

EDITORIAL ANNOUNCEMENT

Studies in plant cell and tissue culture and developments in plant biotechnology are important growth areas of research today. Over the last ten years or so, we have published in *Phytochemistry* a variety of biochemical papers dealing with these topics. In particular, we have been privileged to include many important articles on the accumulation, production, biosynthesis, turnover and enzymology of secondary constituents in cell cultures. In order to encourage the submission of further manuscripts, we are planning to collect such papers together in a new section of the Journal entitled **Cell Culture and Biotechnology**. It would be helpful if authors submitting papers intended for this section mentioned this in their covering letter. All papers received will be dealt with as expeditiously as possible.
