† Phase separated

‡ 0.5% crosslinker

Jaan Roots and Bo Nyström; 'Test of 'scaling laws' describing the concentration dependence of osmotic pressure, diffusion and sedimentation in semidilute macromolecular solutions' *Polymer* 1979, **20**, 149–156

Page 152, 2nd column, caption *Figure 3*, read:

$\lg D \cdot 10^{11} (\text{m}^2\text{s}^{-1})$ and *not* $\ln D \cdot 10^{11} (\text{m}^2\text{s}^{-1})$

Page 154, 1st column, equation (17), read:

$$k \sim \begin{cases} c^{-1.6} & \text{(good solvent conditions)} \\ c^{-2.0} & \text{(theta conditions)} \end{cases}$$

B. Nyström, J. Roots and R. Bergman: 'Sedimentation velocity measurements close to the upper critical solution temperature and at θ -conditions: polystyrene in cyclopentane

over a large concentration interval' *Polymer* 1979, **20**, 157–161

Page 160, 1st column, line 21, *read*:

The molecular weight dependence of the sedimentation process can be reduced or even eliminated if the sedimentation data are plotted in a 'hydrodynamically normalized' plot¹³ (see *Figure 4*).

J. Roots, B. Nyström, L. O. Sundelof and B. Porsch: 'Frictional coefficient of macromolecules in concentrated solution and in the vicinity of the critical solution temperature. Diffusion and sedimentation studies of polystyrene in toluene and *trans*-decalin', *Polymer* 1979, **20**, 337–346
