Earn Hundreds of Dollars More

With the S&M Supersensitive Photo Meters

Use the MODEL A-3 DARKROOM METER with dial lights to become a darkroom PRO. It is EASY to use at the enlarger with the 3/8 in. high EASEL probe to determine accurate exposures for B & W or color photography.

Use the A-3 to improve your darkroom skills; to eliminate waste of prints, chemicals and time; to standardize your work for increasing productivity and earning by HUNDREDS OF DOLLARS.

Use the MODEL 102 LIGHT METER with STANDARD probe to determine exposures from dawn to twilight, to moonlight! SPECIAL FEATURES? Four sensitivity ranges; EV-EVS-LV settings; ASA settings from 3 to 25,000; f/stops from 0.7 to 90; exposure times from 1/15,000 sec. to 8 hours.

Use the A-3 or Model 102 as a densitometer to find the highlights and shadow densities of your negatives and the CORRECT paper for printing.

OTHER APPLICATIONS? Ground-glass, slides, photomicrography, holography and MORE!

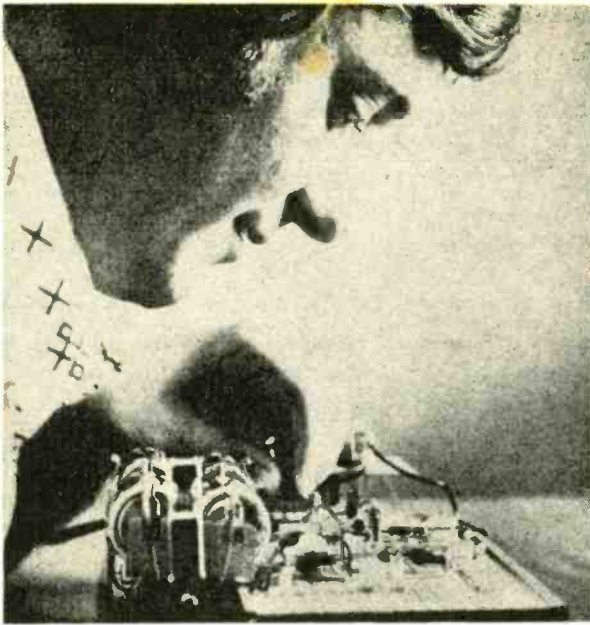

These marvelously accurate and extremely sensitive battery-powered Meters use plug-in probes. Each is supplied here with the probe of your choice, exposure computer, carrying case and manual. This is your opportunity to use one free for 10 days without obligation. Mail the coupon today.

SCIENCE & MECHANICS
Instruments Division, Dept. 308
229 Park Avenue South
New York, N.Y. 10003

Send the S & M Photo Meter with probe indicated, computer, case and manual. Complete instructions supplied to make your own densitometer. If not satisfied, I may return the Meter within 10 days for a complete refund. (Add 10% for Canadian and Foreign orders; N.Y.C. residents add 7% for sales tax.)

- Darkroom Model A-3 @ \$79.95 with
- Light Meter Model 102 @ \$57.50 with
- Standard probe; Easel probe; or
- Mini-probe.
- 3/8 in. diameter Standard probe @ \$7.50
- 3/8 in. high Easel probe @ \$7.50
- 3/8 in. diameter Mini-probe @ \$7.50

You Learn to Make Money ...with CIE's Electronics Laboratory!

Now you can learn Electronics by performing more than 200 practical, skill-producing experiments...with authentic industrial components...at home...in your spare time.

You learn by doing! This 161-piece Laboratory includes the up-to-date equipment you'll need—such things as an IC (integrated circuit), printed circuit board, FET (field effect transistor), photovoltaic cell, DC motor, microphone, multimeter, soldering iron and power supply.

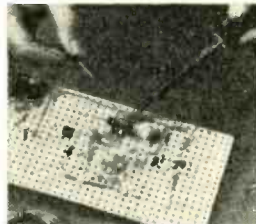

You put theory into practice right in your own home...in your spare time...while you go right on pulling down your present pay. It's CIE's exciting space-age "Electronics Technology with Laboratory" program...a unique combination of CIE's special AUTO-PROGRAMMED® Lessons and laboratory equipment. It is the practical way to learn Electronics!

Prepare for a High-paying Career

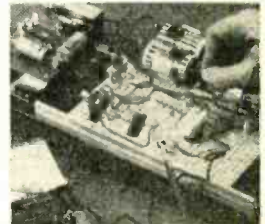

You see, when you "learn by doing," you're ready to do...you're armed with the know-how to meet the challenges of a high-paying career in Electronics...prepared to go after an exciting, relevant job in a growing field such as medical technology, pollution control, radio and TV broadcasting, computers...just to name a few. Once you have some experience, you can make \$12,000 a year or more.

But that's not all! When you successfully complete your Electronics Laboratory course, you'll get a CIE Diploma. And, you'll be able to pass the Government FCC examination or be entitled to a full refund of all tuition paid! CIE's Money-Back Warranty is valid during the completion time allowed for your course.

Send today for CIE's 2 FREE BOOKS about opportunities in Electronics. For your convenience, we will try to have a representative call. Mail reply card or coupon to CIE...or write: Cleveland Institute of Electronics, Inc., 1776 E. 17th St., Cleveland, Ohio 44114.

You learn how to construct circuits and connect them with a soldering iron, which is part of your CIE laboratory equipment. This "hands on" experience is extremely valuable.

Testing and troubleshooting are an important part of your learning experience. Your laboratory has a precision multimeter to diagnose electronic troubles quickly and accurately.

APPROVED UNDER G. I. BILL

All CIE career courses are approved for educational benefits under the G.I. Bill. If you are a Veteran or in service now, check box for G.I. Bill information.

NEW PRODUCTS

Two For The Money

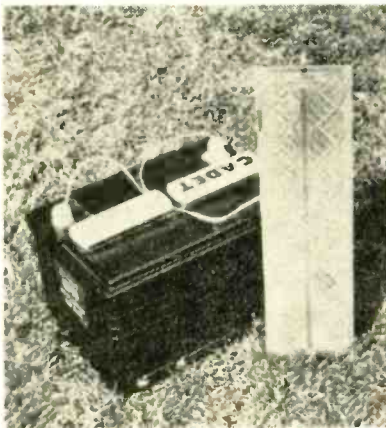

Shakespeare's Thunder-twins (Style 4038) offer CBers a bumper mounted co-phased whip combo with 3-section assembly. The fiberglass antennas are ended, half-wave and center-loaded. Exclusive Shakespeare Diplexer harness makes 76-in. antenna act like it's 18 feet tall. Complete with dual mounts and harness—\$74.50. For all the facts, write to Shakespeare Company, Dept. PR, P.O. Box 5806, Columbia, SC 29250.

Circle No. 2 on Reader Service Page 11

Solar Battery Charger

Similar to battery chargers used aboard satellites, but redesigned for broad usage, the Edmund Solar Panel comprises thirty $\frac{1}{2}$ -volt silicon solar cells in series with a diode. Fully weatherproof, the plastic-coated panels allow direct conversion of light to electricity, and can be used anywhere a trickle charge is needed. Yield is in excess of 12-volts DC at no load with 1/10 ampere in full sun.

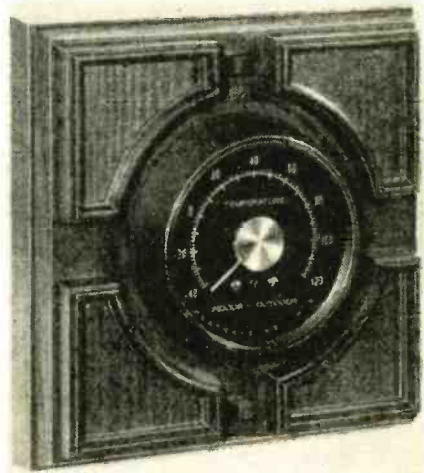

Circle No. 3 on Reader Service Page 11

There is no power gain or drain at night. Left permanently connected to a 12-volt battery, the amount of charge is directly related to the amount of light. Capacity is 30 watt-hours per week approximately. For home experimenters and hobbyists there are myriad uses. They include running a transistor radio or any low current drain electronic device, an alarm-system, or literally anywhere a power

supply is needed and sun is available. The 3.5 x 12.5 x 2-in. 12-volt Solar Panel (Stock No. 71,971) costs \$89.95 and is available by mail from Edmund Scientific Co., 380 Edscorp Bldg., Barrington, NJ 08007.

Indoor/Outdoor Thermometer

The new Heathkit GD-1019 electronic indoor/outdoor thermometer, designed expressly as a get-acquainted kit for first-time kit builders, is nonetheless a high quality instrument and a useful home convenience. The kit goes together easily in a couple of evenings. All solid-state circuitry provides indoor and outdoor temperature readings in degrees Fahrenheit on the same scale. Slide switch selects indoor or outdoor temperature read-

Circle No. 1 on Reader Service Page 11

ing. Battery-saving push-to-read button provides indoor temperature indications from 0°F to 120°F; outdoor temperatures from -40°F to 120°F. Thermometer can be placed anywhere in the home, as it is powered by a 9-volt battery (not supplied). Simulated-woodgrain plastic cabinet can be wall-mounted or placed on desk with bail stand provided. Kit includes built-in indoor sensor and outdoor sensor with 50-ft. cable. Mail order price is \$23.95. For additional information, write Heath Company, Benton Harbor, MI 49022.

Big CB Sticks

New Antenna Specialists CB antennas called Super Can II and Super Can III feature fold-down mounts which permit extra height when in operation. The overall height of both antennas is a full 77 in., but they are easily folded down for garage or other overhead

The CB Antenna With The Highest Gain Any 3-Element Beam Can Produce.

The Mosley A-311

The renewed popularity of the deluxe A-311 is due in part to its endurance record. A record of ten years of reliable, trouble free performance. Heavy gauge, seamless aluminum tubing is pre-drilled and color-coded for fast, easy assembly. All hardware is 100% rust-proof. Illustrated instructions accompany each antenna. For complete specification and performance data, see your Mosley dealer or write: Dept. 216

new products

obstruction clearance. A positive locking sleeve holds the antenna securely upright when in operation, yet unlocks in seconds for fold-down. Also featured is a unique swivel action on the lower mast which permits simple line up of the antenna when folded. Both the Super Can II and III use the heavy-duty type coil introduced on the Antenna Specialists Big Momma antenna. The coil is guaranteed not to burn out and is de-

Circle No. 4
on Reader Service
Page 11

signed to run cooler, with less transmitted power lost in coil heating. The Super Can II (Model M-413) is designed with a 27-in. lower section below the fold-over for use with bumper mounts. Super Can III (Model M-414) has 18-in. in the lower section making it suitable for body mounting. For those who would want the performance of two of these antennas, a phasing harness (Model M-237) is available. The suggested list price of Super Can II or III is \$34.95. Complete details are available from A/S dealers, or by writing to The Antenna Specialists Company, 12435 Euclid Avenue, Cleveland, Ohio 44106.

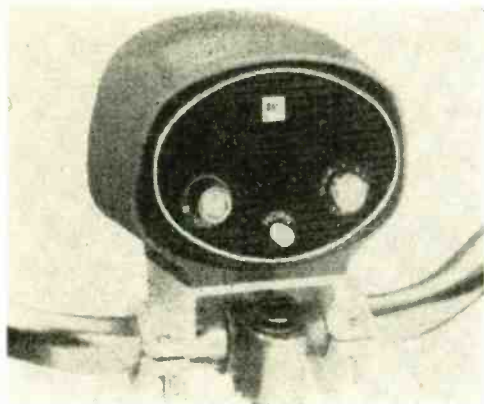

AM Bike Radio

No need to miss the morning news while riding your bicycle to work now that Radio Shack has introduced their new Archer "Road Patrol" AM Bike Radio. The radio comes complete with a universal mounting bracket which attaches securely to the handlebars of any bike. A flip-lever on the mounting bracket makes it possible to quickly remove the radio for indoor or portable use, and as a precaution against theft. The radio has plenty of volume, has a built-in electronic horn, and uses three "C" cells for greatly extended playing time. Its durable black and red oval-shaped enclosure is weatherized and

for everyone

EXPERIMENTER

International EX Crystal and EX Kits

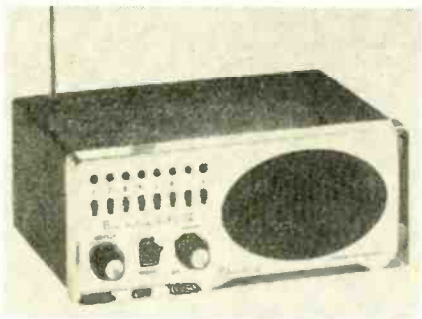

Circle No. 11 on Reader Service Page 11

has a 3-in. safety reflector on the back. The Archer Road Patrol AM Bike Radio is priced at \$14.95. Archer products are available at Radio Shack stores in all 50 states and Canada.

New VHF Bander

The Bearcat IV may well be the first receiver to cover the full 470 MHz to 512 MHz band, in addition to the 30-50 MHz, 146-174 MHz, and 450-470 MHz bands. This unique development allows users to monitor the new frequencies recently authorized by the FCC and currently being used by many metropolitan police departments. The Bearcat IV, a

Circle No. 12 on Reader Service Page 11

product of the Electra Corporation, will offer its own features as well as the features of its forerunner, the Bearcat III, which will continue to be the mainstay of the Bearcat line. The Bearcat IV is now available at \$179.95 less crystals. Additional information can be obtained from the Electra Company, 300 E. County Line Road, Cumberland, IN 46229.

sponsive it can "pick up" letter bombs, "see" through walls, and it is an ingenious helper for a household handyman. It will find hidden electrical cables or pipes without danger to the user. With it, one can "see" through brickwork, timber, tile, plaster, and wallpaper. It will find water pipes in walls, can be used to trace for reinforced steel and

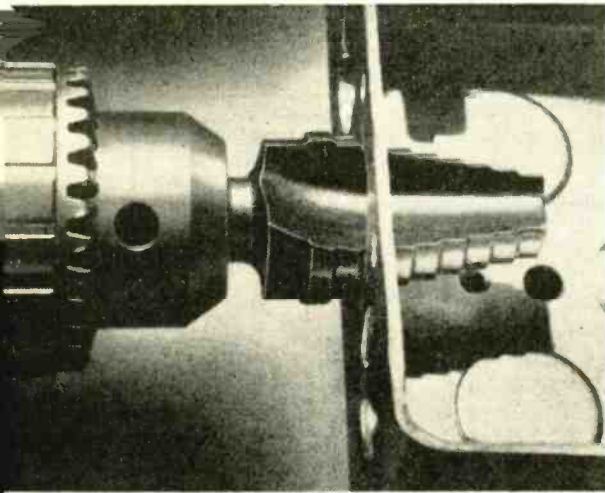

Circle No. 3 on Reader Service Page 11

concrete, and to locate nails and studs in walls for picture hanging on a drywall. The hand-held detector provides a fast way to localize all ferrous and non-ferrous metal to within a fraction of an inch. Before drilling in a wall or floor it should be used to detect hidden metallic obstructions. Security-wise, it can be helpful at home, in business, and at airports in non-invasive search techniques for concealed weapons. Currently in use by several government agencies and police departments in the U.S. and abroad, it is recommended by the National Bomb Disposal Center of New Jersey. This unique, multi-useful metal detecting device (Stock No. 1938) costs \$49.95 postpaid by mail form Edmund Scientific Co., 380 Edscorp Bldg., Barrington, NJ 08007.

A Bit for all Sizes

The newest Unibit drill bit, Model II, enables the drilling of eight round holes, sizes $\frac{3}{16}$ -in. to 1-in., with a single bit. The Unibit II requires a starting diameter of $\frac{1}{2}$ -in. or larger and removes material in $\frac{1}{16}$ -in. increments in eight steps, thus replacing eight conventional twist drills. Designed for use with any $\frac{1}{2}$ -in. drill chuck, Unibit II works equally well with hand-held electric drills as well as drill press equipment. It is especially effective

for everyone

Circle No. 13 on Reader Service Page 11

drilling round holes in thinner gauges of sheet metals such as steel, copper, brass, and aluminum, as well as plastics and wood. Unibit II literature, information, and prices are available by contacting the Unibit Corporation, Box 331, Dept. 2, Wyoming, NY 14591.

Go Down to the Sea

Standard Communications Corporation has introduced a mini 12-watt, 12-channel VHF radiotelephone on the market! Measuring only 2½-in. by 3½-in. by 9½-in. and weighing less than 2 lbs., Standard's new addition to the VHF radiotelephone world is just right for tight installation. Special features of the new mini VHF "half-pack" are its receiver design for maximum sensitivity and selectivity. Included in this radiotelephone is a built-in S-meter for visual signal report. Only one crystal is necessary for each channel, minimizing the cost of installing additional channels in the future. The radiotelephone comes equipped with channels 6, 16, and 26. Each additional channel crystal costs only \$7.50. Everything is built into Standard's new Mini VHF including the speaker, so all that is necessary for installing this miniature radiotelephone is a site on your steering console that will accommodate it. Simply connect to 12-volt power and add a VHF antenna, and you are on the air. Price of the Standard Model SR-C807S radiotelephone is \$398.00. Available at better marine electronic dealers throughout the country. For more information write to Standard Communications Corp., 639 North Marine Avenue, Wilmington, CA 90744.

Poor Wiring?

I connected an electrical ground to the brass screw on the outlet plate next to my shortwave receiver. The rig is very noisy. When I connect the ground lead to another outlet plate the noise disappears. Why?

—C.M., Ft. Benning, GA

I bet the ground connection to the plate and metal box behind it is poor or non-existent. Use an electrician's trouble lamp and touch one lead to the hot line in the box (black wire) and the other lead to the metal box. The lamp should glow with normal brilliance. If not, something is wrong. Another test—connect an ohmmeter between the two brass plates you mentioned. The resistance should be zero. But play safe; connect an AC voltmeter from plate to plate making sure there is no AC voltage potential between the two.

Always the Hard Way

I want to convert my General Electric Message Mate, Model 4ER35A22, to a channel 9 CB monitor. The frequency it receives on now is 9335.000 kHz. How do I go about it?

—M.P., Elizabeth, NJ

If all you want to do is monitor CB channel 9, I suggest you visit a local ham-CB dealer and pick up a used CB rig. Throw away the mike and use it as a receiver only. Multi-channel CB rigs will open the door to other channels also. For good monitoring a good antenna is needed too!

Tuff to Find

Is there a source for hard-to-get schematic diagrams—ones not listed in Sams, Tab, or Ryder? My current problem is an ERIC Model 255AF AM-FM solid-state receiver.

—M.H., Davenport, Iowa

Sounds like an odd brand name for a store in downtown Davenport. Best bet is tracing out the circuit and finding a similar diagram. These imported receivers don't vary that much from each other.

No High Wire Allowed

I live in an apartment and I cannot have any kind of an antenna. My landlord will give in if the rent is raised \$25 a month. What do I do?

—G.W., Bronx, NY

Before the box spring was invented we hooked up our antenna terminals to the bed spring. I know of one SWLer who soldered a lead to a large silvered wall mirror. Hang a flag out the window on a metal staff. Your landlord must be patriotic. Think hard, there are many ways you can find to pull in a good signal.

Drawn Out

Could you tell me what is the best all-around antenna for shortwave reception. I have a Heathkit GR-91 receiver.

—A.S., Hammond, IN

I prefer the old-fashioned long wire antenna. The other day I restrung a new job that is over 160 feet long with a 90-degree bend after the first 70 feet. Reception is great. I have seen two Mosley antennas in operation. The SWL-7 multi-band dipole gives great reception. But the best I've seen in operation is the SWV-7—a vertical job that takes a lot of space. It's a great omnidirectional job that really pulls those DXs in.

Will Be Worth Money Soon

I have an old Stromberg-Carlson No. 535 that receives on 42 to 53 MHz. How do I change it to the current FM band—88-108 MHz?

—J.D., Bruceton Mills WV

Don't touch a knob, coil, screw or anything else. That old rig will be worth a lot of money some day. Clean it, put it into tip-top shape and store it in a safe place.

Mini Snoop

I would like to build or buy a monitor that I could attach to my telephone at my place of business. I want to activate it by a tone signal from my home or other business telephone and hear what is going on at my business during my absence. I realize that anything of this nature attached to someone else's telephone would be illegal, however I cannot see any objection to a person attaching it to his own business telephone.

—C.M., Alexander City AL

You've got to be kidding. Didn't you ever hear of Watergate? Electronic snooping is a dirty word no matter how you try to justify it. If you don't trust the people you work with, get someone else. But, before you fire anyone, see a shrink—you may need help.

LITERATURE LIBRARY

101. Kit builder? Like weird products? EICO's 1974 catalog takes care of both breeds of buyers at prices you will like.

102. *International Crystal* has a free catalog for experimenters (crystals, PC boards, transistor RF mixers & amps, and other comm. products).

103. See brochures on *Regency's* 1974 lineup of CB transceivers & VHF/UHF receivers (public service/business bands—police, fire, etc.)

104. *Dynascan's* new B&K catalog features test equipment for industrial labs, schools, and TV servicing.

105. Before you build from scratch, check the *Fair Radio Sales* latest catalog for surplus gear.

106. Get *Antenna Specialists'* cat. of latest CB and VHF/UHF innovations: base & mobile antennas, test equipment (wattmeters, etc.), accessories.

107. Want a deluxe CB base station? Then get the specs on *Tram's* super CB rigs.

108. Compact is the word for *Xcelite's* 9 different sets of midset screwdrivers and nutdrivers with "piggyback" handle to increase length and torque. A handy show case serves as a bench stand also.

109. *Bomar* claims to have C/B crystal for every transceiver . . . for every channel. The catalog gives list of crystal to set interchangeability.

110. A *Turner* amplified mike helps get the most from a CB rig. This free brochure describes line of base & mobile station models.

111. *Midland's* line of CB (base and mobile) equipment, and marine transceivers and accessories are illustrated in a new 4-color 24-page folder. There's also a separate 8-page, 4-color flyer on scanners.

112. *EDI (Electronic Distributors)* has a catalog with an index of manufacturers' items literally from A to Z (ADC to Xcelite). Whether you want to spend 29 cents for a pilot-light socket or \$699.95 for a stereo AM/FM receiver, you'll find it here.

113. Get all the facts on *Progressive Edu-Kits* Home Radio Course. Build 20 radios and electronic circuits; parts, tools, and instructions included.

114. *Olson Electronics'* 244-page fully-illustrated 1974 catalog carries leading national brand products in all electronic categories.

115. *Trigger Electronics* has a complete catalog of equipment for those in electronics. Included are kits, parts, ham gear, CB, hi fi and recording equipment.

116. Get the *HUSTLER* brochure illustrating their complete line of CB and monitor radio antennas.

117. *Teaberry's* new 6-page folder presents their 6 models of CB transceivers (base and mobile): 1 transceiver for marine-use, and 2 scanner models (the innovative "Crime Fighter" receiver and a pocket-size scanner).

118. *Burstein-Applebee's* 1974 catalog has 276 pages of radio/TV electronics bargains. Selling for \$2, it is offered free to our readers.

119. Besides *Browning's* colorful leaflet on their Golden Eagle Mark III base station, their packet includes other surprises. The LTD is pictured in actual size on a card for you to test on your car's dash. Specifications are given for both the SST and LTD.

120. *Edmund Scientific's* new catalog contains over 4000 products

that embrace many sciences and fields.

121. *Cornell Electronics'* "Imperial Thrift Tag Sale" Catalog features TV and radio tubes. You can also find almost anything in electronics.

122. *Radio Shack's* 1974 catalog for electronics enthusiasts has 180 pages, colorfully illustrated—a complete range (kits & wired) of hi-fi, CB, SWL equipment and parts.

123. It's just off the press—*Lafayette's* all-new 1974 illustrated catalog packed with CB, hi-fi components, test equipment, tools, ham rigs, and more.

124. *Mosley Electronics* reports that by popular demand the Model A-311 3-element CB beam antenna is being reintroduced. Send for the brochure.

125. *RCA Experimenter's Kits* for hobbyists, hams, technicians and students are the answer for successful and enjoyable projects.

126. *B&F Enterprises* has an interesting catalog you'd enjoy scanning. There are geiger counters, logic cards, kits, lenses, etc.

127. *Avanti antennas* (mobile and base) for CB and VHF/UHF are fully described and illustrated in a new catalog.

128. A new free catalog is available from *McGee Radio*. It contains electronic product bargains.

129. *Semiconductor Supermart* is a new 1974 catalog listing project builders' parts, popular CB gear, and test equipment. It features semiconductors—all from *Circuit Specialists*.

130. *Heath's* new 1974 full-color catalog is a shopper's dream—chockful of gadgets and goodies everyone would want to own.

(Continued on page 95)

131. E. F. Johnson's 1974 full line of CB transceivers and accessories equipment is featured in a new 16-page brochure. A 4-color folder on monitor scanner line is also offered.

132. If you want courses in assembling your own TV kits, National Schools has 10 from which to choose. There is a plan for GIs.

133. Get the new free catalog from Howard W. Sams. It describes 100's of books for hobbyists and technicians—books on projects, basic electronics and related subjects.

134. Sprague Products has L.E.D. readouts for those who want to build electronic clocks, calculators, etc. Parts lists and helpful schematics are included.

135. The latest edition of Tab Books' catalog has an extensive listing of TV, radio and general servicing manuals.

136. Leader's catalog features "Instruments to Believe In." They have a complete line for industry, education and service, featuring oscilloscopes/vectorscopes, many generators, accessories, etc.

137. Pace Communications has a packet of information for you. The "Citizens two-way radio" answers all the questions from how to operate one to how much they will cost to operate. A booklet on Pace's scan/monitors to keep you informed is included.

138. Pearce-Simpson has a booklet, "Citizens Band Radios & Scanners," which pictures and describes the various models in this line. A section on CB antennas is included.

139. For the latest information on CB transceivers by Courier, send for their literature.

140. Featured in Siltronix's brochure are single sideband/AM citizen band transceivers, pictured and described with extra features and specifications listed. VFO sliders for monitoring are pictured as well as export models of linear amplifiers.

141. Lee Electronics Labs has an inexpensive circuit analyzer, which is featured in this catalog.

142. Available from Royce Electronics (a new name in electronics manufacturing) is a 16-page catalog for CB'ers. See their base and mobile transceivers, accessories and test instruments.

143. A set of Abraxas/4 speakers contains a rugged 12-inch long-throw woofer with a 22-oz. Alnico magnet, a 5-inch sealed-back rubber-damped midrange, and two 3-inch dome tweeters from Designers Audio Products.

144. For a packetful of material, send for SBE's material on UHF and VHF scanners, CB mobile transceivers, walkie-talkies, slow-scan TV systems, marine-radios, two-way radios, and accessories.

145. For CB'ers from Hy-Gain Electronics Corp. there is a 50-page, 4-color catalog (base, mobile and marine transceivers, antennas, and accessories). Colorful literature illustrating two models of monitor-scanners is also available.

146. Robyn International has 4-color "spec" sheets for each model of their CB (base and mobile) transceivers and monitor-scanner lines.

147. Telex's 4-page, 2-color folder illustrates their new line of boom microphone head-sets for CB'ers and hams, as well as their line of communications headphones.

148. American Trading Corp. offers you two catalogs in 4-color. One features their Electronics 2000/Contact CB, pictured with descriptions and specifications. Their Monitor/Scanner, Surveyor Model 4H/4U, is featured in the second catalog.

149. Cush Craft has a catalog on Citizens Band Antennas for every purpose. The Ringo base antenna is featured, as is the new Superfire 8-element horizontal/vertical power beam.

150. For TV or communications towers, aluminum spells rugged strength. An 8-page brochure from ASCOM details 30 models to fit every need for CB, ham, commercial 2-way radio, or home/institutional installations.

151. For a complete audio accessory line-TV, tape, phono and radio for home and auto, send for Audiotech catalog FR 73-A.

152. Send for the new, free descriptive bulletin from Finney Co. It features the Finco line of VOM multimeters (and accessories) for electronics hobbyists and service technicians.

153. A full-color brochure on Ten-tec's scanners is available. They have portables, 3 bands—12 channels and 3 bands—16 channels. Outstanding features and specifications of the tri-bands are listed.

COMMUNICATIONS

INCLUDING THE COMPLETE WHITE'S

DXing, like love, is a many splendored thing! Yes, there are plenty of reasons why people love DXing as a hobby. Ask any listener why he's a DXer and you'll get one reason. Ask another and chances are you'll get a different answer. Ask a hundred DX hobbyists and you'll probably get dozens of different reasons. But they'll all boil down to three basics.

First, DXing is entertaining. It is an interesting diversion from your normal daily activities on the job or at school. And there's a built-in challenge, the continual quest for new and different stations to log.

Second, DXing is enlightening; I hesitate to say educational because that sounds stuffy and dull, which DXing certainly is not. But you'll never stop learning, learning about your receiver and electronics gear, learning about the world around you. And it is painless learning.

Finally, and most of all, DXing is enjoyable; just plain fun!

"Ok, ok, we know all that," you say. I'll buy that. If you've got some months or years of DXing under your belt, you *do* know the many splendors of DXing. If you're just getting into the hobby, you soon will.

But DXing also is a many "splintered" thing.

And while you, veteran or newcomer, may know why you and others find the DX game so fascinating, perhaps you aren't aware of all the different ways you can DX. Ancient Gaul may have been divided into three parts, but this fascinating pastime called DXing is splintered into many facets, each of which has its own band of adherents.

Maybe you've noticed that so far we haven't said Word One about SWLing, that is, shortwave listening. This is because tuning stations on the shortwave frequencies—generally considered by SWLs to be those between about 1605 and 30,000 kHz—is only one aspect of DXing.

More specifically, SWLing usually is thought of as listening to broadcast type stations, those which have regular programs of music and entertainment, news and commentary and the like. Shortwave broadcast (SWBC) listeners probably form the largest of the DX splinter groups. But there are other types of stations to be heard on the shortwave frequencies and each has its devoted corps of listening fans.

There are DXers who love to listen to the amateur radio stations, the "hams" that operate on the 10, 15, 20, 40, 80 and 160-meter bands. For some, amateur radio monitoring is but a brief interlude, a short apprenticeship they serve to become familiar with ham radio operation before they acquire their own licenses. Others, however, make listening to the hams an end in itself, with nary a thought of *ever* seeking their own ticket.

There are shortwave listeners who favor the so-called utility stations. The utilities are a bit hard to define, except by backing into it. These are the stations which are non-broadcast and non-amateur types. They fill all the nooks and crannies of the shortwave spectrum between the ham and broadcast bands. The utilities include commercial and government point-to-point communications, aeronautical and maritime transmissions, military radio links and, well, you name 'em!

Some of these utility services are operating

The Barlow-Wadley XCR-30 receiver tunes from 500 kHz to 30MHz with a dial accuracy of ± 2.5 kHz. Available in the U.S. from Gilfer Associates. Circle No. 7 on Reader Service Page 11.

WORLD RADIO LOG

in clear voice AM (amplitude modulation). These days, though, most use a special type of emission called single sideband (SSB). SSB signals sound garbled and unintelligible unless your receiver is specially equipped to pull in these signals or unless you know a few tuning techniques to make it all clear to your ear. Some utility type stations still use CW international Morse code.

But even within these three broad groups of SWLs there are sub-splinter groups. SWBCers have many interests. There are those who are attracted by the many types of music to be heard. They often tape record the selections they hear—Arabic chants, African high life music, Brazilian sambas—to build their own unique musical library. There are SWBC listeners who find SWLing a great way to learn a foreign language, or to keep up with world affairs as they happen.

There are those who regularly tune the same familiar stations to hear a favorite show or personality. Others are constantly hunting for new and previously unheard stations and countries. Some SWBCers concentrate on stations from particular countries, such as Indonesia or Brazil, or from particular areas of the world, like Latin America.

And ham band DXers can fall into several categories. Again there are the country hunters, chasing signals from amateur stations in remote countries or on tiny islets in the ocean. Others enjoy listening in, à la the old fashioned rural telephone party line, to regular daily ham nets. Hams with like interests often set up regular schedules on fixed frequencies to discuss their favorite topics.

Utility DXers can fall into as many small splinter groups as there are types of utility stations. And, numerically speaking, that's about as many as fleas on a junkyard dog! One "ute" DXer may specialize in listening to the ship-to-shore radios, another only the CW code transmissions, while a third is fascinated by the point-to-point communications stations.

On shortwave there are a few generalists, DXers who are interested in and proficient at a number of these different facets of listening as a hobby. Most, however, end up by specializing in one or two particular "splinters." It isn't that any one aspect of DXing is inherently more fascinating than any other. But every DXer is an

individual with individual interests. What grabs one guy is dull-dull-dull to another, and vice versa.

In the beginning, most DXers tend to skip around from one DX facet to another, sampling many of them. But usually, more by chance than by conscious choice, they wind up concentrating their interest and attention on just one or two types of DX stations.

Wait a minute, though, we haven't finished ticking off the many types of DXing angles open to you. It is a long list and those stations in the shortwave section of the spectrum form only a part of the picture.

For example, below the shortwaves, from about 540 to 1600 kHz, is the medium wave band. Here is where you'll find our AM broadcasting outlets. Ever since dad or grandad used to sit up on a frosty night with a set of headphones clamped on his head to hear the tinny sounds of Pittsburgh's pioneer station KDKA on a crystal set, many people have found medium wave DXing fascinating.

With over 5,000 medium wave AM stations on the air in the U.S. and Canada, there are plenty of DX challenges in the '70s for the medium wave (MW) DXer. These domestic broadcasters operate with powers ranging from just a few watts—yes, some low powered Canadian relay stations use transmitters with just 20 and 40 watts of power—up to 50,000-

CALLING ALL DX'ERS

Want to see your photograph, together with a view of your DX shack, in COMMUNICATIONS WORLD? We do, and so do other readers. They want to know what your DXing interests are, your biggest DX thrills and the kind of equipment you're using. So why not send CW a nice clear, preferably black and white, photo of you and your gear. Be sure to identify the receiver and other equipment shown in the picture and tell us something about yourself and your hobby. Sorry, we cannot return photographs.

watt powerhouses. It can be as hard or harder to hear a MW station operating with 250 watts, daytime only, on a crowded frequency, from half a state away, as it is to hear a shortwave station half a world away.

And yes, surprising as it may seem, it is very definitely possible to hear foreign stations on the standard medium wave band. Even a beginning DXer can log Mexican and Cuban outlets with ease. It doesn't take too much experience to bring in broadcast band (BCB) medium wavers in a dozen to twenty different countries. Top-flight BCB MW listeners already have topped the 100-countries-logged mark!

More Splinter Groups. Still lower in the radio frequency spectrum are the long wave and very low frequency segments. This begins, at least theoretically, at zero kilohertz and continues up to the medium wave frontier at about 540 kHz. Long wave listeners, and admittedly it is a fairly small contingent, can hear some foreign broadcast stations, mostly from Europe, some CW shipboard signals and a batch of aeronautical navigation beacons on these frequencies.

On the spectrum's high end, up above the shortwave frequencies, there are very high frequency (VHF) and ultra high frequency (UHF) signals to be heard. VHF covers the span between 30 and 300 MHz, while UHF begins at 300 MHz and goes up past the point where the average listener has the equipment to monitor.

Some of these transmissions are those of amateur radio operators on the 2 and 6 meter bands. But today much of the DXer listening activity involves the various types of public service communications stations. These include the police and law enforcement communications in the VHF low band, 30 to 50 MHz roughly,

the VHF high band, approximately 150 to 174 MHz, and the UHF signals in the 450-470 MHz band.

Of course, as the growing band of VHF/UHF monitors is constantly discovering, there's more to this sort of DXing than just listening to police calls. You can also pick up transmissions from a number of other types of stations, those operated by governmental agencies, highway departments, forestry services, taxi fleets, industrial and business users, railroads, highway trucking firms, aircraft, and ships on inland waterways, to name a few.

Yes, DXing is both a many splendored and a many splintered thing. If you're a regular reader of COMMUNICATIONS WORLD, you know we've covered many of these DXing angles before. If you've just discovered CW, don't feel left out. We'll look at the various facets of DX again, in detail, later in this issue and in future magazines.

Communications Monitoring. Call it communications monitoring, action band listening, public service band DXing, or whatever, tuning the utility-type transmissions on the VHF and UHF bands is a fast growing part of the hobby. Equipment dealers across the country will be the first to confirm this. In the past several years, the sales of receivers designed to tune these higher Hertz frequencies have taken off like a jet-powered hummingbird.

Why? Well it is for good reason that these are called the action bands. DXers are fast discovering that there is so much to hear, so much that is different from other types of DXing. Yes, much of the radio activity on VHF/UHF is local. Usually you'll hear stations in your own area, from a few miles to perhaps 100 miles away, depending on your equipment, terrain and reception conditions. But the same propagational factors that make long distance TV reception possible also affect VHF communications monitoring.

There are two VHF public service bands. The "low" band, 30 to 50 MHz, is where you'll find business radio and firefighters communications,

Jerry Rappel of Davenport, IA, hopes to turn his hobby into a career. He's studying radio broadcasting and hopes to be a disc jockey some day. In the meantime, Jerry dials the DX on his Allied SX-190 receiver and has logged 60 countries.

police and power company stations, radio paging, highway maintenance, truck lines, and emergency transmissions. Operating in the VHF "high" band, 150 to 174 MHz, are many police and fire departments, mobile telephone units, weather and shipboard stations, plus other types as found on the "low" band. Radiotelephone services, taxicabs, utility companies, plus still other police and fire agencies, are among the users of the UHF band, 450 to 470 MHz.

Here at COMMUNICATION WORLD'S DX Central, we continue to get letters from readers indicating some of you are still a bit puzzled about these very and ultra high frequencies. These public service stations above 30 MHz cannot be received on the typical communications shortwave receiver (although many transistorized portable sets do cover both all or part of the shortwave frequencies, plus one or more of the VHF/UHF bands).

To answer one of the most common questions—"Why can't I hear police calls on my SW set?"—in most cases, you can't because most police communications today are on VHF/UHF, not shortwave. There was a time when police departments used frequencies just above the regular AM medium wave band. Now only a handful of departments still operate here.

For the beginning or casual listener a good choice of a receiver may well be one of the many different portable sets on the market. You can spend less than \$20, or several hundred, to buy a transistorized set, with built-in whip antenna, which will tune part of the shortwave range and VHF signals as well. This way you can sample the best of both DX worlds.

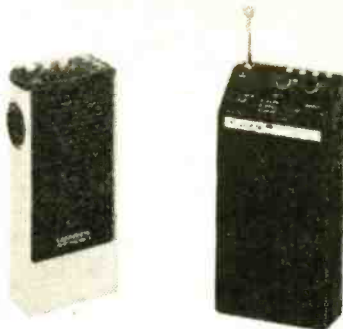

You generally get what you pay for. A multi-band portable costing over \$100 will usually out-perform a \$29.95 "special." And neither will do as well as separate receivers, a top quality SW receiver and a good receiver specially designed to pull in the VHF and/or UHF signals. The type of receiver you buy will depend on a number of factors, not the least of which are your basic DXing interests and how much you want to spend. Regardless of which set you buy, you'll find it will provide plenty of fascinating listening.

A serious DXer may eventually acquire both a good shortwave receiver and a good VHF/UHF monitor rig. It is great if you can get both. If you can't, don't worry about it. Someday, maybe; but until then there's a lot to hear and a lot to learn about DXing, even with an economy-model.

Choosing a Receiver. When you're ready to buy a VHF receiver, you'll want to know what to look for. The first consideration, of course, is price. Inevitably there will be a compromise between the set you *wish* you could get and the one you can afford. But since wishes don't bring in DX, settle for the best you can get for the money you have to spend.

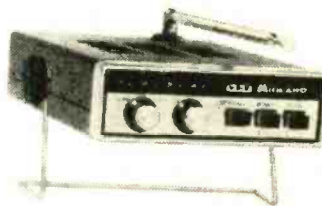

Secondly, which band or bands are you most interested in. There are single band sets, which

HI-BAND PORTABLE MONITORS

Lafayette Portascan 4 fits neatly in your hand as it monitors four channels on VHF. Circle No. 14 on Reader Service Page 11. Priced at \$99.95.

Teaberry T-Scan pocket portable with built-in antenna covers one of 3 bands—\$119.00; \$139.00 for UHF model. Circle No. 15 on the Reader Service Page 11.

Midland 13-916 VHF hi-band totable scanner is great for carry-along and desk top operation. Scans 4 channels. \$102.95. Circle No. 16 on Reader Service Page 11.

cover either the VHF "low" or "high" band. Some sets will tune both ranges. Still others add the UHF frequencies.

If you are interested mostly in monitoring signals from a certain few local stations, for example, your police department, fire department, and sheriff's office, and these all use—as often is the case—adjacent frequencies in the same band, a mono-band set will do the trick. If all your local signals are in, say, the VHF "low" band, you may not need or want greater band coverage. The serious communications monitor, hunting for DX, will probably want a receiver that tunes both low and high band VHF and perhaps the UHF frequencies as well.

The third choice you will have to make will be between a tunable receiver and one with crystal-controlled frequencies. If you prefer your tuning at random, if you like to scan all the frequencies in a particular band, you'll want a tunable model. Tunable receivers cover all the frequencies within the band. A crystal-controlled VHF receiver will not cover all frequencies in a band, only certain channels which you pre-determine. You must purchase plug-in crystals for those particular frequencies you intend to tune.

With a tunable receiver you can dial across the whole band, just as you would tune any radio receiver. With a crystal-controlled model, you switch from one specific channel to another, just as you would change channels on a television set. Each type has its advantages. A tunable receiver does allow you to scan every frequency in a band. You are not limited to just a few frequencies. And you do not have to purchase any accessory crystals for each frequency you want to tune.

The crystal-controlled variety, however, does permit quick and easy access to those station channels you are most interested in. It is just a matter of flipping a switch to the right channel and there you are. No hunting for a hard-to-find spot on the dial. And there are variations on these two themes. Some sets feature several crystal-controlled channels, plus the option of full band tuning.

And there is another option, a special type of crystal-controlled receiver called a scanner. The scanner offers a number of different crystal channels—again, you select them and insert the proper crystals—in the band. But instead of manually switching from one to another, an automatic, electronic scanning circuit does this for you. It sweeps through the sequence of fixed frequencies quickly, automatically stopping on one when it detects a signal. It locks in on the first active channel and stays there until the communication ends. Then it continues sweeping until again it finds a signal.

Signals on the public service bands are not continuous, but consist mostly of two-way conversations. Often many seconds or minutes pass without any traffic being aired on a certain frequency. These channels will be passed by the scanner when they have no traffic. It will lock in only when a signal is being transmitted. A scanner-type receiver permits automatic tuning

This is a selected list of VHF frequencies used by fire-fighters in various cities in the United States.

FIRE DEPARTMENT FREQUENCIES

COMMUNICATIONS WORLD really does span the globe. "I'm an ardent fan of CW," says Dr. Shun-ichi Seki of Tokyo. Latin American stations are the "splinter" specialty of our Japanese reader who uses two receivers, a SONY CRF-230 and a SOLAR NT-110B.

of perhaps eight different crystal-controlled frequencies so you won't waste your time parked on a temporarily inactive channel. When there is action on one of your selected frequencies the receiver will find it for you.

A final thought. Be sure the receiver you select has a squelch circuit incorporated in the design. Frankly, most VHF/UHF receivers do, but some of the inexpensive models don't. It is a point you should check on, however, before you buy. A squelch is a receiver silencing circuit that activates the speaker only when an actual transmission is received. You get no background noise or static when no signals are being received. The speaker only comes to life when there is a message to be heard. A squelch certainly saves wear and tear on the ears!

What is available on the VHF/UHF receiver market today? The COMMUNICATIONS WORLD Receiver Check List will help you to get an idea of some of the more popular sets and some of their special features. The manufacturers and sellers listed will be pleased to send you more information on their products. Just drop 'em a note and tell 'em CW sent you. Also see the Literature Library page in this issue of COMMUNICATIONS WORLD.

Other Voices. Most communications monitors are familiar with the police communications on VHF and UHF. In fact, many DXers note that the notion of being in on police action as it happens, by monitoring these frequencies, is what originally attracted them to the public service bands. Fire department communications stations can be equally exciting at times.

But there are many other types of two-way and one-way communications on the air. One of these is marine communications, the ship-to-shore commercial transmissions and the signals from private pleasure boats.

HI-BAND 8-CHANNEL MONITORS

Linear Systems SBE Sentinel I priority channel switches on with signal. \$179.95. Circle No. 19 on Reader Service Page 11.

Heathkit GR-110 scanning monitor can be assembled in 6 evenings for only \$99.95. Circle No. 1 on Reader Service Page 11.

Shown on our cover, Lafayette's Monitor-scan 8 has built-in antenna. \$99.95. Circle No. 14 on Reader Service Page 11.

NATIONAL WEATHER SERVICE

NWS operates nearly 60 VHF weather stations in 29 states and the District of Columbia. Most of these transmit on a single, standard frequency, 162.55 MHz, though a few, like Cleveland, Boston and Atlantic City, use 162.40 MHz, and New London, Conn., broadcasts on 163.275 MHz. Broadcasts are aired around the clock and consist of tape recorded weather summaries, repeated every four or five minutes. The messages are updated every two hours or so, or more often when special weather conditions require. Depending on your receiver/antenna setup and local ground terrain, you should be able to hear NWS stations within about a 40-50 mile range. The following areas now receive NWS service:

| | | | |
|-------------------|-----------------|----------------------------|---------------------|

COMMUNICATIONS WORLD

Gradually, the Federal Communications Commission is phasing out heavy use of the 2-3 MHz shortwave marine band. Much of this traffic already has gone to VHF, 156 to 162 MHz, using narrow-band FM transmissions.

One channel worth special attention if you live near one of our coasts, within VHF range of one of the Great Lakes or inland waterways, is 156.8 MHz, which has been designated a distress frequency. When there is an emergency situation, you might hear a frantic "Mayday" here. The Coast Guard and other marine stations monitor this wavelength and you can too. Normally, however, traffic on the marine channels will be routine.

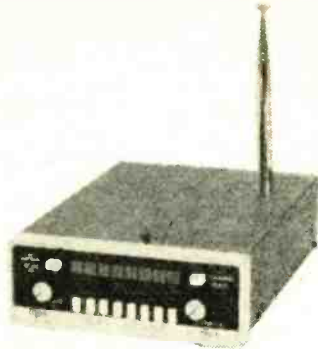

The National Weather Service operates about 60 weather stations around the country, in Alaska and Hawaii. About two-thirds of these stations broadcast on 62.55 MHz. The others use 162.40 MHz. These weather stations operate continuously, broadcasting frequently updated weather information and forecasts. Most use 300 watts of power and normally can be heard by monitors up to 50 miles or more away from the station. During "skip" openings, more distant weather broadcasters can be heard, but since a common channel is used, expect heavy co-channel interference.

Let's hopscotch the high bands for highlights! Here's a quicky guide to where to tune for some of the communications signals on VHF and UHF.

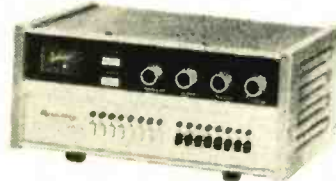

- Try the frequencies around 31 MHz for business radio. Hear the boss chew out his salesman for being late for an appointment. Ok, ok, I'm only kidding.
- Radio paging, those one-way transmissions used to alert people-on-the-go, away from ready telephone communications, of waiting messages. Listen on 35.22, 35.58, 43.22, 43.58 MHz, and also on the lower end of the VHF "high" band.
- The utility utility stations, those communications operations of the electric power and gas companies can be located around 47 MHz and, on UHF, around 456 and 462 MHz.
- Call me a cab! All right, Sport, you're a

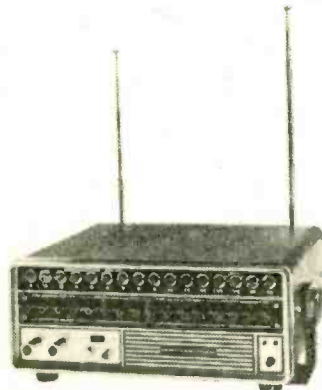

DUAL-BAND HI-LO MONITORS

Pace Scan 308 lets you pull in the calls from high and low bands with ease. \$169.95. Circle No. 17 on Reader Service Page 11.

One more than two—Midland's 13-950 pulls in Hi-VHF, Lo-VHF, and UHF signals on 16 channels for full city service. \$279.95. Circle No. 16 on Reader Service Page 11.

Two more than two—Robyn's 4-Bander covers 25-55, 108-144, 144-174 & 450-512 MHz for full emergency coverage. \$279.95. Circle No. 18 on Reader Service Page 11.

Down-under DXer Donald Taylor from West Hobart, Tasmania, Australia, listens with a Japanese-made Trio 9R-59DS communications receiver. One of the most interesting aspects of SWling, says Donald, is hearing the way different countries deal with the same item of news, such as the Indo-Pakistan War, as reported by Radio Pakistan and All India R.

cab. But if you'd rather listen than call you may find the taxis dispatched on frequencies near 152 and 452 MHz, VHF and UHF respectively.

- And freight haulers across the country keep on truckin' around 45 MHz "low" band and 160 MHz "high" band.

- Devotees of TV private eye and gumshoe programs are familiar with in-car radiotelephones. No TV sleuth worth his salt goes anywhere by auto without receiving at least one call via his radiotelephone. In real life, mobile radio telephone circuits can be found in the region between 152 and 153 MHz.

- Police frequencies? Take your pick. Some departments use "low" band frequencies between 37.02 and 46.42 MHz. These include many state police operations. More transmit on channels between 151.45 and 159.21 MHz "high" band. Some departments use ultra high frequencies, up around 453, 458, and 464 MHz.

- While on the subject of the uniformed protection agencies, I can't forget the firefighters. Listen for them on about 33, 46, 154, 166, 170, 458, and 464 MHz.

Another frequent question directed to COMMUNICATIONS WORLD concerns the legality of monitoring these action band stations. In a nutshell it's like this. There is no prohibition when monitoring in the privacy of your home. A couple of states and some municipalities forbid mobile monitoring in your car. Seldom does anyone bother to enforce these statutes and ordinances. Keep your nose clean, don't make any personal beneficial use of what you hear, just listen in and enjoy and you'll not run afoul the law.

And now, higher Hertz freq. freaks, that should keep you busy for a while!

The Shortwave Bands. Of all the DX "splinters," one of the most popular remains SWLing, tuning the broadcast stations in the shortwave frequencies. If you want to split hairs, some say that when it comes to the shortwave broadcast bands, those who listen mainly for program content should be called SWLs, while those more interested in hearing a station just because it is far away and difficult to log should be called SWBC DXers. Personally, I don't think it matters much what you term yourself as long as what you're doing is enjoyable.

There are a few terms you ought to get straight at the start. Station lists, such as White's Radio Log Worldwide Shortwave Stations at the back of this magazine, give the stations' frequencies in kilohertz, abbreviated kHz. Other publications you may run across use the older term, kilocycles per second (kc/s). All you have to remember is that kHz and kc/s are identical. In this semantics game you pay your money and take your choice.

Another pair of frequency terms are megahertz (MHz) and megacycles per second (Mc/s, or sometimes, just Mc). Most often you'll find these used when referring to the higher frequencies, including VHF and UHF.

POLICE FREQUENCIES VHF HIGH BAND

In metric terms, kilo means one thousand, mega means a million, or, in other words, a thousand thousand. Megahertz is a thousand kilohertz; Mc/s is 1000 kc/s. And kHz equals kc/s; MHz equals Mc/s. Now, class, everybody got that? Good!

Examples: 9,670 kc/s (to save space, the comma is sometimes omitted) is equal to 9.67 Mc/s. And 15.45 MHz means the same as 15,450 kHz. Considering a VHF frequency, 156.4 MHz is the same as 156,400 kHz, but is a lot shorter and easier to use.

What frequency really means, whether expressed in kHz, MHz, kc/s, or Mc/s, is the number of times per second that a particular radio wave "vibrates." Another way of locating a spot in the radio spectrum is in terms of its wave length. Clearly, very high frequencies could just as easily have been called very short waves. The frequencies of shortwave stations are higher

than medium wave stations. The higher the frequency, the shorter the wave length.

Wave length is a bit outdated, at least on this side of the Atlantic. In Europe and elsewhere there is still a limited use of the older wave length reference. About the only real use North American DXers make of wave length is when broadly indicating the bands of frequencies used by stations.

Shortwave broadcast stations, and there are thousands of them which present varying degrees of logging difficulty to the DXer, are not located randomly throughout the shortwave section of the electromagnetic spectrum. You'll remember that we call those frequencies between about 1605 and 30000 kHz shortwave. Most stations are grouped in an even dozen SWBC bands. These, called by their approximate wave lengths, are the 11, 13, 16, 19, 25, 31, 41, 49, 60, 75, 90, and 120 meter bands.

The first three might collectively be called the "Sun Bands." The 11 mb (25600-26100 kHz), 13 mb (21450-21750 kHz) and 16 mb (17700-17900 kHz) are most active when affected by solar radiation. They are the daylight bands. When the sun sets, wherever you are, the signals

World Time By Countries. To compute the time anywhere in the world, add (+) or (-) the number of hours indicated to or from GMT. Figures in parentheses indicate daylight savings time during the particular country's summer months.

vanish. And because of propagational factors, these bands are most active during the peak of the 11-year sunspot cycle. During the cycle's low point, which is about where we are in 1974, you'll find few stations, indeed, on the 11 and 13 meter bands, and a relatively small number of them on 16 meters. Those that can be found here are a handful of the more powerful international broadcasting stations.

Our next trio I'll call the Powerhouse Bands: 19, 25, and 31 meters. Basically there are two types of shortwave broadcasting stations: one, the international SW stations, generally powerful and easy to hear, which broadcast specifically to audiences around the world; and two, the local service broadcasters, low powered stations whose programs are aimed at audiences in their own countries.

Most, though not all, of the stations you'll hear in our Powerhouse Bands today are of the first type, the loud signals, sometimes in English, from the SWBC stations in Europe, Africa, Asia, Oceania, and North America. These include The Voice of America, the British Broadcasting Corporation, South Africa's Radio RSA, Radio Moscow, Radio Australia, Radio Japan, Radio Peking, and, of course, many more. These stations very definitely are trying to reach you and, hence, with their mighty transmitters, they usually succeed.

The 19 meter band (15100-15450 kHz) is essentially a daylight band, like 11, 13, and 16 mb. Further down the dial is 25 meters, (11700-11975 kHz), which is a good place to hunt for signals during the late afternoon and into the

evening. And 31 meters (9500-9775 kHz) will bring in some late afternoon DX, but really is at its best during the evening hours.

There are two Shared Bands: These are the 41 mb (7100-7300 kHz) and, further down the line, 75 mb (3900-4000 kHz). In these two segments, broadcast type stations share the space with the amateur radio "hams." As a result, there is quite a bit of mutual interference at some times and in some parts of these bands. It is not a particularly happy arrangement, with the hams complaining the broadcast signals disrupt their QSDs, and DXers swearing mightily when an amateur station comes on the air, obliterating a SWBC signal just at identification (ID) time.

In these days of low sunspot count, some European stations, and especially the Soviet stations, have slipped down in frequency from 31 meters to the 41 meter band. In its propagational characteristics 41 mb is somewhat similar to 31 meters, but is more of an evening and early morning band.

There aren't too many broadcast stations on 75, which is strictly a darkness DXing spot. But the inhabitants include some of the best and toughest catches around. Greenland, the Solomons, Cape Verde, and the Falkland Islands, to name but a few.

The 49 meter band might be called a Transi-

SWBC BANDS AND FREQUENCIES

| Band | kHz |
|-----------------|-------------|
| 120 meter | 2300-2500 |
| 90 meter | 3200-3400 |
| 75 meter | 3900-4000 |
| 60 meter | 4750-5060 |
| 49 meter | 5950-6200 |
| 41 meter | 7100-7300 |
| 31 meter | 9500-9775 |
| 25 meter | 11700-11975 |
| 19 meter | 15100-15450 |
| 16 meter | 17700-17900 |
| 13 meter | 21450-21750 |
| 11 meter | 25600-26100 |

The look on Joseph DiPietropado's face suggests he's anxiously waiting to hear the identification from a rare DX station. Joseph is a 15-year-old listener from Rolling Meadows, IL, and his receiver is a Knight-kit Star Roamer II.

tional Band, and it is one of the most crowded, in terms of numbers of signals. It is the home

of some powerful international stations and many of the local variety DX stations, including Spanish and Portuguese speaking Latin American outlets.

You won't hear much on the 49 meter band during daylight, except perhaps a Canadian station or two. But as late afternoon arrives the band opens. You'll find some African signals.

There's no sex discrimination in the studios of Radio Norway. Here two women technicians prepare for one of Norway's foreign service transmissions.

plus strong European signals from Great Britain, Germany, Portugal, and the like. You'll also find many stations from Central and South America, from Brazil, Colombia, Costa Rica, and more.

The last three of our DX Dozen are known, generally and collectively, as the Tropical Bands. Few of the international powerhouses are found way down here on 60 meters (4750-5060 kHz), 90 meters (3200-3400 kHz) and 120 meters (2300-2400 kHz). The vast majority of the stations broadcasting here are aimed at local populations in their own countries. The bulk of these stations are in the tropic regions of South America, Africa, Asia, and the Pacific, hence the name. Unlike the biggies, the international broadcasters, these stations aren't especially interested in reaching Stateside and Canadian audiences. Most programs are not in English. Many, particularly the Latin American opera-

tions, are just shortwave extensions of their commercial medium wave outlets.

Since they don't aim for distant audiences, most of these transmitters are not high powered. These stations include some of the hardest-to-hear, some of the rarest DX catches in the world. Little wonder the Tropical Bands are considered the true test of the serious DXer.

And all three bands are definitely darkness frequencies. They open up in the evening, remain good throughout the night and fade out when the sun comes up. Here's where veteran SWBC DXers hunt for African signals as the sun goes down, concentrate on the Spanish and Portuguese-speaking western hemisphere stations

LONG WAVE DX

This is a selected list of long-wave, low-frequency stations which can be heard in North America. Except for local signals, LW reception is a nighttime phenomenon. Some of these stations will be hard to log, but transatlantic reception is more likely if you live near the east coast.

| kHz | Call | Location | Type of Station |
|------------|----------------------|-----------------------|------------------------|
| 164 | Office/RTV Francaise | Allouis, France | Long wave broadcast |
| 180 | Europe No. 1 | Saarbrucken, Germany | Long wave broadcast |

in the evening, the Africans again late at night and, around dawn, the Pacific and Asian stations.

I should point out that there are some mavericks found outside of these 12 shortwave broadcast bands. Some stations, especially some Soviet, Chinese, North Koreans, and a handful of others can be found on off-beat, out-of-band frequencies.

Current and Future. Now that you're in the picture as far as knowing where to tune to find the shortwave broadcasting stations, it's time to look at what's happening on SW now and what is likely to happen in the months and years ahead. It doesn't take a crystal ball to predict that the power race that began a few years back will continue into the mid-'70s. More and more stations are opting for higher powers, 100 to 300 kilowatt transmitters. And that means I've got both good news and bad news for you.

The good news is that as powers increase, SWLs will have the opportunities to hear stations they never could log before. For instance, Paraguay has always been a very difficult country to hear on the shortwave bands. Then a couple of years ago, the Paraguayan government ordered a new 100 kw. transmitter and announced the first International Broadcasting service from that country was in the offing.

Our man on the scene, Tony Jones has been keeping COMMUNICATIONS WORLD informed on the progress of Paraguay's new loud voice. Progress? There wasn't very much for a long time. Every time Tony journeyed outside the capital of Asunción to the construction site he was to report back that little change was ap-

PHONETIC ALPHABET

Because many letters of the alphabet sound similar, and confusion can result when weak signals and interference prevent good intelligibility of radio signals, by international agreement, a phonetic alphabet was devised. These are used invariably by the military services, but also can be found in use by various VHF-UHF services, including some police departments. However, some departments use other phonetic systems—for example, the Los Angeles police use "Adam" for "A", as in the popular TV show, "Adam 12"—and other law agencies seem to choose their phonetic key words at random. Here, however, is the internationally accepted phonetic alphabet.

| | | |
|-----------|------------|-----------|
| A—Alfa | J—Juliet | S—Sierra |

| I—India | R—Romeo | |

parent. Early in 1974, though, things apparently were moving again and local stations in Asunción reported on the air that the new shortwave facilities would be fired up shortly, with programs beamed to Europe.

As this is written, a few scattered tests have been aired. By the time you read this the high powered shortwave service from Paraguay will probably be a reality. Frequencies aren't known at this time, but alert DXers will no doubt find the station without difficulty.

Or take the tiny African nation of Swaziland, just a little dot nestled in South Africa. A couple of years back a new commercial shortwave broadcaster went on the air, beaming U.S.-type pop music programming to South Africa. A new DX target on the map; a new country for DXers to log, right? Wrong, as it turned out! A new catch for some lucky ones, a big nothing for many more. The station's 10 kw transmitter in the Swaziland "boonies" at a place called Sandlane just didn't live up to DXer expectations. The frequency selected, 6155 kHz, was no bargain. For on the same frequency operate a couple of more powerful European broadcasters, including Australian Radio.

The Swazi situation demonstrates the "bad news" aspect of the power race. As more stations start using high and super-high powered transmitters, it becomes increasingly hard to DX the low-wattage stations, the really rare goodies! A mixed blessing, you see. The commercial Swazi Music Radio is still, today, a tough catch because of the interference from other stations. But the situation may improve sometime in 1974, when another broadcasting organization, Trans-World Radio, opens its own station in Swaziland.

You remember TWR don't you? Those are the same great folks who brought us Trans-World Radio-Bonaire, in the Netherlands Antilles, and the original TWR station at Monte Carlo, Monaco. TWR, a missionary broadcasting group, has always been the DXers' friend and it will be nice to see them expanding their operations into Africa. The Swaziland operation will use four 30 kw transmitters, not exactly powerhouses by today's broadcasting standards, but adequate.

Another African country which has announced plans to install more potent shortwave gear is Uganda, which heretofore has been a difficult catch for many SWLs.

Country-chasers also are anxiously awaiting the arrival of the relay station the West German broadcaster, Deutsche Welle, is building on Malta in the Mediterranean. Some years ago DW put the African country of Rwanda on the popular DX map when a relay station was built there, giving SWLs a solid chance to log that previously elusive country. Now the new Malta station should do the same. There hasn't been a SW outlet on the island country since the post-WW II era when a British military station was active.

BOTTOM BAND DXING

One DX "splinter" that is not widely known is very low frequency (VLF) monitoring. The VLF frequencies, 3 to 30 kHz, are really off the beaten track, but there are some interesting things to hear. Here are some stations, selected especially for Communications World, by reader John M. Lauerman, Seattle, WA, who has been tuning the frequencies for a decade.

| kHz | Station | Location | Type of Transmission |
|-------|--------------------|--------------------|------------------------------|
| 10.2 | Omega Trinidad | Trinidad | Navigational system |
| 12.2 | Omega Hawaii | Haiku, HA | Navigational system |
| 12.85 | Omega North Dakota | LaMoure, ND | Navigational system |
| 14.7 | NAA | Cutler, ME | Navy VLF communications |
| 16.0 | GBR | Rugby, England | Time signals |
| 16.2 | RCC7 | Surajevka, USSR | CW and RTTY |
| 17.4 | NDT | Yosami, Japan | Navy, CW and RTTY |
| 18.6 | NLK | Jim Creek, WA | Navy, RTTY |
| 22.3 | NWC | Exmouth, Australia | Navy VLF communications |
| 24.0 | NBA | Balboa, CZ | Navy, RTTY, CW, time signals |
| 25.0 | RWF | U.S.S.R. | CW, time signals |
| 25.0 | RCV | U.S.S.R. | CW, time signals |
| 25.0 | ROR | U.S.S.R. | CW, time signals |

And, in the future, other stations which couldn't be called rare DX will be even easier to hear when new transmitters are installed. The Israel Broadcasting Authority, which not long ago signed on its first 300 kw'er, has several more in the works. Also in the planning stages is a reported new extensive broadcast schedule directed to North America's east coast. This should make Israel's voice equal to any shortwave service in the world.

Half-way around the globe, South Korea has announced the ordering of a 250,000 watt shortwave transmitter from an American manufacturer.

It is something of a paradox, but while some stations are blasting forth on ambitious programs to improve their shortwave facilities, others are phasing out their SWBC operations. Still others, without a present capacity for worldwide broadcasting, have expressed no interest whatsoever in foreign radio audiences.

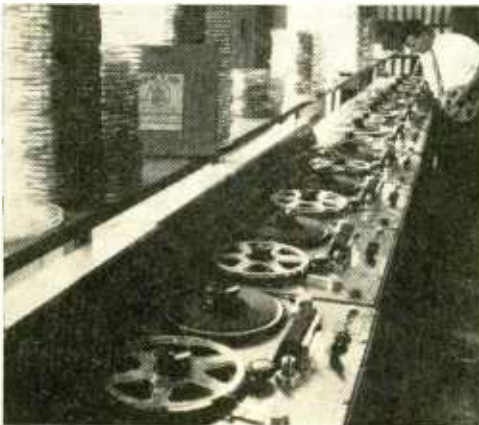

Indonesia, for instance, is in the process of switching its domestic broadcasting from short to medium waves. This nation in the East Indies has been among the most shortwave radioactive

spots in the world, with virtually no medium wave service. Over the next four years these local shortwave outlets, including some real DX targets, will be closed down and replaced by medium wave stations. Indonesia, of course, will retain its more powerful shortwave stations and will continue to beam foreign service programs to overseas listeners.

Eire, the Irish Republic, is a holdout, sticking to a position adopted some quarter century ago when shortwave broadcasting was dropped. A COMMUNICATIONS WORLD reader, Dr. Proinnias O'Croinin, was interested in knowing why the Irish government has no plans for resuming a shortwave service. So he wrote to the Irish Minister for Posts and Telegraphs, Dr. Conor Cruise-O'Brien.

A reply from that office spelled out the official thinking on the matter: "The question of providing a shortwave service was considered in the '40s, but it was decided not to proceed with it. . . . The number who would listen to the service was likely to be limited and would not justify the heavy cost involved. At the time, shortwave listening was negligible, reception conditions were poor, and radios generally were not equipped with shortwave bands. It is unlikely that conditions in the interim have changed to such an extent as would warrant the establishment of a shortwave radio service now."

In other words, the Irish government apparently thinks the shortwave picture hasn't changed in the past two-and-a-half decades. It still is

High-speed tape recorders in the studios of the Voice of America provide almost instantaneous copies of interviews, special events and musical programs. Many thousands of tape recordings are made in the VOA Washington studios each year.

basing an important decision affecting Eire's position in the world of communications picture on a survey made, and not updated, in the 1940s.

On the other side of the coin, a tiny country like Holland is going ahead full tilt in a program to improve shortwave facilities, even to the extent of building elaborate shortwave relay stations in the western hemisphere and in Africa to make sure its programs are well received throughout the world.

Few things change as fast as conditions on the shortwave bands. New stations continually crop up, often with no advance notice. Old ones become audible with propagational changes and, for reasons not fully understood, may vanish, to all intents and purposes, days, weeks, or months later. Others become audible because of favorable changes in frequency, schedule, or, as we've been talking about, new broadcasting equipment.

Every year, many stations cease operations, never to be heard again. This seems particularly true of Latin American commercial outlets, where apparently the business failure rate is rather high. Flat out, it is impossible for any news source, book, magazine or brochure to present all the information on all the changes that are occurring.

COMMUNICATIONS WORLD is published twice a year. Published more frequently is our sister magazine, ELEMENTARY ELECTRONICS, which six times a year contains the regular column "DX Central Reporting." This column, conducted by CW's Communications Editor, Don Jensen, contains features on specific stations and the DX scene in general, plus tips on currently heard stations and a mailbag section called "Backtalk."

There are a number of hobby clubs for DXers which provide even more frequent publications, usually monthly bulletins. I'll be talking about these clubs in detail a bit later on. With the understanding that it is something of an overview of the DX scene on SWBC, let's check out some of the newsworthy changes and additions in recent months, skipping freely across the map.

DX Datelines. Bangkok, Thailand—Not too long ago a new station turned up without any

fanfare in this Southeast Asian capital. The station, known as *Bangkok Meteorological Radio*, operates on the out-of-band frequency of 7863 kHz.

Bangkok Met broadcasts weather reports in both Thai and English, especially for ships in the Gulf of Thailand, Malacca Strait and the Andaman Sea. When not broadcasting weather forecasts and reports, the station airs mostly non-stop music, both Thai and U.S. pops, with few announcements.

With a 10,000 watt transmitter, the station has been heard, often with good signals, across the U.S., around dawn. It has QSLed by letter, and reports should be directed to Capt. Kiti Ratanarome, Chief of the Communications Division, Meteorological Department, Bangkok 2, Thailand.

Kavieng, New Ireland—DXers have been watching with much interest the recent expansion of broadcasting activities in Papua-New Guinea, where a number of new stations have gone on the air. Perhaps the best received station in Papua-New Guinea is the *National Network* broadcaster on 4890 kHz located at Port Moresby. Another one heard fairly often is *Radio Rabaul*, 3385 kHz, which is located on the island of New Britain. New Britain and several other islands in the region are administered as part of Papua-New Guinea.

And a tough catch, but well worth the effort, is a new outlet in the network, *Radio New Ireland* at Kavieng. Like New Britain, New Ireland is an island administered from Port Moresby. This is a real DX station, but if you're lucky enough to be tuning the frequency when conditions are just right, you may find it on 2428 kHz in the 120 meter band. Programs often consist of U.S. country and western music—surprise, surprise, but for some reason, this sort of music is popular in much of Indonesia and Pacifica—and announcements in one of the Pidgin English tongues of the area. Best time to try is about dawn.

Santiago, Chile—After the revolution in this South American country, SWLs began noting a number of changes in the shortwave broadcasting scene. One of the notable changes was the inauguration of an external service, part of it in English, from the government station, Radio Nacional de Chile. The time to listen for this one is during your afternoon or evening hours.

FOREIGN BCB DX'ING—WHEN TO TUNE

Frequencies used as this is written are 6195 and 15150 kHz.

Another result of the turmoil in Chile was the appearance of a new military-controlled station, La Voz de las Fuerzas Armadas y Carabineros de Chile on 6135 kHz. This station, formerly owned and operated by the University of Concepcion, in that Chilean city, has been logged by SWLs during our evening hours.

Thimtu, Bhutan—Where? Bhutan, an Asian buffer country between India and China, is one of the recent additions to the stable of world spots with shortwave broadcasting stations. So far, this station, *Radio NYAB*, has only been reported by a handful of Indian DXers. The station reportedly is operated by the National Youth Association of Bhutan on 7050 kHz, only on Sundays between about 0730 and 0930 GMT.

Not much is known of this broadcaster. It hasn't, thus far, been heard outside of the Indian subcontinent. But if its signals ever do make the big jump to our shores, there'll be a lot of DXers jumping up and down with joy. Fingers crossed, gang!

Sao Vicente, Cape Verde Islands—For west coast listeners these islands off Africa's west coast long have presented a real problem. There are three active SWBC stations in the Cape Verdes, but as far as west coast DXers were concerned they were virtually impossible to log.

The stations had no "darkness" transmissions when a good propagational path to western North America would make reception possible.

So listeners in California, Oregon, Washington, and the adjoining western states really perked up when word spread that *Radio Barlavento* turned up with a transmission beginning at 0800 GMT not long ago. And, since then, some California DXers have managed to add this elusive station to their log books. Radio Barlavento broadcasts from the city of Sao Vicente on a frequency of 3930 kHz. Give it a try!

More Datelines. Montevideo, Uruguay—Over the years there has been regular shortwave broadcast activity from this South American nation, but like Paraguay, mentioned earlier, it has been a fairly tough country to nail down with a DX logging. Therefore, it is good news to learn that a new Uruguayan outlet has been well heard lately.

The station, which identifies as *Radiodifusora Uruguay*, according to initial reports, has been found by U.S. listeners operating on 6045 kHz in the 49 meter band. Programming is in Spanish, naturally, and the station broadcasts from the Uruguayan capital, Montevideo.

Rangoon, Burma—QSL hunters for years had a real headache in Burma. Though not an especially difficult station to hear, few DXers were able to get a verification for their receptions. Things in the QSL department were black for many years. A few years back there was a break in the verification log jam and some listen-

Nineteen-year-old Charles Scott calls Tillamook, OR, home, but by the time this issue of CW is on the newsstand, he'll be serving with the U.S. Coast Guard. Charles has been DXing with his Midland 10-568 receiver for three years and numbered among his radio conquests are Radio New Zealand, Radio Nederland, and Radio RSA, South Africa.

Camden, NJ DXer Bob Newhart has been DXing off and on for more than 20 years. Though he served as SWBC editor for the American SWL Club back in 1958-61, Bob now concentrates on medium wave DXing.

ers began to receive replies to their reception reports sent to the *Burma Broadcasting Service*. But still, BBS was not considered a ready verifier.

Recent word directly from the station apparently indicates a change for the better. The BBS says, officially, that correct reception reports will be verified by QSL card if return postage, in the form of International Reply Coupons—available for 26 cents each at your post office—are enclosed. If you've been trying unsuccessfully to verify the Burmese station, now's the time to try again. If you haven't heard the station, listen on 5040 kHz during the post and pre-dawn period.

Ciudad Mante, Mexico—Absent from the

shortwaves for a while, *XECMT* is now reported back on the air on 6090 kHz. A good time to listen for this Mexican SWer is around 1530 or 1600 GMT, according to reader Glenn Hauser, who did his monitoring from Oklahoma.

Dili, Portuguese Timor—*Emissora de Radio-difusao de Timor Portuguese*, a mouthful of station name, is a dilly of a DX catch! Timor, in case you weren't sure, is a Portuguese overseas territory smack-dab in the heart of the

Indonesian archipelago. The station once was considered an ultra-rare logging, but after a frequency shift to 3668 kHz, many DXers are now reporting it. "Heard nearly daily," one Pennsylvania listener said last winter.

Reception again should improve as we move into the prime fall and winter DX seasons. As with most shortwave stations in this part of the world, your best chances for reception probably will be from about a half hour before dawn to a half hour after sunrise.

San Jose, Costa Rica—A Spanish-speaking station that has drawn DXer-attention is a new outlet known as *Radio Universitaria* in the city of San Pedro Montes de Oca. This one has been heard on 6106 kHz during the evening hours, when Latin American stations often are at their best.

As its name suggests, the station is university-operated and the programming is somewhat varied, all the way from rock music to classical, plus intellectual fare such as lectures, all in Spanish, of course. A word of caution, though. A Mexican station, *Radio Sistema de Yucatan* uses an adjacent frequency so don't confuse the two.

Ujung Padang, Indonesia—If your atlas is more than a year or so old, you probably won't find this datelined city on your maps. Look instead for Makassar, capital of the Celebes region of Indonesia. The city's name has been changed. The Indonesian government's *Radio Republik Indonesia* has added several regional broadcasting centers to serve the area's population, plus providing programs to groups of smaller local shortwave stations. One of these regional centers is located at Ujung Padang. The station can be heard many mornings, in Indonesian, on 4719 kHz about 1230 GMT.

Barquisimeto, Venezuela—Not too long ago one of the loudest and clearest of the South American stations in the 60 meter band was *Radio Juventud*, that's Spanish for Youth Radio, in Barquisimeto. Then, for some reason, the station vanished. Now, however, Radio Juventud is back and, from listening indications, with a new transmitter. The signal is even better than ever on 4900 kHz nightly. Popular music is the usual programming.

So there you have something of a sampling of what's new and interesting on the SWBC frequencies since the last COMMUNICATIONS WORLD hit the newsstands.

In terms of difficulty, these listening tips range from fairly easy-to-tune stations to extremely difficult DX. If you've at least a few months of DXing under your belt, you should be able to DX at least some of them.

WORLD TIME AT A GLANCE

The four columns under United States are, from left, PST, MST, CST and EST. For example, when it is 7 p.m. EST (1900 local), it is midnight (0000) Greenwich Mean Time.

Build it yourself!

Build this exciting color TV as part of Bell & Howell Schools' fascinating learn-at-home program employing digital electronics!

Digital clock that flashes on the screen!

Channel numbers that flash on the screen!

Automatic pre-set channel selector!

"Electro-Lab" is a registered trademark of the Bell & Howell Company.

Simulated TV picture

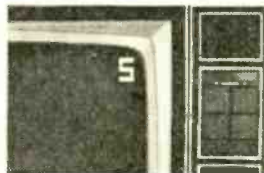

You get valuable "hands on" experience right from the very start . . . it makes learning faster and all the more enjoyable!

Digital electronics is a fascinating world to explore! It's an expanding technology that's changing not only our clocks, wristwatches and pocket calculators, but now, color TV!

By building Bell & Howell's big-screen color TV with digital features, you'll learn about this exciting field first hand. And you'll take special pride in this remarkable TV because you built it yourself!

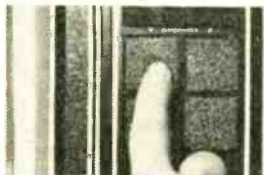

You work with a color TV that's ahead of its time . . . and learn about these exciting features:

Digital channel numbers that flash on the screen

Press the instant-on button and the channel number flashes big and clear, right on the screen — and stays there as long as you want!

Automatic pre-set channel selector

Just a push of the forward or reverse channel buttons and instantly the VHF and UHF channels come on in a pre-set sequence. All "dead" channels are skipped over.

Digital clock that flashes on screen

With just the push of a button, this TV tells the correct time. The hours, minutes and seconds appear in clear, easy-to-read digital numbers.

You need no prior electronics background . . . we help you every step of the way!

We start you off with the basics and help you work your way

up, one step at a time.

With your first lesson, you'll receive a special Lab Starter Kit that aids your understanding of electronics fundamentals . . . gives you immediate "hands on" experience. If there's a "snag," call one of our expert instructors toll-free. You can also talk shop with instructors and fellow students at our "help-sessions" scheduled in 50 cities at various times throughout the year.

Perform fascinating experiments with the exclusive Electro-Lab[®] electronics training system. It's yours to build.

Your program includes professional testing equipment to give you valuable "hands on" experience. You'll build and use a *digital multimeter*, a *solid-state oscilloscope* with "triggered sweep," and a modular *design console*. You will have the most up-to-date tools of the trade, including instruments you can use professionally after you finish the program.

The valuable skills you learn in digital electronics could lead to new income opportunities, full or part-time . . . perhaps a business of your own!

Once you've completed this learn-at-home program, you'll have the skills to service color TV's, plus repair a variety of home electronics equipment.

While many of our students do not ask for employment assistance, it is available. Of course, no assurance of income opportunities can be offered. No better or more practical at-home training in electronics is available anywhere!

Mail the postage-free card today!

This Bell & Howell Schools' program is approved by the state approval agency for Veterans' Benefits. Please check the appropriate box on the card for free information.

If card has been removed, write:

BELL & HOWELL SCHOOLS

4141 Belmont, Chicago, Illinois 60641

663R2

Admittedly, if you are a brand new SWL and don't yet feel ready to tackle the non-English speaking, lower powered stations, you may be a bit frustrated when you try to dial these DX "newies." For you, I suggest some of the International Broadcasters detailed in the Spring-Summer 1974 issue of COMMUNICATIONS WORLD. If you don't have a copy, a buck and a quarter sent to CW at 229 Park Avenue

South, New York, N.Y. 10003, will get you one, as long as back copies are available.

Clubs and Such. One of the best ways of learning what's happening in the DX world is by joining one of the DX hobby clubs active today. These clubs publish, usually monthly but in some cases as often as 34 times a year, DX bulletins filled with information on station changes and tips on how to become a more proficient DXer. Some also offer other services, including help in translating letters to and from foreign languages, informative special publications, log books, and the like.

All clubs are co-operative, non-profit ven-

TAPE THAT DX

Here are a few SWBC stations which have indicated they are definitely interested in receiving tape recordings of their signals from foreign DXers.

LATIN AMERICA

| | |
|--------------|-------------------------------|
| Br. Honduras | Radio Belize |
| El Salvador | Radio Nacional de El Salvador |
| Ecuador | Voice of the Andes, HCJB* |
| Guatemala | Radio Cultural |
| Guyana | Radio Demerara |

EUROPE

| | |
|----------------|-------------------------|
| Austria | Austrian Radio |
| Belgium | Radiodiffusion TV Belge |
| Czechoslovakia | Radio Prague |
| Denmark | Radio Denmark |
| Germany, West | Deutsche Welle |
| Hungary | Radio Budapest |
| Monaco | Trans World Radio |
| Portugal | Radio Portugal |
| Vatican State | Vatican Radio |
| Yugoslavia | Radio Belgrade |

AFRICA

| | |
|-----------------|------------------------------|
| Afars and Issas | Radio Diibouti |
| Angola | A Voz de Angola |
| Burundi | La Voix de la Revolution |
| Comoro Is. | ORTF |
| Congo Rep. | Radiodiffusion TV Congolaise |
| Dahomey | Radiodiffusion du Dahomey |
| Ethiopia | Radio Voice of the Gospel |
| Gambia | Radio Gambia |
| Mali | Radio Mali |
| Mauritius | Mauritius Broadcasting Corp. |

| | |
|------------|---|
| Rwanda | Radiodiffusion de la Republique Rwandaise |
| Seychelles | Far East Broadcasting Associates |

tures, not magazines. You pay your dues but—to whatever degree possible—they help for your active assistance. Usually this means the club members hope that you will send tips on what you are hearing to the bulletin editors. Thus, you together with all other members provide a pool of information on just what can be heard on the bands.

Some of the DX clubs are general in scope, covering most of the important DX "splinter" interests. A few are specialty clubs, stressing a particular aspect of the hobby.

Because they are all operated by volunteer labor and, now and again, even high-minded volunteers tire, there is a tendency for insta-

bility in the newer and less well established clubs. As a result, I can only mention those North American organizations which are affiliated with the Association of North American Radio Clubs, a nationwide co-ordinating body. Affiliation with ANARC requires that a particular club has demonstrated it is a solid, going venture.

If our introduction to TV DXing has caught your interest, then a club for you to consider is the Worldwide TV-FM DX Association, PO Box 163, Deerfield, IL 60015. WTFDA published a monthly bulletin printed by off-set lithography. It contains, typically, loads of information on TV and FM DXing, plus data

CW COMMUNICATIONS WORLD

Sixty-five countries heard and 40 of them QSLed; that's a good record for a 13-year-old SWL. Bobby Hobbs, Rocky Mount, NC, does his listening on a Hallicrafters SX-99 receiver.

on some of the VHF and UHF communications stations.

The North American SW Association, PO Box 8452, South Charleston, WV 25303, specializes in SWBC DXing topics. Its monthly bulletin is called *Frendx* and also is printed by the off-set method. NASWA is now offering, to club members and non-members alike, a special list of those shortwave broadcasters which air English language programs, their frequencies and times to listen. It is a "freebee" that SWLs will find useful. To get a copy, all you have to do is send a large self-addressed envelope, with 20 cents postage affixed, to the address above, asking for the list.

The Society to Preserve the Engrossing Enjoyment of DXing—no kiddin', but just call it *SPEEDX*—is another club that places strong emphasis on SWBC listening. But *SPEEDX* also has one of the most complete sections on utility type DXing in its monthly printed bulletin. The *SPEEDX* address is Box 321, Santa Ana, CA 92702. *SPEEDX* also sponsors a special service for handicapped listeners, which in some cases even makes possible the loan of listening equipment to needy disabled DXers.

The National Radio Club, PO Box 127, Boonton, NJ 07005, is devoted exclusively to medium wave DXing, listening to both the domestic and the foreign stations. Its off-set printed bulletin, *DX News*, is published 32 times a year, weekly during the heart of the winter DX season. NRC has a good track record, producing information-packed DX bulletins since 1933. The club also has available, from time to time, special log books, listings of stations with complete information on transmitting powers, addresses, and similar data.

Another medium wave-only club is the International Radio Club of America, head-

quartered at 12536 Arabian Way, Poway, CA 92064. Its bulletin, the off-set printed *DX Monitor* has been turning up in members' mailboxes 34 times a year since it was founded in 1964. IRCA has compiled an excellent *Foreign Log*, a listing of overseas medium wave stations logged in North America. In its second edition, the log is offered to non-club members for \$3.50. BCBers will find this 144-page book a big help.

The American SWL Club, 16182 Ballard Lane, Huntington Beach, CA 92649, is one of the general clubs active today. It has been around a number of years and is a consistent performer, publishing monthly off-set printed bulletins which cover SWBC DXing interests.

The only Canadian club affiliated with ANARC is the Canadian International DX Club, 169 Grandview Avenue, Winnipeg 16, Manitoba, Canada. It is a general-interest DX club but its ranks are open to non-Canadians.

The cost of a yearly membership in one of these organizations varies from club to club. A good average fee figure would be about \$10 a year, with some charging less, some more, and also depending on whether you want your bulletins sent air mail, first class, or the slower third class postage.

Send a self addressed envelope, with postage affixed, to any of the above clubs and ask them to send you information on membership. If you'd like to see a sample copy of their DX bulletins it is a good idea to enclose 50 cents for postage and handling.

I can't stress too much the usefulness of membership in one or more hobby clubs. Trying to DX seriously without the help of a good club is like trying to swat flies while blindfolded. By luck and persistence you may manage to hit your targets every now and again, but it's so much easier when you've got it all going for you! ■

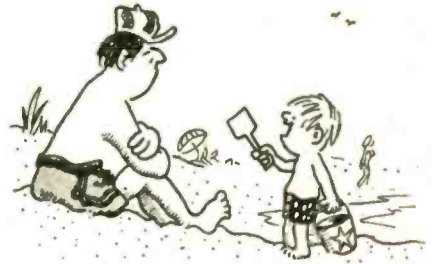

Mike Witkowski, a Wisconsin DXer, edits a section in the Newark News Radio Club's monthly bulletin. His fine listening set-up includes a Hammarlund HQ-170A and a Hallicrafters SX-101 Mark III. Mike has a word of praise for CW, saying each issue is "loaded with helpful info, pictures of DXers and tips on just about every phase of the hobby."

by Jack Schmidt

"Prospect has moved into my area and is headed north-10-4."

"I put your radio under the sand and you try and find it."

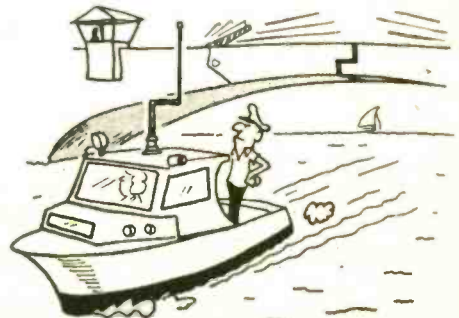

"That's right... Mayday...
M as in Mother, A as in..."

"Let me try that again... on radar,
rocks are in the middle and the
boat is abeam, or is the boat...?"

"Hey, this fish caller just quit!"

The editors' choice: Heathkit Digital Design Color TV!

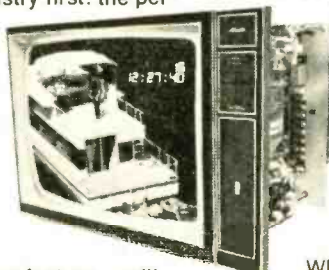

At **ELEMENTARY ELECTRONICS** they said: "The fact is, today's Heathkit GR-2000 is the color TV the rest of the industry will be making tomorrow... there is no other TV available at any price which incorporates what Heath has built into their latest color TV."

The **FAMILY HANDYMAN** reviewer put it this way: "The picture quality of the GR-2000 is flawless, natural tints, excellent definition, and pictures are steady as a rock. It's better than any this writer has ever seen."

POPULAR SCIENCE pointed out "more linear IC's, improved vertical sweep, regulators that prevent power supply shorts, and an industry first: the permanently tuned I.F. filter."

The **RADIO-ELECTRONICS** editors said the Heathkit Digital TV has "features that are not to be found in any other production color TV being sold in the U.S.:

"On-screen electronic digital channel readout... numbers appear each time you switch channels or touch the RECALL button... On-screen electronic digital clock... an optional low cost feature... will display in 12- or 24-hour format... Silent all-electronic tuning. It's done with uhf and vhf varactor diode tuners... Touch-to-tune, reprogrammable, digital channel selection... up to 16 channels, uhf or vhf... in whatever order you wish... there's no need to ever tune to an unused channel. LC IF amplifier with fixed ten-section LC IF bandpass

filter in the IF strip... eliminates the need for critically adjusted traps for eliminating adjacent-channel and in-channel carrier beats. No IF alignment is needed ever. Touch volume control... when the remote control is used... touch switches raise or lower the volume in small steps."

POPULAR ELECTRONICS took a look at the 25-in. (diagonal) picture and said it "can only be described as superb. The Black (Negative) Matrix CRT, the tuner and IF strip, and the video amplifier provide a picture equal to that of many studio monitors..."

Furthermore, the Heathkit GR-2000 is an easier kit-form TV to build. **POPULAR ELECTRONICS** pointed out that "Each semiconductor has its own socket and there are 12 factory-fabricated interconnecting cables... The complete color adjustments can be performed in less than an hour."

To sum up, **POPULAR ELECTRONICS** concluded its study by stating, "In our view, the color TV of the future is here—and Heath's GR-2000 is it!"

Why not see what the experts have seen? The Heathkit Digital Design Color TV—without question the most remarkable TV available today.

Mail order price for chassis and tube, \$659.95. Remote Control, \$89.95 mail order. Clock, \$29.95 mail order. Cabinets start at \$139.95. (Retail prices slightly higher).

Compare TV/Audio home training and you'll choose NRI.

Compare costs

Only NRI offers complete TV/Audio Servicing Courses from \$312 to \$995 . . . with easy budget terms also available. In the Master Course in color TV servicing, with its 25" diagonal solid-state color TV, you save as much as \$800 over other comparable courses. And you get a handsome TV cabinet at no extra charge!

NRI saves you money because we pay no salesmen, and we design our own kits and equipment. We pass that savings on to you.

Compare choices

NRI offers you not one but five courses to match your needs. The 65-lesson basic course costs as little as \$312. Or you can step up to a \$425

course that includes a 12" diagonal b&w TV. The 19" diagonal solid-state color TV course is \$695, the advanced color TV course for technicians (with the 19" TV) is \$535; and finally, the magnificent 25" diagonal solid-state color TV course, complete with console cabinet, oscilloscope, TV pattern generator, and digital multimeter for \$995.

Compare training

NRI maintains its own full-time staff of technical writers, editors, illustrators, development engineers and publications experts. The people who design the kits also design the lessons . . . so theory and practice go hand in hand. Along with each course, NRI provides bite-size, fully-illustrated lessons; personally graded tests; and the kind of person-to-person teaching that makes learning easier and faster.

Nearly one million students have enrolled with NRI. NRI graduates will tell you: you can pay more, but you can't buy better training.

Compare equipment

Don't just count kits. Count the experiments . . . compare the components. NRI has engineered the widest variety of electronic lab equipment ever designed for training at home. When you enroll in the Master Course in TV/Audio Servicing, you receive kits to build a solid-state, triggered sweep, service type 5" oscilloscope; color pattern generator; solid-state radio; and digital multimeter.

Send for the free NRI full-color electronics catalog. You'll find courses offered in TV/Audio Servicing, FCC License, Complete Communications Electronics, Marine and Aircraft Electronics, Mobile Communications, etc.
