New total syntheses of (+)-macrosphelides C, F and G

Tetrahedron: Asymmetry 13 (2002) 705

Hiroshi Nakamura, Machiko Ono, Yuki Shida and Hiroyuki Akita*

School of Pharmaceutical Sciences, Toho University, 2-2-1 Miyama, Funabashi, Chiba 274-8510, Japan

Total synthesis of (+)-macrosphelides C 1 (25% overall yield in nine steps), F 2 (20% overall yield in nine steps) and G 3 (22% overall yield in nine steps) were achieved from the chemoenzymatic reaction product (4R,5S)-4-benzyloxy-5-hydroxy-(2E)-hexenoate 4.

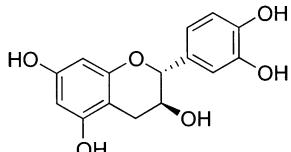

Enantioselective synthesis of (2R,3S)-(+)-catechin

Tetrahedron: Asymmetry 13 (2002) 715

Sang-sup Jew,* Doo-yeon Lim, So-young Bae, Hyun-ah Kim, Jeong-hoon Kim, Jihye Lee and Hyeung-geun Park*

Research Institute of Pharmaceutical Science and College of Pharmacy, Seoul National University, Seoul 151-742, South Korea

A highly enantioselective synthesis of catechin 1a has been accomplished by employing the asymmetric dihydroxylation, the addition of aryllithium followed by the Barton–McCombie reaction, and the intramolecular Mitsunobu reaction as the crucial steps, in nine steps from 3',4'-dihydroxymethyl cinnamate (9%, 99% ee).

Catechin 1a, 99% ee

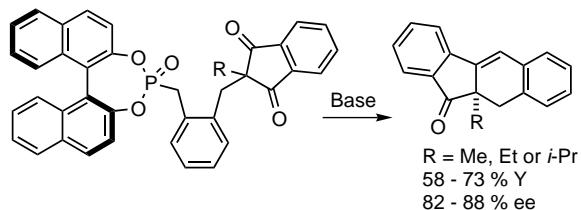

Intramolecular asymmetric olefination of binaphthyl phosphonate derivatives of 1,3-diketones
