Laboratoire des Carbocycles (Associé au CNRS), Institut de Chimie Moléculaire d'Orsay Bât. 420, Université de Paris-Sud, 91405 Orsay, France

The readily available racemic acetal underwent, in the presence of phosphite and chiral amine, a one-pot reaction to give the corresponding phosphonates with high diastereoselectivity and yields. After formylation and separation, the phosphonates furnish enantiopure 1-amino-2-methyl-cyclopropanephosphonic acids in two steps.

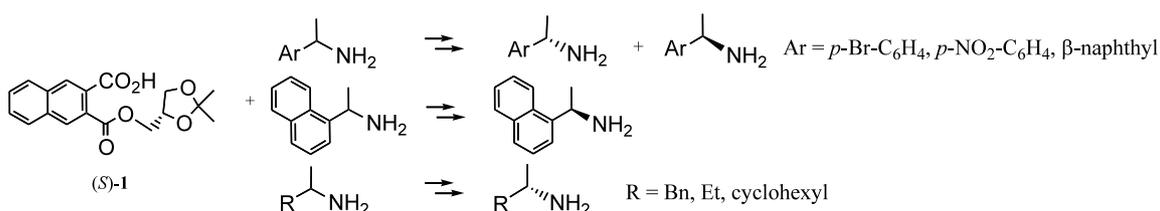

Highly efficient resolutions with isopropylidene glycerol 3-carboxy-2-naphthoate
