

**ERRATUM**

U. HORNEMANN, L. H. HURLEY, M. K. SPEEDIE and H. G. FLOSS. Isolation and absolute configuration of indolmycenic acid, an intermediate in the biosynthesis of indolmycin by Streptomyces griseus  
Tetrahedron Letters No. 26, pp. 2255 (1970)

Due to a regrettable mistake, the reference compound on which all stereochemical correlations in this paper are based has been incorrectly designated as S-(-)- rather than R-(-)-indoleisopropionic acid. As a consequence, the configurational designations of indoleisopropionic acid, indolmycenic acid and  $\beta$ -methylindolepyruvic acid should be inverted to their enantiomers and that of (2RS, 3SR)- $\beta$ -methyltryptophan should be changed to (2RS, 3RS). The figures for "indolmycin" and "natural indolmycenic acid" represent the mirror images of the naturally occurring compounds.
