ADDITION OF SULFENYL CHLORIDES TO THE CYANOGEN BOND IN ACTIVATED NITRILES

H. Kristinsson Central Research Laboratories, CIBA-GEIGY AG 4002 Basel. Switzerland

(Received in UK 23 August 1973; accepted for publication 28 September 1973)

It is known (1) that sulfenyl halides are capable of undergoing addition reactions with compounds having C=N triple bond, such as nitriles, cyanates, cyanogen and cyanogen chloride.

With nitriles, however, the addition was restricted to particular cyano compounds, such as cyanoethylenes and mercapto-cyanoethylenes.

We now wish to report the readily occurring addition of sulfur dichloride and methanesulfenyl chloride to activated cyano groups in sulfonyl cyanides I (2,3) and dichloromalonomitrile IV (4).

The reaction was carried out at 0°C in THF, using catalytical amounts of tetraethylammonium chloride.

$$R-SO_{\overline{2}}C=N + CISCI \longrightarrow (R-SO_{\overline{2}}C=N)_{2}S$$

$$\stackrel{\underline{I}}{=}$$

THIOBIS-(SULFONYL FORMIMIDOYL CHLORIDE) (II)

R	m.p.	yield(%)	compound
CH ₃	233 °	90	IIa
с ₆ н ₅	156 °	89	IIb
p-CH ₃ C ₆ H ₄	143°	90	IIe

$$\begin{array}{c} & \text{Cl} \\ \text{R-SO}_{\bar{2}}\text{C=N} + \text{ClSCH}_3 \longrightarrow \text{R-SO}_{\bar{2}}\text{C=N-SCH}_3 \\ & \underline{\text{III}} \end{array}$$

N-METHYLTHIO SULFONYL FORMIMIDOYL CHLORIDE (III)

R	m.p.	yield(%)	compound
с ₆ н ₅	80 °	93	IIIa
p-CH ₃ C ₆ H ₄	110°	91	11 1 p
p-C1C6H4	133°	7 5	IIIe

$$N=C-C(Cl)_2C=N + ClSCl \longrightarrow Cl Cl$$

$$IV$$

$$V=C-C(Cl)_2C=N + ClSCl \longrightarrow Cl$$

$$V=C-C(Cl)_2C=N + ClSCl$$

3,4,4,5-TETRACHLORO-4H-1,2,6-THIADIAZINE (V) b.p. 100 / 6mm. yield: 92 %.

All new compounds had elemental analyses and spectroscopic properties in full agreement with the assigned structures.

Compounds II, III and V are stable under normal condition.
