> PHOTODECOMPOSITION OF SELENOSULFONATES AND THEIR FACILE PHOTOADDITION TO ALKENES¹ Roman A Gancarz and John J. Kice^{*} Department of Chemistry, Texas Tech University, Lubbock, Texas 79409

<u>Abstract</u> Phenyl areneselenosulfonates (1) are very photosensitive and easily undergo photodecomposition via initial homolysis of the Se-S bond. In the presence alkenes this facile photodissociation of 1 can be used to initiate a free radical chain reaction (eq 6) that leads to addition of 1 to the alkene to form β-phenylselenosulfones (2) The photoaddition requires much shorter reaction times than the non-photolytic addition of 1 to alkenes described recently.²

Both Back and Collins^{2a} and Kobayashi and Miura^{2b} have recently reported that Se-phenyl areneselenosulfonates ($\frac{1}{2}$) will add to olefins (eq 1) to give β -phenylselenosulfones ($\frac{2}{2}$) Reactions were effected either at room temperature in methylene chloride with boron trifluoride etherate as catalyst^{2a} or at reflux in benzene^{2ab} or chloroform^{2a} without catalyst. Rather long reaction times (18-72 hrs) were required

We have found that $\frac{1}{\sqrt{2}}$ are unusually photosensitive. Thus, although a deaerated solution of $\frac{1}{\sqrt{2}}$ (0 3 <u>M</u>) in carbon tetrachloride shows no detectable decomposition after 24 hrs in the dark at room temperature, after 24 hrs under laboratory fluorescent light significant decomposition of $\frac{1}{\sqrt{2}}$ is evident, and if irradiated for 7 hrs in pyrex in a Rayonet reactor (RPR-2537 lamp) photodecomposition of $\frac{1}{\sqrt{2}}$ is complete. The identifiable products of the photodecomposition of $\frac{1}{\sqrt{2}}$ (1 mmol, Ar = p-CH₃C₆H₄) under these conditions are diphenyl diselenide (0 41 mmol) and the arenesulfonic anhydride, ArSO₂OSO₂Ar (0.32 mmol). These products are believed to arise as the result of a reaction sequence (eqs 2-5) initiated by the photodissociation of $\frac{1}{\sqrt{2}}$ into a PhSe· and an ArSO₂· radical (eq 2).³

$$PhSesO_{2}Ar \xrightarrow{h\nu} PhSe + ArSO_{2}$$
(2)

$$PhSe + PhSeSO_{a}Ar \longrightarrow PhSeSePh + ArSO_{a}$$

$$2 \operatorname{ArSO}_{2} \cdot \longrightarrow \begin{bmatrix} 0 \\ || \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix} \longrightarrow \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \operatorname{ArSOSAr} \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ || & || \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ 0 & 0 \\ \end{array}} \xrightarrow{\begin{array}{c} 0 & 0 \\ \end{array}}$$

We have also found that in the presence of suitable alkenes this facile photodissociation of $\frac{1}{4}$ can be used to initiate a free radical chain reaction (eq 6) that results in the addition of $\frac{1}{4}$ to the alkene to yield $\frac{2}{2}$ (eq 1) Products (and product yields) for photoaddition of $\frac{1}{2}$ to several simple alkenes are shown in Table I That the photoaddition is a chain reaction is shown by the fact that the reaction time required (<1.5 hrs) is considerably shorter than the 7 hrs needed for the photodecomposition of $\frac{1}{4}$ in the absence of the alkene That free

$$\operatorname{ArSO}_{2} \cdot + \begin{array}{c} c = c \\ \end{array} \xrightarrow{} \quad ArS - C - C \cdot \\ \parallel & \parallel \\ 0 \\ \end{array} \xrightarrow{} \quad ArS - C - C \cdot + \operatorname{PhSeSO}_{2} \operatorname{Ar} \xrightarrow{} \qquad ArS - C - C - \operatorname{SePh} + \operatorname{ArSO}_{2} \cdot$$

$$(6a)$$

radical intermediates are involved is further indicated by three additional observations First, 2,3-dimethyl-2-butene, an alkene that is much more reactive than styrene in electro-philic additions,^{5a} including the addition of arenesulfenyl^{5a} and benzeneselenenyl^{5b} chlorides, but much less reactive than styrene in free radical addition reactions,^{5c} does not yield a photoadduct with $\frac{1}{4}$ Second, if an initial [1-hexene]/[$\frac{1}{4}$] ratio of 10 1 is employed, adducts ArSO₂(CH₂CH) x SePh were x > 1 are formed along with the 1 1 alkene- $\frac{1}{4}$ adduct shown in Table I

Third, if the alkene used is 1,1-diphenylethylene, where the resonance stabilization by the two phenyl groups of the $ArSO_2CH_2CPh_2$ radical formed in eq 6a is apparently sufficient to make that radical too unreactive toward $\frac{1}{2}$ for reaction 6b to proceed at a sufficiently rapid rate, one finds (a) that photodecomposition of $\frac{1}{2}$ is retarded (reaction time, 12 hrs) and (b) that a major product is the unsaturated sulfore $\frac{3^6}{10}$ (0 33 mmol/mmol $\frac{1}{2}$ decomposing), $\frac{3}{2}$ is thought to be formed by the reaction sequence $\frac{7}{100}$

$$\operatorname{ArSO}_2 + \operatorname{CH}_2 = \operatorname{CPh}_2 \longrightarrow \operatorname{ArSO}_2 \operatorname{CH}_2 \operatorname{CPh}_2 \xrightarrow{\operatorname{PhSe}} \operatorname{ArSO}_2 \operatorname{CH} = \operatorname{CPh}_2 + [\operatorname{PhSeH}]$$

Photoaddition of $\frac{1}{2}$ (Ar = p-tolyl) to norbornadiene (eq 7) gives a 70% yield of a mixture of 1 1 adducts, consisting primarily (85-90%) of exo (4a) and endo-5-phenylseleno-exo-3nortricyclyl p-tolyl sulfone (4b), but also containing a small amount (10-15%) of 3-phenylseleno-5-nobornen-2-yl p-tolyl sulfone (5)⁹ The ratio of 5/4 is almost identical to that

n

(a) Photoadditions carried out by photolyzing a CCl₄ solution of $\frac{1}{4}$ (0.3 M) and the alkene (0 3-0.6 M) in pyrex for 1.5 hr. in a Rayonet reactor (RPR-2537 lamp) (b) All adducts gave nmr, ir, and mass spectra consistent with assigned structures plus satisfactory C,H analyses. Structures confirmed by oxidation of 2 to corresponding selenoxide which then underwent elimination to give unsaturated sulfone shown in right hand column (c) The coupling constant (J = 15 Hz) for the two olefinic protons in this sulfone shows it to be the E-isomer (d) Ref 8

found by Cristol and Davies^{10a} for the photoaddition of $PhSO_2Br$ to norbornadiene at similar dilution in chlorobenzene as solvent and indicates that the reactivity of 1 towards radicals in eq 6b is apparently very similar to that of $ArSO_2Br$. Cristol <u>et al</u> ^{10b} also report a ratio for <u>exo-5-bromo</u> to <u>endo-5-bromo</u> isomers (4 3) not greatly different from the ratio of 4a to 4b (7 6) found¹¹ for eq 7

Photoaddition of $\frac{1}{2}$ to alkenes is much faster than the additions of $\frac{1}{2}$ to the same substrates described by Back and Collins^{2a} and Kobayashi and Miura.^{2b} Where the two reactions give the same product (addition of $\frac{1}{4}$ to cyclohexene, or to styrene in refluxing benzene or chloroform) obotoaddition would therefore seem the method of choice for the synthesis of $\frac{2}{2}$ Civen the sensitivity of solutions of $\frac{1}{4}$ to ordinary room light, one must also wonder whether photoaddition could be playing any role in some of the reactions thought² to be purely thermal processes. Reexamination of these reactions under conditions where the solution is shielded from light may therefore be warranted

- (3) da Silva Correa and Waters⁴ have shown that reaction of two ArSO₂ radicals leads to the formation of ArS(0)OSO₂Ar, and this mixed anhydride then breaks down immediately to give the sulfonic anhydride ArSO₂OSO₂Ar and other product(s) In their system the other product was the thiolsulfonate ArSO₂SAr, but this is not found in the present case. Instead one has one or more rather unstable sulfur and selenium containing compounds that have so far resisted our efforts to isolate them in a pure form
