W. Schwack, Institute of Pharmacy and Food Chemistry, University of D-8700 Würzburg, FRG

N-Substituted phthalimides reacted with cyclohexene on irradiation at $\lambda > 280$ nm by way of para-cycloaddition, yielding N-substituted tricyclo(4.2.2.0)dodeca-8,11-diene-9,10-dicarboximides. The N-(trichloromethylthio)phthalimide gave the cycloadduct as by-product, while for N-methyl- and N-phenylphthalimide the para-cycloaddition predominated.
