CORRIGENDUM

R. H. Weigmann and E.-U. Würthwein, *N,N*-bis(trimethylsilyl)ynamines,
Tetrahedron Lett., **1989**, *30*, 6147

The ^{13}C NMR data in table 2 are partly incorrect. The correct values are:

| | | ^{13}C NMR ppm | |
|-----------|-------------------|----------------------------|-------------------|
| | | $\beta\text{-C}$ | $\alpha\text{-C}$ |
| <u>1a</u> | Ph | 56.47 | 94.36 |
| <u>1b</u> | tBu | 62.77 | 81.32 |
| <u>1c</u> | SiMe ₃ | 54.56 | 107.70 |
| <u>1d</u> | CH ₃ | 48.35 | 81.12 |

The condensation reaction of the title compounds with simple aldehydes gives β -substituted acrylonitriles, not the isomeric *N*-methyleneynamines, as indicated on page 6149 (last paragraph).
