CORRIGENDUM

H. K. Patel, J. D. Kilburn, G. J. Langley, P. D. Edwards, T. Mitchell and R. Southgate,
Synthesis of an unnatural product – 4,4' biaryl formation as a macrocyclisation step,
Tetrahedron Letters, 1994, 35, 481-484.

In the discussion of the mass spectrometry results in the final paragraph of the paper, the reference to peaks in the negative ion FAB MS, corresponding to macrocycle **1**, M^- , and to $(\text{macrocycle} + \text{carboxylate anion} + K^+)^-$, should refer to macrocycle **1**, $(M - H)^-$, and to $(\text{macrocycle} + \text{carboxylate anion} + \text{potassium} - H)^-$ respectively.
