CORRIGENDUM

P. G. Andersson, On the stereochemical outcome of the McMurry coupling of acetophenone. A reinvestigation, *Tetrahedron Letters*, **1994**, *35*, 2609–2610.

Dr P. Weyerstahl has recently informed us that he had previously observed that the major product formed during the McMurry coupling of acetophenone is the *cis* isomer (*Liebig Ann. Chem.*, **1981**, 591. *Chem. Ber.*, **1982**, *115*, 3697). These papers were not included in our reference list, and we apologize for this oversight.
