The authors regret to have omitted, because of space limitations, referring that a 3-(methoxycarbonylmethyl)cyclohexanone was previously obtained by Ziegler¹ from a 6-methylidenebicyclo[4.2.0]octan-2-one through an Haller–Bauer fragmentation reaction of a bicyclo[4.2.0]octan-2,8-dione intermediate. Other applications or modifications of the Ziegler procedure were also described in the literature.²
