Improved syntheses of α-BOC-aminoketones from α-BOC-amino-Weinreb amides using a pre-deprotonation protocol

Tetrahedron Letters 43 (2002) 8223

Jinchu Liu,* Norihiro Ikemoto,* Daniel Petrillo and Joseph D. Armstrong, III

Process Research, Merck Research Laboratories, PO Box 2000, Rahway, NJ 07065, USA

α-BOC-Aminoketones were prepared in good yields from α-BOC-amino-Weinreb amides that contain an exchangeable amino proton. By first deprotonating the amino group with simple bases, only a stoichiometric amount of nucleophile is needed. The procedure is more economical to run and purification is easier.

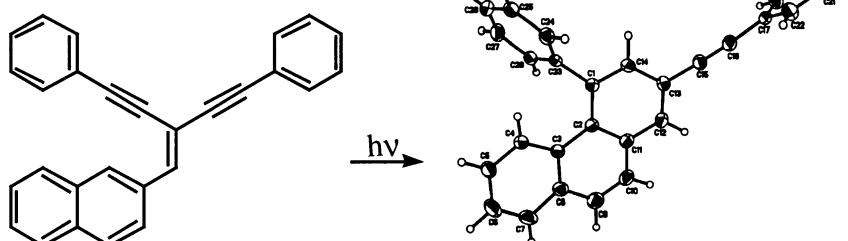

Photocyclization of a naphthyl substituted Y-ynye

Synthesis of pyrimido[4,5-*b*]indoles and benzo[4,5]furo[2,3-*d*]-pyrimidines via palladium-catalyzed intramolecular arylation

Tetrahedron Letters 43 (2002) 8235

Yue-Mei Zhang,* Thomas Razler and Paul F. Jackson

Johnson & Johnson Pharmaceutical Research and Development, LLC, 1000 Route 202, Raritan, NJ 08869, USA

Various pyrimido[4,5-*b*]indoles and benzo[4,5]furo[2,3-*d*]pyrimidines were synthesized via a palladium-catalyzed intramolecular arylation of pyrimidine substrates. Thus, 4-aryloxy- or 4-anilino-5-iodopyrimidines were treated with Pd(OAc)₂(PPh₃)₂ and base in DMF to give the regioselective cyclized heterocycles.

^aMedicinal Chemistry Division, Central Drug Research Institute, Lucknow 226 001, India

^bNMR Lab, Division of RSIC, Central Drug Research Institute, Lucknow 226 001, India

A versatile method for the solid phase synthesis of oxazolidin-2-ones has been described. A resin bound phenolic group was treated with (\pm)-epichlorohydrin followed by opening of the epoxide ring with sodium azide. The resulting 1-azido-3-aryloxypropan-2-ol was treated with *p*-nitrophenylchloroformate and subsequent Staudinger's cyclization using PPh₃ yielded the 5-substituted oxazolidinone. Finally, additional diversity at position 3 was introduced by treating the 5-substituted oxazolidinone with alkyl halides in the presence of NaH to give the desired compounds in high yields and purities.

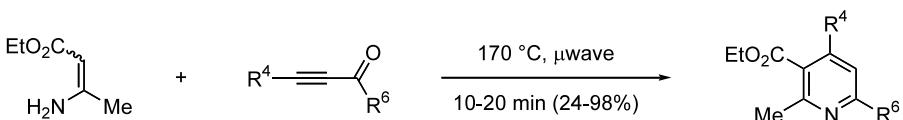

A new one-step synthesis of pyridines under microwave-assisted conditions

Tetrahedron Letters 43 (2002) 8331

Mark C. Bagley,* Rebecca Lunn and Xin Xiong

Department of Chemistry, Cardiff University, PO Box 912, Cardiff CF10 3TB, UK

Highly substituted pyridines were prepared in good yield and with total regiocontrol in a single synthetic step by the microwave-assisted Michael addition-cyclodehydration of ethyl β -aminocrotonate and an alkynone.

Direct condensation of carboxylic acids with polyethylene glycols catalyzed by Sc(OTf)₃

The first esterification of a soluble polymer by condensation of equimolar amounts of carboxylic acids and polyethylene glycols is achieved using catalytic Sc(OTf)₃ in toluene.

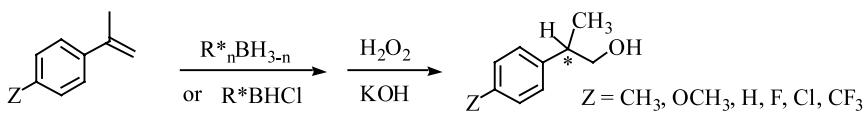

Electronic effects in asymmetric hydroboration

Tetrahedron Letters 43 (2002) 8339

Charles M. Garner,* Shirley Chiang, Matthew Nething and Robert Monestel

Department of Chemistry, Baylor University, Waco, TX 76798, USA

The asymmetric hydroboration of a series of *para*-substituted 1-arylpropenes with four chiral boranes was studied. A significant electronic effect was observed with a chloroborane–ether complex, but not for any simple alkylboranes.

A new tag reagent for efficient capping and easy separation of deletion peptides

Tetrahedron Letters 43 (2002) 8343

Nikos Vavourakis,^a Leondios Leondiadis^b and Nikolaos Ferderigos^{a,*}

^aLaboratory of Organic Chemistry, Chemistry Department, University of Athens, Athens 157 71, Greece

^bMass Spectrometry and Dioxin Analysis Laboratory, IRRP, National Centre for Scientific Research ‘Demokritos’, Athens 153 10, Greece

N-(Biphenyl-4-carbonyl)-L-proline was tested as a new capping reagent. The reagent was successfully used in the synthesis of the classic difficult sequence, acyl carrier protein (65–74). Due to both its reactivity and its lipophilic nature, it can be used as a tag for the deletion peptides in the sequence dependent difficult synthesis and in the automated synthesis of a longer peptide, facilitating the purification of the target peptide.
