

### CORRIGENDA

EDWARD C. TAYLOR, JOSEPH L. PONT and JOHN C. WARNER, Heterodienophilic Intramolecular Diels-Alder Reactions of 1,2,4-Triazines. Synthesis of Novel Polycyclic Condensed Pyrazines and Lumazines, *Tetrahedron* 43, 5159-5168 (1987). The following paragraph was inadvertently omitted from the above manuscript; it should appear at the end of page 5159 and before the beginning of the text on page 5162.

1,3-Dimethyl-7-hydroxy-6-azalumazine (5) was smoothly converted to the corresponding 7-chloro derivative 6 with phosphorus oxychloride.<sup>11</sup> Nucleophilic displacement of chloride ion with sodium 2-cyanophenoxide afforded 1,3-dimethyl-7-(2'-cyanophenoxy)-6-azalumazine (7) in excellent yield. Compound 7 underwent intramolecular cycloaddition in refluxing nitrobenzene over the course of 2 weeks to yield the condensed lumazine 8 in modest yield (Scheme 1).
