### THEORETICAL AND EXPERIMENTAL STUDIES OF THE 3-AZA-CLAISEN REARRANGEMENT.

John C. Gilbert\* and Kimberley R. Cousins, Department of Chemistry and Biochemistry, The University of Texas at Austin, Austin, TX 78712.

MNDO molecular orbital calculations support a spin-paired chair-like transition state for the 3-aza-Claisen rearrangement, and yield the prediction that an anionic substituent on the nitrogen atom reduces the activation energy for the process. Attempted experimental demonstration of this prediction has been unsuccessful.
