Studies into reactions of *N*-methylmorpholine-*N*-oxide (NMNO) and its hydrates with cyanuric chloride

Tetrahedron 58 (2002) 9809

Thomas Rosenau,* Antje Potthast and Paul Kosma

Christian-Doppler-Laboratory, Institute of Chemistry, University of Agricultural Sciences, Muthgasse 18, A-1190 Vienna, Austria

While the solid–solid phase reaction of cyanuric chloride with NMNO results in a thermal explosion, the controlled reaction with anhydrous NMNO in solution gives a neat deoxygenative demethylation, whereas the reaction with the monohydrate causes deoxygenation under formation of HOCl.

Magnesium cation-induced *anti*-aldol selective tandem Michael/aldol reaction

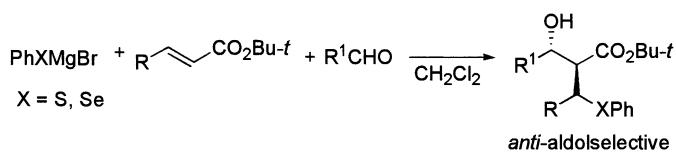

Tetrahedron 58 (2002) 9817
