Department of Chemistry, University of Minnesota, 207 Pleasant Street S.E., Minneapolis, MN 55455-0431, USA

A 20-step total synthesis of (\pm)-arisugacin A with an overall yield of 2.1% is described here in detail. This synthesis features a formal [3+3] cycloaddition reaction of α,β -unsaturated iminium salts with 6-aryl-4-hydroxy-2-pyrones through a highly stereoselective 6 π -electron electrocyclic ring-closure of 1-oxatriene.
