The labelling and coupling patterns of secobotrynediol, biosynthesised from [1-¹³C] and [1,2-¹³C₂]-acetate by the fungus *B. cinerea*, have been used to define the mode of formation and the biogenetic origin of this compound.

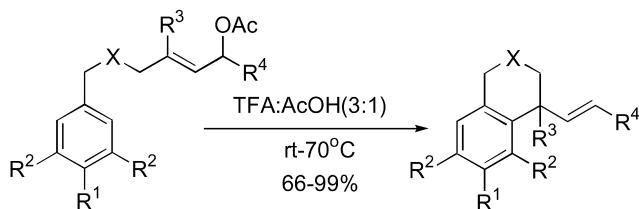

**TFA-mediated intramolecular Friedel–Crafts reaction.
An efficient metal and halogen free route to stereoselective
synthesis of benzocycles**

07065, USA

Compound **1** is a uniquely substituted ketone prepared via addition of a thiazole anion to an aromatic nitrile in good overall yield. An exploration into the generality of the addition of thiazole anions to nitriles allowed us to make a variety of thiazole ketones in good to excellent yield. The non-odorous thiolate mediated demethylation reaction used in the synthesis of **1** is also presented.

Regioselective synthesis and metallation of tributylstannylfluoropyrazines. Application to the synthesis of some new fluorinated liquid crystals diazines. Part 34
