REPORT

Enantioselective synthesis of steroids

Anne-Sophie Chapelon, Delphine Moraléda, Raphaël Rodriguez, Cyril Ollivier* and Maurice Santelli*

pp 11511–11616

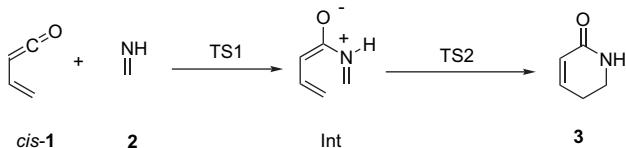

ARTICLES

A theoretical study of the influence of BF_3 on the reaction path of the [4+2] cycloaddition of vinylketene with formaldimine

Angeles Peña-Gallego,* Jesús Rodríguez-Otero and Enrique M. Cabaleiro-Lago

pp 11617–11621

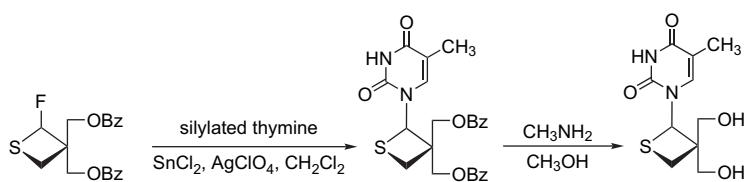

The influence of BF_3 on the mechanism of the [4+2] cycloaddition of vinylketene with formaldimine was theoretically studied, analyzing the *pericyclic* or *pseudopericyclic* character of the cyclization step.

Synthesis of novel well-defined chain-end-functionalized polystyrenes with dendritic chiral ephedrine moieties and their applications as highly enantioselective diethylzinc addition to *N*-diphenylphosphinoyl arylimines

Ashraf A. El-Shehawy

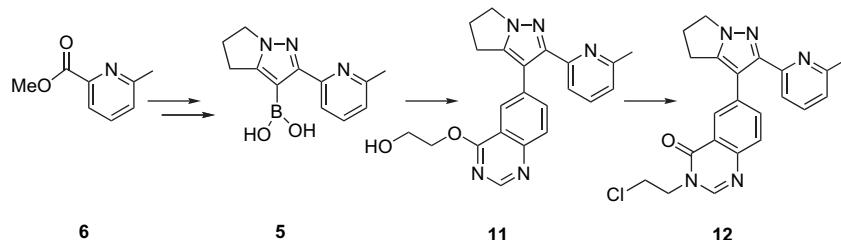

A novel series of well-defined chain-end-functionalized polystyrenes having 2, 4, 8 and, 16 chiral ephedrine moieties dendritically distributed at the chain ends were prepared and evaluated as chiral ligands in the diethylzinc addition to a series of *N*-diphenylphosphinoyl imines. Among them, chiral dendrimer having eight ephedrine moieties at the chain-ends of **PS(Ephed)₈** afforded the addition products with high enantioselectivities (up to 93% ee).

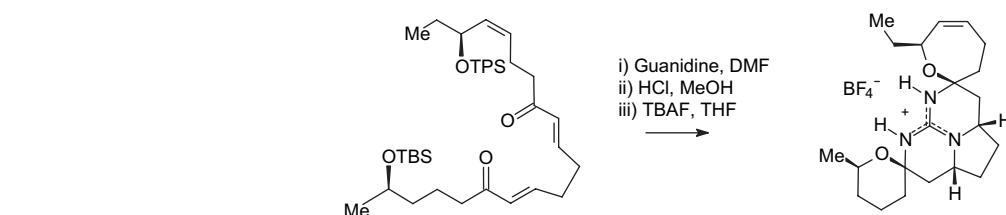

A concise synthesis of quinazolinone TGF- β RI inhibitor through one-pot three-component Suzuki–Miyaura/etherification and imidate–amide rearrangement reactions

COVER

A synthesis of the guanidine containing marine natural product crambescidin 359 is reported. The synthesis takes as its inspiration a proposed biosynthesis of the natural product, with the key step being a double Michael addition of guanidine to a suitably functionalised bis-enone. *Tetrahedron* **2007**, *63*, 11771–11780.
