Corrigendum

Corrigendum to "Manganese(III)-mediated oxidative free-radical cyclisations of allenyl malonates" [Tetrahedron 65 (2009) 10882–10892]

Lucy Curry, Michal S. Hallside, Luke H. Powell, Simon J. Sprague, Jonathan W. Burton *

The authors inadvertently omitted to reference important work on the oxidative radical cyclisations of malonates bearing allylsilanes, mediated by ferrocenium hexafluorophosphate. Ref. 8 should read:

8 (a) Jahn and co-workers have elegantly demonstrated this strategy in the cyclisation of a number of malonates onto allylsilanes in the presence of LDA and ferrocenium hexafluorophosphate. For example, the malonate **12** [R=Et, R′=Me; (*E*)/(*Z*), 1:10] gave the vinyl cyclopentene **16** (R=Et) in 98% yield see: Jahn, U.; Hartmann, P.; Kaasalainen, E. *Org. Lett*. **2004**, *6*, 257–260; (b) It has previously been reported that exposure of β-dicarbonyl and related compounds to allylsilanes and manganese(III) acetate provides products in which the silyl group is retained, see: Warsinsky, R.; Steckhan, E. *J. Chem. Soc., Perkin Trans. 1* **1994**, 2027–2037; Hwu, J. R.; Chen, C. N.; Shiao, S. S. *J. Org. Chem*. **1995**, *60*, 856–862.
