

## Erratum

In the June 2000 issue, in the article “Genomewide Search for Type 2 Diabetes Susceptibility Genes in Four American Populations,” by Ehm et al. (66:1871–1881), the peak marker, on chromosome X, for linkage to either

diabetes alone or impaired glucose homeostasis and diabetes should be DXS1047 at position 153.2 cM (not GATA172D05 at 130.3 cM). The authors regret this error.
