

Erratum

In the April 2005 issue of the *Journal*, in the article entitled “Strong Evidence That *KIAA0319* on Chromosome 6p Is a Susceptibility Gene for Developmental Dyslexia,” by Cope et al. (76:581–591), the authors incorrectly cited the study of Chapman and colleagues (*Am J Med Genet B* 131:67–75) as supporting evidence of linkage between components of reading dis-

ability and chromosomes 2p, 6p, and 18p but not 15q. The converse of each of these claims is correct; that is, the study of Chapman and colleagues did not support evidence of linkage to 2p, 6p, and 18p but did support linkage to 15q. The authors apologize for this error, which was brought to their attention by the authors of that study.
