This journal is of very broad interest to the large technical community concerned with the development of an understanding of the phenomenon of adhesion and with the practical applications of adhesives. The art of adhesion is maturing into a science which requires a broad, coordinated interdisciplinary effort to provide an understanding of its complex nature and numerous manifestations. *The Journal of Adhesion* provides a forum for discussion of the basic problems in adhesion and adhesives. Papers are considered relevant if they contribute to the understanding of the response of a composite structure (not necessarily a composite material) to a mechanical influence. Experimental papers are required to incorporate theoretical background and theoretical papers must relate to practice.
