

## NEWS RELEASE

### **Graduate Education Network S.A.**

Now ready for distribution are 16 mm films and video tapes of all symposia at the *8th International Congress of Biochemistry* held September 1970 in Switzerland. These motion pictures, dealing with all the biochemical subdisciplines covered during the meeting, constitute the *only record of the proceedings of the congress*. These motion pictures are ready for delivery nearly a year before printed proceedings would normally have been distributed.

Undertaken between the *Graduate Education Network* and the *Swiss Biochemical Society*, this communications experiment will allow scientists worldwide who were unable to attend the meetings to have access to most speakers presenting papers at the congress. These films constitute a new source of informative and stimulating classroom material in addition to opening a new era in communications.

A significant contribution to the proliferation of the latest experimental information is being made by introducing leading authorities into laboratories and institutes which they might not normally visit. These motion pictures are being made available worldwide in films and tape from *Graduate Education Network* and may be purchased singly or in specially priced symposia packages.

For further information, write or phone the *Graduate Education Network S.A.*, 4 Cours des Bastions, 1205 Geneva, Switzerland (telephone 24.23.06), or the *Graduate Education Network Inc.*, 801 Welch Road, Palo Alto, Calif. 94304 U.S.A. (telephone 415-326-4731).
