

EDITORIAL

The widening scope of steroid endocrinology has increased the areas of common interest between this field and that of protein and polypeptide hormones such as ACTH, Angiotensin, FSH, LH chorionic gonadotropin, Releasing Hormones as well as prostaglandins. The editors of the *Journal of Steroid Biochemistry* have consequently decided to open the pages of the Journal to publications dealing with protein and polypeptide hormones related to steroid endocrinology, and invite investigators to submit original manuscripts on these subjects.
