

ANNOUNCEMENT

ENDOCRINE APPROACH TO MALE CONTRACEPTION

The 5th Annual Workshop on the Testis

Geilo, Norway, April 2-5, 1978

The 5th NICHD-sponsored workshop on testicular function, focused this year on the "Endocrine Approach to Male Contraception" will be held at Geilo, Norway, April 2-5, 1978. The workshop will focus on various points of attack in the search for male hormonal contraceptives. Thus, sessions will deal with the inhibition of gonadotrophins, Leydig cells, seminiferous tubules, and epididymis. Furthermore, methods for evaluation of antifertility agents in the male will be discussed. The meeting will be limited to 100 participants.

If you are interested in contributing to the workshop, please submit for consideration an abstract of research activities. Presented papers including the discussions will be published within 90 days after the meeting.

ERRATA

Volume 8, number 5, pp. 537-544 (1977), *The Fetal Hypothalamus and Pituitary During Growth and Differentiation*, D. F. Swaab, F. W. van Leeuwen, J. Dogterom and W. J. Honnebier.

The publisher regrets that the following corrections were not included in the above paper:

1. Recent data make it unlikely that the measured compound is indeed AVT. So read instead of AVT: "AVT-like".
2. Introduction, line 25: Somatostatin instead of Somatomedin.
3. Legend to Fig. 1, line 19: on day 19 (S, drawn line) instead of 5.
