

BIOCHIMIE 1985, TOME 67 No. 5  
SOMMAIRE

CONTENTS

<i>News</i>	
Receptors-cell response coupling in the action of Ca <sup>2+</sup> -mobilizing hormones in the liver	IX
<i>Colloquia and Congresses</i>	XI
<i>Literature</i>	XVII
<i>THE APPLICATION OF COMPUTER METHODS TO MOLECULAR BIOLOGY</i>	
I—Operating systems applied to sequence data banks.	
A user-friendly biological workstation. M. and J. NANARD	429
Systems analysis and nucleic acid sequence banks. M. GOUY, C. GAUTIER and F. MILLERET	433
Computer generation and statistical analysis of a data bank of protein sequences translated from Genbank. J.-M. CLAVERIE, I. SAUVAGET and L. BOUGUELERET	437
II—Graphical sequence presentation.	
Graphical coding of nucleic acid sequences. E. MIZARJI and J. NINIO	445
III—Statistical methods applied to sequence analysis.	
Non-parametrical statistics for nucleic acid sequence studies. C. GAUTIER, M. GOUY and S. LOUAIL	449
Theory of degenerate coding and informational parameters of protein coding genes. A. K. KONOPKA	455
The missense errors in protein can be controlled by suractive synonymus codon usage at the level of transcription. A. K. KONOPKA and V. BRENDEL	469
The origins of the strategy of codon use. A. HÉNAUT, J. LIMAIEM and P. VIGIER	475
IV—General presentation of computer methods.	
OURCIN: a tool to build expert systems. J. QUINQUETON	485
Statistico-syntactic learning techniques. H. SOLDANO and J.-L. MOISY	493
Structural descriptions. Learning and discrimination of these descriptions. O. GASCUEL	499
Sequence representation. F. VAN BOCKSTAELE	509
V—Classical methods and learning techniques applied to the analysis of sequence data.	
Extraction of symbolic patterns common to a family of biosequences. W. SAURIN and P. MARLIÈRE	517
Prediction of secondary structures in nucleic acids: algorithmic and physical aspects. M. GOUY, P. MARLIÈRE, C. PAPANICOLAOU and J. NINIO	523
Localization of the initiation of translation in messenger RNAs of prokaryotes by learning techniques. F. RODIER and J. SALLANTIN	533
Application of learning techniques to splicing site recognition. J. QUINQUETON and J. MOREAU	541
Search for promoter sites of procaryotic DNA using learning techniques. J. SALLANTIN, J. HAIECH and F. RODIER	549
Computer search of calcium binding sites ina gene data bank: Use of learning techniques to build an expert system. J. HAIECH and J. SALLANTIN	555
<i>Index of advertisers</i>	561
