This proceedings article has been retracted at the request of the authors as most of the data presented had already appeared in a paper entitled “Vitamin D decreases NFκB activity by increasing IκBα levels”. M Cohen-Lahav, S Shany, D Tobvin, C Chaimovitz and A Douvdevani, *Nephrol Dial Transplant* 2006, 21: 889–897, doi:10.1093/ndt/gfi254, due to their misunderstanding of the respective publishing and copyright policies of the journal and a conference proceedings publication.
