The Micro User welcomes program listings and articles for publication. Material should be typed or computer-printed, and preferably double-spaced. Program listings should be accompanied by cassette tape or disc. Please enclose a stamped, self-addressed envelope, otherwise the return of material cannot be guaranteed. Contributions accepted for publication will be on an all-rights basis.

© 1984 Database Publications Ltd. No material may be reproduced in whole or in part without written permission. While every care is taken, the publishers cannot be held legally responsible for any errors in articles, listings or advertisements.

The Micro User is an independent publication and neither the BBC nor Acorn Computers Ltd are responsible for any of the articles in this issue or for any of the opinions expressed.

News trade distribution:
Europress Sales and Distribution Limited,
11 Brighton Road, Crawley, West Sussex
RH10 6AF. Circulation 0293 27053.

SPECIAL OFFER!

All the programs in this issue are available on tape or disc – and it's the best value ever in educational software.

– See coupon on
Page 73

4 Explorer Eddie

Trapped in the deepest recesses of a monster-infested mine, you have to battle your way upwards through 12 levels. Superb graphics and cunningly constructed screens set new standards.

10 Masterspy

Based on Mastermind, this intriguing brainteaser is set in the deadly world of counter espionage.

14 Draw

Brilliant simulation of draw poker guarantees hours of enjoyment for would-be Mavericks.

22 China Drop

A baby-sitting program might seem the ideal solution for insomniacs, but not when the baby is two-year-old Tobermory, intent on destroying his parents' precious china...

28 White Widow

There aren't fairies at the bottom of your garden, but there is Arachnida. This aged spider needs your help in capturing the fleas she needs for food.

34 Bill Bounces Back

Continuing the saga of our intrepid Spaceman Bill. This time he's trying to make his fortune from the teapots of the planet Neegus. Of course he hadn't reckoned on the cloudhoppers...

41 Software Guide

Comprehensive survey of all the latest games software for the BBC Micro will let you find exactly the program you want.

45 Splat

A cat and mouse maze game for all ages, Splat's simple layout hides a compulsive, action-packed game.

47 Fair Play

All the fun of the fair in this simulation of a shooting gallery. To achieve a respectable score you'll have to earn your ammunition – and that's no simple matter.

50 Crown Green

A vivid reconstruction of the gentle game of crown green bowling. This program captures all the grace and skill of the original.

54 Sevens

Two player simulation of the standard card game. It needs skill and downright cunning if you are to rid yourself of all your cards before your opponent.

60 Cribbage

Our version of the classic pub card game is certain to give you all the fun and frustration of the real thing.

68 Which Way?

Perplexing, puzzling, but always highly pleasurable, this original game of strategy for two players will really get you thinking.

74 Yams

Based on the traditional dice game Yahtzee, it's easy to learn, but its subtle tactics will keep you intrigued.

80 Patience

Simulation of the solo card game. Like the original it offers the same need for careful thought, the same excitement as you near the end.

NOW GET OUT

HAVE you got problems! Trapped in the darkest recesses of a monster-infested mine, you have to battle your way upwards through 12 levels.

There is a lift to help, but you'll have to collect all the keys on each level before you can use it safely.

You can walk on and jump off the ledges and conveyor belts found on all levels, but the bricks cover the cavern floor completely. Be careful though – if you jump too far you're dead!

You'll have to watch the conveyor belts as well – you can't walk against the direction of travel. You'll stand still if you try!

And, of course, the final level has its own special trick, but you wouldn't want us to spoil it by telling, would you?

You can even tailor the game to your own design.

You'll have to change the user-defined characters 239 to 254 at the correct place in the program for the level being altered, then redefine logical colours 2 and 1.

Next, give the start position and direction of movement for the two hazards.

You must make sure that if the hazard moves horizontally there is some sort of ground beneath it and that there is a gap in the ground where it is to stop.

If the hazard moves vertically there must be pieces of ground where the hazard is to stop.

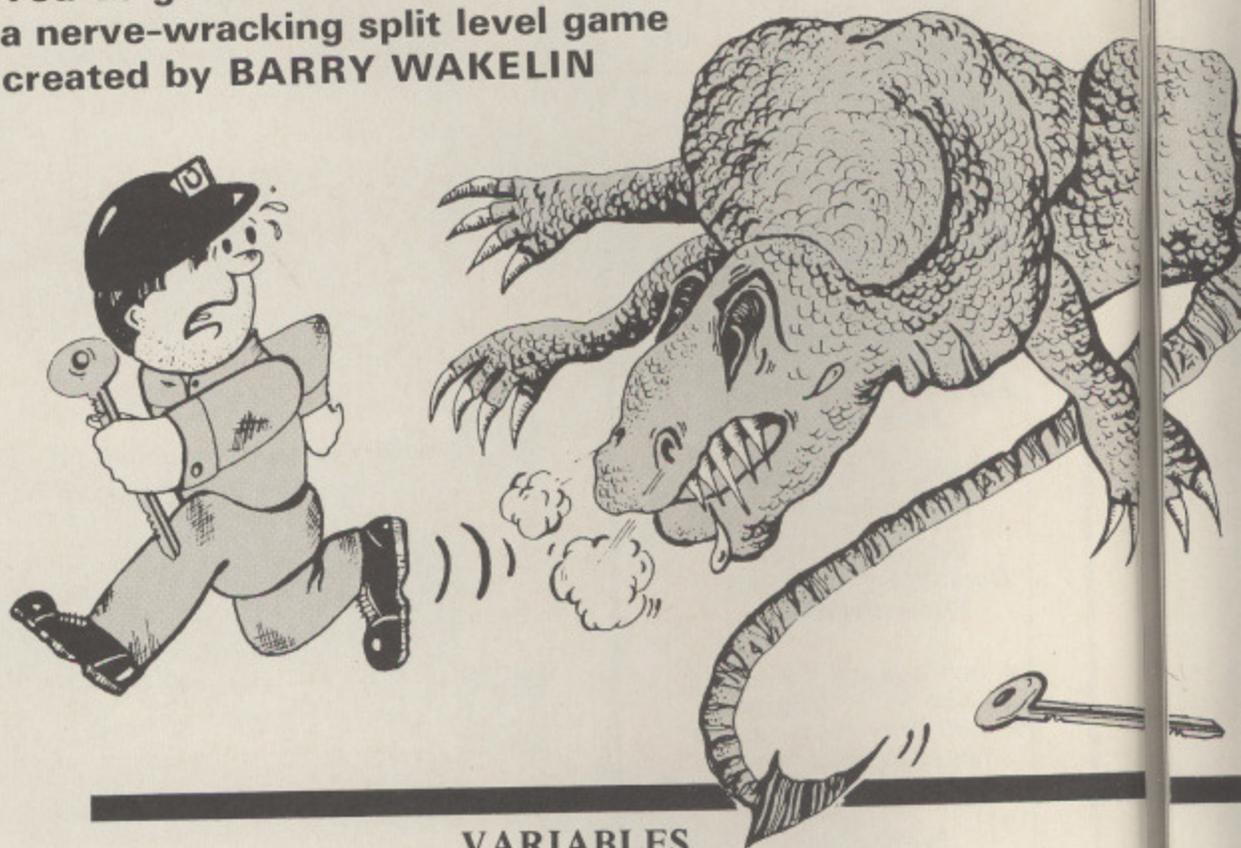

Next, give the name of this level. Then set the number of pieces of ground. Print, at their appropriate positions, the keys(K\$), stalactites(SS) and trees (T\$).

Now go to the line where the positions of that level's pieces of ground are stored and enter your own data. Each piece of ground is stored as X position, Y position, length and type of ground.

Type 1 is a ledge, type 2 is brick, type 3 is a left conveyor and type 4 is a right conveyor.

There are 24 different monsters, each of 2 x 2 character size. All this takes up rather a lot of memory, so take care not to add unnecessary spaces and so on when typing it in.

You've got monster-size problems in Explorer Eddie – a nerve-wracking split level game created by BARRY WAKELIN

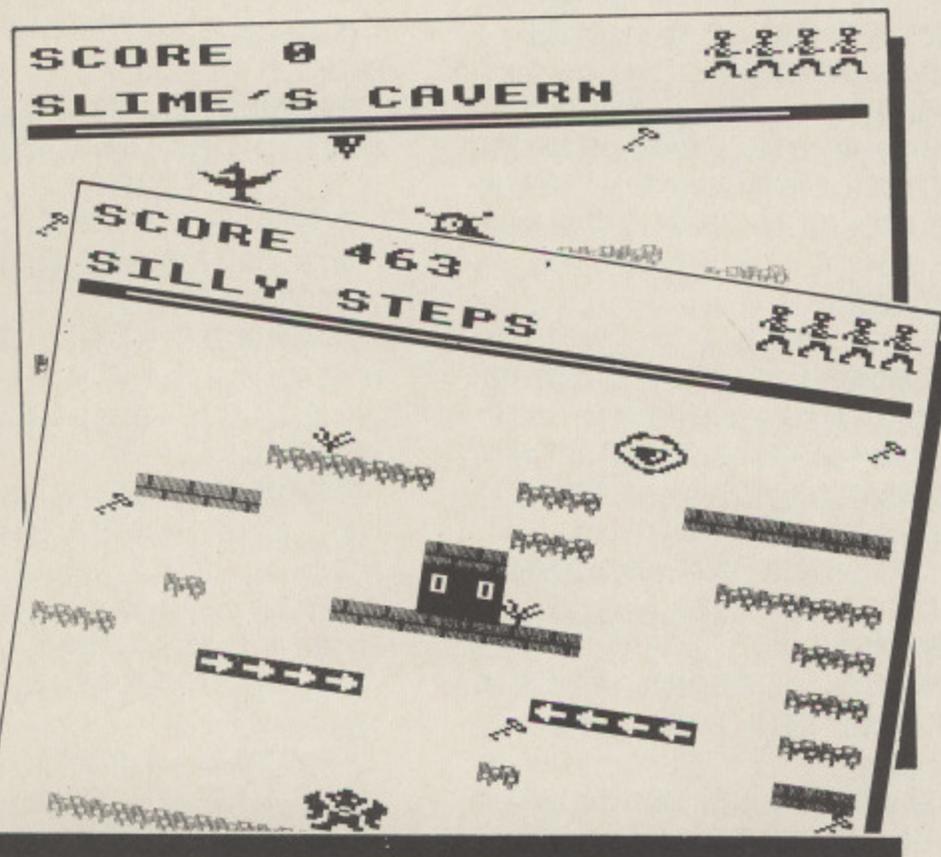

VARIABLES

PS(n)	Character used for the player.
MS(n)	First character for each monster.
NS(n)	Second character for the monsters.
D%(n)	Horizontal direction of monster n.
E%(n)	Vertical direction of monster n.
A%(n)	X position of monster n.
B%(n)	Y position of monster n.
HIS(n)	Name of high scorer n.
HI%(n)	Score of high scorer n.
I%,I	General variables.
KS	Key character.
SS	Stalactite character.
TS	Tree character.
GS	Puts CGOL3,3 in the PS(n) characters.
CS	Puts cursor down and left in characters.
L%	Character number being used for monster 0.
LEV%	Level being played.
LIV%	Number of lives.
SCR%	Score.
FI%	True if level 13 is reached.
W%	Number of keys collected.
O%	Last character printed for the player's character.
C%	Character being used for the player's character.
J%	True if you are jumping.
V%	Vertical movement of player.
DE%	True if hit by monster.
TIM%	Time remaining.
D%	Used to store direction of motion before a jump.
X%	X position of player.
Y%	Y position of player.
Q%	Number of pieces of ground used on this level.
S%	Start of piece of ground.
F%	Length of piece of ground.

KEYS
Z left
X right
Return jump

OF THAT!

- K% Type of ground.
- T% X position of lift.
- U% Y position of lift.
- K% When elsewhere in the program it is used as the character for monster 1.
- H% Horizontal move of player.
- Z% Stage of jump.
- A% This is two if the player is going left.
- R% Ranking on table.
- WS String to be printed in double height.
- NS Name of level.

DESCRIPTION OF LINES

- 10-80 Set up characters, arrays, variables and envelopes.
- 90-110 Set up screen.
- 120-150 Move the monsters if they move vertically.
- 160-170 Move the monsters if they move horizontally.
- 180-190 Print monsters at their new positions.
- 200 End if player has been hit.
- 210 Decrement clock.
- 220 Check if the player is jumping.
- 230-240 Check for left, right input.
- 250-260 Check if player is on a conveyor belt.
- 270 Check for jump input.
- 280-330 Act on move.
- 340-370 Move player and restart loop.
- 380-480 Checks and moves if jumping.
- 490-500 Subroutine if a key is grabbed.
- 510-520 Lose a life.
- 530-540 End of game.
- 550-580 Input name if on score board.
- 590-620 Print up high score table.

If you're devious, deft and deadly - go on

PROCEDURES

PROctitle
PROcerr

Sets up MasterSpy title.
Error trap. If ERR=17 PROCreport
ELSE REPORT ERROR with my name
and address.

PROCinit

Sets DIM arrays for Messages (Mes\$),
Colours (Col%), Answers (Ans%), Codes
(Code\$) and Random (rnd%).

PROCagent

Asks for the player's name, waits for a
mission.

PROCinstruction

Gives briefing to agent.

PROCscore
PROCsetcode

Keeps score.
Sets all codes, and makes sure that Files
1-3 do not duplicate any colour.

PROCplayingboard
PROCplay

Sets screen up for play.
Prints colour key and changes numbered
input to the right coloured ★. Keeps tries to
10 per file.

PROCreport
PROCcheck
PROCans
PROCnewpage
PROCclues

Gives a mission report.
Checks answer and assigns clues.
Reveals correct code.
Press space bar to continue.
Mixes up answers and prints them as on
screen '/ X.'

PROCnewsflash

If score is too good a newsflash from
mission control.

PROCscoretable

There are five places on the agent's league
table. You have to be good to beat James
Bond.

PROCinsert

If an error other than 17(Escape) then this
will list the line in which the error has
occurred.

VARIABLES

HIS(5)
H% (5)
level%(6)
attempts%
of%
err%

James Bond.
Minimum score to enter score table.
File level in play.
Total goes, all files.
Number of files opened.
Flag. err%=1 or 2. If 1 program terminated. If 2
program completed so that correct message is
printed.

Cn%
N%
M%

Number of colours in code (1-5).
Number of tries in each file (max 10).
Counts how many '/' (right colour right place) in your
answer. If M%=Cn% it is correct.
Puts number of tries on screen.
Colours used in each file.

Tries%
Col%

But you have to be good to beat James Bond!

MASTERSPY is based on the well-known colour code game Mastermind. In this version you are a secret agent who, once accepted into the agency, is sent on a mission by mission control. You must uncover the secret colour codes of six files – but it is not easy.

File 1 contains any three of seven colours. File 2 contains any four of seven colours. File 3 contains any five of seven colours. These files do not contain any duplication of colours.

Once you have opened File 3 (five colours) you get on to the more difficult agency work. The next three files, although reverting to three, four and five colours of seven respectively, now may contain any number of colour duplications.

As you have to be good to be an agent you are only given 10 attempts at each file. If you don't crack by the tenth try the code will be revealed to you and you lose the file you previously opened, so you go back by one file. On File 1 should you fail to uncover the code it is rescrambled and you can try again.

During your spying activities mission control keeps an undercover watch over

your progress. If M decides you are likely to be caught he instructs that your mission is terminated and you will receive a mission report to that effect.

If on the other hand you complete your mission by opening all six files you will receive a report from your mission controller and may be duly promoted.

To join the ranks of James Bond you have to be very good. You must open all six files in fewer than 50 attempts. If you can do this you are invited to enter your name on the agents' league table.

To help you in your mission your controller gives you clues for each colour entered – but these do not relate to the correct position of the colours in the code. To enter your selection you must depress the relevant number key followed by Return for each colour in the code.

When the program runs you enter your name and if accepted for a mission you are asked: "Do you require a briefing?". This is a must for a newly enrolled agent as it contains mission control's clues, which must be memorised.

Good luck in your mission.

Draw up a chair and join in this poker simulation game by ALAN GORNALL

Deal your way to a right royal flush

DRAW is a computer simulation of draw poker, from which all other forms of the game are derived.

First each player chips in his or her ante or stake into the kitty or pot. Then each is dealt five cards face down.

In real life the player to the dealer's left either opens the betting or folds, so losing his ante. The next player in turn may "see" the amount previously put into the pot, or raise it, or fold. And so on until we get back to the dealer.

If the pot has been raised the betting goes around a second time. Next comes the draw.

Each player can change any or all of the five cards in his hand. Once everyone has been dealt the final round of betting follows.

The same process as before applies and the last person left in collects the pot.

Poker hands are ranked like this, with the best hand first:

Royal flush (ace to ten in the same suit), straight flush (five cards in sequence of the same suit), four of a kind (say, four kings), full house (three cards of one kind and two of another), Flush (all of the same suite), Straight (consecutive cards, different suits), three of a kind (say three fives), two pairs, one pair.

The simulation, however, involves only two players with the computer acting as dealer. So if one player drops out the hand will be over.

A few tips for the player:

The only way to play poker, other than by cheating – which incidentally the simulation is quite adept at when called upon – is to make the most out of your winning hands, and lose as little as possible on your losing ones. Unfortunately, this is hard to do.

One way is to glean as much as possible from your opponent's style of play and act accordingly.

Of course he may play erratically, which would not be much help.

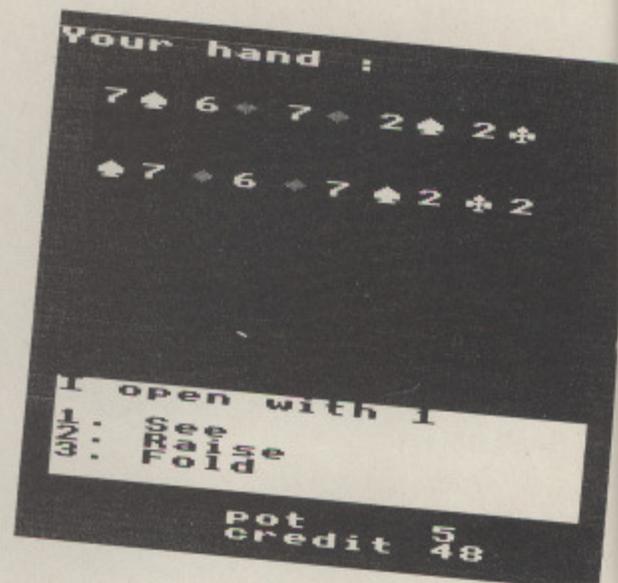

You will be pleased to hear that the simulation does play to a fixed system,

the nature of which you'll have to work out for yourself.

There are two pretty good indicators as to the strength of an opponent's hand. One is how much money he is prepared to put on it – although he may bluff – and the other is how many cards he takes at the draw.

If he takes three cards, the best hand he could have had before the draw would be a pair, and his odds of improving this are about 5-2 against. So if you have two pairs, chances are you'll beat him in the showdown.

In the game the ante is 1, the maximum open 10 and the maximum raise 10.

PROCEDURES

Values any poker hand in order of the accepted ranks. This uses other procedures, such as: PROCstraight, PROCswap, PROCflush, PROCpremanip, PROCa (deals with hands of one pair), PROCflush2, PROCb (hands of two pairs), PROCc (three of a kind), PROCd (full house), PROCflush1, PROCit, PROCe (four of a kind). Deals the specified hand. Starting at the left of the screen at a Y – coordinate of Y%. This uses PROCcard(X%,Y%) to draw the card in the correct place.

Draws the value of the card on its face. Displays the value in the pot, and how much you are in credit.

Control the betting rounds. Which one is used depends on whose turn it is to open first. Decide the computer betting scheme. The former is used before the draw has taken place, and the latter after it has taken place.

Works out the percentage of hands that the computer's opponent has bluffed on. Called when someone has been seen after the draw has taken place.

Controls which cards you wish to change, and how many the computer wishes to change.

Called when the name entered at the beginning of the program matches up with one of those in one of the data statements at the end of the program. It also sets its betting scheme, and if its hand is not as good as its opponent's hand it will alter it using PROCalter, and if it still isn't as good, it will change it using PROCalter1.

VARIABLES

- Pack\$** Contains a pack of cards.
 - STAKE%** Opponent's credit.
 - POT%** Amount of money currently in the pot.
 - bluff%** Percentage of hands that the opponent has bluffed on.
 - no%** Number of hands that have so far been played, with nine added on, to make calculations easier.
 - BLUFF%** Number of hands that the computer's opponent has bluffed on.
 - Opponent\$** Name of the computer's opponent.
 - FOLD%** Variable by which computer decides whether it will fold or not, if 1, it will fold, if 0, it will not.
 - cheat%** Variable by which computer decides whether it will cheat or not, if 1, it will cheat, if 0, it will not.
 - opt%** What the computer's opponent has decided to do.
 - draw%** Whether the draw has taken place or not, if 1, it has, if 0, it has not.
 - Count%** Card at the top of the pack.
 - AS(52)** After the cards have been shuffled they are placed here, one in each location.
 - Hand1\$** Opponent's hand.
 - Hand2\$** Computer's hand.
 - fold%** Determines who has the write to fold and not lose their ante. If 1, it is the computer's turn, if 0, it is the opponent's turn.
 - value** The value of the hand last used in PROCvalue.
- All of the other variables are used in FOR...NEXT loops, are restricted to a small part of the program, or are of little importance.*

SATAN'S CHALLENGE

or (Nevil Rides Out) A Black Magic Adventure

Dare you take up the challenge laid down by the most evil and sinister of all beings . . . the devil himself.

If you do you will find yourself alone and at the mercy of the twisted fancies and whims of a cold and calculating mind.

Occult forces are threatening the lives of those near and dear to you. Their only salvation rests in your hands but in accepting the challenge your own existence is put in severe peril.

In taking up the challenge you have to find the TALISMAN and locate a pentagram which then has to be prepared for the final rite. In the mean time dark forces will be opposing you making a difficult task almost impossible.

Do not allow yourself to be lulled into a sense of security for it will be short lived.

Many have gone before only to swell the ranks of the damned.

This is the latest adventure from the stables of Microtest and has been written with the acclaimed features of other adventures in mind eg save facility, quick response, simple but extensive commands, a mixture of logical and fiendish problems to solve.

Be warned this is an easy adventure to get into but devilishly difficult to end.

CASSETTE £7.95 inc VAT

DISC 40 or 80 tk £9.45 inc VAT (add 50p p&p)

DAIRYFILE FOR DAIRY FARMERS

Keep on that economic line between over and under feeding!
Save time recording milk yield and calculating feed amounts!
Quickly decide feeding policy with the 'Monthly Calving Group' Performance Graph!

Print out a recording sheet with cows in numerical order. Print out graphs or tables of individual cows or Monthly Groups showing serving and pregnancy details, illness record, Calving Index, weekly and running total Margin over Concentrate. See at a glance cows due for serving, pregnancy diagnosis and drying off. Keep track of

weekly total feed cost and milk sale price.

All this and more with DAIRYFILE.

Predict cow or Monthly Group total lactation yield. Compare with Standard Lactation Curves. All old data preserved - compare Monthly Groups over the years. Which is the most profitable month?

Find out with DAIRYFILE - for up to 200 lactating cows.

Available on dual 40 tk disc (For dual 40 tk drives only)

Dual or Single 80 tk drives **£69 inc VAT (add 50p p&p)**

Please state on ordering which disc format and printer model.

MICROTEST FONT ROM

This exciting new ROM from Microtest will enable you to get all sorts of new characters and fonts from your BBC Computer. Once you have produced your masterpiece on the screen, all you have to do is use the inbuilt screen-dump utility to produce a hard copy onto paper.

Typing **"*HELP FONTS"** gives a list of available fonts and the blocks of characters which they replace.

Available fonts are:

- *Accents** Accents and miscellaneous.
- *Block** Small capitals.
- *Data** Like the bottoms of cheques.
- *Greek** It's all Greek to me too!
- *Joined** Standard capitals with joined up lower case.
- *Maths** A mix of until now unobtainable Mathematical symbols.
- *Miscellaneous** A few oddities which often are very necessary.
- *Thick** Thick text (for MODEs 0&3) to enhance 80 column mode.

***Thin** Thin text (for MODEs 2&5) which makes modes 2 & 5 much more readable or perhaps "READABLE".

***Vertical** For labelling graphs.

***MODE 8** Ten column multicolour, memory-miserly mode.

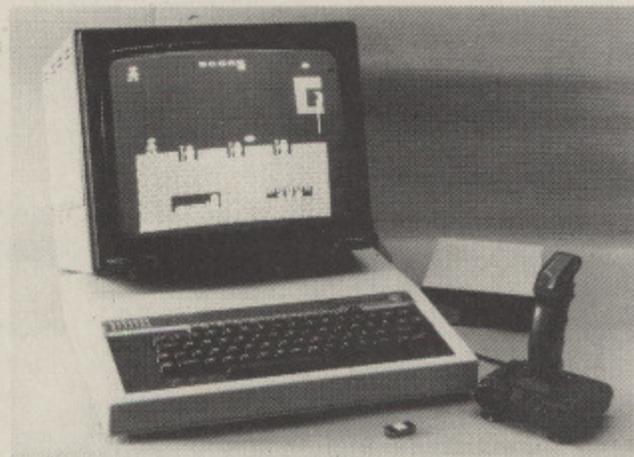

***S DUMP** A dump facility which will produce a screen dump of any MODE from 0 to 8 (including a text only dump in MODE 7) on an Epson, Star, CTI CP80 or MT80.

The ROM uses absolutely NO user memory and can be used with word processors etc. as well as normal BASIC programs. The DUMP utility will produce positive or negative graphics and will also rotate the picture produced through 90° as well as being able to position the picture anywhere laterally across the sheet of paper.

£17.50 inc VAT (add 50p p&p)

Microtest Starstick ROM & Joystick Package

Now available the Starstick ROM and Joystick. This comes in three forms:

Enables you to use our joysticks on most programs even those that do not offer joystick capability.

(A) The Starstick ROM and Quickshot I Joystick

Price 17.95 + VAT = 19.84

(B) The Starstick ROM and Quickshot II Joystick

Price 19.25 + VAT = 22.14

(C) The Starstick ROM and patch lead, choose your own Spectrum/Atari style joystick

Price 15.25 + VAT = 17.54

Post and Packing £1.00 inc. VAT per item

This enables you to plug the Rapid action self centring joysticks until now only available for the Spectrum/Atari/CBM machines into the user port of the BBC. Model A users please note NO ANALOGUE INTERFACE REQUIRED.

Disc Users Note - pressing BREAK, SHIFT-BREAK or CONTROL BREAK does not modify or destroy the STARSTICK software so Disc Users please feel free to Boot!

The software patch provided in the ROM is interrupt driven and adds the following commands to your computer.

- ★ STICK turn on the STARSTICK ROM
- ★ NSTICK turn off the STARSTICK ROM
- ★ SETSTICK set up joystick to users spec
- ★ SAVE "NAME" 140 160 saves your user-key protocols
- ★ ADVAL emulate standard analogue joysticks
- ★ PAUSE define key to Freeze game
- ★ NPAUSE turn off ability to freeze game
- ★ "NAME" predefined key protocols set up for software houses programs
- ★ HELP KEYS displays currently selected key protocols
- ★ REPEAT enables auto-repeat fire
- ★ NREPEAT disables auto-repeat fire

Catch crashing crockery in this fast mover by IAN McALPINE

BABY, YOU'RE QUITE A HANDFUL!

YOUR rich aunt and uncle have asked you to babysit with their two-year-old son, Tobermory, who is quite a mischievous chap for his age.

No sooner have your aunt and uncle left than he jumps up on to the china cabinet and runs along the top of it, jumping up and down as he goes.

The expensive china starts to fall and you run frantically left and right trying to catch the falling pieces.

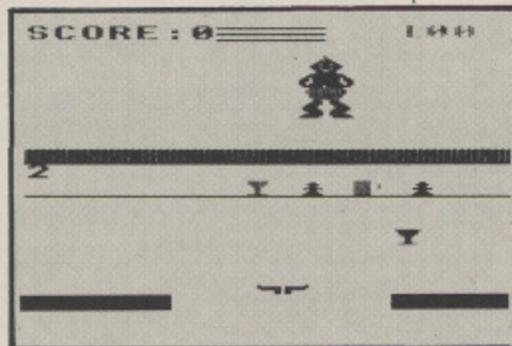

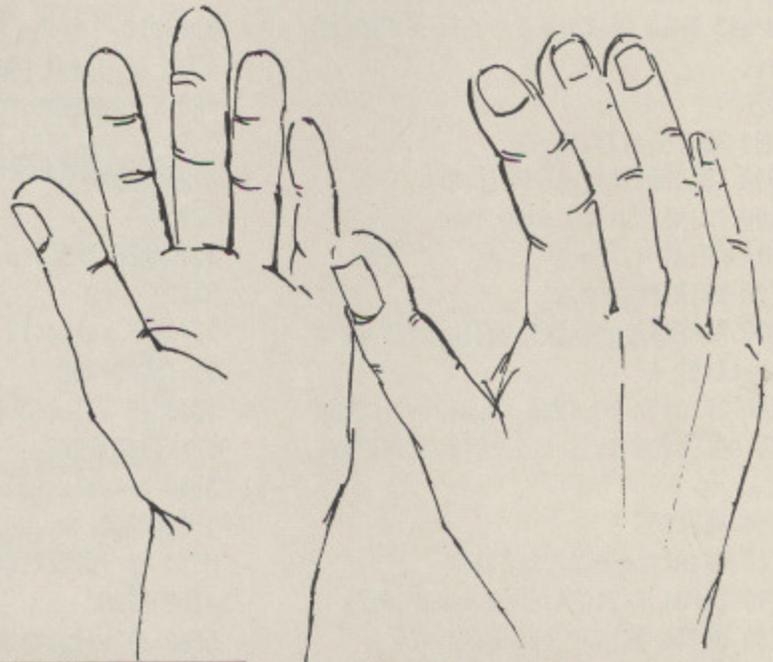

It's easy to start with, but soon the crockery falls thick and fast.

Because of the Law of Frustrating Games the china will occasionally turn into a red anti-matter blob, heralded by a ping.

Never try to catch an anti-matter blob or your hands will explode and you will lose a life – as you do when you drop a piece of china.

You have three lives to begin with, but get an extra one on completion of Level 3. The number of lives left is printed in yellow two-thirds up the left hand side of the screen. This number turns red when you only have one life left.

Once you have lost all of your lives, your aunt and uncle return home, see their beautiful china smashed, and uncle promptly shoots you!

The program's features include ability to turn the sound on/off, use of keyboard or joystick for movement, pause game control, SAVE and LOAD high score from cassette, "gruesome consequences" and full use of the Acorn Speech System if fitted.

The Speech System is used for prompting input, speaking level number, the "thud" in the gruesome consequences and for announcing the score.

Enter the program exactly as listed, as it runs very tight on memory.

When entering the program disc users would be advised to SAVE it each time before they run it because of the relocater at the start of the program.

Cassette users can leave out lines 60, 1330 and 1340. All users should initially enter line 70 as:

```
70 PROCi
```

Once the program is running correctly the rest of line 70 can be entered.

CONTROLS

- To move your hands left or right use the left or right cursor keys.
- To accelerate hold down either Shift key.
- To pause the game press Shift Lock.
- To continue press Caps Lock.
- To turn the sound on/off press S/Q. The sound controls only take effect at the end of each drop of china.
- To return to the title page press Escape.

PROCEDURES

PROCI	Initialises characters and envelopes.
PROCgh	Asks whether to load recorded high score.
PROCbp PROCa	Prints title page. Presses space or fire button.
PROCI1	Initialises strings and secondary variables.
PROCre PROCw	Prepares to start game. Checks whether using keys or joystick.
PROCb PROCF PROCwt(num) PROCu	Prints bouncing baby. Drops a piece of china. Delay. Updates score, high score and pieces of china left to drop.
PROCFf PROCc	Plays title tune. Gruesome consequences.
PROCp	Prints your score and high score at end of game.
PROCs PROCkm	Prints screen display. Checks which keys pressed.
PROCjm	Checks for joystick movement.
PROCpa	Pauses game or sound on/off?
PROCet	You caught the piece of china.
PROCdp	You dropped the piece of china.
PROCe	Erases piece of china from bottom of screen.
PROCrh PROCr	Records high score. Restores everything to default.
PROCas	Assembles machine code to print the baby and your hands.
PROCI2	Initialises which piece of china goes where on the cabinet.
PROCspk	Reads data, then speak.
PROCed (num)	Prints "China Drop" in teletext graphics.
PROCdo (num)	Plot door.
FNrc (num)	Reads character.

```

THE NUMBER ONE ADVENTURE SERIES

Triffid Software Research

Triffid Software Research

BBC-B
versions
£6-95
each

BBC-B RUNEMAGIC SERIES
ADVENTURE ONE
THE SECRET RIVER

BBC-B RUNEMAGIC SERIES
ADVENTURE TWO
THE WIZARD'S CITADEL

1. Load Character Generator (on side one of Adventure One).
2. Dice Character; buy weapon and armour and choose spells.
3. Load Character into Adventure One.
4. If you complete Adventure, then your character will progress in experience, so:
5. Load Character into Generator, rest up, relearn spells and buy better armour (only if you have found enough money on your travels); Save Character.
6. Buy next Adventure in series and load Character in.
7. Go to step 4. Until You have finished Adventure Eight then put your feet up for a well deserved rest.

Available by M/Order (p+p free)

Flee the gardener ...catch the fleas

Help a senior spider round the garden in ALAN SERGEANT's lunchtime lark-about

ME mam always told me that there were fairies at the bottom of our garden — well, I checked the other day and believe me it's a load of old rubbish. The place is full of insects and other horrible creepy crawlies.

Down in the bottom corner, just to the left of the garden roller, there's the most gi-normous white lady spider I've ever seen in my life. I can tell she's a lady by the way she keeps smashing everything in sight with her handbag.

Alas and alack, she is now a widow and her daily diet of fresh fleas is getting more difficult to come by, what with inflation as it is, and VAT (vermin added tax) escalating out of all proportion.

To cap it all the gardener, in his wisdom, has sprayed everything with this horrible yellow stuff, fatal to spiders I'm told.

Anyway the lady is getting a bit weary in her old age and needs the help

Score 20 Bonus 717
Fleas 2 Lives 5

Score 0 Bonus 906
Fleas 0 Lives 5

of your nimble fingers to get her around the garden.

You move Arachnida – she didn't pick the name – round the screen using:

A (up) . (left)
Z (down) , (right)

You must catch a minimum of 20 fleas before you move on to another screen.

There are seven different screens in each round and on the first run through there are a maximum of eight fleas on the screen. This number decreases by one each round to make the game a little more difficult.

You score 10 points for each flea you catch, plus whatever bonus points are left if you clear a screen.

Just be careful of anything yellow – the walls, the frog, the plant pots, and even the gardener's boots are poisonous.

One touch means certain death, although you do have five lives to play with. There is a time limit on each screen so don't hang about 'cos the fleas won't.

THE following routines are a little more complicated and require further explanation:

PROctun(P%,D%,DD%) – Writes the music that is passed to PROCmusic. The parameters are passed because without this, each time the PROC is called, the pitch resets.

It is this procedure which keeps the music playing throughout the game by using the ADVAL(-8) test. This checks for free spaces in the channel three sound buffer and, if there are any, continues playing the tune.

PROCscroll – Inserts a space in the bottom right hand corner of the screen forcing it to scroll upwards. If you prefer not to have the scroll, replace PROCscroll in lines 4190, 4260, 4380 and 4490 with CLS and omit lines 4620-4720.

PROCenv(e%) – This is necessary to cater for the 0.1 OS which only allows the user to define four envelopes. This game needs five and gets round this by defining two envelopes with the same number, (1), and toggling between them according to the value of e%.

PROCscoretbl – In order to control the input to the high score table, I have used an OSWORD call set at &FFF1 (line 700), with A% set to 0.

This routine takes a specified number of characters from the currently selected

PROCEDURES

Most of the procedures are adequately described by their names, but the following require a little more description.

PROCinit_arrays

Initialises all arrays which are called but only once.

PROCstartup

Initialises screen and restores data for music for each round.

PROCinit

Initialises variables and envelopes.

PROCsetup

Initialises certain variables and strings.

PROCsoundoff

Empties the sound queue at "Game over".

PROctun (P%,D%,DD%)

Creates the music and passes parameters to PROCmusic, P% – offset, D% – note length, DD% – pause length.

PROCmusic

Called throughout the game with updated parameters.

PROCdbl (msg\$,X%,Y%,C%)

Double height characters passing the string, X, Y coordinates and colour.

PROCsgl (msg\$,Y%,C%)

Single height centralised characters passing the string, Y coordinates and colour.

PROCenv(e%)

Toggles between two envelopes with the same number.

FNp (X%,Y%,C%)

Hit check for colour C% at location X%, Y%.

VARIABLES

BO%

Bonus.

BPITCH%

Base pitch for music.

co%

Count for number of lines scrolled up.

dead%

Number of fleas caught.

F%

Random number for feet to move.

frog%

Count for delay in froghop.

FOOTflag%

Flag for deciding which foot to move on screen 1.

HI%

Hiscore.

lives%

Lives.

MAX%

Maximum number of fleas on screen.

NEWRIGHTX%, NEWLEFTX%

OLDRIGHTX%, OLDLEFTX%

NEWRIGHTY%, NEWLEFTY%

OLDRIGHTY%, OLDLEFTY%

Coordinates of feet.

NEWX%, NEWY%

OLDX%, OLDY%

Coordinates of spider.

NFX%, NFY%

OFX%, OFY%

Coordinates of frog.

P%, D%, DD%

Offset from BPITCH%, note length, pause length.

snuffedit%

True or false for dead spider.

SCREEN%

Screen number.

XX%,YY%

Coordinates of teletext spider.

input stream. Input is terminated with a Return, the last character can be deleted and Ctrl+U deletes the entire line.

If the maximum number of characters is exceeded a VDU7 prompts. X% and Y% are the low and high bytes of the address of the parameter block. The parameters are set up using the following:

block%?0 and **block%?1** are the low and high bytes of the start address of the

input buffer.

block%?2 is the maximum length of the input stream.

block%?3 and **block%?4** are the minimum and maximum acceptable Ascii values of the input.

***FX12,0** resets the auto repeat delay and ***FX15,1** flushes the keyboard buffer. OSWORD is called and finally the string in **buff%** is allocated to **names\$(N)** using the string indirection operator \$.

The continuing saga of Bill the Spaceman and his quest for fame

Bill boun back

By
**SIMON
PHIPPS**

WE thought he had gone, but Simon Phipps returns yet again with a sequel to the highly exciting *Dug-Dig* (*Micro User*, May 1984). This time though, he had incorporated a section of machine code in his latest marvel to make the game a little faster and obviously that much harder.

Without further delay we continue the saga of Spaceman Bill and his quest

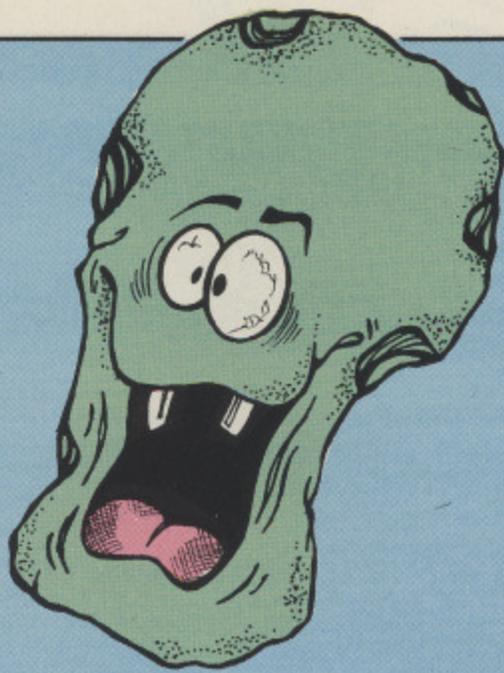

for fame, fortune and an Acorn Electron. (How did that get in?)

There he was with a handful of krystals on a strange asteroid away in the Hilton system. It was quite risky this mining business and Bill was a little worried about the fact that he might not be able to spend all of his profits, what with those nasty Scrugolds and all.

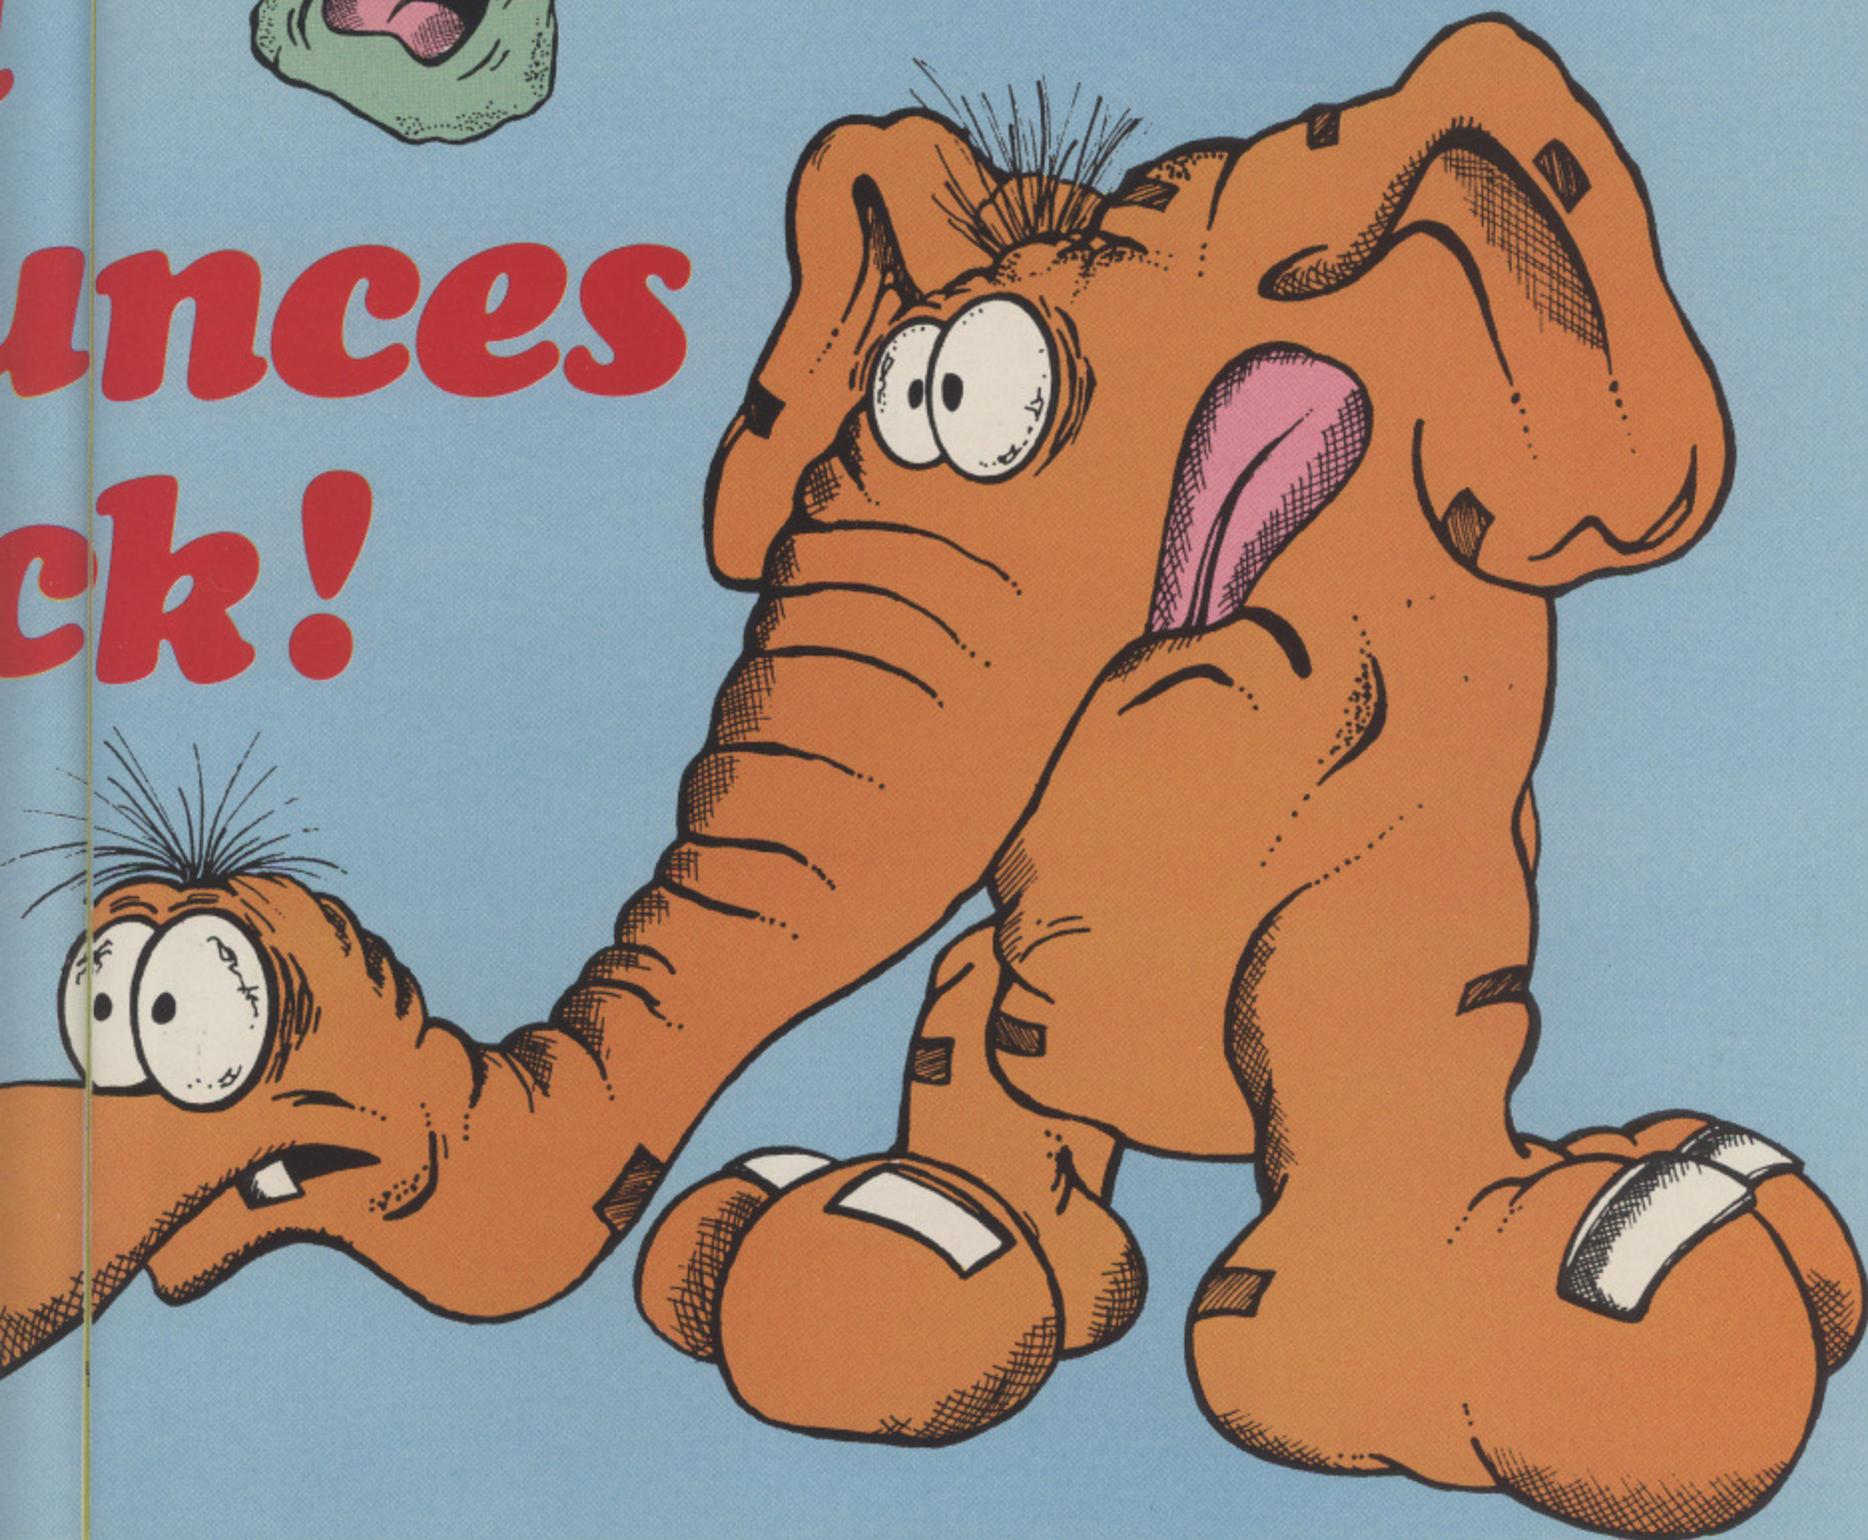

So packing another gem into his

starship and zapping a last alien he blasted off for territories unknown and relaxed with a jinantonnix and his copy of the book that caused him all the trouble in the first place.

He had reached chapter 21,884 by the time the warp drive had cut in when suddenly he found what he thought might be a safer way of making money. Gugvunt Bleuch, author of the best

ances
ck!

selling "Jewels of the Universe" had made a killing on his book, but Bill was no author, so turning the page he found a section on the sacred Green Teapots of Quarg.

Wasting no time Bill punched the right coordinates into his flight computer and headed for the Betel-joolien star cluster and once more (hopefully) fortune. (He was starting to

give up on the fame bit.)

Bill was now certain about everything. Surely nothing dangerous could happen. According to the book the strange teapots were piled high all over the planet Neeguss — the umptifirst moon of the star cluster.

However he was a trifle worried about the fact that the last page of that chapter had been torn out.

As it happened the last page did give a warning along the lines of "Keep away from it mate, it's far too dangerous", but as Bill didn't know this he landed his starship with an ungainly thud on the alien terrain.

He had noticed on the way down that there was a great deal of low cloud cover

From Page 35

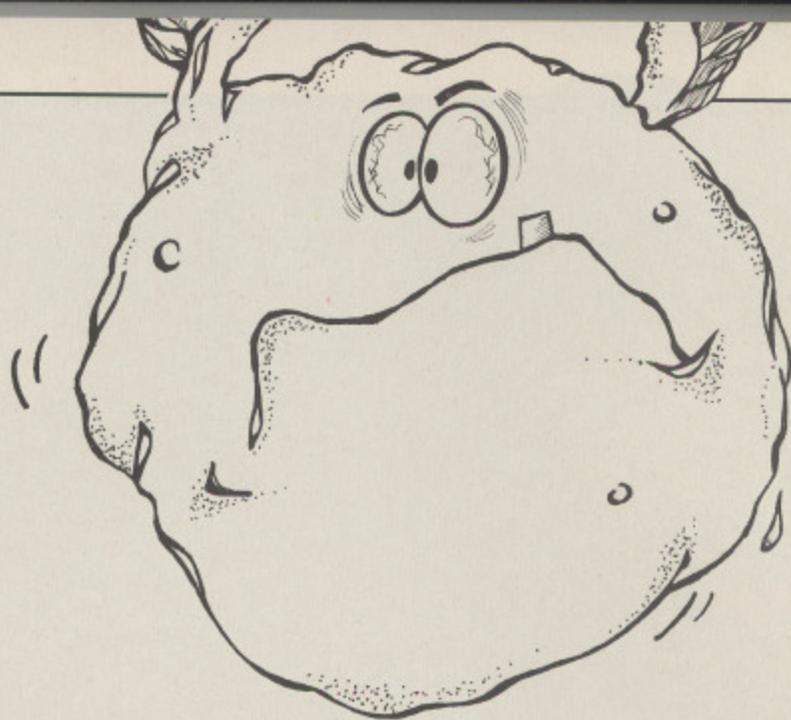

and that it moved quickly and erratically across the planet's surface.

Had Bill realised that the clouds were really vaporoids, a strange life form only found in a few video games across the galaxy, he probably wouldn't have landed. But land he did.

Of course that wasn't all that was stopping Bill from having an easy life. The planet's population mainly consisted of Uecchian Cloudhoppers, small cute and cuddly nasties that spent their whole lives jumping up and down, annoying unwary space travellers and consuming the little oxygen that remains in the planet's atmosphere.

Bill dived out of his starship. Taking a large gulp of air he ran towards the teapots. Night was falling and he knew that any collision with a Cloudhopper would mean certain death. Can he make it? Get typing and find out...

It really is quite simply a matter of collecting some objects and returning

them to your waiting starship, avoiding numerous space nasties and only having one minute's supply of air to do it in – a theme that has become rather popular recently.

The game hinges around the large section of assembly language (lines 370-520) which controls no less than 18 separate objects on the screen at once.

This technique uses the rather

“illegal” method of directly accessing the screen, but seeing that many leading software houses use this method it is quite acceptable.

Just to make the game harder, as each level is progressed night begins to fall (literally) as the stars come out and the Cloudhoppers refuse to jump quite as high into the cold night air...

Have fun...!

VARIABLES

<p>A% Variable used in PROC-MAN to find out what must be added to Bill's x coordinate value depending upon the keys pressed and in FNPEEK(x%,y%) to aid in the calculation of the Ascii code of the character position (x%,y%).</p> <p>C% The value of the address from which the alien and cloud definitions are stored.</p> <p>CAR% A flag indicating if Bill is carrying a teapot, if zero then no object is being carried.</p> <p>CODE% Value of the address from which the assembler code is assembled into.</p> <p>D% Used in the generation of the starfield to calculate the base y coordinate for the stars being plotted.</p> <p>DIR% Value of the address from which the cloud direction table is stored. A value in the table of 2 indicates the cloud moves left, a value of 1 moves it right.</p> <p>DY% Value of the address of the start of the alien direction table. A value in this table of 2 moves the alien up,</p>	<p>H% otherwise it will go down. Used in the generation of the starfield.</p> <p>HI% Table of the hi-bytes of the cloud's positions.</p> <p>HY% Table of the hi-bytes of the alien's positions.</p> <p>J% Used to generate the starfield.</p> <p>KIL% A flag indicating if Bill is still alive, 0 indicates yes, otherwise it's splatto...</p> <p>LO% Table of the lo-bytes of the cloud's positions.</p> <p>LY% Table of the lo-bytes of the alien's positions.</p> <p>P% Program counter, where the assembler code is presently being assembled into.</p> <p>Q% Bill's x coordinate.</p> <p>S% Player's present score.</p> <p>SC% The number of screens successfully completed.</p> <p>T% General variable used for virtually everything – in fact my favourite variable.</p> <p>TEA% Number of teapots collected.</p> <p>X% Start address of table of x values of the cloud's positions.</p> <p>Y% Start address of table storing Cloudhopper y coordinates.</p>	<p>o% Variable passing on OPT value to the assembler routine.</p> <p>x% Variable used to pass various x values to PROC\$.</p> <p>y% Variable used as x% to pass various y values to PROC\$.</p> <p>MANS Holds the multicoloured definition for the Bill character.</p> <p>a\$ Used in PROCP(x%,y%, a\$) to enable a string to be passed to that procedure.</p> <p>A Calculates various screen addresses in PROCMEM.</p> <p>B Execution address of cloud movement routine.</p> <p>C Execution address of cloud initialisation routine.</p> <p>D Execution address of alien in initialisation routine.</p> <p>E Execution address of alien movement routine.</p> <p>JJ } Loop variables.</p> <p>KK }</p> <p>X Used in PROCMEM to generate random screen addresses.</p> <p>Y Used as X in PROCMEM to generate random screen addresses.</p>
--	--	---

FUNCTIONS

FNPEEK Taken almost exactly from the User Guide, checks the character at the position (x%,y%) and returns its Ascii code.

CONTROLS

Z Left
/ Right

The game is not very tight on memory and will run quite happily on a standard BBC Micro with 32k. Disc users please note that to run the game with PAGE set to &1900 all unnecessary spaces must be removed and some of the lines may need packing together.

PROCEDURES

PROCASS

Contains the assembler code for the aliens and clouds.

PROCBONUS

Calculates the bonus points given for completing one screen.

PROCDDED

Splats Bill about the bottom of the screen.

PROCMAN

Moves Bill around the screen.

PROC MEM

Initialises the cloud and alien positions.

PROCP

Yet again simulates the VDUJ:PRINT TAB(x,y)a\$ fea-

PROCScore

ture available on the 0.1 OS BBC Micro.

Prints out the player's score in the box at bottom of the screen.

PROCScreen

Draws out screen.

PROCTITLE

Prints out start up display - "The Micro User presents" etc.

PROCVARI

Sets up variables Q%, TEA%, CAR% and KIL%.

PROCcentre

Centres text on screen, as passed to procedure by a\$.

Three programs everyone's talking about!

Play the most exciting, challenging Olympic simulation of them all!

MICRO OLYMPICS is riding high in the charts – and no wonder. You are challenged to beat the world record in 11 realistic track and field events, with the packed stadium cheering you on to victory – or defeat! Just like the real thing, you'll want to keep on improving your sporting skill until you're up there among the greats!

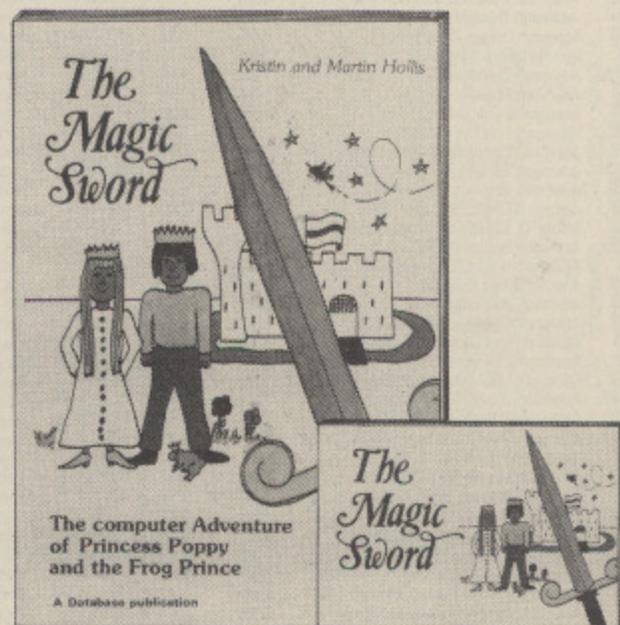

Turn your home micro into a true office workhorse!

MINI OFFICE is the most incredibly priced introduction to business computing ever offered. The package contains four full-scale programs – word processor, database manager, spreadsheet and graphics. They include advanced features not yet available on programs costing many times as much. Plus a concise 32-page how-to-do-it booklet.

Let your children embark on a magical micro adventure!

THE MAGIC SWORD breaks new ground in programming for the young – a complete adventure on cassette accompanied by a 48-page full colour storybook. Stunning sound and colourful graphics bring a completely new dimension to the classic computer adventure. And there's a very helpful animated compass to help you find your way around!

Send for them today

Please supply software as ticked in price boxes

OG the Caveman	Simonsoft	Caveman smashes dinosaur eggs.
Old Father Time	Bug Byte	A traditional style text adventure.

SPLAT!

By
MARTIN HOLLIS

SPLAT is a simple cat and mouse maze game for any age.

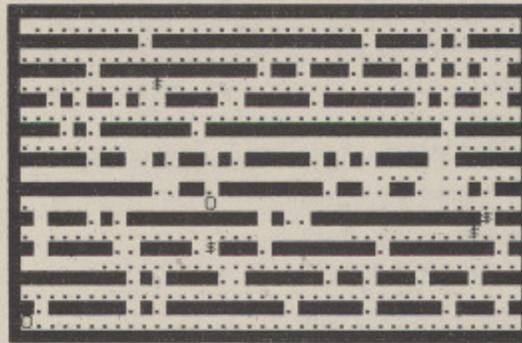

You are the star in the centre of the screen being chased by a monster - 'O' - who starts off in the top left hand corner. You have to eat all the dots, worth one point each, without being caught.

Every 100 dots you eat gives you four \$ signs to eat, each worth 10 points. When your score reaches 500 another 'O' - which has been waiting in the bottom left hand corner - springs to life.

These monster 'O's do not eat the dots, but they do eat the \$ signs - and you! If the two monsters hit each other, one is transported to a random position in the maze.

You have three lives to clear the screen of dots. When you lose a life you re-start from where you died.

At the beginning of the game you are asked to enter your name and to choose

a level. The higher the level, the more holes there are in the walls of the maze.

At the bottom of the screen your name, score, lives left and the hi-score are displayed.

If you qualify, your name will be entered automatically in the hi-score table displayed at the end of the game.

To change the player's name, press Escape which returns you to the beginning of the game without losing the hi-score table.

PROCEDURES

PROCScreen Prints screen.
 PROCDollar Places \$ on screen at every 100 score.
 PROCsprinkle Gives new dots when screen cleared.
 PROCscores Hiscore table.
 PROCmore Another go option.
 PROCTitle Prints header title.
 PROCinst Prints instruction.

VARIABLES

C%, E% x position of monsters.
 D%, F% y position of monsters.
 H% Level of difficulty.
 H%(9) High score.
 L% Lives.
 LEFT% Number of dots remaining on screen.
 P% (40,24) Dimension for easy access to chrs on screen.
 S% Score.
 X%, Y% Coordinates of star.
 HS(9) Table of names.

FAIR

PLAY

By
D.H. IBBOTSON

THE fairground has come to your micro in the form of Happy Harry's shooting gallery. All you have to do is hit the targets with the darts in order to win one of Harry's fantastic prizes. (If the prizes are not quite up to your expectations then simply change the data on line 160.)

Hitting a number will increase your darts. Hitting a face will make all the targets retreat. Hitting anything else will increase your score.

Clear all the targets and a new set will appear in new colours, sometimes making the targets or gun partly invisible. So try to hit the numbers first, followed by everything except the faces. Shoot the faces last of all in order to progress to the next card.

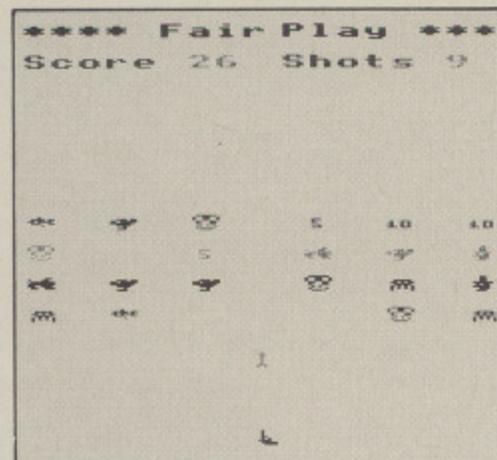

Instructions are contained in the program. Only the space bar is strictly necessary in order to play the game. I

hope you enjoy the Fairground organ music.

The data on line 460 may be changed if the score, or the number of extra darts, is not to your liking.

The formula is simple, 0 to 9 is added to the score, 10 or greater will be added to the darts, and -2 (use -2 only) will force a retreat.

Likewise characters 224 to 232 can be redefined if you dislike the targets.

ARRAYS

- A\$() Targets.
- C\$() Colours in the form of strings.
- D\$(1) Dart / D\$(0) delete dart.
- prize\$() All the prizes.
- R%() Temporary stores for random numbers.
- S%() Scores for the various targets.
- s%() Old scores for score ladder.
- s\$() Old names for score ladder.

VARIABLES

- A% Permanently set 165.
- a% Permanently set to OSBYTE address &FFF4.
- AS Removes bottom line of targets when they retreat.
- B% X axis position of the gun.
- C% Master counter.
- D% Darts flag 1 if fired, 0 if not fired.
- GS The gun.
- H% Height of targets.
- I% Jump out of loop flag.
- J% Counts hits.
- L% Level or card.
- M% Time value for each note.
- N% Pitch value for each note.
- O% Removes bottom line of targets if set flag.
- S% Total shots remaining.
- s% Old total shots remaining.
- T% Total scored.
- t% Old total scored.
- X% Darts X axis.
- Y% Darts Y axis.

PROCEDURES

- PROCmulti_colour Displays Mode 6 (normally a single colour mode) in multi-colour by using *FX19 and then rapidly changing the palette in order to display bands of colour.
- PROCsetup_characters Sets the string array A\$() to random characters or targets.
- PROCcheck (A%) Finds out which target (A%) has been hit and then pays out accordingly.
- PROCchange Selects fresh colour from the palette.
- FNp (AS) PEEKs the screen more or less as described on page 432 of the User Guide. If a hit is detected removes it from the appropriate string, then calls PROCchange.
- FNs Gets the name of the player for use in PROCscore_ladder.
- FNT Resets data pointer to line 1180 if the end of the music, as indicated by M%=0, has been reached.

A realistic interpretation of the gentle art of playing bowls by ALAN TOPHAM

CROWN GREEN

CROWN Green is a vivid simulation of the game for two players. The program allows for different weights of bowl, 16 bowling directions and left or right bias. The wood – the name remains, even though many bowls are now made of plastic – even slows down to a halt realistically.

For those of you who like to play rough, full allowance is made for cannoning of woods into one another.

Each player plays two woods alternately from the footer (a non-slip-pable mat). The player who bowls the jack also retains possession of the footer until his bowl has stopped running.

If the jack comes to rest within less than 21 yards – strength 150 in our game – or is bowled directly off the green, the player loses it to the opponent.

If it is knocked off the green during an

end, that end is replayed and the same player retains the jack.

At the completion of each end a player scores one chalk – point – if his bowl is nearer the jack and two points if both are. The first player to 21 points is the winner.

Before each delivery instructions are given in the boxes at the top and bottom of the screen and a hint is given as to which way the run of the bowl will bend.

The lines drawn between each bowl and the jack at the finish of each end represent measuring strings and the player who wins the end bowls the jack at the start of the next one.

It is sometimes better to alter the direction and peg – bias – to avoid knocking your opponent in or yourself out.

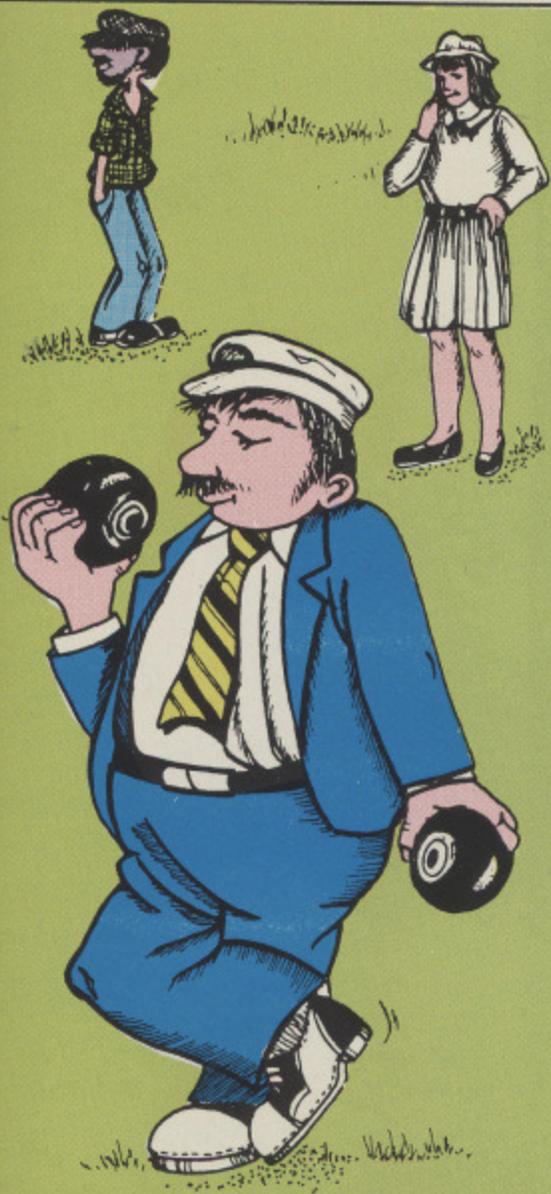

VARIABLES

A%,B%	Coordinates of the running bowl.
C%	Colour of each bowl.
P%	TRUE if a bowl has been hit or 2 if it has gone off the green.
M%,N%	Coordinates of any hit bowl.
H%	Number of bowl being bowled.
A%	Player.
HIT%	TRUE if any bowl has been hit.
S%,T%	Determines direction of running bowl and causes it to curve (bias).
F%	TRUE if jack is being bowled.
X%,Y%	Position of the footer.
A\$,B%,C%	PROCmessage parameters.
D%	Direction of bowl pointer arrow.
G\$	Bias selection (finger or thumb peg).
E%	Strength factor.
MANX%,MANY%	Position of man at start of delivery.
MANX2,MANY2	Position of man at the footer.
L%	Count for running bowl – random factor at line 990 brings an element of chance.
G%	1 if the jack has been knocked off during an end.

PROCEDURES

PROCbowl	Moves current bowl and calls PROCwhbowlA and tests for a hit.
PROCover	The finish of each end.
PROCbend and PROCacross	Causes the bowl to bend according to the bias (G\$).
PROCmove	Moves only the “hit” bowls.
PROCwhbowlA	Tests for a hit on any still bowl.
PROCscores	Measures the bowls from the jack.
PROCslow	Ensures that each bowl wobbles to a halt instead of stopping dead.

Lay your cards on the table

By **STUART MENEFY**

PROCEDURES

PROC_DEFINE	Defines characters, envelopes, sets up DIMs and major variables.
PROC_INIT	Sets up variables for each new game.
PROC_SCREEN	Displays screen.
PROC_GO	Decides who starts.
PROC_SHUFFLE	Sets up and shuffles the pack.
PROC_SOUND	Makes a bleep, when an input is not valid.
PROC_DELETE	Removes last character from input string.
PROC_COMMENT	Displays a centralised comment for required period of time.
PROC_HUMAN	Accepts and validates the humans entry, and performs the required function, if possible.
PROC_POSSIBLE	Finds out if a card may be played from the current hand.
PROC_DETAILS	Calculates the representation, value and suit of a card.
PROC_COMPUTER	Plays a card if possible from the micro's hand.
PROC_PLAY	Plays a card, and removes it from the hand.
PROC_FLIP	Attempts to make the sound of a card being put down!
PROC_DIS_HAND	Displays the human's hand.
PROC_ADVICE	Tells the human which card to play, using the micro's criteria.
PROC_SWAP	If possible, swaps the human's and micro's hands.
PROC_INSTRUCTIONS	Displays brief instructions, and asks for the human's name, the time for which messages are displayed, and if hands can be swapped.

FUNCTIONS

FN_DEAL	Moves a card from the top of the pack to one of the hands.
FN_INPUT	Asks the human for his/her instruction.
FN_COMPUTER	Returns the position of the 'best' card to play.

FN_END	Displays which player won, makes an appropriate sound, and asks if the human would like another go.
FN_YES_NO	Only returns TRUE if "Y" pressed, FALSE if "N" pressed.

VARIABLES

CARDS(13)	Contains the representation of each card.
C%(8)	The last card played in each section (see below).
CARDS\$	A representation of a card, including colour control characters, as determined in PROC_DETAILS.
CARD%	The cards face value, from 1 to 13, as determined in PROC_DETAILS.
DELAY%	Delay while messages are displayed, in centiseconds.
end%	Whether the game has finished or not.
G%(8)	In which section the most cards can be played, used to determine the micro's go.
GO%	The current player (see below).
GO_POS%	The position in the current hand of the best card to play
GOS	Command entered by human.
HAND%(1)	Position in memory where each hand starts.
HAND_LEN%(1)	Length of each hand.
NAMES	Human's name.
NUM_GO%	Number of cards that can be played.
PH%(8)	Position in the hand of each card that can be played.
PACK%	Position of the start of the pack in memory.
PACK_LEN%	Number of cards in the pack.
P1% & P2%	Used in shuffling the pack.
PH%	Position in the human's hand of the card he/she wants to play.
SCORE0% & SCORE1%	Number of games won by the human, and micro.
SNUM%	Number of times the human may swap hands with the micro.
SUIT%	Suit number, from 1 to 4, as determined in PROC_DETAILS.
VLU%	Card's internal value, as determined in PROC_DETAILS.

SEVENS is a traditional card game, depending partly upon luck and partly upon the skill of the players.

The game is played with a normal pack of playing cards, the object being to lay down all your cards before your opponent.

However cards may only be laid down in order, starting from seven, going up to king, and down to ace, and may only be laid down with other cards of the same suit.

Each player starts with seven cards, dealt from the pack, and puts down a card in turn. If he or she is unable to go, then a card must be picked up from the pack, and added to the hand.

In this way, four piles of cards develop, in order, and the winner is the player who is able to put down his or her final card.

In this version you play against the micro, who cannot "see" your hand, although it is displayed on the screen.

The player can also swap hands with the micro a limited number of times – as set by SNUM% – and can also give advice on which card to play.

The logic behind deciding which card to play is simple, as can be seen in FN_COMPUTER, and is used by the micro for its own goes, and also to give advice.

Having first checked to see how many cards can possibly be played (PROC_POSSIBLE), the micro returns a -1 if no card can be played. If only one card may be played then its position is returned, otherwise the remaining logic comes into play.

This first checks to see how many cards are held in the hand in each 'section'. There are eight sections, two for each suit, which extend from seven (which is included in both sections), either up or down.

In the arrays and scoring, the human is player 0, and the micro is player 1.

Also, the word "section" in arrays C%(8) and G%(8), section 1 (or element 1) is from seven hearts, to the king hearts, 2 is from the ace hearts to the seven hearts, and similarly 3 and 4 are clubs, 5 and 6 diamonds, and 7 and 8 spades.

The section that has the greatest number of cards in, and has a card that can be played, is used, and that card's position in the hand is returned.

This gives the player one advantage, in that the micro does not understand 'blocking'. This is when you hold a card for as long as possible, to prevent the micro being able to lay down his own cards, which come after it.

For example, if it is thought that the micro holds the jack, queen and king, then by delaying putting down the ten, you stand a greater chance of winning.

mixed moods

two amazing new games

from Software Invasion...

3D Grand Prix

Software Invasion games are available from WH SMITH, HMV, all SPECTRUM SHOPS and over 1,000 retail outlets.

This is the game you've been waiting for! A 3D high speed formula 1 car race round 8 different international circuits.

Just look at these amazing features:-

- * Bends arranged to simulate 8 actual Grand Prix circuits.
- * Working cockpit - Rev. counter, Speedometer, Temperature Gauge, gears, moving steering wheel.
- * Other cars which alter in perspective and size as they overtake. * Signposts. * Realistic sound effects such as engine noise, skids and crunching shunts. * Keyboard or Joystick control. * Volume control.

Runs on O.S. 1.0 or greater. More than a year of man hours have gone into creating this superb game.

BBC MICRO MODEL B

£9.95 CASSETTE

£11.95 DISK

Authors: Mick O'Neill and Dave Mendes

Blitzkrieg is a 3D Tank Battle from the same author as our Best Seller "3D Bomb Alley".

This program is probably unique in the fact that all the graphics were created with the help of models, a video camera, a video digitiser and some very special Light Pen software.

This has resulted in extremely fine detail and realism, with fast moving real time graphics - you don't have to wait for the screen to be updated between each move. Features include:-

- * Detailed scrolling landscape. * Rotating tanks.
- * Detailed explosions. * 3D shell movement. * Recoiling barrel. * 3D sound. * Keyboard/Joystick option.

* Freeze game facility.

* Optional sound.

* Demo' mode.

* High score & ranking system.

BBC MICRO MODEL B

£7.95 CASSETTE

£9.95 DISK

Author: Simon Vout.

Blitzkrieg

NOW WITH COLOUR GRAPHICS! (BBC VERSION ONLY)

HOW TO ORDER

You may purchase any of the games above direct. All you have to do is write your name and address on a piece of paper, item(s) required, enclosing your cheque/P.O. made payable to SOFTWARE INVASION.

Please allow 7 to 14 days for delivery (orders are normally dispatched within 48 hours!) OVERSEAS ORDERS. Please add £1.00 per game

DISTRIBUTORS, MULTIPLE STORES, RETAILER GROUP AND EXPORT INQUIRIES INVITED.

SOFTWARE INVASION

50 Elborough Street, Southfields, London SW18 5DN

Do you write your own programs? If you have an unusual program which can meet our standards you could be earning a substantial sum every week! Why not take advantage of our sought after reputation. Write now!

other SOFTWARE INVASION GAMES... send for full list now!

The company which brought you the first self-build Arcade game and the first Adventure with sound, just had to be the one to give you the very first QUEST for the Beeb!

Swords and Sorcery

a new experience...

QUEST programs originated on the American mainframe computers, and were converted to micros, though requiring so much memory could only be made to work on expanded Apple micros and the like. Now, Kansas have crammed a full feature Quest into 32K, giving every BBC Micro owner the opportunity to play and experience these unique games.

So what is a Quest? Think of an Adventure, then think of very much more. A Quest is operated similar to an Adventure, but no longer are you alone, starting with three helpers. As you progress you will encounter many other characters, but unlike an Adventure program were all characters are passive, these can be either hostile, friendly or indifferent. If hostile you have to fight, and quickly; if friendly they may join your team bringing more strength, magical ability and carrying capability; if indifferent you could perhaps try a bribe (but beware if you offer too little) or you could sell an object and raise yourself more cash as well as lessening your load.

But most of the effort is your own, with treasure, money, magic and strength all having a bearing on your progress. At times it will pay to be vicious and abandon your friends as they become weaker, or even go in fighting before characters show their true colours, the element of surprise using less strength.

As can be expected in Swords and Sorcery there is a story:

Once upon a time in a far away land called Iriuma a magical Princess cast a spell of banishment on the wicked Sorcerer Brogfelt. However, just before the spell took effect, Brogfelt threw his arms into the shape of changing and cast a return spell, changing princess Illear into a diamond. Taking the diamond with him, Brogfelt took sanctuary in the Dungeons of Terror amongst the various monsters and demi-humans. Here he split the diamond into four parts and changed each part into a different crystal. Brogfelt then hid each crystal in the dungeons never to be found again. When the king heard of this he summoned all his faithful Knights to him and offered half his lands for the four crystals. Sadly they all perished in the Dungeons of Terror attempting it. Now the king has offered anyone his other daughter's hand together with half his lands. Hearing this, you set off to the king's palace to offer your services. The king is astounded but nevertheless offers you a party of three prisoners from his jail, promising them a full pardon if they will go and aid you. As you leave the king stops you and thrusts a scrap of paper into your hand explaining that it contains the location of each part of the crystal from the entrance of the dungeons. It was written very shakily and stained in blood. The king says: "Let me introduce you to the three prisoners that I have volunteered to go along with you..."

The characters you meet include a Troll, Orc, Thief, Dwarf, Goblin, Madman, Witch, Hobgoblin, Mad Monk and of course the wicked wizard himself, all in fact you would expect in a magical Swords and Sorcery...

All the objects have a use, but be careful, for picking the Dragons Tooth could be fatal; though if you find the Staff of Healing try and get it; an Idol of a forgotten God should be left well alone; the Ring may help you; the Magic Axe certainly will; the Old Book will give some clues; rub the Glass Ball; used properly the Magic Carpet will get you out of trouble; the Rolled Scroll too is useful; but not so the Fools Gold; be careful with the Bottle of Liquid; but drink the Magic Potion; treat the Golden Orb with care; but of course the Sword is the greatest help of all. And so it goes on, and on and on...

Unlike an Adventure game, were once you have solved the plot, and it is all finished for good, Swords and Sorcery generates an entirely different scenerio every time, even though totally logical! But if you really intend to see a game right through to the end, the game saving facility allows you to do this, playing the same scenerio, time after time, to its end. It is so different from an Adventure, that it actually has nine—yes nine—levels of play, with the ninth having so many locations and of such complexity, that we would be amazed if anybody ever solved it!

If you are an Adventure addict, this will really spoil you! If you do not care for Adventures the activity in this unique game will suit you as well. It is one of those you just will not be able to leave alone...

Though there are many Adventure games using the word Quest in their title, these are not Quests in this, the true sense of the word, but are just ordinary Adventures.

FEATURES a Map routine showing exactly where you are and where you have explored.

FEATURES colour denoting the different aspects of the game.

FEATURES sound on or sound off facility.

FEATURES entirely different scenerio for every game and all totally logical

FEATURES nine levels of difficulty from fairly easy to impossible.

FEATURES game saving routine to be able to replay the same scenerio.

Only available from Kansas at £10.35 Vat and post paid.

Our normal return first class post service applies, with same day postage if ordered on Access or Barclaycard.

This program carries our famed lifetime guarantee.

Available on cassette only for BBC model B.

Kansas City Systems, Unit 3, Sutton Springs Wood, Chesterfield, S44 5XF.

THIS version of cribbage pits one player against the BBC Micro. For those unfamiliar with crib, the object of the game is to "peg" your way round a board by scoring points. There are two main ways to score.

Firstly you can score points as you and your opponent play your cards alternately – this is the play.

Secondly, after the play, you lay down your hand and gain points according to the various scoring combinations you hold – this is the lay.

All cards are worth their face value with jack, queen and king counting ten. Ace is low.

Play alternates between player and computer, with the dealer of the first game being picked at random. In practice the micro deals the card.

However the deal is considered to alternate between micro and player, the non-dealer having to lay the first card in a game.

The player is dealt six cards, from which he has to retain four for his hand. The two cards he discards are thrown into the "box" or "crib". These, together with the computer's discards, form an extra hand.

This hand is scored at the lay and the points awarded to the dealer – that is, this extra hand alternates between player and micro.

Thus when selecting discards you have to bear in mind whose box it is. You must also try to ensure that the hand you are left with is balanced enough to provide points in both play and lay.

Once the discards have been made a starter card is dealt from the pack. This is the "turn up". If it's a jack, the dealer scores two points. This turn up plays no further part in the play, but is considered to be an integral part of the hand during the lay.

The non-dealer then plays a card followed by the dealer, the total points value of the cards being added. Play continues alternately until the total is either exactly 31, or neither player can play a card without exceeding that value – or until all the cards in the hand have been played.

If, after your turn, your opponent cannot go, you are still entitled to if you can do so legally, scoring as normal.

If a position is reached where neither player can go, that round of play is finished and a new one started with the remaining cards, the player who first failed to play a card going first.

The last player to play a card in a round scores points: two if he reaches 31 exactly, otherwise one. However

Play Cribbage

Peg your way round ALAN FARMAN's version of the classic card game

there are also other points to be won during the play.

You score two points if you bring the total to 15, or if your card forms a pair with the previous card. If your card forms three the same you score six, and all four identical scores 12.

Also, if the card you play forms a run of three or more (including your opponent's cards), you score one for each card in the run. Note that they don't have to be in order. If you play a four then the micro plays a six and you then play a five, you score three for the

run, even though it's 4, 6, 5.

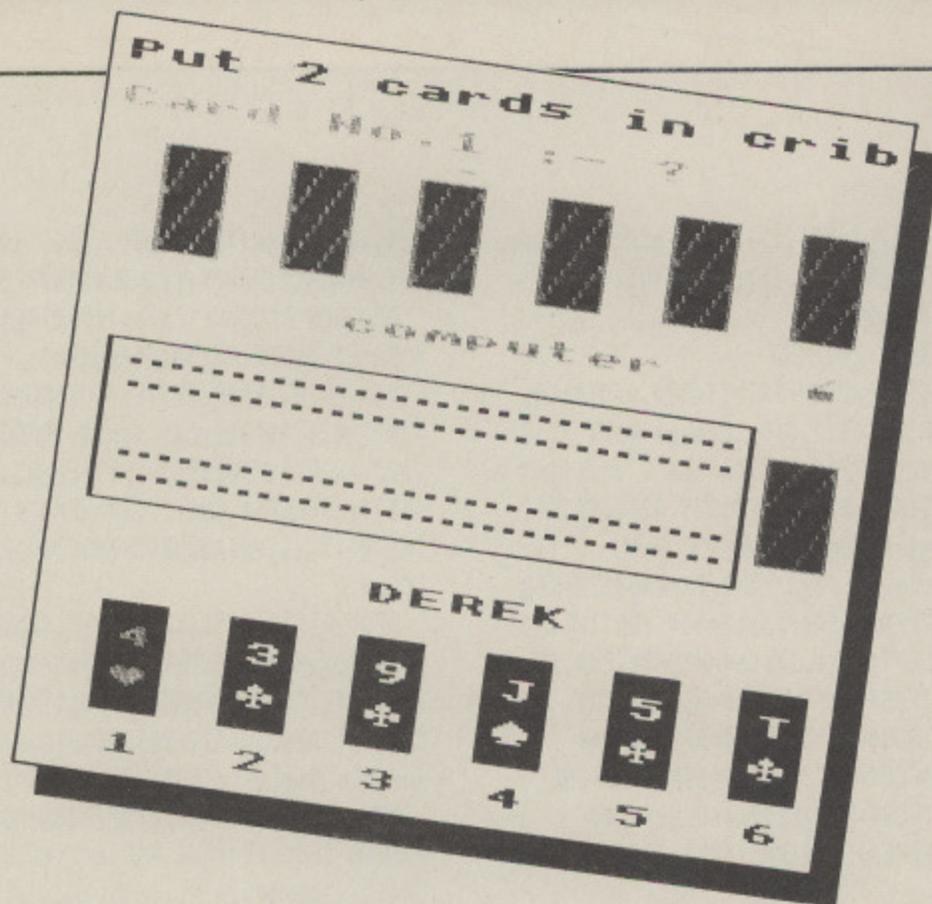

Incidentally, if your four had been the first card in the round, you would score five, since the total would be 15 – you score two for that and three for the run. All you have to hope is that the micro doesn't have a three – then again you might have a two to follow it . . .

When all the cards have been played they are laid out and the cards in each hand – together with the turn up – are scored.

You score two for every combination of 15 you can find in your hand, and

PROCEDURES

PROCINIT	Rules.
PROCTAPE	Chains game.
PROCget	Pause control.
PROCT	Time delay.
PROC_vdu_chars	Sets up characters.
PROCplayname.	Player's name.
PROCBOARD	Draws board.
PROCDEALER	Randomly decides first dealer.
PROC_varis	Sets up variables.
PROCSHUFFLE	Shuffles cards.
PROCCARDS	Draws cards on screen.
PROCALLOCATE	Allocates CARDS\$ type to numeric. CARD% for calculation purposes.
PROCSTARTER	Draws starter or crib card.
PROCSTARTERBACK	Draws starter card back.
PROCBOXCARD	Allocates the four cards to the crib.
PROCWHOLAY	Sorts out who is to lay first card.
PROCGAME	Plays the game.
PROCCARDFRONT	Draws front of card.
PROCCARDBACK	Draws back of card.
PROCUP & PROCDOWN	Moves box character about screen.
PROCNUMBER	Converts random number into card number used when sorting out dealer.
PROCsound	Makes a sound.
PROCPACK	Reads 52 cards into an array and allocates suit.
PROCPLAYERCARD	Draws player's cards on screen.
PROCcardcol	Sorts out player's suit colour.
PROCCPBEST & PROCCPSECBT	Sorts out computer's best or second best cards according to whether Level 1 or 2 is being played.
PROCcompse & PROCplayse	Draws scores on screen for both computer and player as play proceeds.
PROCGAMETOT	Displays game score.

similarly for every pair. Three of a kind count six, and four count 12. Runs of three or more count one for each card involved.

If all four cards in your hand are the same suit you score four for the flush.

(In the box, you need all four cards in the hand plus the turn up to be of the same suit for a flush – and you score five for it.)

Also, if you have a jack in your hand of the same suit as the turn up, you score

“one for his nob”.

The non-dealer scores his lay down first, followed by the dealer, who then also totals his box. This is quite important, as it lets the non-dealer have first chance of pegging out – that is, pegging his way around the scoring board twice.

There are two levels of play. At level one, the computer has limited search facilities and this level should be used to learn the game.

At level two a full search of any four combinations from six cards is carried out, making it suitable for the more experienced player.

PROCCOMPCHK

Part of computer's search routine to find best cards.

PROC(S)-FIVECARD, FOURCARD, THREECARD, TWO CARD, SAME, PAIR, JACK PROCSWOP

These procedures search for runs, 15s, flushes, pairs etc.

PROCKEEP

Swops computer/player cards to enable search for runs.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Decides which four cards computer should keep.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Computer plays with these cards. Plays computer's first move (only if computer goes first).

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Plays player's moves.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Plays computer's subsequent moves.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Clears up a bit of logic.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Removes cards from game screen.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Prints card face.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Decides who scores first, displays cards again and scores.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Lays a card and sorts out specific variables.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Lays a card in CLEARUP above.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Re-allocates player's cards before game commences; enables player's scoring to be carried out by the computer.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Prints arrow character when scoreboard turns corner (useful on B/W sets).

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Declares winner.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Displays boxcards.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Part of score checking routine.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Sorts out boxcards.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Shows total score held by each player at the end of each hand.

PROCCOMPGAMECARD PROCCOMPFIRSTMOVE

Removes total score from game board.

QUAL-SOFT

STEV (0438) 721936

NEW GENERATION LEISURE SOFTWARE

QUAL-SOFT comments: In 1982/83 it was only necessary to throw together a few M/C code routines, record them on a cassette, produce a flashy cassette insert, and it sold. But as we approach 1985, BBC users have become much more discriminating in their choice of software. Customers demand something more satisfying than a few hours of high adrenaline action. They demand, not hours, but tens of hours, even a hundred hours plus, of "playability". They demand that the program challenges their intellect and not just their reflexes. They demand QUALITY games. For the 84/85 season; for these customers, QUAL-SOFT is proud to offer these games:

"DIVISION ONE '85" and "SOCCER SUPREMO" are direct descendants of the 1983 game "LEAGUE DIVISION ONE", but they are a significant advance on what was described as "by far the best game for the BBC Micro". They are soccer management SIMULATIONS! Soccer management is about ASSESSMENT; assessment of the opposition strengths, of your players and their skills, of the effectiveness of the teams you assemble, of the value of transfer listed players, of the potential of your own youngsters. Soccer management is about EXPERIMENTATION; experimentation with players, with blends of players, with team formations, with tactical ploys. QUAL-SOFT's unique soccer match simulation, with tackles, passes, shots, saves etc. all simulated within your micro, and the results displayed in graphical form on your screen, allows ASSESSMENT and EXPERIMENTATION to be carried out. **The result is a 2ND GENERATION soccer management SIMULATION, not an exercise in mental arithmetic!!!**

BBC 'B'
(all OS)

DIVISION ONE '85'

TAPE £9.95
DISC £12.95
(all inc.)

This is an uncompromising strategy/tactics simulation, it will test to the full your knowledge of the game and your ability to use it to build a winning side. As described above, your ability to experiment and judge the results are paramount. Injuries, suspensions, long term "form" changes, short term "form" fluctuations, will all conspire to confuse and defeat you. You will also meet the problems of financial limitations as you choose between the 33 players available to you. You have a contract for 5 seasons, which will be terminated if your side is relegated. This game is the supreme test of your managerial skills, short of the real thing.

ELECTRON
BBC 'B' (all OS)

SOCCER SUPREMO

TAPE £9.95
DISC £12.95
(all inc.)

Soccer Supremo has been improved over the original game in the direction of a much more realistic "3D", 22 MAN, FULL PITCH match simulation for each of your games. The game is still a significant challenge to your managerial skills, but with greater emphasis on enjoyment and entertainment. But with 30 players to choose from, restricted finances, and just a 5 season contract, the 1st Division Championship is not an easy task.

COMBO OFFER. Telephone conversations, and orders, have shown that customers find it very difficult to choose between the two games. Our COMBO tape/disc offers you both games for just the price of one plus £3. £12.95 or £15.95.

PREVIOUS OWNERS. Send in your ORIGINAL tape/disc of LEAGUE DIVISION ONE, with manuals, and receive £7 for your tape or £9 for your disc, discount against any order for the above game(s).

BBC 'B'
(all OS)

PORTFOLIO

TAPE £9.95
DISC £12.95
(all inc.)

The most popular indoor games have always been multi-player board games, and yet designers have insisted on producing single player "me and my micro" computer games. In the USA the balance has already shifted away from the "arcade mentality" towards multi-player programs. PORTFOLIO is an investment game for 1-4 players, or teams of players. Each player/team begins with £1,000 and invests his money in a variety of companies against a background of continually changing international, national and commercial news. The news items affect the share values of the companies in a variety of different ways, and the players must shift their money around to maximise their investments; maybe even to become a millionaire.

The game is an ideal family game, or perfect in the classroom with a high pupil/micro ratio. It's suitable for 12 years old and above, though younger do enjoy the game with some help from their friends, and in this game, competitors. For the adult we have made some of our news items somewhat cryptic, occasionally even red herrings, to really make them think about the effect on share values. Because we call it a family game we have tried to see that there is something in it for all members of the family. Teachers can even tailor the news items to suit the capabilities of the pupils.

So why not set your Beeb on the coffee table, connect it to the TV set and play against the rest of the family or your friends on these cold, wet winter nights that are on us. It might even bring back the art of conversation (as against BASIC statements).

3D-TANKZONE

Sensational
NEW
release!!!

For
BBC 32k

At last, a stunning interpretation of the 3D Wire-Graphics Tank Battle simulation you've all been waiting for brought to you by Dynabyte.

Features include anti-tank missile launcher with realistic 'shell-in-flight' action, radar screen, detailed control panel, anti-aircraft and anti-tank modes (with options to choose one or both), hidden line removal, exploding tanks and many other special effects. There is NO other game like it.

Spend a night on the tiles...

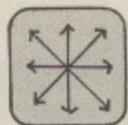

... but make sure you head in the right direction with **JERRY LANCASTER's** game of strategy for two players

THE principle of Which-Way? was described in 1969 by a research worker looking into psycho-cybernetics and game playing. Each of your moves is partly controlled by your opponent's previous move, which means there is an element of feedback in the game.

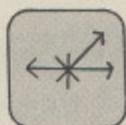

In the same way, your move controls the options open to your opponent, so you may be able to force him into a move which is favourable to yourself.

The board is made up of 64 tiles, set out in the usual 8 x 8 pattern. The two opposing sides are Red and White. Each side has a start tile and a finish tile and the other 60 are made up of arrow tiles or blank tiles.

Each arrow tile shows three arrows and since there are eight possible directions for the arrows this means there will be 56 different possibilities for the arrow tiles.

8 directions

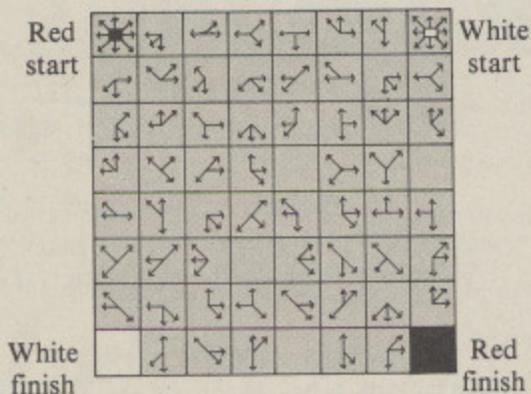

one possible tile

$$\frac{8 \times 7 \times 6}{1 \times 2 \times 3} = 56$$

If we take a completely blank tile into account then there will be 57 possible tiles to choose from. The program chooses at random from these designs and prints them out in the 8 x 8 layout.

On the first run this takes about five or six seconds to be produced, but in further games the board is printed on demand.

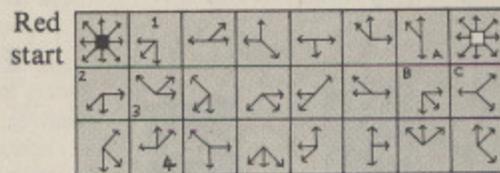

The aim of the game is to get from Red start to Red finish or from White start to White finish.

There is one basic rule which controls the moves in the game - you can only move in a direction shown by one of the arrows on your opponent's tile. To make your moves you use the keys shown in Figure 1.

Here is part of one possible layout

showing the start of a game. Red moves first. He has three choices, tiles 1, 2 or 3:

If Red moves to tile 1, White has a completely free choice - A, B or C.

White chooses A, Red will have only one legal move (down to tile 3) because the other two directions take him off the board.

White chooses B, Red has a choice of three moves all of which take him in the right direction.

White chooses C, Red will be left with two moves, one of which takes him back to the Red start tile, giving White a free choice next move.

If Red moves to tile 2, White will have only two possible moves, B or C.

White chooses B, and gives Red the advantage of a free choice of three directions.

White chooses C, and Red has two moves possible this time, back up to tile 1 or down to tile 4.

If Red moves to tile 3, White has no legal moves available because all Red's arrows take White off the board.

This move by Red to tile 3 looks like

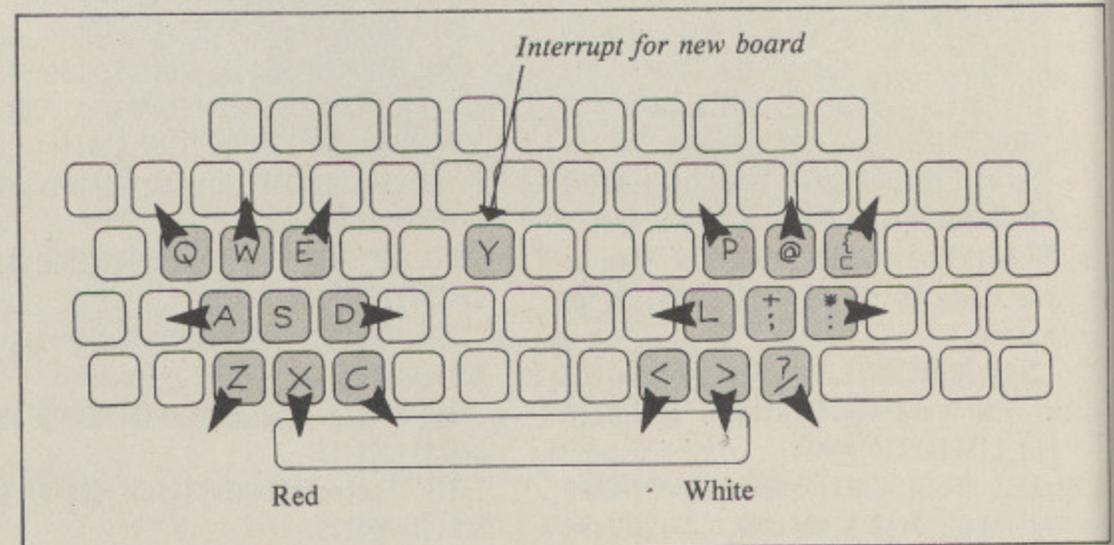

Figure 1

his best option.

If you attempt an illegal move the computer will not execute it. Instead it will leave you where you are and award the move to your opponent.

Illegal moves are:

- Any move which would take you off the board.
- Any move which does not match one of the arrows on your opponent's tile.
- Any move which would put both of you onto the same tile.

Some tiles are blank. If you move onto a blank tile your opponent will be left with no legal moves, so in effect you will get a free move. When you are forced to stay on the same tile you can do so by pressing the central key of your control group.

Red always starts the game but White can decide whether or not to accept the layout displayed. If Y is pressed you can get an entirely new layout, without losing the current game score.

This option is also available during play, so that if a drawn position is reached you can restart that game.

Be careful when entering the program that you don't inadvertently include any spaces or suchlike as it is very tight on memory. You will certainly have to download it on DFS machines.

PROCEDURES AND MAIN VARIABLES

sh\$(N%)

DEFPROCinit

This is an entire tile pattern made up from nine user defined characters and several cursor moves, all printed as one unit.

SHAPE%(N%)

A Binary coded nine-digit number which describes the tile pattern.

TILE%(X,Y)

Array which records the layout of the tiles on the board for a particular game.

red, white

VDU23,224 to 232

VDU23,234 to 242

The game scores.

'Arrow' shapes.

'No arrow' shapes.

DEFPROCtileshapes

Cursor movement controls which form part of each string describing a tile.

Read as a number from data statements. The data is written in the form 111010000.

This is derived from a tile pattern:

1	1	1
0	1	0
0	0	0

String version of SHAPE%(N%).
Leading zeros will have been omitted and need to be replaced.

SH\$

sh\$(N%)

X% Y%

PROCmoveA

PROCmoveB

I%

PROClegalmove

PROCwin

The tile pattern obtained from SH\$. MID\$(...) is used to detect the '1' which shows where the arrow should be.

DEFPROCboard

These correspond to the columns and rows of the 8 x 8 board.

Values are used to identify particular tiles, such as the corners. The remaining tile patterns are chosen at random using N% = RND(57).

RED and WHITE are printed on their start squares using "*" in the right colours.

DEFPROCgame

Used to move each 'man'.

Uses INKEY(0) to detect key presses. Acceptable returns are converted into values of I% from 1 to 9. I% then corresponds to tile sectors 1 to 9.

1	2	3
4	5	6
7	8	9

The values are checked using MID\$(...) to determine the legality of a move.

If a winning position is reached a winning message is printed in the appropriate colour and the game score is updated.

WHAT A BARGAIN!

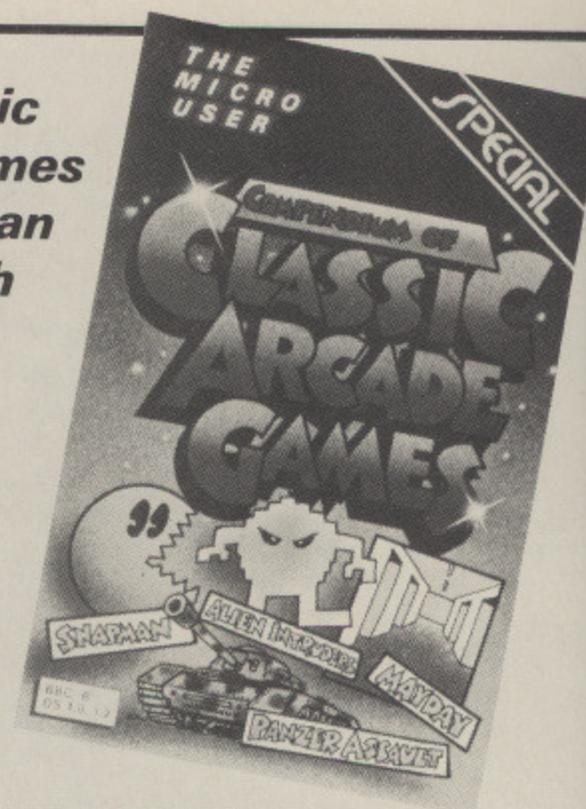

Four classic arcade games for less than £1.50 each

Three of this high-powered collection are top-rate machine-code versions of arcade classics and the fourth is a thrilling real-time adventure game. There's hours of enjoyment and something to suit everyone in this unique value for money collection.

ALIEN INTRUDERS – With only your laser for protection you must destroy the waves of aliens who threaten to engulf you. **PANZER ATTACK** – You are a tank commander engaged in vicious combat against encircling enemy forces. **SNAPMAN** – Guide your man through

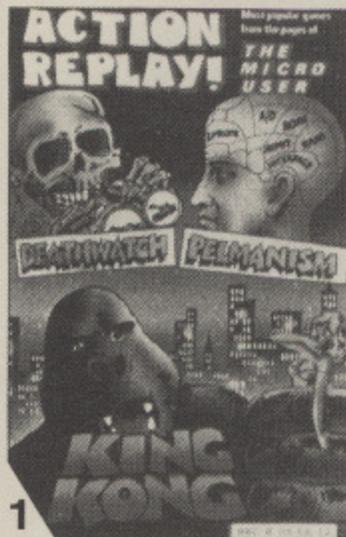

the maze as he munches energy pellets and avoids hostile aliens. **MAYDAY** – A futuristic adventure! As captain of an interstellar cruiser you must guide the sole survivor of a stricken space freighter through the wreckage of his craft.

£5.95 (cassette) £7.95 (disc)

ACTION REPLAY!

Build your own handy, action-packed cassette library of these all-time Micro User favourites. Only £3.75 per cassette (three games in each).

Deathwatch Hold the fort against a combined tank and helicopter assault on your positions. Fast and furious – one of our most popular games.

Pelmanism Defeat the computer by remembering more pairs of cards than it can.

King Kong Use your helicopter to rescue two maidens from the Empire State building – avoiding a deluge of rocks from King Kong.

Fruities Fast-paced, fun-packed extravaganza. Guide your man up ladders, avoiding – and digging traps for – the marauding Fruities!

Nim Find out just how nimble your mind is in this intriguing battle of wits against the computer.

Space Pilot Desperately fighting off hostile life-forms, you must dock with satellites to replenish dwindling fuel supplies.

Robin and Marian Medieval melodrama! Rescue Maid Marian from the sheriff. A hilarious, action-packed game.

EECGAL In charge of the EEC's Picture Gallery, you have to put some order into the frames – but it's not so simple as it sounds.

Air Strike You need to fly fast and low for this dangerous intrusion into enemy air space.

Barrel Battles Fast and furious video action. Dodging an avalanche of deadly barrels you climb towards the telephone.

Frogs 'n' Dogs Loved by young and old alike. Simply take Freddy Frog for a walk, avoiding Fido and poisonous lilies!

Tenpins Stunning simulation of ten pin bowling. This addictive game will hold you spellbound.

Tower of London Ghosts have broken out of the Tower of London and taken the treasure. Can you recover it?

Blackjack A true-to-life recreation of the casino favourite. Can you beat the bank?

Galactic Invaders The only thing between you and imminent destruction by waves of hostile aliens is your proton gun. A compulsive classic.

Alien Intruders Stunning version of the all-time arcade hit. No one can resist this classic!

Goblins Frolics in fairyland! Guide Kaplan the pixie home through the forests, avoiding the nasty goblins – a delightful game.

Gone Fishing Superb simulation of a day on the riverside. This enthralling program will give hours of enjoyment.

The best software value ever!

£7.95
Cassette/Disc

£14.00
Both Discs

IT'S an offer you can't afford to refuse – all 14 fantastic games from The Micro User's Games Special are now available on tape or disc to save you the trouble of typing them in.

Never before has such high quality fun-packed games been offered at such a low price!

In fact the package is so crammed with goodies that for the DFS version we've had to split the cassette over two discs.

On DISC A (Cassette Side A) you'll find Bounce, Crib, Fair Play, Sevens, Which Way, White Widow and Yams.

DISC B (Cassette Side B) features China Drop, Crown Green, Draw Poker, Explorer Eddie, Masterspy, Patience and Splat.

And every game is of the high standard for which Micro User is renowned!

Never before has so much BBC Micro software been offered for so little.

Don't miss out – send off for your cassette or discs today

Please send me Games Special software as indicated here:

YAMS is an adaptation of the traditional dice game Yahtzee and can be played by two to four players.

The object of the game is to get the highest score possible by using a set of five dice to obtain certain combinations, called scores. These are outlined below.

Each player takes a turn at throwing the set of dice. During that turn you have a maximum of three throws. After the first throw you may

- Throw all the dice again.*
- Hold selected dice and throw the rest.*
- Accept the throw.*

After the third throw, you must accept the dice shown. If you can select a score from this combination of dice then you must do so – if not you can pass.

Once you have made a valid selection, a summary of your current scores is shown and the game then passes on to the next player. It cycles round all the players until everyone has had 14 turns – enough to cover all the scores.

A final score sheet is then shown and the winner declared.

Dicey business

Who can get the best score from throwing a set of dice? Play Yams by **JULIA AIZPURVS** and find out!

KEYS

Y	<i>Accept a throw</i>
Space	<i>Throw all dice again</i>
H	<i>Hold some of the dice</i>

Once you have pressed H, you are asked how many dice you wish to keep and then which ones they are. To select these, type in the appropriate number (1-5) of the dice, reading from left to right. Once selected, the dice has the

letter H printed under it.

When you accept a throw, type the NAME of the score you have selected. The ones you require are shown at the top of the screen. If you can't make up a score, type PASS and then enter the NAME of the score you wish to forfeit.

When your score summary is shown the computer waits for quite a while to allow you to get a good look at your scores.

As the game progresses, there are

VARIABLES

AS,ABS,ANS	Strings for INPUTS.
A%	Accept throw flag.
a%	Number of selected 'score'.
B%	Bonus.
b%, BS	General variable used in PROCPASS.
C%	Game loop counter.
d%, dd%	General loop variable.
DRS	Names of players who have drawn a game.
DS	General string used in PROCgot.
e%	Side value in PROCSIDE.
f%	Indicates whether or not you've already selected a score.
F%, ff%	General variable in RUN procedure.
FA%	Value of face of dice.
G%	General loop variable.
g%	Face value in PROCFACE.
H%	General loop variable.
HOS, HO%	Number of dice to be held.
ho%	Identity of dice selected to hold.
I%	Seeds random number generator.
ID%	Flag to indicate validity of throw.
J%	General loop variable.
JS	General string used in PROCPASS.
k%	General loop variable.
K%	Key used in sort routine.
N%	General loop variable.
0%	General variable in RUN procedure.
P%	Number of players.
p%	General loop variable.
pts%	Points assigned to a score.
q%	Controls colours.
Q%, R%	General loop variable.

REPLY%	Indicates a key pressed.
S%	Size of side of dice.
s%	General loop variable.
ss%	General variable used in PROCRUN.
SI%	Value of side of dice.
throw%	Throw counter.
TT%, t%	General variables in PROCRUN.
T%	Controls dice moving down screen.
t%	Value of top of dice in PROCTOP.
to%	Value of top of dice.
U%	General loop variable.
V%	Valid flag.
WINS	Name of winning player.
X%	Value of dice in PROCTHDI.
X%	Coordinate (x) of dice.
Y%	Coordinate (y) of dice.
Z%	Delay variable.

ARRAYS

D%	Holds value for each of the five dice.
DPOS%	Holds starting position for drawing dice on screen.
hold%	Contains dice to be held during each throw.
NAS	Holds names of players.
SC%	Holds each players total score.
SCS	Holds names of scores.
SCSH%	Three dimensional array holding scoresheet for each player. That is, SCSH%(A,B,C) where A='score', B=player and C=status of 'score' A for player B. C=0 gives the actual score obtained; C=1 gives details about that score, that is, whether available, forfeited or taken.

quite a lot of them. However, if you find this too long, simply alter line 1190 PROCDEL (1000) to a lower value.

When playing this game, you take your scores from the front face of the dice – that is, the dice facing you on the screen.

Because of the large number of variables in this game, the program had to be written in Mode 4, thus sacrificing colours. The program is a tight fit even then, so be careful not to leave spaces.

PROCEDURES

Lines 10-70	Main body of program. Seeds random number generator, defines envelopes and calls procedures to play the game. Turns off cursor after each mode change.	PROCDEL	Delay procedure.
PROCnoplayers	Prints titles. Asks if you want instructions and if so calls PROCINST. Asks for the number of players.	PROCADD	Adds up each players scoresheet and decides whether to award bonus. Calls PROCPLTBL.
PROCINIT	Sets up arrays according to the number of players and initialises variables.	PROCPLTBL	Draws the final scores table and declares the winner. Asks if you want another game.
PROCNAMES	Gets the names of the players.	PROCTHDI	Throws dice, checking which ones (if any) are to be held. This procedure assigns the values to the dice.
PROCPLAY	The main procedure, it controls the playing of the game. It calls PROCTHDI, PROCgot, PROCpass, PROCcheck, PROCerr, PROCDEL and PROCSCORES.	PROCDRDI	Actually draws dice tumbling down the screen. Also erases dice where necessary. Sets hold% back to 0 before ending.
PROCcheck	Checks if the score you've selected is valid. Calls relevant checking procedure.	PROCplot	Draws a cube at selected position.
PROctot	If a number score is selected, this procedure is called to add up the dice with the number.	PROCLplot	Draws the edges of the cube.
PROChi	Checks the dice to see if a Hi score is valid.	PROCTILT	Draws a tiltedcube and its edges.
PROClo	Checks the dice to see if a Lo score is valid.	PROCTOP	Draws the spots on the top of the cube.
PROCvalid	Checks SCSH% after validation. If there is no score for the player concerned, then ID% is returned false, that is not valid.	PROCSIDE	Draws the spots on the side of the cube.
PROCTPR	Checks all combinations of dice for a Two Pairs score.	PROCFACE	Draws the spots on the face of the cube.
PROCTRI	Checks dice for a Triple score.	PROCSPOTS	Calculates the values for the top and side of the cube given the value for the face.
PROCFKD	Checks dice for a Four Kind score.	PROCHOLD	Asks which dice you wish to hold and sets hold% accordingly.
PROCYAMS	Checks dice for a Yams score.	PROCPASS	Asks which score you will forfeit and sets SCSH% to indicate this.
PROCRUN	Checks dice for a Run score.	PROCERASE	Erases dice from resting position on screen, ready for next throw.
PROCFH	Checks dice for a Full House score.	PROCgot	Checks to see if you've selected a score which you've already had.
PROCSCORES	Prints the summary of scores at the end of	PROCINST	Instructions for the game.
		PROCerr	Lets you know if you've entered a name or score that the program does not recognise.
		Line 2580	Data containing names of scores.

SCORES

Ones Any number of ones. Score total number of ones (1-5).
Twos Any number of twos. Score total number of twos (2-10).
Threes Any number of threes. Score total number of threes (3-15).
Fours Any number of fours. Score total number of fours (4-20).
Fives Any number of fives. Score total number of fives (5-25).
Sixes Any number of sixes. Score total number of sixes (6-30).
 If you total of scores is 60 or more, you are awarded a bonus score of 60 points.

SPECIAL SCORES

Two Pairs Any two pairs of dice, such as 2 ones and 2 fives. Score 30 points.
Triple Run Any three dice the same. Score 30 points.
Four Kind All dice different, either one to five or two to six. Score 40 points.
Full House Four of dice the same. Score 40 points.
Hi Two dice the same, and the other three the same as each other, such as 2 fours and 3 sixes. Score 40 points.
Lo Any fairly high score. It must be higher than Lo. Score total number shown on dice face.
Yams Any low score. It must be lower than Hi. Score total number shown on dice face.
 Five sixes. Score 60 points.

George Cane puts an old favourite on your monitor

PATIENCE is a BBC Micro version of the long established card game which, by its nature, is for one player.

On screen you see seven vertical files of cards, all face down bar the last card of each file. The number of cards placed in each decreases by one as you look from left to right, resulting in there being only one card in file seven.

The remaining 24 cards form the pack. For convenience the pack is also laid in a vertical file on the extreme left of the screen and is numbered 1. The seven files of game cards are numbered 2 to 8.

Using these numbers you must move cards from one file to another in an attempt to finish with every card face up, and all the pack used up.

The all-important rule is that cards

must be placed in the order "low" on "high" and in alternating colours. This means for example that a red 4 can only be placed on a black 5, a black queen can only be placed on a red king and so on.

When any vertical file becomes empty as a result of moving its last card, that empty space can be filled, but only with a king.

Just keep moving the cards until either you succeed in using all the pack and turning all 52 cards face up in ascending order, or you cannot move any card according to the rules.

By the way, the computer won't let you make an illegal move - though we're sure you wouldn't even try!

All you need is a little bit of luck... and an awful lot of patience.

```

The best value ever in educational programs!

Available now at your newsagent

A must for every parent and teacher, the Micro User Educational Special will help turn your BBC Micro into a learning centre.

Its 15 original programs have been specially chosen to combine educational validity with sheer good fun.

Tested in the classroom, and ranging in scope from pre-reading to sixth form maths, each program is fully listed and explained in detail – in the clear style for which The Micro User is renowned.

And we've managed to squeeze all the programs from this Micro User Special into a software package that's overflowing with educational value.

Can you or your children afford to miss these vital educational resources?

NEW! from SQUIRREL Two very original programs for BBC-B and ELECTRON

POLAR PERILS £7.95
A 100% m/code multiscreen arcade/adventure game set in very hostile Arctic waters. No gun – just your wits and your spear for survival against many sub-zero hazards including ravenous polar bears who will hop on to your tiny ice floe without warning! Great skill is required to get through to the final screen of this very addictive adventure and only then do you realise that your difficulties have only just begun as you try to collect ice blocks in your kayak for your igloo home!

MONEYWISE £9.95
An up to date yet simple to use personal/home money management system based on not one but TWO main accounts with extensive analysis, budget forecasting, annual summary and 3D BAR CHARTS. Other facilities offered are – SAVE complete program to DISC, PASSWORD protected datafiles (tape or disc), PRINTOUTS of all accounts and 3D Bar chart screen dump.

Other established classics from SQUIRREL:-

TRAFALGAR £8.00
'A good combination of arcade action and strategy' – C & VG

SUPERGOLF £7.50
'I do know a good game when I see one and SUPERGOLF is just that!' – Electron User

BUNFUN £6.50
'Fast and furious – a game calling for quick reactions – fun to play' – The Micro User

All programs available on 40T disc – add £2.00

BMX ON THE MOON (32K)

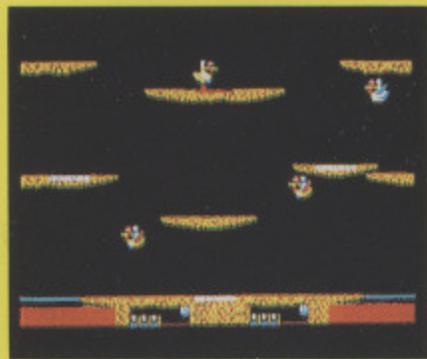

Smooth scrolling-screen arcade action. In this game you control a moon cycle which you use to patrol the surface of the moon. You must avoid the rocks on the surface, and also the monsters bouncing high in the low gravity. You should try to shoot down the spaceships which fly overhead dropping bombs onto the moon surface: A further hazard are the flying barrels which are often just too high to shoot or jump over, and just too low to squeeze underneath.

●●● NEW RELEASE ●●●

£7.95

Many of our titles are available in Boots, W.H. Smiths, John Menzies, Rumbelows, Laskys, Currys, HMV, Greens at Debenhams and Spectrum Shops. Also at all major computer dealers - Eltec Computers, Micro Management, West Coast Personal Computers, Microstyle, Electronequip, 3D Computers, Computarama, GTM Computers, etc. Our software is also available through all the major distributors, and directly from us by mail-order.

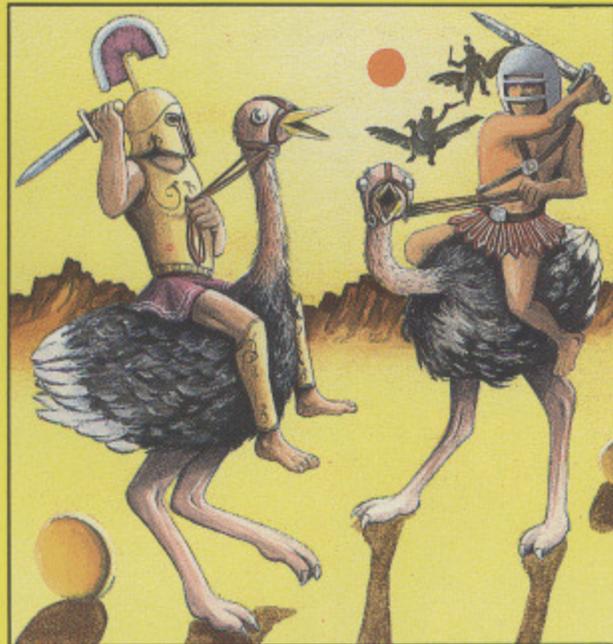

WINGED WARLORDS (32K)

A fascinating arcade-style game for one or two players. Each player rides an ostrich, and the aim is to knock the enemy riders off by colliding with them. In a collision the rider with the highest jousting pole will be victorious. If you are successful, the enemy will revert to its original form: an egg. The egg must be collided with to prevent it from hatching. Avoid the lava bath at the bottom of the screen, and remember: you can fly better by using stronger strokes - imagine you are an ostrich trying to fly!

(KEYBOARD OR JOYSTICKS)
