Launch your BBC micro with the Torch Z80 disc pack.

If you already have a BBC Model B micro, then you know that it is not a toy. But neither is it suitable for business or for serious programming because it lacks the access speeds and massive storage capacity that only floppy discs can provide.

The answer is a TORCH Z80 DISC PACK. The twin discs store up to 800K of data and programs, while the Z80 processor board provides an extra 63K of user memory and Torch's CP/M* compatible operating system – giving access to the largest range of software currently available.

For the business user, this means sophisticated word processing, financial and stock-control packages. For the programmer who has outgrown BASIC, the TORCH DISC PACK can handle more compact, powerful, and specialised languages – such as PASCAL, C, FORTRAN, LISP and COBOL.

The TORCH Z80 DISC PACK comes complete with a range of useful software, including a full disc function test, a character redefinition program, a music generator, a Z80 monitor and system demonstrations.

TORCH gives you the power and programming space to launch your BBC micro into the world of serious computing.

Name changes for the worse

THE BBC Micro is to change its name! It has been rechristened the "British Broadcasting Corporation Micro-computer".

The change has been

forced on the BBC and Acorn because of difficulties that have cropped up in the export field.

Apparently while the letters BBC mean only one thing to the insular British, abroad they are widely recognised as the initials of the Brown Boveri Company, a Swiss multinational.

Although nobody has registered BBC as a trademark in this country, owing to a "hands off" agreement between the two parties, Brown Boveri has registered it in most other countries.

This means that the BBC Micro can no longer go out with the logo "BBC Micro-computer" emblazoned on it.

So, all Acorn's production lines are now manufacturing the "British Broadcasting Corporation Micro-computer".

Riddle of missing

WHERE are the BBC Micros? Acorn recently handed over its 100,000th machine and is increasing its production line by several thousand units each month — yet dealers and a clamouring public are complaining that there are chronic shortages.

Some exciting new lines on way

CUMANA is all set to launch an exciting range of new products for the BBC Micro which will greatly increase its capabilities.

Based around an expansion board which plugs into the tube, the system will enable the BBC Micro to be used with 6502, Z80, 8088, and 6809 second processors.

The board, which has slots for six cards, will also provide a hard disc interface, Prestel/teletext downloading and a networking system.

First out will be the Z80 card, with licensed CP/M, followed closely by the 6502.

Initially, both will support 64k as standard with a 64k expansion option. Later there will be a 256k RAM card. The units are due for phased release over the next six months.

Pre-production models of both the 6502 card and the hard disc interface will be on display at the BBC Micro User Show, to be held in Manchester at the end of June.

At the same time while people are upset because they can't get hold of a BBC Micro, users who do have one say it is often unreliable and temperamental.

And the very dealers who complain about not getting supplies have been criticised in turn for contributing to the situation.

"Go back a few months to just after the Christmas rush and it was difficult to find a dealer who was prepared to commit himself to the market by placing a forward order," said Martin Jardine of Leasalink, Acorn's main distributor.

Frustrated

"Now that the market has been proven the dealers have increased their scheduled orders and demand instant response. But it is just not possible to turn Acorn's production line around overnight."

Jardine adds that some of the people making the most noise are frustrated would-be dealers who have taken orders for machines without any possibility of supply.

"It is a daily occurrence," he told *Micro User*, "Dealers set themselves up without making an approach to Acorn or ourselves, then they phone up and say 'I have an order, supply me.'"

Other dealers are also trying to get equipment before their credit

BBC machines

worthiness has been established.

Leasalink has now stopped appointing dealers for "at least three months" so that it can concentrate on meeting the needs of its existing network.

Leasalink itself is in a quandry. A visit there found crowded premises,

Turn to Page 10

IMAGINE JOIN IN

SOFTWARE company Imagine has switched its allegiance from the Vic 20 to the BBC Micro.

"We've been writing games for the Vic but feel that it has now reached the end of its commercial life," said a spokesman. "The BBC Micro was the obvious choice to replace it."

Imagine's programming staff includes (from left to right) John Gibson, Eugene Evans and Dave Lawson. Evans has been the darling of the national press and media recently. They've portrayed him as a teenage whizz kid reputed to earn £35,000 a year as a programmer.

Those missing micros

From Page 9

staff seemingly bewildered, and shortages of essential distributor stocks such as spares, joysticks, printers and other peripherals.

One new dealer who arrived on appointment to place an order for hundreds of BBC Micros came away with one machine and no indication of when his full order would be met.

It is not as though Acorn isn't producing the goods - it is just that no one estimated the phenomenal demand for the product.

About 18 months ago Acorn staff were predicting an annual sales turnover of around 12,000 machines. The company is now producing that many machines each month.

It has also boosted production for May to 15,000 and will increase this to 17,000 in June.

Acorn's comments on the situation are delightfully ambiguous: "There isn't a shortage at all,"

said a spokesman, "it's just that demand exceeds supply."

It is difficult to establish reasons for the shortage other than that the market demand was wrongly judged.

Dealers complain that education authorities are being given priority, that machines are being stockpiled for sale in the US, that too many dealers are chasing too few machines, and that mail order sales of the micros have first call over dealer requirements because of a legal clause stating that the goods will be supplied within 28 days.

Acorn say that no machines are being stockpiled for the

American market (it is understood that the company is required by the British Broadcasting Corporation to satisfy the home market in terms of supply and quality before exporting), that the mail order business makes up only seven per cent of total sales, and that the demand from the education sector was only a seasonal hiccup and one that brought business both to dealers and themselves.

It is understood that 4,500 BBC Micros were delivered to primary schools alone in March, and all educational establishments bought heavily to utilise budget allocations at the end of the school financial year.

Video micro link

A VISION analysis system which allows pre-recorded images to be transferred from a standard home video recorder to the BBC Micro has been developed by Digithurst.

The interface digitises pictures and allows analysis and subsequent storage of the information. It costs £295.

For the 20-pupil school... a Micro

ONE of the smallest schools in Wales has just installed a BBC model B system for use by its 20 children.

Half of the £650 cost was donated by parents, with the rest coming from the government's MEP scheme.

Mr Michael Taylor, headmaster of Pentre junior school, near Wrexham, said he had treated the computer as a sophisticated toy at first, but was now convinced of its educational value.

The children - there are so few of them that girls have to play in the football team - are delighted with the computer and have already mastered the basics.

"With such a small school it is very easy for all of the children to gain maximum benefit," said Mr Taylor. "They have taken to it extremely well and I am sure they will be proficient in computer techniques by the time they move on to comprehensives."

FROM HIGH FLYING TO HIGH TECHNOLOGY

WHAT does a British Airways pilot do with his spare time?

In the case of Captain Roger Selby, he writes simulation packages for the BBC Micro.

And Selby, who was a co-pilot in a Jumbo jet (see picture) before assuming command of a TriStar, says not only has he found a hobby for life, but he has also improved his real-time navigation skills through writing and using his packages.

He recently released an enhanced version of his 747 Flight Simulator for the BBC, and is now busy working on a space simulation package "Relativity Starship", which simulates the correct 3-D positions of 50 local stars within 20 light years of the sun.

Obsession

The package incorporates "all the Einstein relativity effects, and makes one realise just how big space is," he said.

Selby (37) has had no problem in switching from the high technology aircraft cockpit to the BBC console.

"Computers have become an obsession with me and since their invention I've known that I'll never be bored again, he said.

He wrote his first 747 flight simulator 18 months ago for the Acorn Atom, but says the BBC version is much more realistic, and easier to use.

"I'm an absolute nut about the BBC Micro," he said.

"I'm particularly

'Can't wait for second processor'

impressed with the ease with which machine code sub routines can be used in conjunction with the very fast resident Basic.

"However I only realised how good the Beeb machine was when I tried out other micros.

"Now I can't wait to get the extra processor options going on the machine."

He has also developed a space adventure program which he describes as a "think and zap and think again game." He says it is a new concept in which a player has to manage the play as well as compete in a straight forward confrontation.

Prototype versions of the packages were snapped up by Micronet 800 when it was first building up its tele-software base for the BBC Micro.

Enhanced versions are now being marketed through Doctor Soft, a company Selby set up with Peter Chilcott, himself a former pilot.

H & H Software has announced that Alphabeta, its word processing package for the BBC Micro, has been reduced in price from £28.50 to £14.50 for the cassette version.

Also released - a disc version for £16.

Happy with their chips

ACORN have revealed they are second-sourcing their ULA chips. This means that they are to obtain this vital component from both Ferranti and another, as yet unnamed, supplier.

Despite rumours to the contrary, Acorn strongly deny that this is due to any dissatisfaction with Ferranti, previously their sole supplier.

They state that they are doing what any sensible company would do to ensure future requirements are met. Ferranti would continue to be a valued source.

Acorn's concern with future supplies of chips is probably well justified, particularly in view of the great difficulty in obtaining disc upgrade kits. This is due to a scarcity of the 8271 disc controller chip.

Acorn instal more lines

THAT long catalogue of complaints from users unable to get through to Acorn should be at an end. The company's customer services department has been tripled in size - and eight telephone lines installed.

The number to ring: 0223 210111.

According to customer services manager Mike Bignall, more phone lines will be added as required, and he anticipates his staff of 12 will go up to 18 within the next 12 months.

Stringent

That's providing he can find the right people. Dealing with customers' problems requires tact and understanding, and Mike is not finding it easy to recruit people who meet his stringent requirements.

Phone queries only account for one aspect of

the department's activities. Letters appealing for advice are pouring into Acorn's Cambridge headquarters at the rate of more than 100 a day.

Says Mike: "We are aiming to reply to a general enquiry within a week. A more technical enquiry may take up to a fortnight."

The address to write to is Customer Services Department, Acorn Computers, Fulbourne Road, Cherry Hinton, Cambridge.

THE 1000,000 BBC Micro has been presented to Charing Cross Hospital. BBC Breakfast Time's Selina Scott presented it to the hospital's speech therapy unit.

The micro will play a key role in the unit's new venture, a Communication Aid Centre, which opens next month.

Software winner

THE winner of the software contest in the April issue of BBC Micro User was Mr Anthony Withall of Sheffield. As his prize he will be receiving a box of software from the Acornsoft range every month for the next year.

New disc filing system is due

A NEW disc filing system for the BBC Micro is due to be released in mid-June. Developed by Kenda Software, DMFS – which stands for Disc Management Filing System – hopes to overcome many of the limitations inherent in the present BBC Micro DFS.

The new system places no restriction on the number of files you can have on disc, unlike the present DFS, which allows a maximum of 31 files.

There is also a facility to allow recovery of inadvertently deleted files.

Appealing

"This should make it particularly appealing to first time and educational users," said Kenda director Alan Horner.

DFMS permits file names of up to eight characters plus three qualifiers, overcoming another disadvantage of the present DFS.

These filenames are CP/M compatible, and DFMS will read CP/M standard discs, allowing the BBC Micro to load up programs written on

Disc copier

The first protected-disc copier for the BBC Micro has just been released by Clares. Called The Key, it will enable the user to take back-up copies of most protected discs, and also allow copying of individual tracks and sectors.

Clares stress strongly that the program, which sells at £12.95, is meant solely as a utility to enable "safety" discs to be made. A condition of sale is that the disc must not be used for software piracy.

CP/M machines.

DFMS can stand alone or work alongside the present DFS, and provides a utility to transfer files between the two systems.

Because it is hardware based, the system also allows the user to access the whole of the BBC Micro's 32k RAM, as well as providing an extra 1.5k of memory itself!

Not the line for lasses?

MICROSTYLE are still looking for a female computer engineer.

Following the story in April's BBC Micro User, they did manage to find one, though they had to import her from Germany. However she has since left them to take up a full time course in computer engineering.

"We've had scores of male applicants for the job, but very few women," said Lyn Farmer, managing director of Microstyle.

"The trouble is that, although they've got the talent, women just haven't been given the opportunities for training that men have.

"If we could find a woman with the appropriate training we would seriously consider her."

Devilish clever, these Beebs

A TEN foot tall demon, currently on display in Great Yarmouth, owes much of its "life" and movement capabilities to a BBC Micro.

It was built for a chamber of horrors show by N.J. Farmer Associates, but the company encountered a major problem when trying to synchronise its

movements with a horror music sound track.

"We tried it manually with an electronic coding device, but didn't have enough fingers and thumbs to press the buttons needed to get him to open his mouth in time," said Nick Farmer.

"So we bought a BBC Micro and with it were able to program the

demon's movements and lighting with lip synch accuracy. We have managed to achieve an effect of stunning and very frightening realism."

The completed program has been transferred to a spare track on the audio cassette tape loop which drives the monster.

Desmond, as the

demon is affectionately called, is made of various plastics and rubber over a steel skeleton, and has eye, jaw, neck, waist and leg movements working in conjunction with a lighting sequence.

The movements are operated by pneumatic cylinders controlled by electric solenoids and valves.

BARRY WOOD'S TAILPIECE

IT'S really a shame the way so many commentators keep on having digs at Acorn.

The latest is caustic Peter Craig, columnist of the industry's trade newspaper, *Computer Dealer*, which has always had nice things to say about Acorn in the past.

In the latest issue he complains that the Acorn phone number – 0223 245 200 – is engaged "168 hours a week," and he adds:

"Being permanently engaged might make it difficult for important staff to ring out, so they all have special private ex-directory numbers.

Next month this column will list them."

IT may not have been the Pulitzer Prize but for me it meant as much: Acorn's PR man sent a letter to the editor complaining about my column.

I'd love to quote from it but, in line with Acorn's usual open policy, the document's not for publication. After all, it might be bad for public relations...

A LITTLE bird (an Owl actually) tells me that the BBC are all set and ready to go with

their telesoftware launch. Only they've had to delay it.

Apparently, those awfully clever folk in Cambridge have produced so few tele-software units, and at such a price, that the BBC is afraid of getting into the Guinness Book of Records for broadcasting to the lowest audience ever.

FOLKS, the second processor's nearly here. At least, version one is.

According to an Acorn spokesman – you can always tell them as they're the ones who say "but don't quote me" –

the 6502 version coming out will give you only 32k of extra user memory.

You see, the 6502 addresses 64k: the copied-over Basic takes up 16k of that, and the part of the OS they transfer takes up another 4k.

That might add up to only 20k but, as Acorn haven't relocated the code with the bootstrap, the other 12k is wasted.

Don't worry, though, there's going to be a second version out in the near future. Well, knowing Acorn, there would be, wouldn't there? But don't quote me.

Software for the BBC Micro

...ROMS...

Available Soon!
SEND FOR DETAILS

Beeb-calc

A ROM based spread sheet program, like Wordwise this firmware is very fast and simple to use — yet is a powerful spread sheet analysis program, considerably better than the original 'calc' program — full floating point maths. Works in 80 or 40 column screen modes, variable column widths. Works with either cassette or disk.

This ROM coupled with Wordwise can turn your micro into an ideal small business machine.
£34.00 + VAT

Debugging Program

2 machine code programs — one in ROM, one on tape. Essential for the machine code programmer. An ideal compliment to the assembler built into the BBC machine. Contains a full machine code monitor allowing examination and alteration of memory, registers, setting of break points and even single stepping through machine code programs.

ROM based £19.00 + VAT
cassette £10.00 + VAT

Disk Doctor

A ROM containing useful disk utility programs. Enables the recovery of any data off the disk including deleted files etc. The full disk editor allows the alteration of any bytes directly on the disk (or in memory), or the loading and saving of any track or sector on the disk. Automatic transfer of programs from tape to disk and visa versa.

Includes a whole host of other useful utilities — string search, function key editing, the ability to format 35, 40 & 80 track disks.

£19.00 + VAT

Printer toolkit ROM

This includes routines for high resolution screen dumps for both the EPSON and NEC printers. Will work in any graphics mode with automatic grey shading of all screen colours. The most useful feature of this program is its 'spooling' capability, this enables data such as a program listings or high res screen dumps to be automatically spooled from your disk to the printer while using your BBC machine for running other programs.

£19.00 + VAT

Quantity discounts, starting at five off.

Wordwise

THE WORD PROCESSOR FOR THE BBC MICRO

SUPERB REVIEWS!

Wordwise

The word processor for the BBC machine.

This ROM based word processor has received superb reviews.

A powerful and flexible system — it's greatest strength being that it is fast, simple and very easy to use. No other existing word processor (even ROM based, costing twice as much) can compare with the flexibility of this system.

Supplied with full spiral bound manual and cassette containing an example document and free typing tutor program.

£39.00 + £1.50 p&p + VAT

Now available from stock. Quantity discounts, starting at five off.

all ROM based software requires new series 1 Operating Systems. We are now in the position to supply 1.2 ROM's for £5.00 + VAT when you buy any of the above software.

- CL50A - TEAC Cased, Single sided, 40 track, 5 1/4", 100K £150
- CS50A - TEAC Cased with own Power Supply, S/S 40 track, 5 1/4", 100K £180
- CD50A - TEAC Twin Cased with own PSU, Single sided, 40 track, 5 1/4", 200K £350
- CS50E - TEAC Single Cased with own PSU, Single sided, 80 track, 5 1/4", 200K £250
- CD50E - TEAC Twin Cased with own PSU, Double sided, 80 track, 5 1/4", 400K £475
- CD50F - TEAC Twin Cased with own PSU, Double sided, 80 track, 5 1/4", 800K £599
- MITSUBISHI Slimline - Uncased. Double density. Double track, 5 1/4", 1 Megabyte, track density 96TPI, track to track access time 3mSec. ONLY £220
- Single MITSUBISHI Slimline - Cased with own PSU. DSDD. 1 Megabyte. (400k with BBC) £275
- TWIN MITSUBISHI Slimline Cased with own PSU. DSDD 2 Megabytes. (800K with BBC). £535.
- Single Drive Cable for BBC Micro £8
- Twin Drive Cable for BBC Micro £12
- 10 Verbatim Diskettes, 5 1/4", S/sided £20
- 10 Verbatim Diskettes, 5 1/4", D/Sided £30

BBC PRINTER

GP100A

10 Tractor Feed, 80 Columns, 30 CPS normal & double width Char.

Dot res graphics. Parallel interface std. Our price includes FREE 500 Sheets of paper.

ONLY £175 (£7 carr.)

- SEIKOSHA GP250X 10" Tractor Feed, 80 col. 50 CPS, normal & double width & height characters, RS232 & Centronics Interfaces standard. £235 (£7 carr)
- Printer Cable to interface above printers to BBC Micro £11

NEC PC8023BE-C:

NEC 8023BE-C:

100 CPS, Bi-directional, logic seeking, 80 columns, 7x9 Dot matrix, superscript and subscript, hi-res block graphics, underlining, Tractor/friction feed, reverse linefeed, 2K Buffer, proportional spacing. £320.00 (carr. £7).

EPSON Printers FX80

10" Tractor/Friction feed, 160 CPS, 11 x 9 matrix, 137 columns max., Bidirectional, Logic seeking, proportional spacing, Hi-res bit image, Italics & Elite Char, Subscript & Superscript. £395.00 (£7 carr.)

MX100FT/3

15" Carriage, 136 columns, plus all the facilities of MX80FT/3 Only £425 (£7 carr)

LISTING PAPER

8 1/2" x 9 1/2" Fanfold paper plain or ruled (1000 sheets) £7 (150p carr)

15" fanfold paper (1000 sheets) £9 (150p carr)

Teletypewriter Roll (econo paper) £3 (£1.50 carr.)

MONITORS

MICROVITEC 1431

14" Colour Monitor, RGB Input. (as used in BBC programs) FREE Interface Lead. £249.00 (carr. £7)

SANYO 3125 14" Colour. RGB & V.H. Sync. Attractive screened metal Cabinet. Value for money. £199 (carr. £7).

Interface Lead for Sanyo £8.

ZENITH 12" Green Monitor. Hi-resolution £75 (£7 carr.)

CASSETTE RECORDER & ACC.

Top quality Slim-line, portable Cassette Recorder for Computer use. Mains/Batt. operated with counter. £26.00

C12 Computer Grade Cassettes in library cases. 40p

BBC FORTH on Cassette

Follows FORTH-79 standard and has fig-Forth facilities - Provides 260 FORTH words - infinitely extensible - Full screen editor - Allows full use of MOS - Permits use of all graphic modes, even 0-2 (just) - Easy recursion - Runs faster than BBC BASIC. ONLY £13 FREE 70 page manual and a Summary card.

BBC FORTH TOOLKIT

Adds following facilities to FORTH. 6502 Assembler, providing machine-code within FORTH - Turtle graphics enables easy to use colour graphics - Decompiler routines enables versatile examination of your compiled FORTH programs - Full double number set - An example FORTH program and graphics demonstration - Other useful routines - 64 page manual. ONLY £10.

READY-MADE LEADS for BBC

CASSETTE LEADS 7 pin DIN Plug to 5 pin DIN Plug + 1 Jack Plug £2.00
to 3 pin DIN Plug + 1 Jack Plug £2.00
to 7 pin DIN Plug £2.50
to 3 Jack Plugs £2.00
6pin DIN to 6 pin DIN Plug (RGB) £2.50

RIBBON CABLE LEADS 36" long

(Female Plug at one end, other end free)
SK9 Printer Cable (26 way Female) £2.75
SK10 I/O Cable (20 way Female) £2.00
SK11 1MHz Bus Cable (34 way Female) £3.20
SK12 Tube Cable (40 way Female) £3.70

PRINTER LEAD 36"

Ready Made £11

MISCELLANEOUS CONNECTORS

	Plugs	Sockets
RGB (6 pin DIN)	30p	45p
RS423 (5 pin Domino)	30p	40p
Cassette (7 pin DIN)	25p	65p
ECONET (5 pin DIN)	15p	25p
Paddles (15 pin 'D')	£1.10	£2.15

DISC Power Plug 6pin 75p

Official JOYSTICKS £11.50/pr

LIGHT PEN

All parts available for the Acorn User's "SHINE A LIGHT" Light Pen article for £8.50.

GEMINI'S BUSINESS SOFTWARE

Written by professional Chartered Accountants and coded by competent programmers. Ideal for small and medium sized companies. Now available from stock.

- Cash Book Accounts Package £82.00
- Beebcalc Spreadsheet Analysis £17.00
- Invoices & Statements £17.00
- Commercial Accounts £17.00
- Mailing List £17.00
- Database £17.00
- Stock Control £17.00

WORD PROCESSOR

This program features routines found in much larger and expensive programs. Very easy to use. Allows 1000 words (approx) in memory. Ideal for writing letters. Features incl., block delete, block insert, search and replace, edit text, display text etc.

£17.35

NEW ... NEW ... NEW

3 New Adventure games. May be the best yet written. We strongly recommend them. All have over 200 individual locations and packed with puzzles. A game can take easily months to finish. Only sophisticated compression techniques can squeeze so much in.

ADVENTURE QUEST (32K) £8.60
COLOSSAL ADVENTURE (32K) £8.60
DUNGEON ADVENTURE (32K) £8.60

FORTH ROM for BBC

This superb compiling language now available in ROM. Simply plug into one of the ROM sockets. £35.00

Full FORTH Manual £6.75

SIMONSOFT DISASSEMBLER

The most powerful, flexible and easy to use Disassembler currently available for the BBC Micro.

- Suitable for both Model A & B.
 - 5 modes of operation from Memory dump to full automatic disassembly.
 - Ability to identify any location in memory with a label.
 - Operating System Entry Points and Indirection Vectors are already labelled when the Disassembler is loaded.
 - Ability to define a 'map' of up to 72 separate areas of machine-code.
 - Output may be directed to the screen or a printer.
 - Areas of code can be disassembled and the output saved on tape or disc in BASIC *EXEC format for later incorporation into user programs.
 - Machine-code programs may be loaded and disassembled regardless of their actual run-time location.
 - The current set of labels, map and associated data may be saved at any time on tape or disc. This data can be reloaded at a later date and the disassembly continued.
 - Full Error checking and reporting is carried out at each step.
 - The disassembler is operated by typed commands or the user definable user keys.
 - Full instructions are supplied in the form of a 'HELP' program.
 - AVAILABLE on CASSETTE or DISC.
- Price: CASSETTE **£6.95**
DISC S/D **£9.95**
DISC D/D **£9.95**

BeebPen

(BBC Wordprocessor in 4K ROM)

BeebPen has been written completely in machine code for the BBC Micro to facilitate maximum speed and number of functions. It is without doubt one of the best things to happen to BBC Micro since its launch. BeebPen has been designed to be as simple to use as possible while still retaining the maximum power and versatility. It has numerous functions including right justification, block operations, text compression, full cursor control with on screen editing and a full set of printer options. BeebPen ROM plugs into one of the ROM sockets, no track cutting required.

Special Introductory Offer: £32.

13 ROM SOCKET BOARD

— simply plugs into one of the four sockets currently available on the BBC Micro to give a full 16 ROM socket capability (in which all ROM's may be resident at once). The circuit has been designed to allow the use of RAM in this area too.

By special request we have now extended our Introductory Price to first 1000 orders from BBC MICRO USER readers.

KIT — Only **£19.95**
Ready Built & Tested — Only **£24.95**

APPLICATIONS

CONSTELLATION (32K) £6.50

The great Bear! The Southern Cross! The Horned Goat! See the night sky gloriously depicted in hi-res graphics. Constellation has been adapted and enhanced from our successful ATOM program.

DISASSEMBLER (16/32K) £6.95

Relocatable disassembler program. Lists object code and Assembler mnemonics from and to any specified addresses. The listing can be stopped and restarted. Page mode option and output to a printer are available. ASCII symbols may be output if required. The Assembler code may be stored and modified and the program re-assembled.

FILER £8.95

A powerful file handling program for BBC. FILER allows the user to build up, manipulate, store and retrieve data on the BBC. A very powerful package indeed.

Wordwise

WORDWISE Model B

Without doubt the most sophisticated piece of software yet written for the BBC Micro. Wordwise contains all the usual word processing features enabling characters, words, sentences or any defined section of the text to be deleted, moved or copied from one part to any other part of the document. The more complex facilities such as search and replace or file handling commands are menu driven so that even a beginner can understand how to operate them. Wordwise will work with whatever filing system is currently implemented. Supplied with full fitting instructions and a spiral bound manual. We believe this word processor compares favourably with those costing many times as much.

Special Offer — ONLY £35.00

LOGO II

£9.95

This language is very popular in American schools as it is an ideal educational program. It can graphically demonstrate the ideas of defined procedures, sub-routines, loops and even recursive programming. Gives excellent introduction to LOGO language for young and old alike.

EDUCATION Software

JUNIOR MATHS PACK (32K) £6.95
Makes learning fun for 5-11 year olds. This package consists of 3 programs (menu driven) that increase in difficulty as your child becomes competent. A very good supplement to standard educational methods.

WHERE? £6.95
Do you know WHERE? you are? This well written program, using high resolution graphics offers timed tests on the geography of Great Britain.

WORLD GEOGRAPHY (32K) £7.00
Beautifully drawn Hi-Res colour map of the world illustrates and aids this graded series of tests on capital cities and populations of the world.

BRITISH GEOGRAPHY £6.95
Teaches a child the locations of Cities and Ports using directional keys.

CAROUSEL £4.35
Aimed at junior school age. Sequences of colours and sounds teaches a child to concentrate.

INTRO TO ARITHMETIC £10.45
4 programs — Additions, subtractions, multiplications and divisions. Help stage, moving graphics and colours. Worksheet produced at the end of program. (5-7 years old).

WRITING £4.80
Full screen demonstration of correct formation of lower case alphabetic characters. Several choice of sequence (5-7 years).

PROGRAMMING MADE EASY ONLY £8

A new concept for schools — A set of workcards to introduce programming to primary school pupils. An invaluable asset to Teachers and Parents alike. The language has been carefully chosen to provide a balance between 'Computer Terminology' and standard language. Bulky and often despised text books have been replaced by the set of Workcards. Each card can be handled easily at the Computer Keyboard. Also included are a SUPPORT PROGRAM specially produced to reinforce the work covered by the cards and a CHECK LIST for children and teachers to monitor progress. A must for primary schools undertaking computer learning.

WATFORD ELECTRONICS

CARDIFF ROAD, WATFORD.
Tel: (0923) 40588. Telex: 8956095

THE editor passed my desk,

"Look everyone", he screamed excitedly, "he's writing, he's actually writing."

He came closer and looked over my shoulder.

"COPY, eh? Well, plagiarism is what you're good at. Come on, come on, what about LIST and RENUMBER?"

With that he walked back into the office.

"He's forgotten LISTO," I thought to myself.

"And that's not mentioning LISTO," he added, door ajar.

You probably know what LIST does but, if not, here goes...

LISTen carefully...

We have ways of stopping your precious program taking a mad scroll all over the screen

IF you type in LIST and press the Return key the computer will display on screen all the lines of any program in memory. Simple isn't it? So if you've entered a program into the machine and you want to show your masterpiece to admiring friends just type in LIST.

Sadly, if your program has more lines in it than the micro can display on screen what happens is that the lines whizz through until the end of the program just fits. The last line of the program fills the last line of the screen.

So, unless you've got very fast eyesight, all you get for your LIST is the last 25 or 32 lines of your listing (depending on the mode you're in).

Obviously this isn't good enough and there are a couple of ways around it. One way is to limit the effects of the LIST command to the bits of the listing you want to see. This is easily done using a combination of the LIST command, commas and the relevant line numbers.

If you just want to see one line, say line 100, then type in

LIST 100

and press Return. This will display line 100 or whatever number you choose.

You can also select chunks of your listing by using a comma. For example:

LIST 200,300

will give you all the lines between 200 and 300, inclusive.

LIST 0,100

will give you all the program lines between 0 and 100, though they may not fit on the screen.

In fact, you don't have to put in the

zero. You can display all the line numbers from the beginning of the program to, say, line 500 by entering LIST,500. The system will assume the zero for you.

Knowing that, it probably won't come as any surprise to learn that typing in:

LIST 400,

will give you all the lines from 400 to the end of the program.

Using these commands, you should be able to list any section of the program you want. Even so, if you happen to list out too many lines you'll still get the "fruit machine" effect as

**By NIGEL
PETERS**

the screen scrolls upwards madly trying to display all the lines at once.

The way to get round this is to use the CTRL key, which we met earlier, to put the machine in "paging" mode. To do this you press the CTRL key and the letter N at the same time. Now when you type in LIST, the program is displayed one "page" (or screenful) at a time. If you want the next page you just press the SHIFT key.

When you've finished with the paging mode you just press the CTRL key and the letter O at the same time. The screen now goes back to its normal state (known as scroll mode).

I may as well tell you that if you're idle, like my editor, you don't have to

type in LIST in full. L. will do the same job.

Now you can display the part of the listing that you want, you may find that you would like to erase part of it.

You can get rid of any particular line number by merely typing in that line number and pressing the Return key. This is obviously a bit pedestrian if you want to erase a lot of lines.

Alternatively you can get rid of the whole lot by entering NEW, which seems a bit drastic.

Happily there is a middle way between these two extremes which involves the use of the DELETE command. Now this is *not* the same as the DELETE key we met earlier.

The DELETE key only works on lines at the bottom of the display *before* they have been entered into the computer. This means that it won't work on lines in listings which display the program that is already in the micro's memory.

What you do when you want to get rid of a group of lines at a time is to type in DELETE, letter by letter, specifying the numbers you want to erase, and then press the Return key.

Suppose you want to get rid of a chunk of lines from 200 to 300. You type in:

DELETE 200,300

and press the Return key. Lines 200 to 300 will disappear.

Similarly, if you want to get rid of the first 400 lines of a listing you enter:

DELETE 0,400

You have to put in the zero. Unlike LIST the system will not assume it.

If you want to delete from a certain line number to the end of the program you use **DELETE** again. You'll have to tell the machine what the last line number is or, if you can't remember it, just use one that's bigger.

For example;

DELETE 400,30000

will get rid of all the lines between 400 and 30000 inclusive and is almost sure to get rid of all the lines to the end of the listing.

If you want to be absolutely sure the highest line number the BBC Micro will allow is 32767. So:

DELETE 400,32767

will delete all the lines from 400 to the end.

You have to state a line number to terminate the command. **DELETE 400,** will not work.

Again, if you're lazy you can just enter **DEL.** instead of typing **DELETE** in full.

Once you've done all this deleting and copying your program might be in a bit of a mess. For a start, it's unlikely that the line numbers will be consecutive. You'll find from experience that this can lead to problems as well as making the whole thing difficult to read.

Also you might find you want to squeeze 20 new lines in between line

number 7 and line number 8, which isn't easy!

Of course you could use the editing facilities mentioned earlier to sort it all out (figure it out yourself!) but there is a better way. Those clever people at Acorn have allowed for your needs and the BBC Micro has a nice little command, **RENUMBER**.

If you type in **RENUMBER** and press Return the micro automatically rennumbers your program, the first line becoming line number 10, the second becoming line number 20 and so on in increments of ten until the end of your program.

If for some reason you want to change the increments or start renumbering at somewhere other than line 10, you can. For example **RENUMBER 300** will cause the renumbering to start from line 300. The increments, as you haven't specified anything else, are ten by default.

RENUMBER 1000,3 would start the renumbering process at line 1000 and this time the increments would be in 3s. Hence the line numbers would be 1000,1003,1006 and so on.

But what about **GOSUBs** and **GOTOs**? Well, provided you haven't been too clever in your programming **RENUMBER** will take good care of them. Example 1 makes this clear.

```
10 REM EXAMPLE1
20 INPUT "ENTER 1,2,OR 3",X
300N X GOTO 40,60,80
40 PRINT "ONE"
50 GOTO 100
60 PRINT "TWO"
70 GOTO 100
80 PRINT "THREE"
90 GOTO 100
100 END
```

It takes the input, a numeral 1, 2 or 3 and it prints out the number you have picked as one, two or three. Run it a couple of times, then use the **RENUMBER** facility to renumber your program as you will, such as **RENUMBER 20,3**.

Now run the program again and it works as before. Enter **LIST** and you'll see that the line numbers after the **GOTO** have been correctly adjusted.

```
10 REM EXAMPLE2
20 INPUT "ENTER 1,2,OR 3",X
300N X GOTO 40,X*30,80
40 PRINT "ONE"
50 GOTO 100
60 PRINT "TWO"
70 GOTO 100
80 PRINT "THREE"
90 GOTO 100
100 END
```

Example II does exactly the same thing, only here notice that we calculate the second line number after the **GOTO**, such as **X*30**. Run it and you'll see how it works.

Now use **RENUMBER 100** and you

From Page 17

get Example III:

```
100REM EXAMPLE3
110INPUT "ENTER 1,2,OR 3",X
120DN X GOTO 130,X*30,80
130PRINT"ONE"
140GOTO190
150PRINT"TWO"
160GOTO190
170PRINT"THREE"
180GOTO190
190END
```

Try running it and you'll get a message "no such line at 120". If you list the program you'll see that RENUMBER 100 works on line 120 to produce:

```
120 ON X GOTO 130,X*30,80
```

What has happened is that RENUMBER has worked up to where the calculation comes in and then fails for that line and the ones after it!

What's worse is that if the uncalculated lines exist you might end up in the wrong part of the program and, if it doesn't crash immediately, you may not notice it. Try RENUMBER 20 and see what happens.

You can imagine what might happen in longer, more complicated programs using calculated GOTO lines. So beware RENUMBER and line calculations!

Finally, just to prove it works for GOSUB here is the same old program using subroutines:

```
100REM EXAMPLE4
110INPUT "ENTER 1,2,OR 3",X
115GOSUB120
116END
120DN X GOTO 130,150,170
130PRINT"ONE"
140GOTO190
150PRINT"TWO"
160GOTO190
170PRINT"THREE"
180GOTO190
190RETURN
```

Now RENUMBER it as you choose and it will still work.

Incidentally, if you try doing something like RENUMBER 1000,5000, which takes you beyond the possible number of line numbers, the error message you get is rather apt. Try it!

So far we've covered the DELETE key, the COPY facility, LIST, DELETE and RENUMBER. That only leaves LISTO and then the editor might get off my back.

Now LISTO is a kind of addition to the LIST command we met earlier.

Using LISTO you can affect the format of the display you get when you use LIST to get a listing.

LISTO can be used to make a listing easier to read and its structure easier to grasp. You pick the particular LISTO option you want and when you next use LIST you get the listings with spaces inserted where you have specified.

You can have these spaces after the line number, in FOR...NEXT loops and also in REPEAT...UNTIL loops, or any combination of them depending on the number you add on to LISTO.

But remember that LISTO won't magically affect any listings already on the screen. It only works on the listings you call *after* selecting the LISTO option.

Also, you still have to use LIST after using LISTO – the latter does not automatically LIST for you.

The number you add on to LISTO to specify the option you want is made up by adding together a selection of numbers from the following menu:

- 0 means no spaces will be inserted.
- 1 will put in a space after a line number.
- 2 will put spaces in to indent FOR...NEXT loops.
- 4 will do the same for REPEAT...UNTIL loops.

What you do is decide which options you would like, add the menu numbers together, and put this controlling number after LISTO.

For example, if you want to have spaces after line numbers and also indent REPEAT...UNTIL loops, you just add together the menu numbers for each.

In this case you will add 1 (for line numbers spaces) and 4 (for REPEAT...UNTIL indentation) to get 5 and enter LISTO 5. Now when you enter LIST the listings you will get will be in this format.

All listings will be in this format until you change the LISTO option, or switch the machine on and off again when it will automatically assume LISTO0, with no spaces inserted.

Similarly, if you wanted a space after line numbers and indentations in FOR...NEXT loops it would be 1 plus 2 and the command is LISTO3.

In practice you tend to find yourself using LISTO0, with no spaces inserted, and LISTO7, which gives you all the spaces available (1+2+4=7!). LISTO7 makes your listing very easy on the eye but it uses up a lot of space.

LISTO is easier to grasp in practice than in theory, like most things on the Beeb. Try typing in a program which

has both kinds of loops and practice using the LISTO options from 0 through to 7 to see what happens to your listings. Notice how LISTO0 undoes the effects of any previous LISTO options.

Also notice that LISTO only works once on a listing. For instance, you can't use LISTO1 twice to get two spaces inserted after the line number.

Beware combining COPY and LISTO options. If you are in any of the LISTO options other than LISTO0 you can drive yourself crazy when you COPY.

What happens is that when you COPY a line and enter it using Return, the system forgets whether or not it has already inserted a space. It looks at the LISTO option and when you next use LIST it shoves in the required spaces, which can make your new line the odd one out in the listing.

As an example, type in LISTO0, press Return and enter:

```
10REM SPACES
```

```
20REM SPACES
```

Enter LISTO1, LIST and you'll get:

```
10 REM SPACES
```

```
20 REM SPACES
```

Now use COPY to copy line 20 and enter it. It looks alright doesn't it? Use LIST and you get:

```
10 REM SPACE
```

```
20 REM SPACE
```

The micro has copied line 20 exactly, including the space inserted under LISTO1, and treats it as a new line. So when you use LIST it goes through the listing, doesn't bother inserting another space in line 10 as it already has, but does in line 20, as it thinks it's new.

Try COPY on line 20 again. Now LIST and you'll get:

```
10 REM SPACE
```

```
20 REM SPACE
```

As you can see this can play havoc with the nicely ordered format of your listings. Sadly you can't use LISTO0 as a remedy, it only takes away the last space. Try it on the above and you get:

```
10REM SPACE
```

```
20 REM SPACE
```

The lesson is to avoid using COPY in anything but the LISTO0 option, otherwise you run the risk of getting extra spaces all over the place. Once you've got your listing correct you can then use the other LISTO options to make it more readable.

And now we've reached the end. I think you'll agree that none of what we've covered is particularly hard. All you'll need is a little practice and you'll soon have command of the BBC Micro's editor.

Which is more than I have of mine!

Midwich

COMPUTER COMPANY LIMITED

choice for **BBC** microcomputers

BBC COMPUTERS

Model B £346.95
 Model B + Disc Interface £441.95

RICKINGHALL HOUSE, RICKINGHALL, SUFFOLK IP22 1HH
 TELEPHONE (0379) DISS 898751

THE NEW AND UNIQUE C.A.D.* PROGRAM FOR THE BBC MICRO (32K)

All Discs available as either 40 or 80 Track at the same price.

* COMPUTER AIDED DESIGN (Available on Cassette or Disc)

AT A VERY AFFORDABLE PRICE

Ideal for teachers, designers, artists, technical drawing and numerous other applications including your own form and stationery design etc.

This program must be seen to be appreciated – your imagination is the only factor to limit its individual applications.

- Modes 0,1,2,4,5 (can be changed when program is running).
- Multiple display of arrays enables infinite complexity.
- **FUNCTIONS:** Line, rectangle, triangle, circle, text (upper and lower case) and colour pallet (8 colours and flashing).
- **DRAWING AIDS:** Alignment grid, circle copy, delete, free memory, purge memory, variable cursor speed, clear screen and redraw.
- Shapes can be filled or outlined (no need for Fill Routines).
- Save and load to tape in about 20 seconds, or to disc in 2 seconds.
- **SPECIAL FACILITY** – Rubber band mode – A very flexible and variable line drawing facility – must be seen.
- Free "redraw" routine to enable the pictures created to be displayed in your own programs.
- The disc version allows screen saves, which take approx. 3 seconds.
- **Recommended by BBC Micro User.**
- Future developments will include processing packs which will provide additional features such as arcs, ellipses, air-brush, printer dump and many more. Cassette users may purchase an additional cassette containing these features, but disc users will be able to return their disc which will be upgraded to the latest specification, and the user will only be charged the difference between the two versions.
- **GRAFSTIK** (joystick cassette version) **£7.95**
- **GRAFKEY** (keyboard cassette version) **£7.95**
- **GRAFDISC** (combines both on one disc) **£12.95** (the examples shown are all unretouched off-screen photographs of some of the program's capabilities).

SYNTHESISER PACKAGE (requires 1.2 O.S)

PART 1:-
 Allows up to 16 envelopes to be defined and saved using a very sophisticated, yet easy to use defining program. Alter the values and hear the effect instantly. Then use the envelopes in Part 2.

PART 2:-
 Turns your keyboard into a musical instrument. Lets you play 3-note chords (not just single notes). Use cursor keys to change octaves etc, etc.

Become the Rick Wakeman of the Computer Age.

THIS SUPER PACKAGE COSTS JUST
 Cassettes **£7.95**
 Disc **£10.95**

JOYSTICKS
 Pair of fully proportional joysticks of compact and handy size
£17.95

"THE KEY"

A disc utility package providing many useful features including formatting, data retrieval (even recovers accidentally erased programs), sector search, and the ability to alter individual bytes on the disc.
Plus the ability to make back-up copies of your treasured programs (works with most protected discs).
PRICE £12.95 (disc only)

CASSETTE LEADS (with Motor Control)

7 pin DIN – 3 pin DIN
 + REMOTE £2.95
 7 pin DIN – 2 x 3.5mm Jacks
 + 1 x 2.5mm JACK £2.95

MONITOR LEADS

6 pin DIN 6 pin DIN £2.95
 BNC – PHONO £2.95

PRINTER LEADS

SERIAL (5 pin DOMINO – 25 way "D") £7.50
 PARALLEL (Centronics) £13.95

PROGRAMMERS

We are constantly seeking new and interesting programs. Why not send yours for appraisal? Do not worry if the presentation is not to professional standards – we are looking for new ideas and we will advise and assist in bringing your program to the required standard. You have got nothing to lose but much to gain – So why not send your program today? 40 Track disc if possible or two copies on cassette. In some cases we will even provide disc drives against future royalties.

**PAUL LEMAN sounds out
the new BBC speech chip**

**English
as she is
spoke**

BY the time you read this the speech system for the BBC Micro may well be easily obtainable. On the other hand, you may still be whistling in the wind ... Before I describe some of the operational features I'll detail the major hardware additions and how I obtained them.

The speech system consists of two Texas Instrument devices:

- The TMS 5220 voice synthesis processor contains a digital filter and simulates the human vocal tract. It requires a large amount of data to make speech, and although the processor can be accessed directly, the synthesis of speech is a difficult task. This is where the second device comes in ...

- Actual word parts and words are stored in a 128k bit TMS 6100 voice synthesis memory or phrase read only memory (PHROM).

Both devices are mounted on board in positions IC 98 and IC 99. The full upgrade consists of the above devices plus two sockets to the left of the keyboard (the ashtray on early models) where cartridges can be plugged in the future. Presumably these will be extra PHROMs or ROM cartridges (hence *ROM?).

The PHROM supplied is known to Acorn as WORD PHROM A and a

phone call ascertained that they have no immediate plans for a successor. Texas Instruments, however, have a few different ones available. They come in 128k bits and 32k bits costing £15.27 and £11.92 respectively:

128k

- (a) Industrial
- (b) Weather time
- (c) Military
- (d) Avionics

32k

- (e) Talking clock
- (f) Sound effects
- (g) Telecoms

The speech add-ons had been ordered last September and a local dealer supplied a temporary manual in April. Within a week my original dealer said the chips had arrived sans manual and ROM slots. The chips were liberated and fitted, but not a word was heard.

Next day the aforementioned call to Acorn lifted the veil.

The system would only work properly without modifications if the micro had an Issue 4 board with OS 1.2 fitted. The full upgrade (with ROM slots) was not finalised, and I shouldn't really have the ICs anyway.

On refitting to a suitable machine all

the facilities mentioned in the manual worked.

On eventually getting down to using speech, WORD PHROM A was disappointing. The words and word parts available number 165, but are in themselves a little limited, although easy to use via the existing Basic command SOUND.

```
10 SOUND -1,160,0,0:REM 'Acorn'  
20 SOUND -1,179,0,0:REM 'computer'  
30 SOUND -1,122,0,0:REM '-z'  
40 SOUND -1,257,0,0:REM 'score'  
50 SOUND -1,162,0,0:REM 'again'
```

The first parameter (-1) tells the operating system the SOUND statement is a speech system command.

The second parameter relates to the

**though not for
really lurid
language**

From Page 21

word or word part required in the PHROM.

The last two parameters are always zero and must always be present.

There are other ways of accessing the speech system from Basic, which will be mentioned later.

An appendix in the manual gives a list of words which can be made up from words or word parts and speculates that the user can think of many more. They would be useful for simple prompting and simple mathematics, but not for much else.

Cutting up preset words in the PHROM or accessing the processor directly allows you to form your own words. The first requires a lot of experimentation and patience, the second an understanding of the parameters used by the speech processor – there can be up to 13 of these.

Besides being difficult this second method, eats up large chunks of memory. The word "zero", for example, takes up 144 bytes in its definition.

Word numbers 32 to 126 have an association with the Ascii characters of the same number, that is:

SOUND -1,56,0,0 and SOUND -1,ASC("8"),0,0 will both give "EIGHT".

Numeric characters will give numbers as above. Upper case letters will produce letters of the alphabet and lower case letters and remaining characters will produce words with some kind of association, for example

">" gives "large"

"P" gives "P" or "pea"

"a" gives "and"

The first parameter for SOUND can be given as a four digit hexadecimal number, its value indicating the action to be taken with the other three parameters. Four values can be used:

Value Action

&FFFn Speak using word number 'n'

&FFBn Speak using absolute address in PHROM 'n'

&FF60 Speak from RAM. This initialises the speech processor.

&FF00 Speak from RAM

Acorn has given WORD PHROM A the number 15 (&F). Hence SOUND -1 (-1=&FFFF). The speech system will allow you to access up to 16 word PHROMs.

To produce a word using the absolute address is just as simple as

using SOUND -1. Here are four ways of producing the word "illegal".

```
SOUND -1,108,0,0
SOUND &FFFF,108,0,0
SOUND -1,ASC("i"),0,0
SOUND &FFBF,&1E3E,0,0
```

There are also two operating system calls which allow access to the speech system.

OSWORD call with A%=&07 is detailed on page 461 of the User Guide. Its use is as for generating sound, but with the parameters as mentioned above.

OSBYTE calls with A%=&9E or &9F. These give low level access to

speech by directly writing to and reading from the speech processor. This is quite complicated, but gives you the added bonus of producing sounds from parts of words.

OSBYTE call with A%=&EB will indicate if a speech processor is present. X%=&FF if present, X%=&00 if not. If it is present this also turns it off! It can be turned on again with *FX 235,255.

Although obviously limited in its scope WORD PHROM A delivers very good quality English speech, especially for the price. The provisional manual is very comprehensive and easy to use.

Some more useless information about the BBC Microcomputer

THE machine operating system is held in a 16k ROM, which extends from &C000 to &FFFF, but within that address allocation there are three pages (3 x 256 bytes) of memory – &FC00 to &FEFF – which are used for memory-mapped input/output, writes Paul Beverley.

Therefore, when any of these addresses is being accessed the operating system ROM is automatically disabled. That means that there is 3/4 k bytes of information in the ROM which is normally inaccessible.

Even though it is inaccessible, there must be something in there – it could be all zeros I suppose, but knowing some of the Acorn engineers it seems unlikely that they would miss the opportunity of putting something in there, even if it was a message like "Stop messing about and put this chip back into the machine it came from. You have voided your warranty!!!"

One way to find out what is really in there would be to borrow an operating system ROM from another machine and put it in one of the sideways ROM sockets. Then, since you cannot run Basic at the same time, you would have to use a machine code monitor program to select the particular ROM slot by changing the contents of &FE30,

the sideways ROM paging register. (Numbers 0 to 3 are used for the four slots.)

Now the information you want to look at will be accessible between &BC00 and &BEFF, since the sideways ROMs are mapped between &8000 and &BFFF. You would then have to transfer the bytes across into RAM, switch the sideways ROM register back to Basic and then use Basic to look at the information at leisure.

Some idiot had to do it sooner or later, so I thought it might as well be me! This is what I found ...

(C) 1981 Acorn Computers. Thanks are due to the following contributors to the development of the BBC Computer (among others too numerous to mention): David Allen, Bob Austin, Ram Banerjee, Paul Bond, Allen Boothroyd, Cambridge, Cleartone, John Coll, John Cox, Andy Cripps, Chris Curry, 6502 designers, Jeremy Dion, Tim Dobson, Joe Dunn, Paul Farrell, Ferranti, Steve Furber, Jon Gibbons, Andrew Gordon, Lawrence Hardwick, Dylan Harris, Hermann Hauser, Hitachi, Andy Hopper, ICL, Martin Jackson, Brian Jones, Chris Jordan, David King, David Kitson, Paul Kriwaczek, Computer Laboratory, Peter Miller, Arthur Norman, Glyn Phillips, Mike Prees, John Radcliffe, Wilberforce Road, Peter Robinson, Richard Russell, Kim Spence-Jones, Graham Tebby, Jon Thackray, Chris Turner, Adrian Warner, Roger Wilson, Alan Wright.

DISC BASED SOFTWARE

for BBC Model B with 100K Disc Drive or above (Monitor + Printer optional)

INTERACT – Integrated Accounts

Keep tabs on 800-1200 invoices per 100K disc drive. Invoice entry, search, sort, and Account management plus credit management and alert are handled from a series of menus. When searching for an invoice or set of invoices you may enter a keyword such as the clients name or you can look for other details such as a nominal sale code.

Please note this is the real thing and fulfills the dream of every small businessman who wanted to put his accounts on his BBC computer, just like they seemed to say you could on the TV!

This program will be available from your local dealer in the future and should now be available from us. We guarantee the disc for six months but there is a back-up facility. One final thing we should mention is that our Commercial Accounts program handles VAT at differing rates unlike some other amateurish versions on the market.

Manual £5.00 – Program + Manual £99.95 incl. VAT.

BSTOCK – Stock Control

Keeps stock control on 800-1200 stock items per

100K disc.

There is an entry system, update, auto re-order and search + sort facilities.

All files are randomly accessed and searched for automatically from disc.

Manual £5.00 – Program + Manual £49.95 incl. VAT.

COPYRIGHT NOTE – These programs are sold only for the use of the person or Limited Company who purchased them. If found in any unauthorised hands their supplier will be liable for substantial damages.

DISCOUNTS AVAILABLE

"Mind is the great lever of all things." – Daniel Webster, 1825.

HEINZ Zemanek might have identified the GOTO statement as the source of many computing problems in 1959. There is no doubt that Edsger Dijkstra called the computing fraternity's attention to it very firmly in 1968. By the early 1970s many people were aware of it, though they did not all know that the solution was at hand.

The solutions had already been embodied in both Algol 68 and Pascal, and Borge Christensen of the Tonder Teachers' College, Denmark, and some colleagues asked themselves if they should abandon Basic altogether for teaching and use Pascal.

They decided that the very great virtues of Basic justified its retention and extension. They took control structures from Pascal, simplified them to match the style of Basic, and added them.

The result was called Comal (Common Algorithmic Language). Technically it was an extended Basic, but the new name signified the totally

* Roy Atherton is with Bulmearshe Computer Education Centre.

By ROY
ATHERTON

different philosophy of problem solving which it represented.

BBC Basic does not have all the control structures and facilities of Comal, but it has enough to make good programming a realistic possibility for all. These articles will show how this can be done and what to do in those cases where the missing structures might cause trouble.

CONCEPT: Repetition with exit on a count

This can be illustrated by simulating Wyatt Earp, Sheriff of Dodge City, ordering his deputy to test his long-barrelled pistol by firing it six times.

DESIGN

```
FOR shot = 1 TO 6
  Fire a shot
NEXT shot
```

The concept is expressed in the notation of BBC Basic. It has the essential components shown.

OPENING KEYWORD FOR CONTENT

```
Fire a shot
CLOSING KEYWORD NEXT
```

Some further information is also necessary to ensure that the repetition is properly handled.

PROGRAM

```
FOR shot = 1 TO 6
  PRINT "Fire a shot"
NEXT shot
OUTPUT Fire a shot
       Fire a shot
       Fire a shot
       Fire a shot
       Fire a shot
       Fire a shot
```

The variable *shot*, called the control variable of the FOR loop, can be used within the loop but its value should not be changed by the content of the loop. We could write:

PROGRAM

```
FOR shot = 1 TO 6
  PRINT "Fire shot number"; shot
NEXT shot
OUTPUT Fire shot number 1
       Fire shot number 2
       Fire shot number 3
       Fire shot number 4
       Fire shot number 5
       Fire shot number 6
```

If the 6 in the FOR statement is changed to zero then, logically, no shots should be fired. In practice, however, the output would be one line of

Magnifying effort: Repetition

From Page 25

print, and this is a fault in the implementation of the FOR loop in BBC Basic.

We shall return to this question (the zero case) later. The reader is warned not to regard this as an unimportant quibble. The zero case in computing is as important as the zero concept in arithmetic.

A program should reflect its function at three levels – design, coding and presentation. Even as small an example as the above demonstrates this, as shown below.

DESIGN The concept of repetition with exit on a count is recognised at the design stage.

CODING The FOR loop reflects this type of repetition.

PRESENTATION The use of indenting for the content of the loop, a meaningful variable name, *shot*, the use of upper case for key words and lower case for the variable name help the reader to understand the program and its function. In much the same way spacing, capital letters, paragraphing, etc., help the reader of ordinary text.

CONCEPT: Repetition with exit on a condition

A bandit is holed up in the old school house. Wyatt Earp instructs the deputy to keep firing shots until the bandit throws out his gun.

DESIGN

REPEAT

Fire a shot

UNTIL Bandit throws out gun

We can simulate this by supposing

that the bandit has a gambling frame of mind and rolls a die. If a six turns up he will throw his gun out.

PROGRAM

REPEAT

die = RND(6)

PRINT "Fire a shot"

UNTIL die = 6

PRINT "Bandit throws out gun"

OUTPUT Fire a shot

Fire a shot

Fire a shot (number may vary)

Bandit throws out gun

Again we have a problem, or rather the bandit has. If he throws out his gun immediately he still gets one shot fired at him. This is unfair and is another instance of the zero case. This time it is not Acorn's fault. The REPEAT/UNTIL structure is inherently incapable of dealing properly with the zero case. We shall return to this problem again.

We now have two concepts and corresponding program structures for dealing with repetition. Exit must be determined by a count or by a condition. There is no other way (the count is really a special type of condition but we shall keep the distinction).

There is more to be said about recognising and handling repetition, but it should now be apparent that the necessary structures are simple in concept and notation.

The use of random numbers and BBC graphics enables some quite dramatic, highly motivating effects to be achieved with minimal effort. The programs below illustrate some

possible effects with coloured lines.

1. Fifty coloured lines

MODE 5

FOR line = 1 TO 50

GCOL 0,RND(3)

DRAW RND(1200),RND(1000)

NEXT line

2. A variable number of lines

MODE 5

stopper = 99

REPEAT

GCOL 0, RND(3)

DRAW RND(1200),RND(1000)

UNTIL RND(100) = stopper

3. An indefinite number of lines

MODE 5

cows-come-home = FALSE

REPEAT

GCOL 0,RND(3)

DRAW RND(1200),RND(1000)

UNTIL cows-come-home

Line numbers are not given but they must be inserted when programs are entered.

The REPEAT loop continues UNTIL a condition is TRUE. This will happen eventually in program 2, but program 3 will continue indefinitely. The ESCAPE key will stop it.

The variable, cows-come-home, uses the dash (under the £ sign on the keyboard), not the minus sign.

It is recommended that keywords of BBC Basic are always written in upper case and other words of a program in lower case. This will improve presentation and avoid some annoying problems which might otherwise arise.

Meaningful variable names should be used. Names like X, Y, z, p, a1 are abstract and unhelpful. ☞

Impious thought for the day

AND the Lord said unto Noah: "Where is the ark I have commanded thee to build?"

And Noah said unto the Lord: "Verily, I have three carpenters off ill. The gopher wood supplier hath let me down – yea, even though the gopher wood hath been on order for nigh upon 12 months. What can I do, O Lord?"

And God said unto Noah: "I want that ark finished even after seven days and seven nights."

And Noah said "It will be so."

And it was not so.

And the Lord said: "What seemeth to be the trouble this time?"

And Noah said unto the Lord:

"Mine sub-contractors hath gone bankrupt. The pitch which Thou commanded me to put on the outside and on the inside of the ark hath not arrived. The plumber hath gone on strike. Shem, my son, who helpeth me on the ark side of the business, hath formed a pop group. Lord, I am undone."

And the Lord grew angry and said: "And what about the animals, the male and the female of every sort I ordered to come unto thee to keep their seed alive upon the face of the earth?"

And Noah said unto the Lord: "They have been delivered unto the wrong address but should arrive on Friday."

And the Lord said: "How about the Unicorns, and the fowls of the air by sevens and all that equipment from Acorn computers?"

And Noah wrung his hands and wept, saying "Lord, Unicorns are a discontinued line, thou canst not get them for love nor money. And it hath just been told unto me that the fowls of the air are sold only in half-dozens and Acorn sayeth that delivery will be in three weeks. Lord, Lord, Thou knowest how it is."

And the Lord in His wisdom said: "Noah, my son, I knowest. Why else dost thou think I have caused a flood to descend upon the earth?" Tony Blade

BBC MICRO OFFERS FROM OPUS

WE HAVE MOVED TO LARGER PREMISES
Please note our new address and telephone number

TEAC DISC DRIVES

- TEAC 55F 5¼" D/S 80 Track. Formatted Single Density 400K. ONLY £229.00
- Case with built in power supply to hold 2 drives. ONLY £29.95
- Ribbon Lead £12. ● Power Lead £5.00
- Ideal for use with BBC Micro.
- Slimline - latest technology.
- Low power consumption. ● Full warranty.

CANON DISC DRIVES

- MDD 6106 5¼" S/S 40 Track. Formatted Single Density 100K. ONLY £129.00**
- Case £9.95. ● Leads available. Prices as TEAC.
 - Ideal for use with BBC Micro.
 - Full warranty. ● Slim design.

A DAISY WHEEL PRINTER ONLY £499

- TEC STARWRITER FP 1500-25**
25 CPS - Friction Feed - Serial Interface
Interface Lead to connect to your BBC £9.00

THE MAGIC BOARD

- A Memory Board for your BBC!**
Gives up to 64K of Eprom storage/16K of additional RAM.
Takes the following: 2716/2732/2764/6116/5516.
Plugs into an Eprom socket and fits inside your BBC! Easy to use - supplied with full software instructions. ONLY £29.95

FLOPPY DISCS

5¼" Discs - with Hub Rings in FREE Plastic Library Case.
"Nashua" - 5 Year Guarantee.

S/S 40 Track	£16.95 for 10
D/S 40 Track	£22.95 for 10
S/S 80 Track	£25.95 for 10
D/S 80 Track	£26.95 for 10

LOOK

VIEWDATA TERMINALS

NEW

- We have available a limited quantity of these superb terminals built to industrial specifications by a world famous manufacturer. Featuring:
- Prestel. ● Built in modem - receive at 1200 baud/transmit at 75 baud.
 - GPO Approved ● 7" green anti reflective screen
 - Angled display for desktop viewing.
 - Page format 24 lines/40 characters.
 - Security lock. ● Very slim dimensions. ONLY £199.00

THE "ORGANIZER" DESK

ONLY £49.50

- Teak finish
- On castors
- Self assembly
- Full instructions provided
- Top shelf for monitor/printer
- Large desk top area
- Lower shelf for paper/book storage - ample room in front of the shelf for you to sit comfortably.

OPUS SOFTWARE "DOGFIGHT" FOR BBC 32K

A brand new and original game for 2 players using keyboard or joysticks.

8 levels of difficulty - levels 7 and 8 definitely for aces only. Fly your own World War I plane and try to shoot down your opponent before running out of bullets! Fly out of the sun, hide in the cloud cover but watch out for the lightning. Go off the screen to plan a surprise attack - but do not stray too far. In certain levels you may use variable speed - only suitable for experienced pilots.

Buy it now to practice before your friends do!! ONLY £8.65

How to order:- Add carriage at the following rates - Discs 85p, Magic Board 50p, Game, Free. All other goods £7.00. Add VAT at 15% to the total.

Govt, Educational & Official orders welcome.

And send your order to:-

GREAT BRITAIN LTD

"A complex and challenging game. An absorbing and thought-provoking game which exercises the mind rather than the fingers, yet without becoming dry and academic."

Which Micro, April 1983

"It is an excellent game, and it passed one crucial test, in that two economists of my acquaintance, although fully aware of its limitations, are still queing up to play it. You'd best buy it now before inflation pushes software up to £500 a tape."

Personal Computer News, April 1983

"At the end of five years you get to election day which is very true to life and tense – the game is very good and I enjoyed it."

Acorn User, December 1982

"The game has got great potential."

P.C.W., January 1983

Great Britain Ltd is available for the BBC Model B and comes on a cassette with full instructions.

Price £5.95 complete

Also available:

INHERITANCE (32K) **£5.95**

UNLIMITED GUARANTEE

Get set for the biggest BBC Micro get-together ever held!

IT'S all happening at the BBC Micro User Show! Preparations are well advanced for the largest-ever gathering of BBC Micro users under one roof.

Held in UMIST's prestigious Renolds building in Manchester – the city that gave birth to the computer in-

dustry – the show is attracting all the major dealers and manufacturers of BBC Micro hardware and software.

Exhibitors will be displaying all things fascinating to the BBC Micro user, and a whole series of activities will be featured that will make the event

unique among shows.

Anyone who is anyone in the BBC Micro world will be there. Everything from dust covers to interfaces will be on display – plus all the latest developments.

Many companies are planning to visit the show to release exciting new products.

Acorn Computers will be using the BBC Micro User Show as the launching pad for all three of their long-awaited second processors – the 6502, Z80 and 16032.

These second processors will give the BBC Micro extra memory to enable larger programs to be run, while leaving the original memory free to deal with the screen and other input/output functions.

This will open entirely new fields of application for the BBC Micro, particularly in the area of graphics, education and business.

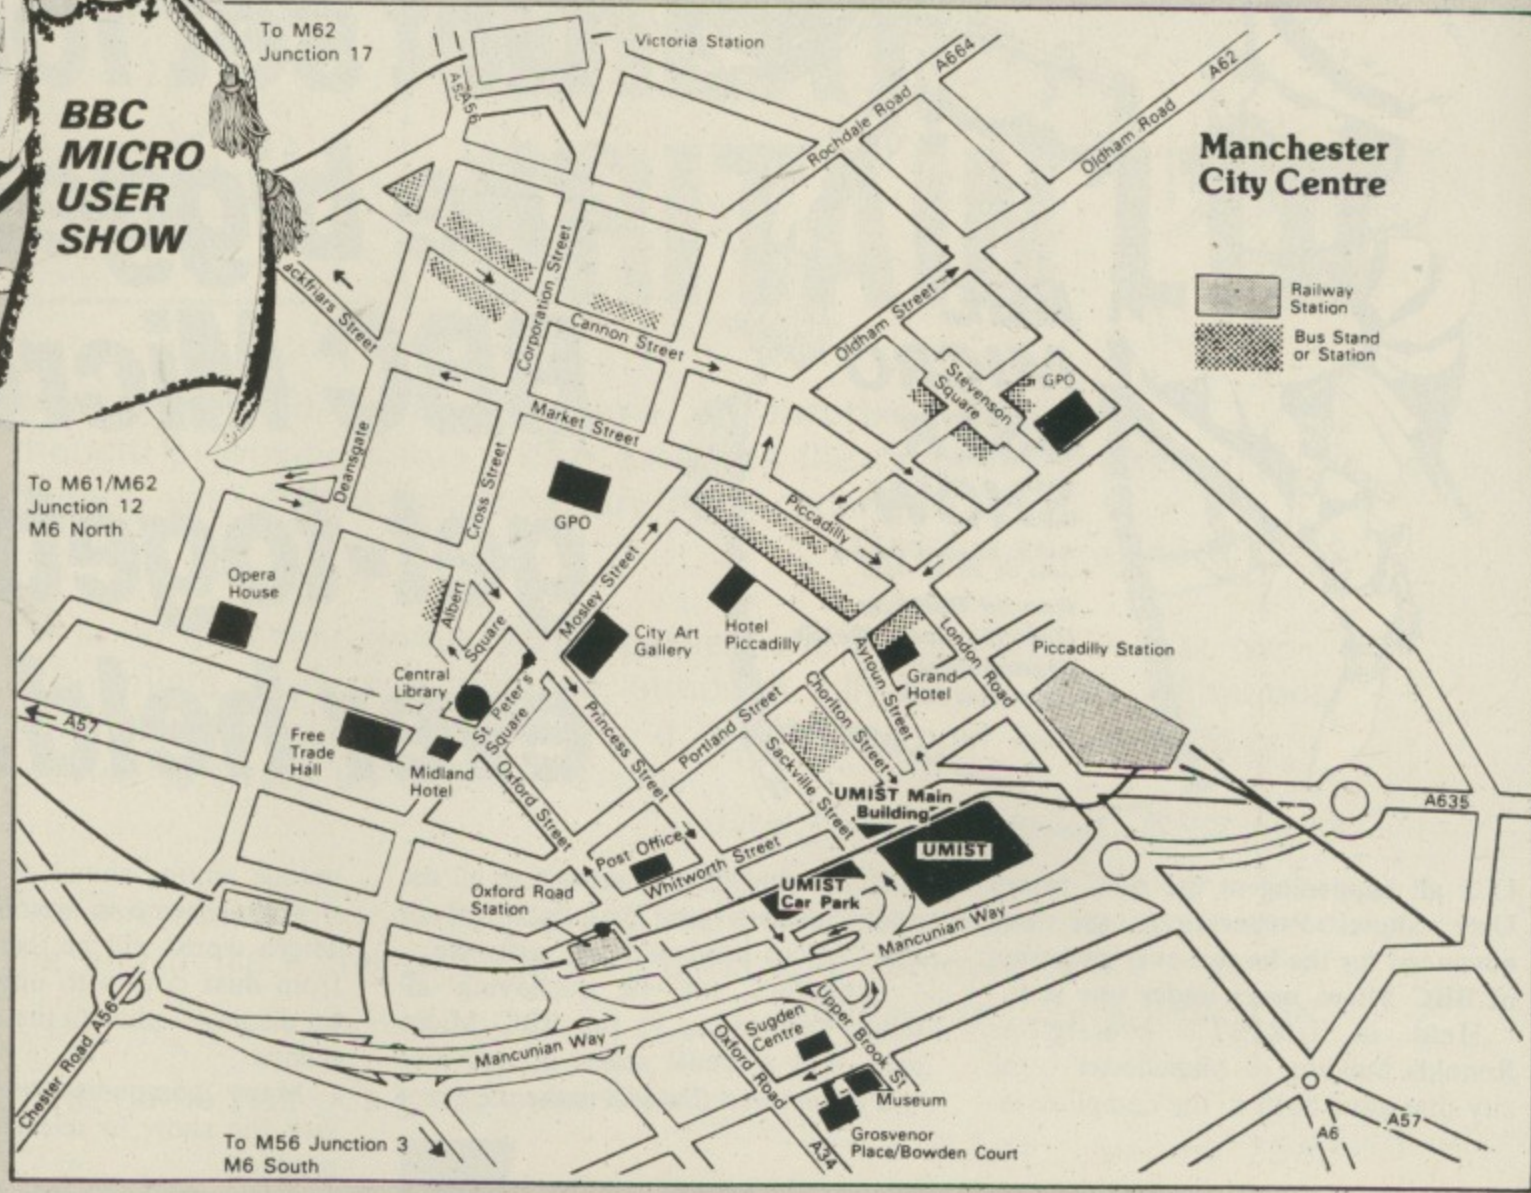

Acorn will also be giving a preview of their CP/M software package, a sophisticated suite of programs that will be available from mid July.

And there are high hopes of having the Electron there as well!

Torch Computers have chosen the show to spearhead a massive national sales drive. Not only will their Z80 disc pack for the BBC Micro be on display, but also their own computer, big brother to the BBC Micro, which uses the same board.

One of the many options this

advanced machine offers is the ability to turn itself into a BBC Micro – and so run all the software written for the BBC machine.

The show will also feature a series of talks on all aspects of the BBC Micro.

Friday is education day, with top names from the field of computer literacy much in evidence. However it's not going to be all theory – we'll have real teachers speaking, most of them contributors to BBC Micro User.

They'll be talking about how they use computers in their own classroom. Whether your field is primary or secondary, music or maths, history or geography, infants or interfacing, you'll find plenty to interest you among the chats.

We'll also be bringing along some of Britain's leading suppliers of educational software, so you can make your own points about the software you require, and the quality of what you are receiving.

All in all, a vital day for anyone using the BBC Micro in education.

On Saturday and Sunday the talks

will provide something of interest for every user of the BBC machine. We'll have something for absolute beginners as well as experts.

As part of our graphics coverage, Paul Leman will be demonstrating simple animation techniques that will help bring your programs to life.

Paul Beverley will be showing just how simple machine code really is, and also offering something for the more advanced:

Jim Notman will be giving assistance to those who can't resist poking about in the ROM.

Mike Cook will be displaying his latest ideas for you solder freaks, as well as giving guidance to the newcomer to interfacing. With David Ellis of "Making the Most of the Micro" fame showing us how to exploit the musical potential of the BBC Micro, it promises to be a fascinating couple of days for BBC Micro users.

On each day of the show we'll be offering prizes to those of our visitors clever and determined enough to solve our free competition.

Friday's prize will be a colour monitor, Saturday's a disc drive and Sunday's a printer. As well as this, on Saturday we'll be offering the runner-up a place on UMIST's "Programming in Basic" course. This residential course, normally costing £120, runs from July 17 to 26.

And, of course, there will be plenty of consolation prizes.

On top of all this, there will be the BBC Micro User stand, constantly manned by our contributors. If you want to talk to any of our writers, they're almost certain to be there sometime over the weekend.

You'll have no trouble finding UMIST. Situated in the heart of Manchester, it's easily accessible by road and rail with plenty of parking available.

So there you have it – a fine venue, all the latest products, stimulating sessions on the micro, prizes for the fortunate and the BBC Micro User stand itself.

Can you possibly afford to miss it?

● For further details see Pages 70-71.

MYSTERIOUS ADVENTURES

FOR BBC MICROCOMPUTER MODELS A & B*

Join the growing band of Adventurers who are enjoying these absorbing and stimulating programs. Step into another world of Fantasy, Magic, Mystery and Sorcery. Only your wits and cunning can ensure success in these scenarios!

- WRITTEN IN ULTRA-FAST MACHINE CODE.
- SAVE GAME FEATURE.
- SPLIT SCREEN DISPLAY.

1. **THE GOLDEN BATON** — Venture into a strange province of Sorcery and Evil Magic to recover the Golden Baton, a priceless artifact whose powers are said to bring great Health and Prosperity to the Land.
2. **THE TIME MACHINE** — As a Newspaper reporter you are sent to investigate the eccentric professor who lives in the old house on the Moors. What is his secret and why is his house now deserted?
3. **ARROW OF DEATH (Pt. 1)** — A blight has fallen on your homelands, the Baton has become tarnished and now radiates a malevolent aura of Evil. Your mission is clear — trace the source of this Evil and destroy... or be destroyed. This is the first part of an Epic Adventure although each part can be played as a stand alone scenario.
4. **ARROW OF DEATH (Pt. 2)** — You now have the means to destroy your enemy... but you are far from home and this land is strange to you. Can you cope with the deadly perils which approach you and have you the strength to see your mission through to the final conflict?
5. **ESCAPE FROM PULSAR 7** — Alone on a gigantic Space-Freighter... The rest of your crew have died horribly at the hands of a mutated Zoo-Specimen. Your only chance of escape is to reach the Frail Shuttlecraft. But the lurking Monster is hungry and you are the only food it has left...
6. **CIRCUS** — Your Car has run out of Petrol on a lonely road miles from habitation. As you trudge reluctantly down the road in search of help you are suddenly confronted by an amazing sight... in a nearby field is a Huge Circus tent! But this is no ordinary Circus as you will soon discover...
7. **FEASIBILITY EXPERIMENT** — Far across the gulfs of time and space, a dying race of super-intelligent beings search the Universe for a Hero to save their existence... At length their thoughts turn to planet Earth. You are chosen to be their saviour in a bizarre scenario where death is a mere thought away...
8. **THE WIZARD OF AKYRZ** — You are in the Royal Palace. The King beseeches you to rescue his daughter from the evil wizard. If you succeed your reward will be priceless... failure will bring certain death.
9. **PERSEUS AND ANDROMEDA** — Travel into the realms of ancient mythology. Battle with grotesque monsters and supernatural powers as you search for the hidden secrets of myth and legend.
10. **TEN LITTLE INDIANS** — This mystery begins with a train journey into a strange country. What secrets are held by the strange country mansion? What meaning is attached to the strange idols? Maybe you will find out if you live long enough...

* Adventures 5-10 inc. require 32K RAM

Each adventure comes attractively packaged for just £10.29 inc.

Available soon for ZX SPECTRUM, ZX81 (16K), APPLE II.

TOTALS	11884	11884

One of the most innovative business programs on the market. Replaces a manual cash book system, e.g. Simplex and 'All-in-One'. Written by practising Chartered Accountants, this practical program is simple to use and will replace your manual cash and bank records. By giving you access to vital management information as and when you want it, it will enable you to keep more positive financial control of your business.

The software is extremely well and lucidly documented, and Gemini provide a full technical back-up and product up-date policy. Take a look at the information this program will provide:-

- Summary of VAT information for VAT returns
- Cumulative receipts and payments report analysed over the standard profit and loss and balance sheet headings
- Option for departmental analysis of sales and purchases
- Audit trail printout of all transactions.
- Journal routine for entering transfers between accounts and year end adjustment for debtors, creditors etc.
- Trial balance at any interval
- Interfaces to 'Final Accounts' program to produce balance sheet and trading and profit/loss account etc.
- Spectrum version may be used with Sinclair OR 80 column printer.

FINAL ACCOUNTS PROGRAM FOR BBC 32K, TORCH, SPECTRUM 48K..... £59.95

NEW

Requires Cash Book module. This program will take your cash book data to the logical conclusion of balance sheet, trading and profit/loss account and notes to the accounts i.e. fixed assets, land and buildings and capital accounts. Final accounts (BBC version) links to 'Beebplot' for graphic data presentation.

Format: Torch disk, BBC disk/cassette, Spectrum cassette.
Special Offer - Cash Book and Final Accounts together - £95

"Gemini's range of software is in the vanguard of the releases for 'serious' micro users..."
(WHICH MICRO AND SOFTWARE REVIEW)

INVOICES AND STATEMENTS... £19.95

Compatible with most micros. See table. Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations include VAT automatically, and the program allows your own messages on the form produced. This program gives you superb presentation and saves time on one of the most tedious tasks in the office.

COMMERCIAL ACCOUNTS... £19.95

Compatible with most micros. See table. A gem of a program, all for cassette, with the following features:- Daily Journal. Credit Sales. Cash Sales. Credit Purchases. Purchases—other. Sales Ledger. Purchase Ledger. Bank Account. Year to date summary. A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

MAILING LIST... £19.95

Compatible with most micros. See table. A superb dedicated database to allow for manipulations of names and addresses and other data. Gemini's unique 'searchkey' system gives you a further ten 'user-defined parameters' to make your own selections. Features include the facility to find a name or detail when only part of the detail is known, it will print labels in a variety of user specified formats.

1 DATABASE... £19.95

Compatible with most micros. See table. The program that everyone needs, the most valuable and versatile in your collection. Facilities include sort search, list print if required. Can be used in place of any card index application; once purchased you can write your own dedicated database to suit your particular needs with a limitless number of entries on separate cassettes.

STOCK CONTROL... £19.95

Compatible with most micros. See table. Dedicated software with all that's necessary to keep control of stock. This program will take the tedium out of stock control and save time and money. Routines include stock set up, user reference number, minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more.

HOME ACCOUNTS... £19.95

Compatible with most micros. See table. Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P., etc. This program also allows you to plot graphically by Histograms your monthly outgoings.

WORD PROCESSOR... £19.95

Compatible with most micros. See table. This program features routines found in much larger and more expensive packages with a typical word length of 5-6 letters it allows for around 1000 words in memory at one time. Ideal for the user who requires a simple program to write letters on his computer. Features include, block delete, block insert, search and replace, edit text, display text and more.

"Simple to use"
"Ideally suited to the way most offices run....."

Without any programming knowledge at all, you may:-

- Set up a computerised spreadsheet, with chosen row and column names.
- Specify formulae relating any row or column to any other.
- Enter your source data and have the results calculated.
- Save the results on tape (or disk - BBC) for later reloading and manipulation.
- Print the tabulated results in an elegant report format.
- Experienced users may access saved files and write their own reporting or graphics presentation programs for the results.

Some typical applications:-

- Small business accounting applications, e.g. profit and loss statements and cashflow projections, break-even analyses etc.
- Investment project appraisal - anything from double glazing to oil rigs!
- Comparing rent/lease/buy options.
- Processing the results of scientific experiments or field studies.
- Engineering calculation models.
- In fact, anything that involves repeated re-calculation of results presented in tabular or spreadsheet format.

BEEBLOT & SPECTRUMLOT £19.95 NEW

Important new additions to the Gemini family. Present numeric and string data together in easily-understood pie chart, histogram or graph format. Beebplot has a built-in interface to Beebcalc, and both Beebplot and Spectrumplot have built in interfaces to the Final Accounts program of Cashbook. The facility for mathematical function

plotting is also provided. The BBC version has a high resolution screen dump for the Epson or CP-80 printers, and the Spectrum version dumps to the Sinclair printer via the 'copy' key. A very useful program that will give superb results either from direct input of data from the keyboard or via simple access to other software data files. A must for business and education.

Dealer/Trade enquiries invited - generous trade discounts for quantity.

Making capital out of lower case letters

WE saw last month how to label strings with variables. This meant that, if we were using a string several times in a program, we could use a variable instead of it. For example

```
A$="AUSTRALIA"
```

means that, from now on, instead of using "AUSTRALIA" in full in our programs, we can use A\$.

```
PRINT A$
```

will print out AUSTRALIA for you.

The labels we used last month were all single letters of the alphabet followed by '\$'. The dollar sign tells the computer that it is a string we are labelling – such a variable is called a string variable.

It is called a variable because the "contents" of a variable (in technical terms, its value) can vary throughout a program. Program I should illustrate the point.

```
10 REM *** PROGRAM I ***
20 MODE 6
30 A$="AUSTRALIA"
40 PRINT A$
50 A$="AMERICA"
60 PRINT A$
70 A$="AFRICA"
80 PRINT A$
```

Program I

As you will see when you RUN it, the value of A\$ varies as we reassign it during the program. A\$ always takes the last value assigned to it.

You may wonder why on earth you would want to use the same variable for different things, rather than label everything separately. As we shall see, it can be extremely useful.

```
10 REM *** PROGRAM II ***
20 MODE 6
30 name$="Mr.Smith"
40 fact$="You owe me money."
50 threat$="Pay up or else."
60 PRINT "****"
70 PRINT "Dear "name$
80 PRINT TAB(5) fact$;threat$
90 PRINT TAB(15)"cordially yours,"
100 PRINT TAB(20) "Mike"
```

Program II

So far we have restricted our string variables to single letters of the alphabet followed by the \$ sign, such as A\$, B\$ and C\$.

However there is no need for such a limit – provided we follow them with \$. String variables can be made up of several letters, even words.

Program II illustrates the point. It is our most sophisticated program to date, and is well worth having a close look at.

Perhaps the first thing to remark upon is that we are now working in lower case letters as well as capitals. Infuriating as this is at first for the non-typist (myself included), it really is worthwhile.

Notice that in the programs all the Basic keywords are in capitals – they have to be, or else the BBC Micro doesn't realise that they are meant to be Basic keywords.

All the variables (names\$, fact\$, threat\$) are in lower case. This may not make for easy typing, but it is good programming practice, since you can tell at a glance what's what in a program.

So from now on for a lot of the programs you'd probably fare better with the CAPS LOCK off.

Take a close look at those variable names – we are using actual words for the labels in this program. Again, it is good programming practice to do so, since we can make the label describe what it is labelling. Programs make more sense this way.

Thus we use name\$ to label "Mr.

Smith", fact\$ to label "You owe me money", and threat\$ for "Pay up or else".

This may seem long-winded, but it really does help to make your programs more readable, and hence easier to decipher. For example:

```
70 PRINT "Dear "name$
```

really tells you what the line is doing, far more than

```
70 PRINT "Dear "A$
```

Similarly

```
PRINT threat$
```

is more meaningful than

```
PRINT B$
```

The moral is, use words for variables (labels) as much as possible – and preferably lower case words.

Actually you can use capitals for variable names and intermix them with lower case letters and also numbers. The rules for doing so are as follows:

- All variable names must begin with a letter, though you can follow this with any mixture of letters and numbers. Letters may be upper or lower case.

- You cannot put spaces in the middle of variable names. Sometimes, though, it makes sense to use two words as a label. In this case join them with the underline character. For example, upper_limit, final_weight.

- Variables should not start with Basic keywords such as TO or COLOUR, so TOP_WEIGHT would be illegal.

The commonest error is to start a variable with a keyword. Some days they seem to crop up in every variable name you think of! If you make all

your variables lower case that won't happen.

One advantage of using variables instead of directly using strings is that we can easily alter the output of the program.

In the case of Program II, if we want another victim to be the recipient of our letter, just change line 30. For example,

```
30 name$="Mr. Jones"
```

From then on all uses of name\$ in the program will refer to Mr. Jones.

In this short program it doesn't make a great deal of difference, but in larger ones, if you had used the string "Mr. Smith" every time, instead of name\$, you would be in for a lot of retyping.

Program II introduces another new idea, the use of the TAB() function. This allows you to specify how far along a line you want the output of a PRINT statement to start.

In Mode 6 there are 40 characters to a line, so the screen can be considered to be 40 columns wide. TAB() decides in which column the print out starts. However, the 40 columns are numbered 0 to 39, so, although it uses TAB(5), line 80 actually prints in the sixth column.

When you change mode the number of characters across the screen, that is the number of columns, changes. For example, Mode 5 only supports 20 characters. Try running the program in this mode by changing line 20 to

```
20 MODE 5
```

Can you see what is happening?

After a while TAB() becomes second nature. All too often potentially good programs are spoiled because they are set out badly on the screen. Careful use of TAB() can avoid this.

To give you some practice, try Program III. This prints out a triangle of asterisks. Can you devise a similar program, using TAB(), to create a diamond of asterisks in the centre of the screen?

Before you continue, you might find it easier on the eyes if you return to Mode 6 with:

```
MODE 6 [Return]
```

So far we have talked about string variables. However there is another

```
10 REM *** PROGRAM III ***
20 MODE 5
30 PRINT '***'
40 PRINT TAB(4)"*"
50 PRINT TAB(3)"***"
60 PRINT TAB(2)"*****"
70 PRINT TAB(1)"*****"
80 PRINT TAB(0)"*****"
```

Program III

kind of variable called a numeric variable.

These are labels just as much as string variables are, only they label numbers in such a fashion that we can do sums with them. Try running Program IV.

Line 30 uses the numeric variable A to label the number 10. Note that for a numeric variable we can simply use a letter of the alphabet without following it with the \$ sign necessary for a string.

Also since it isn't a string, the value we are giving the variable doesn't have to be in quotes. Hence line 30 is simply

```
30 A=10
```

Line 40 prints out, not A, of course, but the value that A labels, which is 10.

The most interesting part is line 50. Here we multiply the number that A labels by two, so that the line prints out 20.

That's the useful thing about numeric variables – you can do sums with them!

Try running Program IV with the following versions of line 50:

```
50 PRINT A+8
```

```
50 PRINT A/4
```

```
50 PRINT A*A
```

If you've been following what I've said so far, you could be forgiven for thinking that string variables are for labelling words, and numeric variables for numbers.

```
10 REM *** PROGRAM IV ***
20 MODE 6
30 A=10
40 PRINT A
50 PRINT 2*A
```

Program IV

Life is never that simple. You can, and often do, use string variables for labelling numbers – the point is that you can't do sums with them. Try Program V, which is based on program IV, using the string A\$ instead of the numeric A.

The "Type mismatch error" that you receive shows that you are attempting to do a sum with the wrong type of variable – string instead of numeric.

```
10 REM *** PROGRAM V ***
20 MODE 6
30 A$="10"
40 PRINT A$
50 PRINT 2*A$
```

Program V

As with string variables, we do not have to (and should not) restrict ourselves to single-letter labels for numeric variables.

We can use words in a manner strictly analogous to string variables, save that we omit the final \$ sign. And, of course, we don't put what we are labelling in quotes, since it isn't a string.

Have a look at Program VI. This is meant to be a cheery greeting for someone when they RUN the program in the computer – the sort of thing I often use in my classes.

```
10 REM *** PROGRAM VI ***
20 MODE 6
30 name$="MIKE"
40 PRINT "GOOD TO SEE YOU, " name$
```

Program VI

However as it stands it's a bit restricted – after all, only a small percentage of my students are called MIKE. What's really needed is some way for the BBC Micro to find out the name of the person so that it can tailor the message to suit.

Program VII fits the bill. The trick here is the use of INPUT name\$ in line 40. In Program VI, line 30 put the value MIKE into name\$. In Program VII the variable isn't actually attached

From Page 35

to a specific value – if you like, you give the program a label, but neglect to tell it what it's labelling. Instead you type:

40 INPUT name\$

When the BBC Micro reaches this line it waits until you PUT IN, or INPUT, the value you want name\$ to have by typing the value in.

To put it another way, when the computer meets an INPUT statement followed by a variable, it asks you what you want the variable to be – in fact, it actually puts a question mark on the screen.

You are then supposed to type in the answer followed by Return, which, as

```
10 REM *** PROGRAM VII ***
20 MODE 6
30 PRINT "WHAT IS YOUR NAME";
40 INPUT name$
50 PRINT " " "GOOD TO SEE YOU " name$
```

Program VII

always, sends it to the computer, which then carries on with the rest of the program.

So when you run the above program line 30 asks "WHAT IS YOUR NAME". Notice that we don't need a question mark – the INPUT statement of line 40 supplies that.

The micro then waits for us to type our reply and send it by pressing Return. Whatever we have typed in then becomes the value of name\$ – even if we have lied!

Line 50 then prints out the message.

The point of all this is that in Program VII, as opposed to Program VI, the value of name\$ is not fixed initially, but is decided during the

program by the response to INPUT.

This means that every student in the class can now run the program and have the message tailored to themselves.

Incidentally, line 30 is not strictly necessary, but it is only polite to tell people what kind of response you expect them to make. Otherwise they will be met with just a question mark, followed by a flashing cursor – not too "user-friendly" as the jargon has it.

The semi-colon at the end of line 30 "glues" the question mark, or prompt, as it is known, to the preceding "message". Running the program with it omitted should make this clear.

Remember, when you run Program VII and it asks for your name, you must type your reply then press Return. If you omit Return the BBC Micro won't receive your answer and will continue waiting. This could be incredibly boring!

If you make a typing mistake before you press Return, you can erase it with Delete. Once you've pressed Return, though, you're stuck with what you've typed.

You can use INPUT with numeric variables as well as strings. Program VIII demonstrates this. When you get

```
10 REM *** PROGRAM VIII ***
20 MODE 6
30 PRINT "How old are you";
40 INPUT age
50 PRINT " " "I don't believe you are "; age
```

Program VIII

the prompt, try typing in a word rather than a number and see what happens.

A slightly more serious application of INPUT allows you to calculate the

```
10 REM *** PROGRAM IX ***
20 MODE 6
30 PRINT "First Number";
40 INPUT first
50 PRINT "Second Number";
60 INPUT second
70 PRINT; first " multiplied by "; second " is "; first * second
```

Program IX

product of two numbers, as Program IX demonstrates.

Look carefully at line 70 and see if you can work out what's happening. *first* isn't in quotes, and so the Micro will print the number that *first* labels. "Multiplied by" is printed literally since it is in quotes.

The numeric variable *second* is not in quotes – it may have them on either side, but the quotes on the left are already paired with the quotes on the far left, so they don't count. The Micro will, therefore, print out the value of *second*.

"*Is*" is printed literally, since it is in quotes. *first*second* isn't in quotes, so the sum is done and the answer printed out. Figure I should help to make this clearer.

Finally, try altering program IX so that it adds or subtracts pairs of numbers.

We've covered an enormous amount of ground this month. I suggest that you spend a good while going over the programs. If you are having problems, re-reading the earlier articles in the series will probably help.

Above all, remember it's a "hands-on" course – you can't expect the examples to make sense until you've typed them in!

Figure I

MICROVOC

Patent applied for.

Yes it's here! A complete sound system for the B.B.C. Micro, realistically priced at £21 (Inc. V.A.T.) plus £2.00 post and packaging. (domestic market only).

MICROVOC – the BBC Sound System

MICROVOC is a complete sound system designed specifically for the BBC micro, capable of use with either speech synthesis or computer produced music.

Using the BBC micro's own power, **MICROVOC** can literally fill the average sized room with a quality of sound you may not have believed possible.

Supplied with robust, ultra modern, spherical speakers, which can be free standing, to compliment the BBC machine, or fixed to the wall, or indeed out of sight on the underside of your desk, **MICROVOC** brings out the true quality of the BBC micros sound facilities.

The external speakers can be disconnected at will leaving **MICROVOCs** volume control to operate the internal speaker of the BBC micro.

NEW PRICES
APPLY FROM
MAY 13th

MUSICSOFT
SOFTWARE NOW
IN STOCK

OUR GUARANTEE – None of the original components of the BBC micro, including the cabinet need to be modified in any way to install 'MICROVOC'.

Our prime concern whilst designing '**MICROVOC**' was to ensure that your BBC micro warranty would remain unaffected.

MICROVOC can easily be fitted in five minutes and requires no drilling, soldering, or any technical expertise whatsoever. It can just as easily be removed, leaving your BBC micro in its original condition.

MICROVOC simply plugs into existing fittings on the BBC micro and makes use of the 'Reset' and 'Econet' apertures at the rear of the machine, which on current models are covered with a thin plastic film – removal of this film is relatively simple.

If your BBC micro suffers from the infuriating 'Buzz' then you will also need '**Buzzgo**'. '**Buzzgo**' simply plugs into the 1Mhz Bus to eliminate the infernal buzz. If purchased with '**MICROVOC**', **Buzzgo** costs an additional £1 (Inc. VAT). For separate purchases **Buzzgo** costs £2 (Inclusive).

IN the March issue of *BBC Micro User* MIKE COOK explained about the cassette problems he had so far encountered. Since then he has come across several others. Here they are . . .

● When the command to load in a program is given, the computer indicates it is searching but never finds anything.

Assuming all the leads are OK and there IS a program on the tape, it looks as if you have blown up the input chip in the computer.

This is IC 35 and is located just next to the cassette input socket. It consists of four operational amplifiers (op-amps to the initiated) and conditions the cassette signal before it goes to the serial ULA. The voltage supply to this chip is ± 5 volts and the chip will suffer damage if the signal you feed into it from your cassette recorder is greater than this.

Quite a few recorders are capable of producing more than 10 volts, peak to peak, when operating into a high impedance input (like the cassette input) at full volume.

You can test to see whether the chip is damaged by looking at the input – pin No. 10 – to see if a signal is reaching it. If so then pin No. 1 should have a 5 volt square wave on it. If it has not then your input chip has bought it!

New ones are readily available. The type number is LM324 and should cost about £2.

However you first have to get the old one out. This is a job that is best left to a dealer unless you have the right tools.

The way I have tackled it is to use a solder pump to remove the solder from each hole and then to carefully remove the dead IC. That sounds easier than it is as there is a considerable knack to removing all the solder.

Whether you do it yourself or get a dealer to replace it, you should solder back a socket in its place. That will ensure that the chip will never go again! Once it is fixed, mark a place on the cassette volume control that is adequate and do not exceed that setting.

You can often be tempted to put in more volume when trying to load a tape recorded on someone else's recorder, but the problem will be that of head alignment as explained in my first article in the March issue.

● When I try to load in long programs the computer starts to misbehave.

This is a symptom I have come across on "Realistic" recorders but it might happen on some others with separate mike, remote and output connectors.

Try loading in the program that gives you trouble with only the output connected. That is, disconnect the remote and mike leads.

If it now loads, your problem is almost certainly

earth loops. This is well known by the hi-fi fraternity and can produce hum or mains pickup on the signals.

The simple cure is to have only one lead connected at any one time, but you are liable to forget to swap them over and not actually record that program before you switch the computer off!

As a permanent fix, try disconnecting the earth lead from the output socket so that only the centre conductor is connected. You will then need to have all the leads connected for the right connection to be made.

If that doesn't work, reconnect it and remove the earth lead from the mike connector. If you still have no joy, you will just have to improve your memory!

● A horrible buzzing noise is recorded on the tape.

This can be caused by certain colour televisions radiating signals that are picked up by the leads. Try to ensure that the cassette leads are placed as far away from the set as possible.

● The recorder keeps chewing up the tapes.

The solution is to chew up

your recorder and get a decent quality one. And, while you are about it, get some decent tapes.

And a final note: Always remember to save at least two copies of each program as it is extremely unlikely that the same block will come to grief on all copies. I always record a program three times – this ensures I only ever need the first one!

Also if you do want to swap programs between different recorders use the slower, 300 baud speed, which is obtained by using the command *TAPE3.

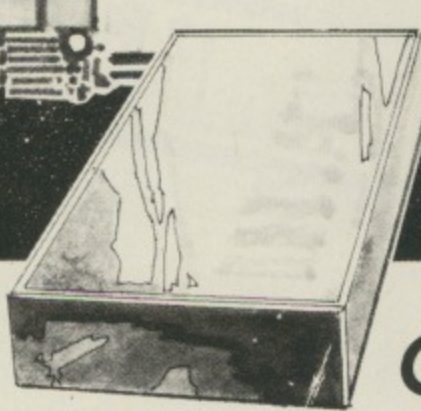

It is more reliable and tolerant because it is slower, and it is better to wait longer than not be able to load the program at all. Remember you can always re-record it at the faster speed when you have it in the computer.

That's all for now, but if I do come across anything else going wrong with the cassette system I will let you know. Happy LOADING. ☺

Dock your games software into Britain's largest home-user database...

...  *one cassette reaches thousands of enthusiasts.*

Micronet 800 is a powerful new service that opens up a whole new world of opportunities for microcomputer users.

When this huge database was launched just a few months ago, it attracted thousands of enquiries from home computer enthusiasts who could see the huge new vistas when you link microcomputers with Micronet 800...an 'Aladdin's Cave' of hundreds of games programs which can be downloaded to individual machines...hundreds of thousands of pages of news, reviews, product data and prices from the computer world and from *Prestel*...and an electronic mail-box for exchanging messages and ideas with other users right across the country.

All this for around a modest 15p a day. Subscribers are linked by telephone through a modem, making it the fastest and most direct means of selling your games software downline to the BBC Micro.

Make a name for yourself in games software. Send your disk or cassette, together with the coupon to Micronet 800 at the address below.* We will validate the program, and let you know what you stand to gain from Micronet 800.

Cumana drives BBC Micro best!

**CUMANA DRIVES +
OWN POWER SUPPLY
=BIG PLUS FOR
BBC MICRO USERS
... JUST FOR
STARTERS**

The 'ice on the cake' is that because the Cumana Drive has its own power supply, it can be used with many other Micros when connected via the appropriate cable. Cumana supply a Drive connecting cable which has a standard 34 way edge connector plus 34 way BBC connector in the same cable length. This allows the Cumana Drive to be connected to numerous makes of micro without the need to change connecting cable. And the Japanese manufactured disk drives are quiet and utterly dependable.

CS50A Single 40 track drive 100K	£199
CD50F 2 double sided 80 Track TEAC Drives with cabinet and power supply 800K	£619
Disk formatter and instructional manual	£15
Model A-B upgrade kits	£65

**Many other Disk Modes available for BBC.
Call or write for Data Sheet.**

Colour keeps those characters capering

By KIM WEST and PAUL PASSANT

PROBABLY the first user defined character you came across was the BBC "Micronaught" (see Figure 1) who can be found on page 170 of the User Guide. He was created using the VDU23 command to redefine character 240. Those unfamiliar with this command can find a detailed explanation on page 384 of the User Guide.

Listing I is a simple program which defines "Micronaught" (line 20) and prints him on the screen (line 50). An alternative to line 50 would be:

50 VDU240

This is the exact equivalent.

Boring, we hear you say. Well, bigger

and more recognisable figures can be made by defining two or more characters and printing them below each other. See Listing II.

Lines 20 and 30 define the

```

10 MODE5

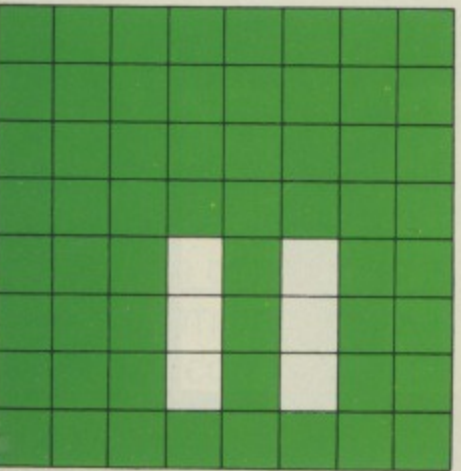

Figure IVe Legs

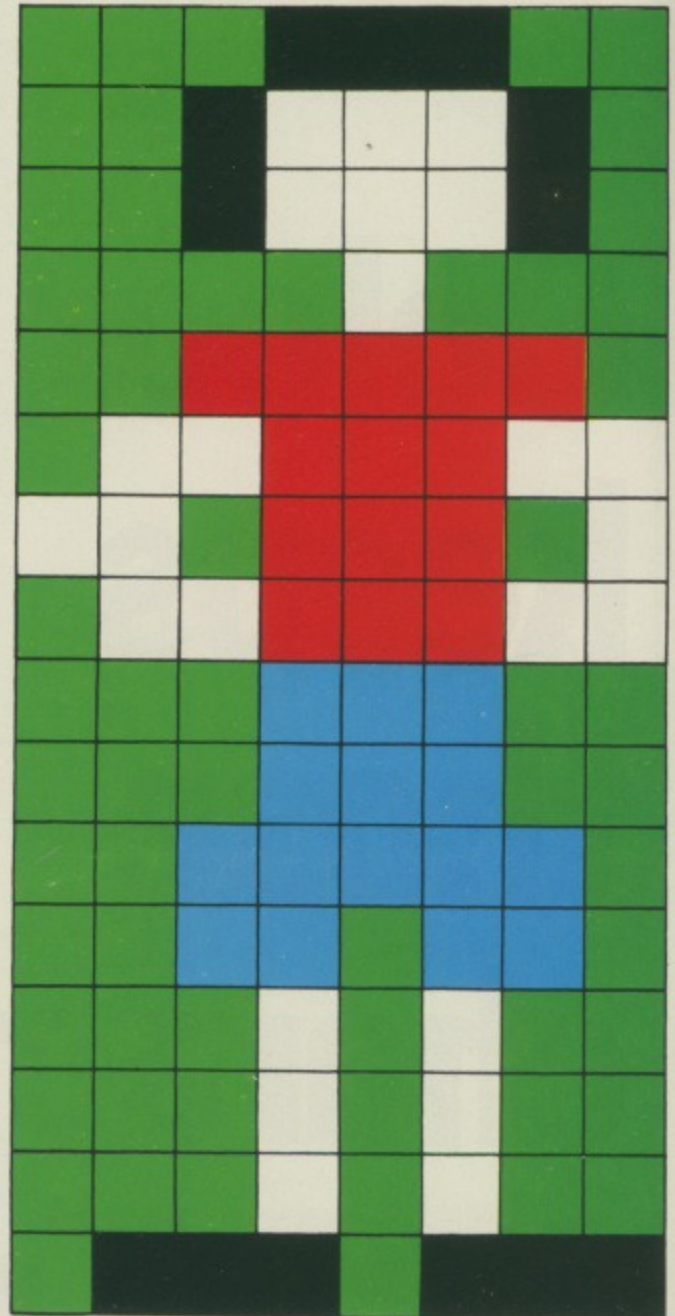

Figure IVf Shoes

The making of

Colourful Colin

From Page 41

characters seen in Figures IIa and IIb. Line 50 prints character 224, while lines 60 and 70 move the cursor back one space and down one space respectively.

Line 80 then prints character 225. Lines 50 to 80 can be combined to form a single line:

50 VDU224:VDU8:VDU10:VDU225

This in turn can be simplified to:

50 VDU224,8,10,225

because successive VDUs can be replaced by commas, greatly saving both memory and time.

All very well, but with only two colours, foreground and background, the figure looks rather dull. Can

characters of different colours be superimposed? Try typing in Listing III before moving on.

It would appear that we cannot superimpose characters without the lower one being erased. Fortunately the BBC can overcome this by using the VDU5 command. This tells the computer to print at the graphics cursor.

Two very important features of this are firstly that any figure must be MOVED to a position on the screen rather than TABbed and secondly, the characters do not overprint all of the block, but only that part which is defined within the character.

So instead of lines 40 and 50 of Listing III try:

```
40 VDU5:MOVE500,500
50 GCOL0,1:VDU240
60 GCOL0,2:VDU8,241
70 END
```

Note that now all commands refer to

```
10 MODE2
20 VDU23,240,255,255,255,255,25,25,255,255
30 VDU23,241,0,0,60,60,60,60,0,0
40 COLOUR1:VDU240
50 COLOUR2:VDU8,241
60 END
```

SPACE PILOT

and other programs listed
in the pages of
BBC Micro User
Vol. 1, No. 4.

June Issue

SPACE PILOT, lost in space with dwindling fuel supplies, you must fight off repeated attacks from alien life forms. To replenish fuel, you have to perform a tricky docking manoeuvre, while to repair the inevitable damage you must land on a mountainous planet. **NOMISM**, you are a nomadic herdsman desperately trying to eke out a living on the plains of Africa. Can you survive drought, tsetse fly and other hazards? **PLUS** other listings from the June issue.

From Page 43

graphics, for example, GCOL and GLG rather than COLOUR and CLS.

So far so good, but this is not very spectacular with two squares. Nonetheless this illustrates a very powerful tool for multi-colour graphics.

Colourful Colin uses techniques similar to Listing II but uses VDU5 to form a more detailed and colourful man. Lines 50 and 60 set the background colour to green. This could have been done equally well by:

```
50 COLOUR130
```

```
60 CLS
```

but GCOL0 was used to give the program consistency. In lines 70 to 90 a FOR NEXT loop is used to print Colin a random number of times (up to 21).

Once set, the random number in line 70 remains unchanged until the program is run again.

Line 100 changes the foreground

Listing IV

colour to green so the cursor will not be seen when the program ends.

PROCMAN (lines 200 to 440) first defines the various characters to be used, Figures IVa to IVf respectively. 300 sets the co-ordinates of the man. These must be within 1280 and 1024 so he is not printed off screen.

From line 320 the colours of the various characters are set with GCOL0 since we are printing at the graphics cursor, and each character printed relative to the first using VDU8 and VDU10 or VDU8,10.

This part of the program is rather long-winded, but fortunately there is a VDU equivalent to GCOL. This is VDU18. Thus GCOL0,1 becomes VDU18,0,1 and so this can be strung together with other VDU commands, as will be seen in the next listing.

Great! But wait, if the flashing colours are employed to animate the figure we could have an impressive man ready for a game. This can be seen in Listing V.

Mr. Lemon looks from side to side, running on the spot, ready for you to put him into a loop which will move him about.

VDU18 can also be applied to background colours as in line 30. Line 40 is the VDU equivalent to CLG.

Lines 70 to 90 should be familiar from Colourful Colin, but line 100 illustrates yet another useful VDU command. VDU4 is the opposite of VDU5 and so resets all printing to the text cursor, which is at the top left of the screen, not having been moved.

Lines 140 to 190 define the characters in Figures Va to Vf.

Lines 230 to 280 use VDUs discussed in previous listings. These could be done all in one line, but this would greatly reduce the readability of the program.

When this program is run Mr. Lemon continues to move even after the program has ended! This useful effect is made by letting characters 228 and 229 (Figures Ve and Vf) flash in and out of the background colour. Two flashing colours are used for the feet - blue and yellow, and yellow and blue. This means that the feet on one character will show when the others are blue.

Unfortunately there is one drawback with this technique. Flashing colours use one colour and its inverse, so unless you are prepared to let Mr. Lemon have shoes of a different colour to yellow, he must have a blue background.

The eyes are not a problem. They

320 ENDPROC
```

Listing V

use a similar technique to the feet except with black and white, which do not run into complications with the background colour.

In terms of simple graphics this is about the limit, but one other command can come in very useful.

In long Basic programs character movement becomes very slow. By increasing the flash rate Mr. Lemon will appear to move faster.

*FX9 and *FX10 control the duration of the first and second colour in the flasher respectively. Initially these are set to 25 fiftieths of a second each. Try 75 *FX9,10:*FX10,10. Rapid!

To summarise, when you require detailed characters to be printed you must:

- Print at the graphics cursor: VDU5
- Change colours by using GCOL
- Use VDU commands whenever possible

Finally, remember flashing colours and *FX commands can combine to give realistic figures with some degree of animation.

Educational Seminars
given.

THIS month we present several useful ideas from the pens of John Lord and Paul Leman.

John has provided us with a neat explanation of the string indirection operator, a source of much confusion. We nearly didn't publish this, since some of you out there might be tempted to poke about in areas forbidden by Acorn. On reflection, we decided that you were more mature...

John not only explains the operators, he's applied the knowledge and written a single line memory examiner routine. It is small enough to

fit into a function key – useful when you're digging around in the ROM.

He probably used the program to ferret out the zero page addresses. They should be correct for OS 1.2 but might differ for others. We would be glad to hear from you if you discover any other useful addresses.

Paul Leman has been looking at the hidden *FX calls in OS 1.2 – no mean feat! He has come up with lots of routines that should prove immensely useful for those of us wishing to boldly go where no Basic programmer has gone before.

Exposed – those missing effects

THE new operating system ROM enables the user to access all of the *FX or OSBYTE calls documented in the User Guide. There are, however, many that are not documented. The range of valid values are:

0 to 22
116 to 159
166 to 255

You will find below explanations of some of the undocumented values.

Some are read only and can be used from Basic by means of the USR statement (see page 445 of the User Guide).

For ease of presentation I have listed all the effects as *FXs, even though some can only be used via USR or in machine code.

***FX 142,X** Enters the Xth, sideways ROM. The slot on the extreme right is slot 3. There is apparently provision in the operating system to access 16.

***FX 196** On return the X register contains the auto-repeat delay as set by *FX 11,X.

***FX 197** On return the X register contains the auto-repeat period as set by *FX 12,X.

***FX 200,X** If X=2 then pressing

BY PAUL LEMAN

BREAK will have a nasty effect on a program currently in memory. Try it and see! I've been told that X=1 will make the ESCAPE key have the same effect, but it doesn't work with my operating system.

***FX 202,X** X = 16 SHIFT LOCK active.

X = 32 CAPS LOCK active.

X = 48 NEITHER active.

X = 64 BOTH active.

***FX 210,X** X = 1 turns sound on. X = 0 turns sound off.

***FX 211,X** X gives the sound channel. Try *FX 211,0 then CTRL G.

***FX 213,X** X gives the pitch of the 'beep'.

***FX 214,X** X gives the duration of the 'beep'.

***FX 219,X** Redefines the TAB key to give the Ascii character X. However, try *FX 219,65, then press 'A' and you'll get 'a'. *FX 219,97 gives you 'A'.

***FX 220,X** This allows you to read or set the Ascii key that gives

ESCAPE. *FX 220,0 disables the keyboard ESCAPE.

***FX 236** On return the X register contains the destination for output as set by *FX 3,X.

***FX 237** On return the X register contains the cursor edit key state as set by *FX 4,X.

***FX 245** On return the X register contains the output destination as set by *FX 5,X.

***FX 246** On return the X register contains the printer-ignore character as set by *FX 6,X.

***FX 247,X** On startup locations

***FX 248,X** &247 – &249 normally

***FX 249,X** contain zeroes. On BREAK these locations are looked at and are usually ignored. If these locations contain a three byte instruction, say JMP &2000, then on BREAK the OS will 'jump' to location &2000.

This would be achieved by:

*FX 247,76

*FX 248,0

*FX 249,32

***FX 252,X** X sets the number of the sideways ROM to be entered after a BREAK.

***FX 253** On return the X register

String along the dollar operator

By J.F. LORD

THE string indirection operator, or dollar operator \$M, enables up to 254 bytes of text to be read or written. The string read starts from location M and extends until a carriage return (&OD) is encountered. If no (&OD) code is present then a "string too long" error is printed because the (&OD) indicates the end of the string.

\$M must not be confused with the more usual string variable M\$.

Type:

M=&DOO [Return]

\$M="ABRACADABRA" [Return]

and \$M will write the string "ABRACADABRA" and a carriage return in memory locations from &ODOO to &ODOB.

As well as writing a string, the operator can read a string starting at M which is terminated with a carriage return. If you now type:

PRINT \$M [Return]

then "ABRACADABRA" will be printed because M is still assumed to be &ODOO.

You can assign \$M to be any other string as you would any other variable:

A\$=\$M [Return]

If you now type:

PRINT A\$ [Return]

"ABRACADABRA" will once more be printed.

Moving strings from one part of memory to another is performed in four simple steps:

- (1) Set M to the start of the string's current address.
- (2) Assign \$M to A\$
- (3) Set M to the planned start address.
- (4) Assign A\$ to \$M

Now type:

M=&DOO:A\$=\$M:M=&7FD8:

\$M=A\$ [Return]

and "ABRACADABRA" will be printed at the bottom right of the screen if your computer is in Mode 7. Otherwise it will not be recognisable. This technique accesses the screen memory directly. Although useful for examples, we do not recommend it for general programming.

If you use this method to look at sections of memory remember that you cannot print characters for all the Ascii codes you will find, as some are control codes.

contains the type of reset that last occurred.

X = 0 BREAK

X = 1 power on

X = 2 CTRL BREAK

*FX 254,X X = 64 followed by CTRL BREAK will give you the message 'BBC Computer 16K'.

*FX 254,128 followed by CTRL BREAK returns you to a 32k machine.

*FX 255,X The eight bits of X correspond to the links on the bottom right-hand side of the keyboard pcb. The 3 low bits control the screen mode on BREAK. Bit 3 determines whether auto-boot from disc is via BREAK or SHIFT BREAK. Bits 4 and 5 allow selection of various disc drive types and bits 6 and 7 are unused at present. For example, X = 8, bit 3 is on, the rest are off. BREAK will put you into Mode 0, SHIFT BREAK will attempt to boot from the disc in mode 0.

X = 3, bits 1 and 2 are on, the rest are off. BREAK will attempt to boot from the disc in Mode 3, SHIFT BREAK will put you into Mode 3.

Single key memory display

This program will display 128 bytes of memory starting at memory location M. Each line begins with the initial memory location, its contents and the contents of the next 7 bytes. The routine is short enough to be programmed into a single key.

Abbreviations are used where possible for the Basic key words, for example F. is short for 'FOR' and S. for 'STEP'. Page 483 of the User Guide

lists the minimum abbreviation for the other Basic key words.

*KEY1 F.I=0 TO 127 S.8:@%=4:ML=M+I:P.'~ML;:F.I.L=0 TO 7:P.~ML?IL;:N.I.L:N.I.P.'

The start address M must be defined before key f0 is pressed.

F.I=0 TO 127 S.8: Steps out the memory in banks of 8 bytes.

From Page 49

@%=4: For spaces for displaying each byte.

ML=M+I:

P.'~ML;: Prints the address of the first byte on this line.

F.IL=0 TO 7: Loop for each byte on the line.

P.'~ML?IL;: Prints the contents of the byte.

N.IL: Next byte.

N.I: Next bank of bytes.

P.' Forces the cursor to the start of the next line.

If you type `M=&B00` and press RETURN ,f1, RETURN you should display part of the memory page which contains the key definitions – and of course, it will display the key definition you have just entered!

If you find that the address is not the first number on each line of the display check to see if you have missed out the ' before the address is printed.

The display should appear as in Figure I.

Memory locations `&B00` to `&B0F` contain the information for the definition of keys 0 to 15. If the key is defined, the corresponding byte contains the offset to be added to `&B00` to give the start of the definition. If it isn't defined, the byte holds the offset giving the address of the final byte used for key definition, that is the next byte is free for putting a new definition in.

Memory locations `&B00` to `&B0F` contain either the next byte free for key definitions 0 to 15 or the starting location of the key definition.

For example, `&57` is the last byte used for key definitions and `&10` in location `&B01` means that the text in key 1 starts at the byte following `&B10`.

At this stage the Basic keywords have not been tokenised. The first two bytes of the definition are `&46` which is "F" and `&2E` which is "."

WHEN I was a little lad my favourite story book was called *On Beyond Zebra*, which told of the adventures to be found when you leave the confines of the alphabet and travel beyond Z.

The author had invented a world inhabited by the weirdest of letters and little did I dream that 30 years later my BBC Micro would give me the same adventures – though with the slightly off-putting title of *User Defined Characters*.

These can be added to the character set already in the Micro's ROM to enable you to print unusual letters or shapes on the screen.

The normal character set consists of all the letters, capital and lowercase, the various punctuation marks and arithmetical symbols and so on.

Anything that appears on the screen via a PRINT statement is part of the character set. Each has a code number and you can print a character by using CHR\$(N) where N is the code number of the character. Try PRINT CHR\$(64) or PRINT CHR\$(92) to see what you get. If you want to see some of the characters try the following program:

```
10 FOR I = 64 TO 255
20 PRINT CHR$(I),I
30 NEXT I
```

You may have noticed the gap between 224 and 255. This will come in useful later.

Now suppose you wanted to use another character set, say Russian letters or italics or maybe some other symbol not usually available. Can you do anything about it? With the BBC Micro you can define your own characters and it is very, very easy.

Let's imagine that you've been doing some statistical calculations and you want to use sigma, Σ , which means "the sum of the following numbers." This isn't in the normal character set, but we can make it available by defining it.

To define a character we use an 8 x 8 grid (Figure I). On this we draw the character by blocking in the squares to get the shape we want. You don't need much artistic talent, just a pencil and a rubber. To get sigma we end up with something like Figure II.

Now we have to translate the picture drawn on the grid into numerical terms our micro can understand. It is quite a simple job which we achieve by giving each of the columns of the grid a numeric value, the first column on the

BEYOND

By PETE BIBBY

Figure I

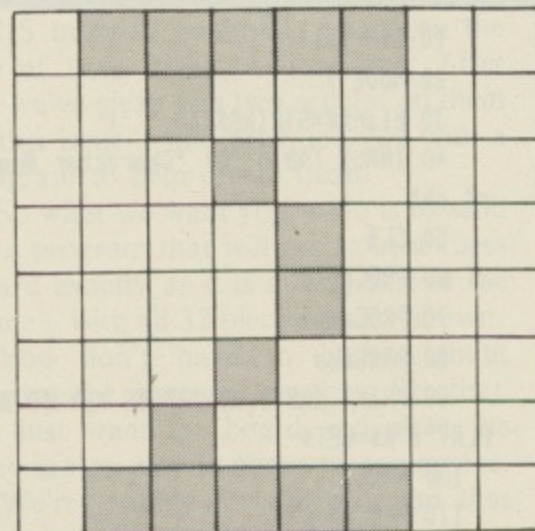

Figure II. A blocked diagram of sigma

Figure III

left having the value 128, the next, 64, and so on to the last column which has the value 1 (Figure III).

Then we take each row at a time and add together the values of each column in that row that we have blocked in.

Let's take the top row of Figure III and go along it square by square from left to right. At the beginning the total is set to zero. If, as we go from left to right, a column is filled in, we add the value of that column to the running total. If it is not filled in we don't add anything. Our top row looks like this:

Let's start off at the beginning with our total at zero. Now the first square we come to is not filled in so we still have 0. The next is, the column value is 64 so $64 + 0$ gives our total 64. The next square is also filled in, its column value is 32 so the total goes up to 96.

We carry on to the next square which is also filled, the column value taking the total to 112. Similarly the next square takes it on to 120 and the next on to 124. The last two squares in the row are empty so we add 0 to the running total for each and the final total is 124.

We write it down and start on the next row, with the total set to zero, working left to right square by square to get a running total for that row and so on. We end up with the data shown in Figure IV.

We now have all the numerical information for telling the micro to include a sigma in its character set.

You will remember that in the character set we had the values 224 to 255 to spare. We can use one of these numbers as the code number for sigma. Let's choose the number 240 as the code for sigma by entering VDU23, to tell the Micro we're defining a

From Page 51

character, followed by 240 to say what the character code is to be. Then come the running totals taken in order, row by row, from top to bottom. We enter: VDU 23,240,124,32,16,8,8,16,32,124 and press Return.

Now if we want to see our user defined character we enter PRINT CHR\$(240) and hey presto, sigma – unless you are in Mode 7, as user defined characters don't work in that mode. And we can call it up time after

Figure IV shows how we add up the values of the shaded squares.

time using CHR\$240, or VDU 240.

Try drawing your own characters, it is easy and fun. Those of us who have OS other than 0.1 aren't restricted to just 224 to 255 for our user defined characters. However they are enough to be going on with.

Also you can put two or three of your creations together to form a composite character and can even animate it, as described in ?????

So there it is. On the BBC Micro you need never be confined to the character set. You, too, can go beyond Z.

See for yourself
how they make
the BBC Micro

Win our
holiday of
a lifetime

**HONG
KONG**

To get you started...

IN order to assist you with your competition entries, Percival has come up with a program to help design your user defined characters.

When you run it, it asks which character number you wish to define – you answer in the range 240 to 255, although it doesn't check on this.

You are then presented with an 8 x 8 grid of red blocks. You can move the cursor about the grid by means of the cursor control keys.

The grid represents the character you wish to define. If you want a particular block "shading in" just move the cursor to that block and press the space bar. The block will then turn blue, signifying that we have "shaded it in" to be used as part of our character.

If, as you're designing your character, you decide that you would like to rub out one of your blocks, just move the cursor to that block and press space. It will change back to red again.

When satisfied with your creation simply press the S key.

The program does all the necessary sums and prints out the VDU23 values needed to define that character, so make a note of them.

After this, pressing a key will display a diagonal line of the character you have defined in Mode 5.

That's all the help you'll get! No

HONG KONG is easily one of the most fascinating cities on earth. Its harbour a glittering spectacle of hundreds of junks and sampans. Its restaurants a paradise for gourmets. It epitomises all the old-world romance of the Orient, plus the excitement of today's electronic marvels. Its intriguing shops offer unbelievable bargains for computer buffs. And from the bustling Wong factory in Kowloon pour thousand upon thousand of BBC Micros for the markets of the world.

An escorted tour of the BBC Micro production line is the highlight of the most fabulous prize we've ever offered. The winner

of this month's contest – plus a companion – will be flown by Cathay Pacific from London to Hong Kong, where they will spend five nights as guests at one of the most luxurious hotels in the Far East, the famed Sheraton.

You'll have plenty of opportunities to explore this vibrant and colourful city, travel by rickshaw or the most advanced underground railway in the world, revel in sights, spectacles, even smells, you've never experienced before. All in all, it will be an unforgettable holiday.

But first, there's our contest ...

This is what you have to do

THIS month's contest is based on the use of user defined characters. After all, we've given you two articles on them in this issue – and provided you with a program to help create them!

So what we want you to do is to send us a program that will print out a chess board exactly as it is at the start of the game – with all 32 pieces clearly shown.

You don't have to bother about moving the pieces or anything like that, we just want the board and pieces as they are as play is about to commence.

We're looking for the program that does just that – making best use of the user defined characters – and, of course, being well structured. That should be child's play to most of you, given the excellent responses to our previous contests.

There's one more thing we need,

though. Together with your cassette and listing we want a detailed explanation of how your program works. Who knows, if it's good enough you might end up working for us!

Send your cassettes, listing and explanations to: Hong Kong Contest, Micro User, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.

And please mark each item clearly with your name, address and telephone number – and put "Hong Kong Contest" on the envelope.

If you want your cassette returning, please enclose a stamped addressed envelope. Otherwise it will be donated to a school.

● *Entries must be received by July 31, and each must include the entry form printed below, or a copy of it.*

BUSINESS

Beebcalc	The only ROM based spreadsheet program currently available. ROM only at £34.	●	●	●	●			Computer Concepts
Broadplan	Spreadsheet program. 80 columns. Easy to set up for cash flow projection, financial analysis, etc.	●	●	●	●	£24		RMK
Cashbook	Double entry two column system with accounts, ledgers and nominal ledger.	●	●	●	●	£7.45	£5.95	Micro Aid
Database	Comprehensive database facilities include fast search, sort, search and replace, etc.	●	●	●	●	£12.95	£9.95	Primasoft
Database	Menu driven database with add, change, search, sort, delete and display routines.	●	●	●	●	£12.95		Computercat
Easycalc	Spreadsheet processor, disc or tape files. Up to 2,000 cells.	●	●	●	●	£60	£12.95	Zero Software
Easyplan	Disc based financial modeller.	●	●	●	●			Zero Software
Filer	File handling program which allows user to build up, manipulate, store and retrieve data.	●	●	●	●		£10.29	Micro Power
Ledger	Complements Micro Aid Cashbook and allows checks to be kept on accounts.	●	●	●	●	£7.45	£5.95	Micro Aid

Title	Description	Model A	Model B	Joystick	Keyboard	Price		Supplier
						Disc	Cassette	
Mailing	Address file for listing and sorting by name or postcode. Labels of any size handled.	●	●	●	●	£7.45	£5.95	Micro Aid
Micro Budget	Personal finance program enabling the recording, review and analysis of budget and income, etc.	●	●	●	●	£7.99		Micro Power
Nominal Ledger	Maintains records of expenses, income, assets and liabilities to produce balance sheet, etc.	●	●	●	●	£195		RMK
Payroll	Full PAYE system including three NI codes, for contracted in, all PAYE codes. Overtime facilities.	●	●	●	●	£15.45	£13.95	Micro Aid
Sales Ledger	Maintains records of debtors to produce full audit trail, statements, aged debt analysis, etc.	●	●	●	●	£195		RMK
Scred	Screen editor and word processor. Over 50 functions for creating, checking and modifying programs.	●	●	●	●	£23	£18	Stable
Spreadsheet	Over 1,000 cells up to 26 by 99. Build, modify, read, write, print, functions, variables, text, etc.	●	●	●	●	£8		Contex

WORD PROCESSING

Alphabeta	WP package for use with most printers. Insert, delete, centre, print emphasis, underline, tabs, etc.	●	●	●	●	£16	£14.50	H and H
Pro Word	Full feature word processor. On screen editing and justification. Written in machine code.	●	●	●	●	£19.95		Pro Software
Worded	Simple word processor written entirely in Basic for those who want to know how they work.	●	●	●	●		£5.95	Processor Applications
Wordpro	For either Epson or Seikosha printers. Justification, alter, delete, pages to tape.	●	●	●	●		£10.50	IJK Software
Wordscan	Easy word processing for Epson MX80FT III and other printers. Can produce 400 lines of text.	●	●	●	●		£12	Dial
Wordwise	ROM based word processor for the BBC Micro. Very easy to use and a best seller. ROM only at £39.	●	●	●	●			Computer Concepts

GRAPHICS

Easy Graphics	Highly versatile, easy to use graphics program generator. Simplifies production of maps, graphs.	●	●	●	●		£13.50	Hexagon
Gratdisk	Same as Grafkey, but also provides screen save	●	●	●	●	£12.95		Clares
Grafik	Same as Grafkey, but can be used with joystick or keyboard.	●	●	●	●		£8.95	Clares
Grafkey	Advanced CAD type program. Allows complex drawings to be created and saved to tape.	●	●	●	●		£7.95	Clares
Grafstik	Same as Grafkey, but for use with joystick.	●	●	●	●		£7.95	Clares

NE'S ...

IN this game for the model B you are in control of a spaceship lost in space, with dwindling supplies of fuel and laser energy. To make matters worse, you stumble across a fleet of blood-thirsty aliens who attack your craft in numbers, intent on your destruction.

You must fend them off with the lasers on board, but your power is limited and your fuel level drops all the time.

The situation is not too bad though, because you can replenish your stores of energy and fuel by docking with a supply satellite and you can repair damage caused by the aliens by landing on a friendly planet.

As the game progresses, the aliens become faster and deadlier, and eventually even the most skilful pilot is sure to be overwhelmed.

When the game starts you are presented with a screen in two parts, the warning dials and fuel and laser gauges in one part and a visual display the other.

There are three parts to the game, and each will produce different views on the display. Instructions concerning what you have to do and how you move are given in the program.

Briefly, the first part is direct combat, where you have to destroy the aliens. Secondly, you must dock with a

supply satellite, and thirdly you must guide your lander to a pad on a planet to repair damage.

When your damage points reach five or your fuel runs out, the game ends and a high score table is displayed.

The program itself consists of a main loop which calls three procedures, one for each part of the game. These in their turn call other procedures to perform other functions.

Lines 10-90 initialise graphics, envelopes, display the instructions and select Mode 1.

Line 110 initialises all the variables to be used in the game, and calls a procedure to draw the screen.

Lines 120-150 are the main loop of the program.

Lines 220-320 deal with the high score table.

PROCINST displays instructions.

PROCI initialises variables used in the game.

PROCS initialises the screen.

PROCAL/PROCA deal with the movement and firing of aliens.

PROCLAND deals with the landing on a planet section.

PROCDOCK deals with the docking section.

PROCT displays any warning messages in the scanners (this will be

Space Pilot listing starts on Page 60

From Page 59

seen when the game is played).

PROCM takes inputs from the keyboard and acts accordingly.

PROCG is the firing routine when you press the space bar.

PROCRUB draws the approaching aliens on the screen.

PROCCRO draws your sights on the screen.

PROCFU increases fuel and laser energy after a successful docking or landing.

PROCFO decreases fuel.

PROCQ decides what part you will face next.

A few hints . . .

The program only just fits into memory, so I have deleted REM statements and unnecessary spaces. I would advise you to do the same. For disc owners, you will need a downloading routine, and I would recommend *TAPE: FORN%=PAGE TO TOP STEP 4:(N%-2816) = !N%:NEXT: PAGE=&E00: OLD which does the job relocating from &1900 to &E00 four times faster than the common

downloading routine using ? instead of !.

It is easy to confuse PROCRO and PROCCRO or PROCFU and PROCFO. Don't - it will not crash the program, but it will not run properly.

When the program is run, and you are confronted by an alien, it might be confusing at first to find that when you move up the alien moves down, but remember that you are moving your ship, so the alien moves in the opposite direction that you do. This does not apply to the other two stages of the game.

GRAPHICS

RIGHT – lots of “hands-on” this month, so let’s get to it! Enter the following:

```
MODE 5
VDU 28,0,31,19,0
COLOUR 129
CLS
```

What exactly is going on? Well, cast your mind back a month or two. Do you remember that the display we look at is actually composed of two screens as far as the BBC Micro is concerned, one on top of the other?

They were called the graphics and text screens, and when you first switch on or change mode they overlap.

When we used PRINT, TAB(), COLOUR and CLS we were using the text screen.

When we used MOVE, DRAW, PLOT, GCOL and CLG we were using the graphics screen.

Normally both screens are on top of each other, and we might be tempted to think of them as really the same thing.

They are quite separate, though. If you doubt me, set the graphics background to one colour and the text background to another. Then alternately try CLS and CLG. That should convince you!

But, to return to our present problem, if you’ve done what I asked

By PAUL JONES

you should be left with a screen red on the left half and black on the right, with some remnants of your typing.

VDU 28 has restricted the BBC Micro’s text screen to the left half of the display. To use the jargon, we have created a text window. We’ll go into the details in a moment. Let’s just prove that we have made such a window and see what it means. Type:

```
CLG
```

Everything disappears to leave a blank screen, save for the prompt and the flashing cursor.

You see, the graphics screen is still full sized, and when you clear it you also wipe out what’s on the text screen – that is, the red rectangle disappears. This should become clearer in a moment.

Notice that the prompt is written on a red background. After all, “>” is a text character, and so is printed on the text background, which is red.

Now hold down a key and keep it down so that it repeats. Surprised? The repeated letter only gets halfway across the screen before starting a new line.

Figure I: Text screen in Mode 5

Figure II

This is because we have restricted the text screen to half the screen’s width.

In Mode 5 the screen is 20 characters wide, numbered 0 to 19, as you can see from Figure I.

Now you can restrict this text screen to any particular rectangular “chunk” or window you choose. Of course, that rectangle mustn’t slope, it must be upright.

Last month we saw how we could fix such a rectangle with just two points, the opposite corners.

To define a text rectangle, or window, we use VDU 28 followed by the character co-ordinates of the bottom left corner of the screen, then those of the top right corner.

Look at Figure II. This shows the text window we set up at the beginning of the article. To define, or fix the shaded area as a text window we typed

```
VDU 28,0,31,19,0
```

Notice that we use commas to separate the figures, but there is no final comma.

Although we have defined a text window, the graphics screen works normally. Try:

```
MOVE 0,0
```

```
DRAW 1279,1023
```

The graphic commands act as they usually do and overwrite the text window as if it weren’t there. After all,

the graphics screen still fills the whole of the display, and we have only limited the text screen.

Before you clear the screen, press the Return key and keep it down to see what happens. When the prompt reaches the bottom the text window will scroll as normal. However, the only part of the line we drew that scrolls up is the part that crosses the text window. The rest of the line is immune.

This means that if we use our windows carefully we can stop text and graphics interfering with each other.

Now don't think that the text window has to go on the left side of the screen, or from top to bottom. It can be any rectangular portion of the screen.

Try:

VDU 28,7,20,12,11

which sets up the text window in Figure III. (Notice that you are still in the old text window as you type this - it doubles back on you.)

Now type:

CLG

which should clear the whole display, since the graphics area hasn't been restricted. Then type:

CLS

The text window shown in Figure III should appear.

Try typing a few words in here and see what happens. This proves that:

- You can have a text window anywhere on the screen.
- Redefining a text window (that is using VDU 28 twice) automatically destroys the old one, although it doesn't clear it.

Now type:

VDU 26

CLS

Hopefully the whole screen will turn red. The effect of VDU 26 is to restore the text and graphics windows to the state they were in when you switched on - totally overlapping.

Program I illustrates the use of the simple TAB() function in a text window. Line 30 sets up a text window identical to the one we last used. 40 to 70 form a loop attempting to print an

```
10 REM *** PROGRAM I ***
20 MODE 5
30 VDU 28,7,20,12,11
40 FOR I=0 TO 31
50 PRINT TAB(I)"*"
60 A$=GET$
70 NEXT I
80 A$=GET$
90 CLS:VDU 26
```

Program I

Figure III

asterisk in all positions from TAB(0) to TAB(31). The A\$=GET\$ in line 60 is simply to step you through each printing, as you have to press a key before the program continues. Line 90 returns the screen to normal.

It should be immediately apparent that the zero position as far as TAB() is concerned is at the left of the new text window, TAB(1) is next to that and so on.

Since the text window is only six characters wide (columns 7 to 12 on

```
10 REM *** PROGRAM II ***
20 MODE 5
30 FOR I=1 TO 255
40 PRINT TAB(I)"*"
45 A$=GET$
50 NEXT I
```

Program II

```
10 REM *** PROGRAM III ***
20 MODE 5
30 VDU 28,7,20,12,11
40 FOR I=0 TO 31
50 PRINT TAB(I,I)"*"
60 A$=GET$
70 NEXT I
80 A$=GET$
90 CLS:VDU 26
```

Program III

the original display, 0-5 on our text screen), TAB(6) will be a complete line across the text screen plus one column. That is, the asterisk will appear to miss a line. Similarly, TAB(7) is a complete line plus two characters and so on.

This wraparound effect is exactly what happens with large values of TAB() on the original text screen. Program II demonstrates this.

The main point is that in a text window TAB(0) is the left hand column of that window and TAB() only con-

siders the width of the text screen in its workings.

Much the same thing happens with the "multiple" TAB() such as TAB(3,4). TAB(0,0) is at the top left of the text window. However, unlike the simple TAB(), if the number in the brackets exceeds the size of the window, this multiple TAB() ceases to work. (It also collapses in this way when you go out of bounds on the normal screen.) Program III illustrates the point.

Experiment with setting up your own text screens. See if COLOUR works normally. What happens when text and graphics overlap? Do they overwrite each other? What exactly happens when scrolling occurs? What effect does getting your co-ordinates mixed up and using the top right corner instead of the bottom left have, as in:

VDU 28,12,12,7,20

Just as we can define a text window on the screen, so we can define a graphics window. That is, we can restrict the area where our graphics commands apply to a rectangle within the whole screen.

We use VDU 24 to do this, followed by the co-ordinates of the bottom left corner of the window and the top right hand corner. Of course, we now use the co-ordinates of the graphics screen not the text screen.

To define the graphics window shown in Figure IV we use:

VDU 24,200;300;1000;800;

Notice that while we use a comma to separate the VDU 24 from the list of co-ordinates, after that each co-ordinate is followed by a semi-colon (;).

Also there is a final semi-colon - if you omit this your programs will crash.

Now enter:

MODE 5

then:

**VDU 24,200;300;1000;800;
COLOUR 129
GCOL 0,130**

Figure IV

From Page 63

Now try:

```
CLS
CLG
```

alternately until you get the hand of things. Nice, isn't it!

Notice how clearing the text screen also clears the graphics area to the text background colour. This is because the text window still occupies the whole screen, so when you clear it the graphics screen, which also overlaps it, suffers the same fate.

Similarly, text gets printed across the graphics area.

The only way to avoid this problem is to define two entirely separate text and screen areas.

Now, with the graphics screen as defined above, try:

```
MOVE 0,0
DRAW 1000,1000
```

You'll see that only the part of the line that crosses the graphics window appears — you really have a "window" onto part of the original graphics screen.

So (0,0) is still where it was on the graphics screen, as is (1000,1000).

```
10 REM *** PROGRAM IV ***
20 MODE 5
30 VDU19,3,4,0,0,0
40 FOR loop%=1 TO 10
50 leftx=RND(1000):rightx=RND(1000)
60 IF leftx>rightx THEN store=leftx
:leftx=rightx:rightx=store
70 lefty=RND(1000):righty=RND(1000)

80 IF lefty>righty THEN store=lefty
:lefty=righty:righty=store
90 VDU24,leftx;lefty:rightx;righty;
100 GCOL0,RND(3)+128:CLG
110 NEXT loop%
```

Program IV

Having a graphics window does not automatically move (0,0) to the bottom left of that window.

The only graphic effects you will see from your graphic commands will be those that occur within the region of your graphics window.

Try drawing a few triangles with parts outside the graphics windows to

see what I mean.

Just as with text windows, defining a new graphics window immediately cancels the old one (without clearing it from the screen). Also VDU 26 still has the effect of restoring the text and graphics areas to their original extent.

We can use the idea of defining graphics windows to draw rectangles on the screen rapidly. We just define a graphics window where we want the rectangle, then clear to the appropriate background colour.

Program IV illustrates the techniques, by printing out ten random rectangles on the screen.

Finally, how about writing a simple program for children? Define a graphics window in the top two-thirds of the screen and a text window on the bottom third. Try not to let them overlap.

Then draw a house piece by piece in the graphics screen. Each time you press a key another bit appears. As each part appears, make sure that the name of that part is printed on the text screen.

If you can manage that, you are well on the way to mastering graphics! ☺

Escape from ORION

BBC Micro

A new arcade game that stretches the BBC Micro to the limits of its capabilities. Your space ship is forced to land on a hostile planet for you to replenish your supplies. On each screen are 6 items to collect and take back to your ship. You run along the walkways and up and down ladders, and jump to avoid running into things and to cross the gaps (you've played Donkey Kong? This is better!). On screen 1, green bug-eyed monsters fire fast missiles at you. Clear this screen and you get to screen 2 with lifts you have to jump on and off, a fire monster and a nasty little creature that tries to drop on you. Screen 3 is the factory, with explosive mines on conveyor belts. Screen 4 has electrified doors which shut when you're not expecting them. Clear this screen and you're back to screen 1, only it's harder.

Superb full colour Mode 2 graphics, lots of sound effects (which you can switch off).

You can choose which screens to play, and the initial difficulty level. It's all in machine code, of course. Keyboard or joystick control. Tested on OS 0.1 and 1.2.

Only £6.75 inclusive. Needs 32K.

So you want to be Premier?

I NEVER thought that I could have much fellow feeling with Margaret Hilda Thatcher, but after playing Simon Hessel's brilliant new game Great Britain Ltd, I must admit to more than a touch of sympathy.

It's not simple running a country, take my word for it. If you've ever sat in front of a TV on Budget Day thinking how easy it is, and how much better you could do it, then try this game.

The idea is that, as Prime Minister (of the party of your choice), you have to guide your country through its social and economic ills for five years, then put yourself up for re-election.

At the beginning of the period you are shown a display of the major economic indicators such as inflation rate, unemployment rate, exchange rate and, ominously, your popularity rating.

You also get a display of what you receive by way of taxes and what you spend.

For each of the five years that you're in office you have a Budget Day. Using the economic indicators as guides you can change the taxes (but watch the inflation rate and unemployment figures), be as generous as you like with social benefits (but beware budget deficits) and start such things as housing projects (but keep an eye on everything!).

It's absolutely fascinating to play and, while it is easy to understand with excellent instructions, it is far more than just a trivial mimicry of reality.

You really do get involved, especially when you get news flashes of

Great Britain Ltd
(Simon W. Hessel Software)

rioting in the streets!

The decision-making process can get both involved and agonising. You don't get the super fast, technicolour graphic wonders of other games, but you do get thoughtfully laid out, easily understood displays of economic information.

Great Britain Ltd is easily as exciting, and certainly more satisfying, than any game of Space Invaders I've played.

And at the end of five years worry-

Package 004 (Software Invasion)

TEXTPRO

THIS simple text editor written in Basic uses text Mode 3 with black letters on a yellow background.

This mode is difficult enough to see on a monochrome TV, and near impossible on a colour one.

It can only handle a maximum of 60 lines of text, which might suffice for letters but not for War and Peace.

The function keys are used to enter commands. The program is supplied with a "command strip" which is placed under the clear plastic bar next to function keys to act at a prompt.

This is one practice which I hope becomes much more widespread.

The commands available allow you

ing about the country what do you get as a reward? The chance to write your own manifesto and fight an election!

Try it, it's fascinating. Watch yourself become the type of political animal we all know and hate. Resist the election year give-away budget if you can and see how much you promise in your manifesto compared with what you do in office.

As for me, well, I've learnt how hard it is to run even a micro-country. I've never once been re-elected but despite that I know my policies are sound and I'll stick to them when I play the game again. After all, there is no alternative...

Steven More

to LOAD and SAVE the text, JUSTIFY, INSERT and DELETE a line, PRINT and move text up and down.

BLACKJACK

THIS tape version of the well known card game is written mainly in Basic, with one machine code call.

The cards displayed by the program are very realistic indeed, especially the Royal cards.

It is a pity that the game is rather disappointing. This is partly due to the inherent limitations of the game itself, and partly to the lack of variation in the computer's responses.

This version will not run on a disc

Good for gamblers? Bet your shirt on it!

HAVE you ever wondered what you'd do if you came into some money? Would you be able to invest it and watch it grow, or maybe start a small business and become a millionaire?

With *Inheritance* you have the chance to find out.

It's a game in two parts, the idea being that you have been left your Great Uncle Arbuthnot's whole estate. But first you have to prove you are worthy of the inheritance by turning £10,000 of it into £100,000 by investing in the stock market, the metal market and, if you're desperate, gambling on horses or cards.

As if that's not enough, you also have to avoid your scheming relatives who'll be trying to thwart you.

I must admit that before I'd played the game I thought that investing might be boring. No way! In fact, I might just buy a copy of the *Financial Times* tomorrow: I've discovered myself muttering about "market trends in platinum" and insisting beneath my breath that "retailers are under-priced!"

And when I took a chance on a rank outsider because I was short of money,

Inheritance (Simon W. Hessel Software)

I had to leave the room while the race was run! Incidentally the horse racing and blackjack gambles are mini-games in themselves.

If you manage to run the gauntlet of the shares market and your relatives, you graduate to the second part of the game where you use your business skills to turn the £100,000 into £1,000,000 by investing it in the estate's soft drinks factory.

But first you have to find the recipe for Paradise Cola which uncle A. has hidden, then treat with a native chief for the raw material of the drink.

Only then do you get round to actually running the factory, deciding how much to make at what price and

fixing the advertising strategy to conform with market conditions.

It's not easy, but it is fun.

A great game, really two games for the price of one. Again Simon Hessel has used tabular information (combined with clever applications of the BBC Micro's sound and graphics facilities) to produce an interesting, intelligent and enjoyable game.

The only trouble is that there is no way to hold a stewards' inquiry into that last race where I lost all I had in a desperate attempt to make the £100,000.

It was a fix. I'm sure it was those scheming relations.

And have you seen the price of raw materials nowadays? It's enough to make you cry.

And that Chief Imbango, don't talk to me about the exploited Third World...

David Carr

Challenge for starship captains

Countdown to Doom (Acornsoft)

system without being moved down in memory, as Mode 1 is used to draw the cards on the screen. If only the rest of the game had matched the card display!

DISASSEMBLER

THIS is a very simple disassembler written in Basic. Apart from using the function keys and having a "command strip", there is nothing special about it. There are more useful disassemblers, having more features, listed in computer magazines.

The vendors describe these programs as one of "four brilliant new software tapes". That is greatly overstating the case for this tape.

THIS adventure is set on an alien planet where your spaceship has crash-landed. The aim is to collect various pieces of equipment necessary to repair the ship, thereby escaping from the planet before your craft collapses in face of unspecified hazards.

The alien territory consists of deserts, swamps, volcanoes, forests, cities and glaciers, and the gaming landscape is diverse and imaginative. However the close proximity of two opposite climates - glaciers and swamps - does tend to stretch credibility.

The game starts on the bridge of your fast disintegrating star-voyager. You are faced with some explosives and a

jammed door.

After you have navigated around this obstacle, you meet such things as a poor, defenceless(!) cute little blob of roving jelly, a rather obliging sandworm and a 500 toothed, three headed monster, with a taste for starship captains!

The many strange puzzles that cross your path will keep you occupied for many frustrating days.

The vocabulary is extensive and includes words that are not of direct use in

From Page 67

the adventure, such as swim, sit and eat. This quirk is used to provide a touch of "alien" humour when the desperate adventurer tries anything to survive.

Thus, when attempting to wave an object, I was told: "This isn't a fantasy game, you know. Doing that won't help!"

ONCE every three months I go through a nightmare. All the cheques I have sent or accepted, all the tatty little receipts for purchases or services received, have to be sorted, numbered, listed, added, explained and merged into an intelligible set of books that will satisfy the taxman, persuade various clients to pay for my services and, above all, give me a clear picture of whether my one-man, self-employed business is surviving.

One day earlier this year I switched off my calculator in despair after eight hours of failure to find a missing £100, and sent Gemini Marketing a cheque for £23.95 for their Commercial Accounts package on disc.

I had acquired my BBC Micro only a few days before and had never used a computer until then. I wistfully considered Gemini's Cashbook program but concluded I dare not risk £95 on an unseen product.

The disc arrived ten days later – I felt they could have been quicker – and it was accompanied by a brief User Guide which unfortunately referred only to tape cassettes.

However it proved to be a simple, crisp and friendly program, with the clarity my pen and paper book-keeping lacks.

The user selects from concise menus the type of transaction – either cheque receipt or payment for credit or on-the-spot purchase or sale.

The transaction is input as a few brief answers to short prompts from the screen. The program lists these either as a journal or by individual account.

It will also summarise the state of the bank balance, the history of the year,

Abbreviation of direction commands can be used, like NE, S, W, etc. This cuts the tedium of typing in "Go northwest" perpetually in maze situations.

There is also a save game facility which is a great boon, especially when you are progressing well and a voice screams: "It's time for your dinner!"

Countdown To Doom is a real challenge for any adventurer, beginner

or expert, and will provide months of entertainment before you can successfully lift-off in your ship. The story line makes an enjoyable change from the standard adventure format.

At £9.95 it provides the usual Acorn-soft value for money and, though not as technically proficient, it is almost on a par with Dungeon Adventure.

Chris Roberts

First impressions were fading fast..

Commercial Accounts (Gemini Marketing)

month by month and the VAT record. Procedures to save and retrieve information from disc or to print are simple and clear.

Sadly this first, favourable impression evaporated when I got down to work. I do not pay VAT because my turnover is below the threshold, so I was irritated to answer a VAT question – admittedly with a single keystroke – for every transaction.

I would have liked to say "No VAT" at the start and not be pestered thereafter.

For tax reasons my financial year starts on May 1. Dates, however, are input with a month number. Instead of requiring the user to construct a numbered tax month calendar the program should input MAR or APR and either use these throughout or else convert them to the correct position in the user's personal financial year – in my case 11 or 12.

The program makes no attempt to sort transactions by date. For lazy people like me who stockpile chits for three months, but still need to present accounts in date order, such a facility is essential.

Input of a cheque receipt duly

Cancels the outstanding debt but does not credit the bank account. A separate input is needed for this.

Could not "Have you paid it in? Y/N" be added to do both jobs with one input?

The journal described my transactions with a number so I had to repeatedly consult the menu to discover whether "5" signified "cheque payment for a credit purchase" or something else. No doubt, one would learn in the long run, but initially it was irritating.

In particular I grieved that the 12 characters available to input the account name were abbreviated to a mere five on the journal display because this prevented me "bending" the system to overcome its worst fault of all. It caters for only one profit centre, operating one single bank account and provides no analysed management information.

There may be minute businesses for whom this could be an adequate book-keeping system, but it should not be described as producing accounts.

Most businesses however, even small ones, need costs and income to be sorted and allocated to profit centres and need to differentiate between expenditure which is tax-deductible and that which is not. For such people this program is quite inadequate.

There's never been a show like it!

INSPECT the latest hardware devices that add greater power and more versatility to the BBC Micro.

TRY OUT the yet-to-be released summer crop of games – a unique opportunity to test them out in advance.

WATCH demonstrations by some of Britain's leading experts in BBC computing.

AT LAST – a national show exclusively for users of the BBC Micro! An action-packed, three-day event that has one main aim . . . to ensure users from all over the country are brought fully up to date with all the exciting developments in this most remarkable machine.

The BBC Micro User Show is primarily designed for people who already own a BBC Micro, and they will find it a veritable Aladdin's cave, packed with goodies that will help them make their computing even more rewarding.

But there will also be much to interest anyone about to buy their first machine. They will be able to discover for themselves what computing is all about – and how easy it really is.

Visitors will be able to ask all the questions they want about the vast range of accessories on show, from tiny program chips and memory expansion devices to disc drives, monitors, modems and the many other ways of linking the BBC Micro to the outside world.

This is an event no user of the BBC Micro will want to miss. So make a note of the date in your diary now. More details of our plans will be given in next month's BBC Micro User.

Meet BBC Micro experts at our WALK-IN FORUM

LECTURE theatres adjoining the two exhibition halls will be in use throughout the three days of the Show, with leading authorities on the BBC Micro explaining in easy-to-understand language the latest developments in BBC computing.

On Friday there will be special sessions on practical applications of the micro in education and business.

On Saturday and Sunday more well-informed speakers will be discussing subjects ranging from Basic for beginners, the use of discs and exploring the BBC's ROM to tackling assembler language and demonstrating advanced techniques in BBC graphics.

When it's open, and what it costs

EXHIBITION

Friday, June 24 – 9.30am-7pm
Saturday, June 25 – 9.30am-5pm
Sunday, June 26 – 9.30am-4pm
Adults: £1.50 Under-12: £1

(50p reduction with voucher from this page)

WALK-IN FORUM

Two-hour sessions each morning and afternoon
10.30am-12.30pm
2pm-4pm

Admission per session: £1

Why Manchester?

IT was at Manchester University that computing as we know it today was born. So it is only just that the first national show devoted exclusively to the all-British BBC Micro should make its debut in the city that spearheaded the computer revolution.

UMIST is in the city centre, only minutes away from main-line rail and coach stations. And there are NO parking problems!

Cut-price travel by British Rail

British Rail is offering special discount fares for visitors to the BBC Micro User Show – in some cases as much as one third off the normal fare. These are Second Class fares on any train, and the return journey can be made on any day within one month. (For First Class travel add on half to the prices given.) These are the fares from BR stations in the following counties:

ENGLAND: Avon, £18.90; Beds, £16.40; Berks, £20.40; Bucks, £17.60; Cambs, £18.90; Cheshire, £4.00; Cleveland, £12.30; Cornwall, £35.30; Cumbria, £9.40; Derbys, £6.90; Devon, £27.30; Dorset, £27.30; Durham, £13.60; Essex via London, £29.80*; Glous, £14.90; Hants, £25.80; Hants via London, £35.30*; Hereford & Wors, £12.30; Herts, £20.40; Herts via London, £27.30*; Humberside, £9.40; Isle of Wight, £29.80; Isle of Wight via London, £38.20*; Kent via London, £32.80*; Lancs, £4.00; Leics, £13.60; Lincs, £9.40; London (Greater), £24.60; Merseyside, £4.00; Norfolk, £23.10; Northants, £16.40; Northumberland, £21.60; Notts, £9.40; Oxon, £17.60; Shrop, £8.20; Somerset, £23.10; Staffs, £6.90; Suffolk, £23.10; Surrey, £24.60; Surrey via London, £29.80*; Sussex (East) via London, £32.80*; Sussex (West) via London, £32.80*; Tyne & Wear, £16.40; Warwicks, £12.30; West Midlands, £9.40; Wilts, £21.60; Yorks (North), £9.40; Yorks (South), £8.20; Yorks (West), £4.00.

Be one of the first to get each issue!

Every owner of a BBC Micro – and everyone thinking of buying one – needs to get Micro User every month. It's the biggest, brightest, most authoritative yet completely independent guide to a machine that has so much potential you will never tire of reading about its remarkable capabilities.

You can buy Micro User from your local newsagent or station bookstall. Or you can take out a 12 months subscription and have it delivered by post.

Copies of these back issues are still available at £1.25

Cassette tapes of Micro User programs – £3.75

Or take out a year's subscription and have your cassette posted to you each month. You can start your subscription from any issue to take advantage of this offer.

FREE

If you take out a subscription to *Micro User* you will receive completely free the sturdy copy-holder illustrated above, together with a large crib card containing essential information and charts that will save you continually referring to the *User Guide*. This free gift is for a limited period, so subscribe now!

NOW a Graphics Digitizer for the BBC MICRO: £19.95 + p&p + VAT

"This is a complete, assembled, tested graphics digitizer arm for the BBC MICRO. It turns your computer into a "computerised drawing board."

It will transfer designs to the screen, allow you to change screen colours, automatically draw true verticals and horizontals or an on-screen work grid, save the whole screen to cassette or disc, clear the display and recall it later from memory, and much more – all selected by the arm sensor from our specially designed layout sheet provided.

For £19.95 (+ p&p & VAT) you will buy:

1. The Minor Miracles digitizer, ready to plug in and use.
2. The special work-sheet with full option menu
3. The superb software in cassette
4. Comprehensive instructions

To receive your Minor Miracles digitizer just clip the coupon opposite and send with cheque/PO's for £24.50 (£19.95 + £1.36 P&P + 15% VAT) to us NOW!

Rush me a Minor Miracles digitizer NOW!

NOMSIM

THIS program was designed primarily as an aid to geography classroom teaching. For a number of years geographers have used simulations which simplify reality. These enable children to work out for themselves important inter-relationships.

But even after careful design many simulations are still complex and take a considerable time to work through. Also the geography can be hidden in a mass of operational detail. Using a microcomputer both simplifies and speeds up the activity.

The starting point of Nomsim was an interest in the savanna grasslands of Africa and the associated nomadic herding. The economy is affected by many factors and it was necessary to isolate some of the major ones.

MODE 1 was chosen as it has a very readable text style and size, allows four colours on the screen at any one time, and has high resolution graphics. The major problem in a program of this type is the limited RAM available in this mode.

The most important elements are:

PROCra

Choose an annual rainfall weighted to favour the range 500-999mm. These areas experience only occasional very wet or dry years.

PROOch

An area must be chosen in which to spend the dry season. It would have been useful here to draw a more detailed sketch but this program virtually fills the user's Basic program space. The second part of line 540 allows for spelling mistakes after the first two letters and allows the program to run without having to type in the full name of the chosen area.

PROCpa

Rainfall is a major factor determining the pasture available. The different regions vary in their pasture growth and `pa$` carries a comment on the pasture quality.

PROCv

A graphics window is drawn using VDU 24. In it a simple diagram is produced to illustrate the response of pasture to the rainfall. VDU 5 separates the graphics and text cursors

and allows text to be printed at the graphics cursor. VDU 4 rejoins the cursors and VDU 26 returns the graphics window to its initial value. `CHR$X%` carries the vegetation character (derived from `PROCpa`). For example, 228 is tall grass.

These characters are defined at the start of the program using VDU 23. Note how `X%` is controlled through `pa` in `PROCpa`. For example `PROCpl` will not allow tall grass on the plateau despite the rainfall total.

PROChe

The herd size is initially set at 80 in line 60. Here its increase or decrease is calculated. The two lowest rainfall totals produce a decrease in size as the pasture is poor. Line 1240 redefines `COLOUR 0` to be `COLOUR 15` from the palette, flashing black and white. Line 1250 changes the background colour to yellow and on it are printed characters suggesting cattle. The number printed corresponds to the herd size. A detailed status report is given using `r$,a$` and `he`.

PROCTs

The nomadic herders face the problem of the tsetse fly. `CHR$231` to `CHR$240` produce the different ele-

ments of a fly-like figure – hopefully a little menacing when drawn in black on a red background. Line 1420 combines the various elements as the array `TS` and the loop in line 1430 puts them together. A number are printed on the screen equivalent to the intensity of the problem, a `REPEAT – UNTIL` loop controlling this number.

The group of procedures which follow calculate the effects of the tsetse fly. These vary from area to area and are affected by the rainfall.

PROCc

Here certain chance factors are brought into play. Memory size limits the number available and each are given an equal opportunity of happening. There are certain safeguards. Floods can only occur on the floodplain. If the number of people in the family falls below three `PROCson` is ignored. In `PROCTsinoc` a flag is carried (`ino=1`) to signal in `PROCTs` that this factor no longer has any affect.

PROCmk

This procedure calculates the number of cattle needed to be sold. The

By **NORMAN PARR** and **GARETH PROUD**

Nomsim listing

From Page 75

cattle price varies with the rainfall and pasture, and the family size will determine the number of cattle that are sold. This factor is much more complex in reality.

PROCsum

A graph is drawn to summarise the herd size each year. Numbers are plotted to a maximum of 200 but this may be easily changed. 2%(I%) is the position of the * along the X axis, 160 is the Y axis position of the graph base which has added to it H%(I%) (the herd size) multiplied by 3.75 to scale the graph from 0 to 200. GCOL0,1 in 2480 colours the * red.

The program is contained within a loop Y%=1 to 10 to run for the equivalent of 10 years. At the end of each year a test is made to check if the number of cattle per person has fallen below the critical survival value of 10. If so, PROCend is called up.

The general arrangement of the program allows various factors to be altered. The chance events may be changed and/or weighted, the characters may be redefined and the graph re-scaled, for example alter line 2410 to no=no+10 and alter the scaling factor in line 2480 to 7.5 to give a graph scaled from 0 to 100.

If a memory expansion were available more factors could be included and other inter-relationships explored. The simulation would then more nearly approach reality.

INCREASE YOUR FIRE POWER !!!!

There you are, ZAPPING away with your laser, happily defending your planet when; suddenly – you're surrounded. Your one chance? a SMART BOMB. You reach for the keyboard – your spaceship nose dives and CRASH!!! – Wiped out. Later, on your cloud, playing your digital harp, you think "If only the SMART BOMB button had been next to the laser on the handset? I'd be alive today.", "If only the joystick had sprung back to centre at least I'd be still up there fighting."

NOW!!! TO SAVE THE WORLD. THE NEW DELTA 14 RANGE OF HANDSETS FROM VOLTMACE.

Used for years by DATABASE video game owners these handsets have sprung return, nylon coated steel joysticks with graphite wiper potentiometers for longer life and SM00-00-00-THER control, plus 12 pushbuttons with two extra fire buttons to share the wear. The DELTA 14 comes in two parts. One handset will plug into the 15 way "D" plug to give analogue joystick plus three button functions. The second part is the DELTA 14B/1 adapter box which plugs onto the 15 way "D" and connects to the user port. This gives use of all 12 buttons on the user port using a 3 x 4 strobed matrix. The eighth line is used to select a second joystick which can be plugged into the adapter box. Suggested software routines included with each handset.

DELTA 14 B JOYSTICK HANDSET FOR BBC £10.00
DELTA 14 B/1 ADAPTER BOX & CABLE £13.00

MONITOR MANUFACTURER

The case has been designed with safety utmost in our minds. This advanced model cuts the component count and incorporates the most sophisticated parts on the market today. Using the MULLARD AX tube, which gives perfect colour registration with reliable and stable operation. Automatic drift (Black level) compensation adjusts automatically with the ageing of the tube. All this and many other features, including years of experience in the data display industry and backed up by our 2 year guarantee. **We guarantee long service and reliability.**

- Quality.
- Reliability.
- Manufactured in Britain 100%.
- A moulded case with carrying handle.
- Meets British standard safety regulations (BS415).
- Automatic black level compensation for tube ageing.
- Mullard AX37-590x Tube.
- Power consumption 60w.

CABEL offers you a new high quality 14" colour monitor.

THE BEEB BODY BUILDING COURSE

EXERCISE NO 4

I have often pondered upon the workings of the female mind but always come to the same conclusion – it is better to stick to simple things like designing computers! However, it was just this stimulus that started this month's exercise. Let me elaborate.

Consider this question: What makes a wife, mother and trained psychologist suddenly have a desire to take up geomorphology? Well I don't know and quite honestly I don't wish to, but given the fact what can one do to help?

Geomorphology is the study of the effects of the underlying geology on the landscape. "Wouldn't it be great," said my wife, "if your computer could plot a sectional profile of Pendle Hill?" (A local, very large, lump of rock.)

"Nothing to it," I said, "once the data is in the machine." And there, as they say, is the rub. What is needed is a device known as a "graphics digitiser tablet". With it I could trace round the outline of each contour on the map and build up a data base of the shape of the hill.

Unfortunately these digitisers cost

By **MIKE COOK**

slightly more than my entire computer system and are way outside my budget. However a home brew set up can be made for less than £7 if you go about it in the right way, which, without further ado, I shall show you now ...

A digitiser tablet is a device that will input the X and Y co-ordinates of a pointer into a computer. As the pointer is moved around the active area of the digitiser, a stream of information is fed back to the computer.

There are many different principles on which they can work, but most connect the pointer to the positional-sensing electronics by a wire. However, if you are willing to make the compromise of mechanically attaching your pointer to the table then things become much more feasible for an amateur constructor.

The type of digitiser I am describing

*The radius arm
digitiser ...
simple to make,
but effective*

ARMS STRETCH WITH THE GRAPHIC DIGITISER

is known as a "radius arm digitiser" and is quite simple to build. In fact, the electronic parts are essentially no different than last month's joystick. The difference lies in how we physically link them and the software used to drive the device.

The device is shown in the photograph and consists of two pots (potentiometers) connected together by a radius arm, the second pot being

attached by another arm to a pointer.

To see the principle of operation consider Figure I. A and B are the two pots with the two equally sized radius arms labelled L attached to them. There is an imaginary line R (shown dotted) joining the pointer (marked P) and the first pot A, thus forming a triangle.

At this point I am sure there are

Figure I. The geometry of the digitiser

Figure II. The trigonometry of the digitiser

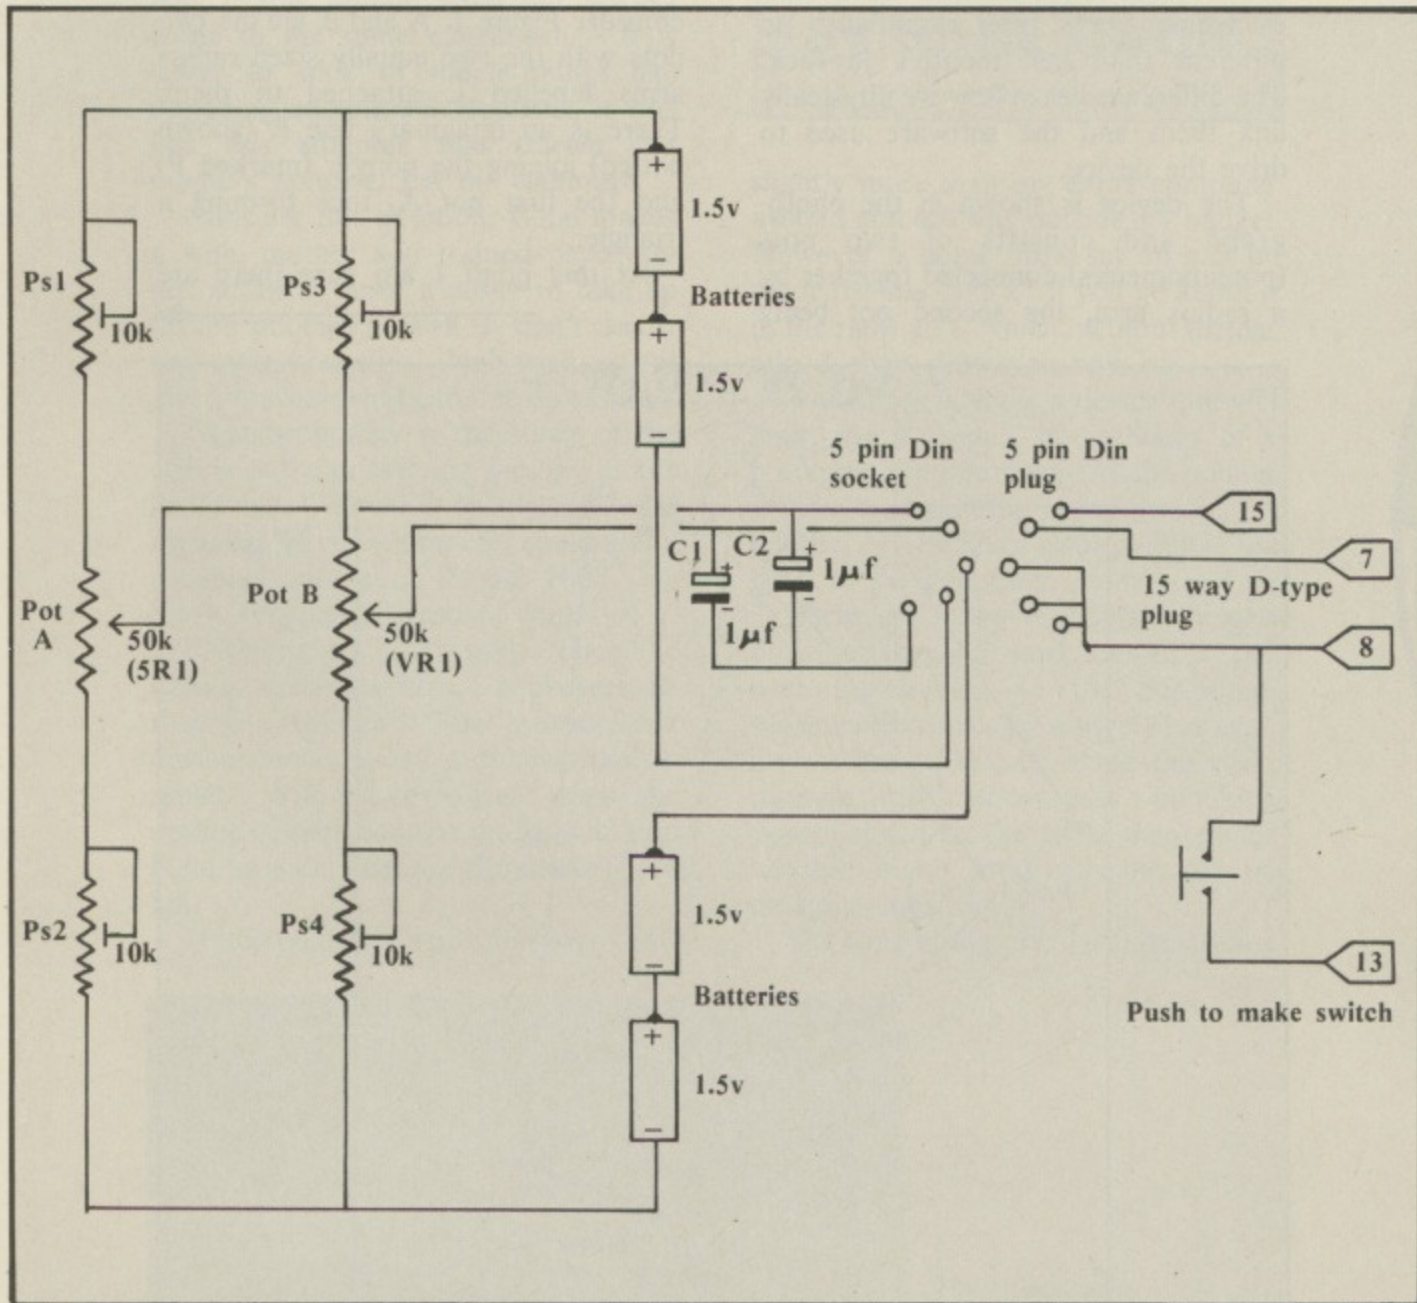

Figure III. The circuit of the digitiser

From Page 81

some of you wishing you had paid more attention in your geometry lessons at school, but be comforted by the fact that you don't have to understand it to build it - it just helps. As it is, we know two sides of the triangle (we built it so we can measure the size of L) and we can get the computer to measure the angle F by measuring the voltage from pot B. Thus we can work out the size of R. See Figure II.

The angle G can be found from the voltage from pot A and the angle E can be found from the angle F. Therefore the position of the pointer P is known in polar co-ordinates. That is, in terms of an angle, G+E, and distance from the centre, R. This can be turned into the normal X,Y cartesian co-ordinates by:

$$X=R*\text{COS}(G+E)$$
$$Y=R*\text{SIN}(G+E)$$

and so we can find the position of the pointer. Of course when I say we I really mean the computer, because it is quite good at sums.

Let us now consider the electrical circuit shown in Figure III. It is somewhat more complex than last month's joystick because we want to squeeze every bit of accuracy we can from the A/D port in the computer.

When the pointer is moved over the active area each of the two pots A and B will only move through a small angle. To achieve the maximum accuracy we must make this small angle produce the full range into the A/D port.

To do this we need to feed into the pot not only a larger voltage than the maximum but also a negative voltage to pull the minimum output down close to zero.

These voltages are derived from batteries so that they are electrically quiet and add no noise to our signal.

You can get plastic battery holders for four AA size batteries from Tandy, and with a little judicious snipping of the wires linking the batteries we can convert them to have the configuration required in the circuit.

At the end of each pot is a preset variable resistor, and they should be adjusted using a small screwdriver so that a full scale signal can be provided over the working range of the pots. These can be replaced by fixed resistors if you want to use a bit of trial and error.

Any value of pot may be used as this works using a potential divider action, the only stipulation is that they must be linear, as the linearity affects the accuracy of the final digitiser. I happen to have used two 50k wirewound pots

that I had lying about. Being wirewound they perform slightly better than the moulded carbon type as they have a better mechanical construction.

A little bit of noise is generated by the pots themselves, and this is removed by the two capacitors. These components are wired to a 5-pin DIN socket on a small bracket underneath the digitiser. A lead then connects this socket to the 15-way D-type socket on the back of the computer.

Three pins in the DIN plug are connected together and to the earth, thus making a switch. When the plug is not connected there is no circuit made between the batteries and so no current will flow.

With the plug in place the connection is made, so when it is not plugged in it is turned off. This saves money and is much better than having a switch which you will tend to forget if you are anything like me.

The same circuit that was used for the fire button last month is also included, and, although not essential to the operation of the digitiser, makes its

THE BEEB BODY BUILDING COURSE

their undersides.

The radius arms are made from some aluminium extrusion designed to slide patio doors, and the pointer once was an old darning needle. With the components assembled and with the aid of some tubes of glue and a few simple tools the table was easily assembled.

Before you buy the parts you should consider what size of table you wish to construct. The length of the radius arms determines the overall size of the

Figure IV. The fixing of Pot A

use easier. I used a separate wire from the D-type plug to a button mounted in a circular plastic box that once contained a 35mm colour film. This made it comfortable to hold and operate.

The mechanical construction of such a device can take many forms. All I can describe here is how I went about it. It may not be the easiest or most elegant solution, and if you feel you could do it some other way then by all means do so.

All the mechanical parts were bought from a local DIY supermarket and were used in a way that the manufacturers definitely did not intend.

The base of the table was bought as a kitchen cupboard door. These are available in many different sizes and are of solid wooden construction. The four short legs are square wooden furniture knobs with pieces of felt glued to

active region on the table. This region will be split up into about 500 units in both planes.

It is therefore no good making the arms large if you want to input information from a small drawing. I used seven inches for each arm. This gives a slight reduction in size when the co-ordinates are scaled up and plotted on the screen.

You might consider something smaller. It just depends how you want to use the table. For pot A I fixed the body to the arm and the spindle into the baseboard (this can be seen in Figure IV) but you could equally well do this the other way round.

Pot B must have its body fixed to one arm and its spindle fixed to another. I fixed the pointer into the arm

From Page 83

by drilling a hole and sticking it in with epoxy resin. Also I shaped the aluminium slightly to allow a better view of the pointer.

Remember, it is vital that the distance between the pointer and the spindle of pot B must be the same as the distance between the spindle of pot B and the spindle of pot A.

The pots must be set so that the angle they will work over is in the centre of their rotation arc. This ensures maximum linearity and minimises "end effects" on the pots.

The arm attached to pot A is made slightly longer to act as a counter balance. To reduce the length needed I melted some plumber's solder with a blowlamp into the U shaped channel of the arm. Careful study of the photograph should enable you to construct something similar.

If you are in any doubt about the construction I would try that famous firm of French consulting engineers Messieurs Sucket and See.

Once the construction is complete, the preset pots need adjusting to give the maximum variation on the A/D port over the working angle. To do this, set all the preset pots at maximum and program two function keys to print the value of each analogue input channel:

***KEY0 PRINT ADVAL(1)**

DIV 64 :M

***KEY9 PRINT ADVAL(2)**

DIV 64 :M

In this way you can read the input value at any time by pressing one of the keys. Move the pointer so that pot A is at one of the limits of travel, say the top right hand corner, then look at the value it gives using a function key. Then adjust preset pot PS1.

The reading should start to change as soon as you make the slightest adjustment. If not, then recheck your circuits. Carry on adjusting it until a reading just below the maximum of 1023 is achieved.

By taking the reading just below the maximum you ensure that the reading is a true measure of the pot's position. Obviously once the maximum is reached any increase in input voltage just registers as maximum. If the reading will not reach high enough then pick the other extreme of travel for pot A (that is with the pointer just to the left side of the pot).

When this has been adjusted move the pointer so that the pot is at the other extreme and adjust preset PS2

THE BEEB BODY BUILDING COURSE

until the reading reaches about 10 or so.

It is important not to take the reading right the way to zero, as then the voltage on the A/D chip would go negative. This can cause damage to the chip if it goes below -0.5 volts. When you have done this go back and check the other extreme again as the two adjustments interact.

Once this is done correctly pot B can be adjusted in a similar way, but note this time that the limits of travel will be when the pointer is just to the right of pot A and in the bottom left hand corner. With this adjustment made you can now get the maximum usable resolution out of the A/D in the computer.

Having set up the table we now need to produce the software to drive it. Listing I is a demonstration program that will enable you to use the digitiser as a sketch pad.

The first thing it does is to calibrate the table. This is necessary as the pots only produce a voltage and we need to know the relationship between this voltage and the angle of the arm joints. This relationship can be expressed as:

$$\text{Angle} = \text{Voltage} * \text{Scale factor} + \text{constant}$$

We need to find a scale factor and a translation constant for each pot. The easiest way of doing this is to place the pointer in a known position so that we can work out the size of the angle.

As there are two unknowns in the equation we have to do this for two positions. These two calibration points can be anywhere on the table but the farther apart they are the better. I chose to measure in inches the two corner positions of:

- 1) X=8 & Y=0
- 2) X=-6 & Y=-12

These need to be fed into the calibration program, either via the keyboard or as a program statement line. You can choose other numbers depending upon the size of the arms and whether you like to work in real inches or those funny continental milly somethings.

If these positions are not marked accurately then there will be errors in the values the table produces.

The program in Listing I has a calibration procedure PROCAL which will work out the calibration factors. Line 270 contains the calibration points that are marked on my table and the number seven in line 380 refers to the size of the arms on my table. This should be altered to suit the size of your table.

The calibration factors could be printed out and incorporated into the program PROCAL as constants, as they should not change unless the hardware is changed or the battery voltage drops.

Perhaps a better solution would be to convert these floating point values to integers and store them in eight of the integer variables A% to Z%. In this way the table would only have to be calibrated once each time the computer was switched on.

You would need two integers for each floating point number, one to hold the number and one the exponent. It makes an interesting problem converting one to the other and vice versa.

Once the table has been calibrated it is comparatively simple to extract the

PARTS LIST

VR1 & VR2 50k linear variable resistor (wirewound if possible).
PS1 to PS4 10k skeleton preset variable resistors.
C1 and C2 1uF electrolytic capacitors.
5 pin DIN plug and socket.
Push-to-make switch.
Four 1.5 volt AA size batteries.
Battery holder to suit above.

X,Y co-ordinate of the pointer by using the procedure PROCAL.

In line 510 the number seven again refers to the size of the arm on my table, and like the calibration routine line 380 should be changed to suit the length of arm you used when constructing your table.

The calibration and table values procedures can be incorporated into your own programs. The program in Listing I is operated as follows:

First a graphics mode is selected. This will usually be Mode 0 or 2. Secondly you will be asked to put the pointer to the first calibration position (X=8 & Y=0). When you have done this press the button (the fire button). This will be acknowledged by a short bleep. Then move it to the second position.

Finally, the screen will go blank. Pushing the button will then draw the path of the pointer on the screen. If you want to start a new line release the button, move the pointer to the new position, and then press the M key. You will now be able to draw from that point.

The two other keys used in this program are the W to wipe the screen clean and the P to call up a screen to printer dump program.

Note that this program is not included in the listing and must be loaded separately. Several have been published and the one to use depends upon the type of printer you have. A good one for the Epson is in the book "Assembly Language Programming for the BBC Computer" by Ian Birnbaum.

Note also that I have assembled the program to start at &D10 so you should alter line 210 to suit your own setup. However, you don't need a printer to use this program.

There are two techniques you can use when producing sketches. The first is to keep the button pressed as you trace round an object. This is ideal for

From Page 85

free hand drawing and following complex shapes like maps.

However if the diagram consists of straight lines your hand will not be steady enough to make a perfectly straight line. In that case you can use the second method which involves moving the pointer to the point where the line is to be drawn and giving the button a short jab, then moving the pointer to the next place and repeating until the outline has been entered. This is also the best way to deal with circles – that is, to make them up as a number of straight lines rather than a freehand curve.

What to use as a master if your own art is not up to it? Well, there are many sources. However remember that the digitiser has fixed arms and you cannot use a book unless it is very thin or you bend it back to leave a page protruding.

See the accompanying illustrations for an idea of what can be achieved.

Just to tidy up the explanations of the program, the following may be of use:

Lines 120,130 convert the X and Y given by the table to values that will

cover the screen.

In the calibration procedure some of the values are stored in two dimensional arrays. The first array index indicates the pot (A or B) and the second indicates at what calibration position it was measured.

The only values passed from this procedure are the scale factor SF(1) for pot A, SF(2) for pot B and the translation constant TC(1) for pot A, TC(2) for pot B. These are needed in the procedure to get the values from the table.

The procedure to return a value, PROCtable, uses the variables X & Y. All the other values except the calibration constants may be declared local if you require.

Like any program, this can be expanded to suit your own needs. For example, PROCkey can be expanded to allow you to input the colour to draw in via the GCOL statement, or to allow you to save and load the screen to and from tape or disc using a *LOAD and *SAVE.

In the program "Making the Most of Your Micro" they showed a similar digitiser being used to input pictures in different colours. Then by making one

logical colour white and the rest black show only one picture. By making each logical colour white and the rest black in sequence an animation effect can be created.

You might try your hand at writing a routine that fills in a bounded area with a solid colour. If you have Operating System 1.2 then you can use the plot options 72-79 and 88-95 to help you.

The tablet is not just restricted to producing sketches. It may be used to position a pointer or cursor. It can be used to select options on a menu or coupled in some way to affect the parameters of the SOUND and ENVELOPE commands and "hear" a sketch!

You never know some day I might even get round to writing that program to produce the profiles of Pendle Hill!

If you do write a program that does something different why not submit it to the editor with a view to publication? As I said in the first of these articles, the exercises are just a starting point for you to begin exploring the limits of your imagination.

Next month's exercise: The computer hokey-cokey (you put your signals in, you put your signals out). ☼

BBC Spectrum nascom

GIANT ADVENTURE GAMES

- 1) COLOSSAL ADVENTURE:** The classic mainframe game "Adventure" with all the original treasures & creatures + 70 extra rooms.
- 2) ADVENTURE QUEST:** Through forest, desert, mountains, caves, water, fire, moorland and swamp on an epic quest vs Tyranny.
- 3) DUNGEON ADVENTURE:** The vast dungeons of the Demon Lord have survived His fall. Can you get to their treasures first?

Every Level 9 adventure has over 200 individually described locations and is packed with puzzles – a game can easily take months to complete. Only sophisticated compression techniques can squeeze so much in! Each game needs 32K and costs £9.90

BBC FORTH, FORTH TOOLKIT

"r q FORTH" runs on 16K or 32K BBC micros and costs £15. It:

- ★ follows the FORTH-79 STANDARD and has fig-FORTH facilities;
 - ★ provides 260 FORTH words;
 - ★ is infinitely extensible;
 - ★ has a full-screen editor;
 - ★ allows full use of the M.O.S.;
 - ★ permits use of all graphic modes, even 0-2 (just!);
 - ★ provides recursion easily;
 - ★ runs faster than BBC BASIC;
 - ★ needs no added hardware;
 - ★ includes a 70 page technical manual and a summary card;
 - ★ has hundreds of users.
- Level 9 Computing are pleased to announce a new toolkit for "r q FORTH" on 32K BBC micros. It costs only £10 and adds the following facilities to FORTH:
- ★ a 6502 assembler, providing machine-code within FORTH;
 - ★ turtle graphics, giving you easy-to-use colour graphics;
 - ★ decompiler routines, allowing the versatile examination of your compiled FORTH Programs;
 - ★ the full double-number set;
 - ★ an example FORTH program; and
 - ★ demonstrations of graphics;
 - ★ other useful routines.

LEVEL 9 COMPUTING

Dept U, 229 Hughenden Road, High Wycombe, Bucks. HP13 5PG

BBC SOFTWARE

Quality Software produced by professionals and used in hundreds of schools throughout Great Britain.

FUN WITH WORDS B £8.05
Start your fun with alphabet puzzles in ALPHA. Continue your play as you learn about VOWELS, know the difference between THERE and THEIR and have games with SUFFIXES. After working so hard reward yourself with games of HANGMAN. Learning should be fun. The tape includes ALPHA,VOWELS,THERE?,SUFFIXES and HANGMAN.

EDUCATIONAL - 1 A or B £8.05
Hours of fun and learning for children aged 5 to 9 years. Animated graphics will encourage children to enjoy maths, spelling and telling the time. The tape includes MATH1, MATH2, CUBECOUNT, SHAPES, MEMORY (Model B only), SPELL and CLOCK.

EDUCATIONAL - 2 A or B £8.05
Although similar to Educational - 1 this tape is more advanced and aimed at 7 to 12 year olds. The tape includes MATH1, MATH2, AREA, MEMORY (Model B only), CUBECOUNT and SPELL.

GAMES OF LOGIC & CUNNING A/B £9.20
For children and adults alike. The tape includes AUCTION, FLIP, REVERSE, TELEPATHY and HEXA15 (Model B only).

SUPERLIFE B £9.20
Fast (machine code) version of a popular 'Game of Life' in a large universe.

KATAKOMBS B £9.20
Are you cunning enough to discover and seize the treasure in the Katakombs AND return alive? What and where are your enemies? Can you outwit them? Yes? Then your adventure will take you through unending forests, besides tumbling streams, over lonely plains to desolate ruins and finally underground to the tortuous Katakombs. Be prepared for anything!

UTILITIES A/B £8.05
Behind the mundane title lies an assortment of useful procedures and functions which can save you hours/days of programming effort: date conversion, input and validation routines, graphic routines (cube, rectangle, etc), sorts, search and many more.

***** SPECIAL OFFER ****** Any 3 cassettes for £20.70
Add 50p p/p per order. Please state your model.

BBC MICRO

Forty quality games. A varied selection ensures something for everyone.

£7.95

A thorough, thoughtful, though high-paced review of elementary BBC lore. Includes topics such as the disc system and interfacing.

£7.50

Probably the best elementary BBC Basic text. An exceptionally readable book which more than lives up to its title.

£6.95

An easy-to-follow, step-by-step guide to more advanced BBC Basic, following on from Easy Programming for the BBC Micro.

£6.95

A clearly written manual on good Basic programming and problem solving. This book could become the standard work.

£7.50

Twenty good games listings plus hints on better programming and a comprehensive glossary. Excellent value.

£3.55

BOOKSHOP

One of the best assembly language books ever written. Comprehensive, and specially compiled for the BBC Micro.

£9.95

An intelligent, information manual on the workings of the BBC Micro. Recommended reading for anyone beyond the beginner's stage.

£7.95

With 36 fun programs for the BBC Micro, this is exceptional value for money. It also gives many ideas for future projects.

£4.75

A useful assortment of programming ideas for the less-experienced programmer. It's also a useful source of enjoyable programs.

£5.95

Bourne Educational Software

HAPPY NUMBERS (Code P22) £7.80 NEW!

Uses full colour graphics to present attractive images to encourage 4-6 year olds to learn their numbers and count. No reading skills required for this very easy to use program. Suitable BBC Model B.

● Children encouraged through attractive flower collection and happy/sad face responses to their entries. ● Full use of sound reactions, but only with correct answers! ● Incorrect entries show equivalent number, then original entry counts to correct number. ● Random/specific order sequence plus full monitoring.

WORLD-WISE (Code P19) £7.80 NEW!

Two programs enabling children to build up fascinating information banks on their favourite geography subjects. Covers both UK and World in a series of 10 categories including eg. canals, towns, antiquities, etc. Your atlases and reference books well-used as they try to find a river that passes through the Equator, or who built the Parthenon! Features:-
● Powerful review/edit facilities to correct entries if required. ● Save and load the data at any time. ● Personalised responses with attractive sound (adjustable!) ● Maintains extensive information on individual childrens' entries. Suitable for ages 7-15 and BBC Model B.

WORDHANG (Code P20) £7.80

Educational version of 'hangman' word game, with full colour graphics and simple but attractive screen layout. Children no longer find learning to spell a chore as they try to keep him alive! Host of attractive features include:-

● Lists totalling 260 words to suit reading age/subject. Facility to create and save own lists - ideal for that weekly spelling list! ● Time limit can be set for each guess. ● Monitors individual childrens' performance - time taken, list used, correct/incorrect attempts, etc. Suitable for ages 7-13 years and BBC Model B.

ANIMAL/VEGETABLE/MINERAL (Code P21) £4.95

Think of an object and see if the computer can guess it correctly! Children love 'educating' the computer as it fails to get the answer right.
● Stimulates fascinating (and educational!) discussions as to the difference between alligators and crocodiles, and whether oil is vegetable or mineral. ● Encourages use of reference books as children try to find the answers to their own questions. ● Maintains full information on individual childrens' entries. Suitable for ages 7-13 years and BBC Model A and B.

All programs feature cassette sized explanatory booklet. Postage and packing FREE! Please add 15% VAT. For 24 hour despatch send cheque to:

***** IRREGULAR FRENCH/RUSSIAN VERBS *****

Educational Software for BBC Model B (32K)

TEST yourself BROWSE at random Use as
REFERENCE

All tenses of over 150 verbs (90% irregular) for ALL
ability levels.

Unique practical comprehensive programs to challenge
beginners 'O', 'A' Level and more advanced students, to
make a study of verb grammar more enjoyable.

- * Menu Driven
- * Test with time limit
- * English meanings
- * Choice of tense(s)
- * Full character sets
- * Multiple levels
- * Attractive colour format
- * Full form generation
- * Vetted by native speakers
- * Five operation modes

FRENCH Fully accented characters; Eight
tenses/modes. Includes virtually all types of stem and
ending mutation.

RUSSIAN Cyrillic character set; Optional stress
accenting Aspect pairs at a key press.

These sophisticated programs actually generate each
verb form as and when required.

On cassette FRENCH **£19.30** RUSSIAN **£21.50**

* GERMAN coming soon

Simonsoft

Specialists in High Quality Software for
the BBC Microcomputer

DISASSEMBLER (A/B) – a 'smart' disassembler that will generate fully labelled assembly listings of any machine code program – data is automatically differentiated from code and displayed together with its ASCII equivalent – the assembly listing can be saved in *EXEC format and subsequently incorporated into user programs – supplied with full instructions.

Without doubt the most powerful and flexible disassembler available
Disassembler £7.95

EMULATOR (B) – a new concept in machine code programming tools! Emulator is a machine code INTERPRETER which allows you to write and debug a machine code as easily as BASIC – fully compatible with disassembler so that disassembled programs can be altered and 'emulated' – features single step, breakpoints register display, edit modes, data display mode etc etc – since the machine code is interpreted there is full protection from errors.

Probably the most useful machine code programming tool.
Emulator £8.45

BASIC GOODIES (A/B) – a set of useful BASIC debugging routines saved in *EXEC format and fully documented – includes PROC/FN LISTER which lists the lines where procedures and functions are defined together with name, parameters etc – VARIABLE LISTER displays the current values of all or selected variables; very useful for debugging and demonstrations – SUPER REPORT intercepts BASIC errors and returns the message in a string variable so that error messages can be more flexibly reported – and more besides.

Basic Goodies £5.95

Prices are fully inclusive (for disc version add £3.00 and state single or double density)

All programs are fully guaranteed and OS 0.1 to 1.2 compatible.

EXTENDED COLOUR-FILL GRAPHICS E.C.F.G. GIVES YOU A CHOICE OF !! 4 BILLION + !!

SHADES FOR TRIANGLE FILLING IN BBC MODES 0,1,2,4 & 5

- * PLOT 81 and 85 commands for triangle-filling have been adapted to use the ECFG fill-shade currently selected by new ECFG user-friendly commands. GCOL is still used for line colour.
- * Easy choice of 17, 289 & 6561 subset colours between those normally available in 2, 4 & 16 colour MODEs. Further options include colours, angles, spacings & widths of cross-hatch etc.
- * ECFG commands can be used in BASIC, typed from the keyboard, accessed in Assembler, or in future BBC Micro languages. ECFG is MOS-adaptive, and proven with versions 0.1 to 1.2
- * Bootstrap from cassette rapidly builds an ECFG module at a RAM address pre-defined by PAGE, which is then automatically increased 512 bytes to allow immediate LOADING of programs etc.

WE SPECIALISE IN "TORCH Z80" DISC PACS

Turn your BBC Microcomputer into a full business system running CP/M and BBC Basic. The Torch Disc Pac adds a second Z80 microprocessor, 64K of RAM and 800K of disc storage for ONLY £780.00 + VAT.

PHONE: 557 4546 or call in for a demonstration.

★ EASY GRAPHICS ★

Make full use of the graphics on your BBC micro (32K). Simple to use, works through the keyboard, ideal for education, computer art, as a design or programming aid, or just for fun. Loads from cassette.

Here are some of the features:

- ★ Draw lines (any thickness), boxes, circles, ellipses, arcs, and many more.
- ★ Measure distances and angles, find x,y coordinates.
- ★ Full cursor control, including on/off and variable speed.
- ★ Fill or shade any shape.
- ★ Change colour and/or palette, dozens of extra colours + shades available.
- ★ Change mode (works in modes 0,1,2,4 or 5).
- ★ Auto repeat facility (probably the most powerful feature).
- ★ Amazing rubber band (helps with perspective).
- ★ Mix text and graphics.
- ★ Save on tape and use in your own programs.

EASY GRAPHICS was originally written as a programming aid, but has now been fully developed into what is probably the most versatile graphics program on the market. Must be seen to be fully appreciated.

EXCELLENT VALUE AT ONLY £13.50.

Includes demonstration program, program generator (allows you to redraw your pictures) and full instructions.

Write for more details or send cheque/PO to:

GARLAND COMPUTING

Learning Maths with the BBC Microcomputer

As specialists in the development of top-quality software produced by professional teachers, we are pleased to announce a collection of programs for junior level maths (age 9-12). Animations and simple games help children learn the principles of mathematics.

JM1 ANGLES – five programs showing how angles are formed and named.

JM2 DIRECTED NUMBERS – three programs to help children understand positive and negative numbers.

JM3 FRACTIONS – four programs to help with fractions.

JM4 CO-ORDINATES AND LINES – five programs introduce the concept of co-ordinates and equations of lines.

JM5 SYMMETRY – five programs which develop concepts of axis and order of symmetry.

JM6 MOTION GEOMETRY – three programs which introduce motion geometry – reflections, rotations, translations and enlargements.

Each cassette – £7.00 (inc. VAT and P&P). Set of six cassettes (or 40-column disc) – £30.00 (inc.)

**GARLAND COMPUTING – 35 Dean Hill,
Plymouth, PL9 9AF, Devon.**

True "IN-SPACE" cumulative motion - unlimited freedom of movement, amazing colour graphics and sound!
"Sometimes your first warning is a lancing disrupter beam striking from beyond visual range, sometimes they materialise close at hand. You are either quick or dead!"

PROWL Lush starfields commanding a mighty fleet of deadly starcruisers. Carefully plan your strategy. Switch control from ship to ship. Each has its own mission, it's own destiny.

SEEK out lethal enemy battle stations, planets, cruisers and phantoms using base station radar and target data.

FIGHT to the death! Detonate the enemy for a harvest of energy to transport to base. Lose and risk a rescue under heavy fire!

Features include: Real and enhanced time, docking, refuelling, rotating base station, meteor strikes, rank and promotion, damage reports, crew comments, hyperspace warp between galaxies and separate briefing program. A total experience!

Other DOCTOR Software for BBC Micro

* 747 32K. Full blown flight simulator by the same B.A. captain who wrote the famous Atom program. Moving dial needles and digital display, full 3D visual of Gatwick or Heathrow runway, NAV points and horizon. Optional wind effects and comprehensive briefing program included. **£6.95**

* KREMLIN 32K. 3D multi level maze escape with gremlin combat! Maps, skill levels, standard or random structure. **£6.95**

* HARMONY 16K. Delightful infinite, saveable patterns of light and sound. **£5.95**

ROYALTIES

The DOCTOR pays top royalties for top programs!
All popular machines. All types of software.

No extras! All prices fully inclusive.

Cheques & P.O.'s to:

EPSON'S LATEST PRINTERS

SAVE £70 - £80 (+ VAT) when you order your superb new FX80 or MX100 printer from Datatech, the Epson specialists.

We also have large stocks of Epson sundries including cartridge ribbons, dust covers, fanfold paper, continuous labels, etc.

For FREE BROCHURE and special DISCOUNT OFFER write now to:

DATATECH LTD (BMU)

3 Bramhall Close, Timperley, Altrincham, Cheshire WA15 7EB.

J.M. SOFTWARE

Cassette-based programs make your life easier:-

DISASSEMBLER - Probably the best disassembler available. Jumps, branches and moves into and out of subroutines, all at the touch of a single key. Display in up to 4 columns. Printer facility. Many other features. **£5.95**

RENUMBER - An extremely useful program that enhances the computer's RENUMBER command to enable quick renumbering of parts of programs and single lines. **£3.95**

COMPACT - For fast LOADING of BASIC and assembly language programs. Changes variable names to single letters, removes REMs, comments and unnecessary spaces, and combines program lines where permissible. Typically reduces assembly language programs to half original length or less. **£4.95**

SAVER - For fast copying of programs. LOAD up to 20 programs at once, change program names, save any or all in any order at the touch of a key. **£3.95**

- **SAVE £3!** Buy all four of the above cassettes for only **£15.80**.
- All programs come with detailed instructions.
- All prices fully inclusive.

J.M. SOFTWARE, 25, Harrow Drive, Sale, Cheshire M33 3TB. Tel: 061-973 8943.

35 EDUCATIONAL PROGRAMS FOR THE BBC MICRO Ian Murray

Here is a selection of fully documented programs ranging from mathematics to geography, history and general science to spelling. Designed for use in schools, colleges – all programs have been checked in a classroom environment – and at home, this book will allow you to put your BBC to work as soon as it is unpacked. Each program makes full use of the BBC micro's remarkable graphics capabilities and together they provide a useful insight into programming techniques.

£6.95 (paperback) 240pp Available through all good bookshops.

EASYCALC's Big Brother. A full scale disc-based financial modelling package. S.A.E. for details.

FUN & EDUCATIONAL SOFTWARE for B.B.C. 32K by 'MUSICSOFT'

'PIEMAN' ... Not as Simple as Simon!
Starting with a Simon look-alike, this suite of musical games is great fun for 5 year olds, yet proves frustrating and addictive to music graduates in the later stages. Scores and skill levels are additive and alterable. 'PIEMAN' cassette and instructions £3.75 inc. P&P

'MUSICTOOLS 1' ... Over 60 procedures to use in your own musical programs, already incorporated in the following 5 working programs to illustrate their use: ● **ORGAN**. Play, store, replay faster, slower, exactly as played(!) or smoothed out, 6 or 7 octaves with notes not mentioned in the guide. ● **TUNE GENERATOR**. Creates a chord sequence, tune, quaver variations, displays a dynamic keyboard and notes on a staff as tune is played (it LOOKS like music). ● **CLEFTOOL**. Draws musical symbols in 26 different sizes on a staff, this one is great for teachers. ● **1, 2, 3 PART TUNE PLAYER**. Simple input from data, with demo tune. ● **ENVELOPE EXPLORER**. Display and alter all parameters with cursors. Experiment with the sound power of the B.B.C. Micro. 'MUSICTOOLS 1' cassette and instructions £5.75 inc. P&P.

Sounds great with Microvoc - see full page ad this issue.

Cheques & Official orders to:
'MUSICSOFT' 12 Fallowfield, Ampthill, Beds.

DRAGON/32

TRS 80 C/C 32K

BBC MODEL/B 747 FLIGHT SIMULATOR

Superbly realistic instrumentation and pilot's view in lifelike simulation which includes emergencies such as engine fires and systems failures. This program uses high resolution graphics to the full to produce the most realistic flight-deck display yet seen on a home computer. There are 21 real dials and 25 other indicators (see diagram). Your controls operate throttle, ailerons, elevators, flaps, slats, spoilers, landing gear, reverse thrust, brakes, etc. You see the runway in true perspective. Uses joysticks and includes options to start with take-off or random landing approach. "A real simulation, not just another game." (Your Computer Apr. 83).

How to get new OS fitted free of charge

I HAVE recently received a free 1.2 OS ROM from Acorn. Further, I found an Acorn dealer to fit it (just in case) without charge!

It should not be necessary for anyone who has purchased a BBC computer fitted with a 0.1 OS to pay for the supply and installation of a series 1.2 OS in order to bring the machine up to specification.

It is only necessary to point out to the vendors that the computer does not meet the implied specification in one important respect - that the computer will not support paged ROMs, for example a word processor such as Wordwise (see page 4 BBC Information Sheet G2, December 1981).

As I see it (and so, incidentally, does the local Trading Standards Office) anyone owning a BBC Micro fitted with a series 0.1 OS is entitled to have a 1.2 OS fitted free of charge!

It may be worthwhile sending the bill for the supply and fitting of the 1.2 OS to the vendor from whom the machine was originally purchased.

Please note that the fact that the computer's performance may exceed the original specification when fitted with the 1.2 OS is, as we say, "neither here nor there" - W.M. Dunning, Potters Bar.

● Thank you for your letter, I've not heard of any other individual getting the new OS without charge, though apparently one education authority not too far from the centre of Manchester has managed to get its upgrades free.

Avoid the void

MESSRS. Poeth and MacRab deserve commendation for their article on the Splurge language in your May issue.

I presume that lack of space prevented them from mentioning the Reverse Indirection Operator Supmost (Step Until Paged MOS True).

Although very user friendly, it is worth pointing out that in-

cautious use of this operator can produce the effect of a black hole in the centre of the VDU, through which all subsequent programs disappear rather faster than the speed of light. - W.P. Wislade, Knaresborough.

Splurge revisited

RECENTLY a press release has come to us entitled "Splurge revisited". This product, version 3.9 is now available on ROM and almost reaches the original published specification.

A usually reliable source from the sixth generation project in Cambridge informs us that this language has been selected as the latest mouse-machine interface, a dedicated Splurge machine having reached final test status.

This machine runs U code as its native language and achieves speeds very nearly approaching that of the interpreted version.

A very exciting feature is the provision of cross decompiles. These accept either machine code or E code as source and decompile through E,R,U and L code to P code.

Furthermore each stage of this full feature decompiler is speed optimised, producing extremely fast if large code. It is hoped that future machines will have space to store the resulting programs.

A special CAD package has been produced which when involved with SCREATE produces plans for a computer to run the code produced by the stochastic decompile command.

This can be linked to its internal modem as a marketing aid, informing all customers that delivery will be 10-15 days.

Other worthwhile extensions to the language include ability to use long or short variables. The function LONG assigns strings to produce long variables

while the stochastic SLONG assigns differing strings on each occurrence of the variable. SHORT provide the reverse facility.

Other design innovations include single key command entry through use of a conventional Ascii keyboard combined with function, shift, control and Splurge keys.

So efficiently is this designed that some commands actually require fewer depressions than typing normally.

Finally this product, although oversubscribed, will be available on a preferential mail order basis to those having purchased Splurge I in Eprom - delivery will be 10-15 days! - B. Mused, Ham, Surrey.

Unhappen you're right

YOUR readers may be interested in the thinking behind the IF/THEN/DONT construct of Splurge (Poeth, Macrab, BBC Micro User 3).

This was proposed by members of the SCB Schools Committee who had observed users writing code and jumping round it with a GOTO statement.

The IF/THEN/DONT is a safer and more natural construct, which achieves the same effect.

I can also reveal two further inclusions in the 1983 specification of Splurge. The first became necessary when it was realised that the use of COME FROM could contradict the Second Law of Thermodynamics.

This was confirmed (Macfargle, Zloppstra, 1981) when a small rise in temperature was detected as a result of 16,384 iterations involving the use of COME FROM.

The problem was caused by code lying between the COME FROM statement and its target.

The solution to this was Ynot

Eraoh's brilliant UNHAPPEN command, which negates the effect of code already executed.

Your junior school readers will appreciate the problems this caused in software, particularly with recursive descent compilers, but these have been solved.

Unfortunately the UNHAPPEN construct caused further difficulties in stochastic models, and could not properly be applied to code which was only randomly executed.

The UNPERHAPS statement solves this problem. - Roy Atherton, Reading.

● Splurge has been causing a great deal of excitement. Has any of our readers attempted to write a Basic interpreter for it? We'd certainly publish one. The advanced structures available in this language will make it standard in the future, and we would like to acquaint our readers with it as soon as possible.

ROM crash

HAVING spent many hours, mostly fruitless, trying to rescue programs which ran quite happily on my Beeb B with its old 0.1 MOS but crash with its new 1.2 ROM, I was wondering if it was possible for you to publish an article to help newcomers like myself to amend programs to suit the operating system.

Please could you state in future listings of your own which operating system they are written for.

● We try to ensure that our programs work fully under all operating systems. Certainly we haven't published any so far that are machine specific.

The main problem comes in trying to use OS 0.1 programs which "break the rules" on OS 1.2 machines. Often these directly access machine code routines in the OS whose

MICROMAIL

From Page 105

addresses have changed in the new versions.

The problem that affects most "home-grown" Basic programs, however, comes when the graphics and text cursors are joined with VDU 4. Although the User Guide prohibits it, many programmers found that TAB() still worked under these conditions – so they used it. However, as Acorn warned, the new versions do not support this, and the programs crash.

Joystick conversion

DEATHWATCH was very good but could you let me know how to convert to Joystick as I am a novice and think it should be in assembly language.

I would also like to take this opportunity to congratulate you on a necessary supplement to the 'B' as I have dabbled in all other publications and have found these puny in comparison to yours. – H. Morgan, Crossgar, Co. Down.

● Has anyone out there adapted Deathwatch for joysticks? If so, please let us know – we've had lots of similar letters!

Order in court

IT'S sad to see a good man fall prey to disillusion, and I soaked several hankies while reading Paul Beverley's tentative approval of the use of indirect operators in BBC Micro User volume 1, No. 2.

Let me explain. In the May 1982 edition of *Personal Computer World* (hats off, please), a letter appeared from a Mr Paul Beverley, of which I quote the final paragraph:

"Listen, all you 'advanced programmers'! Don't waste your time POKEing around. The BBC machine has so many facilities within its operating system that it will

take you all your time to sort those out and write articles explaining them to others. Then by the time you've sorted all that lot out you'll find yourself wanting to use a second processor, and the good habit you've developed of using calls instead of POKEs, will mean that ALL your programs will run on the second processor and you will have proved who really is an 'advanced programmer'!"

Strong stuff, what? But then, in spring '82 golden light shone strong from a sapphire sky over emerald lawns in Chipland.

We were promised a bugless, final MOS, second processors galore, add-ons, hang-ons, clip-ons, stick-ons and a stable Basic for the economy.

Our ZX colleagues hummed a catchy tune, "Coming soon – The Microdrive", which seemed to sum up our boundless hope and optimism as the sun passed through the RAM and we advanced, parasang upon parasang into the brave new world.

Today we are sadder and wiser. We sing "She'll be coming round the mountain when she comes" at each new announcement of a phantom pregnancy from Cambridge.

Eagerly awaited developments do not materialise, while a change we do not want, and Acorn deny they are making, a new Basic, leaks into the market and turns the software writers into whirling dervishes.

Dealers skulk around in dark glasses, their hats pulled down over their faces, to avoid innocent but embarrassing questions. Acorn's promises are sound. And fury. Signifying nothing.

You may care to ponder how much time is being spent at Acorn on the second processors.

The Electron is currently flavour of the month, and when they've got that out of their hair, the Business Machine will absorb all the attention.

Yes, I know the Electron is only a simple strip-down of the BBC, but can you imagine the engineers leaving it at that?

Neither can I. If that's all it is, it would have been on the market months ago.

And the Business Machine is a big project for a small company. So what time is available for old-hat BBCs? The tea break, probably. In Chipland, all your important products are in the future, not in the past.

Gentlemen of the jury, Kid Curry and Hannibal Hauser have broken the terms of the amnesty extended to them during the long delivery delays of last year.

May I suggest that the engineers among you form a posse, gallop madly over to Cambridge and give them the assistance they so obviously need?

Otherwise it may be necessary to heave the poor little owl overboard and replace him with a butterfly.

M'lud, my case rests.

(Sits down amid a cloud of legal wigdruff, knocks ciggy ash into coffee, curses, and resumes work on new Wonderworld Fantamaze Adventure "Castle of Wiggles".) – Roger Bagnall, Maidenhead.

Elusive recorder

CONGRATULATIONS to all concerned on an excellent magazine. I am the proud owner of a BBC Micro B but a not so proud owner of a cassette recorder.

Could you please help? I have been trying to obtain the elusive cassette recorder for the BBC Micro for over eight weeks now. I decided not to order one because at first I thought that a cassette recorder would be the least of my worries. But it's not just the problem of actually obtaining a recorder, but also finding a compatible one.

Am I the only person faced with this dilemma? I would be pleased (an understatement) if you could recommend a suitable recorder and a reputable dealer who has them in stock ready to be bought and not just ordered. – Steven Solsby, Walney Island.

● I've talked to several firms who market cassettes for the BBC Micro and the story is always the same. Apparently you can import one set of recorders that work perfectly with the BBC Micro (or can be adapted to do so). The next batch you receive though can be absolutely incompatible, despite having allegedly the same specifications.

Hopefully Mike Cook's article in this issue will help iron some people's problems out.

Flicker ridder

I AM just getting to grips with my BBC Micro and have been learning how to move user defined characters around the screen.

The methods I had used seemed great at the time, but now I feel that the desire for information increases while the information available on the subject decreases.

I have plotted and unplotted the characters but still can't get rid of an annoying flicker.

I would be most grateful if you could direct me on the right road to "smooth" graphics. – Stuart Millard, Bristol.

● Well Mr Millard, no promises as to dates, but we have some articles on animation of the sort you require in the pipeline – smooth graphics will soon be yours!

S'il vous plaît

WHILE much of the back-slapping and congratulation over the early issues of BBC Micro User is amply justified, it does seem to me to be quite weak in precisely those areas likely to be of most interest to owners of the BBC machine.

It manifestly is not a toy, but you place great emphasis on its games applications. On the other hand, it is perhaps not the first choice of businesses or the research scientist, yet you offer

MICROMAIL

From Page 107

interfaces, musical keyboard interfaces, battery backed-up calendar and digital to analogue converters would certainly ring the changes, as most micro magazines seem to concentrate on writing software.

— William Smith, Sheffield.

● Paul and I agree with you that the indirection operators on the BBC Micro are more powerful than on any other. The subject seems to be one of "Do as I say, not as I do."

Although I must admit to breaking the rules myself, I can understand the opposition expressed to their use in any form. They can make even the simplest of programs virtually incomprehensible. And, as you point out, one slight slip and your programs tend to disappear into vileness.

You'll be pleased to know that Paul has got a whole series lined up for us solder freaks. I've bought a new iron specially for it!

Sorting out one's OS

I AM impressed at the content of your magazine. I was particularly interested with Paul Beverley's series on

operating systems.

However I must say that I am somewhat confused. I bought my Model A in late January 1983 (serial number 128388) and it has a ROM operating system. The two ICs are marked as follows:

2E1
HN613128P
BO1 JAPAN
ACORN BASIC
and
2F1
HN613128P
BO2 JAPAN
ACORN OS-1

If I type in *FX0 the answer I get is OS EPROM 0.10.

Will you please explain which OS I have and what its limitations are. Will you please also explain how one can recognise OS 1.0 and OS 1.2. — A. Romaine, Ripley.

● The OS you have is indeed 0.1, and is in ROM, despite the message. Hurrying to produce the ROM, and thus avoid the much more expensive EPROM, Acorn forgot to change the *FX0 message in the code. Easy to criticise, but most programmers have dropped similar clangers!

The worst thing about OS 0.1 is that its cassette filing system is unreliable — see Mike Cook's article in our first issue to settle that. Two other inconveniences are that it won't support the "sideways ROMs" — that is

chips such as View and Wordwise — and also it lacks lots of the *FX calls available to the more sophisticated versions.

*FX0 and Return will tell you if you have OS 1.0 or 1.2.

More joy on Figure V

HAVING already got Atari joysticks and a BBC B, I was particularly pleased to see the article on joysticks. Is it possible for you to supply diagrams showing the arrangement of the components on a piece of veroboard or whatever along with a shopping list of components?

Could you also supply clarification on Figure V, regarding which connections are to the Atari joystick and which to the Beeb.

I do not want to risk damaging the micro by making a wrong connection and being an electronics novice I need reassurance.

If you produce any other bits of hardware for home building could you please contemplate including more photographs of the circuitry and easy-to-follow diagrams so that simpletons like myself can follow them and achieve success.

For the future, you might contemplate producing "kits of bits" to support articles on

hardware homebuild, or publish lists of suppliers.

I congratulate you on your excellent magazine. — G. Shally, Newbury.

● We shall be producing kits of bits for our future body building projects, and these will include printed circuit boards, which should help with the layout problem.

Figure V was a bit of a mess — our fault, not Mike Cook's. He makes the following points:

Where there is a single number, it belongs to the Atari joystick.

Where there are two together, the number without brackets belongs to joystick one, numbers with brackets to joystick two.

The letter G should have been the number 6, and the unlabelled resistor below it should have been 20k.

Cover story

THANK you for a very interesting first edition of your new magazine. However, the cover picture on your second edition almost put me off buying it. — M.E. Boleleuster, Strand, Glos.

● Some of us had doubts about the cover too, but we thought we'd solved the problem when we got Percival to cover himself up with the ape suit. Still, you can't please everyone.

And finally, with tongue firmly in cheek . . .

Missive from a faint-hearted micro user

Dear Trev,

The worst has happened. You know how Andrea has always looked down on my Beeb (incidentally I've named him Bug), well last month BBC Micro User carried an article by some fool explaining how easy it was to set up the Bug as a games machine without knowing anything about micros.

And of course last Saturday I was in the Nice Byte lusting after some disc drives when an idiot salesperson decides to sell A. some games cassettes, show-

ing her the article and saying how easy it was. I thought he was onto a loser — after all she's always called Bug "that Space Invaders thing" — but I'd reckoned without that blasted frog crossing the road. She was entranced.

"Sweet", she said, and a love affair was born. She bought three games cassettes with her credit card and I know for a fact that she's bought at least five more since — and a joystick!

As soon as she got home it was up to the spare room with

tapes in one hand and the article in the other. Why she bothered with the article I don't know. She connected up Bug by trial and error, screwing the 7 pin DIN's in with all the manic joy of Frankenstein assembling his monster. Sadly she eventually got it right and now I can't get on the thing.

She's addicted. "Just one more go, just one", is all the conversation I get out of her. The neighbours are looking at me strangely and I'm not surprised what with all the screams

coming from our back bedroom — "Yes, yes, go on, go on — Nooo!"

It doesn't help that she's started wandering round like a zombie because of lack of sleep. The worst thing is that she's started talking chillingly about "her" machine.

I don't think I can stand it.
Cheers, Bob.

P.S. Good news! I can now get back on the Beeb. A. has sprained her thumb trying to put a DIN plug into the TV aerial socket.

BBC MICRO OWNERS! KEEP **PACE** WITH LATEST TECHNOLOGY!

ACQUIRE THE COMPLIMENTARY DISC DRIVE

This superb precision disc drive has been specifically designed to give increased versatility to the BBC microcomputer. It is made by the world-famous camera manufacturers, Canon. Compact and colour matched, it measures a mere 217mm x 303mm x 63mm. The entire design concept is notably advanced and practical e.g. improved head seek accuracy has been achieved by positioning the read/write heads with a four phase DC stepper motor actuator. A wheel provides precise location of the head track. The solenoid connected via hardware jumper automatically locks the front door when in use, ensuring data security. Utilities Disc and Operating Manual available.

MOONRAIDER

A GREAT NEW BBC MODEL B PROGRAM FROM BRITAIN'S LEADING SOFTWARE HOUSE!

You're flying a highly manoeuvrable 32K Space Fighter armed to the teeth with a rapid-fire laser cannon and the latest Tryxex bombs. Your mission is to penetrate the alien moon defences. Against you are self-firing rockets, nuclear Ack-Ack guns, spacernines, 'fizzers', and meteors, not to mention the network of narrow passageways which must be negotiated. You have only limited fuel which needs to be replenished by either bombing the enemy fuel dumps or docking with the refuelling station. There are 6 phases to get through and 4 levels of difficulty. The game can be started at any phase and on any level. The controls are either from joysticks or from standard or user-defined keys. This exciting program only £6.95!

Other B.B.C. programs available: Swoop (B) £6.95/Croaker (B) £6.95/Chess (B) £6.95/Laser Command (B) £6.95/Galactic Commander (B) £6.95/Alien Destroyers (B) £6.95/Adventure £6.95/Cowboy Shoot-Out (B) £5.95/Filer £8.95/Micro Budget £6.95/World Geography (B) £5.95 Timetrek (B) £6.95/Spacemaze (B) £5.95/Martians (B) £5.95/Astro Navigator (B) £4.95/Star Trek £4.95/Munchyman £5.95/Seek £5.95/Eldorado Gold (B) £5.95/Cat and Mouse £4.95/Mastermind £3.95/Reversi 1 £4.95/Reversi 2 (B) £4.95/Roulette (B) £4.95/Gomoku £3.95/Zombies £3.95/Dissassembler £5.95/Constellation (B) £5.95/Junior Maths Pack (B) £5.95/Where? ORDER FORM OVERLEAF

PROBABLY the first user defined character you came across was the BBC "Micronaught" (see Figure I) who can be found on page 170 of the User Guide. He was created using the VDU23 command to redefine character 240. Those unfamiliar with this command can find a detailed explanation on page 384 of the User Guide.

Listing I is a simple program which defines "Micronaught" (line 20) and prints him on the screen (line 50). An alternative to line 50 would be:

50 VDU240

This is the exact equivalent.

Boring, we hear you say. Well, bigger

and more recognisable figures can be made by defining two or more characters and printing them below each other. See Listing II.

Lines 20 and 30 define the

```

10 MODE5
20 VDU23,240,28,28,8,127,8,20,34,65
30 FOR I=0 TO 19
40 COLOUR I MOD3+1
50 PRINT;TAB(I);CHR$(240)
60 NEXT
70 END
    
```
