# ROMS

ORIGINAL SCREEN DISPLAY

WHOLE SCREEN DUMP

ENLARGED PART OF SCREEN

★ DEFINE IN ACTION

## Printmaster

Joining our already extensive range comes PRINTMASTER a sophisticated printer handling utility ROM. PRINTMASTER will be released in several versions catering for each of the most popular printers on the market. This first PRINTMASTER ROM supports a range of EPSON printers: MX80, RX80, FX80 and other compatible printers.

All commands in the ROM must be preceded by an asterisk and can be used like all normal operating system commands from within BASIC programs etc. It is also possible to use them from WORDWISE and other language ROMs.

PRINTMASTER supports three types of screen dumps. The most flexible (★GDUMP) allows any graphics on the screen to be dumped onto the printer. This will operate in any mode, the colours being displayed as shades. Any part of the screen may be printed at any position on the paper in any one of four orientations. It is also possible to magnify the screen dump by any factor x2, x3, x4 etc.

A special feature allows true Mode 7 screen dumps with TELETEXT text and graphics, colours (as shades), double height etc.

★TDUMP allows any text mode to be dumped and ★FDUMP will automatically print the contents of a file on disc to the printer WHILE the BBC machine is doing other things, running other programs etc.

★DEFINE allows the redefinition of any user definable character in the simplest possible manner. See screen photo opposite. ★USAVE and ★ULOAD can be used to save or load all user definable characters.

★WINDOW allows the user to interactively define a graphics window, this controls the part of the screen printed in ★GDUMP this is a very much easier method of defining graphics windows than the normal VDU statement.

The above list is only a fraction of the commands in the PRINTMASTER ROM. Others include ★CENTRE, ★UNDERLINE, ★ITALIC, ★MARGIN etc. etc. which provide total control over the printer. Order as PRINTMASTER (Epson).

£33.35 incl. VAT and p&p.

# Sulis Software invites you to a private showing of all their learning programs—for just £1

**SPECIAL  
OFFER!**

It has been calculated that 60% of people who buy home computers want to use them for educational purposes—but that only about 10% ever do so.

It isn't surprising. Games are easy come, easy go—and are on sale everywhere. If you buy a dud—well, better luck next time.

Educational programs are different. You're looking for quality and lasting appeal—which is what Sulis Software programs are all about.

Then there's the problem of level. Age is no guide to ability or knowledge, and a program which is too easy or too difficult isn't much use. Shop assistants aren't always knowledgeable, and magazines are full of games. People know it's important to choose the right programs—but how do you go about it?

## The pleasure of learning

For 10 years people have been using our products to improve their language skills. Writers, journalists, linguists, teachers and designers have worked with us to create materials which help people to learn—and to find pleasure in learning.

Now learning has a new dimension. Sulis Software programs offer new opportunities for every family to benefit from the individual tuition that a computer offers.

## A unique offer

People are choosy about educational software—and rightly so. You need time to look at what's available and decide for yourself whether a program is right for you or for your family. So we are offering you a demonstration cassette or disk with samples of all our programs to run on your own computer in the comfort of your own home.

As you see each Sulis Software program in action, you can judge for yourself what the level is; whether you like the content, the graphics, the way the screen is set out and all the other factors that go into a good program.

## English and French

Sulis Software specializes in programs for English and French—although we do have other subjects. Our programs aren't dull revision notes on screen—they are designed to improve spelling, vocabulary and grammar.

With English programs, that means better results in every subject, as well as better results from job applications. For French, it means increased fluency and accuracy.

**Our promise:** every time you sit down to a Sulis program, you'll enjoy yourself—and you'll learn something.

## A satisfied user

Young Alastair M. failed his English Language O Level last June. He got a Grade D. He wrote to us earlier this year:

*"I would like to compliment Sulis Software on their achievement in producing English teaching programs which are both enjoyable and usefully informative.*

*"I used the programs Wordpower and Besieged as part of my preparation for my English GCE O level exam re-sit, which I successfully passed with a Grade A result.*

*"It was essential that I passed the exam, an English language qualification being essential for entry to universities."*

## Try before you buy

Sulis Software sample cassettes only cost £1. If you prefer to use a disk, you can order a demo-disk for £2. And the cost of the sample cassette or disk is deducted from your first order.

Whether you are looking for games or grunt-work, whether you want a program for a pre-schooler or an adult—you'll find a program to suit you.

Take advantage of this very special offer and send off for your cassette or disk TODAY.

Bureau of Circulations

The Micro User welcomes program listings and articles for publication. Material should be typed or computer-printed, and preferably double-spaced. Program listings should be accompanied by cassette tape or disc. Please enclose a stamped, self-addressed envelope, otherwise the return of material cannot be guaranteed. Contributions accepted for publication will be on an all-rights basis.

© 1984 Database Publications Ltd. No material may be reproduced in whole or in part without written permission. While every care is taken, the publishers cannot be held legally responsible for any errors in articles, listings or advertisements.

The Micro User is an independent publication and neither the BBC nor Acorn Computers Ltd are responsible for any of the articles in this issue or for any of the opinions expressed.

Trade distribution in the UK and overseas: Contact Steve Fletcher, Circulation Manager of Database Publications at the above address or telephone him on 061-480 4153.

## CONTENTS

### NEWS

23

Keep in touch with the latest happenings in the eventful world of the BBC Micro.

### BEGINNERS

42

Procedures are the subject in the latest of our simple series on Basic for the novice.

### MEMORY

47

Short of bytes? Larger programs for disc users with these cunning overlay techniques.

### BIG LETTERS

51

Brighten up your programs with our large letters utility that's much, much more.

### ADVENTURES

61

Our forthright columnist takes her usual critical look at the world of adventures.

### SOFTWARE SCENE

87

Our team of frank and thorough reviewers assess the latest software releases.

### MACHINE CODE

99

Learn where to store machine code in this easy-paced excerpt from Ian Murray's book.

### SOUND ADVICE

108

We reach the end of the series with an explanation of amplitude envelopes.

### DUG DIG

114

Further adventures of Spaceman Bill as he dodges aliens and grabs the crystals.

### PROBLEM PAGE

123

Mike Cook tells you the things you've always wanted to know but been afraid to ask.

### SPIRO

130

We show you how to multiply your graphic windows - with spectacular results.

### DOWNLOAD

133

Upgrading from tape to disc can cause memory problems. Here's the remedy.

## GAME of the MONTH DAMRAIDERS

Defend the dam from  
submarines and bombers  
— an action blockbuster.

— Page 82

## Spreadsheet special

ROM-based spreadsheets are beginning to appear for the BBC Micro. But what exactly is a spreadsheet and what are the alternatives? We investigate.

### START HERE

A gentle introduction to the world of spreadsheets. We show you what to look for.

— Page 68

### VIEWSHEET

Our exclusive pre-release assessment of Acornsoft's companion program to VIEW.

— Page 71

### ULTRACALC

We examine BBC Soft's spreadsheet that everyone's talking about. How good is it?

— Page 72

## 135 TYPING IN LISTINGS

Further explanations of Jim Notman's formatter — with Mode 7 firmly in mind.

## 136 COMPETITION

Our simple contest could be your entry to the world of computer communications.

## 141 HARDWARE REVIEW

A candid comparison of two digital plotters, and an evaluation of an electronic diary.

## 146 LANTERN

A short, simple and colourful demonstration of the BBC Micro's powerful graphics.

## 148 BODY BUILDING

Control the world with stepping motors! Mike Cook's step-by-step guide shows the way.

## 160 TAPE & DISC OFFER

Save yourself the chore of keying in listings with this month's cassette or disc.

## 161 ENVELOPES

A hands on approach to mastering the intricacies of the ENVELOPE statement.

## 166 BACK ISSUES

Make sure your Micro User collection is complete. All you've missed and how to get it.

## 171 WORKSHOP

Full details of a versatile utility that allows partial renumbering of programs.

## 190 BOOKSHOP

We've chosen 10 of the best books for the BBC Micro for this month's offer to readers.

## 196 SUBSCRIBE NOW

A year's subscription to *The Micro User* will bring you a FREE *Micro User* cassette.

## 210 MICROMAIL

The page you write yourself. Just a small selection from the flood of letters pouring in.

# SERIOUS DECISIONS NEED THE SUPPORT OF OUR 80 COLUMNS

Most serious users of micro computers require the facility to display in 80 columns, especially for word processing. Try this on most monitors and the result will be a frustratingly fuzzy image.

The Microvitec CUB 653 gives the user not only glowing colour, but also pin-sharp-images, thanks to a medium resolution screen 653 pixels wide by 585 high, plus a selective transmission

panel giving super-high contrast. These features make this model from the CUB range of monitors the perfect partner for the high resolutions generated by BBC B, SINCLAIR Q.L., I.B.M.,

**MICROVITEC**  
**cub**  
COLOUR DISPLAYS

ELECTRON, ORIC, APPLE II and Ile, and many others.

So if you wish to sharpen your image, whether in the office or at home, decide Microvitec:

**Remember – the highest quality doesn't have to mean the highest cost.**

*Call at your local dealer or contact us direct and we'll send you full details with a pleasant surprise – our price list.*

Microvitec Ltd., Futures Way, Bolling Road, Bradford BD4 7TU. Tel: (0274) 390011. Telex: 517717.

Microvitec Monitors are available from your specialist local computer dealer, selected branches of W. H. Smith, John Lewis Partnership, Lasky's, John Menzies and other leading retailers.

We have a range of printers that will meet most requirements.

**EPSON**—the high quality dot-matrix printers that set the standard in the industry—versatile printers that provide the optimum in performance & reliability. The RX80/FT provides all standard printing & graphic functions, (single sheets & perforated paper),

with the de-luxe FX80 giving in addition proportional printing, italics, programmable characters etc. The FX100 also allows the use of 15" wide paper. The **JUKI** daisywheel provides a quality normally found in printers costing far more. Printer cables, interfaces, ribbons, paper etc. are all normally available from stock.

**SPECIAL OFFER**  
Epson FX80  
only £325

### TORCH Z-80 Pack:

Your BBC computer can be converted into a business machine at a cost slightly higher than a 800K disc drive. The Torch pack with twin disc drive and a Z80A processor card greatly enhances the data storing and processing capability of the computer (NOTE: In BBC mode the disc pack functions as a normal BBC drive). Z80A card comes with 64K of RAM and a CP/M compatible operating system in ROM. The system is supplied complete with a BBC owner's user guide, a System/Demo disc, and a PERFECT software package. The PERFECT software package comprises of a DATABASE, CALC, WORD PROCESSOR and SPELLER commercially valued at over £1000. We are now supplying a Utility that enables software on 40 Track discs to be transferred to 80 Track discs **£730**.

**NOW AVAILABLE** — The TORCH Z80 SECOND PROCESSOR CARD — for those who already have suitable disc drives. The card is supplied with all the free software, as detailed above, presenting a very attractive package. **£375**.

### RH LIGHTPEN:

The Acorn-approved superior design, with a programmable 'push-tip' switch, status indicator LED and an interface box. Supplied complete with manual, full software and basic demo programs. **£39(c)** Colour graphics. Cassette **£8.65(d)** Disc **£10(d)**.

### GRAFPAD

A low cost graphic-tablet offering the performance and durability required for the business, industrial and educational user. It is small, accurate & reliable. Working area: 240 x 192mm + Menu area. **£125**.

### BUZZBOX

The micro modem, a full feature, Originate/Answer, 300 Baud, CCITT V21 modem — direct connect with BT approval. Uses include inter-office business use, as well as hobbyist use. (not for use on Prestel). Can be powered by batteries **£69**.

### KENDA DMFS

A truly professional double density DMFS with several unique features:- \*requires no RAM i.e. PAGE=&EOO \*uses standard CP/M filenames & disc drive conventions \*no limit to number of files \*single/double density automatically selected \*runs most 'protected' software \*enables 80 Track drives to read 40 Track discs.

### COLOUR GRAPHICS PLOTTER:

This robustly built 3-colour graphics plotter provides both versatility & precision. The carriage can be moved with an accuracy of 0.025 cm. over an area the size of A4 paper. The plotter bed can accept paper & far thicker materials, at sizes of up to A3. The basic plotter carries three pens each of which is software selectable. Optional accessories that can be fitted include: Scriber, miniature drill, router, and high-resolution optical sensor for scanning. This versatile plotter can provide an endless source of creative ideas.

### 3" HITACHI DISC DRIVES

The latest in miniature data-storage technology. Totally hardware & software compatible with 5 1/4" drives (can be used together!). Supplied complete with format disc, manual, cables etc. **£160(b)**.

Our in depth stocks allow us to offer immediate deliveries on most items and our aim is to provide the best available products at competitive prices. In addition to the items listed above we carry extensive stocks of: connectors, connector assemblies, components including TTLs, CMOS, RAMs, EPROMs and CPUs. Spares for the BBC computers are normally available from stock. Orders from government departments, public bodies, hospitals, schools, colleges, universities and recognised PLCs welcome. We specialise in world wide exports. No VAT on exports. Our specially negotiated freight charges to many countries ensure the customer considerable savings on charges.

### ACORN IEEE INTERFACE

A full implementation of the IEEE488 standard, providing computer control of compatible scientific & technical equipment, at a lower price than other systems. Typical applications are in experimental work in academic and industrial laboratories. Phone for details. **£282.**

### DISC DRIVES:

A full range of disc drives fitted with quality Japanese slimline mechanisms, (such as TEAC, MITSUBISHI etc.) are supplied ready to connect to your BBC, and come complete with necessary cables, formatting disc, manual etc. TEAC & MITSUBISHI mechanisms can operate in single and double density modes. The switchable disc drives give the user flexibility, by allowing access to both 40 & 80 Track discs. The 40/80 Track switching module can be simply attached to your standard 80 track drives thereby vastly increasing their versatility. We have a full range of diskettes, variety of disc storage cases, disc-drive cables. The Floppiclene head cleaning kit, is the ideal way to ensure optimum performance of your drives. The use of disposable cleaning discs eliminate the risk of recontamination and abrasion, and ensure continuous data capture and transmission.

### TELETEXT

Converts your BBC into a fully fledged Teletext Terminal. In addition to normal reception of Teletext pages, it is able to 'download' software as well as saving standard pages on any of the four TV channels. **£196.**

### ULTRACALC

With advanced features, such as: \*Handling of labels as well as numbers, as values, allowing the search of a list by a meaningful name, instead of just a number. \*Efficient memory usage allowing large spreadsheets to be constructed. \*Variable width columns. Facilities include SUM, Replicate & most mathematical functions. It helps you to create and manipulate \*Budgets \*Cash-Flow forecasts \*Price Lists \*Balance Sheets \*Time Sheets \*Order Entry \*Small Databases \*Scientific Calculations etc. **£65.**

### MICROTEXT

Developed by the National Physical Laboratory, is a programming system designed to simplify the production of a wide range of man-computer dialogues. Using MICROTEXT, an expert in any field can construct their own complete courses of computer-based instructional material. Applications include interviewing systems, teaching packages, training courses and interactive demonstrations and simulation. Cassette **£43.35(c)** Disc **£52(c).**

MODEL	110	210	221
FORMATTED CAPACITY OF SINGLE DRIVE ON BBC MICRO	100K	200K	400K
SINGLE DRIVE IN CABINET	£170	£198	£236
DUAL DRIVE IN CABINET	£320	£370	£437

All units available with on-board power supply.  
Additional cost: £25.

## EPROM PROGRAMMER:

A fully self-contained mains-powered eprom programmer housed in an attractive finished case. It is able to program 2716, 2732/32A, 2764 & 27128's in a single pass. It is supplied with vastly superior software when compared to any currently available similar programmer. In addition to normal eprom programming, you are now able to load your favourite basic programs onto eprom.

The programmer comes complete with cables, software & operating manual.  
£89 + £2.50 carriage. Software on disc £2 extra.

- \* Menu Driven Software provides user friendly options for programming the eprom with:
  - a) Basic programs.
  - b) Ram resident programs.
  - c) Any other program.
- \* Programmer can read, blank-check, program & verify at any address/addresses on the Eprom.
- \* Personality selection is simplified by a single rotary switch.
- \* Programming voltage selector switch.
- \* Full Editor with ASCII Disassembler, allowing direct modification of memory data in HEX or ASCII.
- \* Continuous display of time left for completion of programming.
- \* Continuous display of current addresses as they are being programmed.

## EPROM ERASERS

UV1T Eraser with built-in timer and mains indicator. Built-in safety interlock to avoid accidental exposure to the harmful UV rays. It can handle up to 5 eproms at a time with an average erasing time of about 20 mins. £59 + £2 p&p.  
UV1 as above but without the timer. £47 + £2 p&p.

**SPECIAL OFFER**  
**EPSON FX 80 PRINTER**  
**ONLY £325**

including BBC printer lead  
Twelve Months full warranty.  
Offer valid while stocks last.

## 'TIME-WARP'

### REAL-TIME-CLOCK/CALENDAR

A low cost unit that opens up the total range of Real-Time applications. With its full battery backup, possibilities include an Electronic Diary, continuous display of 'on-screen' time and date information automatic document dating, precise timing & control in scientific applications, recreational use in games etc—its uses are endless and are simply limited by one's imagination. Simply plugs into the user port—no specialist installation required—No ROMS. Supplied with extensive applications software. Please phone for details.  
£29.00 + £2.50 carriage.

## SMARTMOUTH:

The original 'infinite speech'.  
Still the best.

A ready built totally self contained speech synthesiser unit, attractively packaged with built-in speaker, AUX output socket etc.—no installation problems! It allows the creation of any English word, with both ease and simplicity, while, at the same time being very economical in memory usage. You can easily add speech to most existing programs. Due to its remarkable infinite vocabulary, its uses spread throughout the whole spectrum of computer applications—these include industrial, commercial, educational, scientific, recreational etc. No specialist installation—no need to open your computer, simply plugs into the user port—and due to the simple software, no ROMS are needed. SMARTMOUTH is supplied with demo and development programs on cassette, and full software instructions. £37+ £2.50 carriage.

## ELECTRON ADD ONS

NOW IN STOCK

### PRINT PORT

- \* Suitable for most centronics printers
  - \* Supplied complete with lead & programming.
- £39 + £1.50 p&p

### JOY PORT

- \* Controls over 80% of available arcade games.
  - \* Uses ATARI Style 9 pin joysticks
  - \* Just plugs in—no soldering
  - \* Does not overload Electron psu
- £14.75 + £1.60 p&p

## WORDWISE

This ROM based word processor is simple to fit and simple to operate. Its greatest strength lies in its ease of use, yet it is a fully fledged text processing system, with all the features you would expect to find in many more expensive programs.

Once entered the user has total control over the text. Any section may be marked, this may be a word, sentence or any larger piece of text. The marked section may then be instantly deleted, moved or copied to any other point in the document. The more complex operations are menu driven so that the user is always prompted when necessary. When printing a document the user may specify the line length, line spacing, page length etc. WORDWISE even handles automatic page numbering, centering of text, justification and many more powerful features.

This word processor has become the best selling program for the BBC machine. In the year since its launch it has outsold all other available ROM, cassette or disc based word processors and continues to outsell them.

**£46 incl. VAT and p&p.**

## DISC DOCTOR

Following on from WORDWISE this utility ROM is the ideal way to get the most out of your computer system. This ROM adds 20 new commands to the Machine Operating System. Most of these are concerned with DISC operation although some of the commands are totally general purpose. Disc Doctor allows up to 60 files per side of a disc and includes its own disc formatting and verifying commands. Three search commands will find any string in memory or on disc, or will list all the line numbers in a BASIC program that contain the string. Many other features include disassemblers, disc/memory editors, function key listing etc. Works with all versions of the Acorn DFS, and other Acorn compatible DFS's.

**£33.35 incl. VAT and p&p.**

## GRAPHICS ROM

Our latest utility ROM includes over 28 new graphics related commands. These can be typed in like any normal commands and can of course, be included in BASIC programs. The commands are split into 3 distinct areas:-

- 1. Sprite graphics**  
These are multi-coloured shapes up to 24 x 24 pixels in size. Once a sprite has been designed (using in-built routine) it can be plotted at any position on the screen and easily moved around. A sprite can also be part of a 'film' — a sequence of frames allowing animation up to 32 sprites or 'films' can be active on the screen at any time. A 'film' can contain up to 47 frames, each frame being any sprite image.
- 2. LOGO 'turtle' graphics**  
By using simple FORWARD, BACKWARD, LEFT and RIGHT commands a 'turtle' can be moved very quickly around the screen, producing intricate patterns by the most user-friendly means. Including these commands in structured BBC BASIC programs provides a system faster and more powerful than many of the packages currently used to demonstrate the LOGO language.
- 3. The third section consists of a large number of general purpose commands, such as:-**  
★ FILL which will fill ANY area on screen.  
Fast circle and arc drawing  
3D graphics routines allowing X, Y, Z co-ordinate plotting  
Large character printing in a range of patterns  
Scaling — allowing any part of the screen to be expanded or diminished  
A rotate command that will rotate all plotting by any angle around the origin  
Because this is a ROM, all the commands are instantly available. It has a built-in help menu showing the syntax of all commands. Supplied with a comprehensive manual and step-by-step fitting instructions, suitable even for the inexperienced. This ROM represents extremely good value for money.

**£33.35 incl. VAT and p&p.**

## PRINTERS

FREE INTERFACE CABLE & 500 SHEETS OF PAPER WITH ALL PRINTERS

### DOT MATRIX

EPSON  
FX80

£389

Epson RX80 ... £295  
Epson FX100 ... £489

FX-80 is even faster. An astonishing 160 characters per second, proportional spacing, quick forms tear-off, superscripts, subscripts, dot addressable graphics and down loadable character set. Standard Centronics parallel compatible interface with optional RS-232C/ current loop and IEEE interfaces. The FX-80 is pin fed and friction fed and can feed single sheets (optional tractor feed).

### STAR GEMINI & DELTA

£199

£375

120 CPS (Gemini), 160 CPS + 8K buffer (Delta). Friction, tractor and roll feed. Ultra high resolution graphics. Normal, expanded and condensed print. Emphasized and double strike print. Superscripts and subscripts. True underlining. Italics and international characters. Downloadable character set. Interface — Gemini (parallel), Delta (parallel & RS232). Full one year parts and labour warranty.

### SHINWA CP80

£230

80 column, friction and adjustable tractor feed, bi-directional logic seeking HI-RES graphics and block graphics sub and super scripts, condensed and emphasised print, and underlining vertical and horizontal tabs, self test, italic print, etc.

### RITEMAN MATRIX PRINTER

£230

80 column, friction and pin feed, 120 CPS Bi-Directional, Hi-Res and block graphics, 9 x 9 matrix true descenders, normal, expanded, condensed printing, emphasised and double strike printing, italics printing, auto underlining, subscript and superscripts, international character sets, easy access dipswitches, 1:1 High Res (true circles and squares), optional tractor unit, optional RS232C interface.

### MANNESMANN MT80

£249

High quality 80 column serial dot matrix printer. Dual density dot addressable graphics, quick tear facility as standard. Ability to handle both tractor-fed fanfold and single paper.

### DAISYWHEELS

JUKI 6100

£395

20 CPS max (13 CPS Shannon text) 10, 12, 16 CPI and proportional spacing up to 220 characters per line, diablo protocols. Bold, shadow printing and underlining.

### BROTHER HR15

£395

13 CPS. 10, 12, 15 CPI and proportional spacing up to 165 characters per line, colour printing, shadow printing, super/sub script, auto underlining, text reprinting. 3K Buffer Standard. Keyboard ..... £160  
Sheet Feeder ..... £228  
Tractor Unit ..... £109

### COLOUR PRINTERS

CANON PJ1080A

£430

7-Colour Drop on Demand Ink Jet. 40 CPS, Bi-directional Printing. High-resolution Graphics. Extremely quiet, less than 50dB. Ideal for Overhead Projection. Long-life Ink Cartridges. 3.5 Million Characters per Colour. Very compact & lightweight. 8-Bit Parallel Int — Epson compatible. Easily replaced. Accepts single sheets. International character sets.

### WIRE DOT PRINTER

CANNON P.W.  
1080A

£299

80 column 160 CPS, near letter quality printing at 27 CPS. Will do italics or proportional spacing. Super and subscript down loadable character set, high resolution graphics, standard with friction and tractor. Optional RS232 available, fully compatible with Epson control codes.

## MONITORS

ALL MONITORS COME WITH FREE CONNECTING CABLES

NOVEX 14" MONITOR

Low-cost model for personal computers. 14" Screen colour display. R.G.B. and composite inputs. Switch to allow monitor to be used as green screen monitor. Switch mode auto-regulated power supply. Professionally-styled Metal-Cabinet in B.B.C. Micro colours.

£228

### TV/MONITOR

£269

#### 14" TV/MONITOR

This TV Monitor is not a modified television as many TV Monitors are, but a 14" TV/Monitor which has been designed to perform both functions. It has RGB and Composites video and sound. An RGB cable for a BBC is supplied as standard.

**Disc Interface & Drive**  
**£198.95** (inc. VAT)

Micro Disc Drive for the BBC Micro

The Micro disc drive offers a method of low cost quick access to programs. The drive is essentially a small version of a 5¼" disc drive and offers similar features to the larger drive.

The data is stored on a 3" disc, this is enclosed in a protective hard plastic cassette which features a write protect switch.

The micro drive requires the standard Acorn disc interface, but a new disc filing system rom. Acorn DFS may be exchanged for the micro DFS for £12.00. The new micro disc filing system allows 60 files per disc surface and it can read and write to Acorn DFS discs. Thus if a 5¼ inch and a micro floppy were connected on the same cable files could be transferred between them.

# If you're studying... Study our Software

We've been producing educational software for the BBC micro ever since it was launched, and our programs are in use in schools and colleges all over the country. Now, some of these programs have been specially adapted for you to use at home.

With our **Understanding Science** programs you can get to grips with subjects in Biology, Physics or Chemistry that you didn't understand, or supplement your practical work by doing simulated experiments on the computer. These programs are suitable for age 13+ and are ideal if you are studying for those all-important exams. The emphasis is on **understanding** the subject and the programs come with a detailed explanatory booklet. The first programs are ready now —

with many more to follow.

**Chemistry** — Symbols, Formulae and Valency

**Chemistry** — Chemical Equations

**Chemistry** — Inorganic Analysis and Identification of Gases

**Physics** — The Oscilloscope and Waveform Analysis

**The Human Body** — Heart and Kidney

Each package costs £12.95 (cassette) or £13.50 (disc).

For younger pupils age 9+, our **Learning Maths** programs use simple games and animations to illustrate important principles of elementary Maths. There are nine titles — each containing three or more programs covering a particular concept. The programs are great fun to use — as well as providing real educational value.

Nine cassettes are available\*

- JM1 Angles
- JM2 Directed Numbers
- JM3 Fractions
- JM4 Co-ordinates and Lines
- JM5 Symmetry
- JM6 Motion Geometry
- JM7 Sets
- JM8 Elementary Statistics
- JM9 Ratio

Each cassette costs £7.00. Disc collections also available (JM1-6, £30.00; JM7-9 £18.00)

\*Electron versions of programs JM1-9 and Dragon versions of JM1-6 also available.

Available by direct mail order, or from selected software dealers.  
Prices include VAT and P&P (in UK).

- The complete AMS disc drive package, tailored to your BBC micro, is compatible with all disc interfaces and includes cables, a comprehensive manual and utilities on either disc or EPROM. Housed in a steel case, matching the BBC micro, these reliable and robust Hitachi 3" disc drives are the ultimate for home, office and classroom.
- The 3" disc is totally enclosed in rigid plastic and a unique automatic steel shutter protects the delicate disc surface from dust and finger marks. For the first time discs can be used in industrial, educational and commercial environments without the worry of corrupting precious programs and data.
- The disc is "flippable" like a cassette tape and has a storage capacity of 100K on each side in single density mode (twice as much when used with a double density interface). A neat plastic switch can be flicked back and forth to write-protect valuable discs.
- The AMS disc drives are completely hardware and software compatible with 5 1/4" drives which can be used in parallel so allowing easy transfer of software. Consequently the 3" drives will operate with all the standard floppy disc interfaces. They take their power from the outlet provided by the BBC micro - there's no onboard power supply to corrupt data.
- The AMS package includes utilities on either disc or EPROM for formatting and verifying discs. The EPROM, which is easily fitted, offers a simple to use and permanent alternative to using the utilities disc.
- The impressively engineered Hitachi 3" drives feature an eject button allowing single handed operation, a multi-colour LED indicating the disc side in use, and a brushless direct-drive motor for reliable operation. The super fast track-to-track access time of 3ms is at the forefront of disc drive technology. The longest of programs are loaded in a flash.

# WHAT'S ON BBC?

## READ ALL ABOUT IT FOR ONLY £249.

*Even with such a versatile workhorse as your BBC Micro, you've got problems.*

*For example, supposing you want a permanent record of important graphics? Or need to eliminate glitches from a lengthy program? Fast.*

*Without a printer you're stuck.*

*And up to now, even if you had a printer that could play in the same league as your BBC, you were stuck - with a price tag running into three or four hundred pounds.*

*The Seikosha GP500A changes all that.*

*It's got full graphics capability, with a single command enabling you to repeat a column of graphic data as many times as you like.*

*Its printing speed is 50 characters a second in an 80 column dot-matrix format on standard width paper adjustable up to 10 inches.*

*And under its sleek casing, there's a wealth of sophisticated features. Like automatic printing (no data lost due to overflow), intermixing of all modes on a single line and printing of one copy as well as the original.*

*All for only £249.00.*

*No, you didn't misread. The Seikosha GP500A complete with BBC interface cable costs only £249.00.*

*See the GP500A in action - phone for details and the address of your nearest dealer.*

# SEIKOSHA DRG

DRG Business Systems, Peripherals Division, 13/14 Lynx Crescent, Winterstoke Road, Weston-super-Mare, Avon BS24 9DN.  
Telephone: 0934 419914. Telex: 444761.

# Small business can now stop going by the book.

For under £1,000 a small business can now equip itself with a BBC Microcomputer, a disc drive, a word processor and printer.

(All tax deductible by the way.)

Once you've parted with that money, you'll find that business has never been brisker.

Because now, there's a new series of floppy disc software specially for the smaller business.

It has been developed by Acornsoft, the software division of Acorn Computers who are the manufacturers of the BBC Micro.

For only £24.95, each disc can store volumes of vital bookwork which can be updated and amended in a fraction of the conventional time.

And there is a disc to cover most aspects of paperwork and book-keeping.

## The Invoicing package.

This program stores details of products, VAT numbers and, of course, the names and addresses of your customers. As orders come in, you simply record them. Then, when it's time to invoice, you just press a few keys and each invoice or credit note is printed automatically in seconds.

Allowing for variable terms of trading, the system calculates and prints discounts. And it should help to improve your cash flow dramatically.

## The Order Processing package.

With this program, you can confirm your customers' orders, prepare and print despatch notes and make fast analyses of individual orders or of all the orders stored on disc.

## The Accounts Receivable package.

Now, it couldn't be easier to keep your customer accounts under control.

In an instant, you can analyse debtors, produce statements, keep a check on any credit limit and calculate VAT output automatically.

Using this package in conjunction with the invoicing package, you can also keep tabs on payments received against payments outstanding.

## The Accounts Payable package.

This package will keep you fully up-to-date on how much you owe and who to. In addition, it calculates

input VAT and, used with the Accounts Receivable package, produces instant VAT returns.

It also highlights settlement discounts, produces remittance advices and provides an immediate analysis of all creditors.

### The Stock Control package.

Touch a few keys and you have instant access to stock status and automatic analysis by quantity and value.

Consequently, it's easy for you to maintain correct stocking levels, having an early warning of out-of-stock situations or the likelihood of over-stocking.

### The Purchasing package.

All your suppliers' names and addresses go onto the disc. Then they can be retrieved instantly for preparing and printing orders.

All order data can be recalled in seconds, allowing you to check on orders, and suppliers' invoices and to record all deliveries.

### The Mailing package.

Instead of the shotgun method of sending mailshots, this package enables you to refine each mailing down to the customers who are most likely to respond.

It gives you a rapidly accessible mailing file of your customers, according to any criterion you choose. Size of company, for instance, or type of business.

Average value of the business they do with you, or whether they are good or bad payers.

Then, when you are doing a mailing, you simply choose the group or groups of customers you want.

At £24.95 each, these packages could be priceless.

Each package comes with clear instructions on how to get the program running so that you can devote much more of your time to more profitable activities.

If you're a credit card holder, you can order any or all of the packages by ringing: 01-200 0200 anytime. Or 0933 79300 during office hours.

(By ringing the same number, you can get the address of your nearest stockist, or full details of the BBC Microcomputer system if you don't already have one.)

Alternatively, you can order the packages by sending the order form below to: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL. Please allow 28 days for delivery.

☎ Credit card holders, phone 01-200 0200, anytime. Or 0933 79300, during office hours.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me the following business software packages at £24.95 each.

Virgin  
Games

A name to  
PLAY with

**BUGS**  
By Dennis Ibbotson for the Electron  
VGA 8001

An arcade game for the new rare Electron. This fast-moving arcade game has the players' garden being invaded by a whole host of nasties, scorpions, spiders and bugs of all kinds. Your job is to shoot them down before they get you. Your spray can is very fast and very manoeuvrable, but you can still get caught.

**CHECKOUT**  
By Mike Cooke for the BBC B  
VGA 2011

A unique game that keeps your heart beating fast. Charlie the Checkout burglar dashes round the store collecting carpet tiles, a robot guard with lasers tries to stop him. This grid walking game is a must for quick-thinking, fast-fingered players.

**JUNGLE JIVE**  
By Dennis Ibbotson for the BBC B and Electron  
VGA 2801

By the author of another new release, Bugs, Jungle Jive is fast action shoot'em up arcade game. Walk your hunter between the lines of snapping, snarling and slithering beasts. Shoot them all but not the baboons, and especially the snakes. Faster action as you progress. But beware the ricochet - you could shoot yourself! Stunning use of sound and colour.

£7.95

**SPECIAL OFFER:**

All existing games (except the four new ones just launched - what do you want? Blood?) are to be made available at the much reduced price of £6.95 instead of the usual £7.95. This amazing offer is for a limited period only, and includes postage and packaging. Send your cheques to: **I WANT TO TAKE ADVANTAGE OF THIS AMAZING OFFER DEPT.**, Virgin Games, 61-63 Portobello Road, London, W11.

Computer FUN...available NOW!

# NEWS

## Acorn export bandwagon is rolling

### Business users get a boost

BUSINESS software for the BBC Micro has received a powerful boost with the release of new programs from Acorn and Clares.

BetaBase, from Clares, is claimed to be the most powerful database yet for the BBC Micro.

A disc based system, it can handle over 2,000 records with a maximum of 200 fields, each of up to 254 bytes.

On entering the parameters of a file, BetaBase formats the disc to the required number of records.

Meanwhile, Acorn have finally released its long-promised suite of business software for the BBC Micro.

Officially titled 'Small Business Programs', the intention is to offer a comprehensive range of accounting, invoice and stock facilities essential to the small firm.

A DRAMATIC breakthrough by Acorn on the export front has resulted in a forecast that overseas sales this year will account for up to 15 per cent of the group's turnover.

Such is the company's current success story abroad that *The Micro User* has learned that it will have opened up eight new foreign markets by the summer alone.

"We are going from strength to strength", said Bob Bayham of Acorn International, the organisation formed little more than a year ago to spearhead the export drive.

"By the end of the year, we expect exports to make up from 10 to 15 per cent of Acorn's revenue".

The company has yet to announce details of its eight new markets but *The Micro User* is reliably informed that three are in Europe, two being Italy and Spain.

Acorn has already established two overseas subsidiaries - in the United States and Germany - while the remaining markets will be handled for the time being by appointed distributors.

The US operation is expected to start paying real dividends in the second half of this year as orders already taken there are well in excess of 50 million dollars.

More than 1,000 dealers have been appointed in North America to sell the BBC Micro and the American subsidiary has also established an educational advisory board to vet software for the machine out there.

BATTLE of Britain fever gripped London again when a wartime fighter ace scrambled to take to the air in a Spitfire.

Only this time Air Vice-Marshal Sandy Johnstone didn't leave the ground, for it was all achieved on a BBC Micro.

The occasion was the launch of the world's first home computer Spitfire flight simulator - the Aviator - developed by Acornsoft.

In what guests described as "a press relations masterstroke", the event was held in the Battle of Britain Hall at the RAF Museum in

## Air ace flies again

Hendon, with a real Spitfire in the background.

Air Vice-Marshal Johnstone, who commanded the world famous 602 Squadron during the battle, accepted an invitation to try his hand at the new game.

## SOFTWARE PIRATES ON THE AIR

SOFTWARE pirates, always ingenious in thwarting the protection attempts of manufacturers, have begun to use the radio waves to distribute their illicit copies.

Radio hams have started to use their sets to transfer software directly to each other.

The whole operation is beginning to become highly organised.

Ringleaders frequently broadcast catalogues of hundreds of programs from which other hams

can take their pick.

Estimates of the amount of software pirated this way range from £5 million to more than £20 million.

The practice came to light when Rochdale-based A&F Software began to monitor transmissions.

Said managing director Mike FitzGerald: "We were amazed at the scale

of the operation. It's not just games - the other night they were talking about sending Acornsoft's View over the air.

"Rest assured that we will take action against anyone pirating our programs in this way.

"We've already got a list of call signs, and if the offenders don't stop

**Turn to Page 24**

# Spring launch for Second Processor

THE coming of spring saw the launch of Acorn's long-awaited 6502 Second Processor, an expansion device which converts a standard BBC Micro Model B into a high speed dual processor system.

This means that the Model B takes care of all the screen and input/output handling while the Second Processor runs the program proper.

In effect, the BBC Micro acts as a terminal, controlling the graphics.

The usual trade-off between the amount of

memory available for running programs and the graphics definition is thus avoided.

Attached to the micro by the tube interface, the Second Processor consists of a 3MHz 6502 chip and 64k of user memory, running 50 per cent faster than the BBC Micro.

Up to 44k of the Second Processor's memory can be used for Basic programs, with a massive 60k available for assembly language programs.

Two ROMs come with the package. The first is the 16k "Hi-Basic" chip which provides the Basic

for the Second Processor.

The second ROM updates and replaces the user's disc or Econet filing systems with a single chip.

Acorn claims that the Second Processor outperforms all other home and personal computers currently available - including 16 bit and 32 bit machines.

The unit, complete with the two ROMs and User Guide, costs £199.

Despite Acorn's assurances that the Second Processor is available now, dealers have been told that it will be several weeks before they are in the shops.

## ... and Bitstick opens way to CAD

THE BBC Micro has entered the field of computer-aided design with the launch of its Bitstick.

Basically a precision three axis joystick with software, it uses the speed and power provided by the 6502 Second Processor to provide a low cost computer-aided drawing facility.

The menu-driven Bitstick allows wide and easy control over the creation and manipulation of onscreen drawings.

Lines, curves and circles can be drawn in three user-selected colours with "painting" available in four colours and twelve shades.

An outstanding feature of the Bitstick is its ability to zoom and pan in on a drawing, allowing it to be magnified and displayed to virtually any degree.

The Acorn Bitstick system

Also individual elements of the picture can be moved, copied, enlarged, shrunk, reversed and reorientated as needed.

Finished drawings can be saved onto disc, each

holding up to 48 pictures which can be displayed on a pictorial index.

An in-built dump facility enables screen images to be printed on Acorn's Sparkjet Printer.

The graphics software for the Bitstick is held on a ROM chip, while the system master utilities are provided on an 80 track floppy disc.

The entire system, consisting of Bitstick, BBC Micro, high resolution colour monitor, 6502 Second Processor and 800k disc drive, costs under £2,000.

## Enter the 10

A NEW and revolutionary mass storage system for the BBC Micro called Phloopy has just been launched by Phi Mag systems of Falmouth.

Aimed at BBC Micro owners who want to save their programs on something faster than cassette

tapes but can't afford discs, the Phloopy uses a 12-foot loop of 1/4 inch magnetic tape.

The system consists of the Phloopy drive itself, an interface to the BBC Micro and ROM based software.

The tapes come in

## Software pirates

From Page 23

they'll have injunctions served on them to close down their stations".

Contacted by *The Micro User*, the Radio Society of Great Britain said it had no knowledge of any of its members being involved in piracy.

"We know that some of our people are programmers and send their programs over the air - which is quite legitimate", said David Evans, the society's secretary.

"But obviously we would not expect amateurs to broadcast any material where copyright law exists".

A&F seem to be leading the fight against piracy and other abuses - to such an extent that their solicitors have just had to dissuade Acorn

themselves from using unauthorised copies.

At a recent Acorn Roadshow they were found to be using a disc copy of A&F's best selling Chuckie Egg in their display.

Said Mike FitzGerald "It was obviously an unauthorised copy as we don't do a disc version. On top of that, the code had been altered.

"If they'd asked permission they could have used the program - it's good publicity.

"But it's bad publicity when they have the audacity to change code and use a non-standard version".

An Acorn spokesman told *Micro User* they had no knowledge of this happening, and if it did happen they believed it wasn't any of their doing

*PERSISTENT rumours that Acorn is about to drop the Econet local networking system have been strongly denied.*

*"Far from dropping it, we are still developing Econet and will continue to develop and support it for quite some time", said an Acorn spokesman.*

*As a proof of this comes the Level II Econet fileserver, an update on the Level I which allows, among other things, the use of random access files and password protection.*

## the 100k Phloopy

fford  
uses a

sts of  
itself,  
BBC  
based  
ne in

cartridges, each of which can store 100k of data. Phi Mag claim that their tape loop system scores over other such systems in its reliability. This is the result of the "byte-wide" magnetic head used to read and write to the tape.

The head reads nine tracks across the width of the tape, instead of the usual single track. This allows a shorter tape loop and, hence, faster access times. The time to access a file can be as little as three seconds.

BRITISH and American robots are set to play each other at pingpong in 1986. The Robot Pingpong Contest, dreamed up by Dr John Billingsley of Portsmouth Polytechnic, will pit computerised robots against one another. Contest organisers think that sensors enabling robots to "see" the ball and return it will be available within two years. They also believe most of the contestants will be built by hobbyists. The first British

"friendlies" will take place later this year. And American robotics fans are expected to take up the British challenge at the International Personal Robot Congress and Exposition this month in Albuquerque, New Mexico. **Enquiries** Meanwhile, British contestants can get a fact sheet from Dr Billingsley. Already he has had around 30 enquiries from budding robot builders - including one who wants to control his robot with a mainframe!

But Billingsley thinks most will be master-minded by humbler gear such as the BBC Micro. And robot size will be limited by its having to stand on a one-metre square. "After all, we don't want the contestants too big" he said. "Just imagine what would happen if a big one got out of control". **\*\*\*** HOBBIT publisher Melbourne House has brought out a "Guide to Playing the Hobbit" at £3.95.

# CABLE TV PUSHES COMPUTER GAMES

THE MICRO market may shortly make another sharp change in direction. By the end of this year, computer games will start to pour into the homes and TV sets of a growing number of cable subscribers.

And at a rental of around £10 a month, industry observers predict a down-turn in business for retailers of micros and software.

Three companies are now wooing the cable operators - all with basically similar plans.

British Telecom proposes to lend each of its cable subscribers a Spectrum complete with joystick and a choice of 20 games and educational programs.

Thorn EMI offers a software-only option for owners of micros such as the BBC, Apple and Sinclair.

And high-street retailer W.H. Smith has a tie-in with The Games Network, already a big name in America. The deal will include a Japanese-built

micro, and will also feature more than 20 programs.

But games are only the tip of the iceberg.

All three companies expect that once they have a foot in the door it

will lead to home word processing, banking, shopping and electronic mail.

And W.H. Smith is working on a range of software aimed squarely at the small businessman.

Ian McNaught Davis, left, and Paul Vaughan try champagne opened by computer-controlled robot.

A LEADING manufacturer of peripherals for the BBC Micro officially opened its new £150,000 headquarters recently with a ceremony where the champagne cork was fittingly popped by a computer.

Broadway Electronics of Bedford also marked the event by predicting that it will create up to 50 new jobs in the next two years.

The success story of the four year old business which now has a turnover in excess of £1 million - began when managing director Paul Vaughan failed to clinch a sale.

Acorn Computers did not want to buy Paul's components. But instead, he decided to stock their computers at his tiny Bedford shop.

"It was a major turning point", he explained. "When the BBC Micro was launched, we estab-

## Chips pop the cork

lished a reputation with schools and colleges within a 50 mile radius as a servicing agent.

"Then a year ago, we began to design and manufacture peripherals for Acorn to give us a measure of product independence".

Ian McNaught Davis of BBC Television's programme, "Computers in Control", was on hand to assist with the official opening.

## Plug-in processor

CAMBRIDGE Micro-processor Systems has introduced a single board plug-in second processor for the BBC Micro. It is designed to enable

software houses and engineering departments to develop new hardware and software, and as a teaching aid in further education.

# "YOUR SAME-DAY SERVICE IS BY A LONG WAY THE BEST"

(J. Farmer, Edinburgh)

CONFUSED by the growing choice of BBC programs? We can help. We've played hundreds to choose the best (like the ones on this page.) Details in our catalogue - free with your order. It's the only catalogue to give details of the best, omit the rest and quote all the reviews. All programs work with keyboard control or joystick as shown. All programs FOR 32K BBC.

**WE TRY TO SEND YOUR PROGRAMS THE SAME DAY WE GET YOUR ORDER.** Access/Visa card holders phone 01-789 8546, 24hrs, from any country where your own laws allow this. All games in stock - and tested by us - BEFORE we advertise them! Try us and see ...

Of course, we have the classics like THE HOBBIT (text only) £14.95 and PIMANIA (win £6,000!) £10.00 and the 747 FLIGHT SIMULATOR ("the best") £8.95. But we also have, among others ...

**FORTRESS** Too new for reviews, this 'ZAXXON' -type game works beautifully on your Beeb. As Pace say ... the Fortress awaits you. It is a classic computer game, in a smashing 3D graphic form. All the features you would expect, plus a Hall of Fame. Fast and furious. STIX OK. (Pace) £8.95

**POOL** A very realistic simulation in this game for two players. (With very good Scott Joplin music, too!) You can play solo to perfect your technique. Excellent and smooth hi-res colour graphics make the full-screen table a pleasure to play on. You control the cue angle and strength of shot and can get it down to a fine art. Choose the frames to play, too. Great display: very satisfying program. NO STIX. (Dynabyte) £7.95

**LORDS OF TIME** "Some of the most intriguing puzzles I've come across ... not to be missed". (Home CompWkly) "Executed with wonderful style ... highly recommended". (PopCompWkly) In this text-puzzle adventure you must collect 9 objects, each marked with an hourglass, from different timezones - from the Ice Age to the Space Age. 200+ locations, 750 messages, 80 objects, vocabulary over 200 words. Beautifully written and more sophisticated than ever. NO STIX (Level 9) £9.90

**MAGIC ADVENTURE** The first, and very beautiful, graphic adventure for children up to about 8 years old. Simple to operate - with an overlay for the User Defined Keys, but intriguing to play. Meet The Talking Tree, open the cage - maybe: count the rabbit's babies: can you get into the Fairy Castle? Great sound too and simple but very imaginative graphics. Loved by children in 57 primary schools already! We think it's, well, magic! NO STIX. (Kansas) £7.95

**VAMPIRE CASTLE** A brand new and surprisingly spine-chilling text adventure with some of the best music we've heard and a few graphics. The sounds and music are really great and the adventure is very well-written indeed. As a humble villager, you explore the dreadful castle, smell the musty smells, watch out for the eyes peering from the gloom. Save feature, of course. But it may not save your life! NO STIX. (Micrograf) £7.95

**SPACE ADVENTURE** "One of the best of the new generation of adventures ... challenging and exciting" (BBC File) "The smoothest graphics I have ever seen" (Beebug) Absolutely amazing graphic adventure as you explore the 90 rooms of the drifting spaceship to find the keys to the rooms where the power capsules are hidden. 10 command keys: 3 skill levels: 8-way movement. One of the games we come back to again and again. STIX OK. (Virgin) £7.95

**VORTEX** "A fast exciting game with some of the better 3D effects ... recommended" (PCGames) The newest game from the author of 3D BOMB ALLEY (£7.95) takes you on a 3D voyage into space as you are slowly drawn towards the black void. Seek the aliens, dodge the asteroids, as the Vortex drags you relentlessly towards itself ... stunning b/w full-screen very fast 3D graphics and great sound. STIX OK. (Software Invasion) £7.95

**PINBALL ARCADE** "As professional a piece of software as you are likely to find ... the graphics are exceptionally good" (C&V Games) **DESIGN YOUR OWN PINBALL TABLES!** One example is included, but the fun is designing, playing and saving your own. You can add or take away or move 38 different features - springs, wires, flashing lights, bumpers. Alter their scores, their bounce. Alter the flippers, even tilt the table. Change just about everything, quickly and easily. Then play with the results. Be your own Pinball Wizard. NO STIX. (Kansas) £9.90

**BIRDIE BARRAGE** "Very little to fault ... well-presented, and as accurate as you're going to get". (PersCompNews) The best golf game we've seen for the Beeb. Acorn Park Golf Course has 18 holes, 72 par. You have a full bag of clubs and full screen graphics to play with. Set direction and power of each shot very accurately - and watch your ball in flight. Special detailed display when you reach the green. Wind strength, direction, changes between holes. NO STIX. (Computasolve) £7.95

**TWIN KINGDOM VALLEY** "Sure to become a classic ... an involved and difficult adventure ... the excellent graphics add to the enjoyment". (MicroAdventurer) Not only a great adventure, but all 175 locations are drawn in hi-res graphics - and some of the beautiful drawings contain clues. 36 commands: realtime adventure with 6 control options. Rapidly becoming OUR BEST-SELLER! NO STIX. (Bug-Byte) £9.50

**CYLON ATTACK** "Stands head and shoulders above the rest" (Acorn User) "Excellent ... the standard by which other games will be judged" (Micro User). "A superb program with excellent graphics" (CompChoice) You will really believe you are launching from and docking with a mother ship: you will see and feel you are refuelling: you will know exactly when you can kill the enemy. UNIQUE 50-PLACE HI-SCORE TABLE CAN BE SAVED. Great. And 3D, of course. STIX OK. (A & F) £7.90

**TRENCH** "It's very hard even at skill level one ... a challenge to your skills". (A&B Comp) "Manna from heaven" (PersCompNews). One of the most exciting games we've ever played. Fly your Beeb X-wing Fighter down the 3D Trench towards the Death Star-style target, dodging the tie-fighters as they attack. 9 skill levels: sensational graphics: one of our best sellers. STIX OK. (Virgin) £7.95

## 8 GREAT SUPER SAVERS! SAVE £16.00!

Save £2.00 on each of these great programs, which have all starred in our BBC-best catalogues.

ALIEN INTRUDER (Superior)	ONLY £5.95
DANGER UXB (P.Power)	ONLY £5.95
FELIX IN THE FACTORY (P.Power)	ONLY £5.95
LUNAR RESCUE (Alligata)	ONLY £5.95
MICROBE (Virgin)	ONLY £5.95
MOON RAIDER (P.Power)	ONLY £5.95
ROAD RUNNER (Superior)	ONLY £5.95
WORLD TRAVEL GAME (Hessel)	ONLY £4.95

# When a BBC micro spells hope..

A POLICEMAN'S lot isn't always a happy one.

Like the time PC Colin Sanders, of the Greater Manchester force, realised that his son Andrew was not like normal children.

For the sad fact is that 10-year-old Andrew is handicapped.

"Looking back, the signs were always there", recalls his father. "He was late when it came to crawling, walking and talking. I suppose we didn't want to face up to it."

"So it wasn't until after nine months at primary school followed by transfer to a special school that his mother and I had to come to terms with the problem".

Like most parents in the same situation, Colin

Sanders and his wife lived in hope of a miracle which would enable Andrew to show some real improvement.

Now they are convinced he is on the verge of a breakthrough – and it's all thanks to the micro revolution.

For since Andrew was introduced to a BBC Micro he has come on in leaps and bounds.

His concentration has intensified, his coordi-

nation improved substantially and he has recently mastered the ability to count from one to ten.

The youngster first got hands-on experience of the computer at the Hawthorne Special School in Denton near Manchester. It was on the advice of his headmaster that his parents decided to buy one for him at home.

As always however, money was the problem.

But Colin was so convinced that the computer was vital to his son's wellbeing that he was prepared to sacrifice the family car.

However officials of the Police Benevolent Fund got to hear of the story and stepped in with cash to buy a BBC Micro.

"We have been delighted with the results ever since we got it home", Colin told *The Micro User*. "Every even-

ing he goes on it for a while, and he has already shown all round improvement".

As they watch their son improve day by day, the Sanders are filled with gratitude for the help they received.

"To the Police Benevolent Fund, I offer my heartfelt thanks", says Colin. "I now hope and pray that the BBC Micro will turn out to be the best buy of my life . . ."

## Government aid is a Buggy-booster

A PLAN to give pound-for-pound government aid to secondary schools for buying computing equipment is boosting sales of the BBC Buggy, reports Economatics, maker of the robot.

The scheme also applies to printers and upgrades for the BBC Micro.

It is administered by the Council for Educational Technology, which acts as a clearing house for bulk orders.

Equipment bought under the scheme is paid for with cash from the

Department of Trade and Industry. Schools are then invoiced at half price.

This means they pay about £60 for a buggy.

Economatics expects these low cost buggies to establish a grass roots interest in robotics, just as the BBC Micro sparked off a nationwide computer boom.

The DTI hopes that by the time the scheme ends in July every secondary school will have a Buggy.

After July, further sales will go through the normal dealer network.

In anticipation of a

growing robotics boom, Economatics is working on add-ons. A pen kit is to be released later this month followed by a grab arm.

Some higher education establishments are also buying the BBC Buggy, even though they do not qualify for the DTI rebate.

### Party line

WIGAN Labour Party is putting all its records onto a BBC Micro database system.

## Beebriefs

THE BBC Micro is now fourth in the home micro charts. Just ahead, in third place, is the Commodore 64.

Sinclair's Spectrum and ZX81 have a combined one-third market share. Sales of two million home micros are forecast for 1984.

RME Diamant has brought out a series of BBC Micro programs for builders. Typical subjects are U-value calculation, heat loss and insulation depth.

Philips has launched a 12 inch monitor at £70 for micros, including the BBC.

Acorn's forthcoming BBC-based business computer will have two built-

in floppy discs, beefed-up CPU, and sell around £900.

13,000 pirated computer games were seized by police in Manchester.

Acorn will launch a computer-aided design workstation this year.

Newsbox has designed a system based on the BBC Micro for news-agents.

Cyber Robotics is offering a five axis robot for use with the Forth language on the BBC Micro.

Acorn has set up a venture capital fund for small high-tech companies in the Cambridge area.

# SCREENPLAY

## £200 COMPETITION

SCREENPLAY offers anyone who buys the ANIMATOR for the DRAGON 32/64 or the BBC Micro, the chance to recover the cost and a whole lot more.

All you have to do is to write an original program using the SPRITES from the ANIMATOR. Programs may be written in basic or machine code.

The winning program will be published by SCREENPLAY and the author will receive £200 cash plus royalty payments, subject to SCREENPLAY standard terms and conditions, a copy of which can be obtained by request.

Even if you don't win the £200 cash prize, if your program is of high enough standard, you could be making MONEY before the closing date of the 1st September 1984, by having your program published by SCREENPLAY.

Rules of the competition and entry forms are included in the package. All entries will be acknowledged.

THE ANIMATOR is a sprite GENERATION package for the BBC MICRO and THE DRAGON 32/64. The sprites produced have collision checking facilities built in and can be moved around the screen from your own basic or machine code programs.

The programs are supplied in a box with a comprehensive manual and demo programs. Details of each product are given below.

### SPRITE FEATURES INCLUDE:

#### BBC MICRO:

Maximum size sprite 30 x 30 pixels:

16 colours in each sprite:

64 sprites at 8 x 8 pixels or 9 sprites at 30 x 30 pixels:

Each sprite generates 2 other related clones.

**ONLY £11.95**

#### DRAGON 32/64:

Sprite size up to 40 x 40 pixels:

all available colours:

all 5 HI-RES modes:

25 sprites at any one time:

40 page manual and demo game included.

**ONLY £9.95**

## DEALERS

CONTACT 041-248 2481 for details of our range of software and dealer terms.

## PROGRAMMERS:

Excellent royalties paid for top quality original programs. Send off now to, the PROGRAMMING DEPARTMENT at SCREENPLAY.

Cut out this coupon and send it now to:  
SCREENPLAY, 134 St. Vincent Street,  
Glasgow.

Please rush me THE ANIMATOR for the:

DRAGON 32/64 [ ] £9.95

BBC MICRO [ ] £11.95

All cheques payable to SCREENPLAY.

# Micro games go on video

A VIDEO show has been made about computer games.

Christ Tarrant introduces the 35 minute programme, which shows 32 computer games, ranging from animated soccer to outerspace adventures.

It shows what's on the

market and explains how to play them.

The games were recorded without a camera directly from the games computers - BBC Micro, Spectrum, Oric, Commodore - onto video tape.

The idea is to let people sample games before they buy. The video is available for sale or rental from leading dealers.

## Sophisticated CAL made easier

AN authoring system for the BBC Micro that enables non-programmers to write sophisticated computer-aided learning programs has been launched by Acornsoft.

Called Microtext, the new system simplifies the production of "man-computer" dialogues for a wide range of applications, particularly in education and training, expert advice and information retrieval and gathering.

Microtext is aimed at the non-computer expert, requiring only a basic knowledge of the BBC Micro to produce sophisticated computer-aided learning (CAL) systems.

### Feature

All have text and graphics, response handling, decision making and branching.

A key feature of Microtext is its "frame" structure. Each frame represents a screen of text and graphics, together with control commands to govern frame sequence.

A series of frames builds up into a module, whose size is limited by available computer memory.

However a single Microtext program may be constructed from more than one module - as

many as there are room for on the user's cassette tape or disc.

Microtext also supports sound and hi-res graphics, and can even control devices such as slide projectors and videotape recorders through the BBC Micro's user port.

### Versions

Microtext was developed by the National Physical Laboratory. It is currently available on cassette or disc.

ROM-based versions

are to follow.

A publishing version of Microtext, to enable application programs to be securely distributed and reduce user memory requirements, is also planned.

The system comes complete with comprehensive documentation.

This includes authoring guide, reference card, function key strip, and a "welcome" guide to the nine demonstration programs included on the cassette.

## SYMBNET FOR SCHOOLS

A NEW version of Symbiotic's Symbnet has been developed to enable teachers to use the BBC Micro for full local area networking.

The system is said to require no great computer knowledge.

BBC Symbnet uses the same fibre optics as earlier versions. It is compatible with Acorn DFS and with the tube.

NDOS (Network Disc Operating System) will run Acorn DFS software without modification, even most protected systems.

Acorn DFS ROMs are

not required.

All BBC Micros have full access to the network and none are tied up as file servers.

Each Symbnet disc drive - a Winchester is treated by the system as several floppies - can be either global or private for read only or read-write access.

The system manager is kept on floppy disc. It allows configuration of the system for such operations as automatic downloading of programs and files when students log on.

Electronic mail is also

THIS modem links the BBC and other popular micros to Prestel, Miconet 800 and similar viewdata services.

The Telemod 2 sits beneath the telephone.

It connects to the phone line via the BT module extension socket and will connect directly to the BBC and most other micros via an RS232 or serial port.

## Secrets on top

BBC Micro fans who are looking for something a bit different can now buy a system that will let them eavesdrop on secret radio transmissions.

The breakthrough comes from Microcentre of Bognor Regis. Their method enables anyone to decode morse, and signals from press agencies, Interpol, embassies and other users of long-distance short-wave broadcasts.

The transmissions sound like high-pitched whistles but in fact contain messages.

No knowledge of morse is needed, because a decoder translates the signal into plain language for display on a monitor screen.

However the price of around £1,000 is likely to deter all but the keenest.

## Hobbit speeds up

AT Ikon Computer Products, makers of the Hobbit tape drive, top man David Tucker is busy taking orders from BBC Micro users for his Ultra-Drive.

The new machine, like an improved Hobbit, holds nearly twice the amount of data - 200k.

It is also claimed to give twice the speed - 1,200 bytes a second.

Ikon are planning to offer a factory upgrade which will put Hobbits into the Ultra-Drive class.

## BP 'build a robot' challenge

BP Oil has challenged Britain's schoolchildren to roll up their sleeves and tackle the household chores - with a robot.

Winning schools can clean up prize money totalling about £3,000.

The BP Buildarobot competition offers two routes to the finals at the School of Electrical Engineering, Arborfield, Reading, in October next year.

One challenges schools to design and construct a freestyle robot to perform a useful domestic task.

The other, for schools who prefer a set challenge, is to build a mobile robot butler to serve a drink to two people seated in a room.

Competitors, who must be under 19 on August 31, 1985, can enter one or both categories.

Regional finals will decide who goes through to the national finals.

The first BP Buildarobot competition had its finals last year and the standard of entry won praise from Minister of State for Industry and Information Technology, Kenneth Baker, who presented the prizes.

## Ghost walks in a micro store

THE BBC Micro's pulling power now apparently stretches beyond the grave.

For the ghost of electronics pioneer Sebastian de Ferranti materialised in a northern town recently just to get a glimpse of the machine.

Complete with silver topped cane, tailcoat and bowler hat, the apparition of the Victorian genius dropped into the Wilm-

slow Micro Centre, Cheshire, to see for himself the results of his visionary dreams of a century ago.

It was all for the benefit of a government film unit which had resurrected the 19th century gentleman in the form of actor John Rankin for a television programme about the micro revolution.

The film, which has been booked by 60 TV stations around the world,

## Bank managers are training on the BBC micro

BANK managers from all over the country have been climbing out of their cupboards, casting aside bowlers and brollies in their rush to get to grips with the BBC Micro.

They are all making their way to the Bank of Scotland's staff training centre in Edinburgh

where they are being given the opportunity to work with a new network.

Designed by consultants Commcot, the system combines the BBC Micro with the Torch Z80 dual disc drive and Torchnet to provide a low cost flexible network.

Torchnet not only enables individual workstations to communicate with one another but also to share the use of relatively expensive additional equipment.

"We have always believed that our branch managers should be in a position to offer something a bit more practical than sympathy", said Stewart Henderson, manager of the bank's training department.

"The objective of our investment in this installation is not to turn our managers into technical consultants or advisers, but to develop and heighten the awareness which already exists of the areas in which microtechnology can be of assistance to our customers".

## BARRY WOOD'S TAILPIECE

TO go with their second processor, Acorn seem to have invented a new form of double speak.

Quoth an Acorn spokesman: "They're available from the warehouse now, but there may be some delay for new orders while we fulfil the backlog".

\*\*\*

ACTUALLY, I really do believe there's a warehouse full of the things - they're probably hidden behind all those Electrons.

\*\*\*

WHAT is certain is that because of the acute shortage of Electrons Acorn have had an "Out of Stock" notice printed for W.H. Smiths.

Good luck delivering those, lads...

\*\*\*

HAS anyone noticed that the QL in Sinclair's new machine stands for "quantum leap"?

Considering that a quantum leap is probably the smallest "leap" you can make, I think old Clive is being astonishingly honest.

\*\*\*

"SO", quoth an inquisitive reporter to the ubiquitous and uniformed Acorn spokesman, "your new business machine will run Unix and Zenix, will it?"

"Who told you that?" cried the AS, aghast.

"You did", came the reply, "in your advert for a programmer last month".

\*\*\*

WE had a phone call from an irate reader the other day. Apparently he'd seen an advert in the mag offering "Plinth for BBC Micro".

He was disgusted when he got a monitor stand and not a high-level language.

\*\*\*

IN case you're wondering where I was last month, I was in Brazil, sipping coffee with Ronald Biggs.

And you'll never guess who I saw over there - but don't worry,

Chris, your secret's safe with me...

\*\*\*

THE hyped-up press releases from software houses get worse and worse. One of the latest gems announces a "pending release".

I wonder if they'll let me buy it with my "pending money"?

\*\*\*

LATER in the same release they tell us that "the decision was made to try and create a model program to cater for most all specifics".

Stirring stuff!

\*\*\*

WELL I've got my micro and I've got my

ashtray and all I need now is something to fill it.

Maybe I should take up smoking.

\*\*\*

NEVER mind asking where all the Electrons have got to, I've got a much more interesting question.

What's happened to all the adverts for the Electron?

\*\*\*

SO an Acorn spokesman denies that they might be dropping Econet. Very reassuring.

But would you buy a used Econet from an Acorn spokesman?

# SIMON. W. HESSEL

FINANCIAL GAMES

## THE KEY TO THE COUNTRY FOR £6.95

### WITH GREAT BRITAIN LIMITED

Have you ever wondered what you would do if you came into some money? Would you be able to invest it and watch it grow, or maybe start a small business and become a millionaire? With Inheritance you have the chance to find out.

"A great game, really two games for the price of one." MICRO USER.

**£5.95**  
COMPLETE

A game for 1 or 2 players. Your aim is to obtain six souvenirs from six different countries and return to London intact, in the shortest possible time. Keep your head and try to avoid hijacks, bankrupt airlines, bad weather, thieves, car breakdowns, strikes and other problems inherent in World Travel.

"Exciting, competitive and even educational - not to be missed."

**£5.95**  
COMPLETE

Ever thought you could run the country better? Here is your chance as Prime Minister (of the party of your choice), you have to guide the country through its social and economic ills for five years, then put yourself up for re-election.

"Great Britain Ltd., is easily as exciting, and certainly more satisfying than any game of space invaders." MICRO USER.

"A must for all budding politicians." COMPUTER ANSWERS.  
"Thoroughly enjoyable and worthwhile decision-making activity and as such, it can be thoroughly recommended." EDUCATIONAL COMPUTING.

**MAKE THE BBC  
AN EXPERT AT  
COMMUNICATIONS.**

The BBC Micro is unbeatable when it comes to holding your attention. But when it comes to talking to the rest of the outside world it's virtually speechless.

Until, that is, you speak to us.

In which case you and your BBC could soon be accessing viewdata systems throughout the country.

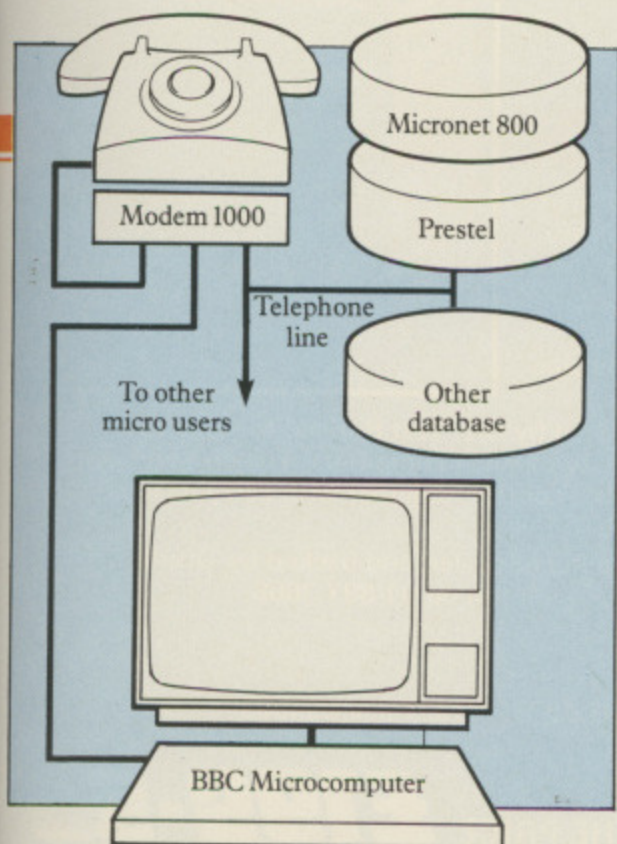

By simply linking your BBC into our purpose-designed communications and viewdata system you dramatically increase the capability of your micro. Allowing you to keep in touch with your friends. And to get answers within minutes to electronically mailed letters. You can even try your hand at the latest adventure games on Micronet 800 (as well as looking at the news, reviews, prices and best-buy information).

In addition to all this, you will also be able to access Prestel. A vast database of news and information. Helping you to book tickets for your favourite concerts. Plan your road and rail trips. And even check the weather forecast before you go.

Our communications and viewdata systems open up the world to you and your micro. And at a down-to-earth price - with systems starting from under £90.

So, if you're keen to contact the outside world... simply contact us.

*The Technology that puts NOVEX light years ahead*

Display Distribution, who market probably the most comprehensive range of professional monitors, announce an astounding leap forward in monitor technology.

The revolutionary NOVEX D/S monitor combines superb resolution graphics, colour balance and image clarity which moves existing monitor technology into the past. NOVEX advanced technology doesn't stop there; just push the unique green switch and instantly convert your monitor to a D/S green monochrome monitor for programming and word-processing applications.

NOVEX monitors (recommended for use with the BBC Micro and approved by the 'Test Bureau' for education) are specifically designed with both RGB and PAL inputs to cater for the majority of small computers. The durable metal case (in BBC Micro colours) houses an internal speaker with independent volume control, together with carrying handles for greater safety when moving the monitor around.

The complete range of NOVEX monitors is available through your local micro dealer, and backed by Display Distribution's after sales support. Dealer enquiries welcome by contacting Charles Martin on 01-891 3668.

- **CS400S** Mitsubishi Double sided 40/80 track 400K 5 1/4" Single Drive **£340**
- **CD200** TEC Single sided 40 track 200K 5 1/4" TWIN Disc Drives **£275**
- **CD400** TEC Single sided 40 track 200K 5 1/4" TWIN Disc Drives **£365**
- **CD800** Mitsubishi Double sided 80 track 800K 5 1/4" TWIN Drives **£425**
- **CD800S** Mitsubishi Double sided 40/80 track Switchable 800K TWIN Drives **£465**
- **SPARE DRIVE CABLES, SINGLE £6; DUAL £9**
- **DFS Manual (comprehensive) £7.50 (No VAT)**

P.S.  
1. You do not require Formatting Discs when using our DFS as the formatting program is in the ROM, nor do you require the expensive 40/80 track switchable drives as with our DFS, you can read and write 40 and 80 track discs on an 80 track drive (software switchable).

2. MITSUBISHI SLIMLINE DISC DRIVES that we supply are Double Sided, Double Density 5 1/4", 1 Megabyte. (With BBC Micro 400K after formatting.) When used in conjunction with Double Density board one obtains 800K (approx) after formatting. Track density 96 TPI, track to track access time 3mSec. These drives are very fast, quiet and efficient. We strongly recommend them.

## NEW

### Mk II 13 ROM SOCKET BOARD

Now all lines fully buffered - On board battery back-up facility - will now accept EPROMS 2716, 2732, 2764 & 27128 and ROMs 6116 & 6264.

Simply plugs into one of the four ROM sockets currently available in BBC Micro. There are only 5 solder connections to be made. Full instructions are supplied. This board has been ergonomically designed to enable the user, easy further expansion inside the Micro, e.g. Double Density Board, Torch Board, etc. (At Watford, we think ahead.)

Our 13 ROM SOCKETS BOARD enables the User to increase the Sideways ROM capacity the basic four sockets on the main board up to the full SIXTEEN capable of being supported by current operating systems. In addition the board is designed with the facility to hold up to 16K RAM, which when switched into operation is automatically selected by any WRITE signal to the Sideways ROM area. This gives the User the ability to write a utility or language and upon pressing break have the utility or language up and running (new ROM software can be developed and tested in situ.)

The Board gives the User, plenty of freedom to explore the possibilities of the new paged ROMs due in the coming months and offers them the chance to develop their own.

All lines are fully buffered and the Board meets or exceeds all timings for operation in the BBC Microcomputer. When fully populated, the ROM Board consumes less than half the recommended maximum current limit.

Supplied ready-built and tested complete with fitting instructions.

**ONLY £32.50 (carr. £1)**

## EPROM PROGRAMMER for BBC MICRO

At last! - the EPROM Programmer for BBC Micro Computer from WATFORD ELECTRONICS that will suit both your pocket and all your requirements. Programs all popular types of EPROMs from 2K bytes up to 16K bytes - 2716 - 2516 - 2532 - 2564 - 2764 - 27128.

This extremely powerful system is designed for your needs of TODAY & TOMORROW! - BBC Basic programs can be copied into EPROM and subsequently re-loaded faster than from a disc! Suitable for both hobbyist and professional users!

Just look at these features:

- **COMPLETELY SELF CONTAINED** - Housed in its own sturdy case - Uses its own power supply - connects directly to the 1MHz Bus - Simple and Safe!
- **FULL SOFTWARE SUPPORT** - Comes complete with simple to use fully machine code ROM based software and easy to understand manual. Facilities include Verification, Reading, Virgin Testing, Writing, Editing, Saving, Loading and more! NOTE!! - This software does not simply comprise hastily prepared routines to get you going, but is a professional, purpose designed applications package.
- **ACORN BUS COMPATIBLE** - Use of the 1MHz connection complies with all Acorn addressing recommendations - That means you can still add-on such things as the TELETXT, IEEE 488 TUBE and PRESTEL
- Allows more than one program to reside in an EPROM using the ROM Filing System.

**ONLY £89 incl. Manual (£3 carr)**

## BEEB SPEECH SYNTHESISER

### VERSATILE SPEECH SYNTHESISER UNIT FOR THE BBC MICROCOMPUTER

Watford Electronic's very own Speech System. Specially designed so that even a novice can make his BBC talk:-

- SIMPLY** the best! - An unlimited speech synthesis system. Complete with easy-to-follow manual. Controlling software is in ROM so no Cassette Loading problems!
- PHONEMES** for word synthesis - That means unlimited vocabulary! No extra speech dictionary chips to buy!
- BUILT-in** Library of approximately 500 words to get you started.
- ENGLISH** accent - Utilises inflexion techniques to produce highly comprehensible speech.
- EASY** to use system - Just plug the software ROM into a socket, the Speech unit into the User Port, and away you go! No specialised 'dealer upgrade' required!
- COMPACT** unit - The whole system is built into a small case - easily tucked behind the computer. Auxiliary output socket provided for direct connection to an external amplifier.
- HOURS** of fun! - Suitable for any application - Games, Educational Programs, Specialised Packages.

We know this all seems too good to be true but DON'T BE LEFT SPEECHLESS! Order your Versatile Speech Unit now!

**Only £44**

**WATFORD'S  
BEEB PRINTER ROM**

Are you fed up with not being able to unravel your printer manual and use all those features you paid for? Need sensible paging for use in the creation of booklets? Then you certainly need our Beeb Printer ROM.

A machine code printer utility in ROM.

- 'Single' key operations replace control code sequences for underline, font and size selection, paper movement, etc. Up to 30 come pre-defined, without effecting normal fn key usage.

- **This rom allows easy control of your printer from 'Within' WORDWISE text. Instead of long escape sequences, you just 'OC' a single number to Select, Underline, Print Styles, etc.**

- Automatic fanfold page margins. Puts gaps in listings. PRINTed text etc to skip the folds. The gap size alternates to minimise paper wastage when using binders.

- Form feed and related commands, made available on ALL printers. Can also provide a left margin.

- User defined characters embedded within text are printed as on VDU.

- ★ Commands select option for GP100, STAR, NEC, MX/FX, LP VII/DMP100, DMP200. Operates with Parallel and Serial Printers.

- Fully functional with the popular WORDWISE wordprocessor.

*Supplied complete with a comprehensive 50 page manual.*

**Price: £24**

(When ordering, please specify the make of printer you have.)

**SPECIAL OFFER**

Buy BEEB PRINTER ROM and any one of the two SCREEN DUMP ROMS for

**ONLY: £33 (A saving of £7+)**

**TWO NEW GRAPHICS  
SCREEN DUMP ROMS**

**DUMP OUT 2**

A versatile machine code hi-res Screen Dump ROM.

- You can now have small or large 2 tone dumps and multi-tone 'colour' pattern dumps (8 distinct mode 2 shades) on every printer.

- \*Commands initiate the required dump optional parameters may be included for colour masking and selecting the part of the screen to be dumped.

- Clever use of the processor stack means that no workspace is required! (Multitone dumps also use 2 zero page locations.)

- For GP80/100/250, STAR, NEC, EPSON MX/RX/FX, LPVII, DMP100/120/200/400.

- Screen modes 0, 1, 2, 4, & 5.

- Instruction Manual

All this for

**ONLY £15**

**EPSON DUMP ROM**

A specially designed Dump ROM for EPSON RX and FX Printers.

Will accurately DUMP all Screen modes including TELETXT, GRAPHICS and DOUBLE HEIGHT. MULTITONE DUMPS are also supported. Simple single command (\*SCDUMP) operation.

**Only: £16**

**WATFORD JOINS THE  
COMMUNICATION REVOLUTION**

**MODEM 84**

**Prestel**

**A British Telecom Service.**

With the launch of Watford's MODEM 84 you can now hook into PRESTEL, MICRONET, HOMELINK, TELECOM GOLD, etc., for about the cost of a good tape recorder. Prestel gives you access to an incomparable database covering almost every subject under the Sun. There is Micronet with lots of free programs that you can download and run. Details of Clubs and User groups, a diary of meetings and exhibitions, news and reviews, technical information, etc. There is Homelink with On-line banking. And there is armchair shopping, travel information, Entertainment, World News, Sports News, Business News, Weather information, Electronic mail and lots more. The basic Prestel subscription is only £5 per quarter for domestic user and at off-peak times there is no charge for access time. Can you afford not to be part of this revolution?

Now using the latest techniques and the new generation of Modem chips, Watford have developed a Modem that is newer, better and yet cheaper than any on the market.

*Compare the Specifications:*

**MODEM**

- Direct-connect Modem using BT approved isolation components.
- Full Duplex V23 operation for Prestel and TELECOM GOLD operation (1200/75 Baud).
- User-to-User half duplex 1200/1200 Baud operation with AUTOMATIC SEND/RECEIVE switch (BEWARE - most MODEMS switch manually between send and receive, which precludes the use of intelligent user-to-user software).
- Simple single button operation and comprehensive LED status display.
- Attractive Beige case to match your Micro. Sized to sit on the disc drive.

(P.S. BT approval applied for).

**NEW FX80 PRINTER  
DRIVER for VIEW**

Do you want to use Italics or Enlarged Characters with View? French or German Characters? These and other FONTS from FX80 character sets can be accessed using our Printer Driver with VIEW. The disc contains an example as well shows how to use. Available on 40 or 80 track Disc. **ONLY: £7.50**

**NEW SUPER PRESTEL  
INTERFACE ROM**

Fully compatible with Watford's MODEM 84 as well as with PRISM and most other Modems.

- Supports full Prestel Colour Alpha and Graphic Characters including Double Height, Flashing, Conceal/Reveal.
- Called by simple \*PRESTEL command. Disc and Tape configurations fully supported.
- Telesoftware downloader included.
- Comprehensive MAILBOX facilities including offline editor.
- Auto Logon sequence, can be burnt into ROM if desired.
- Unique "TAG" facility allows tagging and recall of interesting pages - avoids the common and annoying 'NOW WHERE WAS THAT PAGE' problem.
- Page load and save to tape or disc. Pages are automatically saved under Page Number reference in a 'FRAME' directory.
- Print page options are ASCII only (i.e. with suppression of Graphics) - fast and works with any printer - as well as a full graphics dump for the popular Epson printer.
- 'USER' function call built into interface with specialist add-on routines (your own as well as ours).
- All the above facilities available from Function Keys. An overlay is provided giving simple yet comprehensive guidance to the key functions.
- Comprehensive instruction manual supplied.

PRICES:  
SOFTWARE in ROM incl. Comprehensive MANUAL **ONLY: £25**  
MODEM 84, SOFTWARE in ROM & Operating MANUAL **Only: £75 (Carr. £1.50)**  
*(Please allow upto 28 days for delivery)*

Coming soon:  
BEEB User-to-User ROM. For automatic user-to-user communication including file/program transfer. (Requires Watford's MODEM 84 or PRISM 2000).  
Please write to Watford Electronics for full details, Order and Application Forms.

**VIEW**

Acorn soft's Wordprocessor ROM. **£52**

**FORTH ROM for BBC**

This superb (FIG FORTH) compiling language now available in ROM. Simply plugs into one of the ROM Sockets. Manual included. **£33**

## WONDERFUL WATFORD

### TWO NEW DATABASE SOFTWARE for BBC Micro

### ★ ★ NEW LAUNCH ★ ★

#### DISCDATA

At last for BBC Micro Disc users, Watford Electronics have produced 'DISCDATA' which must be the most versatile general database at the price on the market. The length of your files is restricted only by the space on your disc. You can have up to 20 fields with 'page' length records of up to 254 Characters. The program is completely menu driven obviating reference to a manual although written guidance is given with the program. Add and delete records, amend title, field names and records, sort on any field and search for any record or group of records in any field. You do not need to abandon or rewrite your files if you wish to add additional fields or extend the length of any field, the program will rewrite the files for you. Your files can be in any drive. Output can be in 40, 80 or 132 character width with Printer routines. Two forms of output are provided for, horizontal for label type output and a tabulated output with title and headings. What is more, the selected fields can be placed in any order on the screen. In the horizontal mode you can scan backwards or forwards with wrap around effect. Output can be started or stopped anywhere in the file. There is automatic totalling on decimal fields and an automatic count of the number of records output.

On disc at **Only £15**  
It has to be the best value.

### ★ ★ NEW ★ ★ FILE-PLUS

A 16K ROM containing the most flexible and easy to use disk based Database system on the market. A database may occupy your total on-line storage capacity. You may design any number of data entry forms using a "paint" on screen technique. Forms may be up to 3 screens in size. Any of these forms may be used to Add, Delete, Update, Print and Spool records from your Database. Quick search facility on any text field. A query language provides full maths support (-, +, /, \*, +-9999999999.9999) and compare facilities (=, >, <, <=, >=, &, !) when used with the keywords - Assign, Compare, Display, End, Goto, If, Ift, Print, Read, Search, Spool and Update. Full printed output control via embedded commands. Supplied with 70 page manual and fitting instructions.

DISC DATA **Only £15**  
FILE-PLUS **Only £43**  
Send SAE for Fact Sheet

### ★ ★ STAR LAUNCH ★ ★ BUFFER & BACKUP ROM

A very versatile firmware. An ideal ROM for engineers, programmers, teachers, students, etc.  
★ Converts your Sideways RAM to a 4K or 16K BUFFER for a parallel printer. (Uses \* FX5,3). (You no longer require to purchase expensive (£100+) Printer Buffers.)  
★ Dumps selection of Disc files to Tape.  
★ Makes backup copies of tapes onto Tape, Disc and Hobbit.  
★ Displays contents of a chosen paged ROM on screen.  
★ Menu display on 'shift-break' using ROM Filing System.  
★ Comprehensive Manual  
Simply a give away at **£16**

In keeping with our tradition of bringing you the best in BBC Micro at prices you cannot refuse, we are launching yet another of our ROM based software.

### NEW LAUNCH

#### TERMEMU

(A Terminal Emulator ROM for BBC Micro)

Use your BBC micro as a VDU terminal, connected to any other computer with a V24 or RS423/RS232 serial interface. Transfer text files in either direction, using disc or tape filing system.

Powerful function set allows emulation of popular mainframe terminals, including full DEC VT52. A tailoring program is included which allows you to define your own terminal and save the file on disc or tape.

The TERMEMU ROM is entered either using \*VDU, or directly when the BBC micro is switched on.

#### Features include:

- Compatible with BT GOLD electronic mail service
- Full BBC graphics available
- Split baud rate for receive/transmit
- User-defined function keys
- Visible control codes (for debugging protocols)
- Full cursor addressing
- User-definable addressing convention
- ALL OS commands available, even when online
- SPOOL and EXEC, even at 75 baud
- Parity, start/stop and number of bits
- Change baud rates online
- Online/local operation
- Runs in any mode
- Comprehensive manual and fitting instructions

ALL THIS and MORE FOR ONLY **£24**  
(Price includes tailoring software on disc or cassette and manual)  
Suitable cable for RS423 domino to V24  
**ONLY £5**

#### PACKAGE OFFER

BBC model B, ZENITH 12" monitor, plus TERMEMU and cables, a complete mainframe terminal for:  
**ONLY £445**

#### SPECIAL 'DISC DRIVE OFFER

#### MITSUBISHI DISC DRIVES

Cased, including Power Cable and Interface Cable. Plugs directly to BBC's Power Supply socket.

- LCS400 Single 400K Drive **£185**
- LCD800 Twin 800K Drives **£359**

**DFS MANUAL for BBC**

A fully comprehensive disc manual for BBC  
Micros. All extra commands are included. A  
bargain at **£7.50** (no VAT).

**PLINTH FOR BBC MICRO**

Protect your micro from the weight of the heavy  
TV/Monitor. This sturdy plinth is attractively  
finished in BBC colour. Air vent slots have been  
provided to allow maximum air circulation. It can  
be used to support a monitor or a printer. The  
micro slides underneath comfortably. A must for  
every BBC Micro owner, specially for those who  
have to move/open their computer frequently.  
**Price: £11** (carr. £1.50)

**PLINTH FOR PRINTERS**

Keeps your desk tidy. Place the printer on the  
plinth and the paper underneath. Finished in  
BBC colour.  
**£10** (carr. £1.50)

**VOLTMACE'S DELTA 14**

**Hand-set**

(Highly acclaimed at the Acorn User Exhibition)  
Save your BBC Keyboard from a games bashing  
with our precision, smooth, sprung return 'Delta 14'  
Joysticks which has a built-in 14 Button Keypad.  
The hand set is Acorn Soft compatible and will work  
as a Joystick and two Fire buttons. Adding the  
ADAPTOR BOX will enable the use of all twelve  
Buttons (plus two repeated).  
A user friendly, Keyboard to Keypad transfer  
program allows you to assign any Keyboard Key to  
either Keypad button or Joystick direction. The  
program also allows you to adjust sensitivity on the  
Joystick and conversions can be saved in a library  
which already contains some Acorn-Soft conver-  
sions.

Price: 'Delta 14' Hand set **£12.95**  
ADAPTOR MODULE **£13.25**  
TRANSFER PROGRAM Tape **£5.15**  
Disc **£7.75**

**JOYSTICKS for BEEB**

Two versions available:  
SINGLE: Player type **£7.00** each  
TWO Players type **£11.50** per pair

**SURGE PROTECTOR Plug**

Safely eliminates dangerous voltage surges.  
During a thunderstorm, a nearby lightning  
strike can induce high voltage spikes in the  
voltage supply or fluctuating loads can also  
result in transient overvoltages which if  
unchecked, lead to expensive data  
corruption/loss. Our surge protection plug will  
provide the necessary surge protection. Simply  
replace your standard 13Amp mains plug with  
the surge protection plug (which is almost the  
same size). Ideal for computers, Hi-Fi systems,  
precision instruments, fridge freezers, etc. Max.  
surge current 2KAmp; Max. Voltage 250 Volts.  
A must for all serious computer users.  
**Price: £8.95**

Prices subject to change without notice.

**MAIL ORDER AND RETAIL SHOP. TRADE AND EXPORT INQUIRIES WELCOME.

CASE for BBC Micro**

These Attache Carrying cases are attractively  
finished in mottled antique brown leatherette. An  
ideal and very safe way to carry your BBC  
Microcomputer. **Price: £12** (£2 carr.)

**GRAPH PAD**

With this popular British Micro's Graph-pad, you  
can add new dimension to your computer  
enjoyment. It helps you to create your own  
application programs by the simple use of the  
Graphpad. Ideal for Educational use. Supplied  
complete with Cables, Manual and a two  
program cassette.

**Price: £125**

**ROBIN LIGHT PEN**

A specially designed light pen to cover the whole  
educational range, from nursery to University.  
This pen is both Hardware and Software  
programmable.

**Price: £26**

(price includes Painting & Drawing program on  
cassette)

**4 WAY MAINS  
DISTRIBUTION SOCKET**

A highly versatile space saving solution when  
multi-power outlets are required. Can be wall or  
floor mounted. Ideal for Micro Computer and  
peripherals application. Prevents you getting a  
dangerous tangle of plugs and adapters.

**Only: £9.50**

**TEX EPROM ERASERS**

EPROMs need careful treatment to survive their  
expected lifetime. Rushing it could burn their  
brains out. So cop-out of this helter-skelter  
world; take it easy the TEX wand and give your  
chips a well earned break. Cool, gentle and  
affordable. EPROMPT does it properly.

Two versions available:

- **EPROMPT EB** - The standard version.  
Erases up to 16 chips. **£30.00**
- **EPROMPT GT** - Erases up to 28 chips. Has  
an incorporated safety switch which  
automatically switches off the UV lamp when the  
Eraser is opened. **£33.00**

We stock a wide selection of games software  
and peripherals for BBC Micro. Why not call in  
at our shop for a demonstration.  
Be satisfied before you buy.

**Watford Electronics**

# Part 13 of MIKE BIBBY'S introduction to programming

STRAIGHT to work again this month – have a look at Program I. It may seem a rather futile program to you, but it does make a point.

The idea is to present several pages of information on screen, one after another.

You move onto a new page by pressing a key.

```
10 REM *** PROGRAM I ***
20 MODE 6
30 PRINT TAB(12,12)"This is page
one."
40 PRINT TAB(7,22)"Press any key to
continue"
50 dummy$=GET$
60 CLS
70 PRINT TAB(12,12)"This is page
two."
80 PRINT TAB(7,22)"Press any key to
continue"
90 dummy$=GET$
100 CLS
110 PRINT TAB(11,12)"This is page
three."
120 PRINT TAB(7,22)"Press any key to
continue"
130 dummy$=GET$
140 CLS
150 END
```

## Program I

Program I has three pages of information. Admittedly page one only has "This is page one" on it, and so on. But the idea's there.

You could, if you wished, have several lines of information PRINTed onto the screen for each page.

The program starts by setting mode (line 20), thus effectively clearing the screen. It then prints out the information for that page (line 30).

We use line 50 to wait for a key press. Remember, GET\$ holds things up until a key is pressed. The actual key pressed is stored as *dummy\$* but we aren't too interested in its value, hence the name. It just holds things up (leave it out if you don't believe me).

Notice line 40. This is only common politeness – we're telling the user what to do to continue. If we didn't put this line in before the GET\$, how is he or she to know what to do?

Incidentally, it's telling a bit of a white lie: It's not 'any key', Escape or Break will cause problems!

Once we've pressed a key, line 60 clears the screen, line 70 prints out "This is page two" and then we're back

into polite waiting with lines 80 and 90.

Another key press takes us through to page three. Then the final key press takes us through to the end of the program at line 150.

Notice the end of line 150. When the micro encounters an END statement it just comes to a halt.

Actually, you don't need this in the program. The micro assumes, reasonably enough, that when you run out of lines you want to END. Try leaving 150 out to prove it!

There's another way of stopping a program – with the command STOP. Try Program I with the line:

```
150 STOP
```

Did you notice anything different?

With STOP the micro tells you the line number you've finished at.

This can be useful when you've lost track of where a program's going – which, unfortunately, is easier than you might think. Sprinkle in a few STOPS and one of them's bound to come up with the line number you're at.

To return to Program I. If you look carefully, you'll notice that lines 40 and 50 are identical to lines 80 and 90 and lines 120 and 130. In other words, we're repeating ourselves.

A microcomputer is extremely good at repeating things. One of the first rules of programming is: "Don't repeat lines of code, let the micro do it for you".

Often as not, this means putting things in a loop. In this case, though, we're going to do something different.

We're going to write out the repeated lines once only – assigning a name to them in a similar manner to the way we labelled variables.

Each time we want the computer to use those lines, we refer to them by their label.

As I've said, this is rather like labelling strings and numbers with variables. This time, however, we're labelling lines, so things are a bit different.

The set of lines we want to refer to is called a procedure.

Let's see how we can use a procedure to replace the repeated lines in Program I – these are the ones that say: "Press any key to continue" – and wait for a GET\$.

Suppose we want to refer to these lines as key, we give them the name PROCkey. Notice:

- We have to have PROC first, in capitals. It's short for procedure.
- There's no space between PROC

and the name we've given it.

So, we're going to refer to the lines as PROCkey.

However we must let the computer know what we mean by PROCkey. To put it more formally, we must define PROCkey.

To do this we 'bracket' the lines we want with:

```
DEF PROCkey
```

before them and:

```
ENDPROC
```

after them. DEF stands for define, of course.

From then on, the lines between the DEF and the ENDPROC are known as PROCkey.

Whenever the micro encounters PROCkey it will:

- Go to where the procedure is defined
- Carry out the lines of code it finds there.
- On meeting ENDPROC it will return to the next part of the program directly after the PROCkey that 'called' it.

That is, whenever the micro meets a procedure it does that procedure exactly as defined. Then it carries on from where the main program was up to – it doesn't lose its place.

Notice that you can call a procedure as we say, from several different places in a program. The micro always remembers where it's up to and goes back there.

```
10 REM *** PROGRAM II ***
20 MODE 6
30 PRINT TAB(12,12)"This is page
one."
40 PROCkey
50 CLS
60 PRINT TAB(12,12)"This is page
two."
70 PROCkey
80 CLS
90 PRINT TAB(11,12)"This is page
three."
100 PROCkey
110 CLS
120 END
130 DEF PROCkey
140 PRINT TAB(7,22)"Press any key to
continue"
150 dummy$=GET$
160 ENDPROC
```

## Program II

To see how this works in practice look at Program II. I've replaced the old

repetition with three calls to PROCkey at lines 40, 70 and 100.

The procedure itself is defined in lines 130 to 160.

The program continues exactly as Program I until it meets line 40. Here PROCkey is called.

Remembering where it's got up to, the micro goes to where PROCkey is defined, then does lines 140 and 150 – the key press bit.

It then hits ENDPROC and goes back to the main program, continuing with line 50, then 60, until once more it calls PROCkey with line 70.

Again the micro does 140 and 150 then hits ENDPROC. However it's 'marked its place' in the program, so this time when it goes back it resumes at line 80.

I think you can work out for yourself what happens at line 100.

The program finally ends at line 120.

That END statement in line 120 is important. Leave it out and see what happens. The program runs normally until you press a key after page three.

Then, instead of finishing like last time, you get another "Press any key to continue". If you take it up on the offer all you get is:

No PROC at line 160

What's going on?

Well, everything has worked perfectly up to and including line 100 which calls PROCkey. When you return from the procedure line 110 clears the screen.

But, whereas line 120 would have ENDED things there if you hadn't left it out, the micro crashes on through lines 130 and 140 to line 150.

It then waits for you to press a key. Notice that you've "gate-crashed" the procedure this time. You didn't call it with PROCkey.

This means that when you do press the key, and the micro encounters the ENDPROC of line 160, it hasn't got any place marked in the program to go back to.

This is what is meant by the plaintive message:

No PROC at line 160

So to stop yourself inadvertently entering procedures in this way, use END at the end of your main program.

Now take a look at Program III:

```
10 REM *** PROGRAM III ***
20 MODE 6
30 asterisk$=""
40 position%=10
50 FOR loop%=1 TO 5
```

```
60 asterisk$=asterisk$+"*"
70 PRINT TAB(0,position%+loop%)
   asterisk$
80 NEXT loop%
```

#### Program III

This simply prints out a triangle of asterisks. *position%* determines how far down the screen the triangle appears.

To see this, try altering the value in line 40. For example:

```
40 position%=5
```

I don't think you should have much trouble following that piece of code.

```
10 REM *** PROGRAM IV ***
20 MODE 6
30 position%=0
40 PROCtriangle
50 position%=5
60 PROCtriangle
70 position%=10
80 PROCtriangle
90 position%=15
100 PROCtriangle
110 END
120 DEF PROCtriangle
130 asterisk$=""
140 FOR loop%=1 TO 5
150 asterisk$=asterisk$+"*"
160 PRINT TAB(0,position%+loop%)
   asterisk$
170 NEXT loop%
180 ENDPROC
```

#### Program IV

In Program IV I've incorporated the triangle drawing code from Program III into a procedure called PROCtriangle. If you compare the two programs it should be obvious.

The point is, having done it that way, I can call the procedure several times with different values for *position%* – thus printing the triangle in different positions on the screen.

Lines 30 and 40 print the triangle at the top of the screen by setting *position%=0* (line 30) and then calling PROCtriangle (line 40).

Lines 50 and 60 then print a triangle further down the screen by setting *position%=5* (line 50) and then calling PROCtriangle (line 60).

You should be able to see how we get the other two triangles on the screen.

We can make things neater still – look at Program V.

```
10 REM *** PROGRAM V ***
20 MODE 6
30 PROCtriangle(0)
```

```
40 PROCtriangle(5)
50 PROCtriangle(10)
60 PROCtriangle(15)
70 END
80 REM =====
90 DEF PROCtriangle(position%)
100 asterisk$=""
110 FOR loop%=1 TO 5
120 asterisk$=asterisk$+"*"
130 PRINT TAB(0,position%+loop%)
   asterisk$
140 NEXT loop%
150 ENDPROC
```

#### Program V

Line 30 reads:

```
30 PROCtriangle(0)
```

This replaces the pair:

```
30 position%=0
40 PROCtriangle
```

in Program IV.

What we're doing here is to use the brackets after PROCtriangle to hold a value we want the procedure to use. In this case it's 0, the position we want the triangle to be printed at.

If you look at line 90, where the procedure is defined, you'll see that we have *position%* in brackets after the procedure name. That is:

```
90 DEF PROCtriangle(position%)
```

The *position%* is there to 'catch' the value we put inside the brackets when we call the procedure.

In other words, if in the program we use:

```
PROCtriangle(0)
```

to call the procedure, then when the micro enters that procedure *position%* is given the value 0 and used as such throughout the procedure.

On encountering ENDPROC it goes back to its former place in the main program.

If we now call the same procedure with:

```
PROCtriangle(5)
```

when the micro enters the procedure *position%* is set to 5 – so the triangle gets printed in a different position.

By handling the value to the variable contained in brackets in the procedure definition we've been able to eliminate all the *position%=0* and so on that we had in the Program IV.

We call transferring values to procedures via brackets "passing parameters to the procedure".

As we'll see next month, it can come in very useful. 

All disc software now available on 3" disc - add £3.00 to printed prices.

# BBC MICRO COMES OF AGE..

## B-BASE: £25.00

B-BASE is a very powerful and very flexible database program. Because B-BASE is designed specifically for disks there are none of the limitations found in most database programs, which are usually upgraded cassette programs. B-BASE is not limited by memory and even the disk limit can be overcome easily to provide an unlimited file size. Take a look at the features listed below and compare it with so called professional programs at up to £400, we think that you will be amazed. Why limit yourself to a 16K eprom - B-base contains approx. 30K of tightly compacted code.

Maximum File Size (40 track) - 99k & (80 track) - 199k.  
Maximum Record Size - 2k; Maximum Number of Fields - 200;  
Maximum Field Length - 254 chrs.

Options Include:

- 1) WRITE - for adding records.
- 2) WORK - for displaying records, editing and deleting.
- 3) CALC - allows you to cope easily with fluctuating prices and VAT rates. (works with whole file or search lists). Uses EVAL function allowing complex calculations to be performed, and the results to be displayed on screen or placed in a nominated field.
- 4) SEARCH - multiple function search on up to 5 fields.
- 5) OPTIONS: a) sort records found in search on 3 fields in ascending/descending order + set number of chrs to sort on (max records sorted is 500).  
b) work search list, with edit and delete.  
c) save records found in search to disc.  
d) load previously saved search for re-search etc.  
e) make a search list.
- 6) PRINTER - copes with parallel and serial printers and allows you to set up the printout + all printer codes allowed + allows you to join fields together and allows you to set them into columns etc. A label print routine allows single or double labels to be printed.
- 7) REDEFINE - allows you to transfer all records from old file to new file plus add or amend field or record size. No more re-entering all your data if you wish to add a field.
- 8) TRANSFER - allows you to transfer selected records between files.
- 9) NEW - allows you to define new file.  
+ real time clock + many more features.

If you want a professional database for the BBC micro the B-BASE is your only option.

Not compatible with Amcom DFS.

## REPLICA II: £12.00

This is the one that everybody has been waiting for. The original REPLICA set a very high standard and many said that it could not be improved. The specification that we set our chief programmer included some supposedly 'impossible' features. In fact ACORN state that some of the things that we have done are impossible, it just took us a little longer that's all. REPLICA II will transfer most of your cassette based programs to disk, even more than REPLICA did. Now when you buy disk drives you do not have to throw away your expensive cassette based programs. REPLICA II will transfer 'LOCKED' programs, programs loading as files, programs that load below &E00, those with up to 6 sections and those up to &6E in length eg adventure programs. No more waiting for 6 minutes whilst your adventure programs load. REPLICA II is very easy to use and the user just enters a name, how many sections and whether CHAIN, \*RUN or \*LOAD is used to load the first section. Press play and let the program do the rest, even a menu. You cannot afford not to have a REPLICA II, think how much it will cost you to buy just 1 disk version of your favourite program - it is probably more than REPLICA II which will hold up to 16 programs, limited only by the disk capacity.

## BEEBSYNTH: disk £11.00 cassette £8.00

A very powerful yet easy to use sound generating program that can be used by expert and novice alike. Up to 16 envelopes can be defined and saved. The envelope definer is very easy to use, control is through the cursor keys, and the effects of your changes can be heard immediately. When you have defined your envelopes press 'K' for Keyboard and the keyboard is transformed into a musical instrument, but you control which instrument. Lets you play chords, not just single notes, change pitch and duration etc etc. A superb program that you can use immediately. Unlimited sounds at your disposal. Recommended by MICRO USER, PCN, HCW etc.

## THE KEY: £12.95

A disk utility program that provides the user with the tools to explore the disk environment and use it to its best advantage. The programs are:

- 1) FORM40 - Formats and verifies 40 track disks.
- 2) FORM80 - Formats and verifies 80 track disks.
- 3) BACKUP - Allows backup copies of your valuable disks to be made.
- 4) EDITOR - Enables the user to read the disk sector by sector and to alter programs on the disk, even most protected and unlistable ones. More fun than any adventure game.
- 5) RETRIEVE - Allows the user to recover data or programs that have been accidentally erased or damaged by a head crash.

Every disk owner should have one, you will wonder how you ever managed without it. Recommended by WHICH MICRO, EDUCATIONAL COMPUTING etc. 'THE KEY' has been imitated by many but bettered by none.

## JOYSTICK UTILITY: £6.00

Converts non joystick programs to work with joysticks. Works with any program using INKEY (-) in Basic or machine code, to detect movement, which applies to most programs. The routine is relocatable and sensitivity of the joystick can be varied. Compatible with most games, including Acornsoft. Very easy to use, just press the keys you want to transfer. The machine code can be saved as a block of just 100 bytes. Supplied on cassette but can be transferred to disk.

## SHADOW: £8.00

SHADOW is a tape cloning program that will enable you to make security copies of your own valuable cassette software. SHADOW works with 99% of all known programs including those with sections at 300 BAUD and those that load as files. SHADOW will handle programs with any number of sections and it will work with any of the current operating systems including 0.1, 1.0, & 1.2. SHADOW is the definitive tape backup system and as a bonus you also get 'INSPECTOR' on the same tape. This allows you to view all areas of memory, search and alter bytes, etc. Colour coding helps to simplify memory usage. All this for just £8.00. I don't know how we do it. 'It is a condition of sale that this program is not used for piracy'.

## GRAFKEY/GRAFDISK disk £12.95 cassette £9.00

The 'GRAF' series of programs are, to our knowledge, the cheapest entry to the CAD (Computer Aided Design) field on the BBC micro. Input is by either joystick or keyboard. All graphics modes can be used and altered whilst running, the functions provided are: Line, rectangle, triangle, circle, text (upper and lower case), paint and colour pallet (8 colours and flashing). Drawing aids include: Alignment grid, circle copy, delete, free memory, purge memory, variable cursor speed, clear screen and redraw. Save drawings to tape in about 20 seconds or to disk in about 2 seconds. Rubber Band is a very flexible line drawing facility and has to be seen to be believed. Pictures can be saved and included in your own programs, very easily. GRAFDISK also provides a screen save facility. Recommended by BBC MICRO USER, PCN, ELECTRONICS & COMPUTING, LASERBUG ect, used by universities, colleges and business, as well as the enthusiast.

## SINGLE KEY: (requires 1.2 O.S.) £5.00

SINGLE KEY ENTRY provides the user with single key entry of all 66 keyworks on the BBC micro. Speeds up your program input, it's just like having 66 function keys and it only occupies 256 bytes. Compatible with BASIC 1 & BASIC 2.

## EDUCATIONAL PROGRAMS

### THE GARDEN:

£8.00

A series of three programs to help children with colours, spelling and recognition. The three programs cover three overlapping age ranges from bright four year olds to eleven year olds. The first level concentrates on colours and requires a simple Y/N answer to a question. The other two levels are orientated towards spelling and sentence structure. A sentence is presented with a missing word and the child is required to choose the correct word from a list and then type it in. Using this method each exercise involves a sentence, three words and picture/word relationships, all of which help to expand the child's vocabulary and understanding. Excellent graphics are used to reinforce the teaching. All three programs are provided on each tape and are compatible with disks.

### COUNTING:

£6.00

Like 'THE GARDEN' this program uses good graphics to interest the child whilst engaged in learning. Various levels can be chosen with a maximum number of 20. Aural stimulation can be selected if required and allows the child to do the counting in various ways, it can even be done with eyes closed. The objects for counting are rockets that blast off, flowers which bloom, jack-in-the-boxes that jump etc, and are used to stimulate interest. Makes counting fun.

### TAKE-1:

£6.00

TAKE-1 is by John Sekula, the author of the acclaimed COUNTING program above. This new release concentrates on subtraction and again uses excellent graphics including sideways scrolling to gain the child's interest. Suitable for children counting up to 20 but the graphics are suitable for all. Recommended and praised by many teachers and parents. Give your children the start they deserve.

### MATCHING:

£7.00

A bumper tape of four programs covering numbers, words, shapes and patterns. Graphics have been deliberately minimised to avoid distraction from the subject. They are ideal for infants and pre-school children. 'NUMBERS' provides various levels and alternative methods for counting. The space bar can be used as a counting stick and a visual and aural reward is given. 'WORDMATCH' again has various levels and the child is required to match the subject word with its partner which is in the displayed list. There is a choice of moving the word or moving the marker. 'SHAPE MATCH' can be of use to all ages and has a wide difficulty span. The cursor keys are used to move the subject shape onto the correct match and they will then merge if the answer is correct. 'PATTERN MATCH' is similar to 'SHAPE MATCH' but colour patterns are the subject instead of the geometrical shapes. This program introduces shape, colour and relational concepts and can even be of help in detecting colour blindness, although any suspicions should be confirmed by an expert.

### INTRO:

£10.00

INTRO is a simple computer programming language which uses the immediate visual response of 'turtle graphics' to introduce a number of programming concepts and techniques and to illustrate a variety of mathematical ideas in the areas of measurement, pattern, angle, and the use of variables. INTRO is similar to LOGO but with some important and deliberate differences. The most obvious is the screen layout which sets a section of the screen aside as a scratch pad with room for instructions to be displayed. Another important difference is in the way procedures are defined, in LOGO you must decide before typing in the procedure but in INTRO the current program can be stored as a procedure by typing STORE NAME, or whatever. INTRO has a very full instruction set, permitting great flexibility in handling graphics and in addition allowing access to the BBC's mathematical functions, INKEY etc. Programs and procedures can be saved to tape just like normal programs. INTRO is supplied with a comprehensive nineteen page manual as well as demonstration programs on the tape. INTRO can be transferred to disk but files must still be loaded and saved on tape.

### HUE-MEN

£6.00

Designed and written especially for pre school children this program is loved and admired by everybody that sees it. It has proven a big hit with children and adults alike and no collection is complete without a copy of HUE-MEN. This program is the best example of animation in MODE 7 seen to date, yes MODE 7. We cannot praise this program too highly and it is actually educational too. The subject is colour and HUE-MEN succeeds in extending young children's attention span without the teaching element even being noticed. Recommended for children of all ages.

### SHAPE-MEN:

£6.00

SHAPE-MEN is by the same author as HEU-MEN, Phil Reynders, and uses similar concepts to aid in shape recognition. Again using MODE 7 and sound this program will extend the child's attention span considerably. A real must and both these programs are recommended by PRIMARY EDUCATIONAL SOFTWARE REVIEW. ALL educational software is supplied on tape - but can be easily transferred to disk.

### CASSETTE LEADS WITH MOTOR CONTROL

Electron cassette lead 7 DIN - 3 DIN + 2.5mm Remote Jack	£2.95
Electron cassette lead 7 DIN - 2 * 3.5mm Jacks + 2.5mm Jack	£2.95
BBC cassette lead 7 DIN - 3 DIN + 2.5mm Remote Jack	2.95
BBC cassette lead 7 DIN - 2 * 3.5mm Jacks + 2.5mm Jack	£2.95

### MONITOR LEADS

BNC to phono monitor lead (1.2m)	£2.95
PHONO to phono monitor lead	£1.50
RGB monitor lead (6 pin DIN - 6 pin DIN)	£2.95

### PRINTER LEADS

BBC serial printer lead (25 way 'D' type to 5 pin domino)	£7.50
BBC parallel printer lead-Centronics	£13.95

### JOYSTICKS

BBC JOYSTICKS - Fully proportional joysticks in smart sturdy injection moulded cases. 1.5 metres of cable, long life mechanism gives precise operation. British made.

£17.95

### BEEBSTICK PLUS

BEEBSTICK PLUS - A high quality joystick as used by MEP's and SEMERCs. Precise action and if you want to use a joystick for serious use then this is the one.

£40.00

### PROGRAMMERS

We are constantly seeking new and interesting programs. Why not send yours for appraisal? You have got nothing to lose but much to gain - So why not send your program today? 40 track disc if possible or two copies on cassette. In some cases we will even provide disc drives against future royalties.

State 40 or 80 track when ordering discs.

NOTE: All prices are inclusive of VAT and postage - NO EXTRAS!

  
Clares  
MICRO SUPPLIES

Dept. BMU5, 98 Middlewich Road,

All prices inclusive of VAT + Carriage - No Extras.

# ROM extension board for the BBC Micro

**Personal Computer News January '84**  
*"...the Romex 13 is the best I have seen".*

The GCC Romex 13 enables the user to increase sideways ROM capacity from the basic 4 sockets up to the full 16, which is capable of support by the current operating system.

- Mounts inside the lid of the BBC computer
- Normally, no soldering required
- Does not suffer from over-heating problems

ROMS/EPROMS – accommodates 2764, 27128 and 2732 EPROMS.

Price including VAT £45.94 (+£1.75 p&p).

STOCK SUBJECT TO PRIOR SALE  
Trade & Local authority enquiries welcome.  
Prices correct at time of going to press.

**GCC (Cambridge) Limited**  
66 High Street, Sawston, Cambridge CB2 4BG  
Telephone: Cambridge (0223) 835330/834641  
Telex: 81594 SAWCOM

# Thanks for the memory

IT does not take too long before the programs you write for your BBC get so large that you start running out of memory.

This is particularly true if you have added a disc drive or other ROMs that require some of the available memory for work space.

There are many different ways to get round this problem. Unfortunately, most involve additional expense.

If you don't require access to your disc drive during the running of your program – in other words, you don't want or need to load data or save data on the disc – then there are ways to use the DFS work space.

With the Watford DFS, for example, you can use the \*MLOAD command to relocate your Basic program to say &0E00 before execution (ignore the "Bad Program" message). If you then set PAGE=&0E00 you are ready to run your program.

After finishing you can get the disc system back by entering \*DISC, although the effect on your existing program will be somewhat devastating.

One of the more common ways to conserve memory is to use the CHAIN command. In BBC Basic you can end one program with a command to CHAIN another.

What this does is to load in a new program over the current one. This is useful in situations where a series of more or less independent programs need to be executed.

After the execution of a CHAIN command the integer variables A% to Z% are unchanged. That is, their values can be used by the next program. However all other variables are lost.

You cannot assume that the value of a variable set in the first program can be referred to in the chained second program. This severely limits the use of the CHAIN command.

An extremely powerful technique for disc users is to use overlays just as we often had to do on those now somewhat primitive mainframes and minis of the 1960s and '70s.

Essentially what is done is to write your programs in such a way that there are large sections of code (procedures) that are more or less independent.

The structure of the program should be such that this set of procedures do not require each other. They can then be loaded into the same place in memory and executed when needed.

What you need to be able to do, of

By **ALEX DRAKE**  
& **JAMES RIEHL**

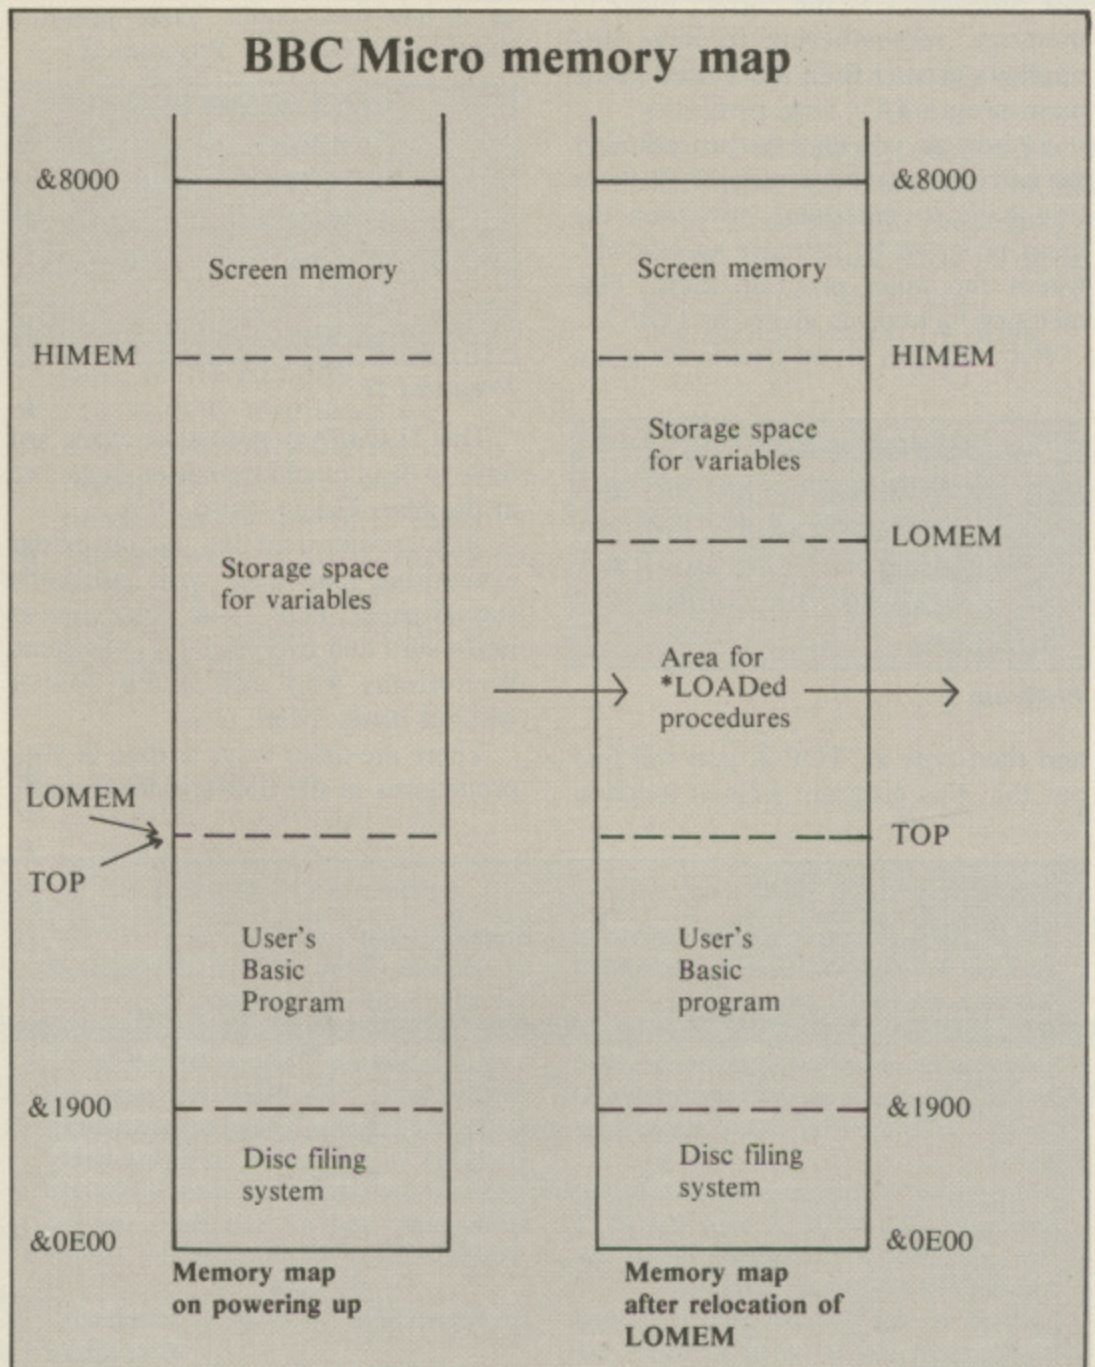

course, is to ensure that when you are loading in procedures and executing them, the variables you need are not affected. In order to do this we need to know a little about how the BBC stores variables.

In Figure 1 we show a portion of the BBC's memory map. Note that programs are loaded at the location denoted PAGE, the end of the program

is given by the variable TOP, and the variables themselves are stored in memory locations beginning at LOMEM (BBC User Guide, Page 414).

Normally the values of LOMEM and TOP are the same, and the values of variables are stored just after the program.

What we would like to do is to relocate this variable storage area to some other place, and load in our various procedures as we need them

## From Page 47

after our main program.

This can be done by setting LOMEM to a larger value – making sure, of course, to allow enough room (HIMEM-LOMEM) for all the variables that we have.

Exactly how much room to allow for variable storage depends obviously on the requirements of your particular program.

A rough estimate can be made by counting how many integer variables, real variables, and strings that you have, each particular type of variable requiring a specific memory allocation as described in the User Guide (Page 64).

The only thing left to do is to load in our procedures at the correct place in memory, remembering to have line numbers greater than those used in the main program.

So how do you load the procedure at the end of your main program? Well, we first have to determine how long the main program is, or more specifically, where the main program ends. This memory location is given by TOP-2.

For example, if you type in Program I:

```
10 REM PROGRAM I
20 LOMEM=&4000
30 a$="Main Program"
40 PRINT a$
50 PROC_1
60 END
```

### Program I

and then type P.^TOP-2, you will find out that this program ends at location

&194D (if PAGE=&1900 and you have typed it in exactly as we did, with no extra spaces).

So if we want to load our first procedure, which has been previously saved on disc as "PROC\_1", we might be tempted to add the following line:

```
45 *LOAD PROC_1 194D
```

If you think a little bit about this though, you will realise that you have changed the length of your program. Right? So how do you get around this?

Well, simply insert line 45 as below, print the value of TOP-2 again, and then edit line 45 to put in the correct address. This time the program ends at location &1962.

It doesn't really matter what address you put in line 45 the first time, as long as it has four digits. Your program should now look like Program II.

```
10 REM PROGRAM II
20 LOMEM=&4000
30 a$="Main Program"
40 PRINT a$
45 *LOAD PROC_1 1960
50 PROC_1
60 END
```

### Program II

The \*LOADED procedure does not have to be in machine code as suggested in the User Guide (Page 393).

Just to make sure that you have done everything correctly you probably should check TOP-2 one more time to make sure that everything is consistent. Sometimes you add extra spaces without being aware of it.

There are other ways to load in your procedures at the appropriate memory

location, but this method is probably the easiest.

In principle you can have many \*LOADED procedures with each one being loaded at the same address and overwriting (overlying) its predecessor.

Program III is a simple example of this.

```
10 REM PROGRAM III
20 LOMEM = &4000
30 a$ = "Main Program"
40 PRINT a$
45 *LOAD PROC_1 19CB
50 PROC_1
60 PRINT "Load next procedure"
70 *LOAD PROC_2 19CB
80 PROC_2
90 b$="Memory capacity increased"
100 PRINT b$
110 END
```

### Program III

```
3000 DEFPROC_1
3010 PRINT "A method for "
3020 ENDPROC
```

```
3000 DEFPROC_2
3010 PRINT "extending memory"
3020 ENDPROC
```

### Procedures held on disc for Program III

You are now ready to break loose from your memory constraints!

If you are writing well-structured programs, you should be able to utilise this overlay technique very easily.

You should be able to free a lot of space, do your graphics in a higher resolution mode and add all those new features that you didn't have room for before.

YOU can use the techniques outlined in this article to demonstrate how the BBC Micro accesses its procedures.

Once the micro meets an unknown procedure it enters its address in a table. When it next encounters the procedure it looks it up in the table rather than search for it.

Program IV illustrates the point. As in Program III, PROC\_1 and PROC\_2 are called. PROC\_1 is then called again (without \*LOADing anything).

Since it's the "second time of asking" the micro looks it up in its table and

jumps to that address.

Because we have \*LOADED PROC\_2 to this address though, the micro performs PROC\_2 unwittingly, thinking it has successfully located PROC\_1.

If you have "Bad Program" messages and suchlike when trying the techniques outlined in the article, it is probably because you have typed them in slightly differently and altered the value of TOP-2. Check this carefully by using:

```
P, ^TOP-2
```

and amend lines 45 and 70 accordingly.

Mike Bibby

```
10 REM PROGRAM IV
20 LOMEM = &4000
30 a$ = "Main Program"
40 PRINT a$
45 *LOAD PROC_1 19D3
50 PROC_1
60 PRINT "Load next procedure"
70 *LOAD PROC_2 19D3
80 PROC_2
90 b$="Memory capacity increased"
100 PRINT b$
105 PROC_1
110 END
```

# ARIES~B20

## Add 20K to your BBC micro in five minutes

### Features

- ★ Adds 20K of useable RAM to your BBC Micro
- ★ Run programs up to 28K long in ANY SCREEN MODE
- ★ Extra memory can be used directly from BASIC I and II, VIEW 1.4, FORTH, LISP, and many other existing programs
- ★ ARIES-B20 is compatible with all correctly written BBC Micro software, on cassette, disc, sideways ROM or cartridge
- ★ Don't be deceived: this product is unique - no other expansion unit has these capabilities
- ★ Complete compatibility - ARIES-B20 uses only documented MOS facilities
- ★ Fitted in 5 minutes using only a screwdriver
- ★ Simply plugs in inside the case
- ★ No soldering or cutting
- ★ (Unlike some add-on products) will cause no damage to your

BBC Micro - can be removed at any time

- ★ Incredibly simple to use
- ★ Patent applied for
- ★ Designed in Cambridge by BBC Micro experts
- ★ Top quality manufacture
- ★ Unquestionably the most important add-on ever produced for the BBC Micro
- ★ Top software houses are racing to produce the "super-programs" made possible by the extra capacity
- ★ 1 year guarantee.
- ★ Available mail-order only
- ★ Official purchase orders accepted from bona-fide educational establishments, all other trade cash-with-order

- ★ Price £99.95 including post, packing and VAT
- ★ If not completely satisfied with your purchase, we will refund your money in full providing you return the ARIES-B20 in good condition in its original packaging within 14 days

### Machine requirements:

- ★ BBC Micro model B
- ★ MOS 1.2 or later
- ★ Plugs into CPU socket and 1 sideways ROM socket

Also available IEEE-488 interface.  
Coming soon: Compatible ROM expansion board.

### How to Order:

Send cheque or postal order made payable to: Cambridge Computer Consultants Ltd and forward to:

If you are getting bored with the same old type faces, think . . .

# BIG LETTERS

"The Abbot's playing space invaders again, so its back to the drawing board".

THE inspiration for Font came when I was writing educational software for my children. I wanted to use Mode 5, but the character set is far too squat.

I decided that if I made them double height, the proportions would be more pleasing and it wouldn't be too difficult to do.

However I've a strong dislike of programs that, for the sake of a little more effort, could be made more general, so I wrote Font as a utility that allowed a wide variety of "type faces" to be used in the graphics modes.

The idea is quite simple really. In graphic modes the characters are composed of a set of pixels or dots, laid out in an eight by eight grid.

The micro lights different patterns of these dots for the various letters. Figure I illustrates the pattern for the letter A.

It remembers these patterns in an area of ROM from &C000 onwards, storing each character in a group of

By MIKE BIBBY

eight bytes. The first byte corresponds to the first row of the character, the second byte to the second, and so on.

As the byte for each row has eight bits, each bit decides what goes on in a particular cell of that row. If there's a 1 in that bit the micro turns that pixel on - if there's a 0 it leaves it off.

Figure II shows how the numbers work out for the letter A.

By now you've probably noticed the resemblance to the way we create user defined characters.

We can create another A (though heaven knows why we'd want to) with VDU 23, 224, 60, 102, 102, 126, 102, 102, 102, 0 where:

- 23 tells the micro what we are doing.

- 224 tells the micro the ASC number we're going to assign to the character we're defining.

- The next eight bytes teach it the pattern.

Font uses the patterns of the characters as a guide to placing rectangular building blocks on the screen.

The actual shape of the block is stored as a user defined character which I print on the screen wherever a 1 in the pattern dictates it. If it's a 0 I just move over, or down to the next row if it was the last bit.

When you think about it, you can vary exactly how much you move over or down between blocks, so you can "spread" the characters out over the screen. You can also vary the size of the blocks - allowing you to create a large range of type faces.

The actual printing is done with VDU 5 on, so that the user defined character can overlap a previous one without blanking it out.

Font actually consists of two programs. The first is an assembler language program (Listing I) which will create a piece of machine code. When you run the program it will ask you for the location you wish the code to be stored in.

I suggest &900 for disc units and

0	0	1	1	1	1	0	0
0	1	1	0	0	1	1	0
0	1	1	0	0	1	1	0
0	1	1	1	1	1	1	0
0	1	1	0	0	1	1	0
0	1	1	0	0	1	1	0
0	1	1	0	0	1	1	0
0	0	0	0	0	0	0	0

Figure I: How A is stored in ROM in binary

								60	3C
								102	66
								102	66
								126	7E
								102	66
								102	66
								102	66
								102	66
								decimal	hex

Figure II: The row numbers for A as a user defined character

# WHAT RESOLUTION FOR ONLY £230. (EX.VAT)

Our RGB high resolution colour monitors (580 × 470 pixels) sell for £229.95 (excluding VAT)—a saving of over £100 compared to other leading monitors of similar specifications.

That's a bargain we guarantee you won't see from any other micro retailer.

We've managed to acquire the sole distribution rights enabling us to offer these superb monitors at this unbeatable price.

And just because you're saving on price doesn't mean you're sacrificing quality. Here's what Personal Computer News had to say about our monitors.

**"There is no doubt that the JVC range of ECM colour monitors is excellent value for money... there is no loss in quality of picture after long periods... remember as more and more resolution is available with new micros, the need for a better display will be that much greater."**

For those who only require medium resolution we also have a model (370 × 470 pixels) at £179.95 (excluding VAT) which is equally excellent value for money.

Both units have a 14" screen and are suitable for the BBC Micro, Spectrum QL, Lynx, Oric, Apple, IBM and

MODEL REFERENCE	1302-2 High Resolution	1302-1 Medium Resolution

## From Page 51

&D02 for cassette units. Whatever it is, make a careful note of it. Incidentally, it expects hexadecimal input, so you don't need to enter the '&'.

A second program (Listing II) allows you to design your typeface and also contains procedures to handle the machine code you can incorporate in your own programs.

When you run Listing I it will prompt you to save the code on tape. Make sure that you do, as it's that you'll be using from now on, not Listing I. It's saved as FCODE.

Important point now. If you want to make use of the procedures contained in Listing II in your own programs you must have FCODE in your machine. To do this you must load it with:

```
*LOAD FCODE
```

Notice that it's not an ordinary LOAD, because this is machine code, not a Basic program.

Notice that in Listing II line 60 is:

```
!Z=&900
```

!% tells the micro where FCODE is stored. If you've stored it somewhere else - for example, at &D02 for a cassette system - you'll have to alter this.

As mentioned, Listing II not only shows you how to incorporate FCODE in your own programs, but also lets you create the type face of your choice.

When you run it you will be asked for the mode you require.

Try entering 2, and respond N to the special character option. You'll see a screen similar to Figure III.

The word Test is printed under conditions determined by *x*, *y*, *w* and *d*, giving you an idea of the characters you'll get with each set of options.

The *x* and *y* refer to the spacing, in pixels, between the rectangular blocks you are using to replace the pixels in the characters you want in the new type face.

Initially they are one pixel apart, as normal.

*w* and *d* refer to the width and depth of the blocks respectively - again in pixels.

The 2 simply reminds you that you are in Mode 2.

I stands for increasing. If you press Return the screen is redisplayed with D in its place - this stands for decreasing. Press Return once more and I is back.

The significance is that if you press the X key while I is displayed, the value of *x* increases and TEST is displayed accordingly.

If you press X while D is displayed

Figure III

Figure IV

Figure V

Figure VI

the value decreases. Return "toggles" between the two values.

The same holds for *y*, *w* and *d*. Escape will take you back to the beginning of the program. F will let you finish, after giving you another chance.

It's easy to get used to and great fun to play with. Figures IV, V and VI show some possible combinations.

Note that you cannot increase *w* and *d* indefinitely. Each has a maximum size of eight, being limited by the size of the user defined character we're using to define the rectangle.

*x*, *y*, *w*, *d* are important - so once you've picked the way you want your letters to look, note them down.

To use this character set in your own programs you then need to:

- At the program's start, set !% to the address at which FCODE will load.
- Include PROCw and PROCf in your program - it doesn't matter about line numbers.
- Have \*LOADed FCODE.

You then call PROCf with the figures for *x*%, *y*%, *w*%, *d*% you've noted as parameters. This sets up the "font".

To print words in the type face thus chosen you simply pass them to

PROCw. The first two parameters are the X and Y graphic coordinates of the start of the word on the screen and the third parameter is the string you pass to it.

So assuming you've actually got FCODE in,

```
PROCw(640,512,'A')
```

will print the letter A at the centre of the screen in whatever font you've chosen at the time (with PROCf).

Notice that:

- You can change fonts at any time.
- The font won't affect your normal printing.

The special character option allows you to actually print a large character made up of normal sized characters from the standard character set.

You could, for instance, make up a letter A entirely of As - or a user defined character of your choice.

If you want to do this, load FCODE and poke (!%+&B8) with the Ascii code of your character - also make sure that you've spaced out the *x*% and *y*% sufficiently in PROCf.

In Listing II I chose an initial width of

## From Page 53

four pixels between *x* and *y* to space the characters out – *w* and *d* are irrelevant. Having called PROCf, continue with PROCw as before.

Figure VII shows the sort of results you can achieve with this technique – I've used an asterisk as the special character.

The program as it stands won't run on OS 0.1 as this doesn't support OSWORD with A=10, so you'll have to read the definitions directly from the ROM.

You'll also have to change a line in PROCf. In Listing II this is line 550. It becomes:

```
550 a%=?367
```

Listing III demonstrates just a small amount of the potential of this technique. As written it's set up for disc. Alter *location%* in line 30 if you're using cassette – I've used it rather than *l%*.

Notice that we use GCOL to change colour, not COLOUR. This is because we are writing under graphics control.

Figure VIII shows the output – my children's names. It's only fair, they started it all . . .

## . . . and this is how it works . . .

LISTING I consists of two main routines. One defines a rectangular character block, and the other prints out a single Ascii character using the pixel pattern of that character as a map.

We shall concentrate on the routine *definer* (line 970). Although it's towards the end of the listing, it does precede the others logically.

This routine defines the shape of character &E0 (224) by using OSWRCH to do a machine code equivalent of VDU 23.

*width* holds the pixel width of the character you want. *define\_row* then repeatedly sets carry and RORs an initially empty accumulator *width*

Figure VII

times, using *X* as index. This puts as many ones into the accumulator as necessary to define a row.

We need this row *depth* times, so using *Y* as an index we use OSWRCH to send these new values. Having done that, since VDU 23 needs eight values it might appear that we should then send (8-*depth*) zeros via OSWRCH.

To avoid doing the "sum" we use *send\_blanks* to send eight consecutive zeros. The ones necessary to finish the VDU23 are "grabbed" by the OS, the rest ignored. This may be inelegant, but it's effective.

The rest of the code is straightforward. Lines 110-190 set up bytes for the variables to be placed into, 210-220 making space for an eight byte parameter block or table.

*start* loads *X,Y* with the address of this parameter block and, using OSWORD with A=10, reads the eight byte character definition of the letter we want to place on the screen into the table we have set up.

It will need to have the Ascii code for the letter at *pattern*, but we'll assume that the calling routine supplies this. The rest of the routine consists of two nested loops (*outer\_loop* and *inner\_loop*).

*outer\_loop* selects each row in turn from the table (indexed by *Y*) and *inner\_loop* examines that row bit by bit using ASL.

If there's a 1 carry is set and *write* called. If not, *noprint* simply skips past this.

*xpos* and *ypos* hold the graphic coordinates at which the character is to be printed. These are transferred to *xstore* and *ystore*.

*ystore* is decremented at the end of each *inner\_loop* by *ystep*, to ensure that the next line is printed with the correct vertical spacing.

*xstore* is incremented by *xstep* within *inner\_loop* after *writing* or *noprint* to ensure that the next printing is correctly spaced across the screen.

After *outer\_loop*, *xpos* is updated to ensure that the next enlarged character is correctly positioned horizontally. If you think about it, you'll realise that *ypos* isn't updated since the next character should start on a level with the previous one.

*write* uses OSWRCH character repeatedly to:

VDU 5 joining text and graphic cursors so characters can overlap (line 780).

VDU 24,4, *xstore*, *xstore+1*, *ystore*, *ystore+1*.

MOVE the cursor to the absolute position for printing (lines 800-910).

VDU 224 printing the character (line 920).

VDU 4 separating cursors (940).

Listing II uses PROCf to set up the type face.

*x%* holds the horizontal separation.

*y%* holds the vertical separation.

*w%* holds the width of the block.

*d%* holds the depth of the block all in pixels.

In line 550 *m%* peeks &355, which contains the current mode. It then uses *f%* to convert the variables from pixel size to graphic units, storing them in *l%*, *l%+3* for FCODE to use.

Finally it calls *l%+&C2* (*definer*) to define the rectangle as 224.

PROCw prints a string out in the style defined by PROCf. Its parameters are the coordinates to start printing at (*x%* and *y%* again – not the same as in PROCf) and the string (*w\$*).

The routine then pokes each character of the string in turn into *l%+&C* then calls *l%+&15* to "print" it (lines 480-490). PROCkey simply looks for keyboard inputs.

Mike Bibby

NOW AVAILABLE  
FROM W.H. SMITH

# A DOUBLE-SIDED 3" DISC DRIVE AT A SINGULAR PRICE.

THE OPUS  
SUPER 3 MICRODRIVE.

**£229.95** (INC. VAT)

FOR USE WITH YOUR BBC MICRO.

For only £229.95 (and that includes VAT, and all the necessary leads) you can have an OPUS 500k double-sided disc drive. And remember 3" disc drives are fast becoming the standard for home and business use.

This is an even bigger bargain than it sounds. For you're getting a double sided drive at the price that other company's sell single sided drives for. It reads and writes to the disc cartridge from both sides, giving you twice the on-line capability of other 3" drives. And there's no need to flip the disc over!

#### STATE OF THE ART TECHNOLOGY FEATURING:

- Easy to connect to the BBC Micro
- Compatible with most other makes
- Comprehensive manual
- Free disc cartridge
- Format, verify and other utilities provided
- Direct Drive
- Double sided
- One touch cartridge load
- 3 ms access time
- Portable, compact and reliable
- One year's full guarantee
- Totally compatible with 5¼" drives

#### TECHNICAL PERFORMANCE.

	Single Density	Double Density
Capacity	250K Bytes	500K Bytes
Recording density	4,915 BP1	9,830 BP1
Track density	100 TP1	100 TP1
Total number of tracks	40 (each side)	40 (each side)
Recording method	FM	MFM
Rotational speed	300 RPM	300 RPM
Transfer rate	125K Bits/Sec	250K Bits/Sec
Access time track to track	3 ms	3 ms
Access time settling	20 ms	20 ms
Motor start time	0.5 sec	0.5 sec

The Opus Super 3 Microdrive is now available from W. H. Smith's and leading specialist shops.

Dual disc drives are also available for £460.

#### OPUS SUPPLIES LTD.

158 Camberwell Road, London SE5 0EE.

## ADD-ONS TO HELP YOUR BUSINESS TAKE OFF.

If you are thinking of upgrading your BBC Micro, it makes sense to get add-ons that not only bear a reputable name but also have been designed specifically to be used in conjunction.

EPSON, manufacturers of the world's best printers, now bring you the world's best drives, including the industry standard 3½ inch and 5¼ inch 40 and 80 track units.

These units are assembled in Britain by UDM for distribution through a dealer network.

All prices plus VAT

The Double Density Controller has been developed and manufactured by UDM specifically for the EPSON Disk Drives effectively doubling their capacity whilst maintaining compatibility with

- second processors
- teletext
- OSWORD 7F.

Additionally, a sideways ROM expansion board has been developed that is fully compatible with the above.

Send for full details of range available and prices or ring for your nearest dealer.

# British Built Designed & tuned for BBC

**£99.95** INC. VAT

Packing & Delivery  
in U.K.

- Designed and built in Britain
- Incorporating professional standard Green Phosphor data display C.R.T.
- Video bandwidth exceeds 16 MHz which is in excess of the output of the BBC micro.
- High resolution of 80 character display with excellent focus performance
- Horizontal line frequency 15.625 KHz. Frame frequency 50 Hz. Mains 240 V input.
- Suitable for use (Via 75 ohm BNC socket) with most other micro computers giving standard composite video signals.
- Full 1 year parts & labour guarantee.
- Delivery:- Ex stock.

# BIG K IS THE NEW GAMES MAGAZINE THAT BREAKS ALL THE RULES

**At last a games magazine that doesn't go by the book!**

BIG K is the name and BIG K is the game and from the very first pixel-poppin' page you'll know that no other sheet on the street looks like it or sounds like it.

Whatever BIG K gets in its sights – whether it's news, reviews, listings, or hardware, it always **plays** it a different way and **says** it a different way. BIG K is technical, BIG K is tactical but BIG K is never typical.

**BIG K isn't afraid to shoot from the hip –**

**and it's always hip when it shoots.**

If you want a magazine that's music to your micros then ours is more than just the score. When we test rigs we don't take prisoners and we've a 'no holds barred' approach to strategy and adventure.

**After your first byte of BIG K – the game will never be the same.**

**Go get it!**

**SECOND ISSUE ON SALE  
19th APRIL: 85p**

**FREE  
FLEXIDISC –**

3 great utility programs to help you get even better games out of the BBC and Spectrum.

## **THIS ISSUE:**

Falklands victor General Sir Jeremy Moore reviews the latest war games.  
1984 giant test – 3 forthcoming British versus 3 American micros.  
Adventure X – a superb adventure game for you to type into your Spectrum.  
Amazing games for Dragon, BBC, Vic 20, Spectrum, Atari.  
Spectrum graphics special – how to program great graphics into your micro.

## Alice through the VDU

Our monthly foray into Adventure games

# Timely crib for a trip with the Time Lords

LORDS of Time was designed by Sue Gazzard, a Harrow housewife and, judging from the peculiar way the player moves through time, a Dr. Who fan.

This adventure from Level 9 had an extra sheet of hints for the reviewer as well as the usual neat booklet. Having read the extra hints on how to operate the time machine – in this case a grandfather clock – my reaction was that I definitely needed the crib.

You have to wind, turn and push things before you can visit any of the nine time zones, which the booklet tells you to tackle in numeric order. This, it says is to ensure that you have the objects needed to solve the puzzles.

Of course it doesn't ensure anything of the kind, because you are limited to carrying only four objects and there are

about 80 objects to choose between.

Of these 18 are treasures and nine are special ingredients, like an Ivory Tusk, Dinosaur Egg and Evil Eye, which you have to throw into a cauldron.

As expected, the program fills the machine with compiled a-code and compressed text so there is little scope for cheating.

Like Snowball, it plays a nice little Vivaldi tune as it loads – a clever bit of interrupt programming – and then up comes the message that Father Time has “chosen you (sic) to help defend history against nine evil Time Lords”.

First time in I got an hourglass, a candle and a box of matches and then asked for a LIST of what I was carrying. The answer was “an old mattress”.

Now for a quick look at the nine

zones, so let's go into the clock to find them. The periods we can choose are Present, Ice Age, Stone Age, Vikings, Mediaeval, Tudor, Future, Roman and Far future (where I got stuck, so QUIT).

Now it's fairly obvious when some of the special ingredients must be. The ivory tusk must belong to the mammoth in the Ice Age, but the sabre-tooth tiger caused trouble, so back to the Present, into the cottage and get the Masai spear off the wall.

Check that it's sharp and now try KILL TIGER WITH SPEAR, which gets the response: “Only a fool would attack a Masai spear”.

One of the tricks I mentioned in a previous article is to check if something exists. This program has some weird

‘The more ambitious the syntax and semantic analyser the more likely you are to get odd answers’

## From Page 61

responses to this method like:

**GET EYE:** "You can't see a tightly closed box".

**OPEN WALL PANEL** (because the wall panels sound hollow in the Tudor mansion): "You can't see a wall of ice blocking the way south".

**GET CAND** (short for candle): "You can't see a silver candelabra".

**EXAMINE MATCH:** "2tches are left".

The program is riddled with these interesting slips because it is trying very hard to make sense of what you say. Many adventures insist on exact words, otherwise they respond with, "I don't understand", or, "You can't do that".

You see, the more ambitious the syntax and semantic analyser the more likely you are to get odd answers which the designers can't always predict.

The game is complex but it does not appear to have any real time paradoxes. I don't count dinosaurs living in the Stone Age which, we are told, was caused by the Time Lords' meddling.

A true time paradox should be caused by the player altering the Future whenever he alters the Past. If say, he drops an object somewhere he should find its decayed remains in a future time zone.

Such complexity is very difficult to design into adventures which, so far, only deal with where objects are and not when.

But maybe someday someone can come up with the equivalent of Isaac Asimov's "End of Eternity" or Ray Bradbury's short story "Tyrannosaurus Rex", where accidentally crushing a butterfly in the past totally alters the future.

As usual, because I can't get at the text, I haven't got very far with this game. The text has been compressed and to give some idea of how this is done, I will discuss some simple examples. Take the sentence:

**the cat sat on the mat**  
= 22 characters

A text compressor scans this and finds that "the" and "at" are common strings of characters so it replaces them with special characters like "#" and "@" thus:

**#c@s@on#m@ = 10 characters**

The text expander gets this string and uses some simple rules like:

- If special character then expand.
- If first character of sentence then make it upper case.
- If upper case character then output lower case + " ".

If you have an enormous amount of

Don't forget to construct a map

text, like the Bible, then another method is to identify and code into single bytes the (1-255) most common words and use the byte "0" to mean "output the next character as literal Ascii".

In this way most of the spaces disappear as well, and the text can be roughly halved.

Whichever method is chosen a further compression can now be made on the new string of bytes by applying some information theory first discussed by Claude Shannon, an American cryptologist in the Second World War. In a classic paper he explained, for the first time, why codebreaking is possible.

The reason is that all natural languages are extremely redundant - only about 25 per cent of most text is strictly necessary. To illustrate this redundancy Shannon asked people to guess, one by one, the characters in the following:

**There is no reverse on a motorcycle**

On average people guess two thirds of the letters in this sentence, particularly if they spot the semantic clue at "motorc" and don't guess motorcar.

Information theory has many applications and can treat ALL forms of communication as a problem in statistics, giving precise measurements of the amount of information conveyed and the efficiency of the machines that handle the information.

When we transmit messages the frequency of the characters can be exploited by giving short codes to the more frequent symbols. This is most

evident in the Morse code where the letter E is the most common in most European languages and therefore has the shortest code.

Now consider a first pass compressed adventure text. Given only the frequencies of symbols in this new language how can we design for optimum transfer properties?

The answer is stated without proof (log<sub>2</sub> means log to the base 2):

On the average

$H = -\sum_{i=1}^N P_i \log_2(P_i)$

bits should correspond to each symbol where  $P_i$  is the probability of the occurrence of the  $i$ -th symbol. This expression is called the *entropy* where  $H$  is Boltzmann's function.

A "bit" is a binary digit (0 or 1). Shannon had already shown before the war that it does not matter what number system is used in the calculations. We tend to use the base 10 decimal system but it is simpler to build binary electronic circuits, which explains the use of log<sub>2</sub> in Shannon's equation.

To show it working, suppose we have a simple language containing only four symbols A, B, C, D with probabilities 1/2, 1/4, 1/8, 1/8 respectively. A sentence in this language might be:

**A C B A D A B A D A A B A C B**

The entropy of this language is:

$H = -(1/2 \log_2(1/2) + 1/4 \log_2(1/4) + 2/8 \log_2(1/8))$

which is 7/4 bits per symbol.

If we represented each symbol with two bits - for example, A=00, B=01, C=10, D=11 - then the above result

# 'Nobody can teach anybody how to think

says we are not being efficient. We are not taking account of the fact that A is more frequent than the other symbols.

A better code is A=1, B=01, C=001, D=000 because then we can transmit the original sentence in 28 bits:

1001011000101100011011001011

rather than the 32 bits required by the two bit code.

Level 9 use these techniques to produce their big adventures. Lords of Time has well over 200 rooms, 750 messages and about 80 objects, plus dozens of puzzles to solve.

Compared with the early micro adventures of five years ago, which usually took about a day to solve, it's about nine times bigger and should take at least nine times longer to finish.

This raises a question I've been asked many times: how to solve adventures in general. The simple answer is that nobody can teach anybody how to think, just as nobody can teach us how to walk.

All I can do is give some guidelines and simple techniques, such as constructing a map with a matrix which I'll describe next month.

You'll have to allow for 12 directions in Lords of Time because IN and OUT are possible. Also examine every object and search every room because the program does not always tell you everything about what you can see.

Another trick is to carry four objects and just try to GET EVERYTHING whenever you reach a new room, because the program gives a rather more detailed description of all the things you can't get.

If you are an absolute beginner and have never played an adventure before then I suggest you start with one of the simple little classics by Scott Adams.

One of his first was Pirate Adventure, written back in 1978, which is still on sale. Adams published a listing of the game in Byte in December 1980 which, if you have the tenacity, can be reduced to about 350 BBC Basic statements.

It has 26 rooms, 75 messages and about 30 objects. All in all, it's only one-ninth the size of Level 9 games and can usually be solved in 140 moves by a beginner in about two days. Nevertheless, it is an amusing little game and ideal for children.

For those of you who have never been in a "twisty little maze" I have written a program to give you some idea of what they are like, and leave it to you to find out how to solve it.

Note that you can enter multiple commands like N.S.GET.LIST.SCORE and that, once again, there is a prize for the best explanation of how to get the money and take the exit. Alice

**We've just won an award for blowing v**

# ing away the cobwebs.

You know the story, the Micro you thought would give endless hours of fun soon becomes a five minute wonder. You get bored and dump it on the shelf to gather dust.

With the introduction of Micronet 800 you now have access to a vast mouth-watering menu of facts, figures and fun.

If we said it was a major breakthrough in microcomputer technology we wouldn't be going over the top.

Just recently at the Which Computer Show we picked up the prestigious RITA award for Systems Innovation of the Year.

RITA is the 'Oscar' of the computer industry. Judged and sponsored by the major forces in related institutes, associations and publications.

Incredibly all it costs is just a pound a week to take up a subscription to the Micronet system. Plus, for most of you, a local telephone call whenever you want to connect up.

Then you've got 30,000 pages at your fingertips, including Computer News Flashes, all that Prestel has to offer, and Micronet's SwapShop. Where you can buy anything from joysticks to second-hand computers.

Interact with our daily news update. You can even take over the world; competing against hundreds of other subscribers on the system, in our 'Starnet' game.

If we haven't won you over with that then try downloading our wide selection of free games and other tele-software.

Naturally, you can run household accounts, manage businesses, talk to other subscribers nationwide using the system.

The list is endless and so is the fun.

The only addition you need to connect with Micronet 800 is a modem unit.

Apart from that all you'll want is a pen to fill in the coupon for more information. Then we'll have you linked up in no time.

Before the dust settles, in fact.

Please send me the full facts about Micronet 800.

# GET ON THE RIGHT TRACK WITH MICRO POWER

Micro Power are an official service and information centre, and we are major suppliers to Government and educational establishments. We stock the complete range of Acornsoft and Program Power software as well as a wide range B.B.C. Micro and general computing books. Our expert staff are always on hand to provide advice and assistance in the relaxed atmosphere of our showroom.

## COMPUTERS

- BBC Model B ..... 399.00
  - Acorn Electron ..... 199.00
- (phone for availability)

**FOUR FREE PROGRAM POWER CASSETTES WITH EVERY MODEL B**

## MONITORS

- Philips TP200 ..... 78.95
- Kaga Green Screen 12" ..... 123.05
- Ferguson TX Monitor/TV ..... 335.95
- Sanyo CD3125NB Colour RGB ..... 235.00
- Microvitec 14" Colour (Plastic Case) ..... 286.35
- Microvitec 14" Colour (Metal Case) ..... 247.25
- Plinth for above ..... 5.75

# Do cells and replication head you for a padded cell? All is not lost, suss them out with DAVID BROWN

ONCE upon a time in the days of yore when personal computers had only just been invented (this is around 1974), two men working at NASA . . . *please note before going any further that this story is apocryphal and may very well bear no relation to the truth whatsoever* . . . two men working at NASA thought up a rather good idea.

They realised that this idea could best be exploited using personal computers. So, in the now familiar manner of capitalistic entrepreneurs, they set out on their own in order to market their newly discovered idea and thereby to make their fortune.

The idea came to fruition as Visicalc, the program renowned for selling more Apple microcomputers than any other product and which spawned the now highly acclaimed Visicorp Corporation.

Visicalc was the first spreadsheet program and it made them their fortune. It was the embodiment of an idea which was so simple and in the end so useful that the reason why nobody thought of it before has never ceased to be a source of wonder.

To understand the principle behind any spreadsheet program it is necessary to imagine a huge sheet of paper marked out into squares by a large number of columns running vertically and a large number of rows running horizontally.

Any one of these squares – normally known as cells, boxes or slots – thus created can then be uniquely identified by giving a reference to the column and to the row in which it lies.

Normally the columns are referred to by letters, the leftmost column being denoted as column A, the one to the right of that column B and so on all the way to Z.

After the twenty-sixth column they may be referred to by combinations of letters such as AA, AB, AC, BA, BB, BC, etc. Rows are referred to by numbers from row 1 at the top, followed by row 2 and row 3, and so on.

You would then refer to the cell in the top left hand corner of your imaginary piece of paper as cell A1 and the one three columns to the right and four rows down from this as cell D5.

## Beginners' guide to spreadsheets

A spreadsheet program simulates such a piece of paper internally and allows one to interact with it, writing into the cells one of three things – either a label (that is, just a piece of text), a value (a straightforward number such as 103.45) or (and this is where the whole power of the spreadsheet lies) a formula which uses values in cells from other parts of the piece of paper.

As a very simple example of this, let us imagine that we wish to compute a profits figure which is obtained by subtracting a costs figure from a sales figure.

Into three cells underneath each other we would put three labels – one for sales, one for costs and one for profits. These simply serve to keep track of which figures mean what.

Next door to the sales label we would put a figure, such as 200. Similarly, beside the costs label we would put a figure, say 95.

Underneath the costs figure and next door to the profits label we would put a formula. This might be  $+B1-B2$ , which would mean: "Take the value found in cell B1 and subtract from it the value found in the cell B2".

Assuming that these two cells hold the corresponding figures for sales and costs the result of this computation would be 105. This is the number that would then be displayed when the sheet of paper is viewed. It might look like this:

	A	B	C
1	Sales	200	
2	Costs	95	
3	Profit	105	
4			

It should be stressed here that there are therefore two pieces of information concerned with a cell which holds a formula. The first of these is the formula itself – in the case described this is  $+B1-B2$ . The second is the number which is the result of evaluating the formula.

When looking at a spreadsheet a numbers look the same, whether they are values entered directly – that is, the raw data – or the result of some calculations.

It is only by looking at the entry for a particular cell that you can determine the origin of the number displayed in that cell.

As the example now stands we can see at a glance that the sales were 200, the costs were 95 and that, not surprisingly, the profits were 105.

If then we discover that our figure for costs was wrong and it was, in fact, 100 not 95, we could simply change the value corresponding to costs to the required value.

The value of the profits cell would then automatically change from 105 to 92.

Let us extend the principle of the example and imagine that these three figures are, in fact, those for a particular month and that, in their turn, they affect quarterly and yearly figures.

It is not difficult to see that a change to one figure which was wrongly copied might have extremely irritating repercussions if the calculations were being done by hand.

All totals which depended on the figure would have to be laboriously re-calculated using a calculator, rubber and a distinctly unimpressed human.

facilities for doing more and more spectacular and more complicated things.

It is not unreasonable to expect a spreadsheet program to provide a little more than the basics. Some of the nicer features might include the following:

- Facility for editing entries (to prevent the need for re-typing large formulas).
- Conditional statement, allowing for a variety of calculations to be done depending on data entered.
- Ability to insert, delete and move rows and columns automatically.
- Facility for moving the cursor to an adjacent cell after entering a piece of data (useful when entering large columns of figures).
- Facility to specify the format of the data displayed in a cell (whether text is left or right justified, how many decimal places to be displayed, etc) both for the whole sheet and for an individual cell.
- Underline facility.
- Facility for splitting the screen into a number of separate "windows", so that one can simultaneously view different parts of the sheet.
- Variable column width applicable both throughout the sheet and to individual columns.
- Choice of whether re-calculation of the whole sheet is done whenever a piece of data is entered, or only when specifically requested.
- Choice as to the direction of recalculation - which cells are worked out before which others.
- Facility for reading and writing individual cell entries from random access files, enabling sheets to be set up as templates for different data which can then be captured using, say Basic programs.
- Facility for merging different sheets together.
- Facility for using the colour capabilities of the computer, a feature which seems to be sadly lacking from a great many "serious" programs.

A spreadsheet incorporating all these advanced facilities would make a very powerful package indeed. However, it is rare to find such a program. Designers

Spreadsheets have found their use in two major areas.

The first is in doing calculations which involve large numbers of figures which need to be tabulated, added, subtracted, totalled and generally mutilated in other varied and interesting numerical ways.

The second area in which they have been found to be extremely useful is in playing "What if . . .?" games.

Spreadsheet layouts can easily be used to answer questions such as: "What is my total payment on a TV set if I enter a hire purchase agreement with a down payment of £200, at an interest rate of 15 per cent over three years, and what if I were only to make a down payment of £150 . . .?"

Financial managers have spent many happy hours using spreadsheets as tools to answer more difficult questions along the same lines.

In order for a program to be considered a spreadsheet it must exhibit a number of basic abilities. First it must enable the user to view a section of the sheet on the screen.

Moving around the screen, inspecting and updating cells, erasing their contents, moving directly to particular cells - all these are functions which are used constantly and must therefore be simple and uncomplicated.

No hunting for the right function keys, changing direction before moving, and so on.

Replication is another primary function. This enables a formula to be repeated many times along a row or a column.

For example, this means that a formula which adds up the column of figures above it and then multiplies the result of this by a constant factor need not be entered more than once despite the fact that it may be needed 12 times.

Replication is used a great deal, even in simple sheets, and it must be powerful and at the same time easy to use.

It is imperative that the sheet has some reasonable number crunching facilities as well as the normal arithmetic functions.

A spreadsheet program would be pretty useless without some ability to provide totals, averages, maximums, minimums, statistical and circular functions.

It is perhaps unnecessary to point out that such facilities would be useless without both the ability to save and restore sheets from tape or disc and also to take a hard copy by printing out some or all of the sheet.

With this basic repertoire the spreadsheet would have the same power as a good programmable calculator, with all the advantages of a screen display and backing store.

However since Visicalc was first produced there has been an ever-increasing demand for spreadsheet programs to have more and more

ALLIGATA THE SOFTWARE

# VIEWSHEET

From Page 69

of spreadsheet programs tend to emphasise some points and not others.

It is also true to say more features add to the price of a package. One tends to get what one pays for.

The choice of which spreadsheet program to buy must depend, for the most part, on the uses to which it will be put.

Buying a program which has only a minimum of functions is probably good enough for applications at home. Business applications, on the other hand, will undoubtedly require more sophistication.

It is important to have a demonstration and a thorough perusal of the documentation of any package before buying. If necessary spend a long time actually reading the manuals before buying a product.

Avoid buying a package from any retail outlet which is unwilling to let you play with a product before buying it.

My preference is to go for programs supplied in ROM. Not only are they always on hand when needed but, particularly for tape users, the hassle of loading a program can be more bother than it is worth.

It also seems a shame to waste valuable RAM space on intransient programs when Basic is lying idle.

*Does anyone else find it strange that there are so few packages available in ROM? – I mean why on earth is the language Lisp being sold on tape?*

It is worth pausing briefly to consider the future of the BBC Micro as a machine for serious applications such as spreadsheets and relational database management systems.

Packages of this kind produced so far have not been of a very high standard, particularly when compared to those available on CP/M machines of similar price to the BBC Micro.

It is a shame that Acornsoft, the company with the most credibility among software buyers, does not encourage the production of high quality applications programs by approving and commissioning software more readily than it does.

If the British Broadcasting Corporation's micro is to survive in the business market, software of a much higher standard than that which has emerged so far will have to be produced very soon.

## ‘Succeeds in providing basic functions – but what a plethora of windows’

VIEWSHEET is a ROM-based spreadsheet program marketed by Acornsoft and written in house, rather than commissioned from another software house.

The pre-release version came with a pre-release type manual. It is therefore not possible to comment on the presentation of the documentation as it will finally appear, only on its content.

There is little doubt, however, that the final form of the package will be up to Acornsoft's usual high standards.

The manual is very well written. The first part is a "try this and watch what happens" tutorial approach which assumes no prior knowledge of spreadsheets and expects a reasonable standard of intelligence from its reader.

There are consequently no condescending "Did you notice what happened then...? I bet Teddy did!..." lines to make one want to rip the book to pieces.

The tutorial covers all the facilities offered by the program, not just the simple ones. The second part is a more curt reference section which concisely explains all available facilities.

To access the spreadsheet one types \*SHEET or \*SH. This puts one in the Viewsheets command mode from which one can load, save and print sheets as well as perform a number of other functions, including changing mode.

The system works equally well in all seven modes, which means that those using TV sets don't have to squint at 80 column layouts and those with particularly bad eyesight can use Mode 5 if they wish.

The foreground and background colours can be changed to good effect using the usual Ctrl-S,n,n,0,0,0 technique.

Mode 3 with yellow writing on a blue background makes the whole system look very attractive and is more restful

By  
DAVID BROWN

on the eyes than white on black.

Pressing Escape takes you into sheet mode, in which you can manipulate the sheet in memory. Pressing it again takes you back into command mode (Wordwise users will have no problems here).

One thing that did strike me is that there is no use whatsoever made of the \*HELP command. It seems unlikely that ROM space is at a premium, and it therefore seems a shame not to make the most of this facility, even if only to provide a list of commands available in command mode as is done in the DFS ROM.

The maximum size of the sheet itself is 255 columns by 255 rows, which means there is no real restriction on the size of the application save that imposed by the amount of memory. (For those with an academic interest in such things, the package will work with the 6502 second processor.)

Facilities are all fairly standard. Moving around the screen is simply a matter of using the cursor keys.

Unfortunately however, the GOTO cell function is rather awkwardly hidden on function key number seven.

All cell entries are simply typed in and once entered they are interpreted to be values or labels.

Very annoyingly, there is no facility for forcing an entry to be interpreted as a label so that 1981-82 comes out as 1899!

As one would expect, ranges of values can be totalled, averaged, "minimum-ed" and "maximum-ed"

## From Page 71

without difficulty. Replication is done in a standard way and is both powerful and easy to use.

Rows and columns can be inserted and deleted, although accidental deletion can be protected against.

The numerical (but not textual) format of the information can be specified on a cell or window basis. The default row and column headings can be redefined or even turned off.

There is a comprehensive IF statement and a facility for reading and writing elements of random access disc files. At first sight it seems that nothing has been overlooked.

Unfortunately there is one major oversight. Presumably in order for the reverse video cursor to show up in Mode 7 there is a mandatory gap between columns which cannot be filled.

This means that any text which is entered into the sheet has to be typed in on a one word per cell basis.

If you wish to write "Uncommunicative" on your sheet, you either have to have a column width of 15 (in which case one can only get about three columns on a screen) or be satisfied with something along the lines of "Uncom-

mu nicativ e". As a result headings, and for that matter all labels, are a pig's breakfast. To compound the error, column widths are not variable.

One can only suppose that the answer is to transfer the computed sheet, complete with mnemonic labels, to a word processor – one feels sure that Acornsoft would recommend View – and tidy up the dog's dinner when the number crunching has been completed. That strikes me as being a distinctly unsatisfactory solution.

Having got over that hurdle we come to another problem. Acornsoft has gone overboard on windows. One can define up to 10 (yes 10) screen windows and another 10 print windows.

The idea is to enable you to dissect your sheet into logical subsections in order to view and print these as inter-related sub-sheets.

There is a facility for loading and saving window definitions separate to the sheets, thus enabling you to swap from one perspective of the sheet to another by loading in a new window definition.

While this is a very laudable aim, there is a considerable obstacle. Defining and manipulating window definitions is uncannily difficult, being

about as user-friendly as a kick in the teeth.

Fumbling around defining and re-defining windows in order to get the display right is not easy. One might feel that the struggle would be worth it if the end result were to prove useful, but I have yet to be convinced.

My view is that an ability to split the screen into two – or at most four – different windows is a very useful facility, but the usefulness of 10 screen windows is dubious.

The printer windows, which allow one to define the area of the sheet to be printed and to some extent the format of the output, could be useful for very big sheets.

More work needs to be done by Acornsoft to find the best compromise between flexibility and user friendliness.

In conclusion, Viewsheets' major failing is to provide adequate facilities for textual labelling. Apart from this it succeeds in providing all the basic spreadsheet functions in a well presented package.

The only real advantage it has over its competitors at the moment – and one which may evaporate before its release – is that it is ROM based. Acornsoft is capable of producing better programs.

LIKE other ROM based software, Ultracalc – a sophisticated spreadsheet program – fits into one of the extra ROM sockets in the BBC Micro. The accompanying 80 page manual, which is extremely well written, gives precise fitting instructions.

To call the ROM into action you have to key \*CALC, which immediately brings the sheet onto the screen with two beeps.

If you want the computer to start-up in Ultracalc, the ROM can be fitted into the right-most socket, and the Basic ROM moved one step to the left.

It is a large spreadsheet with 63 columns and 255 rows. The columns are named A,B,C,D . . . Z, then AA, AB, AC, AD . . . AZ, and finally BA, BB, BC, up to BK. Rows are numbered 1 to 255.

In Ultracalc the top portion of the screen above the column scales is called the information area. This consists of three lines, the first showing the status of the page.

At the left hand corner, two characters, such as A1, indicate the coordinates of the current cell.

To the right of it, the display reads "BLANK", which means that the cell does not contain anything. After this

appear the words INPUT OR COMMAND, which indicate that Ultracalc is expecting instructions.

When anything is typed, it is first

By  
**S.K. KHASNAVIS**

shown on the input line, and as soon as Return is pressed, it is entered in the cell bracketed by the cursor. The entry then moves up from the input line to the contents line.

Below these three lines, a column scale such as A, B, C, etc., is displayed across the screen, and in the left hand margin appear the row numbers, starting from one.

With the default column width of

seven characters, the screen can show four columns and 20 rows at a time.

The cursor indicates the user's position on the page, and can be moved by the micro's four arrow keys one cell at a time in the direction of the arrow. Using the arrow keys in combination with the Shift key will cause the cursor to jump four columns or 10 rows at a time.

There is also a GOTO command /G(area) which will make the cursor go to any desired cell.

In addition to supporting arithmetic and mathematical operators and functions, it has several built-in facilities making it easy to use.

The column width can be individually

# TOOLKIT ROM

## BASIC Programmer's Aid for the BBC Micro

from BEEBUGSOFT  
Quality Software

*It is possible to program in BASIC without  
TOOLKIT but its not very smart*

*"TOOLKIT is an essential utility for all Basic programmers using the BBC Micro . . . The range is enormous . . . An indispensable aid packed full of powerful utilities"*

EDUCATIONAL COMPUTING MARCH 1984

*" . . . Should speed up the process of programming considerably . . . TOOLKIT is highly recommended"*

PCN MARCH 17 1984

### COMMANDS

*CHECK	Verify a program or data in memory with disc/cassette.
*CLEAR	Clear all variables including integers.
*EDIT	Enter full screen editor.
*FREE	Display free memory and other useful information.
*MEMORY	Display memory contents.
*MERGE	Merge two programs.
*MOVE	Move program to run at specified address.
*NEW	As New, but can be issued from within a program.
*OFF	Cancel enhanced error handling.
*OLD	As Old, but can be issued from within a program.
*ON	Auto error handling – enters editor at line in error.
*PACK	Efficient program compactor.
*RECOVER	Intelligently recover bad programs.
*RENUMBER	Allow partial renumbering.
*REPORT	Extended error reporting facility.
*SCREEN	Screen dump to cassette or disc.

### UTILITIES 1-9 ▶

### UTILITIES 1-9

- 1 String Search
- 2 String Search and Replace
- 3 Move lines of BASIC
- 4 List Procedures and Functions
- 5 List values of A% to Z%
- 6 List Numeric Variables
- 7 List String Variables
- 8 List Names of Arrays
- 9 Set up range for Utilities 1 and 2

## £27.00

Including  
VAT & P&P

- Just plug it in, no loading necessary
- 27 new commands to make life easier
- Saves hours in program development and debugging
- Supports both cassette and disc systems
- No command name conflict with other Roms
- Ideal for expert and novice alike
- Fitting instructions and a 32 page manual supplied
- You'll wonder how you ever managed without it

From Page 72

or globally varied up to 40 characters wide, giving the user complete freedom to define a broader width for, say, the first column A on the left normally used for titles and text.

A powerful "SUM" facility is available for easy totalling of a column or row or even a whole area without having to type all the cell references. To do this, you have to type SUM(area), and Ultracalc will total up all the values in the defined area and display it in the current cell.

Editing is excellent. You can edit all the data placed in the various cells with the help of function keys f8 and f9, and the Delete key. All you do is place the cursor on the particular cell and press Shift and Copy together. This puts the contents of the cell in the input line.

The flashing cursor can then be moved to the left by f8 and to the right by f9. The Delete key will remove the character above the cursor, and a new character can be typed in. Pressing Return will send the edited entry to the cell concerned.

The manual describes a numeric entry as "value", and a text entry as "label". A thoughtful feature is that Ultracalc automatically senses an entry to be text string or numeric and marks it accordingly as a label or a value, showing it as such on the top reference line.

This is most convenient, as one does not have to key in double quotes to identify text entries as in a few other sheets. There is provision to override this automatic feature, and to force a numeric entry to be read as text or "label".

A powerful replication facility is available supporting both "absolute" and "relative" copying of formula over any "area" of the sheet.

Copying a formula from one cell to a whole area is simple and useful. Just place the cursor on the particular cell containing the formula and type //(area). In this case area means the cell references at the beginning and end of the area into which the formula is to be copied.

An area begins at the left hand uppermost corner, and ends at the rightmost bottom corner, forming a rectangle.

Because of this feature, Ultracalc requires that even a single cell like A1 should be referred to as a rectangle named A1A1. A rectangle can therefore be a single cell, a row, a column, or any contiguous part of the page.

As well as copying the contents of a

single cell into any area, Ultracalc also supports a powerful replication facility which can copy "relatively" or "absolutely" the contents of one area into another. The command for this is /R (source area) (target area).

The system incorporates an IF routine and a LOOK UP facility found only in expensive financial modelling packages running under CP/M or other operating systems.

IF allows the user to give conditional instructions, carried out only if defined conditions are met.

In LOOK UP, Ultracalc can look up an expression in any area instantly, without the user having to wade across the whole sheet searching.

These two facilities make it very versatile - almost in the class of Visicalc.

Rows and columns can be inserted/deleted simply by typing a single command. All the formulae and contents are automatically shifted and adjusted. Formatting the display is also simple and can be made applicable globally, or to individual cells.

For example, display of integers in those cells where necessary, and two decimal places in others can be achieved without fuss. "Labels" as well as "values" can be left or right justified.

In fact, all the formatting commands can be applied to a single cell or a whole area as necessary. While executing such a command, Ultracalc will automatically ignore blank cells, or cells containing "labels", if the command refers to "values" only.

Saving, loading, printing etc are carried out with ease, and all commands can be remembered easily. For example /S for SAVE, /L for LOAD and /P for PRINT.

Cassette and disc systems can both be supported, and I had no difficulty in using it with Amcom DFS in the extended mode.

Any part of the sheet can be saved or printed if it is defined by cell references as an "area". After saving, there is a command to verify whether the sheet

has saved properly. If it has not, the screen will display "FAIL" so that the user can try again.

While printing it is possible to switch off the column and row scales, so they don't appear on the printed sheet.

By typing /T you can "fix" the area above and to the left of the cell bracketed by the cursor so that it remains in view when the cursor is moved to the right or towards the bottom of the screen.

This is useful in scrolling-in the contents of distant columns against the titles which are usually in the first left column.

The command /H will hold the contents of a cell, and will not allow the user to delete or overwrite it until /H command is issued again.

Ultracalc also allows the command /\* which passes the rest of the line to the system, thus typing /\*B. will take you to Basic, and /\*. will give the catalogue of the current drive etc. Typing TOP will give the remaining memory and CNT counts the number of cells with values defined in them.

Memory is used like the precious thing it is. I built a simple model to calculate compound interest and total yield every year for 25 years for a given amount and rate of interest, the interest being compounded quarterly.

It used up only 5k, leaving more than 21k to be tapped. Obviously, much more complicated models can be built quite easily.

Calculation is also very fast. Any change in the given amount or interest rate in the above model recalculated the whole sheet in less than a second.

Obviously the program has been written by experienced and professional people reflected in every feature of it being simple and easy to use.

I could hardly find anything to complain about in Ultracalc. It has practically everything that a good spreadsheet should have, and I thoroughly recommend it to anyone who has to do a lot of financial modelling.

# SCHOOLKIDS TRACE SATELLITE!

After the recent space shuttle flights the pupils of a Junior School were set the project - "Outer Space". In the computer room Jill, aged 9 and George, aged 10 were using an RD Digital TRACER on the BBC Micro to draw space monsters, following the simple commands for instant drawing and colour fill. They then added the animation routine, and imagine their excitement to see the monsters come to life and actually fly around the screen. Their teacher was impressed and could see a real life application. So he suggested that instead of monsters they draw a satellite in orbit. Using the special construction routines Jill and George did this in a matter of minutes.

The illustration shows each frame drawn, which when replayed makes a fully animated display.

Teacher later used their lively animated sequence to illustrate a lesson on the communication satellites orbiting earth, and the class were amazed that the sophisticated display was created by their pals - and not NASA.

The RD Digital  
**TRACER**

**...SIMPLY CREATIVE**

For

**£60.83**  
plus £9.12 VAT  
For ZX Spectrum  
**£48.26**  
plus £7.24 VAT  
Prices include  
P&P

In the educational field the RD Digital TRACER is capable of very effective results in the most inexperienced hands, and yet it is an invaluable tool for the more advanced user.

Features of the TRACER include:-

- Immediate reproduction from original drawings, maps and books to display file (A4 on Spectrum, A3 on BBC).
- Sample and move text and user defined graphics before entering to display.
- Geometrical shapes quickly applied after sampling, then copied and moved to any position.
- Fast colour fill and shading of outlined areas.
- Instant colour change with all available colours, both PAPER and INK.
- Automatic re-trace and variable scaling (with animation on BBC).
- Save displays on cassette or printer, or merge with your own programs.
- Uses all the BBC's graphics modes, including TELETEXT.
- Supplied ready to use with full easy to understand instructions and advanced software.

For further details of the RD Digital TRACER either telephone or write to Dept. MU3 at the address below (SAE please). For prompt delivery, just send a cheque made payable to RD Laboratories Ltd., together with your name and address.

Also available from Spectrum Stores, and Griffin & George.

# TUTORIAL SOFTWARE PROGRAMMED AIDS FOR BETTER GRADES MAYDAY!

FOR BBC B  
AND ELECTRON

A NEW  
EDUCATIONAL PROGRAM  
PACKAGE  
BY TSL TUTORIAL  
SOFTWARE LTD.

Can you use co-ordinates, grid references, bearings and scales to save the stricken tanker?

A new concept in Educational programs, MAYDAY offers:

- Two compelling new games in one package.
- Playing the game teaches and tests compulsory aspects of Mathematics and Geography.
- Used and recommended by Schools and Colleges for ages 11-16 plus.
- Package includes map, grid protractor, core facts book, simulation program, multiple choice program, all for £11.95 free p + p.

Please send me a copy/\_\_\_ copies of the TSL 'MAYDAY' Teaching Package for the BBC B.

I enclose a cheque/P.O. for £11-95

# ACTION REPLAY!

Most popular games from the pages of

**THE MICRO USER**

AVAILABLE ONLY FROM YOUR ACORN DEALER

Build up your own action-packed cassette library of these all-time Micro User favourites

**Deathwatch** Hold the fort against a combined tank and helicopter assault on your positions. Fast and furious — one of our most popular games.

**Pelmanism** Defeat the computer by remembering more pairs of cards than it can.

**King Kong** Use your helicopter to rescue two maidens from the Empire State building — avoiding a deluge of rocks from King Kong.

**Fruities** Fast-paced, fun-packed extravaganza. Guide your man up ladders, avoiding — and digging traps for — the marauding Fruities!

**Nim** Find out just how nimble your mind is in this intriguing battle of wits against the computer.

**Space Pilot** Desperately fighting off hostile life-forms, you must dock with satellities to replenish dwindling fuel supplies.

**Robin and Marian** Medieval melodrama! Rescue Maid Marian from the sheriff. A hilarious, action-packed game.

**EECGAL** In charge of the EEC's Picture Gallery, you have to put some order into the frames — but it's not so simple as it sounds.

**Air Strike** You need to fly fast and low for this dangerous intrusion into enemy air space.

**Barrel Battles** Fast and furious video action. Dodging an avalanche of deadly barrels you climb towards the telephone.

**Frogs 'n' Dogs** Loved by young and old alike. Simply take Freddy Frog for a walk, avoiding Fido and poisonous lilies!

**Tenpins** Stunning simulation of ten pin bowling. This addictive game will hold you spellbound.

**Tower of London** Ghosts have broken out of the Tower of London and taken the treasure. Can you recover it?

**Blackjack** A true-to-life recreation of the casino favourite. Can you beat the bank?

**Galactic Invaders** The only thing between you and imminent destruction by waves of hostile aliens is your proton gun. A compulsive classic.

**Alien Intruders** Stunning version of the all-time arcade hit. No one can resist this classic!

**Goblins** Frolics in fairyland! Guide Kaplan the pixie home through the forests, avoiding the nasty goblins — a delightful game.

**Gone Fishing** Superb simulation of a day on the riverside. This enthralling program will give hours of enjoyment.

DEALER ENQUIRIES INVITED... PHONE JEANETTE ON 061-456 8383

# PHLOOPY

## A 100k BBC-drive for £99 + VAT

We've done it! We've built a mass storage system for your BBC Micro with the power and convenience of a floppy disk drive, but at a fraction the price. Get to know PHLOOPY, the remarkable new 100k drive that costs only £99 plus VAT, and a further £26 plus VAT for the interface to your BBC, operating system and connecting cables.

### How PHLOOPY does it

PHLOOPY does not use disks to store data, but a 12-foot loop of professional-quality quarter-inch magnetic tape contained in a robust cartridge. The drive has only one moving part, the motor which drives the tape loop – hence the low price and high reliability. As the loop is driven round, each file of data it contains passes across the magnetic head which reads it or writes to it. Other people have produced tape loop micro-drives, but they've not been very reliable. They lacked PHLOOPY's special secret.

### PHLOOPY's special secret

The heart of the invention is a brilliantly designed "byte-wide" magnetic head, made by Phi Magnetronics who build multi-track heads for professional use. PHLOOPY's head records and reads nine tracks across the width of a quarter-inch tape. That means the tape loop can be much shorter, so the typical time to access a file is reduced to a mere 3 seconds. If you're used to waiting for a cassette tape to trundle programs into your BBC, you'll be amazed at PHLOOPY's performance.

### Getting it right every time

In addition, we've included a feature we know you will appreciate. PHLOOPY has full error detection and correction, so you can be certain you will get back what was originally written onto the tape.

### Talking to your PHLOOPY

PHLOOPY's own software, contained in ROM, responds to standard BBC filing system and Basic commands. Most programs written to run on disk or cassette should run on PHLOOPY without problem.

And because PHLOOPY contains its own intelligent microprocessor – a second computer which does most of the hard work – PHLOOPY puts very

# PHLOOPY

Electro magnet to pull motor spindle onto tape.

"On-board" microprocessor.

Nine track "byte-wide" head.

Tape drive spindle.

Precision ground rubber pressure roller.

Twelve foot long loop of tape freely packed into cartridge.

PHLOOPY 100k cartridge, shown not yet pushed fully home.

little load on the BBC and uses much less RAM than most disk systems.

### Installing PHLOOPY on your BBC

You'll be amazed how simple it is to install PHLOOPY. Just plug in the interface cut two resistors (clearly marked in the instructions) and the job is done. If you should have problems our engineers are waiting to help you.

### Making a PHLOOPY Library

PHLOOPY cartridges hold a full 100k of data or programs. Two of them come free with the drive and extra ones cost £3.75 each plus VAT. They are moulded of high impact polymers for protection and store easily on a bookshelf. Many programs will be available to purchase on PHLOOPY.

Defend the dam in this all-action blockbuster by GEOFF TURNER

# DAMRAIDERS

IN COMMAND of a Royal Navy frigate, your orders are to defend a dam under constant attack from enemy aircraft and submarines.

The planes drop bombs both on your ship and the dam, while the submarines attack the dam with torpedoes.

You can counter-attack with guided missiles and depth charges, but as the dam is damaged the water level falls. Your ship will eventually be destroyed when it reaches the bottom.

Also three hits from bombs are enough to sink your vessel.

You score 50 points for each plane and 100 for each submarine, scoring 10 points for each brick left in the dam at the end.

```

# THE BEST BBC MICRO

★ PRODUCED BY AN INDEPENDENT SOFTWARE HOUSE TO

**BORIS IN THE UNDERWORLD (32K)** £7.95  
A novel arcade-style game in which you take the part of Boris, who has had his home raided by the underworld creatures. They have stolen most of your possessions and your task is to venture into the underworld to retrieve your valuables by fighting off the underworld creatures. The walls of the underworld close in and you will be vapourised if they touch you. Can you retrieve all of Boris's possessions from the underworld?  
●●●NEW RELEASE●●●

**OVERDRIVE (32K)** £7.95  
A highly-addictive multi-stage 3D race game. You steer your car left and right, accelerate and decelerate as the opposing cars weave about the road. There are five different stages including night, snow, desert, and riverside scenes. Incredible graphics give the impression that you really are taking part in the race. Highly recommended, and destined to become another top-seller for Superior Software.  
●●●NEW RELEASE●●●

**BATTLE TANK (32K)** £7.95  
An excellent game, made possible on the best video computer only by the unique use of a dual-screen display and specially written plotting routines. You are a tank gunner looking out onto a mountainous plateau. You see the distant mountains and unfortunate pyramid obstacles - and also the enemy deadlier. Position the tank in the rectangular viewing area with fine adjustments of your controls...then fire!  
(KEYBOARD or JOYSTICKS).  
●●●NEW RELEASE●●●

**ROCKY (32K)** £7.95  
A new concept in arcade-style games. Your task is to save yourself from patrols of mutant robots by dropping rocks on them. Each of the robots has a single large eye which emits a yellow beam of light. Being caught in this beam reduces your strength and, if you are not carrying a rock, causes the robot to metamorphose. It may change into either a spectre or a crusher.  
(KEYBOARD or JOYSTICKS)  
●●●NEW RELEASE●●●

**MOON MISSION (32K)** £7.95  
Moon Mission is a fast-action machine-code game featuring superb graphics, sound effects, hi-score, and rankings. Your mission is to rescue the six astronauts stranded on the moon by steering your spaceship through the meteors and space-mines. The game starts relatively slowly, but from sheet to sheet not only does the speed increase, but also the number of meteors, space-mines, enemy spaceships, and fireballs.  
●●●NEW RELEASE●●●

**SPACE DOCK (32K)** £7.95  
A space docking simulator using 3D graphics only to model the motions and responses of the ORION spacecraft. Your mission is to pilot the shuttle to the "soft dock" with the space station. PITCH, YAW, ROLL, FORWARD, LATERAL and VERTICAL engines are provided together with orbit manoeuvre point-roller booster engines. 6 skill levels provide for a completely inexperienced pilot as well as the fabled commander.

# BBC MICRO SOFTWARE

HOUSE ★ TOP QUALITY MACHINE-CODE PROGRAMS ★

**PERCY PENGUIN (32K)** £7.95  
The best version available for the BBC micro. Percy is trapped in an ice maze which is populated by the deadly Snobees. His only hope of survival is to smash them by hurling ice cubes at them. Unfortunately, whenever it seems that he has won, a deadlier breed appears. Hi-score, rankings, excellent graphics and sound.  
(KEYBOARD or JOYSTICKS).  
●●●NEW RELEASE●●●

**HUNCHBACK (32K)** £7.95  
An excellent version of the arcade game where Quasimodo attempts to rescue Esmeralda. Beautifully detailed animation as Quasimodo leaps over the ramparts. Twelve different screens of action! This program is sold under licence from Ocean; we have exclusive rights to its sale for use on the BBC micro.  
(KEYBOARD or JOYSTICKS).  
"...an extremely good version of the arcade game...thoroughly recommended."  
...BEEBUG MAGAZINE

**COSMIC KIDNAP (32K)** £7.95  
The best version available for the BBC computer. In Cosmic Kidnap, you take the role of the Autoguard in charge of your side's three most important alien captives. Suddenly, you hear explosions... your jail is under attack by a fierce swarm of aliens. The game becomes increasingly difficult from screen to screen, and bonus points are scored for hitting the mother ships. A fast-action arcade-style game.  
●●●NEW RELEASE●●●

**MONKEY PRINTER (32K)** £7.95  
The only full-feature version available for the BBC micro. On the first screen, you take the part of a monkey being chased by African tribesmen. The second screen features the monkey trying to reach a bunch of bananas. After that, you take control of a point-roller and each square painted-in adds to your score.  
(KEYBOARD or JOYSTICKS).  
"Great sound and graphics, smooth and accurate animation, responsive and simple controls..."  
...HOME COMPUTING WEEKLY

**ROAD RACER (32K)** £7.95  
The only full feature machine-code version available for the BBC micro. Features include: scrolling screen, radar display, 3 pursuing cars, checkpoint flags, fuel gauge, smoke screens, 6 skill levels, rankings, increasing difficulty, and sound effects.  
(KEYBOARD or JOYSTICKS).  
"The game becomes very hard and has very smooth graphics. Excellent..."  
...BEEBUG MAGAZINE

**STAR BATTLE (32K)** £7.95  
This is a 2-player deep-space dogfight. You each have a limited amount of shield energy to protect you from the other player's laser shots. You can increase your shield energy by collecting the fuel pods dropped by the flying saucer, but your shields will be weakened if you collide with the saucer or the wall snake.

Selected branches of W. H. Smith, Boots, John Menzie's, and Greens at Debenhams.

All major computer dealers - Eltec Computers, Micro Management, West Coast Personal Computers, Microstyle, Electronequip, 3D Computers, Computerama, GTM Computers, etc.

Our software is also available through all the major distributors, and directly from us by mail-order.

# Increase your fire power

## More than just a joystick—a system

- ▲ Nylon encased—Steel shafted joystick with ball and socket joint.
- ▲ Fast sprung return to centre.
- ▲ Graphite wiper linear potentiometers.
- ▲ 12 Months Guarantee.
- ▲ 7 day Money back Guarantee (on Hardware).

## Complete control at your fingertips

A superb joystick and a keypad for the price of either one. Plus the software to integrate it into the computer's system. One handset will work on it's own in the A/D port as a joystick and two fire buttons. Joystick is immediately compatible with ACORNSOFT and similar software.

The interface joins together the analogue and the user ports to use the full keypads giving a total of 24 user definable keys. The interface can also be used as a splitter for the A/D port to take two items at the same time, e.g. joystick and lightpen.

DELTA DRIVER on cassette or disc: Two programs on each cassette or disc. One converts machine code programs from the keyboard to the joystick or keypad, with adjustable sensitivity on the joystick and will run on any O.S. The second program (needs O.S. 1.0 or later and an interface) duplicates any keyboard keys on the keypads, in the operating system, so that it can become a numeric keypad or will take on the function keys.

Numerous stockists nationwide or direct from us.

# High-speed action — out where no man has gone before

IF you have a fatal fascination for unsolved mysteries and unexplored territories, then participating in Optima's *Omega Probe* may just be the sort of program for you.

Little is known about the Omega Zone except that it lies in the uncharted reaches of the universe, a place from where no man has ever returned alive.

Your mission is quite simply to survive, travelling in the ultimate spacecraft — Omega Probe.

Deep space may not be a terribly new or innovative setting, but the story the game depicts does conjure up a sense of foreboding and excitement.

I was especially impressed by the way in which it is brought to life on screen by quite splendid colour and animation.

The many hazards encountered by Omega Probe are cleverly displayed by the use of three separate layers of objects all moving simultaneously.

This not only produces one of the fastest machine code games that I have seen, but gives the game an almost 3D effect.

While the controls of the game are fairly simple (comprising four way movement and a fire button), Optima have included some ingenious refinements.

There are the usual facilities for choosing to play with or without sound and with or without a joystick, as well as a pause option for freezing the game at whatever stage is wished.

The ingenuity arises in that these options can be selected at any time without recourse to the original menu.

Indeed, you can even change options while in the pause mode, not only giving you more time to think, but further enabling you to continue the mission where you left off.

A very simple but nevertheless effective extra is the two keyboard option for controls.

Omega Probe is a must for all game fanatics. It is not just

another watered-down version of an arcade game, but a truly original, fast-moving and action-packed game that rivals even the best of arcade game classics.

Karen Torevell

## Egged on by the Chickaroo

NOT being too keen on birds, children's word games or space invaders, I approached *Chickaroo* by Screenplay with hesi-

tation. I was, however, pleasantly surprised.

The game turned out to be quite an acceptable combination of all three, the star attraction being a bird named Chickaroo.

It flies across the screen laying eggs as it goes. Each egg holds a letter which can only be revealed by shooting at it.

If you think that the revealed letter fits an incomplete word shown on screen you send another little bird to collect it. Err and you will be exterminated.

This certainly took the boredom for me out of yet another word recognition game. Children too, I'm sure, will be much more willing to play along with

# ADDICTED TO BEING EATEN...

AFTER numerous fruitless attempts to retrieve stolen power jewels, being continually and mercilessly eaten alive by spiders and dropped through broken floorboards, I feel that I am well-justified in describing *Ghoul* as addictive.

I now fill the top ten scores for today (under a variety of pseudonyms) and have still not progressed past the second sheet.

As you will by now realise, one of the great attractions(?) of this game from Program Power is that it cannot be mastered in a couple of minutes.

The scene is set in a deadly haunted mansion and your task

is to rescue power jewels from the mischievous ghosts that stole them.

If you can perfect the knack of leaping over cracked floorboards and deadly spikes you are faced by moving platforms.

Throughout the game you are pursued by the ever-lurking spooky ghost. (He seems to crop up everywhere — especially when you are nearing the jewels.)

I very much like the idea of having to watch out for a multitude of hazards and enemies with only a few controls at one's disposal.

No, I'm not a masochist. It's just refreshing to be able to play a game almost straightaway

without having first to digest a lengthy and complicated list of instructions and controls.

You do have a power pill which disables the ghost for a short while, but otherwise it's all down to coordination and dexterity in running and jumping out of harm's way. This requires practice and a great deal of patience.

The game is visually successful in creating a spooky setting, and choosing to play with sound effects only enhances the atmosphere.

*Ghoul* is simple but effective. Now I really must go and have one last stab at retrieving those jewels...  
Karen Torevell

## From Page 87

their parents' wishes for them to learn.

The game involves very attractive use of colour as well as realistic space invader sound effects, providing the sense of urgency and danger that is always attractive to the young.

It really is a case of "Bang, bang you're dead" if you fail to recognise a word correctly.

As well as the 100 words provided in two data files, the menu allows the setting up of an alternative file of up to 50 words.

Such a facility improves the game's otherwise fairly limited educational usefulness.

According to Screenplay, certain of the words in the data file are chosen so that the spelling of other words will be encouraged while guessing for the correct one.

For example, the possibilities

for completing the word "IN" are many. This may in theory be a good idea, but I found it most disconcerting to be "killed off" for making up the word FIN instead of WIN.

OK, so maybe I was trying to be clever (and there's nothing like an educational game aimed at children for boosting the confidence) but surely this is rough justice.

I found the word skills required to be pretty basic. It is obviously designed for the very young.

The game claims nothing more, however, than to help develop word recognition skills in children.

Chickaroo not only achieves this, but I'm sure also retains the attention of its pupils well

beyond the scope of the average teacher.

Patricia Trickett

## Adventures can be fun

**FRANKLINS Tomb** is the first in a trilogy of adventures for the Beeb from Salamander.

It is very attractively packaged, and has an excellent manual, with drawings of some of the locations, as well as the instructions.

You are Dan Diamond, a private eye full of witticisms like "You got a light Mac?" I asked.

"No, but I got a dark brown overcoat", he replied.

You receive an unsigned letter. Inside is an address, and a message: "Please come, you're our only hope".

On arrival, you trigger a mechanism, and find yourself falling. Suddenly you are in Franklin's Tomb, and the adventure begins.

The screen is split into three different coloured sections.

One section gives a description of your surroundings, another lists your possessions and the last is for commands, computer response and articles to be found as you enter a location.

The response to commands is very fast, and it is possible to stack up commands, a feature that I always really appreciate.

The program recognised most of the traditional keywords, although some of the responses were not quite what I expected.

For instance, its response to "Wave rod", was, "OK, but no-one waves back!" - a sense of humour yet!

Unfortunately, the content does not live up to the presentation.

The problems in the adventure are reasonably easy to solve. In fact the real problem

lies in trying to keep one eye on the description at the top of the screen, and the other on the bottom, for any articles or treasure present.

There is a rather elusive rabbit walking around this program and I kept missing him because I was too busy watching the top of the screen.

After discounting the normal keywords for movement, getting and dropping, there are about 100 verbs you can use. Most of these can be deduced from the descriptions, and the drawings in the manual.

I also found the variety of colour on the screen to be very tiring, and I would have liked a command enabling you to turn it off.

Overall, a nicely packaged program, but definitely not for the more experienced adventurer.

I find the idea of a trilogy of adventures very exciting. I hope the other two programs will be a little more demanding.

And please! Don't program "Beeps" into the keys! The w... keeps coming in at 3am... saying: "Right! That's more than enough out of you... tonight."

"Time for bed!"  
Paul Gardner

## QUICK RUNS

A first look at some of the latest releases

**Escape:** You are a member of a group of prisoners who have managed to dig a tunnel to freedom from their hut. Three prisoners are chosen to try out the escape route. Each must try to dodge the guards, dogs, machine guns and cross the minefields. The final stage, if you're still alive, is to find the station and catch a train to Switzerland. (Warex Soft)

★ ★ ★

**Keyboards:** A set of keyboard programs for use either on their own or within your own programs. The menu includes a simple three voice organ in Basic, a single voice organ with pitch bend and two chord organ programs. (Musicsoft)

★ ★ ★

**Fortress:** Pilot of a starfighter flying over enemy defences, your mission is to destroy enemy HQ with four direct hits, being careful to avoid rockets and having to negotiate walls and force fields. Gun turrets and enemy planes are ready to fire

at you if you find yourself in line with them. Your task is not made any easier by your diminishing fuel supply which can only be replenished by destroying enemy fuel barrels. The game incorporates quite stunning graphics. (Pace)

★ ★ ★

**Word Sequencing:** A series of jumbled words must be arranged to form either a proverb, rhyme, or sensible sentence. Identify the words using the cursor keys and reposition them using the function keys. (Acornsoft)

★ ★ ★

**Cottage Software:** This has four levels aimed at 4-5 year olds. Counting - Level 1 features spacebar counting exercises with hi-res graphics. Up to five random silhouettes appear in line which must be counted using the key. On each count the figure is detailed and coloured. A wrong count produces failure. 10 screens.

Counting - Level 3 features numeric or

# Jigsaw Puzzle

✓ FOUR COLOURFUL PICTURES - FIVE LEVELS OF DIFFICULTY

✓ DEVELOPS MEMORY AND REACTIONS

✓ FOR ALL AGES

ega beva

EDUCATIONAL PROGRAMS FOR THE BBC MODEL B MICROCOMPUTER

## Jigsaw jogs the memory

HAVING always been a sucker for the endearing nature of animals, I was instantly attracted by the very appealing ega beva software package, **Jigsaw Puzzle**.

It is one of those strange quirks of nature that many of us, myself included, are much more willing to learn from a cute little beaver in a mortar board than a stern old professor (or even, dare I say it, a computer).

Education authorities take heed!

At least the beaver had gained my initial attention, but would it last?

Having already played on the

more sentimental side of my character I somehow knew I would have to succumb.

Jigsaw Puzzle is a beautifully colourful game to test your memory skills, whatever your age.

The object is to reconstruct a picture split up into sections shuffled about, the number of sections varying according to the chosen level of difficulty.

Each section has a letter corresponding to it, so to move piece A to the position occupied by piece F, for example, you just press A and then F on the keyboard. What could be simpler?

And when you tire of looking at one picture there are three other equally appealing ones to choose from.

The similar **Sliding Block Puzzle** differs only in that one of the sections is missing.

The idea is to reconstruct the jumbled picture by sliding the blocks around the screen, one at a time and only into the blank space.

What's needed here is co-ordination and patience.

What is so special about two versions of what really are games based on quite an old theme?

In short, the presentation and

illustration is excellent. And besides, the good old jigsaw will never go out of fashion. It has been around much longer than Space Invaders!

If I do find fault with either of these puzzles it is in the length of time that it takes for the pictures to reveal themselves.

In this case, however, to quote a very old saying, patience is a virtue!

Karen Torevell

## Love and marriage...

ACORNSOFT/Ivan Berg Software have produced two, similar looking packages to help you decide whether you really do hate the sight of your marriage partner or whether it's just an

illusion you've been having.

Both packages are designed to run on the BBC Micro and the Electron.

**The Dating Game** by Dr Glenn Wilson and ... **I Do** by Hans J. Eysenck (of "Test Your Own IQ" fame) each contain two cassettes and instruction booklet.

They are both good games, handy for provoking conversation, but hardly designed to change your life.

I remember, as a teenager, avidly doing the quizzes in "Jackie" to rate my chances in love and marriage, and these packages pander to exactly those same impulses.

You are sure your innermost self will stand revealed to you, and it's always a bit of a letdown to find nothing very exciting after all.

Eysenck's "... I Do" is a real old psychological test in the true spirit of these things.

He makes sure you don't cheat by asking you the same thing three different ways, and words the questions as though we've all had Mensa membership since we were in nappies.

The results are displayed as positions on eight different sliding scales.

However the labels used at each end of the scales have a high jargon factor, so that when you finally get your score, it is not all that clear what it means.

The scales include:  
*Extraversion - Intraversion*  
*Psychoticism - Superego*  
*Tender minded - Tough minded*  
*High libido - Low libido*

You can see that these are supposed to tap your personality and attitudes, but just where that gets you in relation to your partner is another matter.

The handbook suggests the test be used in the spirit of "Know Thyself", though if you don't already know the things it tells you, you are probably beyond redemption!

However you might just learn some unknown quirks of your other half.

Glenn Wilson's **The Dating Game**, although similar in its basic concept, is designed with greater imagination and even a sense of humour and proportion.

Incidentally, when you enter your personal details you'll need

function key counting of detailed characters placed on screen at random. Once again a wrong entry results in failure. In both programs a successful entry results in a pleasant smile from a jovial face.

★ ★ ★

**Missing Signs:** Three separate Maths programs. 1. Identify missing signs (+ - \* /) to make selected calculations correct. 2. Identify missing signs (< = >) to balance out two equations involving (+ -). 3. As number 2 but for equations using (\* /). All menu operated with selectable difficulty. (Acornsoft)

★ ★ ★

**Amazing Ollie:** Move Ollie round different mazes in four separate games. First you find fish and deliver them, then play at counting them. Run against the clock in the third or play blind in the last. (Storm)

★ ★ ★

**Dodgy Dealer:** Boss of a small manufacturing business, your aim is to

secure the largest possible average yearly profit. How should you invest your initial £5,000 and how much should your product sell for? You may call upon reports from your departments or even pay for some expert advice, but at the end of the day the decisions you make are yours alone. (Wright & Stradling)

★ ★ ★

**Eagle:** Guide your Eagle spacecraft through the caves and tunnels of the four moons of Thrug, collecting iridium pods, avoiding hazards and conserving energy. Each moon has five different screens bristling with hazards. (Salamander)

★ ★ ★

**Paras:** A strategy war game simulating a force of 15 men under your command whose task is to break the enemy's communications. Two separate scenarios create the action. Position your men and weapons on the grid squares as you try to destroy the bridge. (Lothlorien)

to lie about your age if you are under 16 or the program will hang up on you.

Mr Wilson has a more relevant approach than Eysenck. The questions seem quite realistic and meaningful and on the whole it is less obvious which is the "right" answer.

The first cassette contains just the one questionnaire, "The

Dating Game", which can be played by up to 40 people.

They can each be tested against each other for compatibility (platonic or sexual).

The scope this gives for engendering daftness at parties is obviously a point in its favour.

The second cassette contains several smaller and less well-constructed "games". Love Style characterises you as fanciful or practical, cool or passionate, serious or playful

and so on.

Other tests investigate your Preferred Relationship and assess your Dating Skills.

Really both packages should be marked "Strictly For Fun". To pretend greater things for them (as Eysenck does) is really rather pompous and ridiculous.

However if you do take them in a spirit of jollity they are both quite entertaining.

The... I Do quizzes will seem rather uninspiring to old hands,

but if you've never done anything like them before they will pass muster.

The Dating Game is more readily comprehensible in both questions and results, its approach more refreshing, and its sense of its own importance more realistic.

For example, if you score low on your dating skills it will advise you: "Seek help immediately or become a hermit".

Wendy Cook

## The Hunchback's castellations really get you

IT is not often that a piece of software changes your life, let alone a game. However having been exposed to **Hunchback**, I am sure my life will never be the same for a long time.

For the last six months, first thing every morning, my young son Alec (two at the moment) has demanded: "See little man", and nothing will suffice but we load up **Hunchback** and send a score of little men plunging to their deaths.

The fact that this is not the object of the game doesn't seem to bother him. The excellent sound and graphics hold his attention and bring out gales of laughter as if he were being tickled.

That notwithstanding the Superior Software offering is a very good game. The object is to rescue Esmeralda, who is captive in a tower.

Before you reach her you have to run along the battlements avoiding the castle's formidable defences.

You have three controls "Run left", "Run right" and "Jump" which can be operated from the keyboard or from a joystick.

There are 12 screens, each containing a different combination of hazards with

The game starts with your "little man" at one end of a wall and a bell with a long rope attached at the other.

As you make your first strides towards the bell a rasping thud rings out and a cannon ball flies towards you.

Judging the correct moment to jump over it is not so tricky and is rewarded with a very satisfying exuberant "weeeee" noise.

However if the cannon ball so much as clips you, you plummet off the wall with an elongated "arrrrr" noise.

When you reach the rope you grab it and the bell rings, then the screen scrolls lumpily sideways to the next section of the wall.

This reveals a large chasm with a swinging rope. You have to judge your run and jump very finely to grab the rope and swing across.

Next you face a series of castellations in the battlements which you have to leap over. In the next wall the castellations are filled with guards raising and lowering their spears.

No prizes for guessing where they get your "little man" as he leaps over them.

The remaining walls consist of a mixture of these hazards with

cannon balls and arrows coming from both directions and varying heights.

The final wall throws the lot at you with Esmeralda waiting at the top of the final rope. Having never got through the final wall I can't tell you what happens when you reach it.

To allow you to keep track of your progress there is an insert showing your overall position and distance from Esmeralda.

The scoring is simple. For

each section of wall there is a bonus score that keeps ticking away, the longer you take to complete a wall the lower your score.

The usual high score table keeps track of the best score.

You can play the game at three levels of difficulty which mainly affect the speed of the action. There is also a special feature to allow you to practise on any of the wall sections, which is useful as it allowed me to see what the further wall sections looked like.

All in all, this game has excellent graphics and sound blended in a way that is remarkably good.

It has a good addiction factor and is fun into the bargain. As Alec puts it: "See little man AGAIN!"

Mike Cook

## Easy crasher

**UTILITIES Package** from Salamander features a Teletext designer, a sound/envelope designer, a disassembler and an Epson screen dump.

The software came on tape and has a 23 page booklet explaining the programs.

The first program is Sound Shaper. The complexities of the sound chip and its associated commands have always been a mystery to me, and after this will probably remain so.

I managed to crash the sound

# SOFTWARE SCENE

## From Page 91

definer after three key presses but perseverance got me some exotic effects.

I didn't like the way that the program broke so easily, although you could blame it all on user incompetence. But shouldn't the program and the manual avoid such problems?

The Epson screen dump has a few nice ideas but the results aren't all that good. So on to the next program, which to my mind is the best of the set.

TText is a Teletext screen editor that allows the design of Mode 7 screens. It has many excellent features and is a joy to use.

The only problem is that it lacks a few capabilities that I'm sure could be easily added.

The screen has a current state line at the bottom which gives information about x, y position, whether you are in graphics mode or not and a double height indicator.

Best of all, it tells you the otherwise invisible Teletext control characters present as you move the cursor over them.

The cursor can be constrained to move vertically and there are HELP and graphics pages.

The two major omissions are the lack of separated graphics and the hold graphics control codes.

The final program is a disassembler, or should I say three disassemblers located at &2800, &5800, &7800. There's not much to say about these except perhaps that the ROM-based ones do it better.

I found this package a little disappointing although the

Teletext designer with the changes mentioned could be the best on the market.

Alan Plume

## Nice fun, but pricey

THE five programs in **Fun to Learn** (Shards Software) for 6 to 12-year-olds are Count, Mixer, Calculator, Starship and Codebreaker. The presentation is excellent, although most of the basic ideas are rather unimaginative.

The opening display has good colourful graphics and sound which would capture the atten-

tion of the user immediately.

Count displays a random number of characters on the screen, and you have to count how many you can see.

The computer tells you if you're right or not, whether your response is fast or slow and updates the score.

Mixer is an anagram program in which one has to guess a mixed up word. Clues can be sought, but each one reduces the number of points scored.

Words of up to nine letters are used, and one can also enter words of one's own for a friend to guess at.

Calculator gives practice in adding, subtraction, division or multiplication.

Starship is the best of all, a "Hangman" type game. A colourful starship and alien appear on the screen, with only a building between them.

You have to guess letters making up a mystery word, or the alien zaps a laser beam towards you.

The graphics are simple but effective, as are the sound effects.

The final program, Codebreaker, uses simple letter-for-letter codes to be solved. You can create your own codes, or type in words and sentences to be coded for you.

This is a nice collection but I find it rather overpriced.

Jane Jackson

# STARTING AT THE DEAD END

LET'S face it, we BBC adventurers are becoming spoilt. There are so many top class games about now that a new adventure has to have quality and imagination to grab the attention.

And so, having loaded A&F's **Horror Castle**, and sat down in front of the TV set, I was a bit disappointed at first.

"Your objective is to release a beautiful princess..." What, another one? These days, you can't move inside the average castle without tripping over imprisoned princesses.

There seem to be an awful lot of them about - or could it be just one terribly unlucky girl? No matter. On with the game.

My second disappointment came almost immediately. Text-only adventures are greatly

enhanced by imaginative descriptions of the locations.

The initial set-up in **Horror Castle** is this: "You are at a dead end". Hardly deathless prose.

By now I was expecting a pretty poor game, and was ready to reach the poison pen.

But an hour later I realised I was well in to the game and enjoying it.

Although it isn't a very long game, nor a particularly difficult one, there are enough puzzles to intrigue even the most seasoned campaigner.

The HELP and EXAMINE commands are useful, and there's a nice little twist at the end, just when you think you're cantering home.

Admittedly there are a few spelling mistakes that impart a vaguely amateurish feel, but

overall, it's well put together, and good fun.

Not a great game, but a good one, and ideal for the inexperienced adventurer.

James Bibby

REVIEW!**

# FIRST AID!

## DUALSCREEN MONITOR ROM

AID is now clearly established as the finest machine code monitor ROM for the BBC Micro. Designed for beginners and experts, AID is both powerful but still very easy to use. With a comprehensive set of over 40 commands AID will satisfy the demands of the most experienced programmer. Beginners also will soon feel at home with AID's friendly prompts and responses which make it such a good learning aid.

AID can tackle many tasks, from debugging machine code programs to revealing the secrets of machine code games using the unique and highly acclaimed DUALSCREEN graphics feature. Delving into the mysteries of the OS ROM you will find AID a source of lasting interest.

If you are taking your first tentative steps into the world of machine code or planning to write a chart topping machine code game then you can have no finer help than DUALSCREEN AID.

Write your own 'Arcade Action' games with D.A.C.C.

# Sprite-Gen

This amazing and revolutionary new piece of software, written for the BBC Model B by Dennis Ibbotson, represents the biggest step forward for BASIC programmers since the release of the BBC Micro itself. It allows you to create multi-coloured, fast moving SPRITES, controlled simply from your own BASIC program. Now you can write the kind of "Arcade Action" games you always dreamed of writing before you discovered that BASIC can't achieve the speeds necessary. Until now, only experienced machine-code programmers could produce "Ghost Gobbling Monsters" and "Light Speed" spacecraft. With SPRITE GRAPHICS all the creates and objects you can imagine are at your command, moving smoothly at any speed and in any direction you choose. Incredibly, SPRITES can be created using ALL SIXTEEN logical colours - eight steady and eight flashing. And as if that were not enough you animate your SPRITES with individual movements such as "a man who walks", "a bird that flaps its wings", "invaders that pulse menacingly", the possibilities are endless! When you own the SPRITE GENERATOR package you have access to every sort of high-speed animation technique you need. Buying expensive machine-code games may become a thing of the past. Look at the following impressive list of features you can access from your own BASIC programs ...

- Up to 32 SPRITES on screen at any time.
- Limitless SPRITE design using the SPRITE Generator program included in the package, allows ALL SIXTEEN logical colours "in each SPRITE" if desired. Full operating system capability of logical/actual colour assignment.
- There can be up to EIGHT different SPRITE DESIGNS active at one time, each of which can have up to THREE "CLONES", (copies of the primary SPRITE but each with individual movement control).
- Each SPRITE actually has TWO images which given slight differences will achieve the animation effects when the two are alternated. Or, if you choose, give the two images totally different designs and you have created two SPRITES out of one, usable alternately. This technique can also be applied to the CLONES which means that all 32 SPRITES can be animated, multi-coloured, moving objects!!!
- Once you have completed the design of your SPRITES using the simple grid-based generator utility, they and the high speed machine-code routines that control their movement are secreted into RAM and the BASIC system is ready to accept your own program lines through which you can direct the SPRITES to appear, move, disappear or just remain stationary, with the simplest commands you could imagine.
- SPRITES can be linked together in pairs or groups to produce large scale animation. Of course, if you wish they can be as small as a single pixel.
- Your own creations can move in front of each other with no loss of detail.

SPRITE-GEN is supplied as a package containing:

- \*\*\* Sprite-Generator program
  - \*\*\* Two 'fast-action' demonstration programs
  - \*\*\* Sprite-Gen control routines
  - \*\*\* Illustrated user manual with examples and listings
- All for only £17.95 (pp and VAT included).  
In U.S. \$49.95

INTRODUCING **SUPER-7** ● SPACE PILOT TEST ● FIRE-CHIEF  
● GUNS OF NAVARONE ● BOUNCER  
● CHOPPER-CHASE ● SPACE RESCUE  
● CREATURES OF THE DEEP

The best value in arcade-type games available today. Seven exciting games on one cassette using full colour, sound and machine code. (BBC Model/B) ONLY £8.95 (pp and VAT included)

**DRAGON, ATARI 400/300, BBC MODEL/B TRS 80 C/C 32K 747 FLIGHT SIMULATOR**

Superbly realistic instrumentation and pilot's view in lifelike simulation which includes emergencies such as engine fires and systems failures. This program uses high resolution graphics to the full to produce the most realistic flight-deck display yet seen on a home computer. There are 21 real dials and 25 other indicators (see diagram). Your controls operate throttle, ailerons, elevators, flaps, slats, spoilers, landing gear, reverse thrust, brakes, etc. You see the runway in true perspective. Uses joysticks and includes options to start with take-off or random landing approach. "A real simulation, not just another game." (Your Comp. Apr. 83).

ACTUAL SCREEN PHOTOGRAPH

CASSETTE £9.95 (pp and VAT included).  
In U.S. \$27.95 (pp included)

**Replica II** FREE  
This utility, enabling you to transfer your programs from tape to disc, is offered FREE with each disc drive purchased.

## NEW ADD-ONS

**Sweet Talker (Cheetah).** The latest speech synthesis device for the BBC.

- ★ Easily fitted - no soldering.
  - ★ Uses allophone system - gives unlimited vocabulary.
  - ★ All normal BBC sound features are unaffected.
  - ★ Available now!
- Superb value at **£21.50**

**Sureshot Joystick:** A really high quality joystick for the BBC Micro.

- ★ Self centering action.
  - ★ Two fire buttons.
  - ★ Rugged construction
- £16.50**

## COMMS

### Micronet

We invite you to join one of the world's largest databases.

To join Micronet you need:  
● Prestel/Micronet subscription . **£13.00/qtr.**

This will be invoiced to you by Prestel; application forms included with each order.

- Hardware  
\*Modem 1000 ..... **£56.48**  
or Telemod II (includes automatic transmit/receive switching) ..... **£73.87**

# The magic world of machine code is at your finger-tips...

## **ASSEMBLY PROGRAMMING MADE EASY FOR THE BBC MICRO**

**IAN MURRAY**

Here is a really easy guide for the enthusiastic beginner to assembly language for the BBC Micro. Using easy examples, cartoons and short, very simple programs you will quickly learn how to put graphics on the screen, use the BBC operating system and bring the machine to life. **£5.95**

To make learning assembly language even easier send for the combined book and tape cassette containing all the programs. **£12.95**

### ORDER FORM

To: Database Publications  
Europa House,  
68 Chester Road, Hazel Grove

WHEN we received our review copy of *Assembly Programming Made Easy for the BBC Micro*, by Ian Murray, we were so impressed that, instead of a review, we decided to print an extract — with the kind permission of the book's publishers, Century.

We're certain that, when you've read it, you too will be struck with the clarity of Ian's easy-to-understand explanations, and want a copy for yourself.

So we've made obtaining this gentle guide to machine code programming as simple as possible by making it a *Micro User* special offer. See page 98 for full details.

The extract we've picked is on a subject we're often asked about — where exactly can you store machine code?

Knowing that the BBC Micro assembles its code to the memory location given by P% is one thing... but how do you choose P% to ensure that the code is safe from, say Basic programs?

Read on, and Ian Murray will show you just how easy it is!

# Good home wanted for machine code

(not too near Basic programs)

APPLY WITHIN

THE assembly language on the BBC Micro is written as part of a Basic program. This is unique to the BBC machine as most other assemblers stand alone and have nothing whatever to do with Basic or any other language.

Obviously the machine code made by the assembler has to be found a safe home somewhere in the computer's memory. Preferably this home should not be part of or even near the Basic program itself.

If your Basic program with its assembly program "grows", then it may

bump into where your machine code would like to rest. If your Basic program is unlikely ever to change in size, you may get away with putting the machine code near Basic. But best of all is to use the facilities provided for you by the BBC Micro.

You now need to know something about how the memory is divided up. You would be foolish to try and put "your" machine code where the designers of the BBC Micro have put "their" code.

You will find a version of Figure 1 in the user guide on Page 500. As you can see, the whole of the top half of the

**By IAN MURRAY**

memory is just not available to you. Memory locations from 65535 decimal to 49152 decimal are all used by the operating system.

This operating system is responsible for all the ordinary and clever tricks of the BBC Micro, such as getting the tape loading and saving to work, defining the red function keys, scanning the keyboard for which key you have pressed and putting it on to the screen, allowing you to change colours on the screen easily and quickly. The list is endless.

Then the Basic language takes up locations 49151 decimal to 32768 decimal. Remember, Basic needs all this memory so that it can work out the machine code equivalent of the program that you typed in in human readable form. For the more technical of you, Basic in the BBC Micro is an "interpreted language".

This means that, though you may

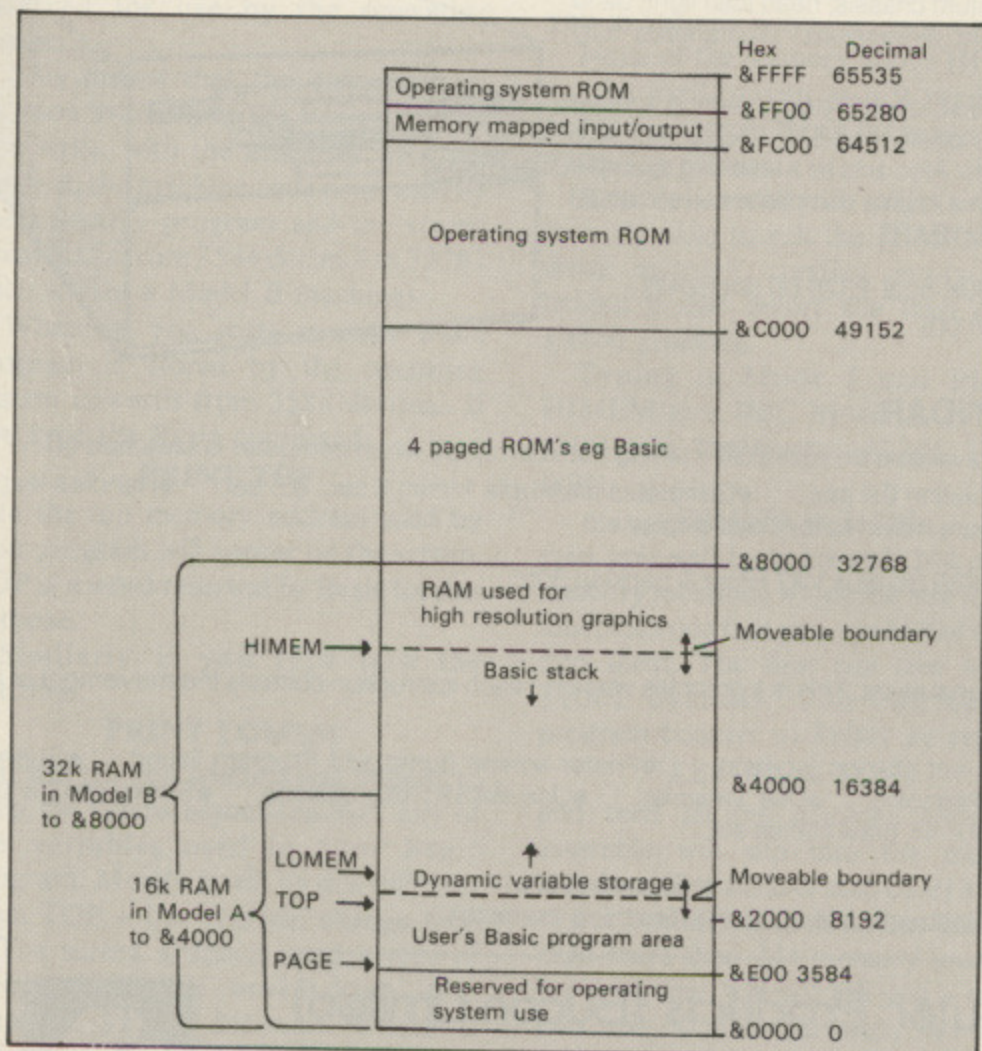

Figure 1: The BBC Micro's memory map

# A BBC WORD PROCESSOR TO REALLY TAKE ADVANTAGE OF YOUR DISC DRIVE.

SCRIBE is a word processor which frees the user from the limitations of computer memory. Now it is possible to create a single document with as many pages as the disc will hold. These are automatically swapped between memory and disc at the touch of a key without you even knowing it's happening. This means that your disc is being used in the way it was intended and not just as a fast cassette. Why go to the expense of buying a disc system and then use simple software really only designed for cassette?

The superb features include:

- All functions menu driven - no knowledge of the computer system necessary.
- Edit in 80 column mode (40 optional) see it as it's printed! INCLUDING UNDERLINING.
- Create up to 255 pages, right justify, word wrap, insert, delete, move, copy and centre.
- Edit Basic programs, produce and merge basic and text files.

Plus many, many more professional features.

SCRIBE comes in ROM with five minute fitting instructions, printer utilities on disc and a comprehensive manual. (Currently recommended for Acorn & Watford DFS)

PRICE £59.95 (incl. VAT) (Post and packing 60p)

AVAILABLE SOON - a superb database to integrate with SCRIBE or to stand alone. Create over 2000 records on disc. One record equivalent to a screenful of information. Find any record in 2 seconds. Format printer output using SCRIBE. Link screens etc. etc.

## MERLIN DISC DRIVES

ABSOLUTE TOP QUALITY Shinon drives - aluminium chassis, head load light, band stepper motor, silent operation, latest half height dimensions. Guaranteed fully compatible with the BBC.

40 track, double density specification; systems disc containing formatting routine plus ADDBOOK - a superb disc based address book program. Create any size address file up to the maximum capacity of your disc. Also acts as a teaching example on how to write random access files. Comes with a highly comprehensive manual plus all cables and connectors. GUARANTEE ONE YEAR!

PRICE 100K single £182.50 (incl VAT) 200K dual £325.00 (incl VAT)  
(Securicor delivery £8.00)

## MERLIN REAL TIME CLOCK/CALENDAR

Now - highly accurate time and date continuously available on your BBC - timing not interrupted when computer is switched off.

- Battery backup, connects to user port.
- Resolution 0.1 sec.
- Generates interrupts 1/min, 5 sec, 0.5 sec.
- Handles leap years automatically.
- Day/week calendar, software included for clock display etc.

PRICE £39.95 plus VAT (Post & packing 30p)

## S-LOGO

A superbly comprehensive version of this educational asset. This is a graphics version - each instruction controls the movement of a pen on screen. Each program produces a picture.

- Vocabulary of over 50 instructions.
- 20 pre-set shapes (sprites).
- Printer screen dump and Program listing.
- Super editor.
- Colour and scale choice.
- Error diagnosis.
- Use variables.
- Use BASIC expressions.
- Show results of calculations.
- Draw on compass-bearings, colour-fill, draw circles etc.

PRICE £19.95 plus VAT (Post & packing 25p)  
Includes full Instruction Manual with Teaching examples.

Think of HIMEM as a huge wall across memory.

### From Page 99

have a 500 line Basic program, it goes to work converting into machine code only the actual instruction it has to carry out next, leaving all the others unconverted until needed.

We are told by the manufacturers that, starting from the bottom, memory locations 0 to 3583 decimal are also reserved for use by the operating system.

This means that the only memory location available to the Basic program you write, with the assembly program inside it, the machine code generated by the assembly program and the screen graphics, is from 3584 decimal to 32767 decimal (on a Model B machine).

Whatever you write in your Basic program is stored by the operating system upwards from 3584 decimal. If you type the Basic command:

**PRINT TOP**

then the top memory address used by your program will appear on the screen. TOP is a word reserved by Basic for this purpose.

Similarly if you type into the machine:

**PRINT LOMEM**

that will tell you where Basic intends to keep the values associated with any of the variables used in your Basic program. Mostly it will be one different from TOP – but you can change this.

The screen graphics need a slice of memory and this works down from location 32767 decimal. Where it finishes is shown by the Basic word HIMEM.

In every mode it is different. HIMEM is not the same in Mode 2 and Mode 7. Type into the machine:

**MODE 2  
PRINT HIMEM  
MODE 7  
PRINT HIMEM**

You can think of HIMEM as a huge wall across memory. Most of the memory below HIMEM can be used by you in various ways.

None of the memory above HIMEM can be used by you as it is needed by either the screen, Basic language or the operating system.

But this is a wall with rollers under it. It is possible to roll the HIMEM wall down memory, creating empty space behind it and before the start of the screen graphics.

Typing in Mode 7 and PRINT HIMEM in a BBC Model B will have given you the answer 31744. If you type:

**HIMEM = 31000**

then you will have created 744 empty memory locations which are free for any machine code that you would like to pop into them. The first one free will be 31001 decimal. You can set the program counter to 31001 by typing:

**LET P% = 31001**

and then all the machine code you assemble will slip into the memory locations free to it.

But beware! If it turns out that you need more than 744 memory locations the computer will not tell you – unless you ask – and certainly no error messages will appear.

So after you have finished assembling

your program into machine code you would need to type:

**PRINT P%**

to find out if it was 31744 decimal – or perhaps more – so intruding into the area for Mode 7 screen graphics.

For the technically minded, now is the time to reveal that strictly speaking P% is not the true program counter. It is a variable used by Basic and the BBC operating system which usually shows what the program counter has stored in it. But it operates just like the program counter.

So Rule 1 for finding space for machine code is:

**MOVE HIMEM down memory.  
PLACE machine code between HIMEM and start of screen graphics.**

*Problems with Rule 1:*

- You have to make certain that you reserve enough space and do not overwrite screen graphics.
- Any change of mode in your program will reset HIMEM and probably lead to screen graphics in the new mode over-writing your machine code.

- As TOP shows where the Basic program itself is, we could place our machine code in some memory locations above TOP. We can type:

**LET P% = TOP + 1000**

Our machine code would then be placed from "TOP + 1000" upwards. This may interfere with work space that Basic needs, which starts at HIMEM and works downwards towards LOMEM. But as a temporary measure in Mode 7 it will work adequately.

Rule 2 for finding space for machine code is:

**SET the program counter to a suitable value above TOP.**

*Problems with Rule 2:*

- The location above TOP that you set for the program counter must give Basic enough room to store its variable values.
- With a large Basic program in Mode 7 or even a small Basic program in

Move LOMEM upwards to a suitable new location

## From Page 101

Mode 2 you must make sure that your resetting of the program counter does not take you too near HIMEM or you will not allow yourself enough memory space.

You can, of course, try to overcome one of these disadvantages by shifting the LOMEM wall upwards and fitting your machine code between TOP and LOMEM.

Basic's variables are dealt with where LOMEM starts, so you would have unused space by doing this shift, like:

**LOMEM = LOMEM + 250**

This would give you 250 free memory locations. You would then need to type:

**LET P% = TOP**

*Rule 3 for finding machine code space:*

**MOVE LOMEM upwards to a suitable new location.**

**SET the program counter to TOP**

*Disadvantages of Rule 3:*

- You must give yourself enough space for your machine code, or you will overwrite where Basic keeps its variable values.

- You must move LOMEM upwards before any reference to any variable. Otherwise that variable will sit where it usually does, just one above TOP. Your machine code would then overwrite it.

- You may move LOMEM too close to HIMEM causing the Basic to "scramble".

As you remember from Figure 1 showing how the BBC Micro's memory is organised, there are interesting areas at the bottom of memory.

Just as we can move LOMEM and HIMEM around in memory, so we can move PAGE.

PAGE always has the memory location of the beginning of your Basic program. For tape-based machines this is always 3584 decimal (&E00 hex). For disc-based machines this is different. For technical reasons any movement of the PAGE wall must be groups of 256 memory locations.

So we can type:

**PAGE = PAGE + 512**

This would give us 512 free memory locations from 3584 decimal upwards.

We could then type:

**LET P% = 3584 (for tape machines)**

This is a bit messy. It would be better to type:

**LET P% = PAGE - 512**

This would mean it would not matter if you were using disc or tape machines.

*Rule 4 for finding space for machine code is:*

**SET PAGE to a new value above its current value. This must be a multiple of 256.**

**SET the program counter to the old value of PAGE.**

*Disadvantages of Rule 4:*

- Any new Basic program you now load must be forced to load above the machine code, either by manually resetting PAGE to the suitable value, or by specifying the load address when you do load it.

- If you need 260 memory locations for the machine code, then you will have to take the full 512 memory locations, which will mean wasting empty memory locations. This could be significant in a high resolution graphics program.

The BBC Micro's operating system seems (with tape-based machines) to have left memory locations 3328 decimal (&D00 hex) to 3583 decimal (&DFF hex) free for machine code use.

If this is enough space for you, then you can type:

**LET P% = 3328**

or

**LET P% = &D00**

These mean the same. &D00 is 3328 in the hexadecimal counting system which will be explained in detail later. Some of the games programs on the market hide their machine code at &D00. You may have noticed this.

*Rule 5 for finding machine code space:*

**SET the program counter to 3328 decimal (&D00 hex).**

*Disadvantages of Rule 5:*

- Very little space is available to you for the machine code before you start overwriting the Basic program beginning at 3584 decimal.

- If you have a disc based system, you will find that the system itself uses some of this memory. Then you may find that the machine code starts doing funny things to the disc drives (such as turning them on), or that any disc load operations are incorrect or that use of the Break key overwrites your machine code.

This is often the cause of problems you may have found with copying machine code games over to a disc system. These games probably had machine code sitting at &D00 hex.

Rule 5 can sometimes be extended to start at either 3072 decimal (&C00 hex) or 2816 decimal (&B00 hex). These memory locations also get round the problems with disc based machines.

But you can only use them if:

- Nowhere in your program do you

use program (or user) defined characters. These are stored from 3072 decimal (&C00 hex) to 3327 decimal (&CFF hex).

- Nowhere in your program do you use the red function keys. Your plans for these keys are stored in memory locations 2816 decimal (&B00 hex) to 3071 decimal (&BFF hex).

But, as I said earlier, the BBC Micro does try to make life easy for you. The designers were aware that all these different hiding places for machine code could be annoying to organise. They invented a special Basic command which allows the BBC operating system to fit in your machine code wherever it can find space, thus taking the worry off your shoulders.

If you type:

**LET P% = DIM A% 300**

then the program counter is set to start at a 300-long block of memory locations which begins at A%. You do not need to know where the block of memory is, but you can find out by typing:

**PRINT A%**

This is the most common and useful method of hiding machine code, as it does not depend on what mode you are in or on PAGE, HIMEM or LOMEM.

*Rule 6 for finding machine code space:*

**SET aside memory space with the DIM statement.**

**SET the program counter to the DIM statement.**

Generally if the machine code is to be part of a Basic program, such as a games or educational program, then Rule 6 is the best method.

But if you want to engage in software protection or have a machine code sitting in the machine whatever Basic program is running, then you will have to choose one of the other rules. Probably it is best to hide short programs at 3328 decimal (&D00 hex).

Hide short programs at 3328 (&D00 hex)

ANSWER BACK  
SENIOR  
**QUIZ**  
GENERAL KNOWLEDGE

THE ULTIMATE EDUCATIONAL QUIZ  
FOR AGES 12 & OVER

BBC (32K)•ELECTRON

The ANSWER BACK Quiz provides an incredible adventure in education by combining a compelling Space-Age game with an immense series of questions on General Knowledge. The thought-provoking and well-researched quizzes contain an enormous total of 750 questions with 3000 answer options covering the following subjects:

- Astronomy  Music  Natural History  Famous People  Science  Sport
- History  Art and Architecture  Know your Language  Discoveries and Inventions
- Legends and Mythology  Geography  Literature  Films, TV and Theatre  Pot Luck

The highly sophisticated control program rewards each correct answer with another turn in the colourful, animated game.

**FEATURES INCLUDE**

- Multiple choice answers  True or False?  Find the missing letters
- "Pass" facility  Immediate correction of errors  Timer option
- Performance summary  Re-run of questions passed or incorrectly answered
- Full facilities for creating and saving an unlimited number of new quizzes

Available from your computer store or by mail order Price £10.95.

I am a Distributer/Multiple/Retailer/Dealer Please contact me (please delete whichever not applicable).

*THE Editor staggered past my desk. "This is the last article in my Sound series, Sir", I cringed.*

*"Thank goodness for that", he slurred, "I only meant you to do a half page filler in the first place. I don't know why you got so carried away with it all".*

*He weaved his way to his office accompanied by the sound of my head banging against the desk.*

IN the last article we explored the ENVELOPE command and saw how we could use it to vary the pitch of a note. We studiously ignored the last six of the 14 parameters that follow ENVELOPE.

This month we'll be dealing with these last six and seeing how the values we give them can affect the amplitude, or loudness, of a note.

The full set of ENVELOPE parameters is:

**ENVELOPE N,T,PI1,PI2,PI3,PN1,PN2,PN3, AA,AD,AS,AR,ALA,ALD**

Let's go straight on to Program I and see what happens if we put values in two of these amplitude parameters.

```
10 REM PROGRAM I
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,0,0,0,120,0
30 SOUND 1,1,50,80
40 SOUND 1,0,0,0
```

The note played by the SOUND command in line 30 gets louder (in four steps) and then stops. This is a result of the parameters we put in the last part of the envelope definition.

Table I gives a list of these parameters and their effects and ranges. I have stuck to the standard parameter name abbreviations for the sake of uniformity.

You might ask why have these amplitude parameters anyway – surely they just make things more complicated?

The answer is that they do, but they also allow the BBC Micro's sound generator to mimic musical instruments.

When a note is played on a violin or piano it doesn't have the same loudness all the time. It builds up from silence to a maximum and then gets quieter again.

Each instrument has a different

# One final effort and we've got the ENVELOPE

amplitude envelope, as this characteristic increase and decrease in loudness is called.

Some achieve their maximum loudness rapidly, then fade away quickly. Others take relatively longer to reach their full power and then die away gently.

Until now all we have used to control the loudness of a sound was the amplitude parameter of the SOUND command. As you'll remember, this is the second one after the SOUND.

The note started at the loudness

specified by that parameter and stayed there until it finished. It was simple, but it wasn't like real life.

The amplitude part of the ENVELOPE command was designed to overcome this. It divides the time the note plays into four sections, each with a different characteristic. Figure I shows this schematically.

The first section is the attack phase. In this the note builds up from nothing to its maximum loudness. The parameters ALA and AA control this phase.

After the note has reached its peak, it enters the decay phase, where it goes into a gradual decline. The parameters ALD and AD govern this.

The final two sections are the sustain phase and the release phase, controlled by AS and AR respectively.

We'll ignore these last two for the time being and go back to Program I to see what caused the changes in loudness we heard.

Notice that it is only the loudness which is changing. The pitch of the note stays exactly the same.

```
10 REM PROGRAM I
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,0,0,0,120,0
30 SOUND 1,1,50,80
40 SOUND 1,0,0,0
```

If you look at the envelope defined by line 20, you'll see it has the label 1 and each step lasts for one second. The six pitch parameters are all 0, so they don't have any effect on the note.

Parameter	Range	Meaning
AA	-127 to 127	Amplitude change per step in the attack phase.
AD	-127 to 127	Amplitude change per step in the decay phase.
AS	0 to -127	Amplitude decrease during each step of sustain phase.
AR	0 to -127	Amplitude decrease during each step of release phase.
ALA	0 to 126	Target (maximum) value achieved during attack phase.
ALD	0 to 126	Target (minimum) value achieved during decay phase.

*Table I: Amplitude parameters of ENVELOPE*

e note  
ed by  
l and  
e six  
don't

The only parameters that have a value assigned to them are **ALA** and **AA**, the ones that govern the attack phase.

The maximum loudness the note can reach is fixed by **ALA**. This can have values between 0 and 126, corresponding to the range of 0 to -15 allowed by the **SOUND** command.

As you can see, the amplitude envelope allows for much finer volume control.

In Program I the level is set at 120, mainly because it's loud and divides easily. The rate at which the loudness of the note increases to get to this maximum level is fixed by the parameter **AA**.

This can have values from -127 to 127, is normally positive and is the change of amplitude per step. It corresponds to the gradient of the attack phase shown in Figure I. For each time step forward the volume of the note increases by **AA**.

In program I the value is 30. For each time step forward the volume of the note will increase by 30 until it reaches the level of 120.

The number of steps it takes to do this is 120 divided by 30, which give the answer four. We can actually hear the four steps as the program runs.

Since each step lasts for one second the whole thing takes four seconds, which is the value I've made the note sound for in line 30.

Don't worry about the **SOUND** command in line 40. It's just a dummy note, there to catch garbage. You'll

Figure I: Amplitude parameters in action

Figure II: Program II's amplitude envelope

learn its significance later.

Run Program II and you'll hear it has eight steps. The sound gets louder, then fades away because there are now values for the decay phase of the amplitude envelope.

The target value **ALD** is now 0 (no volume) and the drop in amplitude per time step, **AD**, is now -30.

Figure II shows what has happened.

```

10 REM PROGRAM II
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,0,0,120,0
30 SOUND 1,1,50,160
40 SOUND 1,0,0,0
  
```

Notice that the peak amplitude lasts for two steps.

This "doubling" effect occurs where two phases join and can lead to some unexpected results if you don't keep it in mind.

Still that's for later when you experiment with envelopes for yourself. Remember though, if you think that something has lasted a step more than it ought it's probably because of the "join" of two phases.

You'll notice that I have increased the duration of the **SOUND** command in line 30 to eight seconds, exactly the

# COMMSTAR

Simply the most comprehensive ROM based communications software available for the BBC micro at the price!

Commstar is unique, it will allow communication with other computer users and allow access to large databases throughout the world via a suitable Modem (such as 'Grapevine' from Pace).

By utilising Commstar it is possible to access Prestel, Micronet, Homelink, Telecom Gold, and various 'Bulletin Boards' throughout the country and so enable you to have access to a multitude of information sources covering:- world news, weather, travel information, entertainment, computer programs, clubs, and even home banking!

In addition more specific emulation facilities can be obtained from a simple boot disc, (e.g. VT 100).

Commstar is extremely flexible allowing full configuration of the RS 423 (RS 232) port of the BBC micro, full XON/OFF protocol and 'safe' file transfer by the use of XMODEM protocols.

**Still Only £34 inc. V.A.T.**

Please telephone for full information data sheet.

# TOOLSTAR

A revolutionary new approach to program development aids.

Toolstar is an eprom-based suite of programmers tools which have been specifically designed to aid programme development and debugging on the BBC micro.

The new commands offered by Toolstar are:-

- ★ CONV  
Convert between Decimal, Hexadecimal and Binary in any combination.
- ★ DFORMAT  
Format a disc to the Acorn standard with any number of tracks within the capabilities of the Drive.
- ★ DLOAD  
Load the data from the specified sector on a disc to memory.
- ★ DSAVE  
Save the data from memory to a specified area on the disc.
- ★ DVERIFY  
Verify a disc.
- ★ FIND  
Search a BASIC program for all occurrences of the specified string (mixed tokens/ASC11), and list all lines with string highlighted.
- ★ FIX  
Repair a 'Bad Program' then list it.

- ★ FKEY  
Display what is behind function keys in a format suitable for on-screen editing.
  - ★ FLIST  
List a 'Bad Program' with suspicious areas highlighted.
  - ★ OPEN  
Smart renumber parts of a BASIC program.
  - ★ REPLACE  
Selective replacement of one string by another in a BASIC program, including wild card options.
  - ★ RESET  
An unforgettable NEW!
- THE FOLLOWING COMMANDS ARE DIRECTED AT THE WHOLE MACHINE MEMORY AND COMPLEMENT THE BBC MICRO'S ASSEMBLER:
- ★ MBRK  
Installs a serial BRK handler giving CPU register and stack displays together with program counter and paged ROM value when BRK occurred - can be used in machine code or BASIC.
  - ★ MCOMP  
Compare memory areas and list those where memory contents are not the same.
  - ★ MCOPY  
Smart memory copy form one area to another.
  - ★ MCRC  
Calculate a Cyclic Redundancy Check for the specified memory area.

## COMMSTAR OPTIONS:-

- B - Copy to buffer on/off. All input from the host may be copied into a memory buffer which is approx, 23k in mode 7.
- C - Exit menu to 'chat' mode to allow conversational access to bulletin boards.
- E - Echo on/off - set echo on when using host terminals which do not provide an echo.
- F - File transfer using XMODEM protocols. High integrity via use of enhanced 'Christiensen' protocols.
- G - Get emulation-allows specific terminal emulation to be loaded from disk. e.g. VT 100.
- I - Initialise RS 423 port for word length, parity and stop bits.
- L - Load buffer from current filing system file for transmission to modem.
- M - Toggle screen mode: normally mode 7,80 columns available in mode 3.
- O - Output buffer to modem - speed may be varied to suit particular modem speeds.
- P - Printer on/off, switches printer on or off line.
- R - Reset buffer pointers.
- S - Save buffer to current filing system file for 'browsing' later.
- T - Transmit break level.
- V - View current buffer contents on screen - display speed may be varied, or paused with optional dumping to printer.
- W - Wipe buffer prior to use of other buffer. commands if necessary.
- X - Toggle XON/OFF protocol.
- ★ - Issue any MOS command from within COMMSTAR.
- # Terminal/Prestel.
- @ Filter mask On/Off.

- ★ MDIS  
Full feature disassembler with parallel ASC11 display. Features include automatic labelling of Acorn O.S. calls and vectors, and on-screen editing. Includes reverse disassembler and scrolling.
  - ★ MDUMP  
Hexadecimal/ASC11 dump of memory with on-screen editing. As with MDIS, dumping may be carried out in reverse.
  - ★ MFIN  
Search memory for all occurrences of specified machine code/ASC11 string.
  - ★ MROM  
All the M (Memory) commands can be directed at the specified paged ROM. e.g. BASIC, DFS, TOOLSTAR, WORDWISE etc.
  - ★ MSEE  
Fill the specified memory area with any value.
  - ★ EXTEND  
Expands the Toolstar to encompass RAM based utilities which then automatically appear under the ★ HELP command. This feature ensures that Toolstar is capable of future expansion.
- All commands can be used from within a BASIC program. Toolstar comes complete with a very comprehensive manual (over 150 pages!), including many program examples.

## From Page 109

length of the envelope.

You might wonder what would happen if the duration of the SOUND command was shorter or longer than that dictated by the parameters of the ENVELOPE command governing the sound. Program III shows what happens if it's shorter:

```
10 REM PROGRAM III
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,0,0,120,0
30 SOUND 1,1,50,80
40 SOUND 1,0,0,0
```

Here the duration of the sound is only four seconds, while looking at the parameters of the envelope would lead us to expect it to last eight seconds as before.

What happens is that the sound lasts for four seconds, so only the first four seconds of the envelope get a chance to work. The rest, in this case the decay phase, is ignored.

Program IV shows us what happens if the duration of the sound exceeds that of the parameter:

```
10 REM PROGRAM IV
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,0,0,120,0
30 SOUND 1,1,50,200
40 SOUND 1,0,0,0
```

As you might expect, the note carries on at the final volume it reached, finishing off the duration parameter of the SOUND command.

The trouble is that since the final loudness of the sound is 0 we can't hear it! Still, it is there, playing away silently until the ten seconds are up.

If you don't believe me, make the SOUND command in line 40 produce a real sound on the same channel. You won't hear it until the ten seconds are up.

Now the value of ALD doesn't always have to be 0. We can have any value between 0 and 126.

In Program V ALA has the value of 60. This is the target volume for the decay phase and it is reached in steps of -30 (AD).

```
10 REM PROGRAM V
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,0,0,120,60
30 SOUND 1,1,50,120
40 SOUND 1,0,0,0
```

With Program V the duration of the SOUND is such that it finishes at the same time as the amplitude reaches 60, after six seconds.

The trouble is that this means you can't hear the note at its final volume as you cut off the sound just as it reaches it.

Program VI is exactly the same, except that it lasts for nine seconds. Now you can hear the final decrease in volume.

Notice again that the sound continues at the final loudness reached until all of the duration parameter of the SOUND command is used up.

```
10 REM PROGRAM VI
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,0,0,120,60
30 SOUND 1,1,50,180
40 SOUND 1,0,0,0
```

*But what of the sustain phase, governed by the parameter AS? What does this do?*

It's quite simple really. All that it does is use up the rest of the duration of the SOUND command. The attack and decay phase both use up part and the sustain phase lasts for whatever period, if any, is left.

Now that we know how long the sustain phase lasts, let's see what it does by running Program VII, which gives AS the value of -15:

```
10 REM PROGRAM VII
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,-15,0,120,60
30 SOUND 1,1,50,200
40 SOUND 1,0,0,0
```

As you can hear, the volume increases to 120 and decreases down to 60 as you might expect from the parameters. This uses up six seconds of the 10 that the note will play for.

During the remaining four seconds of the note the amplitude envelope enters the sustain phase. Here the AS parameter is -15. This, as you might guess, means that the volume decreases by a factor of 15 for each time step.

In this program the volume in the sustain phase goes down from 60 by 15 each second. It gets to 0 volume just as the time runs out.

```
10 REM PROGRAM VIII
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,-15,0,120,60
30 SOUND 1,1,50,240
40 SOUND 1,0,0,0
```

Program VIII is the same as Program VII except that the duration of the note caused by the SOUND statement is now 12 seconds. The volume still reaches 0 after ten seconds but the note keeps playing, silently, for the last two seconds.

Again, if you don't believe me put a real note on channel 1 in line 40 and it won't sound until the note in line 30 has had its full 12 seconds.

Of course you don't have to arrange it so that AS eventually reduces to 0 volume. In Program IX it has the value -5 so the volume doesn't have a chance to reach 0 before the time runs out.

```
10 REM PROGRAM IX
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,-5,0,120,60
30 SOUND 1,1,50,240
40 SOUND 1,0,0,0
```

Looking at Program X two things are apparent. Line 40, the garbage collecting line, has gone and the value of AS is now -10.

A quick calculation will show that the attack and decay phases will take six seconds. A decline of -10 for each of the six remaining one second steps of the sustain phase should take the volume to 0 just as the note finishes playing.

Try it and see!

```
10 REM PROGRAM X
20 ENVELOPE 1,100,0,0,0,0,0,0,
  30,-30,-10,0,120,60
30 SOUND 1,1,50,240
```

The note carries on beyond the 12 seconds you'd expect from the SOUND command.

What's happened is that the sound generator has come to the end of the sustain phase and entered the release phase.

This is a rather weird construction which is independent of the duration parameter of the SOUND command.

The envelope reaches the end of the sustain phase when the duration of the note runs out. The sound generator then searches around for something to do next.

If a note is waiting on the same channel it will play it. If not it will carry on playing the last note until the next note comes along.

Never mind that the duration set by the SOUND command has been used up. The release phase carries on

## SOUND ADVICE

### From Page 111

regardless.

During this release phase, the volume of the note can be made to fade away by giving AR a negative value. It will carry on decreasing by this amount per time period until it eventually reaches 0 or another note is placed on that channel.

The eventual target volume is 0, the decrease per step is AR and the whole phase is independent of the duration parameter of the note.

As you can see from Program XI, if AS and AD are both 0 and there is not other note on that channel queue, the note carries on and on. This is because there's no decline to 0 volume in the release phase.

Hence the dummy note I've put in line 40 of the previous program – without it the note is endless and would confuse all the examples.

```
10 REM PROGRAM XI
20 ENVELOPE 1,100,0,0,0,0,0,0,
30,-30,0,0,120,60
30 SOUND 1,1,50,240
```

As I said, it's a strange part of the

amplitude envelope. It's mainly meant to mimic the dying away of a note on a musical instrument.

You'll notice that if there's a note following it on the same channel the envelope never enters the release phase. It just gets on with the next note.

There are times when we might want to give a note a release phase, despite other notes behind it in the same queue.

We can force the note to enter its release phase, despite any following notes, by putting a dummy note after it such as:

```
SOUND &1001,0,0,0
```

This makes the T parameter of the SOUND command equal to one, which forces the previous note to enter the release phase.

See my article in the January 1984 *Micro User* if you don't know where the T parameter goes or why we've got a & in the SOUND command.

I find the sustain and release phases a nuisance most of the time, so I just use the values of -127 for each. This effectively switches them off because as soon as the note enters either phase the

volume is decreased to 0, whatever it was before.

Program XII shows this in action:

```
10 REM PROGRAM XII
20 ENVELOPE 1,100,0,0,0,0,0,0,
30,-30,-127,-127,120,60
30 SOUND 1,1,50,240
```

And that's the end of the article and the series. I've covered the SOUND and ENVELOPE commands and their parameters. The rest is up to you.

Now that you understand them, why not use the ENVELOPE defining programs we've run in the pages of *The Micro User* to make up your own ENVELOPES? If you come up with any good ones, send them in and let us have a look at them.

*In the meantime I'm working on my own sound. It'll be the noise made by the Editor when he's hit with a disc drive.*

*Of course I've no idea what that sounds like as yet, but I'm going to find out.*

*This may be the last article from me for a while!* 🐾

Nigel Peters

### \* SEIKOSHA PRINTERS

A new range of printers (Spectrum Compatible) replacing existing models.

Prices from  
£120-£300

Dealer enquiries welcome.

## ORGANISATION AT YOUR FINGER TIPS!

Hardware and Software for the BBC Micro. Just a few of our Business, Domestic & Educational Programs available on cassette or disc.

### 107 MEMO-CALC £12.95 + VAT B C/D

"It must be among the least expensive pieces of useful software you will ever buy" *Revue by Practical Computing July 1983.*

This is a database/calcsheet program which allows up to 255 columns. The number of rows is automatically set from 5 to over 1000 depending on the columns declared. Both numeric and alphanumeric data can be stored in any cell and can be of any length up to 255 characters.

### 106 PAYROLL (W or M) £24.95 each + VAT B C/D

Two part programs to handle the wages on a weekly or separately on a monthly basis for up to 100 employees in memory at the same time. Order as WEEKLY or MONTHLY. Deduct £5.00 if both weekly & monthly programs purchased at same time. A PAYROLL update service is offered at £6.00 per annum + VAT

### 304 STATPACK £9.95 + VAT B C/D

A statistic package written by Micro-Aid that first appeared in the *Personal Computer World* magazine between autumn of 1978 and the Spring of 1979 as a series of articles. This fascinating suite of modules will appeal to Schools, Colleges and businesses alike proving extremely valuable.

### 102 CASHBOOK £11.95 + VAT B C/D

FIRST CHOICE. This is a double entry cashbook program showing cash and bank credits and debits, i.e. 4 columns. Any number of individual accounts can be used and analysed or totalled individually or cumulatively by associated group.

LANGUAGE & UTILITY ROM'S from many sources from £18

## After battling it out in Mazemunch spaceman in search of Grungite

**AFTER** taxing your brain and fingers with *Mazemunch* (*Micro User*, March), Simon Phipps has come up with another megaspectacular – *Dug-Dig*.

The game follows the adventures of Bill the spaceman. He acquires a rather cheap starship, together with a copy of "Jewels of the Universe" by Guggvunt Bleuch and a Vactonics pump gun from a rather shady character on Cyrus IV.

He then sets off in search of the fabled Grungite Krystals of Botch.

After jetting across the galaxy, Bill lands on a small asteroid in the Hilton system and immediately sets to work scanning for the precious gems.

Maybe it is the prospect of fame, general recognition and a healthy credit account that keeps him going. But after searching the asteroid thoroughly he follows the instructions in chapter 21867 of Mr Bleuch's book – and begins to dig.

This game celebrates Bill's exploits. The idea is to dig down into the depths of the asteroid and pick up one of the flashing crystals at the bottom of the screen.

Only one can be carried at a time, so the crystal must be taken back to the starship at the top of the screen before any more can be collected.

The Scrugolds cause more trouble by chasing Bill around the screen but at a slightly slower rate than he can move, because alien nasties don't usually carry spades.

To help deter the monsters Bill can use the pump gun which fires in the direction in which he last moved. The gun can only be fired into an empty space – an underground hole or somewhere Bill or one of the Scrugolds has been.

The game is very tight on memory, so be careful not to add extra spaces.

It will need to be downloaded to &E00 on disc based machines.

Now follow Bill the  
Digger with the  
Digger crystals of Botch

# DUG DUG

**SIMON PHIPPS**

## CONTROLS

- A** Move up
- Z** Move down
- ←** Move left
- Move right
- Space** Fire pump gun

## VARIABLES

- A%** Indicates which key was last pressed and used in animation routine on title page.
- B%** General random variable used in PROCSCREEN, title page animation routine and PROCPUMP.
- C%** Value of highest score attained. Displayed next to HI= on bottom of screen.
- CRY%** Determines whether man is carrying a crystal. CRY%=1 means man is carrying crystal.
- D%** FOR-NEXT loop. Performs various functions – generating sound, checking next character in new monster position, etc.
- E%** Moves monster in the title page's animation routine. X co-ordinate set to -1 permanently.

**"ATTENTION, EARTHLINGS.."**

*From Page 115*

- G%** FOR-NEXT loop. Draws on the effect of firing a pump gun (multi-coloured squares).
- H%** FOR-NEXT loop. Controls which monster (in PROCMONS) is being presently updated.
- I%** FOR-NEXT loop. Prints on blank areas on screen in PROCSCREEN.
- J%** Used in conjunction with V% to check if use of pump gun was effective.
- K%** General FOR-NEXT loop.
- KIL%** Checks to see if man is dead (if KIL%=1).
- KRISTAL%** Number of crystals retrieved by man from bottom of screen. When KRISTAL%=10 a new screen is generated.
- LIVES%** Number of lives left (player's man).
- MX%** Used by PROCMONS controlling monster's X co-ordinate after final analysis is stored in X%( ).
- MY%** Used by PROCMONS controlling monster's Y co-ordinate after final analysis stored in X%( ).
- OP%** Last non-zero value of P% which is used to determine in which direction pump gun is fired – that is, last direction man moved in X direction.
- OQ%** Last non-zero value of Q% which is used to determine in which direction pump gun is fired – that is, last direction in which man moved in Y direction.
- P%** Used by PROCMOVE to control the value added to man's X co-ordinate if OP% is non-zero after updating position.
- P1%** Used by PROCMONS to control value added to monster's X co-ordinate.
- Q%** Used by PROCMOVE controlling value added to man's Y co-ordinate if OQ% is non-zero after incrementing position.
- Q1%** Used by PROCMONS to control value added to monster's Y co-ordinate.

- SC%** Total number of points scored by man during game.
- SP%** Discerns whether attract mode has been activated – that is, if SP%=0 attract mode else if SP%=1 player controls man's movement.
- T%** General FOR-NEXT loop.
- V%** Used to check if firing of pump gun was effective.
- X%** X co-ordinate of player's man.
- Y%** Y co-ordinate of player's man.
- Z%** FOR-NEXT loop. Controlling height of starship to start of screen animated landing routine.
- c%** Colour of string to be printed at x,y in PROC(x,y,c,a\$). Often set to 0 since most strings contain colour control codes.
- x%** X co-ordinate of VDU5:PRINTTAB(x,y)a\$ simulated by PROC(x,y,c,a\$).
- y%** Y co-ordinate of VDU5:PRINTTAB(x,y)a\$ simulated by PROC(x,y,c,a\$).
- BS** Definition of magenta/red earth stuff that is dug through by man.
- CRYS** Display definition of crystals located at bottom of screen.
- MAN\$** Display definition of small man character.
- ROK%** Display definition of blue rocks located at screen bottom and below starship. These rocks cannot be dug away.
- SHIPS** String holding display definition of starship located at top of screen.
- SPLOTS** String holding display definition of SPLAT produced when monster is effectively 'pumped'.
- a\$** Used by PROC(x,y,c,a\$) as string to be printed at x,y in colour C when called by main program.
- A** Used as a small 0.3 second delay in PROCSCREEN during initial animation routine leading to screen set up.
- KK** General variable used in delay loops and in PROC SOUND for pitch of note.
- T** Delay loop variable from 0 to 3000 in PROC SOUND.
- ZZ** General variable containing duration of note.

From Page 117

### ARRAYS

- M%** Contains information about each character at each PRINTTAB(x,y) position around the screen on a 19 x 31 matrix.
- X%** Contains X co-ordinates of all three monsters.
- Y%** Contains Y co-ordinates of all three monsters.
- MON\$** Display strings for all three monsters – utilised by PROCP(x,y,c,a\$).

### PROCEDURES

- PROCDDED** Kills man by printing CHR\$242 at X%,Y% and resets the crystals at the bottom of the screen if man is carrying one.
- PROCEND** Prints GAME OVER in centre of screen and checks if present score is higher than the present high score.
- PROCINIT** Initialises MAN\$ and MON\$( ) since both are printed on the screen by use of VDU5 – using PROCP(x,y,c,a\$) where x = X co-ordinate, y = Y co-ordinate, c = colour, a\$ = character to be printed.
- PROC MEN** Displays number of lives in top right hand corner of screen. Also ensures that man cannot walk over life display by setting M%(0,0), M%(1,0), M%(2,0) to 240.
- PROC MONS** Updates positions of attacking monsters by working out values for P1% and Q1%.
- PROC MOVE** Updates position of man, checks for use of pump gun depending upon key press or if SP%=0 on a random value (attract mode).
- PROCP** Performs the VDU5:PRINTTAB(x,y)a\$ available on OS 0.1 BBC Micros. This was originally written on a OS 0.1 machine.
- PROCPUMP** Fires pump gun in direction dictated by OQ% and OP% checking if off screen, etc. Gun cannot be fired into anything but clear space.
- PROCS CORE** Displays present score and high score at bottom of screen.
- PROCS SCREEN** Draws at screen, initialises crystal positions in M%(x,y) and displays man and monsters.
- PROCSOUND** Plays a small tune.

# The Best Thing Next To Your Disk Drive

Proper care of your diskettes is essential to the well-being of your disk drives.

Dirt or grit on the diskette might wreck an important file and could mean expensive damage to the drive itself.

Storing your diskettes in a Personal Disk File protects them and creates an accessible and well organised library system too.

Each wallet is made from a strong but flexible vinyl to protect your valuable data. The double sided leaves enable up to 40 disks to be stored in each binder.

Every pocket is provided with an individual index card with spaces for format, files and your disk to disk back-up record. The leaves have roomy pockets to accept standard 5 1/4 inch or 3 inch mini disks.

A special easel mechanism enables the Personal Disk File to stand for convenient access. The beige covers match your BBC and many other computers or drives.

The Personal Disk File comes complete with 10 inserts to hold 20 disks and their index cards and you can add more leaves as your disk collection grows.

Don't take chances, store your diskettes the right way now!

Direct by return of post from SOFTEACH or from good computer stores.

To SOFTEACH LIMITED, 25 College Road, Reading, Berkshire, RG6 1QE.

Please send me:

\_\_\_\_\_ Personal Disk Files Complete with 10 inserts and 20 index cards at £9.95 each

\_\_\_\_\_ Refill Kits Of 5 Wallets with 10 index cards at £2.95 each

Prices include post and packing for U.K. only. (Overseas should add 25% for additional surface mail)

I enclose a total remittance of £ \_\_\_\_\_ cheque/postal order payable to SOFTEACH LIMITED.

## PROFESSIONAL PROGRAMS FOR THE MODEL B AND ELECTRON

### SPACE TRAFFIC CONTROLLER—"NEW" (B)(E)

£6.95

As a space traffic controller you have been stationed at the main robot cargo port of the planet Ore-7. It is your job to get the robot spacecrafts down in one piece. As your confidence increases you can increase the number of crafts allowed within your control area. Warning: not to be played after a hard or hectic day! Pause option.

### SPACETANK (B)

£6.95

After you SPACE TANK has landed on the planet Orion, a series of alien tanks, surface hoppers, and spacecrafts will attack. How long can you hold out commander? This game makes use of the Beeb's fast scrolling ability. Can be used with either keyboard or joysticks. Top ten table. Pause option.

### HORSES (B)(E)

£6.95

Come on now, don't be shy, choose one of the six horses and let's see what you can do. How many of the fences can you complete at the Orion arena, especially with the clock ticking away? New riders can try one of the more docile horses while others may like to risk one of the more lively beasts! Can be used with either keyboard or joysticks. Top ten table. Pause option.

### STAR HAWKS (B)(E)

£5.95

Can you stop the STAR HAWKS before they stop you? Slow work means the generation of more laser firing mutant hawks. Based on the games of Galaxian and Gorf. Can be used with either keyboard or joysticks. Top eight table. Pause option.

### DESIGN (B)(E)

£5.95

If you like watching your user defined characters run around the screen but are fed up with the time consuming mathematics, then DESIGN is for you! With DESIGN you can draw your characters on an 8x8 grid and let the machine do all the work. DESIGN's features include being able to recall characters for re-editing, displaying VDU 23 commands, and amendable cursor. All characters used in KAY-ESS programs are created using DESIGN.

### HANGMAN (B)(E)

£5.95

Let words become fun again with our three language, (ENGLISH, FRENCH, ITALIAN), version of the popular game of HANGMAN. There are 3 levels of play for each language. All words can be replaced or removed, and new ones can be added. HANGMAN comes with an instruction program giving full details for parents and teachers. Once running prying eyes cannot access the word lists!

#### ★ CURRENT BEST SELLERS ★

#### EARLY YEARS 1 and 2 (B)(E)

£7.95 EACH or £14.00 FOR BOTH

These two packages are designed to help a young child with some of the simple concepts that they will need in the world. The emphasis is on learning through fun with simple game type tasks to enforce ideas. 'Time tables' are out and Fred the Frog is in! Topics covered include subtraction, addition, recognition, colour, shapes, sizes, sounds/notes, co-ordination, distances, estimates, directions.

#### EARLY YEARS 1

- A) MICKEY THE MONKEY and his apple tree make subtraction fun.
- B) COLOUR BLOCKS bring sizes and colours into perspective.
- C) MERRY MUSIC turns the keyboard into a musical keyboard.
- D) FUNNY FACES presents a line up, which one is the suspect?
- E) FRED THE FROG needs co-ordinated help to get across the pond.

#### EARLY YEARS 2

- A) THE POND seems very active today.
- B) SPEED is required to keep the cake on the conveyor belt.
- C) DIRECTIONS seem to be needed by everyone in Orion village.
- D) ORDER the blocks.
- E) SID THE SPIDER needs some help to get out of the maze.

For children between 4-8 years of age.

Cheques/P.O.'s should be made payable to KAY-ESS computer products. All prices are fully inclusive. MAIL ORDER ONLY.

KAY-ESS programs are now becoming available at local dealers.

Dealer enquiries welcome.

KAY-ESS computer products previously traded under the name of ORION SOFTWARE.

Available for:

ACORNSOFT PRESENTS

THE

# AVIATOR

*One man's flight to save his home town!*

This new and sensational production will leave you breathless as you master the art of flying a Spitfire. You'll have to think fast as you battle with the controls. And the suspense will be unnerving as you try out your new-found skills on increasingly difficult manoeuvres.

Aviator is an exciting flight simulator which puts you in the pilot's seat. Earn your wings as you explore a 3-D graphical world and score points by successfully flying under a bridge and between skyscrapers. Then meet your ultimate challenge - you alone must save Acornsville from the advancing enemy. £14.95 cassette. £17.65 disc.

*Plus full supporting programs.*

### Starship Command:

Are your reactions quick enough to fight off invading enemy spaceships? Will your performance report to the Star Fleet Admirals be good enough for them to warrant you another craft?

As Captain of a battle starship, only you and your skill can answer those questions. £9.95 cassette. £11.50 disc.

### JCB Digger:

Get the Meanies before they get you! Dig holes for them to fall in, then fill them. Or scoop them up in your shovel and dump them in the sea.

The Meanies will become meaner and harder to destroy as your skill develops, testing you even further. £9.95 cassette. £11.50 disc.

### Free Fall:

You've been attacked in outer space. All your crew members are dead after the Alphoids injected the air supply to the space station with cyanide.

You managed to get your space suit on in time, now defend the vital computer tapes from the Alphoids.

But, be quick, you've only a limited amount of air. £9.95 cassette. £11.50 disc.

Disc versions are available in the new dual 40/80 track format. These and many more Acornsoft BBC Model B programs are available from your local Acorn stockist.

Alternatively, you can order programs by sending a cheque or credit card details to Acornsoft at the address below. Credit card holders can also order by telephoning ☎ 0933-79300. Ring the same number for a free Acornsoft catalogue and Aviator poster.

Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

# MIKE COOK'S PROBLEM PAGE

## Fitting Wordwise ROM - without 'Bad command'

I WOULD be glad if you could help me as I am having problems with fitting a Wordwise ROM chip to my upgraded Model A BBC Micro.

I haven't got the full fitting instructions but was told that I should remove the Basic ROM from position 2 and put it in position 5 and put Wordwise in position 2 as below.

OS Rom	Word wise			Basic
1	2	3	4	5

But when I do this it comes up in Wordwise.

It says Old text (Y/N) - put 'N' and get into menu mode.

But then when I type in \*BASIC it gives me "Bad command".

I have tried Wordwise in position 5 and Basic in position 2, but I get a "Bad command" when I try to access Wordwise with \*W.

I have also tried Wordwise in position 2 and Basic in position 3, and the reverse, without success.

I thought that the operating system scanned the paged ROMs from 5 to 2, so the first method I used (with Basic in 5, and Wordwise in 2) should have come up in Basic.

I would be very pleased if you could explain this to me, as I have moved the ROMs so many times that I am worried about damaging them.

I saw Chris Martin's article in your magazine in July 1983 but found the directions rather confusing. - Penny Holden, Bury St Edmonds.

● For such a long letter there is fortunately a short reply.

The links S12 and S13 located

where the keyboard cable joins the main printed circuit board have not been snipped.

Thus only one sideways ROM socket can be enabled. Snip these and it should work.

## Interfacing a printer

I have a BBC Model B computer and a Data Dynamics 390 RO (receiver only) printer. This is a 20mA current loop printer.

The BBC manual states that it is not possible to interface directly to this type of printer.

Is it possible to buy or make a suitable interface to run it off the BBC Micro? If so, could you tell me where I might obtain the appropriate circuitry? - C.M. Ashley, Knutsford, Cheshire.

● The circuitry itself is not much of a problem but a 20mA current loop supply requires about 180 volts for full spec performance.

You might be able to modify your printer by removing the resistor in series with the actuator coil.

If you can do this then a simple circuit using a power FET to switch the current might work.

But you are then faced with the problem of speed. It is more than likely that your printer works at 110 baud but the BBC

Micro is not designed for these speeds.

Some mods could be done to achieve this speed, but you lose the use of the cassette system. All in all, probably not worth the effort.

## Altering the volume

A recently purchased BBC Model B (OS 0.1) is causing me a problem with a difference.

In my case, the sound is extremely loud, especially when used for games.

Is there any way I can reduce the sound volume short of returning to the manufacturer? - Edward Martin, Rothesay, Scotland.

● Open the lid of your computer and remove the keyboard. You should see a small plastic block in the bottom left hand corner of the main printed circuit board. In there is a screwdriver slot. This can be used for altering the volume produced by your micro.

## On line at a time

THE first computer I used was a Pet. One of its facilities was

TRACE ON and STEP. With this facility I was able to find out what my program was actually doing rather than what I thought was going on.

I now have a BBC Model B. Still being unskilled at programming I find I need the TRACE on. But even when using Ctrl and Shift I cannot as yet slow down the program to one line at a time.

Can you help by telling me how or if there is a program available to cope with this problem. - G.K. Gifford, Southampton.

● Use TRACE ON, but before you do, Ctrl-N. This will stop the screen scrolling and so allow you to see what has happened. However we think your time would be better spent thinking about what is happening rather than resorting to the TRACE command.

## Checking your DIY

WHEN I bought my machine, a second-hand plain old Model A, I decided an upgrade was needed.

I sent off my hard earned cash for a complete DIY "A to B" kit.

This duly arrived, and with my trusty soldering iron I upgraded it.

Once switched on the micro displayed the required "32k" and all software worked perfectly.

However as I did the upgrade myself, and as I don't own a printer, etc., I cannot be sure if all my soldering on the RGB, analogue, user port and so on was successful, and that's where you come in, I hope.

Are there any programs, instructions or details available that I can key in to check these additions?

I hope that you can sort this problem out and that the

**You've got a problem with your micro and you just can't sort it out on your own? Then write to MIKE COOK. If he can't help then probably no one can . .**

### TEAC 55SRS2

**£157.95 inc VAT**

The latest 55 series from TEAC is now available from us. These disk drives are the new LSI low power consumption high performance version of the famous 55 series.

100K version

at **£157.95 inc VAT - 55A2**

400K version

at **£239.00 inc VAT - 55F2**

The 55F2 is suitable for use with the Z80 second processor.

### Z80 PROCESSOR

**£375 + VAT**

Torch computers bring you the power of CP/M software on the BBC Micro. The Z80 runs at 4MHz and 64K RAM with 4K ROM. The Z80 card fits internally and requires a double-sided 80 track disk drive plus a BBC Micro with disk interface.

Also available is a full range of Business and Programming language software.

— includes **FREE Perfect Software Database, Word Processing + Spreadsheet.**

### STAR 10X

**£199 + VAT**

The Star 10X is a Centronics, 9x7 Dot Matrix head. It prints at 120 cps, is bidirectional and logic seeking. Buffer is .8K expandable to 8K. Prints 17 to 5 characters per inch. Prints 136 to 40 columns. Ten character sets including down-loadable and italics. Printer screen dumps up to 240x144 points. Epson compatible. Colour screen dumps available. Incredible value for money!

## From Page 123

solution may also be of use to other readers. — *Allan Dunn, Glasgow.*

● **THERE** is no way of testing these additions until you come to use them. This is because there is no feedback from the end of the connector back into the computer.

It's just like posting a letter — you have no idea if it has arrived until you receive some feedback.

## Call for the TV man

I HAVE a BBC Model B and was interested in your reply in the January edition to a reader who was having problems with drifting patterns across the screen — especially evident when large areas of a single colour are used.

I get similar effects when running the Acornsoft Snooker game.

The green table is continually traversed by wavy lines, giving a dirty picture.

You suggest altering the trimmer near the colour burst crystal.

I have assumed that this trimmer is the small circular component about a quarter inch diameter in the centre of which is a slotted screw.

Nearby are components marked 17.7345 MHz and R131.

I have tried altering the setting of the trimmer by 180 degrees in both directions, but it seems to have no effect.

Finally I returned the trimmer to its original setting.

Can you offer any further advice please? — *K.W. Biggs, High Wycombe.*

● **To get the colour information onto a TV signal — as opposed to an RGB monitor — it must be modulated.**

This is done at about 4MHz and this carrier frequency is introduced onto the colour signal.

At the TV end there is a notch filter to take out this frequency. If it is not removed you will get the colour patterning you complained of.

This could be due to either bad adjustment or poor design of your TV. The adjustment is quite easy to make. The only snag is finding the colour

subcarrier trap as it is called.

The best bet is to call in a TV engineer and get him to adjust it while displaying a computer signal.

If the adjustments have no effect then it is the design of the TV set that is at fault and I am afraid there is not much that can be done.

The problem is that colour TV sets were never designed to be used with computers and as such are not tested on them.

This problem could just be one of component tolerance and it is likely that an identical set would give much better results.

## Planetoid explained

I HAVE a slight problem concerning the loading of one of my programs on the BBC.

The game is Planetoid by Acornsoft, and when I try to load it it always gives a "Searching" message at the value of 20, during planet 2.

It then shows value 21 and 22, with its hexadecimal value, and continues until it shows V2.0.00 0000.

I will be most grateful if you could give me an explanation of the matter.

— *D. Smith, London.*

● **This one is simple — your tape is faulty.**

There is probably a bit of damage on the tape or a spike has been recorded on it by

accident.

Alternatively the tape could have been damaged by a magnet coming into close contact with the cassette.

In any event if you take it back to the dealer you bought it from he should replace it.

## Blue block mystery

AFTER reading your reply to a letter in the October issue of *The Micro User* (page 113), I opened up my BBC Model B to turn down the volume.

On the left hand side just above the user-defined keys, I found a blue plastic block and used a screwdriver to turn the screw inside. This had no effect on the volume.

Underneath the keys, however, was an off-white block containing a black screw. This turned the volume down.

Can you tell me what the blue block does and how to tell it is correctly adjusted, since I have altered it by turning the screw? — *N. Spooner, Rye, East Sussex.*

● **Yes, the colour of the volume control does vary depending on where the computer was made. What you altered first was the clock frequency control of the speech synthesiser.**

If the synthesiser is fitted you will find that the pitch of the voice has altered, possibly giving a Donald Duck effect.

As you probably have not got

a synthesiser fitted you don't have to worry. This control needs to be set up for each chip, so has not been preset.

Full details of how to adjust this are given in the speech synthesiser user manual.

## Why do they do it?

IT'S come to my notice that more software firms are stopping and starting the cassette motor while loading.

I generally leave my remote jack out to prevent this happening.

At first I thought that it was switching on and off so fast that the motor wasn't actually stopping, but now I have my doubts.

I am sure that the software firms would realise that the motor could burn out with this constant stop-start command and so maybe it's okay, but I would like your opinion.

Why do they do it? Is it another method of preventing copies? — *B.E. Pritchard, Madeley, Salop.*

● **I am not sure what you mean. The cassette relay is quickly pulsed at the end of each block but this is done by the operating system and not the software.**

Normally the cassette motor will not stop, as the pulsing is so rapid.

I cannot think of any way of protecting software by rapidly switching this relay on and off.

## Three (or four) cheers for Mike!

I WOULD like to say how I enjoy *The Micro User* especially Mike Cook's articles for which I give three cheers.

I would make it four if I could make his ideas work.

For instance, the relay will switch a sewing machine on or off but not control it.

I was hoping to stitch 1in or 1cm long from the keyboard, or with the light pen. — *M. Hardy, Tyne and Wear.*

● **With respect it was not my idea to control a sewing machine. A computer can turn things on or off quite easily.**

Now assuming that you have connected the control to the switch that turns on the sewing machine motor you can turn it

on, and then after a fixed time turn it off again.

The motor should have then done a certain length of stitching. You can then calibrate the length of time the motor is on with the length of stitching required.

This is not usually satisfactory as the length of stitch depends on a lot of other factors. What you really need is some

form of feedback sensor that would report back to the computer how much stitching has been done.

This is what I call a non-trivial task. It can be done, however, and I am sure you will learn a lot in the process.

When you succeed you have the material for a very good article. I do hope you will give us first refusal on it.

**IF you have a technical query for this page, send it to Mike Cook, *The Micro User*, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.**

**Letters on other subjects should be sent, as usual, to Micromail, which this month starts on Page 209.**

BBC Model B

# QUAL-SOFT

£9.95  
(inc. VAT and p.p.)

## REV1 \* "LEAGUE DIVISION ONE" REV1 \*

Since its introduction in November of last year, LD1 has set new standards of realism in soccer management games. As manager of a newly promoted 1st Division team of limited skills you have 5 years to build up a Championship winning squad, by a combination of youth policy and intelligent transfer deals. You will have to overcome the same problems and frustrations as your real life counterpart. The game has been designed to challenge the sophisticated adult, engross the enthusiastic teenager, and to entertain the younger fans. Is that ambitious? Read what our customers have written:

Jan-Eirik Lien, Oslo begins, "Thanks a lot for a brilliant game" and ends "Again, thank you for a superb game". Mike Tomlinson, aged 14, Suttor Coldfield "LD1 is by far the most enjoyable game I've played on my BBC Micro". A.H. Jones, W. Midlands, "which I find to be an excellent game. My 10 year old also enjoys playing it very much".

Why REV1? We estimate that over 20,000 seasons, over 1 million matches, have been played since the game was introduced. Through numerous letters and telephone conversations we have gathered a massive database on which to set our statistics, our team and player skill levels. As a result, we are now happy to release a multi-level game which maintains the accuracy of results and the realism even at the extreme levels.

By program compression, we have been able to enhance the game in 21 different ways. Such as:

- \* 4 LEVELS OF PLAY: Apprentice, Competent, Expert, "Move over Bobby"
- \* PENALTIES. You must choose your own penalty "king".
- \* GOAL SCORERS: This is probably the most requested enhancement.
- \* PLAYER INFORMATION SCREENS. Injuries/Suspensions, Goal scoring records, Transfer list.
- \* IMPROVED OPPOSITION TACTICS: No more lambs to the slaughter!
- \* TACTICAL TEAM ADJUSTMENTS at any point during a match.

+ a whole range of minor enhancements without sacrificing any of the existing features. (See past Micro Users)

\* Current Owners. As promised, return your original cassette and case with just £1 to cover p&p, re-recording of LD1 REV1 and the new REV1 supplement. (Keep your present 20 page LD1 booklet.)

### BEEB PEN DRAWING PROGRAM

A comprehensive Mode 2 colour drawing program allowing plot commands, painting, circles, text, character defining, saving and loading to tape or disc, all to be selected and used with the lightpen.

**PRICE £11.95 Introductory Offer £9.95**

### TELETEXT DISPLAY CREATOR/EDITOR

Allows the busy programmer to quickly create Mode 7 colour graphics and test screens for combination into his or her own programs. Movable on screen menu allows use of complete screen for graphics. Full instructions and a discussion on teletext features are provided.

**PRICE £9.95 Introductory Offer £7.95**

### BRITAIN

The first in a series of educational Geography and Geology programs. Britain comes complete with three sets of tests, and these may be very easily changed by adding DATA statements in the Basic program. Full instructions and grid map supplied.

**PRICE £6.95 Introductory Offer £5.95**

### SUPERIOR PERFORMANCE

- Intensive to ambient lighting
- Responds to different colours
- Program accessible LED lamp readout
- Switch for program control

### SUPERIOR PROGRAMS

- Tape storage of your work
- Good documentation
- User routines provided on tape and on printout

The Datapen Lightpen itself comes complete with handbook, software on tape including two drawing programs and a printed listing showing useful routines.

**PRICE £25.00**

Two drawing programs, SKETCH and SHAPE-CREATE are included with the lightpen and the programs shown above may be ordered additionally, or separately as required.

All prices above include VAT, postage and packing.

Please send your cheque/P.O. to:-

**Dept. MU2, Datapen Microtechnology Ltd., Kingsclere Road, Overton, Hants. RG25 3JB**

# GRAFPAD

...for as many uses  
as YOU  
can imagine!

## BBC MODEL 2 • SPECTRUM COMMODORE 64

With Grafpad you can now add a new dimension to your computer enjoyment, but most important, it helps you create your own application programmes by the simple use of the Grafpad!

The Grafpad comes complete with a cassette comprising two programmes.

### THE FIRST PROGRAMME

displays the co-ordinates of your screen area. The co-ordinates are based on the screen with a grid size of 1023 x 1279 pixel, also in the Grafpad giving you a grid size of 320 x 256 pixels!

### THE SECOND PROGRAMME

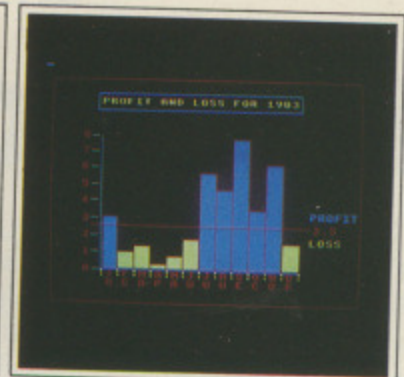

provides you with the utilities for circles, squares, triangles, free-hand, erasing line-drawing etc, and of course, full "Fill-in" facility in 16 different colours by the simple use of the pen!

Draw from a simple apple to a computer circuit - store in cassette or disk, perhaps transfer direct to a printer - in black and white or full glorious colour!

Purchase unique C.A.D. (Computer Aided Designs) programme and add further enjoyment and professionalism to your computer designs!

The Grafpad comes complete with Operational Manual, Programmes, The Grafpad and Pen and it simply plugs in your computer.

(Size: 25mm height x 55mm width x 260mm depth)  
Weight: 1.2 kg (Gross)

(The above designs were drawn by a 12-year-old at our showrooms!)

#### HOW TO ORDER:

**BY TELEPHONE:**  
If you are an American Express, Barclaycard, Diners Club or Access Card Holder simply telephone us giving your Card No., Name, Address and item(s) required and your orders will be dispatched within 48 hours!

**BY POST:**  
Simply fill in the coupon, enclosing your cheque/P.O. made payable to: BRITISH MICRO, or use the special section for Credit Card Holders, and post to the address below. Please allow 14 days for delivery.

Post to: BRITISH MICRO, UNIT Q2, PENFOLD WORKS  
IMPERIAL WAY, WATFORD, HERTS. WD2 4YY

Please send me Grafpad for:

# Peering through the BBC Micro's many, many windows!

By DAVID TALL

Figure 1

THE BBC Micro has the valuable facility of being able to define separate text and graphics windows. But on first acquaintance it seems only one of each is available at any one time.

A greater number can easily be simulated by setting up a switching procedure and jumping almost instantaneously from one to another.

For example, the sample layout in the picture has two graphics windows and three text windows - See Figure 1.

Each of these may be set up by the appropriate codes which in Mode 1 are as follows:

```
TEXT1      VDU28,0,7,19,0
TEXT2      VDU28,21,27,39,20
TEXT3      VDU28,0,31,39,28
GRAPHICS1  VDU24,4;132;628;
           756;
GRAPHICS2  VDU24,648;390;
           1272;1016;
```

(The VDU codes are explained on pages 385-389 of the User Guide)

Switching from one window to

another can be done by procedures such as PROCgraph(N) and PROCtext(N) in the demonstration program SpiroTwo.

PROCgraph(N) selects graphics window N (for N=1 or N=2) and also includes a VDU29 command to alter the graphics origin to the middle of the window selected.

In switching from one to the other the picture remains unchanged until a graphics command is issued, such as PLOT, DRAW or CLG.

My preference is to draw a rectangle as a border just one pixel outside each graphics window at the beginning of the program (in SpiroTwo this is done in PROCinitial\_values.)

Clearing the current graphics area will then leave the border unchanged, creating the illusion of permanent

graphics windows on the screen.

The corresponding switching procedure PROCtext(N) changes the text area and homes the cursor to the top left-hand corner of the selected window.

I have also taken the precaution of clearing the new window with CLG before writing in it.

The multi-window facility illustrated by a pretty line drawing routine show to me by Willie Wynne-Wilson of Birmingham University. I have adapted his idea drawing two versions in separate graphics windows.

If you type the program into your own micro note that the line numbers are in tens to allow use of the AUT numbering facility - just type AUT followed by Return and enter the line

**‘The answer lies in almost simultaneous switching’**

as they come.

Lines between procedures consist of a single space to highlight the program structure. You can miss these out if you like.

The program layout is very simple. After PROCinitial\_values has set up the starting position, the main routine repeats the procedures PROCchoice, to select the windows, and PROCwindows, to modify and draw the figures in the appropriate graphics areas.

PROCchoice is offered in the bottom text area on the screen. Touching 1 or 2 selects the corresponding window, 3 draws in both simultaneously and 4 ends the program.

The idea of the program is to imagine equal spaced points round a circle and to join them in pairs. You may specify the number of points and the rule by which they are joined.

The points joined are numbered  $t$  and  $s$  and you can specify the rule (in Basic) which relates them.

For example, the first window has 35 points and the rule is  $s=t+11$ . Thus if  $t=1$  then  $s=12$ , and the first point will be joined to the twelfth; if  $t=2$  then  $s=13$ , joining the second point to the thirteenth, and so on.

Should the calculated value of  $s$  be bigger than 35 it is simply a matter of counting on round the circle, so the 36th point is the same as the first and the 37th is the same as the second.

In window two the starting rule is  $s=4*t$  with 80 points round the circle. If the program is RUN and option three taken, then both pictures will be drawn simultaneously.

When playing with the program it is interesting to try other rules and different numbers of points. For instance you might try  $s=3*t$  or  $s=5*t$  with 100 or 200 points round the circle, or more complicated rules such as  $s=t^2/20$ .

The program allows one picture to be retained and the other modified, or both can be changed at the same time.

Given the ideas, programmers will soon modify them to suit their own needs. For instance, replacing numbers in the coordinates would allow the windows themselves to be moved round. A nice touch is to include colour changes in the switching procedures so that each window has its own initial colouring.

A less obvious idea would be to have some of the windows overlapping, or one window contained in another. For

## ‘A text window need not contain text only’

instance, you could add to PROCtext(N) the instruction:

```
ELSE IF N=4 THEN  
VDU28,31,39,30.
```

The text area for  $N=4$  would then be the bottom two lines of text area 3. PROCtext(4) would have the effect of leaving the top two lines of text area 3 fixed and scrolling the bottom two lines.

An extension of this idea might be a table of values which the user is able to modify.

The screen could be laid out in a large initial text area with each value in a small rectangle which could later be used as a text window. It would be possible to call up each text window for input or printing without overprinting anywhere else.

Remember also that a text window need not contain text only. Any suitable rectangular area of the screen may be designated as a text area and scrolled for special effects.

Alternatively a text area could have a graphics window superimposed to allow graphics to be added at a later stage.

Should you wish to experiment with the demonstration program it is designed to leave the windows on the screen when it ends.

Type MODE 1 to get rid of them, or include a mode statement just before the END of the program.

You might try typing PROCtext(1) and LISTING the program to see what happens, or typing PROCgraph(1) or PROCgraph(2) and then CLG to clear the selected graph window.

The perceptive reader will see that much of the effect could be achieved in the program without changing the graph areas at all.

However if the variables  $a(1)$ ,  $b(1)$ ,  $a(2)$ ,  $b(2)$  are made slightly larger then the pencil of lines will pass beyond the borders of the graphics areas. For example  $a(1)=500$ ,  $B(1)=300$ ,  $a(2)=300$ ,  $b(2)=500$  would give elliptical shapes in both windows, part of which is outside each rectangle.

Make these changes and RUN the program again. You will see the lines cut off at the border and not going outside the window (Figure II), graphically demonstrating the beneficial facility of using more than one window on the screen at a time.

**Listing starts  
on Page 188**

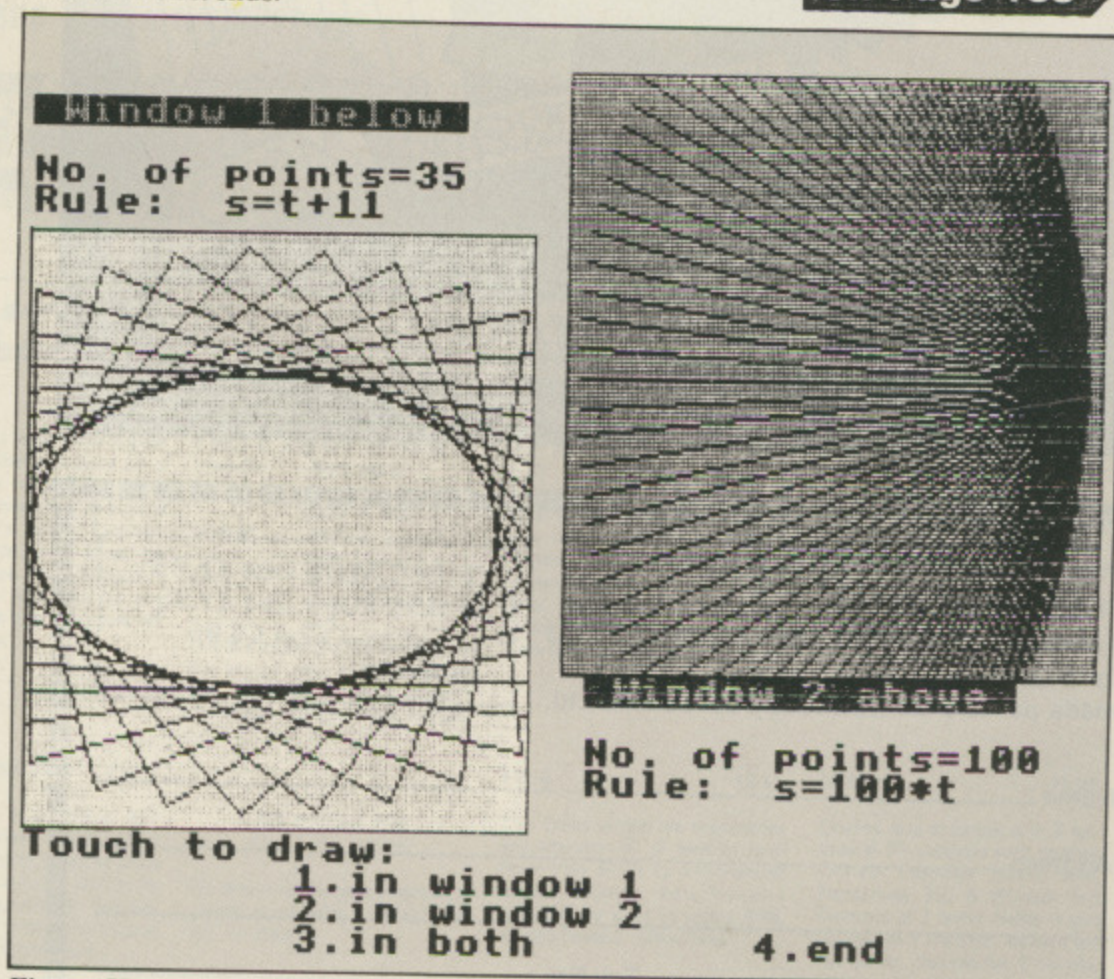

Figure II

Here's something **SPECIAL** from

# **THE MICRO USER**

We've commissioned four rip-roaring games for the BBC Micro and Electron

Three of this high-powered collection are top-rate machine-code versions of arcade classics and the fourth is a thrilling real-time adventure game. There's hours of enjoyment and something to suit everyone in this unique value for money collection

**SNAPMAN** – Guide your man through the maze as he munches energy pellets and avoids hostile aliens

**ALIEN INTRUDERS** – With only your laser for protection you must destroy the waves of aliens who threaten to engulf you

**PANZER ATTACK** – You are a tank commander engaged in vicious combat against encircling enemy forces

**MAYDAY** – A futuristic adventure! As captain of an interstellar cruiser you must guide the sole survivor of a stricken space freighter through the wreckage of his craft. If you fail to recover those vital medical supplies a whole planet is doomed!

**WHEN YOU  
DISC-OVER  
YOU'RE OUT  
OF SPACE,  
THE KEY  
IS TO  
DOWNLOAD  
IT!**

A DISC interface on the BBC Micro uses part of the RAM. With many programs, particularly those using the "memory eating" modes, you can LOAD them but, when you RUN them, as soon as the program tries to enter the hi-res modes it runs out of space.

The space the disc interface uses is at the bottom of RAM, taking up part of the memory that would normally be available for programs.

However, once we have loaded the program from disc there is no need to waste this space. We can copy our program down from where it has been loaded to a new position at the very bottom of RAM, overwriting the memory that the disc system takes up.

The program now has available to it as much memory as if it had been typed in or loaded from tape.

Moving the program down in memory like this is known as downloading. It only takes a small program to do this. I attach my downloader, called MOVER, to a function key.

When I want to download a program I first CHAIN "MOVER" to set up the function key.

Nothing spectacular happens, and I do not, at this stage, press the function

key - after all, I haven't got the program I wish to download in the micro yet!

I then LOAD the program I want and follow that by pressing the function key. This brings the downloader into operation.

After a short pause the cursor returns, showing that downloading is complete and I can now RUN the program.

Incidentally, we've come up with a rather unusual problem in our downloading: The Acorn DFS insists on altering just one byte of a downloaded program.

You can get away with running the program once, but the next time that altered byte will crash the program unless you're lucky.

To get round this, at the beginning of the downloader I've added \*TAPE to negate the influence of DFS. Listing I contains the new version.

**PAEAN systems**

PROGRAMS FOR BBC MODEL B/ELECTRON\*

Quebec Marketing MU, Little Bealings,  
Woodbridge, Suffolk IP13 6LT.  
Tel: Ipswich (0473) 623757

NEW

DELIVERY £7.50

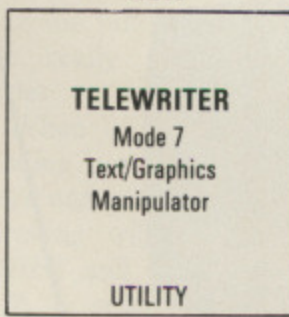

Drive yourself mad around this maze adventure. You will have to stay pretty cool to avoid trouble, cope with a myriad of hazards, not to mention a bolshy mate, and get your deliveries right, all at the same time. The Law is never far behind... so watch out! Full scoreboard. Optional sound. Keyboard.

SCAN\* £7.50

An original card based game of great subtlety. The idea is to place 25 of your 26 cards in positions which equal or are greater than the value of the computer's cards. Excellent graphics include clues about the suits and values of the computer's hidden hand - you must be very shrewd to win the maximum 40 tricks. Keyboard.

NEW

TELEWRITER £8.50

A suite of programs comprising  
Telewriter -Main editor  
Teleflip -Displays up to 20 pages of data  
Teleload -Allows inserts to other programs  
Demo\_Ten -Demonstrates 10 pages of data to play with  
This is a powerful utility which gives the serious user easy domination over the BBC's extensive Mode 7 capabilities. Comprehensive manual.

NEW

SLIDER £8.50

This utility synchronises a single slide film projector with a pre-recorded tape commentary or music background. A slide projector with remote control is required. Programs allows up to 999 slides to be controlled for variable display times. Applications for lecturers, photographers, architects etc. and micro film users. Instruction manual.

LIGHT CYCLES £7.50

A fast reaction game for the fleet of hand and mind. Can you surround the enemy with your light trace and make them crash? The better you are, the more cunning and numerous the enemy become. Simple and infuriating. Full scoreboard and sound. Keyboard.

MORSE INSTRUCTOR £5.95

This program teaches the Morse Code; Character to Morse, Morse to Character, Random character group sequences and 36 word passages provided at a choice of 8 speeds. Limited facilities to simulate transmission using the keyboard.

SHIP LIGHTS GUIDE £5.95

Recognition of ships' lights from three aspects, ahead, abeam, astern. A program designed to assist users in fast identification in conformity with the International Collision Regulations and to test knowledge at a primary or advanced level.

ALL PRICES ARE FULLY INCLUSIVE

We always require good programs on general or specialist subjects for the BBC or Electron.

EBUG £8.50

This Utility allows the examination and alteration of all memory locations from &E00 to &FFFF(except MOS). Simple Edit/Transfer capability for discs or within RAM. Straightforward instructions.

EUROPE £5.95

Detailed map of Europe with 9 sections of 25 questions each covering Capitals, Countries, Rivers, Seas, Populations, EEC & Warsaw Pact Countries at 2 levels. Ability to plot and calculate distances between any two points. Suitable for 8-15 year olds.

AVAILABLE AT GOOD COMPUTER STORES, SELECTIVELY FROM MICRONET 800 OR DIRECT FROM PAEAN SYSTEMS

## £285 For a Daisy?

The first quality Daisy Wheel Printer to be sold for under £300. Twelve months warranty - Japanese reliability. 180 words per minute, quiet operation - 60dB. 13" Carriage, 10, 12, 15, characters per inch plus proportional spacing. Parallel, Serial and RS232 interfaces. Quick loading "Clean Hands" ribbon cartridge QUME compatible. Have fun and dance through your printing with our Daisy!

### The DAISY STEP 2000 printer.

#### Video Camera Interface.

#### BBC CAMERA UNITS

Enables any standard Video Camera to be connected to a BBC or Apple Micro. The image is then displayed on screen ready to be enhanced or manipulated as required. The final image can then be stored or output to a printer, plotter slide or video unit. Resolution is 220x 310 with 64 levels of grey.

Price ..... £174.00

#### BBC SEESCAN VIDIOPHOTOGRAPHIC UNIT

A VIDICON TV CAMERA with a built-in Z80A microprocessor enabling documents and images to be input directly from camera to computer. They can then be enhanced, edited, manipulated stored on disc/tape or output as normal TV/Video signals 220x312 resolution 64 grey levels. Another technological breakthrough from Cambridge at a bargain price.

## PAINTBOX-COMPUTERS,

University Graphics Centre, 37 University Road,  
Southampton. Telephone: 0703 558621

Prices exclusive of VAT and Carriage

#### "CRAFTMASTER"

#### Engraver/Plotter

Fitted with:-

1. Pens it is a 3 Pen A4 Graph Plotter.
2. A Scriber, Router or Drill it becomes a Computer Controlled Precision Engraving Instrument.
3. An Optical Scanner it becomes a Digital Image Recorder. Wonderful potential for use in Education, Art and Design, Control Engineering, Engraving and Computer Graphics all in one package.

Terrific value at ..... £295.00

Drill attachments ..... £59.50

Opto-Scanner ..... £55.00

#### Graphic Supplies

Electronic Drawing Boards from ..... £120.00

Graph Plotters from ..... £295.00

Dot Matrix Printers ..... £216.00

Hi-Res Monitors Green Screen ..... £75.00

Colour Monitors from ..... £195.00

We have a wide range of graphic software for Designers, Artists, Illustrators, Photographers, Engineers and Architects. Computer Holidays - Learning at Leisure  
Carriage:- Printers £8. Other items £6.

## 3D-TANKZONE sensational NEW release!!!

For  
BBC 32k

£8.95

At last, a stunning interpretation of the 3D Wire-Graphics Tank Battle simulation you've all been waiting for brought to you by Dynabyte.

Features include anti-tank missile launcher with realistic 'shell-in-flight' action, radar screen, detailed control panel, anti-aircraft and anti-tank modes (with options to choose one or both), hidden line removal, exploding tanks and many other special effects. There is NO other game like it.

**DYNABYTE**

EXPLOSIVE

Software

Available now at all good computer shops or direct from

**DYNABYTE SOFTWARE**

31, Topcliffe Mews, Wide Lane, Morley  
LS27 8UL. Tel: 0532 535401

Exciting pool hall action all the way in this 2-player game of skill. Excellent ball control and smooth graphics an outstanding feature of this program.

**POOL**  
£7.95

BBC and Electron versions  
(Machine code 32k)

**CORPORATE CLIMBER**  
£7.95

Avoid the eager taxmen in the lifts ready to hinder your climb to power and beware of too much stress resulting in high blood pressure.

BBC and Electron versions  
(Machine code 32k)

**HORSERACE**  
£6.95

All the excitement of the track brought to your own home in this colourful game complete with tumbling jockeys, realistic horses, TV van, tote and leader boards, waving crowds and much more. Suitable for 1-6 players.

BBC and Electron versions  
(Basic + M/C 32k)

**LEMMING SYNDROME**  
£7.95

Save the panicking population in this highly original game full of special features and options designed to make your task harder as you get better.

BBC and Electron versions  
(Machine code 32k)

Disc versions available  
please add  
£3 per program.

SAE for catalogue.

(All programs require O.S. 1.2)

Please state BBC or Electron when ordering and include 50p P&P

Use JIM NOTMAN's  
function key command strip...

# Take the toil out of typing in your programs

THE INCORRECT use of spaces can create problems when typing in programs. BBC Basic, with its long variable names, is much more particular about where spaces occur than simpler Basics.

The computer must be able to determine where the variable name ends and a keyword begins.

In general, if a variable name does not have a "delimiting" character such as \$ % =>< + / \* - , ; or : after it, there should be a space. Otherwise "No such variable" error may result.

Spaces are not required after keywords, though (if the syntax allows) it does make the listing more readable.

For easier readability, many of the listings printed in *The Micro User* use our special formatter. When inputting these listings, do not press RETURN until all the statements from that line number have been typed in. For example:

```
100 IF letter (<) line end
    THEN PRINT "continue typing"
    ELSE PRINT "Press Return" (<RETURN>)
110 NEXT program_line (<RETURN>)
```

In some of the listings you will see some numbers enclosed in brackets and underlined after PRINT statements, such as:

```
PRINT "<129>Red"
```

In this case the line includes the teletext control character 129 which makes the rest of the screen line red. These codes can be input directly from the keyboard (NOT with OS 0.1) by using the function keys with combinations of the SHIFT and CTRL keys.

If any program which uses the function keys has been run, say Wordwise, it is best to reset the BBC with CTRL BREAK.

Before the function key command strip on the edge of the page can be used type in:

```
*FX227,140
*FX228,150
```

This allows all the important control codes to be generated and the function keys can still be programmed with strings as usual.

Before typing a program try:

```
REPEAT : PRINT GET : UNTIL 0
```

with the function keys, to see that you are really producing the expected codes.

When using codes 150 to 159 by holding down the CTRL and SHIFT keys and pressing a function key, line scrolling will be prevented until the SHIFT and CTRL keys are released.

It is sometimes a little confusing using the double height character 141 (&8D). Try:

```
AUTO (<RETURN>)
10 PRINT "<141>Hello" (<RETURN>)
```

When the cursor reappears the next line number is no longer visible as expected. If you now use the cursor to move up to line 10 and copy the line with the COPY key, you'll notice that PRINT cannot be seen on line 20, but that when Hello is reached you'll see the double height Hello.

This rather strange effect is due to the way the teletext character generator works.

	f0

**THE  
MICRO  
USER**

# Get ready for MICROWEB

NEXT month sees the launch of Microweb, a Bulletin Board exclusively for readers of *The Micro User*.

Microweb is the first electronic message service dedicated to the BBC Micro. We're determined that it's going to be the best Bulletin Board in Britain – and with your support it will be.

A simple telephone connection will give you the latest ideas, news and gossip in the world of the BBC Micro.

And it's not going to be one-way traffic. You'll be able to send us your own views, ideas and program queries.

Not only that, but you'll be joining in an elite band of BBC Micro enthusiasts,

each as determined as you to get every ounce of enjoyment and excitement out of his BBC Micro. At Micro User we're bubbling over with enthusiasm exploring this new field.

For us Microweb is the start of a new adventure. We hope you'll share with us.

**Here's a  
great free  
contest to  
get you  
started!**

## Your key to the

GETTING one micro to talk to another is the latest and most exciting application of micro computers. And your BBC Micro is ideal for it.

From your own home, by simply linking your computer to the telephone,

you can communicate with other micro owners, bulletin boards and even large mainframe computers all over the world.

This month's competition offers a unique double package to get you

### A reader in New Guinea is contest winner

The winner of our February competition was Richard Dryden, of Papua, New Guinea. His description of using a *Beastie* to simulate a bird's wing was so exceptional that we've decided to let you see it in detail. He writes:

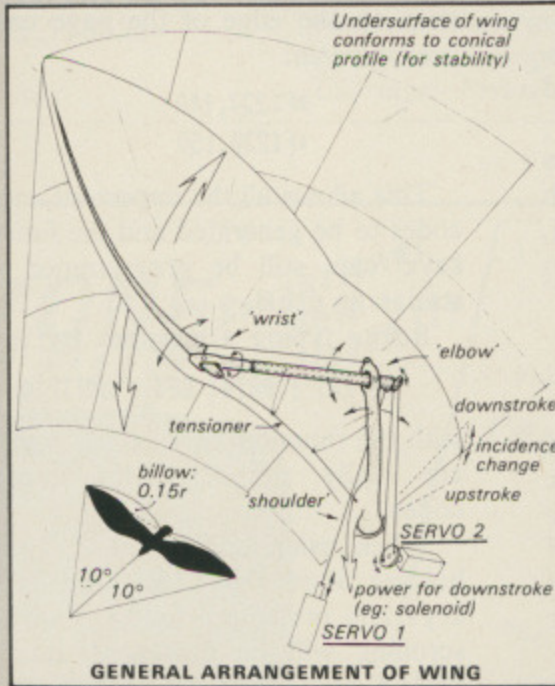

FLAPPING-wing flight has fascinated me for years. Just how do birds, bats and insects do it? I see this as one of the great gaps in our aeronautical knowledge.

We are quite competent at building aircraft with rigid wings and howling motors to push or pull them through the air. But flapping flight is different.

The wings have to provide both lift and propulsion. This requires a controlled degree of structural elasticity to prevent the wings flinging themselves apart.

The main problem areas in studies of flapping flight are:

- **Aerodynamics:** Producing wings with the right kinds of changing geometry to produce thrust and lift.
- **Structure:** Designing a "soft" or elastic wing strong enough to withstand the forces exerted on it.
- **Power supply:** Finding a suitable power source to drive the wings, particularly during the downstroke.

- **Control:** How to alter the properties of the wing in a controlled way to initiate and limit manoeuvres.

It is the last category – control – that I feel could be usefully explored by a robotics approach.

Although the structure of a wing can be designed in such a way that it responds "intelligently" to changing patterns of force by flexing appropriately, there needs to be on top of this, a finer control of changes throughout the wing.

Otherwise flight soon becomes catastrophically unstable – as I have found out the hard way by picking up the pieces of numerous models.

I propose to build a mock-up of a flapping wing, with servo-control of two

parameters initially:

- Overall extension of the three main joints in the wing.
- Degree of pronation/supination of the "wrist" joint in relation to the inner part of the wing.

The accompanying diagram should help to make this clear.

The model wing could then be tested for its response and controllability under aerodynamic loading. I shall have to improvise by having the rig attached to a moving car.

The great joy of having the servos under BBC Micro control would be the possibility of programming sequences of quite complex changes in geometry without having to cope with them manually in real time.

They could be carefully planned before the test and repeated accurately as many times as required.

This potential for precision and repeatability would offer a much greater possibility of modelling the movements of a bird's wing.

get every  
ent out of  
ser we're  
asm for  
t of a big  
share it

*... find out more about  
this exciting venture in  
next month's Micro User*

# newworld...

er micro started in this fascinating area, in which  
ven large thousands of micro enthusiasts have  
over the already become thoroughly hooked.

offers a Firstly, the winners – and there are  
get you three prizewinners this month – will be  
receiving Pace's Grapevine modem.

This interfaces your micro to the  
telephone network so you can transmit  
and receive the electronic signals that  
carry your messages.

There are all sorts of different  
standards for the signals. But don't  
worry, Grapevine will handle all you  
need.

Actually programming your micro to  
handle them can be a little tricky  
though. That's where the second part of  
the prize package comes in –  
Commstar.

This is an extremely clever piece of  
ROM-based software that lets you turn  
your micro into a terminal – that is, the  
sort of computer needed to send and  
receive the signals.

Commstar gives you two standard  
terminal "settings", one of which allows  
you access to Prestel. However the  
software makes it simplicity itself to  
tailor your terminal to your own  
requirements.

*All you have to do to win this dynamic  
duo is to come up with as original a use  
for the combination as possible. The  
possibilities are endless!*

Just think of it. You can send  
messages, data and programs anywhere  
in the world, almost instantly. How  
would you use it?

Once your imagination is fired you'll  
come up with lots of ideas.

Send us just one of your ideas, in not  
more than 100 words, on the coupon  
below. You could find yourself with  
both the hardware and software to put it  
into practice.

But remember – we have to receive  
your coupon no later than May 31,  
1984.

**YOU could be  
the lucky winner  
of a revolutionary  
communications system –  
Pace's Grapevine modem  
PLUS Commstar software!**

UNICORN

SONY

TRINITRON

REMOTE CONTROL KY-1021502

# Unicorn opens 5 new channels for the BBC.

The BBC Model B micro packs a lot of potential. As a basic computer, it is reliable, efficient and simple to use – but, more than that, it is the first step on the road to a complete computer system.

TORCH COMPUTERS have chosen the BBC micro as the heart of their open channel system – UNICORN. UNICORN means a wide choice of upgrade channels to transform your BBC into a complete business system, a fully communicating workstation, or a high-powered 32-bit data processor.

At the gateway to the Communications Channel is the UNICORN ZEP100 – a 64K processor board and the software needed to promote your Model B into a TORCHNET local area network station. Further along the channel, the UNICORN FDP240 will provide twin 400K floppy disc drives, which with the addition of the ZEP100 will result in a Z80 disc pack.

The UNICORN Business Channel develops the BBC micro into a flexible professional tool equipped to manage the most complex business requirements. Opening with the HDP240 – a simple but powerful disc drive, the channel provides for any level of upgrade from the well-proven ZDP240

(TORCH Z80 Disc Pack) up to the ultimate addition – the UNICORN – combining the HDP68K – a 32-bit 68000 processor with the UNIX® operating system.

And if you get lost in the by-passes and flyovers around your BBC, there is one simple route for you to follow – the straight channel to your nearest TORCH UNICORN dealer. He will assess your requirements, then recommend the ideal solution to cope with your present and future needs.

For full colour product brochure, price list and the name of your nearest TORCH UNICORN dealer, just clip the coupon.

# SLIMLINE PRECISION

These superbly engineered slimline disc drives for the BBC Microcomputer are unsurpassed in quality and accuracy. They feature direct drive brushless D.C. motors and long-life ceramic read/write heads for maximum reliability, and a die cast alloy chassis which gives rigidity and long term stability. Furthermore, advanced chip technology, using large scale integration permits extremely low power consumption to be achieved.

The Pace range includes drives which are switchable between 40 and 80 tracks. Double sided drives give a massive 400K storage per drive in 80 track mode, whilst in 40 track mode they retain compatibility with all commercially available BBC software. All Pace drives will support double density operation.

PACE disc drives are supplied complete and ready to run direct from the BBC's power supply. They are supplied complete with all cables, a utilities disc, and manual. Pace even supply a blank disc so that the drive is ready for immediate use!

Available from your local dealer or direct from:

## Non-Volatile RTC and RAM *Acacia*

DAUNTED by the prospect of assessing such an elaborately-titled facility, I began gently . . . if I was going to be dropped into a world of strange and complicated terminology then my wish was to be dropped gently.

My fears were unwarranted. I soon learned that what was included in this intriguing package was electronic diary software, RAM filing system software, associated hardware and a full instruction manual, known collectively as "non-volatile RTC + RAM" (RTC standing for Real Time Clock).

I learned further that the term "non-volatile" simply means that any diary entries or system files are not lost whenever the computer is switched off.

I was not only ready, but now intrigued, to read the Acacia manual, where I discovered that RTC and RAM comprise both hardware and software.

The software is held in a ROM fitted into a spare "paged ROM" socket inside the computer. The hardware is supplied in a box, complete with cable links to the computer.

The electronic diary I found to be both helpful and informative. It is also quite easy to get to grips with, with the aid of the list of diary system commands in the manual.

Working through these commands at the computer you are gently and well initiated.

Acacia's method of using a demonstration time or date, for example, which you can then overwrite as you wish, is especially enlightening.

The diary's functions include a continuous display of date and/or time in the top right hand corner of the screen. Alternatively, you can choose not to display the clock until you request the time.

The time and date is kept, even when the computer is switched off. It also takes leap years into account - I am writing this on February 29!

I was particularly impressed with the facility for inserting and displaying reminders. Again it is well explained, with the use of a demonstration example.

The diary automatically "opens" for you on the correct date, immediately outlining all entries relevant to today. On pressing Return, every reminder set for that date and every date after will be

# 'RTC and RAM' - a helpful and informative diary

displayed successively.

You can change the date of the reminders from which the display begins, to gain a retrospective glance at the appointments you've missed.

Two extras that I found greatly increased the usefulness of the diary are the keyword and wildcard facilities.

The former permits a command which enables you to search out only those reminders which include particular words.

For example, for the regular traveller, typing the command \*DIAK AWAY will display all reminders with the word AWAY in them.

Along similar lines, the latter means that words and filenames do not have to be specified precisely. For example, H\*T covers all words beginning with H and ending with T.

The actual setting up of the reminders is just as simple. You can enter them for years ahead.

The recommendation for the diary to be used in Mode 7 enables the use of colour in the reminders, perhaps not totally necessary but nevertheless an added bonus. I found a red flashing reminder definitely had more impact, sending me scurrying off to my appointments.

Indeed the electronic diary seemed to have thought of everything. The alarm can even be set to sound - perhaps with an appropriate message - at any preset time of day, whether that day is today or in any year up to the year 2014.

The RAM Filing System (RFS) claims in the manual to be "a fully functional storage facility designed to complement the existing range of filing systems, (cassette, disc or net)". Rather a grand claim, but could it be lived up to?

Certainly I was initially impressed by the reduced restrictions on the use of its files. The filenames can not only be up to about 200 characters in length, but there can also be any number of files in the catalogue - if there is enough room in

memory to hold them all. The RFS requires the minimum of workspace for itself - just 256 bytes.

The standard commands used within the filing system are explained in the Acacia manual. As certain of them are fairly complex, I found becoming au fait with the system a little more tricky than with the diary.

The manual, I feel, presumes a certain amount of knowledge of the reader and the initiation is not quite taken step by step.

Once mastered, however, I was once again most impressed. The system's automatic inclusion of creation time and date with saved files is excellent.

The information is displayed even when using the command \*CAT to outline an index of all files held within the filing system. A simple addition, but I certainly found it greatly increased the usefulness of the system.

By far the most impressive feature of the whole package, and one stemming from its non-volatile nature, is the auto-boot facility.

To cut a fairly long and complex story short, this enables you to press Break or switch the computer off without losing the effects of all the commands previously typed in.

This is done by the creation of a special text file which may be LOADED, RUN or EXECUTED at power-on or the pressing of the Break key. (Execution merely treats the file as if it had been typed in - yet another useful facility.)

The advantages and applications of this are quite clearly far-reaching. You may have a standard set of function key strings which you don't wish to lose each time the computer is switched off, or you may want a program to be automatically loaded each time it is switched on.

Altogether, I feel that this extensive package is an extremely useful investment.

Karen Torevell

## HARDWARE REVIEW

THE BBC Micro has some excellent graphic commands – MOVE, DRAW, PLOT, GCOL, etc – built into its Basic. But they are rather tedious to use for anything but the simplest of pictures.

It is better to use (or write) a general purpose drawing program which employs the cursor keys to move about the screen and draw or indicate the location of previously defined objects.

Movement may also be made somewhat easier on a Model B by using the analogue port, ADVAL command and joysticks to replace the cursor keys.

The two systems reviewed here take us a step further in putting pictorial information into the computer. Both employ graphic tablets and a control program and allow the user to trace around actual pictures with a drawing arm.

These devices send X and Y coordinates of their position on the board, via the analogue port and appropriate programming, to the screen display (see Mike Cook's article on building a drawing arm in *The Micro User*, June 1983).

Both systems were tested on a 32k BBC Micro Model B with OS 1.2 and Basic II. So, how do the two compare with each other?

Beebplotter *Watford Electronics*

THIS is supplied as a graphics tablet manufactured by Robot Developments of Hull, software on cassette and a manual.

The tablet is a sturdy transparent sheet of smoked Perspex measuring 48x40cm with a grid marked drawing area approximately 32x23cm.

It has an advantage over the Grafpad in that it can be placed over thick books to trace maps and diagrams and the source picture can be kept still without having to resort to sticking it down.

The tracing arm is the two piece potentiometer type and is well constructed in tough plastic.

The system plugs into the micro's analogue port via a 15 way D connector (provided) attached to a rather short (95cm) lead, which rather restricts the position of the tablet in use.

One thoughtful feature is the provision of a command summary on the tablet itself, as the list given on screen by the intro program is soon forgotten.

The software consists of two Basic

*Beebplotter: Well constructed*

# QUICK

programs – one giving instructions and setting up the grid, and the main program – two runplot routines, and five demonstration files.

Setting up time, including loading the programs and calibrating the grid, took me only two and a half minutes.

You are then asked to select a mode (0, 1, 2, 4 or 5) and whether a previously saved picture is to be loaded.

The facilities available are described in Table I and are selected by pressing the appropriate key. The space bar is used to indicate entry of a digitised point.

All this key pressing caused much distraction when tracing a drawing from the tablet.

In use, the LINE, RECTANGLE and CIRCLE options are very good as the potential position and shape of a figure can be visualised on screen before being fixed. In addition, a picture component can be removed in EDIT mode.

The MOVE/REDRAW feature is also useful as whole shapes can be duplicated in another position on the screen without having to redraw them manually (Figure IIIa). Text can also be added anywhere on the picture using the PRINT AT . . . option.

One of the most useful features is the FOLLOW option which allows the user to trace complex shapes. Rather disappointingly this is spoilt by stiffness of the drawing arm, making it difficult to draw smooth lines even after practice.

The cursor spot on the screen has a slight tendency to wander, requiring the space key to be hit at exactly the right time for precision.

Unfortunately the software is not completely idiot or bug proof on two of the options. Injudicious use of the infill command – for example if a shape is not completely closed or if used on top of an already filled area – caused me irreversible program crashes.

Also when altering colours – both

*Grafpad: Smooth and accurate*

# ON THE DRAW

foreground and background may be altered—the command instruction itself changed colour and sometimes became invisible, making remedies difficult.

It is also a good idea to note the colours and mode of a drawing when saving, as the latter cannot be altered during a run. Surprisingly, crashing the program is also not uncommon when loading the demonstration files.

A printout option is provided in the command table, though the user is expected to incorporate a screen dump facility into the empty procedure in the main program.

This was fairly easy to do and worked well with both an Epson dot matrix and

an Olivetti ink jet printer.

The plotter programs, and saving or loading of picture files, worked on either tape or disc systems without any modifications.

## Grafpad

Micrex

THIS package also consists of a graphic tablet—in this case called a graphic digitiser—a software cassette and a manual.

The tablet is a solid laminated board measuring 51x46cm and is finished in BBC cream (see picture). The drawing area is slightly squarer and larger (29x28cm) than on the Beebplotter.

The drawing arm, which is also of the two piece potentiometer type constructed in metal and plastic, seems less sturdy than the Beebplotter, though it has a locking pin for when not being used.

It does, however, have the big advantage of being much easier and smoother to use, and, combined with the fact that the screen cursor doesn't wander, it seems much more accurate.

A Draw button is also provided on the board to indicate the start and end of a digitising action—an improvement on the Beebplotter's "press the space bar".

Unfortunately, the connecting lead, terminated by the analogue D plug, is even shorter (80cm) than on the Beebplotter, causing difficulties in board positioning.

The software provided is in Basic and includes a loader/instruction program, a main program, three data files and a redraw routine.

On running the loader program I experienced a feeling of *deja vu* as the standard Clare's Grafkey/Grafdisk/Grafstik instructions appeared.

The features available are shown in Table I and are operated by the function keys for which a tear-off crib sheet is provided to fit under the BBC's plastic strip.

Function key 9 acts as a shift key to obtain more options, but is a little too close to the Break key for comfort.

All the features of Beebplotter are present, except for MOVE and EDIT—a pity as these can prove particularly useful. There are, however, some additional routines in Grafpad—TRIANGLE, RUBBER-BANDING and superimpose GRID.

Perhaps the most significant of these is rubber-banding, in which the user can indicate up to four points (for example, the base of a pyramid) and then move the plotter around to "pull out" the apex and attached vertices (Figure 1b).

Selection of colours—16, including flashing, are available—is easier than Beebplotter as a palette is displayed on screen and the required colour digitised. However, unlike Beebplotter, only foreground colours are available.

One advantage of Grafpad is that the mode (0, 1, 2, 4 or 5) can be changed without losing the current picture.

Perhaps the biggest joy (and disappointment) is the PAINT mode, operated like the FOLLOW mode of

## From Page 143

Beebplotter. This allows fairly accurate tracing of diagrams placed on the tablet or can be used for doodling.

It is also possible to vary the thickness of the brush and therefore use it to shade in areas making intricate and pretty pictures.

The disappointing part is that following all that effort, the painted portions of the pictures cannot be redrawn following a screen clear, nor can they be saved on tape.

The complete screen SAVE option is only available on the disc version of the program otherwise saving and loading files is straightforward and works well, though there is no facility to provide separate filenames for pictures.

All were called DATA. Thus searching for a particular picture was tedious.

No printout or screen-dump facility is provided – a big minus for any computer aided design work – and it is difficult to add one's own print routine owing to Clare's extensive software protection.

Similarly, I found it difficult to modify the tape version to work on disc systems. But a separate redraw routine is provided to enable users to incorporate pictures drawn with the Grafpad into their own programs.

### CONCLUSION

OVERALL, both systems performed reasonably well, though in a limited fashion. Both are well constructed and though Beebplotter was easier to set up and use, perseverance with the Grafpad paid its rewards eventually with more versatile pictures.

In both systems, transfer from graphics tablet to keyboard for the commands was a nuisance and could probably have been replaced by a digitisable menu on the tablet.

Disadvantages of the Beebplotter, such as a stiff drawing arm and occasional program crashes, may be balanced against the advantages of a transparent baseboard and its MOVE and EDIT facilities.

On the whole, Grafpad's tablet performed well, as did the software with its extra features.

Its biggest drawback was the

inability to save traced (PAINT mode) drawings, one of the main reasons for using a graphic tablet in the first place, and the lack of a printout option.

Both systems should be satisfactory in an educational environment, especially for reproducing simple geometric shapes and for drawing pictures to add to one's own programs.

Their tracing facilities are somewhat limited and therefore they offer only small advantages over other cursor or

joystick drawing programs . . . and at a price!

They do, however, introduce the user to some of the excellent graphic capabilities and high resolution plots of the BBC Micro. But for more professional computer aided design or technical work requiring the measurement of traced areas, a non-potentiometer type digitiser will probably be needed.

# A SLIMLINE TONIC FOR THE BBC MICRO

Cumana 5 1/4 inch slimline dual disk drives for the BBC Micro are now available from well known high street outlets, including W. H. Smith, John Lewis and Spectrum UK, as well as from Cumana's national dealer network.

The dual drives are available in two versions, as shown, including a 'switchable'. This version enables either drive to be switched independently between 40 and 80 track modes.

Each unit has an independent power supply, 12 months warranty, and is fully assembled and tested before packaging. A drive connecting cable, user manual, formatting diskette, power supply lead and plug are all supplied complete with the disk drives.

Look out for the distinctive Cumana packaging in your high street, today!

- High quality 5 1/4 inch Japanese dual disk drive
- Cabinet finished in hard wearing BBC beige
- Switchable between 40 and 80 track mode

Cumana Limited, Pines Trading Estate,  
Broad Street, Guildford, Surrey, GU3 3BH.  
Telephone: Guildford (0483) 503121 Telex: 859380

# TORQUEING OF STEPPING MOTORS

THIS seems to be the Year of the Robot. What with the BBC TV series "Computers in Control" and the upsurge of computer add-ons of various forms, all designed to produce movement in response to computer control.

There is a plethora of buggies that scurry about the floor, robot arms that make a sudden grab for you or plotters that will draw out high resolution pictures in as many colours as you have felt tip pens.

In all this work the single most popular method of producing movement is by means of a stepping motor. Although this is not the only way of generating movement on demand, it does have many advantages.

You probably already own a couple. There is one in your disc drive and two in most printers.

These motors have been around for many years but only recently have there been low cost computers to take full advantage of their special features.

So this month we have a look at stepping motors and how to drive them.

A normal motor starts to rotate when you apply a voltage to it and slows down and stops when that voltage is removed. If you want to control its speed you usually have to resort to gears.

Although there are various electronic methods of motor speed control these are usually used to make small adjustments, while it is gears that get the speed in the right order of magnitude.

The problem is that for a conventional motor to run efficiently it has to run at around 300 rpm.

The amount of turning power, or torque as it is known, is the way a motor's power is measured. With gears, as the speed is reduced the torque is increased - a very happy state of affairs.

However most electronic motor control reduces the speed as well as the torque.

When it comes to controlling a

By MIKE COOK

conventional motor with a computer the motor takes some time to get up to its final speed. So it is difficult for the computer to "know" how many revolutions it has turned through.

It is normal therefore to include some form of feedback arrangement so the computer can sense the motor's position.

However this feedback is not needed with stepping motors, which is why they are such a natural for use with computers.

A stepping motor, as its name implies, works not by continuously rotating but by moving in a series of small steps. Each time the motor receives a pulse it moves through a fixed angle. The size of this angle depends mainly on the design of the motor.

Motors are usually classified by how many steps are taken to complete one

Figure 1: The principle of a stepping motor

# THE BEEB BODY BUILDING COURSE

## PART 15

Figure II: A stepping motor

revolution – ranging from 4 to 200 steps per revolution.

Another way of expressing this is to quote the size of angle of each step.

As stepping motors are difficult to get hold of *The Micro User* is offering Stepping Motor Experimenting Kits as Body Build Packs Nos. 12 and 13 (see Page 157 for the order form). These include a motor as well as the electronics to drive it.

The stepping motor we have used has a step angle of 7.5 degrees. It is the same type as is used in some of the commercial devices advertised in these pages.

Let's see what makes a stepping motor tick. If you have a coil and pass a current through it you will generate a magnetic field. This will behave just like any other magnet and will attract other magnetic material to it.

Suppose we have a permanent magnet suspended above four coils. If we pass current through two of the coils the magnet will be attracted towards both and will settle somewhere between the two. This is shown in Figure Ia.

We have an arrangement, which will be explained later, to prevent the magnet getting too close to the coils.

Now supposing we remove the current from coil 1 and turn on coil 3, as in Figure Ib.

The magnet will move towards the two coils that are exerting a magnetic force and will come to rest between coils 2 and 3, as in Figure Ic.

We can repeat the process with coil 2 going off and coil 4 coming on, as shown in Figures Id and E.

If we look what has happened to our magnet we will see that it has moved in a straight line in response to our switching currents in the coils.

This is the principle of the stepping motor, only instead of movement in a straight line we have a circular movement.

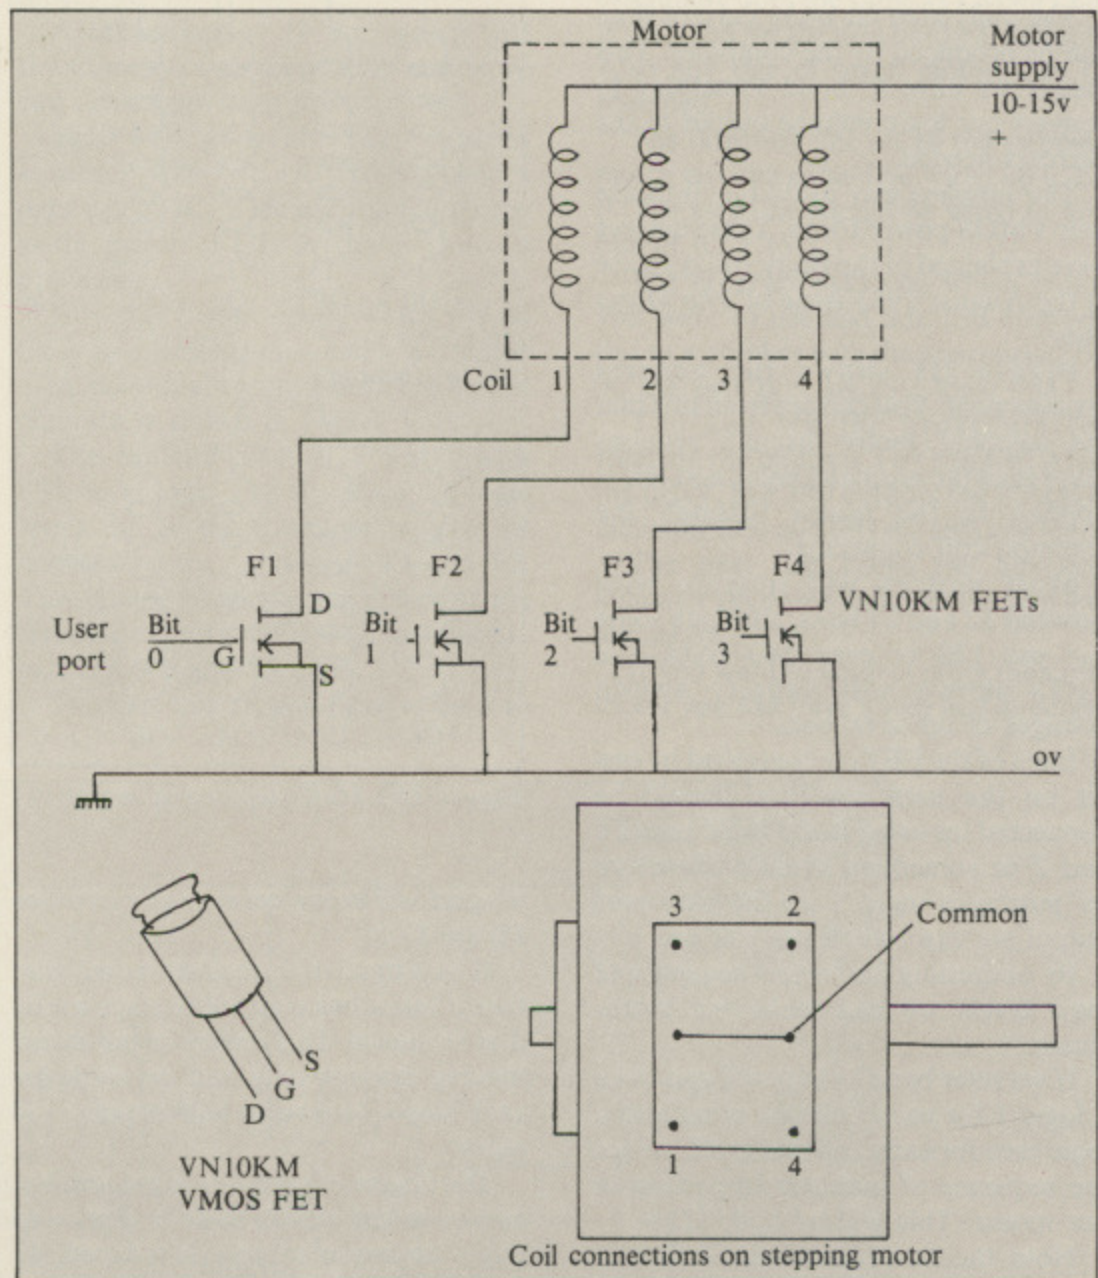

Figure III: Control of a stepping motor

This is obtained by having several coils, each wired as one of four circuits, distributed in a circle. We call this the stator of a motor because it does not move.

In the centre of the circle we have a drum bearing a number of small magnets. The drum is known as the rotor – it's the part that rotates.

The magnets are not actually

separate magnets but are bumps or poles on a large central magnet.

As the rotor is on bearings and the poles are distributed evenly around it, the poles can never come in contact with the coils.

Figure II shows a small section of a stepping motor. Only coil 1 is shown

**From Page 149**

wired up, for clarity, but you can see that every fourth coil is connected together.

You can also see that the number of coils in the stator is four times the number of poles on the rotor, and this number determines the angle of each step.

A stepping motor can therefore be precisely controlled by switching the currents in each of its four coils. So a stepping motor has five wires coming out of it, one for each coil and one common connection.

The coils take far more current than can be produced by the computer. This means we have to build something to convert our logic voltage output to the currents needed.

The simplest way to do this is to use four VMOS power FETs. These devices were explained in the Body Build article in the August 1983 issue of *The Micro User*.

Figure III shows the general arrangement. You can see from this that the stepping motor usually requires more than the normal 5 volts, and this is applied to the motor through the common coil connector.

Most motors will operate with between 12 and 24 volts, although some can use 120 or even 240 volts. The FETs shown will happily switch voltages of up to 60 volts.

Each of the FETs is controlled by one bit on the user port and should be connected up using Body Build packs 1 and 2 or something similar. Therefore by putting a logic 1 on the user port output we can switch the coil on.

By outputting the correct sequence of logic levels we can make the motor rotate.

If we refer back to Figure I and write a logic 1 for each coil that is on and a logic zero for each coil that is off, we get the sequence of numbers to present to our motor. This will be 3, 6, 12, 9.

Note the last one is not shown in Figure I, but it is needed to wrap round smoothly to the start of the sequence again.

Before we see how this can be generated by the computer let's look at another possible sequence of pulses that we can use to drive our motor.

Consider Figure IVa. This shows the motor in the same position as Figure Ia. Now if we leave only one coil on, the magnet (pole) will go directly over it. This is shown in Figure IVb.

If we now switch on coil 3, the

**Figure IV: Half stepping a motor**

magnet will move between the two (see Figure IVc).

If we extend this sequence we will find that it takes twice as many steps as the first sequence. This results in the motor moving through only half the angle for each step – known as half stepping the motor.

The degree of precision is greater, but as you might expect there is a price to pay – the motor's torque is reduced. As there is one coil on for half the time, you are putting less power into the motor. Therefore you get less power out.

With the full step sequence there are two coils on all the time. However in some circumstances it is a useful trick to know.

Any software must present the correct sequence to the motor. The easiest way to do this is to hold the sequence in an array and set up a counter to keep track of the next element in the array to be outputted.

A program to do this is shown in Listing I on Page 152.

The procedure to output the next bit pattern in the sequence is from line 280 to 350.

It is passed two variables. The first, "ROUND", is a logic variable to tell the procedure which way to step through the sequence.

The second variable is used in a delay loop to control the speed of the motor. The delay loop is executed first and then D% is set depending on the direction you want to go.

Line 310 moves N% on to the next sequence in the pattern. The logical AND instruction ensures that if N% is 7 and we add one we will get 0. Also if N% is 0 and we subtract one we will get 7.

This effect is known as the number "wrapping around". The AND instruction was explained in the August 1983 issue of *The Micro User*.

In order to show off the stepping motor procedure the rest of the program makes the motor rotate backwards and forwards.

When I show this to my students I have a small Union Jack on a cocktail stick which I attach to the motor. The computer enthusiastically waves the flag, which is a good thing for a British computer.

As you can see, the motor does not run very fast. But by simplifying the program it is possible to get it working at top speed. However top speed is something that is very variable.

We have seen that torque is the pulling power of a motor. In a stepping motor the torque is inversely proportional to speed. That means the slower it goes the more power it has.

In fact it has maximum torque when it is stopped. You can test this by trying to force the motor to turn by hand.

You will find this harder to do when it is stopped – but still has two coils on – than when it is running fast. If we try to make it go too fast the motor will not have enough torque to turn itself, let alone a load, and so will stall.

When you approach stalling speed you will notice the motor start to miss steps and make a stuttering sound. This maximum speed of the motor from a standing start is called the "pull-in" speed.

If the motor is running it can be accelerated to a speed slightly faster than the pull-in speed. So if you want to run stepping motors at full tilt you have to start them relatively slowly.

One way to achieve more torque, and thus a greater speed, is to increase the current through the coils. This means

# THE BEEB BODY BUILDING COURSE

increasing the voltage used to drive it. At some point you will reach a limit imposed by the DC current rating of the coil. In fact you can go even faster than this by employing a little trick.

When you switch a coil on initially there is no current flow as the change in current in the windings induces a magnetic field. This field then induces a voltage back in the coil, but in a direction to oppose the current flow.

If this process was 100 per cent efficient you could never get any current to flow in a coil, but fortunately it is not. The result is that when the coil is switched on it takes a time for the current to build up.

If you are stepping the motor fast, the current will not have built up to its full amount before the coil is switched off again.

This accounts for the strange fact that a stepping motor takes more current when it is stopped than when it is moving.

The trick in getting a faster rise time of current is to increase the voltage even more. However this will exceed the maximum DC current through the winding and so a resistor should be inserted in each coil line to limit the current.

When calculating the value of the resistor make sure to allow enough wattage as the resistor will get warm.

The inductive part of the resistor/coil combination is thus proportionally

smaller and so there will be a faster rise time of current in the coil, allowing a faster speed to be achieved.

The only snag with the type of control I have described so far is that it requires four computer output bits to drive the motor.

We can make a saving in this number if we generate the sequence, not with software, but with hardware. Then we need only two bits to control our motor – one to specify direction and one to tell it to step.

We can control seven motors from the user port as long as we only want to move the motors in one direction at a time.

Alternatively, if we want full simultaneous control of each motor we can drive four from the user port.

You can generate the required sequence with two JK flip-flops and a data select IC. This can be fed to the same power FET drives as shown previously.

However there is an IC which will do the whole job for you – and it is cheaper than individual components. The circuit diagram is shown in Figure V.

The Mullard SAA1027 works with high level logic and therefore the logic levels out of the computer have to be boosted by the transistors T1 and T2. This IC can be connected directly to the stepping motor's coils with any supply between 9.5 and 18 volts.

To drive this all you have to do is to

set the logic level for the required direction and give a pulse to the step line.

This is shown in Listing II and essentially does the same as Listing I but is designed for the new hardware circuit. Also any one of seven motors can be specified.

The direction line on all the stepping motor circuits should be wired up to bit 0. The step line should be wired to any output bit 1 to 7.

The program asks you which motor you want to use and line 130 converts this to a number with the appropriate bit on the user port set to a logic one.

You can see the procedure for stepping the motor is a lot simpler. After the delay, line 280 outputs the direction indicator D% and sets the step line high.

The next line keeps the direction indicator the same and puts the step line low again.

If you want to control more than one motor you can have a step and direction

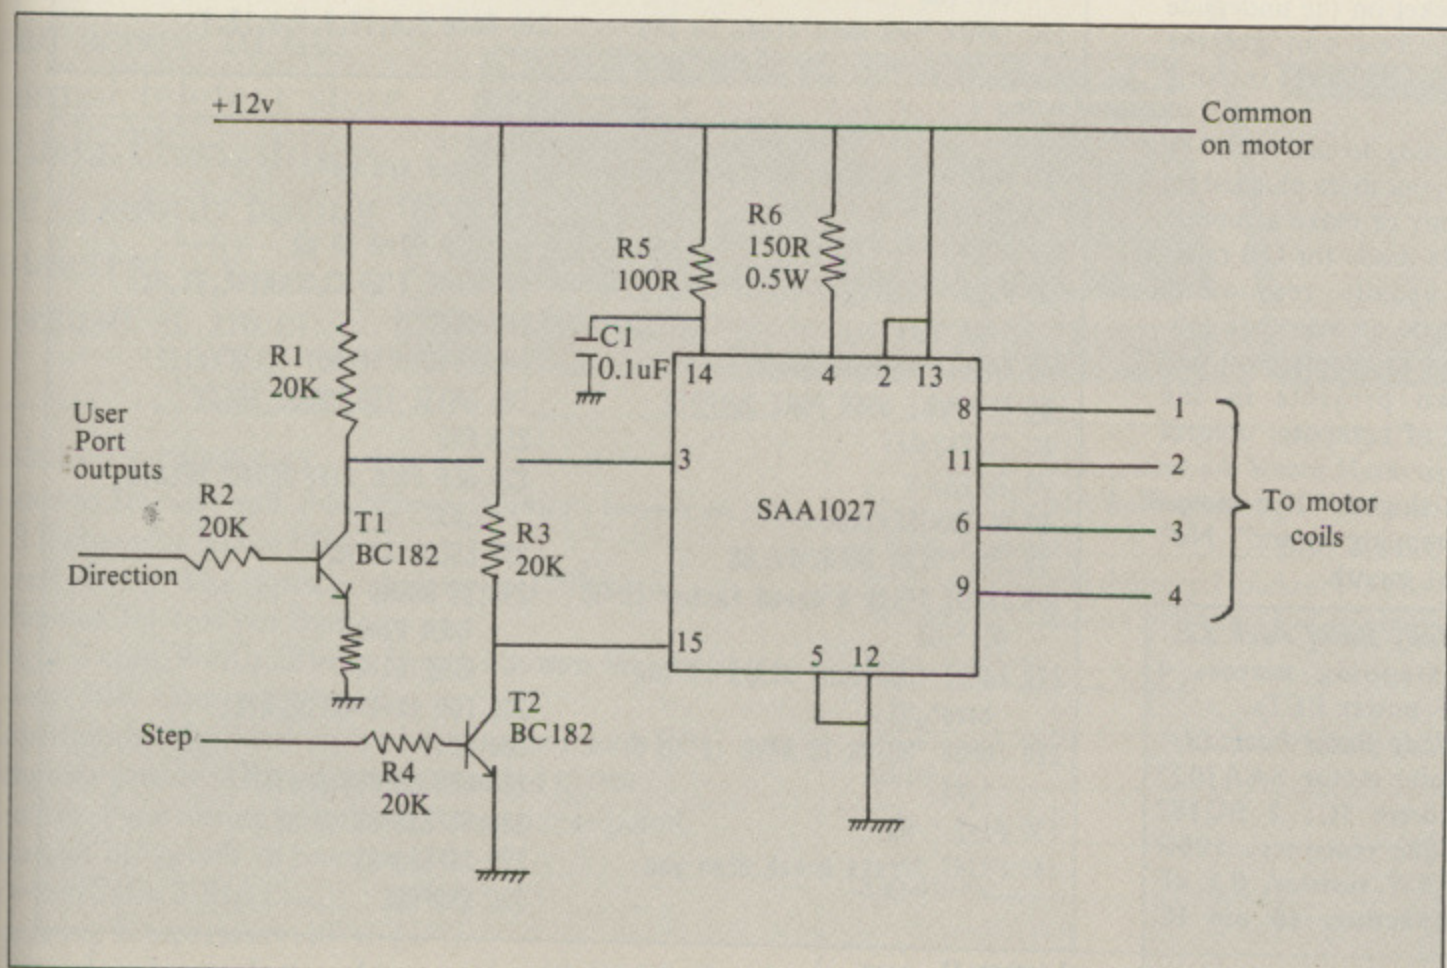

Figure V:  
A hardware  
sequence  
generator  
circuit

# THE BEEB BODY BUILDING COURSE

## From Page 151

line for each motor. In this way the motors are entirely independent.

The program needed to drive four motors independently and simultaneously is a little involved and best left for another time.

However if you want a crack at it you could use the event timer to initiate a background task. This would decrement a counter for each motor and output a pulse to those motors whose counters had reached zero.

In this way a Basic program could just store numbers into those counters to get the motors moving.

Two Body Build kits are available this month, one using the computer to output the sequence and the other using the SAA1027 stepping motor driver chip.

I could have laid out a small printed circuit for each kit, but as you will probably be incorporating the motors into your own devices it would not have been worthwhile. So the kits contain components only this month. The full contents can be found in the component lists below.

Finally, you will need a power supply to drive the motors. If you are just running one or two you can use the external power socket on the underside of the computer. You can get the sockets from advertisers in this magazine.

If you are planning to use more, or you already have your discs plugged in, you will have to buy or make a supply. The type of supply made for CB radio transmitters is usually reasonably priced and should do an adequate job.

Having now got the tools, you can devise your own projects in the fascinating world of computer control and robotics.

Remember the slogan: "If it moves it's probably a stepping motor". No? Well, see you next month.

**Component list Body Build Pack 12:**  
ID 35 35014 stepping motor, 4 VN10KM VMOS power FETs.  
**Component list Body Build Pack 13:**  
ID 35 35014 stepping motor, SAA1027 stepping motor drive IC, 2 BC182 transistors, 4 20K resistors, 100R resistor, 150R 0.5W resistor, 0.1 uF disc ceramic capacitor, 16 pin IC socket.

# Free software, only £225.

If you own a BBC Micro, you can now download, store and run programs (transmitted free of charge via Ceefax) with the new Teletext Adaptor, priced £225 inc. VAT.

These programs make up the BBC Telesoftware Service (which is intended to become a computer software broadcasting channel) and although primarily educational, they will soon develop into general interest and business areas.

And, as they will change every two weeks, you'll soon be able to build up a vast bank of top quality software without ever having to put your hand in your pocket.

But that's not all the adaptor has to offer. It also enables you to gain access to the normal teletext store of data. This is different to simply having a teletext TV because it means

this data can now be transferred to memory and manipulated in any way you wish (making graphs or bar charts for instance).

It's yet another development in our programme to help you fully realise your BBC Micro's potential.

If you're a credit card holder you can order the Teletext Adaptor by ringing 01-200 0200 at any time or 0933-79300 during office hours.

(You can also find out the address of your local BBC Micro dealer by calling the same numbers.)

Alternatively, you can order it by sending off the coupon below.

## Technical Specifications

Access to Teletext and Telesoftware Services broadcast on U.H.F. channels E21 to E69.

Speed of max. data capture rate approx. 128k baud. (8 lines of Teletext per frame.)

Height 70mm. Width 210mm. Depth 350mm. Weight 2kg.

Colour: BBC Computer cream.

Construction: Moulded top and bottom to match BBC computer profile. ABS injection moulded plastic.

Controls: Four tuning potentiometers on rear panel.

Mains on/off switch on rear panel.

Power in 240v, 50Hz, 15w.

Operating Temperature: 10° to 35°C.

Designed and manufactured to comply with BS415 Class 1 standard.

To: BBC Microcomputers, c/o Vector Marketing,  
Denington Estate, Wellingborough, Northants NN8 2RL.  
Please send me \_\_\_\_\_ BBC Teletext Adaptors at £225 each, inc. VAT and delivery. I enclose PO/cheque payable to Readers A/C, Acorn Computers Ltd, or charge my credit card.

## The Panther

a superb printer at a printable price

The Panther has arrived. A fast, sleek, good looking printer from DATAAC that's leaving other printers standing. Just look at the features that make The Panther the most exciting printer available today:

- Friction feed and tractor feed for varying paper widths.
- A Viewdata character set as standard.
- True one line buffer with 1152 Bytes.
- Precision printhead for sharp

quality printing and durability.

- Bi-directional logic seeking carriage.
- 4,000,000 character life ribbon cartridge.
- Centronics interface as standard.
- Compatible with the BBC Micro and most micros.

All this plus more for only **£278,**  
+ VAT + p.p.

Place your order today. Complete the coupon and send to DATAAC at the address below.

# Break the BBC sound barrier!

## Add the power of ROM based software to your micro!

**EXPERIENCE  
A GREAT NEW  
DIMENSION IN  
MICRO SOUND!**

The National Micro Centres hi-fi adapter allows you to bypass the BBC Micro's internal speaker and feed the sound signal into your own hi-fi or music centre.

Turn your micro into a word processor, a disassembler, a multi-language machine, or a communications terminal – at the flick of a switch!

Once there was a physical limit to the number of ROMs you could use. But with our ROM extension socket you can now gain access to an infinite number of ROMs quickly – and safely.

- Easy to install – no soldering
- Three-position switch allows use of internal or external speaker – or turns off sound completely
- Full instructions supplied
- Fully isolated unit
- Much more than an additional speaker – allows full use of your amplifier's controls

- Zero-force insertion socket protects valuable eproms from damage
- Easy to install – no soldering
- Fits into the ashtray for easy access – no need to meddle with the micro's innards
- Full, simple to follow instructions supplied

## DISK DEBUG and COPY-ALL

THE UTILITY DISK for the BBC MODEL B

The disk contains:

### DEBUG

Allows you to VIEW, CHANGE or PRINT any sector on the disk.  
VERIFY and MEND bad sectors.  
Single key stepping forwards or backwards.  
Read & Write DELETED sectors.  
Full error-checked input.  
Auto setup for 40 or 80 tracks.  
Using this program you can recover deleted files and bad programs.

### COPY-ALL

Make an exact backup copy of your PROTECTED Disks  
Transfer good tracks on a damaged disk to a new formatted disk.  
Format up to 4 drives at once.  
THIS has copied ALL the protected disks that we have seen as of 1.12.83.  
It also allows you to make TWO backup copies of the master disk.

\*\*\*\*\*  
By the time this advert is published, VERSION 3 should be available.

\*\*\*\*\*  
This will reach the programs that other versions could not copy!  
Version 3.00 will be sent out automatically to new purchasers of DEBUG.  
If you have an older version and wish to upgrade, please send back THE ORIGINAL DISK and £5.00.  
NO EXCHANGE WILL BE CONSIDERED WITHOUT THE ORIGINAL DISK.  
Please check availability before sending exchange disk.

\*\*\*\*\*  
ALL DISKS WILL RUN ON BOTH 40 AND 80 TRACK DRIVES

ONLY **£12.95** inc p&p

USER

### April Issue

**MICROGOLF**, the simulation. **EASTERMAZE** and **APRIL FOOL**, seasonal games. **SEAWALL** and **MAGIC SQUARE**, maths fun. **FILER** and **ALBUM**, a database of sounds. **TRX1**, **TRX2**, RS243 driver. **HEARTRATE**, monitor your fitness.

THE  
MICRO  
USER

### May Issue

**DUG DIG**, asteroid adventures. **DAMRAIDER**, naval action. **ENVAID**, easy envelopes. **STEPPERS**, Body Building motor control. **SPIRO**, graphics windows. **ADVENTURE**, a trapdoor maze. **RENUMBER**, program utility. **BIGLETTER**, large type. **MEMORY**, RAM efficiency.

**Micro User programs now on disc as well as on cassette!**

Since we started our highly successful cassette service to readers we have been inundated with requests to supply each month's programs on disc. Now it's happened! We've even incorporated an automatic menu downloader. Just boot up the disc, make your choice from the menu, and away you go! And all for £5.75

a disc, including post and packing. Of course, our very popular cassette tapes of the month's programs are still available. The price for these is unchanged - £3.75 a cassette, including post and packing.

**ORDER FORM ON PAGE 197**

# Addressing the envelope

ANYONE who has tried to learn how to use the ENVELOPE command, either by using the manual or by copying from a program, will know how confusing it can be. This program sets out to remedy this by supplying a ready made envelope — a wailing siren — and allowing the user to change any term to see what difference it makes. The envelope and the sound statement can also be set to zero and new values put in. No attempt has been made to handle simultaneous notes or the special non-repeating use of T.

Use envelopes from other programs and back issues of The Micro User or Electron User to see how they work, and keep a note of good ones for future use.

Try this  
dual role  
program — an  
invaluable  
utility plus  
a useful  
teaching aid

```

# Omega Probe

CHOSEN FOR WORLD RECORD ATTEMPT FOR THE GUINNESS BOOK OF RECORDS

FEATURED ON ITV

Far out in the uncharted reaches of the universe lie the Omega zones from which no man has ever returned.

To explore this hazardous region the Earth's scientists have created the Omega Probe - the ultimate spacecraft.

As pilot of the probe, you face the unknown hazards of the Omega zones. Your mission: to survive.

This fast and furious machine code game with its tremendous graphics and many unique features takes arcade games to new heights of programming excellence.

Please send me Omega Probe:

# SPPELLWISE

IS YORE SPELING REELY ATROSHUS?

Or is it just a littel bit off kei?

In either case you need

SPPELLWISE.

NOW ON  
DISC  
AND TAPE

- \* is a spelling checker for use with your BBC micro and WORDWISE word processor
- \* is a DISC or tape based machine code program with comprehensive user manuals
- \* contains an expandable dictionary of over 6000 words (disc) or 3000 words (tape)

SPPELLWISE diligently checks every word in your text against the SPPELLWISE dictionary. When it has finished you will be left with a list of words which are incorrectly spelt or not in the base vocabulary.

The program can be interrupted at any stage for inspection of the remaining word list and for the insertion of personal or specialist vocabularies. For this purpose software is included to enable you to create your own data files.

SPPELLWISE comprises a set of one disc (or two tapes) plus a complete user manual. The tape version is limited to cassette recorders with motor control.

SPPELLWISE costs £12 on tape, £18 on disc and can be obtained from:-

DATAWARE FREEPOST SWINDON SN3 4BR

# Silverlind

SILVERLIND LTD. 156 Newton Road, Burton-on-Trent  
Staffs. DE15 0TR. Tel (0283) 63987

TOWNTTEST BBC/B £6.50

A very useful aid for teaching Geography in primary schools, this program tests pupils' knowledge of the locations of major towns and cities in England, Scotland and Wales. Well presented, with a high-resolution map.

BIOLOGY BBC/B £12.50

A suite of programs using text, animated diagrams, examples, and questions to assist in the understanding of Biology to CSE, 'O' and 'A' Level standards. Most suited to individual use by students, these programs also contain material teachers can extract for classroom demonstration. Topics covered include the Eye, Ear, Heart, Blood and Circulation, Skeleton, Female reproduction, Genetics, Biochemistry and the Central Nervous System.

ENJOY MATHS 48K Spectrum £8.00

A suite of 4 highly motivating programs for the 8 - 14 age range: tables, simple equations, polygons and areas. The programs combine explanation with tests and make good use of colour and sound.

MASTER DIET PLANNER 48K Spectrum £11.95

The ultimate in diet programs, the MASTER DIET PLANNER contains details of calories, protein, vitamins and other nutrients for 681 foods! The MASTER DIET PLANNER will help you plan a well-balanced diet, including options to restrict fats, cholesterol and salt, or to increase fibre intake - at the same time offering maximum choice of foods. Instructions and Recipe Book included.

ALL PRICES INCLUDE POST & PACKING & VAT

We require good programs to increase our catalogue and pay high royalty rates for published material.

# MUSICSOFT

MUSIC SPECIALISTS FOR THE 32K BBC MICRO

★ THE SYNTH ★ (O.S. 1.0+)

"A very flexible and inventive program that's highly recommendable." (Dr David Ellis, E&MM, Oct 83)

This 'synthesizer' program has features which to our knowledge are unique.

- \* ALTER RHYTHM. The rhythm of a recorded melody may be altered by tapping on a single key.
- \* REPEAT. No need to play a phrase twice, great saving in space.
- \* REAL TIME PLAYING. With alteration of volume, envelope and octave pitch as you play a note.
- \* EDITING. Back and forwards whilst hearing the tune.
- \* INPUT. May be hesitant or in correct time.
- \* TIDY. 'Cleans up' inaccuracies of input on demand!
- \* NUMBER OF NOTES. From 3000 for 1 channel to 1000 for 3, etc. Plus all that the other synthesizer programs do PLUS, i.e. sophisticated envelope editing (very easy), larger keyboard used (TAB to ↵ cursor). No secrets, user transparent.

\* This is the program for the experimenter who wants to make HUMAN music rather than perform mathematical finger dexterity exercises.

THE SYNTH. Cassette & instructions only £8.75 inc. P&P.

★ KEYBOARDS ★ (O.S. 1.0+)

5 programs to turn your BBC into 5 real-time keyboards. 1. 3 simultaneous voices (in Basic for easy understanding) 2. Single voice M/C with Pitch Bend. 3. 3 simultaneous voice M/C with Envelope control built in. 4. Single finger Chord organ ranging over the whole keyboard, 2 variations for each chord. 5. Chord organ 2 with different chord configuration. These are all separate programs designed for you to use as they are or in your own programs.

KEYBOARDS cassette & instructions £5.75 inc P&P

★ MUSICTOOLS ★ (all O.S.)

"Musicsoft also produce an excellent 'Musictools 1' cassette... all in all, rather good value" (E&MM, Oct 83)

Five music utility programs on one tape.

Tune Generator with dynamic graphic Keyboard & Stave display, Envelope Command Explorer (Very easy to use), Musical Symbols Graphic routine, Simple single line organ with sophisticated controls. Over 60 procedures for you to use in your programs already in working programs.

MUSICTOOLS 1 cassette & instructions £5.75 inc. P&P.

★ PIEMAN ★ (all O.S.)

"The best version of Simon I've seen, it goes so much further than most" (Quote by a rival software firm!) Recommended for Primary & Middle Schools.

Not as simple as Simon! It develops into a fun set of ear cleaning and musical concentration games - from easy at infant level to impossible at graduation!

Auto scoring.

PIEMAN cassette & instructions £5.75 inc. P&P.

ALL PROGRAMS TRANSFER EASILY TO DISC.

Cheques and official orders to:

MUSICSOFT, 12 Fallowfield, Ampthill, Beds.

Telephone: 0525 402701

If you require further information, please send S.A.E.

 Beginners: simple programming. Impressive graphics with Teletext Mode 7. Common copying errors revealed. How to draw multi-coloured lines. King Kong listing. BBC Operating System, Part 2. Colour monitor review, Part 2. Upgrade Model A to B, Part 2. Finding the ROM's action addresses. Binary code and how to use it. Disc formatter listing. Plus 8-page pullout for Basic programmers.

**May issue**  
 Beginners: string variables. Pelmanism listing. Mode 7 animation, Part 2. Interfacing in the laboratory. How to generate vertical or even inverse text. Graphics course: triangles and rectangles. Build yourself a joystick. The Osbyte routine: full investigation. Air Strike listing. Anagrams listing. Structured programming, Part 1. How to make full use of the BBC's editing function.

**June issue**  
 Beginners: Use of the INPUT statement. Editing course: LIST and LISTO. Structured programming, Part 2. Solve cassette problems. Build your own graphics digitiser. Hidden \*FX calls. Guide to indirection operators. Single key memory display program. Space Pilot listing. Graphics course: text and graphics windows. Nomsim listing. Bring user defined characters to life. Speed chip review.

**July issue**  
 Beginners: loops. Ten Pins listing. Editing course: the PRINT statement. Graphics course: creating sunburst effects. Structured programming, Part 3. How to use the user port to maximum effect. Space Pods listing. Wordwise review. Epson FX80 printer review. The BBC Micro as a sophisticated design tool. Hexadecimal highlights. How to edit with impunity, and fix that break key.

**August issue**  
 Beginners: more help on loops. BBC Micro User's Manchester show reviewed. Animation, Part 1. BBC Buggy and Edinburgh Turtle reviewed. Techniques for switching from tape to disc. Structured programming, Part 4. Inside King Kong: case study of the popular game. Fruits listing. A guide to logical operators. Machine code routines to give Mode 7 colour. Build your own dual cassette system.

**September issue**  
 Animation Part 2. Editing course: use of TAB. Turn your BBC Micro into a graphics terminal. Galactic Invaders listing. Structured programming, Part 5. Two new DFS and APTL. Eprom blower reviewed. Control the outside world safely with your BBC Micro. Robin and Marian listing. Workshop: variable storage explained. Beebcalc investigated. Inside the Electron: Acorn's latest micro reviewed.

Make sure your **MICRO USER** collection is complete!

Back numbers are still available at £1.50 (incl. p&p)

**ORDER FORM ON PAGE 197**

**October issue**  
 Graphics: How to draw circles. Fishing. Structure, the last of the series. Format: We update the program. Make a light pen with Body Building Part 8. Editing: Print fields. The Hobbit reviewed. Workshop: Add joysticks to your games. Link Up: Join two BBC Micros. For . . . NEXT loops in Beginners' Part 7. Contour plotting program. Basicode, a computer communications language.

**November issue**  
 Beginners: guide to character codes. Light Pen, more useful software. Forth ROM reviewed. Blackjack, a compulsive simulation of the card game. Putting Basic programs into sideways ROMs. Goblins, a fun packed enchanted journey. Body Building Part 9, projects for the Physics lab. The SOUND command explained, Part 1. Games design: improve your programs.

**December issue**  
 Tower Bridge - ghostly encounters in the nation's capital. Paged Graphics: 6845 animation techniques. Character Definer an indispensable utility. Smartmouth reviewed. Sound explained, part 2. Body Building, a sound-to-pattern converter. Beginners, working with strings. Slow Down, alters pace of your programs. Graphics: User defined characters. Santa's Saucer and Christmas Card.

**January issue**  
 Barrel Battle - an all action arcade game. Graphics, an easy to follow introduction to multiplane images. Noteplay, an entertaining musical utility. Body Building: add a DFS to your micro. Printing, Pixels, a multitone screen dump for Epson printers. Sound advice, flushing sound queues. Beginners, the use of TAB. Adventures, our regular column begins. Bits and Bytes investigates binary operations.

**February issue**  
 Alien Invasion - Mode 7 action in this arcade blockbuster. Frogs'n'Dogs, a delightful game for all the family. Number Balance - simple sums for children. Body Building, a real time clock. Sound Shaper, an easy-to-use envelope generator. Single Key Entry, save wear and tear on your fingers. DIY ROM board, full constructional details. Gallery, an intriguing logic game. Sound Advice, synchronising channels.

**March Issue**  
 Mazemunch, an explosive version of the all-time arcade hit. Birthday, our fun-packed anniversary game. Denary Derek, number fun for infants. Recovery, a routine to restore Bad Programs. Body Building, turn your micro into an oscilloscope. Light Pen, we give you single pixel resolution. Network, transferring programs between several BBC Micros. PLUS a 32 page special on discs.

**April issue**  
 Microgolf, a simulation of a day on the links. Easter-maze, a seasonal chick-chasing game. Sound Library, create a library of sounds. Owl, a display of computer graphics. RS432 communications software. Body Building, build a heart rate monitor. Sea-wall and Magic Squares, two educational programs. Programmers' Workshop, making the most of DIM. Sound Advice, envelopes made easy.

# Second try at a partial renumber program

ONE of the features lacking in the Basic ROM on the BBC Micro is a partial renumber facility. This enables you to renumber part of a program, such as resetting all procedures to start on a multiple of line 1000.

Although Basic programs have been published to perform this task they tend to be rather slow. So it was decided to write a machine code utility instead.

A renumber program is not easy to write. Not only do you have to change all the line numbers, but you also have to deal with any GOTO, GOSUB, etc, contained within the body of the program.

The initial work on this program was done by Sandy Nelson, who decided to see how Acorn had tackled RENUMBER within the Basic ROM.

The Token program by Jim Notman (*The Micro User*, April 1983) gives the Action Address for RENUMBER as &8F37 for Basic I (it is &8FA3 for Basic II).

Disassembly of the ROM showed that the renumber process split into four sections:

1. Validation of the renumber parameters.
2. Setting up a list of existing line numbers from Top upwards.
3. Renumbering the line numbers at the start of each line in the program.
4. Searching through the body of the program for line numbers after GOTO, etc, and renumbering them with the aid of the list of old line numbers starting at Top.

For the partial renumber program steps one and three would be different. Four parameters would be required, not two, and they would require more extensive checking for overlap, etc.

Also in step three only those line

By **ROBIN NEWMAN**

numbers within the specified renumber range would require to be changed, not the whole lot. However the bulk of the process would be the same.

Therefore it was decided to make use of existing routines within the Basic ROM to make the job easier and to use less valuable RAM space.

Sandy, a former pupil of mine, produced a working version of the program in 1982. However it had various shortcomings.

All four parameters had to be included - REN, F,I,S,E where F was the first new line number, I the new increment and S and E the Start and End of the range to be renumbered.

The fact that E could not be missed out and that S and E had to be existing line numbers made the program unwieldy to use in practice. You had to list the program to find out what values you wished to put in.

More serious was the fact that there was very little checking against overlapping occurring in the renumber.

Thus REN, 10,1,20,40 should have been rejected for a program which initially contained lines 10 to 100 in steps of 10. Instead the result was lines 10,10,11,12,50,60, etc.

Finally to cap it all Basic II appeared on the scene and the program would not work at all on that.

Having left the program to gather dust for many months I was driven back to it because of the frustration of using a Basic version. I decided on the following requirements:

- The program had to work equally on

Basic I and II.

- Full validation had to be applied to the renumber parameters, so that no overlap errors could occur.

- If the S line input did not exist the next existing line number should be selected for the start of the renumber range. Similarly, if the E line input did not exist the previous highest existing line number should be selected.

- The E parameter should be optional. If missed out, the utility should renumber to the end of the program being operated on.

All of these factors are satisfied in the final version.

The program listing is fairly heavily commented and REMed, but perhaps an overall view of its operation will aid understanding.

First those of you who have already sneaked a preview of the listing (does anybody read the waffle before they try out something new?) will have seen that Sandy included some icing on the cake in the original program.

One problem that tape users know well is the lack of a VERIFY function to check whether a program can be read back from a tape without destroying the original program.

The well known dodge of using \*LOAD "progname" 8000 is incorporated into this utility using the syntax VERIFY "progname". This will then test whether the file can be read satisfactorily.

The facility works equally well with disc files, although it is less likely to be needed unless you are very perverse with your discs.

The two additional commands are entered by intercepting the BRK vector

## From Page 171

which is used whenever an error occurs in Basic.

Since the syntax of the additional commands is non-standard this will occur whenever either of them is invoked.

Thus the first section of code (lines 360-430) changes the contents of this vector to point to the new utility so that all subsequent errors are routed to it.

It then gives a message to this effect on the screen.

Lines 440-490 do an initial check on the type of error that has invoked a call to the routine.

REN. with three or four parameters will cause a syntax error (error number &10) and VERIFY will cause a mistake error (error number 4).

Any other errors are filtered out and passed on to the normal error handling routines in lines 490, 1160 and 1170.

Note the code in line 1170 which tests which Basic chip, I or II, is present and jumps to the appropriate address by testing the first byte in the Basic ROM. This is &4C and hence positive in Basic I and &C9 and negative in Basic II.

This coding occurs wherever a direct jump is made into the Basic ROM, and the alternative addresses used are listed in lines 170-220.

If a "mistake" error has been generated then lines 520-600 check for the word VERIFY, ignoring any leading

---

**'If less than three parameters are present ... no error will occur ...'**

---

spaces. If this is not found the utility exits as above (line 600).

Assuming that a match is found, the utility next checks for a filename inside inverted commas, again ignoring leading spaces (lines 610-690), exiting via commaerr (line 500) if the second comma is absent, and then loads the name into a parameter block for use with the OSFILE command (see page 454-6 of the User Guide).

The parameter block is set up in lines 720-750 to read the file specified into a data buffer at &8000 out of harm's way.

If this succeeds without generating further error then the file is okay on the storage media used, and the utility returns to the appropriate Basic warm start address.

If the original error is a syntax one, then the utility jumps to lines 800-820 where it checks to see if there is a RENUMBER token (&CC) in the Basic

input command buffer at &700. Again leading spaces are ignored.

If a renumber token is not found then it jumps to the normal error handler as before.

The four stages of the renumber process now proceed. First the four (or three) input line numbers are extracted from the input buffer, where they will reside in a special coded format.

This is used by the Basic input routine so that line numbers within program lines after GOTO, etc, can be easily identified by means of an &8D character which is followed by four coded bytes, no matter what the size of the line number.

In this case the process has to be reversed. Lines 830-930 together with the lines 1000-1090 perform this task, using almost identical code to that employed in the Basic ROM.

The four line numbers produced are stored in p1 to p4, the X register being used both as a decreasing counter, and as a pointer to the next parameter location to be used.

If X contains two on exit from line 930 then it means that only three parameters have been found.

The utility then enters 32767 which is the highest possible legal line number into p4, thus ensuring that the renumber range extends to the end of the program being processed.

If less than three parameters are present then the normal RENUMBER command will be used, and no error will occur to access this utility.

On the other hand if there are more than four parameters then the extra ones are ignored as the loop is exited when X=0 - that is, after four parameters (lines 860-870).

A check is made to see whether the E line number is bigger than the S line. If not exit is made to Basic's "Arguments" error.

Line 1200 checks that the Basic program is intact so that the line pointers link through from Page to Top using an inbuilt ROM routine. If not a "Bad Program" error terminates the renumber.

Now stage two of the renumber process takes place. A table of existing line numbers is set up from Top upwards (lines 1220-1510) using similar code to that employed in the ROM.

However a record is also kept in finaline of a pointer to the latest line number found in the program, so that on exit from this section it will point to the last line number existing in the program (see line 1320).

Note also the check made to see that there is still room for more entries in this table by comparing the table pointer with &6 and &7 which contain HIMEM.

If there isn't then a Renumber space error is issued and the renumber is aborted (lines 1450-1510).

The next job is to note the actual start and end line numbers for the renumber. For example, if S is 15 and existing line numbers are 10, 20, 30, 40, etc, then 20 must be selected for the start of the range.

Similarly if E is 35 then the end of the range must be line 30.

A search is made for E (contained in

---

**'... there is no problem with any overlap at the start of the renumber range.'**

---

p4) first, using the subroutine findlin.

Location Inflag is first set to 0 (line 1620) so that if there is no exact match the previous line will be taken (lines 2500-2780).

Detail on the use of this subroutine is provided in the comments in the program.

On return from this routine the pointer to this line in the program is transferred from osp to ospointer (lines 1630-40), and then S is shifted from p3 to p4 so that it in turn can be searched for. Also F is transferred from p1 to p3 (lines 1660-1730).

The subroutine findlin is used again to search for S (p4), but this time Inflag contains 1, so that if an exact match is not found then the first line existing after S is selected as illustrated above (lines 1740-1760).

On exit from findlin the location prevlin will point to the previous line to that which was selected by the routine, or to the first line in the program if that number was selected.

In the latter case there is no problem with any overlap at the start of the renumber range (lines 1780-1830), but if not then p3 which contains F is compared with the number pointed to by prevlin (lines 1850-1910).

If it is greater then there is no problem, otherwise the utility exits via argerr2 (line 2250) which prints out the word clash and then jumps to an "arguments" error (line 1140).

Note that in this line ospointer is first set to zero. This is so that an accompanying "at line ..." message is not produced, as ospointer is used by

# LET YOUR BBC SYSTEM GROW ON A ZYGON STAND

**NEW**  
ZYGON DELTA  
**£96**  
(plus £7 p&p  
+ VAT)

The Zygon range starts from £59 (+ VAT)

**Zygon**  
Products

Dealer and Educational enquiries welcome.  
Telephone: Hoddesdon (0992) 466259.

ZYGON. The purpose-designed stand for the BBC Micro. The BBC system is designed to expand. The Zygon range grows with it.

ZYGON DELTA. The top-of-the-range Zygon Delta provides lots of space for a total, comprehensive computer system. Space not only for your BBC Micro and monitor but also for your disc drives, printer, interfaces and modems, as well as for a second processor. The lower computer shelf slides away for full keyboard protection and, on castors, can easily be moved from room to room.

- Upper shelf measures 1270 x 480mm.
- Lower shelves measure 1270 x 550mm.

## FILE—PLUS

an exciting database package for the B.B.C. micro computer equipped with Acorn compatible D.F.S.

### ★ General Features

- Easy to use - Full colour - Help information always on screen on bottom 5 lines
- Design any number of data entry forms using a "paint" on screen technique - any of these forms may be used to add, delete, update, print or spool records from your data base.
- Forms may be 3 screens in size - each screen occupies 20 rows by 40 columns.
- Forms may contain any number of text and numeric fields, together with background text.
- Full printed and spooled output formatting via embedded commands !S, !P, !F, !C, !L, !W, !X, !R, !!
- Database may occupy the total online storage capacity of a system - typically up to 800K
- Query Language provides full arithmetic and selection facilities for records plus quick search on text.

### ★ Query Language Features:

- Operators allowed - Unary minus, -, +, /, \*, =, <, >, <=, >=, <>, &, !, →
- Precision — -  $\frac{+}{-}$  9999999999.9999
- Keywords — Assign, Compare, Display, End, Goto, Iff, Ift, Print, Read, Search, Spool, Update
- Full screen program entry

- ★ Applications include — Budgets, Labels prints, Mail shots, Club memberships, Collectors records, Household accounts, etc.

Supplied on a 16K ROM together with a 70 page manual and full fitting instructions for £49.95 inc. or enclose S.A.E. for fact sheet.

# PROGRAMMERS' WORKSHOP

## From Page 172

the error routine to print out the error line number.

Having dealt with the beginning of the renumber range, we now have to check for possible overlap at the end of the range. This is done by performing a dummy run renumber (lines 1930-2110).

The utility starts at the beginning of the renumber range (pointed to by *oslp*) and goes round a loop which adds *I* (*p2*) to the current new line number (in *p1*) each time until the end of the renumber range (pointed to by *ospinter*) is reached.

The subroutine *add* (lines 2990-3020) is used to increment the pointer *oslp* on each iteration of the loop. It also affects *prevlin*, but this is not used again so it doesn't matter.

On reaching the label *exit* *p1* will contain the last new line number that the renumber will generate.

In order to see whether it overlaps any remaining line numbers in the original program, *oslp* is changed once more, using the subroutine *add*, so that it points to the next line number after the end of the renumber range.

If there isn't one it will point to the *&FF* terminator at the end of the program and the byte following it, which by a happy chance will give a "line number" greater than 32767, the maximum legal value, because in this case there will not be any overlap.

Line 2180 stores the result in *lnafterend*, and this is then compared with *p1* which contains the last new line number.

If *lnafterend* is greater then there is no clash, otherwise a clash exit occurs as before.

Now that the parameter checking is complete the renumber can proceed in

earnest. Section three is repeated, for real this time, the new line numbers overwriting the old ones at the start of each program line.

This is carried out by lines 2270-2400. Note in line 2300 *p1* is set back to the value of *F* which has been stored in *p3* in line 1680, so that the renumber starts with the correct first new line number.

The remainder of the process – the hard bit which deals with *GOTO*, etc, is

---

**'... it will clobber itself as it attempts to place the assembled code on top of itself. Very nasty.'**

---

thankfully the same as for a normal renumber command, and so it can be safely left to the Basic ROM to carry it out.

The process is sent on its merry way by jumping into the ROM for the final time at line 2460.

Finally all that remains is to discuss where to put the utility. As listed it is assembled at *&A00* for use on a disc system.

However tape users will find that this is not very desirable as it occupies the cassette output buffer.

Disc users may also object to losing the use of their user defined keys and any user defined characters, both of which should not be used while the utility is in operation, as it occupies nearly *&300* hex and covers pages *&A00* to *&C00* inclusive.

For this reason pushing the Break key will produce a strange pattern of bytes, and should be followed by pushing the Escape key if the code is assembled here.

Alternatives, which are achieved by altering line 330, are to set *P%* to the

default value of *Page* for your machine (*&E00* for tape machine, *&1900* for disc machine, *&1200* for econet, *&1B00* for econet+disc...) and to set *PAGE* *&300* higher for your Basic program.

In this case it is important to realise two things. First don't forget to load this program at the new *Page* setting *before* attempting to run it, otherwise it will clobber itself as it attempts to place the assembled code on top of itself. Very nasty.

Secondly, the first two bytes are set to *&OD* *&FF*, so that if Break is pushed it does not clobber the utility and you can regain your Basic program by typing *PAGE=PAGE+&300*.

Note however that the utility will have to be reconnected by typing *CALL &xxxx* where *xxxx* is the entry address which will be two above your original page setting, for example *&E02*, *&1902*, *&1202*, *&1B02* etc.

The third alternative is to set *P%* to *&7900* and *HIMEM* to *&7900*. The renumber utility will then reside at the top of memory.

Call *&7902* can be used to reconnect it after Break, and *HIMEM* should also be reset to *&7900*. However in this case you must not select any other mode than 7.

If you are daunted by the task of typing in this fairly long listing you can leave out all the REMs and comment statements (following /) in the assembler, which will considerably shorten the task.

After running the program the assembled code can be saved separately by copying the *\*SAVE* line printed on the screen by line 3260.

Line 3270 gives the *CALL* command to reconnect after BREAK.

When the assembled code has been saved then the command *\*RUN RENMC* will install it without having to reload the Basic source code program.

## Renumber listing

```
10 REM RENUM (version 2)
20 REM Program to improve renumber
30 REM facility and add VERIFY
   REM function

# HORNBY SOFTWARE

Britain's top  
Spectrum Pro-Golf Series now  
available for the first time on  
BBC Model B 1.2 O.S.

The real thing, exact simulation of Britain's top  
golf courses.

1. All golf rules apply.
2. Designed for one or two players.
3. Played off any handicap.
4. On each hole, distance, par, green enlargement.
5. Control shot - choice of all clubs, strength, direction.
6. Graphics excellent.
7. Extremely realistic.

**TROON £7.75 NEWBIRKDALE £7.75**  
**WENTWORTH EAST & WEST COURSE £11.00**

All prices include VAT & P&P

Available from:

**HORNBY SOFTWARE**  
**21 Pinfold Hill, Leeds LS15 0PW.**  
**Telephone: 0937 65847**

## 2 NEW BUSINESS SOFTWARE PROGRAMS FOR THE BBC MICRO

**MAIL LIST** £49.95 inc. VAT & P/P  
**STOCK CONTROL** £49.95 inc. VAT & P/P

- HUGE STORAGE CAPACITY  
UP TO 1600/3200 FULL ENTRIES
- FAST WRITE AND READ CAPABILITY
- EASY UPDATES AND AMENDMENTS

### NEWARK VIDEO CENTRE PRESENTS

## SUPER CLEAR COMPUTER DISPLAY - AND A TV!!!

AN RGB MONITOR - WITH TV RECEPTION

- 14½" C2402/RGB £275.00 - 20" C6100/RGB £365.00
- 16" C3104/RGB £299.00 - 22" C7100/RGB £399.00
- 16" C3404/RGB with Remote Control (Teletext Extra) £350.00
- 26" C8400/RGB with Remote Control (Teletext Extra) £465.00

All prices include VAT, a 12 month guarantee, a 6 pin  
DIN lead, a mains plug and carriage to your door.  
All are Grundig TV's supplied with Grundigs consent.  
Educational and quantity discounts are available.

#### What 'What Micro' said:

"The colours are just unreal like the 'simulated' pictures in TV  
advertisements". "The best of all images came from this set".  
"A very reasonable comparison could be made with colour  
monitors costing several hundreds of pounds".

**NEW!** 1 input-6 output RGBS Distribution Amplifier - £250.

For details of the full range contact:-

### NEWARK VIDEO CENTRE LTD.

108 LONDON ROAD, BALDERTON,  
NEWARK, NOTTS. TEL: 0636 71475

OPEN 9am - 6pm Mon-Sat.

Access and Visa cards accepted.

## BBC/ELECTRON ADVENTURES

**\*\*NEW\*\* WOODLAND TERROR £7.48 (CASS) £10.50 (DISC)**

The sequel to FIRIENWOOD, many years ago an intrepid adventurer embarked on a quest for the Golden Bird of Paradise. Although successful, our hero released a sinister force which now lurks within the enchanted wood. Your mission is to return the terror to its original resting place and restore peace to an unhappy land!!! This is a complete game, knowledge of Firienwood is not required.

**FIRIENWOOD £7.48 (CASS) £10.50 (DISC)**

An evil wizard has captured the magic golden bird of paradise and imprisoned it in a weird castle in the middle of the enchanted Firienwood. Your quest is to find the bird and set it free, in return the bird will give you health and prosperity. BEWARE! many perils lie before you and every move is fraught with danger!!

**BLUE DRAGON £7.48 (CASS) £10.50 (DISC)**

Somewhere in a strange and dangerous land lies a fabulous treasure guarded by a fierce dragon. Can you survive the perils that await and recover the treasure or will you meet a nasty end!! What is making terrible slurping noises deep underground and what use is the strange black cloud? Play the game and find out.

**SURVIVOR £7.48 (CASS) £10.50 (DISC)**

The year is 1910 you are sailing on a steamer bound for Borneo when there is an explosion and the ship sinks. Shipwrecked on a tropical island can you survive and escape back to or will you end up in someones cooking pot!! There is more than one ending to this game, not all of them bad!

All the games are in machine code for fast responses and are text only. Please state which machine when ordering. Prices include VAT and postage within U.K. Cheques payable to **MP SOFTWARE** or write/phone with your ACCESS/VISA card No. Send S.A.E. for full range of programs and price list or ask your local dealer. Trade enquiries welcome.

We pay well for good original programs contact us today for more details.

**XTEND: EPROM UTILITY WITH OPTIONAL PROTECTION SYSTEM:**

£24.95. Extend capabilities of your micro with new commands. Invaluable to serious programmer: \*FIND,COUNT,REPLACE: any string combination replaced (Globally or Selectively) with user specified string (any length). \*CONDENSE: Intelligently and selectively removes REMs, comments, spaces, compacts lines into multi-statement lines. Removes empty lines. \*APPEND: joins code simply. \*KEYS: Display and edit function keys. \*MEM: memory summary with variables taken into account. \*STEP: much enhanced trace. Step through line by line at own pace. Numbers shown discreetly at top. Twin screens to protect graphics. Stop and interrogate variables any time. \*LIST: left justification of all statements. \*VAR: dump variable contents, FN and PROC locations. \*SINGLE generate 'single key' keywords - similar to Electron. \*FIX: recovers 'BAD PROGRAM's.

Calls may be prefixed with 'X' to avoid clashes with other ROMs.

**PROTECTION SYSTEM (OPTIONAL) £7.95.** Name and address (please print clearly) incorporated in XTEND. Displayed on screen on power-up.

**DATABASE: £12.95.** Make card-filing obsolete. Cassette/disc (32K): \*Variable field length. \*Fast sort/search any field. \*Search and replace. \*Specific, between-range, wildcard search. \*Amend, delete, replace.

Use as mailing list, school/class/club/business records, directories, inventories, catalogues, teaching resource where data compilation and classification are required.

**EEL: £7.95** Fun way to learn number bonds/tables. Guide eel and eat the number family. 20 levels of difficulty, suitable for 6+ year olds. User performance record for teacher/parent.

**WORD SQUARE: £7.95** Create wordsquares for any topic.

**G.B. GEOGRAPHY: £7.95** High Res. maps of regions.

**EURO-GEOGRAPHY: £7.95** High Res. Test your knowledge of countries and capital cities.

**MEASURE I: £7.95** Simulations of measurement in maths, capacity, temperature, volume.

**MEASURE II: £7.95** Relationships in balance.

**GEMINI BUSINESS SOFTWARE: £17.95** HOME ACCOUNTS - MAILIST - STOCK CONTROL - SPREADSHEET - GRAPHLOT - COMMERCIAL ACCOUNTS.

**MICRO CASE: £35.00 +£3.00 p&p** Strong, foam-lined, lockable. Holds BBC micro, recorder, disc drive, cassettes, cables. Black with aluminium trim.

**EPROM BLASTING SERVICE** Forget cassettes. Put your favourite program in a chip. Phone for details.

Cheque, Access/Visa (Phone anytime), Official order to:

**NOW EVERYBODY CAN BE A SWIFT PROGRAMMER!!!**

The new Swift Programmer Pack contains specially printed sheets to help accurately position type and graphics on the screen.

Each Pack contains 100 printed surfaces each of:

**TEXT GRID ONE . . . For use with Modes 1, 2, 4 & 5**

**TEXT GRID TWO . . . For use with Modes 6 & 7**

**GRAPHICS GRID . . . 1280 x 1024 gu in steps of 50**

**CHARACTER DEFINITION GRID . . . Numbered 8 x 8**

**squares for easy reference**

**PLUS . . . A5 binder to hold pads**

If you own a BBC or ELECTRON micro, Swift Programmer Packs can help make your programming easier and faster.

**PACKS AVAILABLE AT ONLY £5.95 each**

(+ please add £0.95 p&p)

\*\*\*\*\*

**SWIFT READER**

DISC & CASSETTE FOR BBC MICRO

A suite of eight programs designed to help children (age 4 +) learn to read.

This package takes children from simple letter recognition, through to the reading of a simple story, incorporating "Variable Text Read Out" speed options.

Swift reader ref. Swift 8

**SWIFT G.C.E. HISTORY**

Three packages, each containing TWO programs, designed to be used as G.C.E. O'Level Study and Revision aids, with text and test facilities.

**SWIFT 6 . . . Hitler's Germany 1933-1939**

**Mussolini's Italy 1919-1939**

**SWIFT 7 . . . Lenin's Russia 1917-1924**

**Stalin's Russia 1924-1939**

**SWIFT 9 . . . USA in the 1920's**

**Roosevelt's new deal**

**CASSETTES £9.95 each inc.**

**DISCS £11.95 each inc.**

All programs are for 32k micros

**coming soon**

**SEVEN  
NEW  
TITLES**

If you have a program that you think has potential, let us know, we offer up to 25% royalties.

**TWO PLAYER GAMES DUET**

Choose between playing against a friend or the computer and choose between 4LINE and FRUSTRATION, two classics in one. There's also a joystick option. The choice is yours...

**GAMES QUARTET**

Four colourful and exciting action and strategy games for the price of one, including TRAWLER, LIGHT CYCLES, STARGAME and 3D TIC-TAC-TOE.

**DISC TOOLS**

A Utility Disc especially useful for users of twin 80 track drives including a 40/80 track backing up facility, a disc identifier/verifier, a 35/40/80 track formatter with automatic verification and a comprehensive menu file.

**ROBO BRAIN**

Control the Gremlins to disable the mad Robot's positronic brain, but avoid the deadly Pulses which have been sent out by the robot to get you!

**PIXEL PACKAGE**

Two machine-code programs for the price of one. Firstly there's an excellent single colour character designer and secondly a four colour (from 16 colour palette) character designer and print routine.

**BIG PRINT**

By the author of Beeb-Text, this is a machine-code routine which can be incorporated into your own programs to display variable size height and width text.

**BEEB-TEXT**

A sophisticated and highly original machine-code program which allows virtually unlimited variation in style of displayed text including shadow, outline, italic, thickness, height, width, line spacing, colour combinations, etc. Eight fonts are available in modes 4 and 5 and it is ideal for imaginative displays and titling - especially video titling. Available on disc only.

**Beeb-Text!**

## BBC/ELECTRON EDUCATIONAL SOFTWARE

Our educational software is used in thousands of schools and homes throughout Great Britain.

### EDUCATIONAL 1 Tape £8.00 Disc £10.00

Hours of fun and learning for children aged 5 to 9 years. Animated graphics will encourage children to enjoy counting, maths, spelling and telling the time. The tape includes 6 programs: MATH1, MATH2, CUBECOUNT, SHAPES, SPELL and CLOCK.

... 'An excellent mixture of games' ... Personal Software Autumn 1983

### EDUCATIONAL 2 Tape £8.00 Disc £10.00

Although similar to Educational 1 this tape is more advanced and aimed at 7 to 12 year olds. The tape includes MATH1; MATH2, AREA, MEMORY, CUBECOUNT and SPELL.

### FUN WITH NUMBERS Tape £8.00 Disc £10.00

This program will teach and test basic counting, addition and subtraction to 4 to 7 year olds. The tape includes COUNTING, ADDING and an arcade type game to exercise addition and subtraction. With sound and visual effects.

### FUN WITH WORDS Tape £8.00 Disc £10.00

Start your fun with alphabet puzzle, continue your play with VOWELS, learn the difference between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of HANGMAN.

... 'very good indeed' ... A&B Computing - Jan/Feb 1984

### JIGSAW AND SLIDING PUZZLES £7.95 Disc £9.95

There are 2 jigsaw and 4 sliding puzzles on a 3x3 and 4x4 grid. Each program starts off at an easy level to ensure initial success but gradually becomes harder. It helps children to develop spatial imagination and to solve problems. The tape includes: OBLONG, JIGSAW, HOUSE, NUMBERS, CLOWN and LETTERS.

## LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH

Already in use in numerous schools and colleges, these programs provide an immensely powerful aid to foreign language learning. The cassettes include extensive vocabulary lists arranged as a series of lessons, each covering a different subject. A tuition control program enables individual lessons to be loaded and used as required.

Words, phrases etc are presented first in one language, then the other complete with all necessary accents and special

characters. Masculine, feminine and neuter words appear in different colours to encourage gender learning. All lessons can be run in three different ways, i.e. learning only, self-test or speed and accuracy test.

The programs are suitable for pupils of all ages as simple commands enable new lessons in vocabulary or grammar to be entered by the user. These may then be edited as required and stored on cassette for later use. Invaluable for homework and exam revision!

Level A Cassettes: Contain the tuition control program and 16 comprehensive lessons for general vocabulary learning.

Level B Cassettes: Contain the tuition control program and 16 lessons including verb lists, adjectives, adverbs and phrases.

Available from dealers, large stores or mail order.

Also Available "THE SPANISH TUTOR"

# Marklist

helps take the tedium from teaching

*"A thoroughly worthwhile piece of software for school teachers".  
- The Micro User, April 1984*

Highly recommended by the computing press, Marklist is the program that teachers have always wanted. Easy to understand and even simpler to use, Marklist allows even the most computer illiterate teachers to record and analyse their pupils' marks.

Handling marks for a single class or a whole year with equal ease, Marklist can sort and rank over 300 pupils in under 8 seconds. The list can be ordered either alphabetically or by score, printed out on a printer and saved to tape or disc.

Printouts include such vital statistical information as the mean, standard deviation and t-scores.

Pupil information need only be entered once. It can then be updated as required using straightforward editing commands. Developed in the classroom and given extensive trials, Marklist has been warmly received as an invaluable teachers' aid.

## ORDER NOW!

These special prices apply to UK readers only. Prices to overseas readers are available on request.

Learn to make use of the micro's hidden depths with this comprehensive introduction to using the BBC Micro's powerful assembler.

£8.95

ASSEMBLY LANGUAGE PROGRAMMING ON THE BBC MICRO

An easy-to-follow, step-by-step guide to more advanced BBC Basic, following on from Easy Programming for the BBC Micro.

£6.95

Further Programming for the BBC Micro

THE BBC MICRO BOOK BASIC, Sound and Graphics

A clear, concise and thorough introduction to good programming techniques on the BBC Micro. The book the experts recommend.

£8.95

THE BBC MICRO an expert guide

An intelligent, information manual on the workings of the BBC Micro. Recommended reading for anyone beyond the beginner's stage.

## MOONRAKER COMPUTER SYSTEMS LIMITED

AT LAST!

LINK YOUR BBC TO THE REAL WORLD!

### OPERATE MAINS EQUIPMENT

**RELAY UNIT** Plugs into user port and mains equipment plugs straight into normal 3 pin socket. Easily used with just one line in BASIC programs. Now you can switch electrical appliances, lights etc. on and off at will. Ideal for use in conjunction with the detectors below. Only your imagination is the limit. Complete with demonstration programs on cassette.

Twin socket version **ONLY £39.95 + VAT**  
Other versions (up to 8 mains sockets!) to special order.

### PHOTO-ELECTRIC DETECTOR

Plugs into analogue (joystick) port. Used in Basic programs with one simple statement. Use your BBC as a burglar alarm etc. 100's of applications. Includes 3 programs on cassette (oscilloscope, Alarm Radar).

**ONLY £13.95 + VAT**

### HEAT DETECTOR

Similar to light detector but responds to temperature changes instead of light. Includes 3 programs on cassette (Thermometer, Graph, Temperature Alarm).

**ONLY £13.95 + VAT**

Both of the above detectors wired into one socket for simultaneous use.

**ONLY £24.95 + VAT**

Specials (up to four units to one socket) to order.  
Other detectors coming! (Infra-Red, Acoustic, Proximity etc.)

Please add 15% VAT to all orders.

POSTAGE & PACKING FREE  
Suitable for BBC Model B ONLY

PROGRAMMERS!! - Good royalties paid for high quality software.

## Expandable console for the BBC Micro

As supplied to Universities, Colleges,  
Schools, Business and Home Users.

Not just a monitor/tv stand but an expansion console which gives your micro the professional look. Protects and encloses your micro with room for disc drives and 2nd. processor or teletext adapter etc., all untidy connecting wires safely out of sight within the console. Made of light yet strong aluminium with a textured finish in matching BBC colour. Available now a bolt on extra module to the console for further expansion options. YES this console will grow with your needs.

Basic BBC console as shown **£44.99 + £4 carriage.**

After 31st March - console price is **£44.99**

Bolt on expansion module **£14.99 + £2 p&p**

**SPECIAL TORCH MODEL AVAILABLE: £46.99 + £4 carriage**

Matching Printer Stand, can double for VDU Stand over the micro - only **£14.99 + £2 carriage**

### ELECTRON CONSOLE

The console will house the ELECTRON and will safely support the expansion interfaces which will plug into the rear of the micro and will support the VDU at eye level. Tidies up all wiring between the micro, cassette and VDU. The console stores the cassette and tapes and will allow space for drives at a later date.

Electron console as shown **£34.99 + £3 p&p**

Mail order only - viewing by appointment  
Please add 15% VAT.

For further information or send cheque to:

**Silent COMPUTERS**

27 WYCOMBE ROAD, LONDON N17 9XN.  
TEL: 01-801 3014 (24 Hr Ansaphone)

- Can you write intelligible English?
- Can you create brilliant programs?
- Are you capable of working with a bunch of lunatics?

Yes, you've guessed - we need an editorial assistant at Micro User and Electron User!

Send your application, together with examples of your work to:

The Editor, Micro User,  
Europa House, 68 Chester Road,  
Hazel Grove, Stockport SK7 5NY.

## CONTEX

Professional Software for the BBC Computer

### THE CONTEX SPREADSHEET

The Contex Spreadsheet is one of the most versatile spreadsheet programs available for your BBC computer. It will process virtually any financial or statistical column/row analysis calculations you care to give it. Prepare your home and office budgets, process accounts, complicated invoices, job costing, small stock control operations, financial and statistical modelling, expense evaluations, foreign exchange etc.

Loaded into your 32K RAM means there is no ROM to install (which will save multiple machine installations a small fortune!). Hundreds now in use. Compare the spec. this revised, enhanced version gives you:

15 Cost/mi	0.62	1.14	0.42

Over 1,000 cells in upto 26 columns by 99 rows. Formulae, data or text into any cell. Individually variable widths (1-30 chrs) and decimal places for each column. Nine digit accuracy. Various printer format options. Row and column insert or delete with auto formulae adjust. Use all BBC functions, eg LOG, SIN, SQR. Many new functions, eg. MAX, MIN, SUM, discount factor. Auto replicate formulae and data with auto adjust. Variables. Colour options. Save and restore to disc or tape. Four way scrolling. Headings stay on screen. Edit, search, help, model limits. Access to OS/DFS commands, eg. \*DISC, \*CAT. What-if modify command. Reference any cell by its id or by its headings. Full instruction booklet.

Cassette **£9.99**  
Disc **£12.99**

### TYPING TUTOR

Specifically designed for your BBC micro to teach and encourage you to fast touch typing. Professionally enhance your keyboard skills with the 90 smoothly graded lessons and the free format option. Hundreds in daily use and recommended by adult educational authorities this program will monitor your progress, intelligently check each line for errors and time you against the clock in words per minute. Optional audio key feedback, metronomic pacing and revised performance targets. Auto keyboard/finder display for all lessons including those special ones you optionally add to the course.

Cassette **£9.99**  
Disc **£11.99**

Fast delivery. Discs supplied are 5 1/4" please specify if 40 or 80 track required.

**CONTEX COMPUTING (B5)**

15 Woodlands Close, Cople, Bedford MK44 3UE.

## ARLETTE ELECTRIC MONITOR BASES.

- ⊙ Built-in block of four mains sockets complete with plugs to BS 5733
- ⊙ Colour off-white suits monitor and micro.

**MODEL A.** PVC wipe clean coating.

Top adjustable, flat or sloping, for best viewing position.

Wires concealed with tails for computer and peripherals from all four sides.

**MODEL B.** As model 'A' but luxury vinyl covered.

**MODEL C.** Bridge disc unit. PVC wipe clean surface. Tailored for BBC micro and two slim disc drives.

⊙ All models have mains distribution block and cable.

MODEL 'A' £38.85 'B' £49.85 'C' £29.75  
Add £9.50 if anti-mains surge plug required.  
ALL PRICES INCLUDE VAT AND DELIVERY

⊙ **Target Design Studio.**

47 Station Road, Crayford, Kent. DA1 3QR  
By cheque or quote Access or Visa number.  
Education Authority enquiries welcome.

## M-TEC

AT LAST! **BBCBASIC** to run on YOUR CP/M Computer

## BBCBASIC(Z80)

Now available for the TORCH and DISKPACK with full GRAPHICS

WHY STRUGGLE ON using OLD FASHIONED BASICs when you can have ALL THE ADVANTAGES OF **BBCBASIC(Z80)** on your computer?

Of course, we can't turn your computer's video display into a high resolution colour monitor, but we can give you all the other features of **BBCBASIC** including:-

- > LONG VARIABLE NAMES
- > MULTI-LINE REPEAT UNTIL STATEMENTS
- > MULTI-LINE NAMED FUNCTIONS
- > MULTI-LINE NAMED PROCEDURES
- > POWERFUL DIRECT MEMORY MANIPULATION USING THE INDIRECT OPERATORS
- > AN IN-LINE ASSEMBLER USING STANDARD Z80 MNEMONICS
- > VERY SOPHISTICATED PARAMETER PASSING IN THE CALL STATEMENT
- > SERIAL RANDOM AND INDEXED DISK FILES PLUS THE ABILITY TO ACCESS ANY BYTE IN THE FILE
- > CLEAR SCREEN, TAB(X), TAB(X,Y), POS, VPOS and TIME  
Plus ALL THE OTHER STANDARD COMMANDS etc.

You can copy any program written in older 'standard' versions of BASIC with little change OR you can write well-structured and easy to read programs like a professional.

You need never say GOTO again. But we won't stop you.

Price, including postage, £95 + VAT

TORCH version including SOUND and GRAPHICS £110 + VAT  
**BBCBASIC(Z80)** will run on any computer using CP/M 2.2 or later and a Z80 processor. It comes complete with an instruction manual, a tutor on file handling and configuration notes.

Trade enquiries welcome

## !!! NEW NEW NEW !!!

LARGE STOCKS AVAILABLE

£6 ANTI-AIRCRAFT GUN SIMULATOR £6

For 32k BBC Micro

An Exhilarating New Game from Software Division

### FEATURES:

- \* 100% Machine Code
- \* Hi-Speed Graphics
- \* Three Winning Score Levels
- \* Sound on/off Option
- \* Long Range Radar Screen
- \* 'Moving' Screen feature
- \* Realistic Blast Effect
- \* Joystick or Keyboard

### THE ENEMY CONSISTS OF:

- Helicopters
- Jet Fighter Planes
- Paratroop Planes
- Paratroops
- Rocket Bombs

SCREEN DIAGRAM

You are sitting at the controls of the gun turret. You view the scenery via a camera on the gun barrel. Suddenly a blip appears on the radar. You swing the gun around to meet the blip — the scenery flashes by — the enemy plane bursts onto the large video screen, he is in the sights, squeeze the trigger — bullets scream out — the explosion is devastating. Your smile fades as two blips appear on the radar . . . . .

Soon to be available for Electron

All games  
for BBC Micro  
32K OS 1.2 only

# MRM SOFTWARE

NEW  
RELEASES

## CASTLE ASSAULT

A glittering reward awaits the intrepid atop the heavily defended towering turrets of this forbidding fortress. On your quest for gold you will be assailed by a menacing menagerie of meanies, namely crabs, snakes, lobsters, spiders, bugs and beetles. Watch out for those malicious malades (the deadly Flying Ducks) as you dodge falling rocks, scale ladders and negotiate moving platforms. Collect various different fruits for bonus points on your way. Bonus man for every two bags of gold collected. Hi-score table, increasing difficulty and fantastic animation constitute this stunning game from MRM.

## SCREWBALL

You are Screwball and you have 60 seconds to change the colour of all the squares that surround you (by simply jumping on them). Menacing you all the time, however, are the 'BLACK BUGS' . . . and they sure are mean. They even cheat by sometimes not even walking on the squares. If they catch you then I am afraid you lose a life. Kill the BUGS by digging holes for them to fall through. If you really are in a fix then as a last resort you may HYPERSPACE to the top of the grid . . . but you won't always survive the journey.

## DARTS

Step up to the ocky and enjoy all the fun of competition darts with this high resolution version by MRM. A choice of 3 popular dart games, 501, Round the Board and Cricket is available in this package.

## HANGMAN/SOLITAIRE

This great value two game package consists of a multi menu hi-resolution graphics version of Hangman (including a special category for children) with a colourful 3D version of Solitaire.

# THE MICRO USER

**Don't let it happen  
to you! Take out a  
subscription NOW**

Make sure you get your copy of *The Micro User* HOT OFF THE PRESS – month after month for the next year.

It's the biggest, brightest, most authoritative yet completely independent guide to the machine with so much potential you'll never tire of reading about its remarkable capabilities.

You can buy *The Micro User* from your local newsagent or station bookstall. Or fill in the coupon opposite – your copy will then be delivered to your door each month.

**Copies of these back issues are still available at £1.25 each**

## Cassette tapes and discs of Micro User programs

Take out a year's subscription and have your cassette or disc posted to you each month. You can start your subscription from any issue to take advantage of this offer. Order on the coupon opposite.

**TAPES  
£3.75  
each**

**DISCS  
£5.75  
each**

**FREE**

**COMPLETE THIS COUPON TODAY**

**Cassette worth £3.75 if you subscribe NOW!**

If you take out a subscription to *Micro User* you will receive completely free one of the monthly cassettes of *Micro User* listings. Choose which one you want from those illustrated below. This free gift is for a limited period, so subscribe now!

**Your BBC Micro needs protecting!**

Protect your BBC Micro with our luxury dust cover made of soft pliable water-resistant vinyl, bound with strong cotton and decorated with the *Micro User* logo.

**£3.95**

Keep your collection of *The Micro User* complete with these handsome binders. Bound in PVC with the *Micro User* logo in gold blocking on the spine. Holds 12 magazines.

**£3.95** each (UK)

Sponsored by  
The Micro Users  
and Electron Users

There's much more to show.  
So this summer we go to a  
new home - to give us much  
more room to show it all!

Alexandra Palace, London, Thursday to Sunday, July 19 to 22

You must see for yourself all the rapid  
developments in the ever-expanding  
world of the Electron  
and BBC Micro!

### School and College Groups

Entry only £1 per student if bookings are made in  
advance. Send your cheque (made payable to  
Database Publications) and SAE to:

Electron & BBC Micro User Show  
68 Chester Road, Hazel Grove  
Stockport SK7 5NY Tel: 061-456 8383

*Valid for a minimum of 10 people*

- ★ **SEE the latest software - hundreds of new games, educational and business programs.**
- ★ **SEE all the latest add-ons - never before have so many exciting new peripherals been launched.**
- ★ **SEE all the latest techniques - and get free advice from our team of experts, writers and programmers.**
- ★ **Make a note in your diary - NOW!**

# EPROM PROGRAMMER

A very high quality product direct from the manufacturers, contained in attractive sloping box with low insertion force socket and neon indicator for programming fitted as standard, the software adopts the high efficiency method for programming 2764 and 27128. This allows up to 100% faster programming, software in machine code, supplied on cassette and can be placed in eprom. Very easy to use, menu driven with easy to use instructions. This unit is completely self contained with its own power supply and plugs into the user port.

## THIS PROFESSIONAL UNIT ALLOWS:

1. Will program: 2716, 2732, 2532, 2764 and 27128 eproms.
2. Copy eprom into memory and compute checksum.
3. Blank check eprom.
4. Program eprom from memory.
5. Verify byte by byte and compute checksum.
6. allow buffer start area to be changed.
7. All operating system calls may be used when in menu mode.
8. Semi-intelligent programming. Typical time to program a 2764 8k device is approx. 50 sec. depending on the data to be programmed.
9. Additional software supplied to enable your own program (basic or machine code) to be put into eprom with the necessary leader information to allow calling with a \*command. Downshift routine to enable basic programs to be run is also supplied.

**COST £46.50** please add 15% VAT £1.00 post and package

### ORDERS TO:

## SPECIALISTS IN SOFTWARE FOR THE BBC MODEL B Animate your Basic programs with Arcade-speed Sprites SIMONSOFT SPRITES VERSION TWO

£12.95 each BBC Model B

This powerful and versatile utility package is far and away the leader in the field of graphical animation, bringing FASTEST EVER screen movement to your own character designs, together with a host of special features and effects. SPRITES are user-defined shapes that can be controlled from any Basic program. They are moved quickly and simply by calls to a machine code routine which is located together with the sprite images in front of your Basic program. The speed and simplicity of sprites is a boon to games programmers and to those who need to illustrate and animate their work.

The package includes two GENERATOR PROGRAMS which you use to create your own sprite designs. All 16 logical colours are available in each design, and as you create the image it is stored within the sprite routine. Sprite sizes range from a single pixel to the 24 x 24 pixel SUPERSprite! Once you have designed the sprites you need, the generator program may be erased from the memory. No longer do you have to spend half your program actually designing the shapes you need to use!

Once you have designed your own sprites, or used one of the "books" in the LIBRARY OF SPRITE DESIGNS provided, you are ready to animate your program. To move a sprite, all that needs to be done is to increment or decrement its position coordinates and call the routine! The machine code takes care of the rest. Each sprite has TWO separate images and if these images are designed differently, instant animation effects are achieved as soon as you move the sprite! Frogs will hop and horses trot as each image is displayed alternately in the pixel-by-pixel movement across the screen. To give you an idea of the speed of sprites, a single moving one pixel at a time can cross the whole screen in 0.35 of a second!

The package is distinguished by the amazing and revolutionary features that are offered. Upto 48 SPRITES may be on screen at any one time (12 separately designed base sprites each with 3 independently moving clones). The incredible enlargement facility allows upto FIVE TIMES MAGNIFICATION of sprites, so that the sprites can suddenly loom out of the screen in a 3-D effect or even remain enlarged throughout the program, moving as normal. A COLLISION DETECTOR will report back to Basic with the numbers of over-lapping sprites, which you can then use to determine whether to jump to another part of your program. A further fantastic feature are the FOUR PRESET FLIGHT PATHS. Each path consists of upto 255 steps in each of 8 user-defined directions, and sprites may be allocated to any of the paths. Whenever the sprite is called, it will automatically move by the amount specified by the path.

Twenty different routines allow any combination of the above features, together with EOR, transfer (direct) plotting and transfer plotting with background storage/replacement. Economise on memory space by choosing the routine with just the features

you need in your program. Two demonstration games, an introductory program and an excellent 32 page colour manual are included in the package. The programs are compatible with disc/cassette-based systems, and can be bought already on 40/80 track discs (please specify) for an extra £3. Our only plea is DON'T OPT FOR ANYTHING LESS - it is probably more expensive and certainly won't contain anything like the features of SIMONSOFT SPRITES VERSION TWO.

Actual screen photograph of 'Devil Swarm', a demo game

### SUPERFRUIT (32K) £5.95

Simply the best. Full colour high resolution graphics. Spinning reels with 'bounce'. Incredible gamble effects, hold, 3 types of gamble, swap reels, two-way nudge, nudge gambles, coin pile that shrinks/grows, great sound effects. Separate instruction program. This implementation is in a class of its own.

"You would be justified in claiming that it is better than the real thing" - M. Field, Oxford.

Actual screen photograph

### NEW CASTAWAY (32K) £8.95 The Three Island Adventure

A beautifully designed adventure with a wealth of puzzles of logic, imagination and wit that build up into an intriguing pattern. Tackle beanstalks, irate gardeners and priggish chemistry teachers! Brilliant use has been made of sound and Mode 7 graphics with full-screen pictures. Set in varied terrain, from sand dunes to mansions, the adventure provides an exciting range of locations through which the castaway must pass in search of priceless treasure and cryptic clues. The entrancing full colour pictures will take you deep into the world of the Three Islands in a way that the text-only adventure never could.

# SEQUENTIAL SOFTWARE

presents

## KERNEL\_ONE

an exciting new development for the BBC (32k) micro

KERNEL\_ONE provides

- Cassette containing fully documented assembler source code for an interrupt driven multi-process scheduler
- Working three process example program
- Comprehensive user guide including principles of professional multi-process systems
- Clear illustration of the full power of the BBC's built-in assembler
- High educational and practical value

Written by a professional software engineer, KERNEL\_ONE enables you to learn about MULTI-TASKING systems by building your own multi-process assembler programs in a simple structured way on the BBC microcomputer.

Send Cheque/PO for £12.95 (inc p&p) to:

# SLAVES FROM AROUND £49!

## THE BEASTY

**Beasty**  
- £49.95  
(PBM-1)

**Servo**  
- £14.50  
(PS-128)

**Servos:**  
FROM - 1-4 servos, 3.5kg/cms  
60 degrees in 0.25 secs, 100 degrees range.

**COMMOTION**  
COMPUTER OPERATED MOTION

241 Green Street, Enfield EN3 7SJ  
Telephone: 01-804-1378

Unlock your computer, and give it the power to do your donkeywork. How? By employing a beasty.

A beasty, with up to 4 servos, allows the computer to manipulate a variety of objects - from pushing buttons to controlling the environment in a greenhouse.

We've also come up with a robotic building system which you can use to create the arm shown here. Moments and levers will come to life as you experiment with many different structures.

We can give you computer sight, too. Our revolutionary vision system - SNAP - captures quality moving images which can be displayed on your monitor or printed out. They can also be analysed, processed and enhanced by using the software suite provided.

All our products are 'plug in and go', and are available for the BBC Model B. Versions for ORIC, ATMOS, Commodore 64 etc. are presently under development.

And you can start with the whole kit - the beasty, beasty arm and four servos, and the vision system. Or, if you're feeling a little nervous about controlling all this new-found power, your computer can be given its freedom with as little as one beasty and one servo.

So don't waste any more of your valuable time, doing the jobs your computer can handle for you once it's been released. Send for your personal slave right now.

**Postage and packing £1.25**

**ACCESS**

Your money will be refunded in 14 days if you're not completely satisfied.

## THE BEASTY ARM

**Arm mechanism**  
- £39.95  
(P-arm1)

(Beasty + 3 servos required)

**Beasty Arm:**

Maximum reach: 340mm, maximum lift: 400mm, maximum load: 75gms, point to point time: less than 0.5 secs.

**SNAP:**

Resolution up to 256 x 128, up to 20 frames/second, up to 8 grey levels. **SNAP - £99.95**  
(P-Snap1)

IN July Mike Bibby will be running a weekend course in BBC Basic for absolute beginners at the University of Manchester's prestigious Holly Royde College.

Followers of Mike's Beginners articles in *The Micro User* will already be familiar with his clear, easy-to-follow style of teaching. Mike has also had considerable success as a lecturer on beginners' Basic courses for the Extra-Mural department of the University.

Now *Micro User* readers will have a chance to gain personal tuition from him in a relaxed, informal setting. No prior knowledge of computers or Basic will be assumed, and the course will proceed at a very gentle pace.

Even so, participants can be assured of gaining a thorough grounding in the fundamentals of BBC Basic.

Holly Royde College is in South Manchester within easy reach of the M56 and M63. It provides an ideal environment, with excellent accommodation and a warm and hospitable atmosphere. All meals and equipment will be provided for the course, which starts with dinner at 6.45pm on Friday, July 6 and finishes with tea at 4pm on Sunday July 8.

In order to ensure personal attention the number of places is strictly limited, so early booking is advisable. If you wish to attend, please send the course fee of £125 (inc VAT), made out to Database Publications.

Bookings taken up to June 1 - after which cancellations cannot be accepted.

## Why not learn Basic the Micro User way?

I would like to enrol on the weekend course in BBC Basic (July 6-8).

**micro**

**D.A. COMPUTERS LTD.**

**BBC ACORN COMPUTERS IN LEICESTER**

Specialists in hardware and software.  
Fully authorised ACORN-BBC Dealer.

Complete after sales service — repairs  
and maintenance contracts.

Two of the most useful utilities for the serious BBC User.

**SCREEN DUMP ROM** This 8K page ROM will print out any graphics screen (except mode 7) upright or sideways, x1, x2 or x4 scale on a variety of matrix printers including Epson, Shinwa, Star, NEC, Seikosha, KDC, etc. It will also substitute up to eight shades of grey to represent screen colours. Mode 7 text and graphics can be printed on the FX80 or FX100 only (e.g. teletext screens). This Machine Code software will give you the fastest print out possible on your printer. Page ROM software means you have all the RAM available for your own programmes. Full documentation provided. **£20.00**

**MACHINE CODE MONITOR ROM** Provides powerful facilities for monitoring and debugging machine code and BASIC programmes. Includes single step, break points, disassembler, memory scan "window", search for string or byte sequence, memory move, etc. Also provides BASIC program search and list variables. Extensive documentation. **£20.00**

BBC Model A and B Microcomputers and Electrons always in stock

**Microtest Starstick ROM & Joystick Package**

Now available the Starstick ROM and Joystick. This comes in three forms:

Enables you to use our joysticks even on programs that do not offer joystick capability.

- (A) The Starstick ROM and Quickshot I Joystick  
Price 17.95 + VAT = 19.84
- (B) The Starstick ROM and Quickshot II Joystick  
Price 19.25 + VAT = 22.14
- (C) The Starstick ROM and patch lead, choose your own Spectrum/Atari style joystick  
Price 15.25 + VAT = 17.54

Post and Packing £1.00 inc. VAT per item

This enables you to plug the Rapid action self centring joysticks until now only available for the Spectrum/Atari/CBM machines into the user port of the BBC. Model A users please note NO ANALOGUE INTERFACE REQUIRED.

Disc Users Note — pressing BREAK, SHIFT-BREAK or CONTROL BREAK does not modify or destroy the STARSTICK software so Disc Users please feel free to Boot!

The software patch provided in the ROM is interrupt driven and adds the following commands to your computer.

- ★ STICK turn on the STARSTICK ROM
- ★ NSTICK turn off the STARSTICK ROM
- ★ SETSTICK set up joystick to users spec.
- ★ ADVAL emulate standard analogue joysticks
- ★ PAUSE define key to Freeze game
- ★ NPAUSE turn off ability to freeze game
- ★ "NAME" predefined key protocols set up for software houses programs.
- ★ HELP KEYS displays currently selected key protocols.

## DO YOU HAVE A PRINTER?

**NO!**

Then send your programs to us for a by return  
printing service.

Listings by dot matrix printer on fan fold paper or by letter quality  
daisy wheel printer on individual sheets, the choice is yours.

Dot matrix, fan fold, minimum 10 sheet length £1.80 + p&p  
Dot matrix, individual sheets, minimum 10 sheets £2.50 + p&p  
Daisy wheel, fan fold, minimum 10 sheet length £2.00 + p&p  
Daisy wheel, individual sheets, minimum 10 sheets £3.00 + p&p  
Additional sheets at 10% of minimum price each.

Send your tapes to:

69 Computing Limited, 69 Foljambe Road, Chesterfield,  
Derbyshire S40 1NN.

## Tech OP Tracker

THE very Latest in Dual 5¼" Disc Technology for Under £300!

We believe that these drives are easily the best on the market. Their unique, purpose made construction drastically reduces size and component count thereby cutting cost to a bare minimum. We only supply dual drives since they offer best value and flexibility for the serious/professional user.

Size only 8 x 15 x 22cm approx.

### These features speak for themselves:

- \* Exceptionally low cost
- \* 800K or 1600K formatted capacity in double density mode
- \* All British made
- \* Fast 3ms track to track access
- \* 250Kbit/s data transfer rate
- \* Low power - 4W standby, 11.5W running enables direct use on e.g. BBC B power supply
- \* FM/MFM (single/double density)
- \* Extremely high quality
- \* Full documentation
- \* Formatting and utilities disc for BBC B
- \* All connectors supplied
- \* Personal service from Tech OP for advice and backup
- \* 1 year guarantee
- \* Compatible with most computers

NOTE FOR BBC USERS: Watford or Acorn DFS supports single density only and therefore utilises half capacity i.e. 400K or 800K

TRK1(c) 80 track S/S 800K	£279
TRK2(c) 80 track D/S 1600K	£349

Optional Extra:

DPSU Disc power supply £36

ORDER NOW TO ENSURE QUICK DELIVERY or contact David Poole or Waldemar Osicki for further details. Ask about our other products.

Please add 15% VAT and £8 carr/pack/ins to cost of order. Official government and educational orders accepted.

**Tech OP Ltd.**

## NEW FROM BETASOFT

Two great sea warfare games for the BBC Model B

### BLOCKADE £6.95

Makes full use of Mode 2 graphics to provide a realistic simulation of submarine warfare. The challenge: use your torpedoes to prevent the enemy ships from reaching port with their valuable cargo. Line up the target in your periscope sight, read off his range and speed, and judge the moment to fire. The tonnage of the ships you sink builds up your score, but for maximum points you must sink every one. The realism includes decaying wake and true torpedo running times to impact... but if you are impatient, you can speed up the action.

Can you maintain the blockade and become a submarine ace?

### SUBHUNT £5.95

Your destroyer is fifty miles astern of the convoy, searching for an enemy submarine. He may be deep, or he may be lurking near the surface, waiting for a chance to counter-attack with his torpedoes. Listen for that tell-tale echo from your Asdic scanner. Run in and attack him with depth charges, dropped singly or in patterns. This entertaining game uses a full colour display to track your moves and lay out your options. Choice of difficulty levels and many possible outcomes.

For a single tape, please add 35p postage and packing.

From: **BETASOFT**,  
5A St. Stephens Road,  
Cold Norton, Chelmsford,  
Essex CM3 6JE.

**Special Offer**  
**£9.95**  
**Both games**

Why should readers of The Micro User also subscribe to Electron User?

The answer's simple ...

**LISTINGS!**

Pages and pages of them. Games, graphics, utilities – plus regular features like Casting Agency and Sounds Exciting – all clearly defined to ensure you key in correctly first time.

ALL Electron User listings have been written so that they will also work without modification on a BBC Micro with OS 1.2 and Basic II.

If you have OS 1.2 with Basic I you may have to substitute certain semi-colons for commas. And if you have OS 1.0 or 0.1, you will find nearly all the programs will run without modification.

In the May issue you'll find action games, arcade classics, logic games – in fact, all sorts of games. Your Electron becomes a rally car, a fruit machine, a mental arithmetic test and an electronic drawing board in turn. There's also noughts and crosses, a pursuit game and a secret message encoder. With articles on graphics and beginners Basic, computer number systems and the difference between ROM and RAM, it's the biggest and best Electron User yet.

You should be able to get Electron User through your newsagent. But to make sure you do get a copy each month fill in the subscription form below.

**SPECIAL OFFER!**

FREE cassette of 26 programs from the first four issues of Electron User – worth £3.75 – order NOW!

**SUBSCRIPTION FORM** – Please send me the next 12 issues of Electron User at the special introductory offer inclusive price of £12. Special offer applies to UK readers only.

# A World Of Information

Available to you with Grapevine, the new multi-function modem from Pace.

Grapevine is simply the most versatile modem available, at the price, for home or business use. It offers Viewdata/Prestel baud rates (1200/75) alongside 300/300 baud full duplex for communication between the BBC and other computers.

Grapevine offers both European and Bell frequencies for compatibility with American Databases and standard European CCITT systems.

The state-of-the-art modem chip technology employed requires minimal support circuitry and this results in low power consumption, low cost, high quality and extreme reliability.

Grapevine is 'hard wired' to minimise the risk of 'noise interference' errors which are common to outdated Acoustically coupled devices. Grapevine also features a comprehensive self test facility to facilitate easy installation.

Grapevine utilises RS232/RS423 interface standards with a 5 pin domino din connector. It is supplied complete with the appropriate lead for connection to the BBC micro, other leads are available on request.

The BBC microcomputer requires communications software to operate Grapevine. This is provided by Commstar, the intelligent communications eeprom from Pace. Commstar is extremely flexible and provides numerous commands to transmit, receive, save, load or transfer data. By using Commstar it is possible to access Prestel, Micronet, Homelink, Telecom Gold, and various 'Bulletin Boards' throughout the country. Commstar can be used to emulate other terminals simply, (e.g. VT 100), by means of a configuration disc.

The complete Grapevine/Commstar package, for the BBC which includes the Modem eeprom, all cables and manual is just £139 plus VAT.

Please telephone for a comprehensive fact sheet.

This modem incorporates the very latest in communication technology and is therefore not yet B.A.B.T. approved.

# MICROMAIL

## Case for puzzles for programmers

I REALLY must congratulate you and Mike Bibby for the excellent series "Introduction to Programming".

I find the clear, step by step instructions are just right for a novice like myself to understand.

While I doubt I will ever become an expert programmer you have no idea how much pleasure I get when I have successfully solved one of the problems posed at the end of each article.

I am sure other readers must feel the same and I am prompted to ask whether you could include a page (or half a page) of programming puzzles in future issues of *The Micro User*.

Perhaps, if the questions ranged from very easy to very hard, it would cater for all levels of programming abilities. — D. Marchington, Guiseley, Leeds.

● Thanks a lot for the praise. Your idea of a regular page of programming puzzles is a great suggestion.

There must be lots of computer teachers who have their own pet puzzles and exercises.

So how about it? Why not send in the programs you've used to illustrate your lessons with — then we can share them with everyone?

Incidentally, send the answers too. The editorial staff of *The Micro User* are not as young as they used to be.

### Clock interrupt

REGARDING Michael Pastore's letter in the February 1984 issue of *The Micro User*, there is a way of programming one of the BBC's internal clocks to produce an interrupt — the interval timer.

Using an OSWORD call with A=4 you can set the timer to a value (see page 460 of the *User Guide*). It will then increment every hundredth of a second and will cause an event (if you make it) when it gets round to 0.

This event indirects through &220 and so by changing the

address there, inserting a small routine at the new address and typing \*FX14,5 (to enable this particular event) you have created a kind of alarm. The enclosed program does just that.

10-30 Sets the address for the routine to &ADE (top of the space reserved for function keys).

40-80 Saves registers, prints CHR\$(7) a number of times, recovers registers and ends.

90-150 Sets the number to be written to the interval timer.

160 Sets registers for Osword with A=4, and pointer to &70.

170 Enables the event and sets interval timer.

This program will produce a long beep after the set number of minutes and will work as long as all the function keys aren't programmed — keep to two or three to be safe.

To expand the message it will be necessary to rewrite the routine at &ADE, remembering to change the values at &200, &201 and P%.

Once you have run the program it is possible to run another one, but do not press Break as this resets the vector and timer.

The program has been tested with delays up to 10 minutes. — Joe Faith (14), Bletchington, Oxfordshire.

### Elegance a side effect

JUST for the record, I have never advocated recursion. Nor is elegance the most important characteristic of good programming in my scheme of priorities.

Frank Hughes is demolishing arguments I have never put forward.

My only original uses of

recursion have been for fun or demonstration, and elegance is a side-effect of good programming as it often is of any kind of good design process.

I must repeat that readability is what counts most. Many good things flow from this — correctness, shorter development time, ease of updating or adapting, better personal skill development.

Again, for the record, I agree with Dr Freshwater that there is no real difference between THEN GOTO 50 and THEN 50 and I have never said there is.

They are equally undesirable and the well-documented causes of unreadability of programs. Why is it pompous and pedantic to say that?

Perhaps I'm not as clever as Messrs. Hughes and Freshwater. In the old unstructured days I often failed to understand my students' programs (so did they).

Now their programs are much longer and more ambitious, yet I find them easy to understand. — Roy Atherton, Director, Bulmershe Computer Education Centre, Earley, Reading.

### Six of the best?

DAVID H. Wilde's letter in the March "Micromail" in reply to my own in December's would be a good endorsement for nominating me as editor of *The Wally's Guide to Home Computing*.

I feel he must be a schoolmaster, determined to give me six of the best for frivolity.

My letter was written in irritation at the smugness and preciousness that so many programmers evince, proudly drawing attention to the fact that "the program is fully

## From Page 209

structured, as there is not a single GOTO or GOSUB to be found".

I cannot see why the mere omission of line directions necessarily makes for better structured programs.

As a case in point, I recently copied out a Logo program written by Fintan Culwin in the January 1983 "Your Computer" and counted 36 GOTOs and 49 GOSUBs among the PROCs and functions.

Yet it was clear and structured, using all the facilities of the language to produce an efficient and well-running program.

Can you picture the editor of Your Computer saying: "Hey Fintan! For God's sake man, all those GOSUBs!"

Fintan goes away muttering, returns hours later with sore fingers and the thing completely procedured. "That's better, my boy!" beams the Ed, "and it still works just the same".

Hence I fancy the pragmatist's approach rather than the purist's. GOTOs and GOSUBs were not just thrown in for Wallies who don't know any better. — David Bye, Saffron Walden, Essex.

## GOTO h...!

I AM sick and tired of reading about PROC and GOTO. — A.N. Haslvem, Lewisham, London.

## Enhanced Blackjack

BLACKJACK, which was featured in the November issue of The Micro User, is an excellent and well thought out game that is written well, in spite of its cumbersome upper and lower case variable names. However I have one small criticism relating to the way in which bets are placed.

It is usual in Blackjack (or Pontoon even) to place your bet on the value of the first card dealt to each player, and not to bet blind, as in this game. I believe it enhances the game to carry out a simple modification in PROCmain to achieve this, as follows:

```
590 PROCline(" ",30,0)
    :FOR IX=1 TO 2
    :PROCdeal
    :NEXT IX
595 IX=6
    :PROCcard(130,100)
    :PROCpause(175)
    :PROCtake
600 FOR IX=3 TO 6
    :PROCdeal
    :NEXT IX
```

Line 590 now causes a faced card to be dealt to each player and the new line 595 causes a face-down card to be dealt to the bank. This card does not need a

handling stolen property.

My experience is a warning to other computer users, as only micro related equipment was stolen. I have to ask myself whether I have talked about my Beeb, printer and Prestel adapter to any strangers who could have taken a fancy to it.

I do not wish to run the risk of my replacement equipment being stolen, so I ask you not to publish my name and address. A list of

stored value at this stage, as this is purely for pictorial effect to complete the first round of the deal.

PROCstake then operates as normal, but the players can see what they are betting on.

Line 600 then causes the bank's first card to be revealed and the second card dealt to each player and the bank normally.

I have our version permanently amended in this manner.

One final note worth mentioning is that blue often does not show up very well as text or narrow lines on a TV set. Try cyan instead. It gives better relief to the black and red suit symbols.

There's a wrong note, 5 from the end, of the "Fiddler on the Roof" theme. Can anybody say what is better than pitch 141 (A sharp) for this melody? I have no ear for music, but this one stands out! — Brian Spencer, Hertford.

## Laserbug query 1

COULD you please let me know if the User Group known as Laserbug have ceased trading?

As an independent publication with no advertising revenues from them you are an unbiased judge.

On December 20, Laserbug cashed my cheque for a year's

subscription. Now five letters later, two of which were recorded, I have had no reply.

Is it possible for you to chase them up? I can get no direct communication because no telephone number is listed. — M.A. Parker, Haverhill, Suffolk.

## Laserbug query 2

I READ with interest the letter from K.R. Derbyshire in the April Micro User. I agree with everything he had to say.

I also found Laserbug reluctant to answer any letters if they were of the complaint variety.

They advertise for new members every month in several magazines but they cannot supply their existing members with the monthly news magazines for which members have already paid for.

With regard to the certificate which Paul Barber refers to, I don't think you will be missing out on anything worth having. What good is a certificate from a company or user group if they no longer exist?

I am not pushing for BeeBug, but I have found them to be very good and very helpful in every way and I find their magazine very well laid out and I look forward to it every month eagerly (as I do yours).

I would like an article in your magazine on how to formulate a program for joysticks. I seem to

## Watch out for stolen equipment

I AM sure I am not the only BBC computer user whose addictive hobby has been interrupted by burglary and theft, and it occurs to me that you could perform a useful service by publishing a list of stolen equipment, with serial numbers.

This could set honest dealers and users on their guard when offered second-hand equipment, and possibly lead to the conviction of thieves and others

the items stolen from my home on March 7 is as follows:

BBC model B computer, 1.2 OS, serial number 105521; Shinwa CP80 printer, with cable (5002853), Ferguson TX colour television, grey cabinet, model 37140, 14in. (G104205), Sony TCS300 portable cassette recorder with rechargeable batteries (98274), Tandata TD1100 Prestel adapter (29135).

Keep up the good work in the

magazine. For one who was contemplating disc drives, the March edition I found particularly useful. — Name and address supplied.

● Sorry to hear about the loss of your equipment. We're only too glad to publish the list of missing items and we'll endeavour to do the same for other readers.

If anyone out there recognises any of the items, let us know.

● Want to write to Micromail? The address is: Micromail, The Micro User, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.

find it beyond me.

Thanks for an excellent magazine, it seems to cater for the thick like myself, as well as the pro. — K. Lawler, Dewsbury, Yorkshire.

● We have already covered the addition of joysticks to programs in our Body Building course in the May, 1983, *Micro User*.

A utility to adapt keyboard programs was given in the October issue. And a simple games paddle was described in our very first issue in March, 1983.

However we have plans for a far more comprehensive article on the subject in the near future.

## Laserbug query 3

K.R. Derbyshire's experience with Laserbug comes as no surprise to me.

On August 19, 1983, I posted a cheque to Laserbug together with an order for a 1.2 OS ROM. This cheque was paid by my bank on September 6.

After a wait of some six weeks there was no sign of the ROM. During the next six weeks a number of letters, including one from the Trading Standards Office, Eastbourne, were all ignored.

One of these letters might have gone astray, but not all, and certainly not the last, which was Recorded Delivery.

As seven months has elapsed it is clear that Laserbug intend to keep my money. Subsequently I obtained the ROM elsewhere with no trouble at all.

I would cheerfully have obtained a county court summons to reclaim the money. However I was advised that it was necessary to ascertain the name of the owner of the concern.

Since the Register of Business names has now been abolished the only way to obtain this information was by a request to Laserbug.

My advice to anyone dealing with Laserbug is "caveat emptor!" — T.W. Clements, Hailsham, Sussex.

# Prime numbers check-up

THE program "Finding Prime Numbers" was written in response to a request from some of my secondary modern arithmetic pupils to have a readily available check on which numbers are prime.

Finding the first few is relatively simple to do manually, but as the upper limit increases the exercise becomes tedious and time consuming.

The program, therefore, also calculates the time taken to find the numbers.

As written, the program will print out the results in eight columns up to the desired limit, the display on the screen being in four columns.

If the program is to be run without a printer line 120 must be deleted — VDU2 being the command that will "activate" the printer, in my case an Epson MX-80.

It would also be prudent to delete line 290, which switches off the printer.

The variables used are:

PN The number being tested for "primeness".

Y A count, used to con-

trol the tabulation on printout.

FLAG This is set to 0 until PN is found to be non-prime when it is then set to -1.

— C.H. Hayter, Gillingham, Kent.

## No problem

AS a fairly new BBC B owner am I alone in viewing with slight alarm the appearance of the Electron?

I am worried that software houses will now tailor existing programs and write new programs predominately for the Electron's reduced capabilities with the tag line that they also work on the BBC.

Could we BBC users end up with inferior programs, which for sound commercial reasons will be aimed at the combined Electron/BBC market? I hope not.

I wonder if any program house could allay my fears. — M.J. Morris, Cheltenham.

● Quite frankly, no program-

ming house would be so stupid. They're in it for the money, and BBC Micro owners are a discriminating lot.

## You identified

I FELT I had to write to you, as I have one or two unanswered questions, as well as the odd comment.

Firstly, though, may I add my name to those thousands in praising the high quality of the articles and the way in which they are presented — not assuming we know it all.

Now to the questions:

While playing around with my machine operating calls, I came across the OSFILE routine which deals with files,

accessing an 78 byte control block stored in memory, the last four bytes of which give the file attributes.

The LSB of these four, states the User Guide, can be assigned a value of 0-7, which include "not readable by you," "not executable by others," etc.

Could you please tell me how you tell the computer who "you" and "others" are for future use of the file?

Also, has anyone found a use for the Tab key, except for dropping smart bombs? — Stuart Reynolds, Thorpe Bay, Essex.

● "You" means the user reading the attributes and "others" means other users of, say, the Econet filing system.

The Tab key was included in

## PAYROLL FOR THE BBC B

For up to 150 employees.  
Designed for dual 40 track disc  
using Random Access Operation.

**CALCULATES** Most tax codes.  
Up to 18 N.I. rates.  
Tax return information,  
24 fixed or percentage deductions,  
employer's and employee's pensions.

**PRINTS** Payslips, cheques, bank list,  
Coin and note analysis,  
Departmental accounts,  
Employee's file.

**INCLUDES** Pass word, user changeable,  
Master file, user changeable.  
This holds all the tax rates,  
Limits N.I. rates, etc.  
Technical backup and notification of  
any changes in Payroll procedures.  
And many other features.

Price is £49.95 inc VAT, plus 50p p & p from  
us or from selective computer shops.

Send orders to:- C.Y.B. Design Services Ltd.,  
8, Briar Avenue,

# MICROMAIL

From Page 211

the BBC Micro for use with word processors. As you know, its Ascii value may be changed by using the command \*FX219 (OSBYTE&DB).

## Auto run to music

AFTER typing in the Christmas Card program listed in *The Micro User* for December 1983, I found that by adding the lines:

```
935 TTZ=TIME
1015 IF TIME >TTZ+9100
    THEN RUN
```

the program auto ran itself after the candles had been on the tree while *Silent Night* played. — Andrew Baker, Wellfield Junior School, Sale, Cheshire.

## Control code catch

CONTRARY to your comment on Michael Swatton's letter (*Micromail*, February 1984), control codes are not suppressed when sending output to "printer only" under \*FX3,10.

The catch is that under \*FX3,10, code 1, normally used in print statements to prevent control codes reaching the screen and removed from output by the computer, is sent along with everything else to the printer.

For example, a two byte control sequence such as ESC+X (which turns on underlining in my NEC printer) is normally coded as VDU 1,27,1,88 and received by the printer as 27,88.

Under \*FX3,10 the printer receives the full sequence 1,27,1,88. Note that the byte immediately following code 27 is

now 1, not 88.

The sequence 1,27,1 means nothing to the printer, so it ignores it, treats 88 as a printing character and prints "X".

My solution has been to omit the VDUs from print statements that are to be executed under \*FX3,10.

Alternatively, if \*FX6 is not required to suppress linefeeds or some other character, \*FX6,1 will ensure that code 1 does not reach the printer, even under \*FX3,10. — Colin W. Robertson, Maidenhead, Berks.

## Remember the Tyros

AS a regular reader from your very first edition, may I make a plea for people like myself who have no proper training in computers.

Please keep a fair proportion of your magazine for those who

still think that "&" means "and".

The articles and letters I find most interesting are those which are quite simple but can be of considerable help when attempting to write a program.

The two listings I enclose are examples of what I mean. Perhaps you will see fit to publish them. I find them very useful for headings, etc. — P.A. Back, Bournemouth.

## Over the barrel

I REFER to your program listing of "Barrel Battle" in the January 1984 Micro User.

The problem I have is on lines 82, 87 and 89.

These require more than six lines of space when typing them, which of course the BBC B will not accept.

What can be done about this? I always read your magazine and would appreciate your help.

- T.W. Hayter, Orpington, Kent.

● Sorry you're having problems. The answer is quite

straight forward, though.

The insert on the first page of the listing tells you that it is a special formatter and not to press Return until you get onto the next line.

So, where the listing reads:

```

31 XX=XX+HX (spaces)
:YZ=YZ+VZ (spaces)
:COLOUR QZ
:CZ=CZ+1
:IF CZ=229
etc

```

you type:

```

31 XX=XX+HX:YZ=YZ+VZ:COLOUR
QZ:CZ=CZ+1:IF CZ=229

```

and so on until the end of the line.

## Tutorial

THANK you for your series of articles in The Micro User under the heading "Tutorial" - that is, up to part six.

But what happened in the

September 1983 issue, and since?

I subscribe to your magazine exclusively for this series because of its superiority over the BBC User Guide which, and I quote, "is NOT a step by step course in basic programming". - C.T. Hodgson, Malvern, Worcs.

● Thank you for your kind comments. The article did not appear in the September issue, but it has been in every month since.

In October it was called "Loops" in the contents page, and from then on it has been titled the more sensible "Beginners".

★ ★ ★

WILL you please tell me where I can obtain software programs for the BBC Model B on farm planning, budgeting and accounting? - D.P. Gibbon, Cringleford, Norwich.

● Sorry, we've never heard of any programs aimed at farming.

And finally, with tongue firmly in cheek . . .

## Hoping for a Bad Dim

Dear Trev,

Sorry I haven't written for so long but I've been trying to get in the Guinness Book of Records for teeth gnashing (with optional hair tearing).

The reason, of course, is Andrea or, rather, Andrea's friend Deidre.

Remember when I had to have my Beeb in the front room because the bunker was being redecorated? Well Deidre called round and saw me using Bug.

"Oh", she cried, "isn't it nice? George has got a Sloth, but this is much better. Does it do colour?"

Well you know me, little ROM and rather a lot of output interfaces. Of course I had to tell her all about the graphics abilities of the Beeb. I waxed on like an Acorn spokesman, telling her everything but the delivery date.

"Pixels!" she cried, "How sweet!" A glazed look came to her eyes and I realised that she was hooked, another embryo micro addict.

"You know, a program is just like a knitting pattern, only lots more fun", she

enthused.

Andrea arrived home shortly afterwards and saw what was going on. "So he's been showing you his thing, has he? Don't let him lure you upstairs to let you look at his listings".

Deidre (bless her) ignored this and told A. how grateful she was that I'd showed her how to use Bug. Apparently George wouldn't let her use his Sloth even though she'd often asked.

"Don't worry", A. said, spontaneous generosity making her voice swell, "you can come round and use Bob's micro anytime you want".

"Anytime you want" being the operative words. Nowadays I can't get on my micro for Deidre popping round for "five minutes on the Beeb" and staying until the early hours monopolising my micro.

I just sit around thinking nostalgically about the good old days when all I had to worry about was whether or not I'd remembered the cassette bugs fix.

As it is I pine for a Syntax Error message

or a Bad Dim. I'm getting both withdrawal symptoms and funny looks from George.

It's got so bad that I dream about it at night. Somehow or other I'm a resistance fighter in an occupied country during the war. I'm wandering the streets trying to find a safe house where I can set up my illicit Beeb.

As I'm typing away in comes Deidre (looking frighteningly fetching in her black leather uniform) and grabs my micro.

Invariably I wake up screaming, "Not again, Deidre", which gets me funny looks from Andrea as well.

Yesterday I found myself playing with my pocket calculator for comfort. I think I'm cracking up. Any advice? **Bob**

P.S. All is well, Deidre's bought her own micro. Apparently she got the money by selling a program she'd written. You draw a picture of a pullover on the screen and the Beeb prints out a knitting pattern. And as a reward for "lending" her my micro, she's knitted me a special pully with every error message on it. People can be so thoughtful!

- *PC, Dec 83*

"**Colossal Adventure**... For once here's a program that lives up to its name... a masterful feat. Thoroughly recommended"  
- *Computer Choice, Dec 83*

"**Colossal Adventure** is one of the best in its class. I would recommend it to any adventurer."  
- *Acorn User, Feb 84*

"**Adventure Quest**... This has always been one of the best adventures for me as it seems to contain the lot. In all it took me about eight months to solve."  
- *PCW, 18th Jan 84*

"To sum up, **Adventure Quest** is a wonderful program, fast, exciting and challenging. If you like adventures then this one is for you"  
- *NILUG issue 1.3*

"**Colossal Adventure** is simply superb... For those who want to move onto another adventure of similar high quality, **Dungeon Adventure** is recommended. With more than 200 locations, 700 messages and 100 objects it will tease and delight!"  
- *Educational Computing, Nov 83*

## ADVENTURE REVIEWS

"**Colossal Adventure**... undoubtedly the best Adventure game around. Level 9 Computing have worked wonders to cram all this into 32K... Finally **Dungeon Adventure**, last but by no means least. This is the best of the lot - a truly massive adventure - you'll have to play it yourselves to believe it."  
- *CBM 64 Users Club Newsletter*

"The puzzles are logical and the program is entralling: **Snowball** is well worth the money which, for a computer program, is a high recommendation."  
- *Micro Adventurer, Dec 83*

"**Snowball**... As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denizens... this program goes to prove that the mental pictures conjured up by a good textual adventure can be far more vivid than the graphics available on home computers."  
- *Which Micro?, Feb 84*

"**Lords of Time**. This program, written by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue... As we have come to expect from Level 9, the program is executed with wonderful style - none of those boring "You can't do that" messages! Highly recommended."  
- *PCW, 1st Feb 84*

## MIDDLE EARTH ADVENTURES

### 1: COLOSSAL ADVENTURE

A complete, full size version of the classic mainframe game "Adventure" with 70 bonus locations added.

### 2: ADVENTURE QUEST

Centuries have passed since the time of Colossal Adventure and evil armies have invaded The Land. The way is long and dangerous; but with cunning you can overcome all obstacles on the way to the Black Tower, source of their demonic power, and destroy it.

### 3: DUNGEON ADVENTURE

The trilogy is completed by this superb adventure, set in the Dungeons beneath the shattered Black Tower. A sense of humour is essential!

## THE FIRST SILICON DREAM ADVENTURE

### 1: SNOWBALL

The first of Pete Austin's second trilogy. The giant colony starship, Snowball 9, has been sabotaged and is heading for the sun in this massive game with 7000 locations.

## THE LORDS OF TIME SAGA

### 7: LORDS OF TIME

Our congratulations to Sue Gazzard for her super design for this new time travel adventure through the ages of world history. Chill to the Ice-age, go romin' with Caesar's legions, shed light on the Dark Ages. etc.

Price: £9.90 each (inclusive)

Level 9 adventures are available from good computer shops, or mail-order from us at no extra charge. Please send order, or SAE for catalogue, to:

## DRIVE THE FLYING SCOTSMAN!

In our driver simulation game you can try to do just that.

Your task is to drive the Flying Scotsman from London. You must attempt to keep time despite some adverse conditions e.g:- Lineside Engineering works, signal checks and speed restrictions. If you fail to do so you may be relieved of the controls, or lose valuable points for the end of game performance rating.

You have a choice of three types of motive power, these being Deltic, Brush 47, and the H. S. T. varying from Ex-works condition to those due for attention.

Flying Scotsman for the B.B.C. 'B' is available from:-

**DEE-KAY SYSTEMS**

18, Salford Close, Woodrow South,  
REDDITCH, Worcs, B98 7UN

Price £7.50 inc. p&p.

## TURN YOUR COMPUTER INTO A SCIENCE LAB

Suite of eleven programmes, User-Port adaptor with attachments including light sensor, switches and probes, and full instructions.

Measure speeds and graph them automatically, measure accelerations including "g", test for electrical conductors, time events lasting from hundredths of seconds to hundreds of minutes, investigate reaction times, make an automatic counter and a burglar alarm, discriminate between almost coincident events, and produce bar charts and pie charts in full colour with automatic scaling.

DESIGNED IN CLOSE CONSULTATION WITH PRACTISING SCIENCE TEACHERS  
FOR USE AT SCHOOL OR IN THE HOME.

Also ideal for use with the "Nuffield Dynamics" experiments. For the B.B.C. Model "B" Microcomputer, available on cassette at £17.95 including postage and packing, or on disc at £19.95.

GLENHIRST EDUCATIONAL COMPUTER-PAKS, STATION ROAD, SWINESHEAD,  
NEAR BOSTON, LINCOLNSHIRE, PE20 3NX.

## 'KILLA' THE UPGRADE

by S.D. Ellington From: BIT TWIDDLERS

If you already own the popular game of Killer Gorilla for the BBC Micro or Electron then 'Killa' will provide:

1. 15 levels of play (BBC) 7 levels of play (Electron)
2. Variable extended jump.
3. Climb and jump with hammer.
4. Extra lives after 25, 50 & 75 metres.
5. Practice mode.
6. Pause facility.

Start practice session at 'any height', 'any level'. Exercise your new powers and discover new routes. Have a go at the higher levels with a fighting chance.

Written by a professional programmer.

£2.75 + 50p p&p

For disc compatible cassette  
by 1st class return post.

BIT TWIDDLERS Dept MU/5

Now available on Micronet and from discerning shops

## COMPUTER GARDENING PROGRAMS

Two amazing programs for your BBC Model B computer

### GREENFINGER:GARDEN PLANT SELECTOR

Give your BBC Model B access to information on over 400 plants. You tell the computer about growing site conditions - soil type, sunlight, moisture. The computer finds the best plants for you. Plant descriptions, flowering time, growing conditions, propagation methods etc., appear on your TV screen.

### GREENFINGER:GARDEN LAYOUT PLANNER

Design your garden layout with your BBC Model B. Build up a computer model of your garden layout. Position buildings, walls, paths, patios, borders, flower beds, greenhouses, trees and shrubs. The computer plots a scaled plan on your TV complete with areas of shade! Add and delete items, pan around the layout, file and retrieve your layout for future use. Save on expensive garden purchases and building work!

Programs supplied on cassette tapes with full instructions. Each program costs £12.95 inc. P & P. Send cheque with order and name and address (BLOCK CAPITALS) to:

Cambridge Applied Technology, 51 Hinton Road, Fulbourn, Cambridge CB1 5DZ.

Also available from W.H.SMITH & SONS LIMITED

# BBC Micro Fanatics Required

Do you know your way around the BBC Micro – spend your spare time using it?

**Beebugsoft – the software house of Beebug Publications Ltd. has vacancies for young persons with software expertise (Basic and/or Assembler) on the BBC Micro.**

Continued expansion at BEEBUGSOFT has created further vacancies for young persons with expertise on the BBC Micro.

Successful applicants will join a growing team of enthusiasts developing new software for the BBC Micro and Electron.

Work will be varied and, where possible, reflect the interests and expertise of the applicant. Salary according to experience.

Applications should be made in writing to the address below, and should include a full curriculum vitae together with the names of two referees.

**The Software Manager  
BEEBUGSOFT, PO BOX 50  
ST. ALBANS, HERTS.**

## E·N·I·G·M·A Can you break the code?

CONTROL

ACCEPT?

REJECT?

ACCEPT?

REJECT?

ENIGMA is a new type of computer game. In most games you have a set of rules. In these games it is the other way round. The game will be over when you discover the rule by which it is being played. The computer will accept or reject cards – your objective is to discover the rules. There are five rules in all – but don't be discouraged – the games can be solved – if you have enough imagination and perseverance.

Available on cassette with full instructions for the BBC 'B', Electron and Spectrum machines, at £9.95 including VAT, post and packing. When you've solved all the five games return the cassette with £4 to us and we'll send you another.

**GAMES WANTED**

"Everyone has got at least one novel inside him, and every BBC Micro owner has at least one original game waiting to be programmed."

- Zen in the Art of Computer Programming.

So says our editor in his forthcoming book. Is he correct though? Have you got a games program locked away in your subconscious, just waiting to see the light of day?

If so, get in touch with us right away - we're only too willing to hear from you. And we've got our team of experts

ready to help evaluate your work and add any necessary finishing touches.

Of course, if it's good enough, we shall want to include it in the pages of BBC Micro User. So send a copy of your original games program, on cassette or disc, to:

The Editor,  
Micro User,  
Europa House,  
68 Chester Road,  
Hazel Grove,  
Stockport.

And please mark your envelope clearly "GAME".

# THE MT80. SHAPED BY EXPERIENCE

You are looking at the sleek, ultra modern lines of the latest dot matrix printer from Mannesmann Tally; the people who probably have more experience in computer printers than just about anyone.

The MT80 is a high quality, low cost 80 column, 80 cps printer that will complement any of today's micros in looks and quality; in either the home or the office.

It has been designed with industry-

compatible interfaces in hardware and software.

Experience tells us exactly what you want from a printer - The MT80 has dual density dot addressable and line graphics. An easy change, long life cassette ribbon. It can handle both tractor-fed fanfold and single sheet paper. There is a unique quick tear facility giving you a clean cut along the entire width of the paper. And it even has an optional

sound reduction kit for those of you who like to hear yourselves think.

But best of all, it comes equipped with another valuable asset. A very attractive price tag.

Contact your nearest distributor or send for our colour literature.

Mannesmann Tally Limited,  
Molly Millars Lane, Wokingham, Berkshire  
RG11 2QT. Tel: (0734) 788711. Telex: 847028

## TWO SENSATIONAL NEW RELEASES FROM SUPERIOR SOFTWARE

**BBC MICRO**

### OVERDRIVE (32K)

£7.95

A highly-addictive multi-stage 3D race game. You steer your car left and right, accelerate and decelerate as the opposing cars weave about the road. There are five different stages including night, snow, desert, and riverside scenes. To qualify for the next stage, you must finish in the top twelve. Incredible graphics give the impression that you really are taking part in the race. Highly recommended, and destined to become another top-seller for Superior Software.

●●●NEW RELEASE●●●

**OUR PROGRAMS ARE NOW AVAILABLE FROM OVER 1000 OUTLETS THROUGHOUT THE UK AND OVERSEAS. SEE YOUR LOCAL DEALER!**

### BATTLE TANK (32K)

£7.95

An excellent game, made possible on the BBC computer only by the unique use of a dual-screen display and specially written plotting routines. You are a tank gunner looking out onto a mountain plateau. You see the distant mountains and the pyramid obstacles — and also the enemy tank. Your task is to shoot it before it shoots you. A scanner is displayed in the bottom right-hand corner of the screen. This displays the position of the enemy tank relative to you. You can then turn to get the tank in view. The next stage is to position the tank in the rectangular viewfinder by fine adjustments of your controls. (KEYBOARD or JOYSTICKS)
