SERIOUS SOFTWARE
FOR THE B.B.C. MICRO
From BEEBUGSOFT

SPELLCHECK II

NOW IN ROM and up to 500% faster.

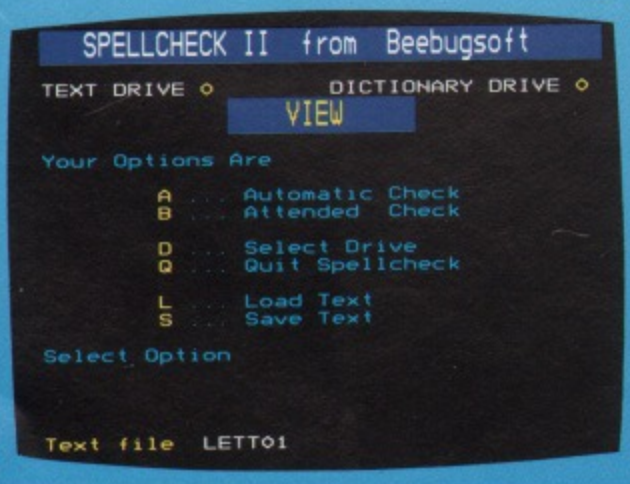
SPELLCHECK provides an automatic spelling check for letters or documents and is the ideal companion to WORDWISE or VIEW. It is menu driven, easy to use and allows unknown words to be added to the dictionary, ignored or re-spelt. A new corrected copy of the text may then be saved to disc.

SPELLCHECK I (On Disc)

SPELLCHECK I is supplied on two discs with a starting dictionary of 6,000 words. Separate versions are available for WORDWISE and VIEW. (When ordering please specify).

SPELLCHECK II (On Rom)

SPELLCHECK II is a completely new machine code program supplied in Rom. Operation speed is up to 5 times faster than SPELLCHECK I and larger pieces of text may be held in memory. The same version will also check both VIEW and WORDWISE. A dictionary disc is still supplied including 6,000 words, but a data compression technique is used to ensure that well in excess of 17,000 words may be stored on a 100K disc. Ingenious hashing and virtual file access routines have also considerably speeded up the time taken to check text. This sophisticated program is fully 6502 Second Processor compatible and uses the extra memory to further improve word retrieval time.



HELP ROM

Give your micro a mainframe utility

Most large mainframe computers have a comprehensive on-screen HELP facility to aid programming, save time and help you out when you get stuck. BEEBUGSOFT's new HELP Rom will give your micro a similar facility.
Just plug it in, and every time you get stuck for a VDU call, a colour code, the parameters for a Basic command or whatever: the HELP Rom will provide an instant answer.
Rather than wade through a book, simply type, for example, *HLP VDU (or just *H VDU) to find out all you need to know about VDU commands – or if you know that it is VDU23 that you want – type *H VDU23.
The HELP Rom uses an ingenious compression technique enabling some 14,000 characters of text to be squashed into an 8K eprom, and provides help on a vast range of subjects, including the following major areas:

BASIC KEYWORDS
MEMORY ALLOCATION
SCREEN MODES
SOUND
COLOUR
TELETEXT
VDU
COMMANDS
FX CALLS

HELP will not affect the normal *HELP command

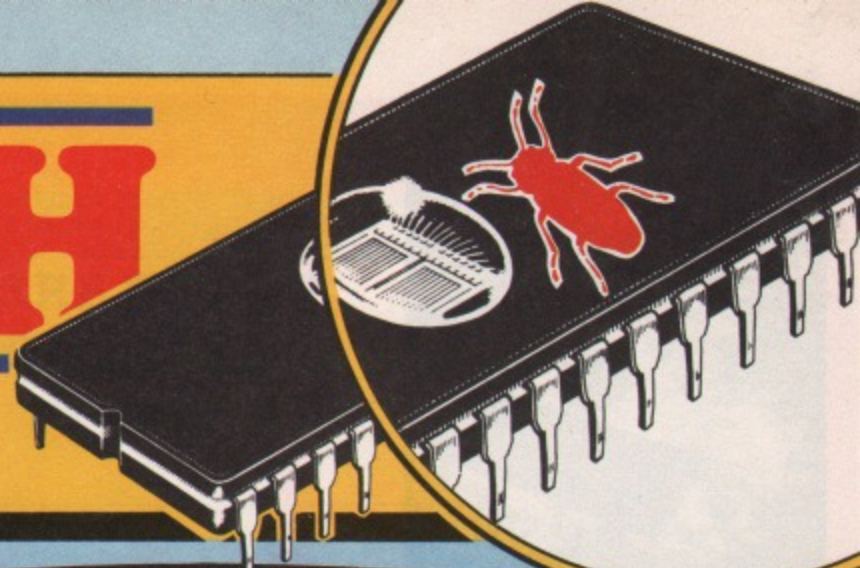
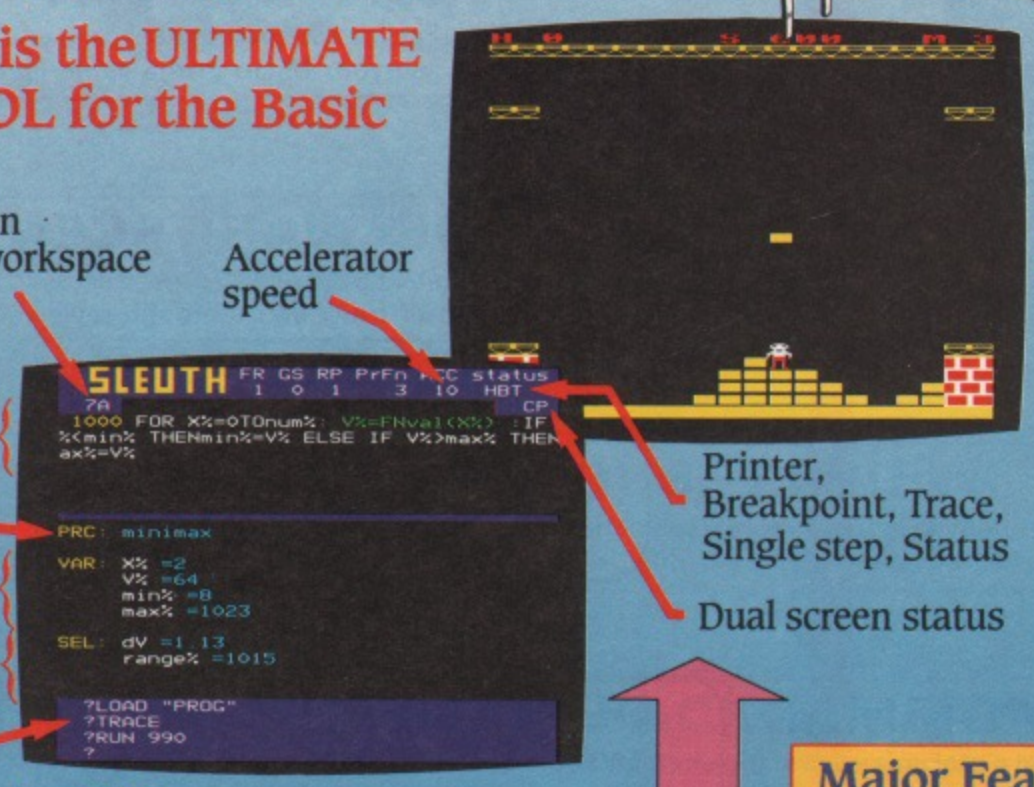
B.B.C. Micro

SLEUTH



Looking for bugs in your Basic?
Let Sleuth track them down.

Here at long last is the ULTIMATE DEBUGGING TOOL for the Basic programmer!



SLEUTH allows you to single step through your Basic program instruction by instruction, watching your screen display as it is built up. Simply press the Space Bar to execute the next instruction. Alternatively you may watch SLEUTH's control screen as you step through your program. (Press Tab to toggle between your own screen and the control screen.) This will show you the next instruction to be executed and allow you to list any part of the program. Also displayed will be the contents of all variables associated with the current instruction and the values of other specified variables.

At any time you may alter the values of any variable or update memory. You can even change the line number of the next instruction to be executed or alter the logic within a program statement. Then simply press the Space Bar to watch the next instruction execute.

Breakpoints may also be set up at any position in your program, these allow you to speed to the problem area and then see exactly what's happening. You may even set conditional breakpoints. e.g. Stop IF A%=20.

Advanced trace and decelerator facilities are also included. The decelerator allows you to alter the speed at which your program executes, actually as it is running.

SLEUTH is ideal for the novice and expert alike and will prove to be instantly invaluable, saving hours of debugging time. In addition, the single stepping facility makes it a powerful teaching aid.

Major Features of SLEUTH

- **Single Stepping through Basic** – one statement at a time or a block (e.g. procedure) at a time.
- **Dual Screen Operation** – flip between your program screen and SLEUTH's control screen.
- **Breakpoints** – pause your program at any preset line number, or on the state of any variable.
- **Accelerator** – adjust the speed of your program from full speed to freeze frame.
- **Full Feature Control Screen** – monitor and update vital aspects of your program as it runs.
- **Trace** – a sophisticated line trace facility operating when program runs.

Control Screen Features

- Control screen entered at the press of a key.
- Select edit or single-step mode.
- Adjust program run speed (1-100%).
- View the current program line with the current statement highlighted.
- List the whole or any part of your program.
- Alter the next line number to be executed.
- Read and adjust the value of variables in the current statement.
- Read and adjust the values of any other specified variables or array parameters.
- Insert or remove breakpoints and conditional breakpoints.
- Return to the program screen or continue to single-step or to run at any speed.

SERIOUS SOFTWARE
FOR THE B.B.C. MICRO AND ELECTRON
From BEEBUGSOFT

B.B.C. only

MUROM

The BBC Micro sound facilities have a lot of potential, MUROM will help you exploit this to the full.

Create your own tunes and sound sequences with ease, either with MUROM'S editor and a musical score or by using the Beeb to simulate a piano keyboard. Edit your creations with the full screen music editor. Then switch to the envelope editor to tailor the tonal quality and select instrument type. Alternatively select one of the predefined instrument envelopes.

Incorporate your music and sound sequences into any program of your own, to play back with or without MUROM plugged in. Playback is interrupt driven and may continue even while you run other programs.

Predefined instrument envelopes may be set up, e.g. *FLUTE, *SYNTH etc.

Instant sound effects may be called from Basic, e.g. *ZAP, *SIREN, *EXPLODE etc.

MUROM is accompanied by a full instruction manual and repertoire of music data on cassette.

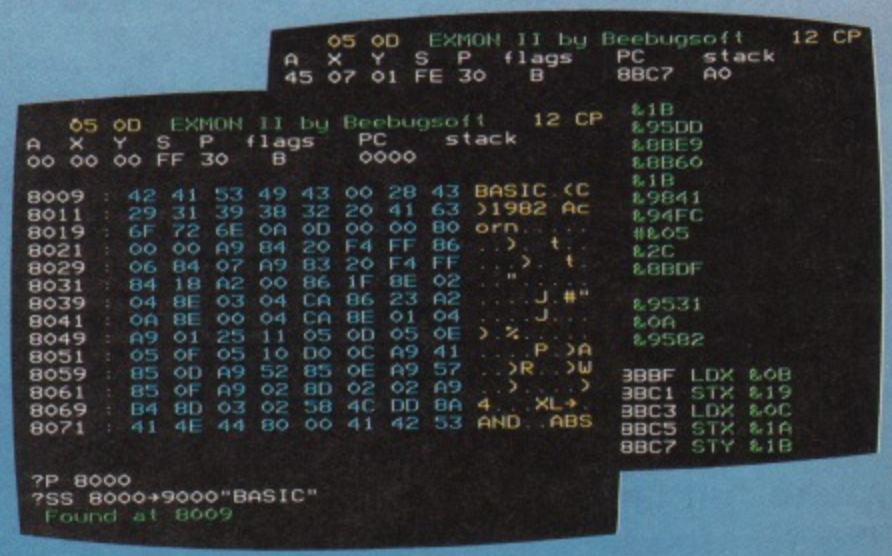
COMMAND SUMMARY

*PLAY	Calls the variable speed, interrupt driven playback routine.
*DISP	Mode 7 display of tune playing.
*TEMPO	Alter tempo.
*KEYB	Use BBC keyboard as a piano keyboard.
*SCORE	Call up full screen music editor.
EDITOR SUB-COMMANDS:	
MODE	Change from editing a single channel to editing all channels consecutively.
GO	Move editor to any note in score.
PLAY	Enable single stepping of music.
OCTV	Change octave of any channel.
ENVL	Change envelope of any channel.
LOAD	Load previously created music.
SAVE	Save edited score to disc or cassette.
KEY	Toggle note entry between note name and keyboard position.
*ENVLP	Sound envelope editor.
*FLUTE,	*SYNTH . . . etc. ten predefined envelopes.
*EXPLODE,	*ZAP . . . etc. ten predefined effects.
*TRANS	Transpose up or down by a number of semitones.
*MONOC	Disable colour output for monochrome screens.

B.B.C. & Electron

EXMON II

EXTENDED MACHINE CODE MONITOR NOW WITH DUAL SCREENS



60 New Commands for debugging and developing machine code

Our very popular machine code monitor has been enhanced by the addition of a number of new facilities, including Dual Screen Operation and full screen memory editor.

Now if you are debugging a game, or any other program with a visual display, you can single step through it instruction by instruction and actually watch the effect on the screen.

You can also revert to the monitor screen at the press of a key to examine registers, edit code, read variables, alter memory etc., and then switch back to your display screen and continue running (or single stepping), without losing your display.

Exmon II features include

- 60 machine code commands.
- Full dual screen operation.
- Full screen memory editor, input in hex, Ascii or as assembler instructions.
- Search for hex, or Ascii string, including wildcards.
- Move memory block.
- Verify that two blocks are the same.
- Relocate code to run at another location.
- Fill memory with series of hex bytes or Ascii string.
- Execute all * commands.
- Single step with skip option.
- Up to 10 breakpoints which may even be set in Rom.
- Conditional breakpoints . . . e.g. Break if register X=5.
- User definable work area.

Note: The Electron version does not feature dual screens.

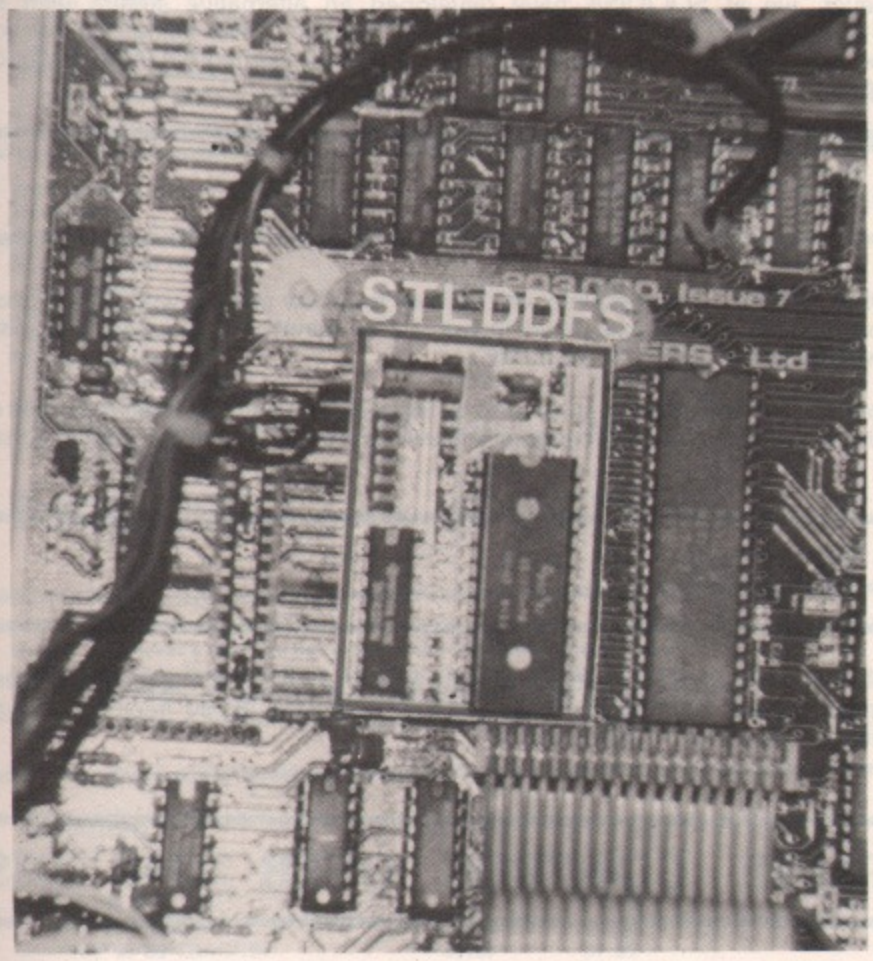
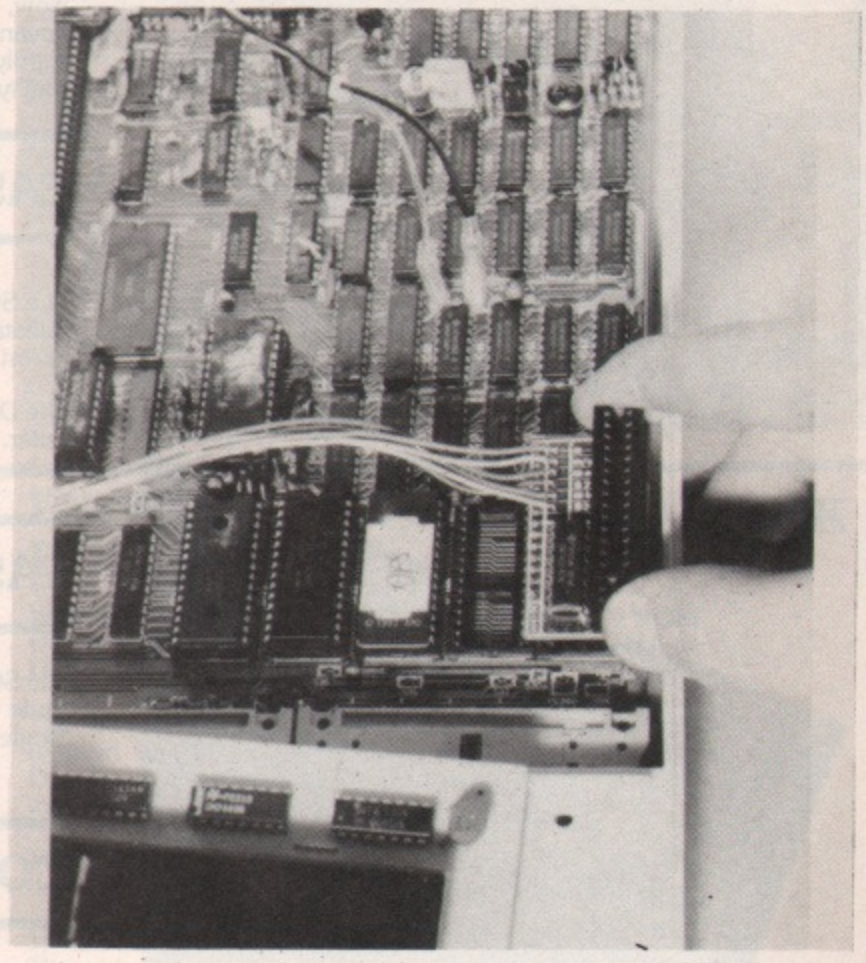
FROM SMALL ACORNS, SOLIDISK GROWS.

IN JULY 1983, we released the Sideways RAM for the BBC computer. We sold 5 in the first week, 10 in the second week, 20 in the third and one year later, we sell more than 500 in the UK and well more than 100 a week abroad.
By the time you read this, more than 30,000 Solidisk Sideways RAM boards will be beavering away in hundreds of schools and thousands of homes.
They are being joined by thousands of Solidisk DDFS each month. Soon, we hope, they will all be linked together by Solidisk Single Chip MODEM.
To support the users, a network of Solidisk Local Experts, covering the UK, Holland, France, Australia and Israel has been set up and expanding. Providing fitting and software for free.





SOLIDISK DOUBLE DENSITY DFS 1.5:
Single and Double Density.
Automatic Density Selection.
1 or Twin Drives, 40 and 80 Tracks, Single and Double Sided.
Automatic 40 and 80 Track Selection.
31 Filenames.
Low Cost.

SOLIDISK DOUBLE DENSITY DFS 2.0:
Virtually Unlimited Number of Filenames.
Automatic Tape to Disk.
Built-in Disk Fix and Disk Sector Editor.
Built-in Wordprocessor.
Does not Require DNFS With Z80 and 6502 Second Processors.

SOLIDISK SIDEWAYS RAM:
Add from 16k to 256k bytes of RAM to the BBC 32k RAM.
Useable for running Sideways ROM Software.
Useable in Networks or on BBC with Disk Drive(s).
Compatible With All Acorn Existing Products.
Including Econet, Teletext, 6502 and Z80 Second Processors.
Compatible With Most Sideways ROM Software.
Available Multi User Licencing Agreement from Leading Software Houses.
Easily Expandable as Your Needs Grow.
Low Cost.
Free Installation if Required.
Very large User Base, Extensive Free Software.
Local Help by Solidisk Local Expert Network.
Free Membership to receive Periodic Newsletters.

COMING SOON:
SOLIDISK is at present developing a state of the art MODEM. This will be compatible with the CCITT V23 and BELL 202 transmission standards at speeds from 5 to 1200 Bauds and will be based on the TMS 3105 single chip FSK MODEM manufactured by TEXAS Instruments.
The price is expected to be £39.95 inclusive of VAT.

We need you and your help. To make Solidisk Users the largest BBC Users Group. To share good ideas and good ways to use them.

SOLIDISK TECHNOLOGY, 17 SWEYNE AVE, SOUTHEND-ON-SEA, ESSEX

THE SOLIDISK DOUBLE DENSITY DFS

If you take your Disk Systems seriously then there are very few viable alternatives to our new Double Density Filing System.

Anyone, with their ear to the ground, will probably have heard of the great shortage of the 8271 Floppy Disk Controller chip. This chip is, of course, the basis of all single density DFS upgrades for the BBC Microcomputer and is used extensively by Acorn, AMCOM and Watford Electronics in their respective DFS's.

This shortage can mean long delays or paying much inflated prices to obtain your Disk Upgrade.

Now, however, we at SOLIDISK have developed an alternative system with many advantages over the 8271 based upgrades. Not the least of these being continuation of supply of the FDC chip (Western Digital 1770) but, also, improvements in the speed and versatility of operation.

EASY TO INSTALL

The SOLIDISK DDFS comes complete with an easy to follow manual with step by step installation instructions, and can be fitted in just a few minutes by anyone with just the barest knowledge of the insides of their BBC.

The DFS contains just 4 IC's and 2 jumpers to be inserted and one link to be cut in the computer. This is compared to the usual upgrades which require 11 IC's to be fitted and the link to be cut.

EASY TO USE

The SOLIDISK DDFS Revision 1.5 contains many time and labour saving features. These include formatter, verifier, automatic density sensing, automatic 40/80 track switching and Single/Double Density mass copying etc.

COMPLETE CONTROL OVER THE DISK

SOLIDISK DDFS gives you complete control over your disk drive(s). You can use any combination of Single/Double Density, 40 or 80 tracks in one or two disk drives.

Every time the SOLIDISK DDFS accesses the disk it detects the density and the disc size in use and acts accordingly.
You can for example copy from a 40 to an 80 track disc on the same 80 track disk drive or even format a 40 track disk in an 80 track drive using the automatic disc size sensing in the DDFS. It is also possible to have one side of a disc formatted in Single Density and the other side in Double Density. Also copying between different densities is coped with automatically and, when using twin drives, is very fast.

GREATER DISC CAPACITY

When formatting a disk with the SOLIDISK DDFS you have a choice of the usual Single Density or the increased capacity Double Density.

Formatting in Single Density will leave your disk compatible with all other Single Density systems. However if the disk is formatted in Double Density it will have a 60% greater capacity than the equivalent size Single Density disk. This means that on an 80 track disk the capacity is increased from the usual 400 kbytes to 640 kbytes of storage. The Double Density Format used is, at present, unique to the SOLIDISK DDFS and provides 16 sectors per track as opposed to the usual 10 sectors in Single Density giving a 40% saving in media surface for a file of given length over Single Density.

INCREASED SPEED OF OPERATION

As mentioned previously a disk formatted in Double Density uses about 40% less disk space per given length of file than does a disk formatted in Single Density or alternatively it holds 60% more information per track. This allows the, already fast, SOLIDISK DDFS to run very fast in the Double Density mode as demonstrated in the benchmark test on the next page

BENCHMARK OUTSTANDING PERFORMANCE:

The table below shows the benchmark timing for STL DDFS 1.4. The benchmark consists of disk operations such as save and load a 16k program, open and close files, BPUT, BGET strings and numbers, format and verify a disk etc., and is available upon request, otherwise listed in Solidisk DDFS User Manual.

The benchmark tests B1 to B9 are the same as used by many reviewers. The time is expressed in seconds and parts of 100th of a second. The disk drives are twin 40/80 track double sided MITSUBISHI M4853, the diskettes are Verbatim Datalife MD 557 series, 96 TPI, double density, double sided, preverified to ensure that the media is free of all error and mechanical defects and containing solely the benchmark program. The test is loaded into memory, the drive motors are allowed to stop completely 2 seconds between tests, 10 timing samples are taken and the mean time is calculated automatically.
For example:

```
100 DEFFNb1:REM Save a 16k program.
110T% = TIME
120 *SAVE A 8000 +4000
130 = TIME - T%
```

Full listings are included in the User Manual.
This FN is called 10 times with 3 sec. interval, the mean result is printed as 'B1'.

BENCHMARK DESCRIPTION	S/D TIME	D/D TIME
B1 Save 16k	**2.62**	**1.43**
B2 Load 16k	**2.45**	**1.23**
B3 Openin and close 100 times	**20.70**	**20.16**
B4 Openout and print 1000 numbers (255)	**5.84**	**4.66**
B5 Openin and input 1000 numbers (255)	**4.72**	**4.14**
B6 Openout and print 100 80 bytes strings	**6.18**	**4.91**
B7 Openin and input 100 80 bytes strings	**4.90**	**4.31**
B8 BPUT 100 bytes (255)	**3.01**	**2.06**
B9 BGET 1000 bytes (255)	**1.88**	**1.52**

Note 1: Whenever a file is to be opened, STL DDFS automatically refreshes the disk directory, thus preventing erroneous disk change. Many other DFS's do not take the same care, although yielding a much shorter time, and this could accidentally stop the program.

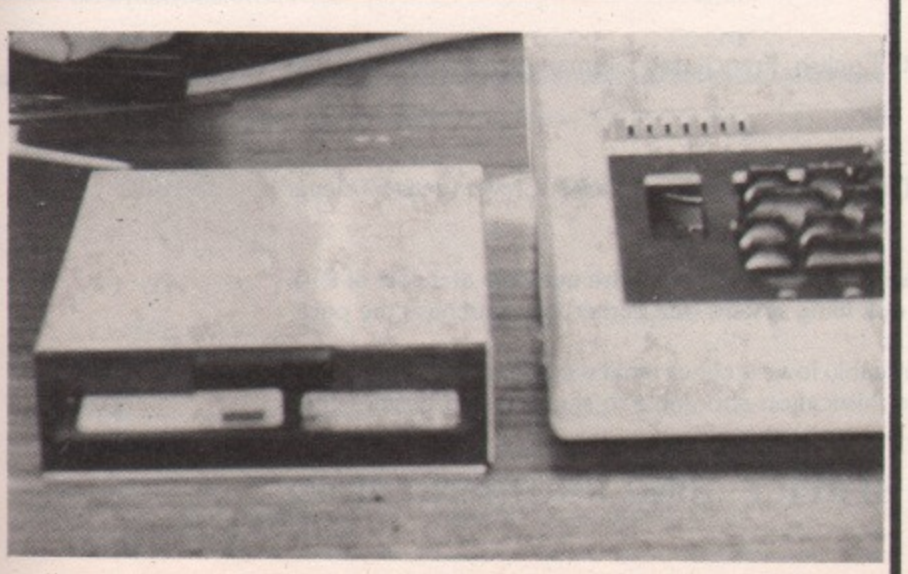
OPERATIONS	S/D TIME	D/D TIME
FORMAT 40 TRACKS:	**17.74**	**17.74**
FORMAT 80 TRACKS:	**33.22**	**33.22**
VERIFY 40 TRACKS:	**9.30**	**9.30**
VERIFY 80 TRACKS:	**17.84**	**17.84**
BACKUP 01 80 TRACKS:	**37.69**	**37.69**
BACKUP 02 80 TRACKS:	**39.46**	**39.46**
COMPACT 100K 10 FILES	**22.42**	**18.82**

With Wordwise:
Load 2000 words (17811 bytes) 16.80 sec. (41.40 sec. with AC).
With Scribe:
Count 2000 words (17811 bytes) 4.20 sec. (9.80 sec. with AC.90 DFS)
With Beebug's Masterfile:
Sort records 1 to 20 in PEOPLE sample database, the database is presorted on field 2 then the program is asked to sort on field 1, the time is then taken: 56.23 sec. (127.86 sec. with AC.90 DFS).
These timings are improved even further in double density mode.

The figures speak for themselves.

STL DDFS dramatically increases the operating speed of your software, including wordprocessors like Wordwise, View, Scribe, databases like Masterfile, Starbase etc.

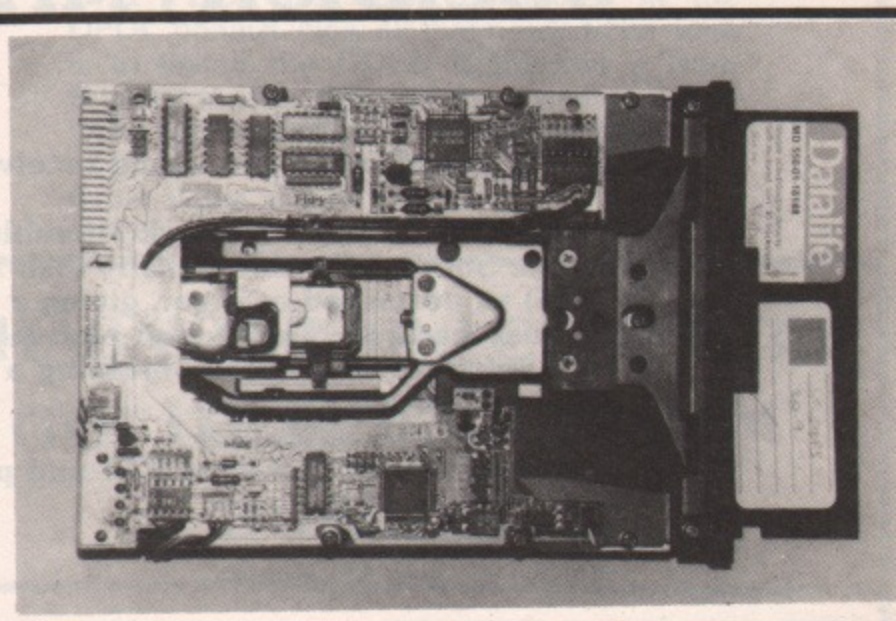
Solidisk engineers won't stop there.



MITSUBISHI DISK DRIVE:
From the new VLSI ultra quiet auto spin-up series comes the MITSUBISHI M4853. We have chosen it for its speed, quiet performance, low power consumption and state of the art design — look at the following features:
— new developments by Motorola and Mitsubishi largely reduce the area taken up by electronics, leaving more room for the diskette. This in turn implies lower noise levels and reduced friction on diskettes.

8 Slim 5.25" half height model attractively cased in BBC micro beige
— Reliability; we find that Mitsubishi compares most favourably with other makes
— Use your BBC own power supply —
— Single and double density available, plus ability ro read 40 track diskettes formatted elsewhere when used with our DFS.

Of course, we don't need to mention that all drives come complete with Dual leadds letting you add instantly a second disk drive and manual together with full guarantee on parts and labour.



EXTRA FEATURES OF SOLIDISK DDFS 2.0

With the production of the SOLIDISK DDFS 2.0 ROM we raise the already high standard of the previous DDFS 1.5 ROM.

The larger memory capacity of the DDFS 2.0 has allowed inclusion of a Wordprocessor and complete Disk Toolkit as well as a totally new concept in the working of the Disk Directory.

This will, we feel, make the SOLIDISK DDFS 2.0 ROM the most powerful Disk System currently available.

1) EXTENDED NUMBER OF FILENAMES
The standard number of filenames on the BBC microcomputer is limited to 31on most Single Density DFS's. This usually presents no problem on a system using 40 track drives but when using either 80 track drives and/or a Double Density Filing System this number will quite often be reached with a lot of the disk space still unused.

The SOLIDISK DDFS 2.0 ROM uses a unique and novel way to circumvent this shortcoming as every time a catalogue becomes full a new one is created. This gives the possibility of having up to 1502 filenames on a normal 80 Track Double Sided disk. Even with this large number of filenames worst case access taking only just over 2 seconds. Obviously with large files and a lesser number of filenames the access time decreases dramatically.

The way that the DDFS 2.0 ROM operates means that ordinary single catalogue discs are completely compatible with our system and, indeed, will be upgraded to multi catalogue once the number of filenames exceeds 31. This means no special formatting is necessary and that the disc remains compatible with other Single Density DFS's.

2) DISK TOOLKIT
Included on the SOLIDISK DDFS 2.0 ROM is a powerful disk repair facility. It is possible to read a complete track into memory and to repair or modify the data before restoring the track to the disk. If only one sector needs to be worked on then this too is possible with the Disk Sector Editor contained in the DDFS 2.0.

A powerful Disk Copy routine is also included to allow mmost non-standard format disks to be duplicated. This routine will also displaay the Sector I.D. Fields so that it is possible to see the makeup of the track being copied.

3) WORDPROCESSOR:
SOLIDISK DDFS 2.0 ROM contains a Word Processor with many excellent features such as 80 column screen, automatic on screen justification, Search and Replace, Block Move and Copy etc.

SOLIDISK+MITSUBISHI BIG DEAL:

This is exactly what you would receive:

— one double sided 80 track Mitsubishi M4853 disk drive, cased in beige.
— one Solidisk Double density disk interface (complete with STL DDFS 1.5 ROM) as described overleaf, giving a total capacity of 640K.
— Dual leads and instruction manual.
— 5 Software Diskettes containing a selection of the most prestigious programs written for the BBC.
— full one year guarantee.
—all for £209.95 including VAT and post and packing.

THE HARDWARE:
As described earlier and opposite.

THE SOFTWARE:
A selection of 6 programs based on ease of use, and popularity. All efforts are made so that you would not have to read the manual twice.
All programs feature on screen help (word processor) or option menus throughout. Mode 3 is used throughout whenever possible for good visual representation.

— Solicalc —
A Disc Based electronic spreadsheet made only possible with the speed of Solidisk DDFS. The sheet size can be as big as 170 kbytes. Written in modules, it is easily upgradable. Mode 3 screen. Goto, Calculate, Replicate, Automatic Header etc.

— Solidisk Datafile —
A fast, efficient and random access Database. Solidisk Datafile features:
— Compact size.
— 80 column screen throughout.
— 15 fields of 60 characters per card.
— Unlimited number of cards.
— Powerful Screen Editing allowing VERY FAST data entry on new cards or data correction on old cards.
— All Maths functions on ALL fields admitting Symbolic Variables (like A, B, C, D etc) for entering formulae.
— Special SORT program making use of any free disk space to avoid swapping cards.
— Standard options include View, Print using Tabulation, Print Labels, Search on any number of criteria and repeat on count, Amend, Create, Spool to disk, Append and Mailmerge with Solidisk Word Processor (requires EPSON compatible printer).
— Ability to read BEEBUG's Masterfile and possibly other systems later on.

— Solidisk wordprocessor —
On screen help, Wordstar style cursor editing and control keys, on screen justification while you type, Block commands, Quick commands and dot commands for mailmerge. Future development will allow reading Wordstar text from the Z80 second processor. Solidisk can offer Laser Typesetting and Page Planning service: it costs you only £1.00 for typesetting 1×A4 page (around 4,000 characters) from disk received by MODEM.

— Stock control —
useful for small businesses. Features include menu driven, easy to follow instructions, easy categorising. Stock evaluation reports and inventories, together with price lists and reorder forms can be printed automatically as requested.

— Silexicon — the most successful spelling checker with English, French and German dictionaries, together with self generating capability.

— Macrobasic —
a BASIC program generator capable of using bits of old programs to create new ones. Clever ideas — clever ideas of making them work!

Please note that this software is only free as prt of the package deal. It is otherwise avaiable at a cost of £14. Customers who would prefer the DFDC version of our disk filing system (see earlier) can purchase the package deal with this option for an extra £10.
What we may need to tell you is that the price is also agreeably low — check what we offer against any of our competitors — which all adds up to a high degree of sophistication affordable to students and businessmen alike.

INTRODUCING THE DFDC!

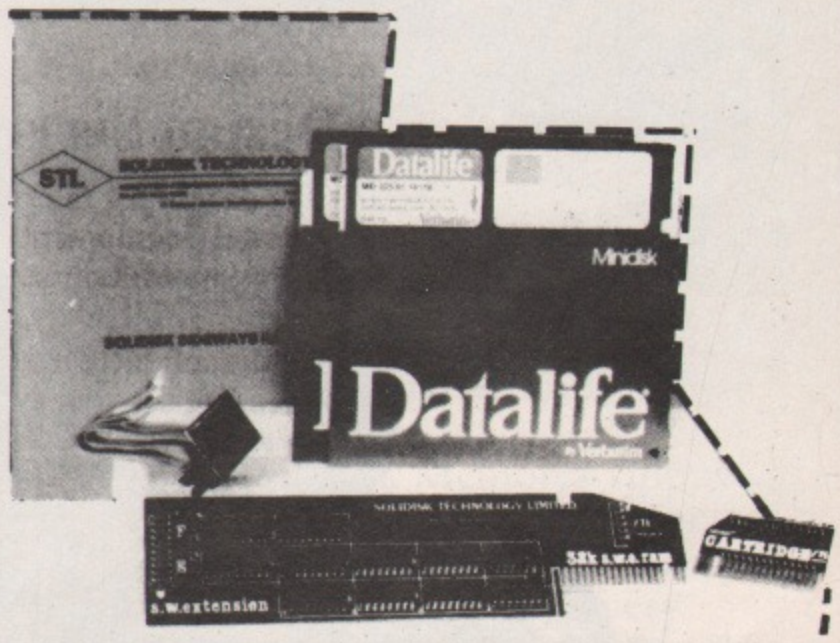
For those who already have the Acorn DDFS installed in their computer and would like the advantages of increased speed and storage capacity that Double Density systems offer SOLIDISK have introduced a totally new concept in the shape of the DFDC!

The DFDC board simply sits in place of the 8271 FDC, this being reinstalled in the DFDC boaard. Now all that needs to be done is to install the DDFS ROM into a Rom Socket, to the right of the existing Acorn DFS, and two other minor connections.

Great Value at £49.95 inc.

HAS YOUR BBC COMPUTER GOT ITS SIDEWAYS RAM BOARD YET?

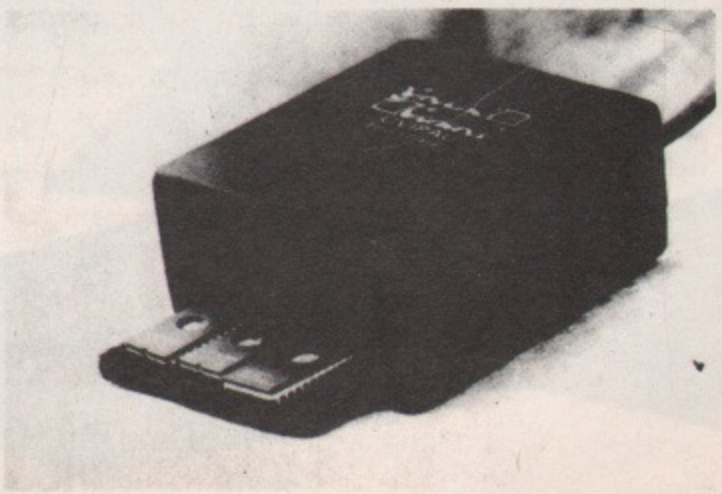
"Break the Ram Barrier" (A&B)



HOW TO ORDER?

You can order any item using the coupon. Prices are inclusive of VAT, post and packing. Access and Barclay card holders can place their order by phone.
Educational authorities, Acorn dealers and OEMs can obtain quantity discounts.

OTHER PRODUCTS FROM SOLIDISK:
UVIPAC EPROM ERASER:



Herbie Briggs has just destroyed the myth that all floppy discs are created equal.

They seem equal. Until you look at the seams.

That's where equality ends.

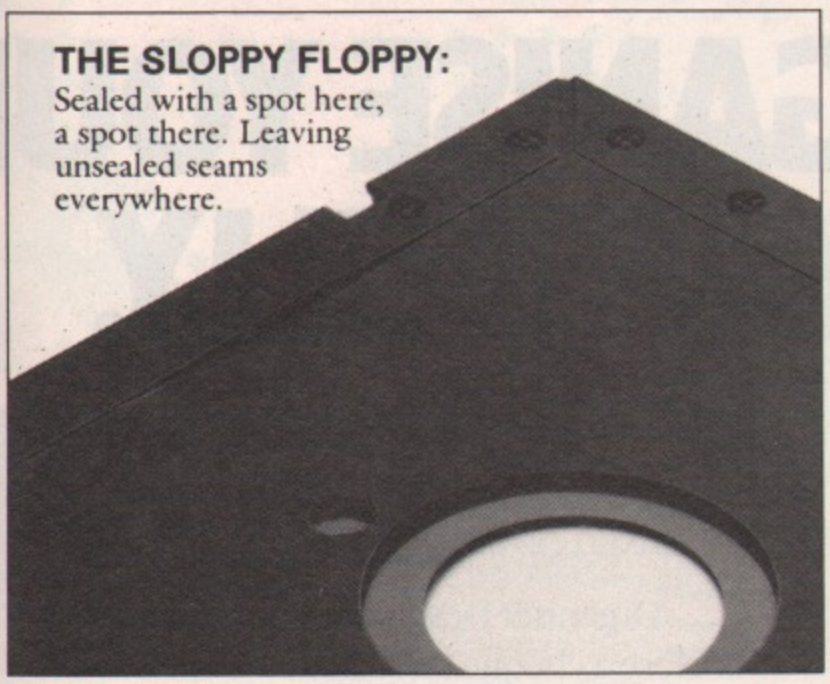
Most companies seal their discs with a spot here, a spot there. Leaving most of each seam not sealed at all.

Sooner or later, the seams might do what comes naturally: they bulge. Warp. Pucker. Open up.

Pens, pencils, fingernails—even a four-year-old's, like Herbie—can catch and snag in those wide open spaces.

That's sloppy. And dangerous. Because if you put a sloppy floppy into your disc drive, it can jam your drive. Ruin your drive head. Lose your data.

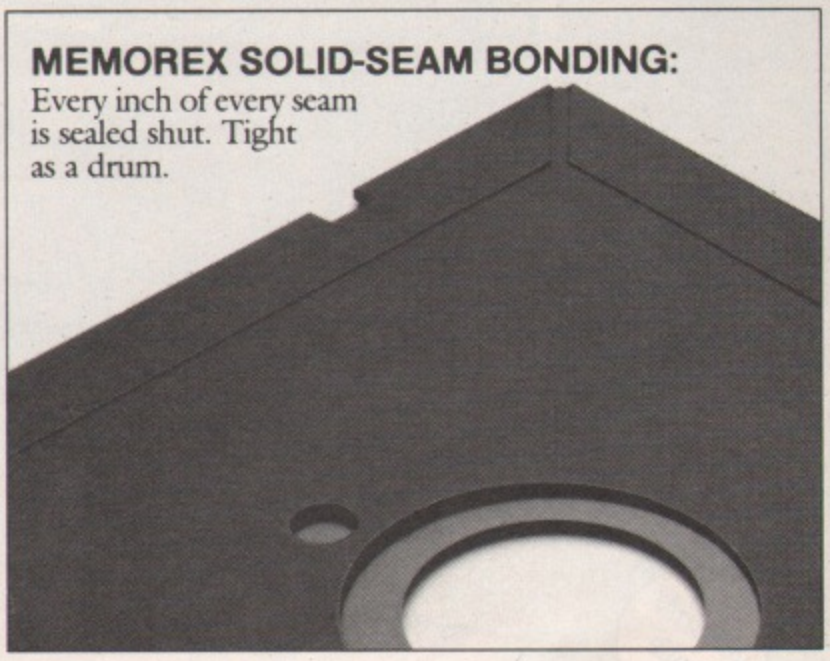
So much for their seams. Ours are different.



Memorex uses a process we developed, called Solid-Seam Bonding.

Solid-Seam Bonding seals shut every inch of every seam of every Memorex® floppy disc. Tight as a drum. That makes the Memorex floppy stiffer. Stronger. And your data safer.

To resist bulging, warping, puckering, or opening up.



To resist all the things that can jam your drive, ruin your drive head, or lose your data.

Which proves that a Memorex floppy disc isn't equal to all the others. It's better.

Solid-Seam Bonding is just one example of the extra care that goes into every Memorex floppy disc. Be it 8," 5¼" or the new 3½." Extra care that lets us guarantee every Memorex disc to be 100% error-free.

The next time you're buying a floppy disc—or a few hundred of them—just remember this:

It's always better to be safe than sloppy.

For more information on the full line of Memorex quality computer media products, including computer tape, call Memorex U.K. Ltd., 96-104 Church Street, Staines, Middlesex. Tel: 0784 51488

TAKE A TEST FROM THE RANGE

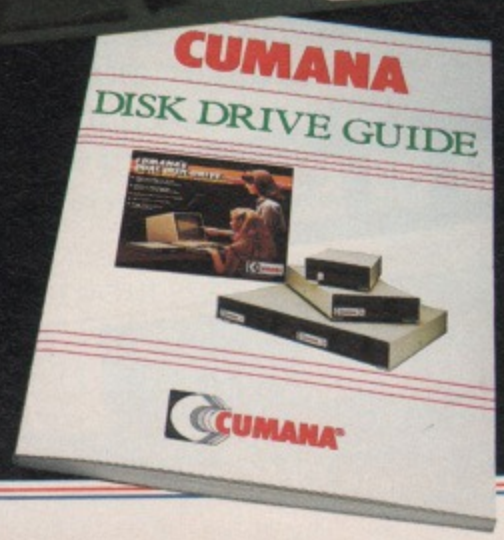
So now you have got your home computer, you're ready to talk to Cumana – the best name in memory. Already a market leader throughout Europe for their range of disc drives, Cumana now have other products on offer, all to the same exacting standards that have made their disc drives the number one choice in the home and in education.

The Touch Pad

The Touch Pad is a low-cost graphic plotting aid for the BBC micro. This compact display cursor moving device simplifies programming with the touch of the stylus.

The product comes complete with an instruction booklet, basic software, stylus and connecting cable. Its uses are in graphics, computer aided design, education and games.

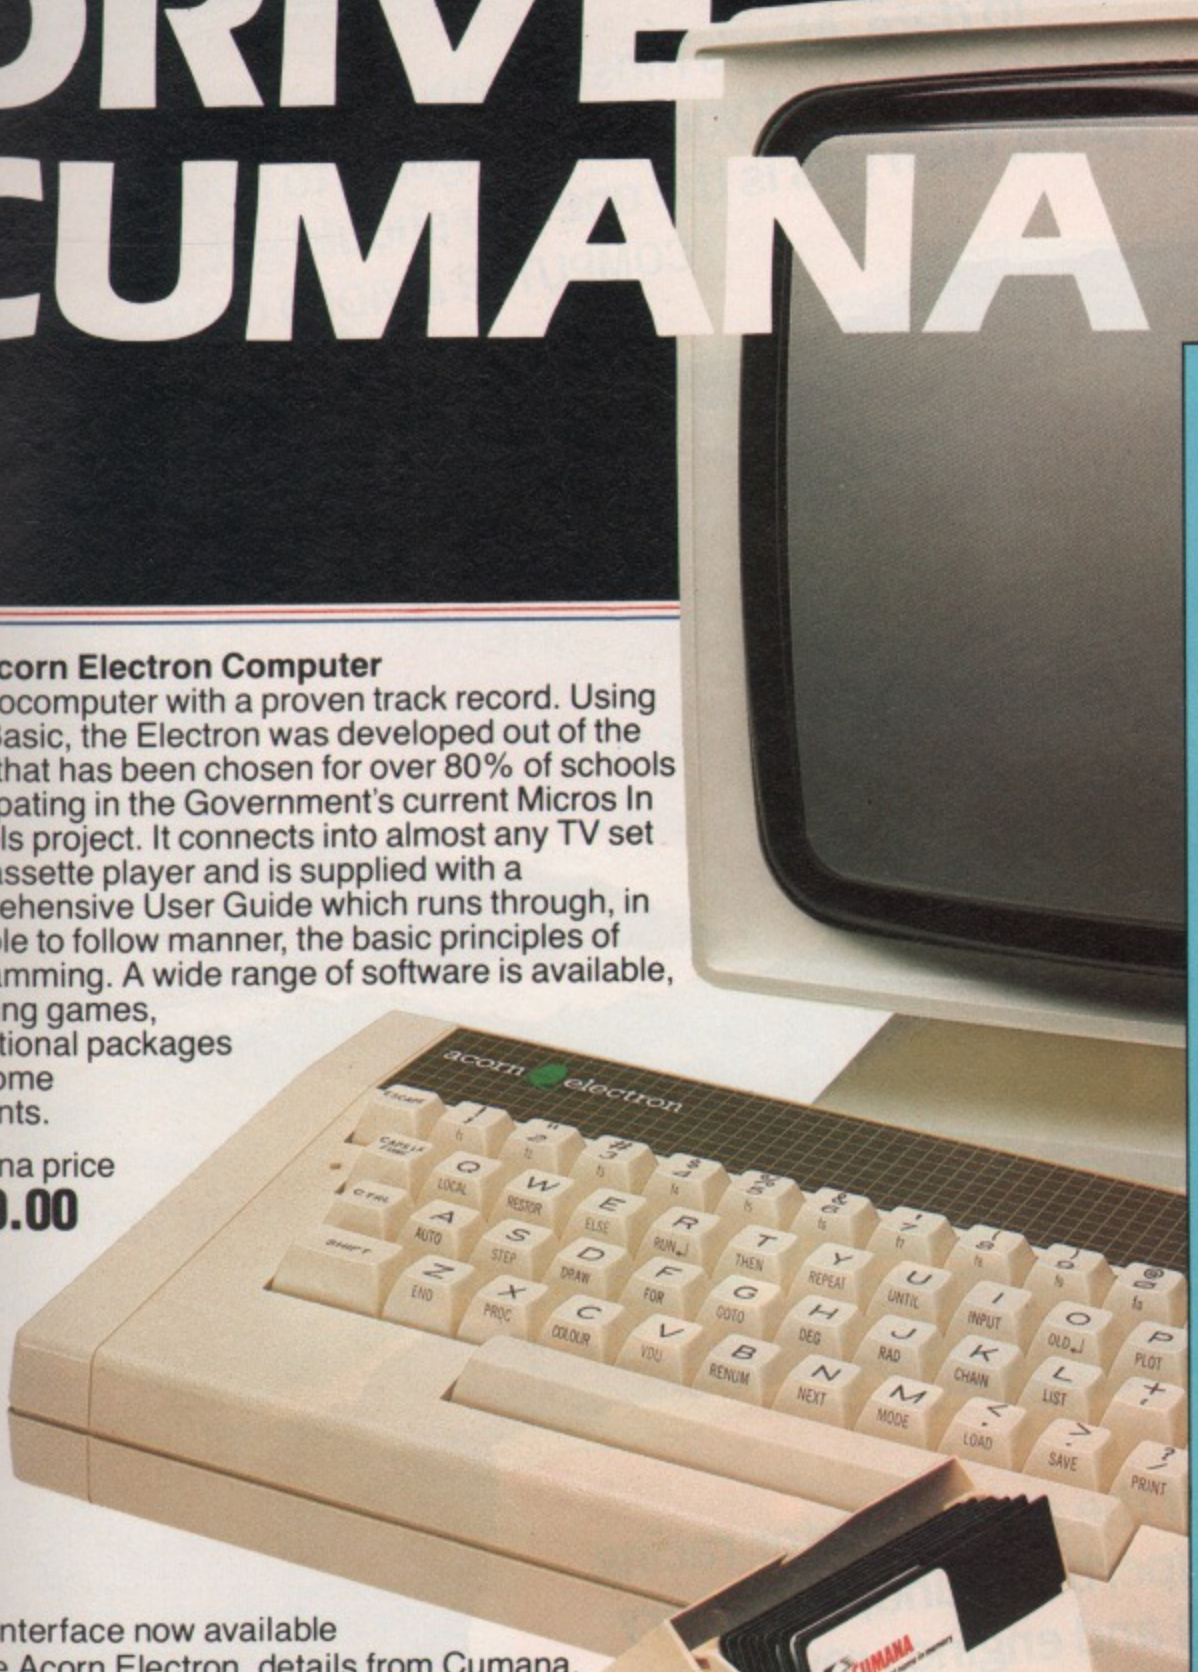
£69.95
including VAT.



Disc Drives

Cumana have spent years on research, development and marketing a range of drives second to none. Their drives are compatible with BBC, Spectrum, Dragon, Oric, Tandy Models I,II, III and 4 and Video Genie. They are fully guaranteed for 12 months and approved for electrical safety by the D.M.E.E. and are extensively used in GLC and ILEA establishments. Cumana were the first independent disc drive supplier and are now Europe's market leader. Their products have been proven in the schools, universities and homes throughout Europe. Let us drive you in the right direction, send now for further details of the Cumana range, or see them at our distributors and at selected branches of W.H. Smith, Lasky's, Greens, Currys, and Spectrum UK.

DRIVE CUMANA



The Acorn Electron Computer
A microcomputer with a proven track record. Using BBC Basic, the Electron was developed out of the Micro that has been chosen for over 80% of schools participating in the Government's current Micros In Schools project. It connects into almost any TV set and cassette player and is supplied with a comprehensive User Guide which runs through, in a simple to follow manner, the basic principles of programming. A wide range of software is available, including games, educational packages and home accounts.

Cumana price
£199.00

Disk interface now available for the Acorn Electron, details from Cumana.

Diskettes
Only when Cumana found a double density diskette up to their stringent quality control requirements, and at a price that made sense to the end user, were Cumana ready to put their name to it.

The result was a top quality diskette, complete with a plastic protective case for the ten-pack (they are also sold in two-packs!) together with index stickers.

Cumana diskettes are available now in both 5¼ inch and 3½ inch as single or double-sided, 40 or 80 track, from your local computer dealer. Don't trust it to chance, go for the best name on record.

Cumana BBC Microcomputer compatible disk drives: retail price list.

Cumana disk drives supplied with formatting diskette, drive connecting cable and comprehensive user manual. Independent power supply, mains lead and moulded plug included.

Dealer Enquiries Welcome

Access a world of Information
WITH YOUR BBC MICRO

Today, there are literally hundreds of databases worldwide which can be accessed by your BBC micro. These include Prestel, Micronet, Homelink, Telecom Gold, various 'Bulletin Boards' and massive American data bases such as 'The Source' and 'DIALOG'. The equipment can also be used to send telex messages. The Pace range of inexpensive communications products are designed to provide accurate data exchange whilst being extremely flexible and easy to use.

NIGHTINGALE - The Modem

Nightingale is by far the most versatile modem available, at the price, for either home or business use. It offers Prestel/Viewdata baud rates (1200/75 & 75/1200) alongside 300/300 baud full duplex for communication between the BBC and other computers, including bulletin boards.

Nightingale has a built-in expansion capability, allowing the addition of auto-answer and auto-dial with battery back-up. The state-of-the-art modem chip technology employed in Nightingale requires minimal support circuitry resulting in low power consumption, low cost, high quality and extreme reliability.

Nightingale being 'hard wired' is not subject to the noise interference errors common to outdated acoustically coupled devices. In addition Nightingale features a simple self-test facility for easy installation.

Nightingale utilises a fully buffered RS 423/232 serial interface and is supplied complete with a lead suitable for connection to the BBC micro, other leads are available on request.

In order to use a versatile modem like Nightingale to its fullest potential, you will require equally sophisticated software. This is where Pace can offer you a total solution — Commstar, unquestionably the most comprehensive communications software available for the BBC.

Commstar is currently the only package for the BBC micro which offers easy access to Prestel (and other viewdata services), together with user to user communication and exceptional file transfer capabilities.

Supplied on Eprom, Commstar is instantly accessible, simple to use and extremely flexible. Just look at the possibilities:- access Prestel, Micronet, Viewfax, Homelink and Telecom Gold, rummage through bulletin boards and chat to literally thousands of other computer users, but there's more. Commstar's versatility enables the BBC to be used as an inexpensive work station for a main frame or mini-computer.

COMMSTAR - The Software

The complete Nightingale/Commstar package for the BBC micro including the modem, cabling and the Commstar Eprom and manual is just £139 plus V.A.T.

Nightingale is available separately for the BBC and other computers at £119 plus V.A.T. and Commstar is £29.57 plus V.A.T. Further details are available, please telephone or write for comprehensive fact sheets.

SPECIAL INTRODUCTORY OFFER

For a limited period, when you order the Nightingale modem you will receive discount vouchers entitling you to the following:-

KNOWLEDGE-INDEX

20% discount off standard enrolment fee (normally £25)

This remarkable collection of databases includes over 22,000,000 items covering Agriculture, Books, Business, Electronics and Computing, Corporate and Company News, Education, Engineering, Government Publications, Legal Information, Magazine Articles, Mathematics, Medicine and News/ Current Affairs (The enrolment fee also includes 2 hours of free access time).

one to one

50% discount off standard enrolment fee (normally £50)

One to one is an electronic message service designed to give you the communications capabilities of a telex at much lower cost. By using your micro fitted with a Nightingale modem you can produce telexes, letters, reports and contracts, and send them in seconds to any destination. Courier delivery, priority mail and radio paging are also included in this highly efficient communications service.

THE MICRO USER
JANUARY 1985
NEWS

ATARI GUARDS ITS CASTLES

A LEADING UK software house, MRM of Grimsby, has fallen foul of the giant Atari Corporation in a dispute over a game for the BBC Micro.

Atari has taken action to protect its Crystal Castles computer software on the basis that MRM Software's Castle of Gems contained substantial similarities to the Crystal Castles program.

MRM has given permanent legal undertakings to Atari not to make, advertise or sell Castle of Gems or any other video game not by Atari which is a colourable imitation of Crystal Castles.

Carry on doctor deal

ACORN has hit back at criticism from dealers over its decision to sell a new package direct to doctors.

"We have just entered the medical market", said a spokesman, "so we want to be as competitive as possible. This means we have to keep margins low.

"If we did sell the package through dealers the profit to them would not be worth their while".

This marketing strategy makes sense, claims Acorn, because the medical market is virtually non-existent at present.

According to the company only about one doctor in 30 at present uses a micro. So in what is virtually a test market, the price has to be low to attract volume sales.

Acorn says that if the market takes off the product may be switched to dealers.

The package combines hardware and software in a starter system which can be expanded.

For £1,999 it offers a patient records system, repeat prescriptions and word processing, complete with supporting hardware – BBC Micro, double disc drive, monitor and printer.

It is available from Acorn's own distribution arm, Vector Marketing.

VIVA ESPANA FOR BBC MICRO?

ACORN is poised to grab a slice of the untapped educational micro market in Spain, estimated to be worth in excess of £100 million.

The company has already held top level discussions with senior Spanish officials during a recent meeting organised by ExportIT, the British information technology export organisation.

At that get-together it was revealed that the hardware requirement alone for Spanish schools and colleges is more than 300,000 micros.

"It will certainly be a case of Viva Espana for the company that clinches this deal", a British Government spokesman told *The Micro User*.

"The Spanish market is like the British one of five years ago, with the government there now fully committed to putting micros into its schools".

Acorn, as manufacturer of the bestselling educational micro in the UK, regards itself as being uniquely placed to penetrate the lucrative Spanish market.

But the company is not being complacent about the situation.

"We don't necessarily expect to be the automatic choice for the Spanish", admitted an Acorn spokesman.

"But the BBC Micro is already well established in education and is therefore the natural machine for the job".

Network

Nor did the man from Acorn view the fact that the company does not have a distributor network in Spain as presenting a problem.

"Because of our educational bias, we tend to go direct to government ministries, rather than setting up a distribution network", he explained.

However Acorn cannot expect to have it all its own way when it comes to Spain. Other companies are also known to be eyeing the new market.

Sinclair intends to pull out all stops to ensure that its Spectrum Plus machine finds favour in Spain.

Also snapping at Acorn's heels is Research Machines of Oxford, whose RML computer has a stronghold in inner London schools.

This company has plans for the Spanish market, according to export marketing manager Ian Thomas.

Surprisingly Dragon, which set up a manufacturing operation in Spain last July after the British company stopped trading, is not being seen as a serious contender.

Although earlier reports indicated that the Dragon might be adopted as the official schools micro in Spain, it is now believed that lack of software will rule it out.

"The competition is going to be tough, but we feel we are in with an excellent chance", insisted the Acorn spokesman.

PROGRAMMES PLAN

THE BBC is planning to get a foothold in Spain by selling its computer-related TV programmes. Contacted by *The Micro User*, a spokesman for BBC Enterprises said: "The Spanish are very seriously considering acquiring a video library on microcomputer topics".

The videos would be held by the education ministry and made available to schools and colleges.

ACORN SHRUGS OFF THREAT

ACORN is confident it can beat off any challenge to the BBC Micro's supremacy in the education market from the new Amstrad CPC464. Amstrad has mounted a campaign through its educational distributor Northern Computers aimed at Britain's 35,000 schools and colleges.

It claims it can supply 18 Amstrads with colour monitors for the same price as 10 similar BBC systems and has promised Econet interface and language and CP/M compatibility early this year.

But an Acorn spokesman told *The Micro User:* "Allegiance to the BBC Micro is very strong – it is still outstanding in networking terms for cost. In addition, our machines are in 74 per cent of schools and colleges.

"RML machines and Spectrums are in about 18 and 16 per cent respectively.

"It is extremely debatable that a fourth machine could make any significant inroads in the education market, particularly one with limited software and peripherals".

Jobs going begging in viewdata

THE boom in viewdata systems is creating plenty of jobs, but schools and colleges aren't turning out the people to fill them.

This is the claim of Information Technology and Marketing, who supplied the software for the highly successful BBC Micro driven viewdata system at the Liverpool International Garden Festival.

Sales manager Dave Phillips told *The Micro User:* "Dozens of editors will be needed in the next few months for the viewdata systems we alone are installing.

"Add to that all the systems installed by other firms and we are looking at hundreds of job opportunities for trained viewdata operators.

"At the moment the schools and colleges haven't woken up to this fact.

"We need to get this sort of training on the curriculum in more educational establishments so that youngsters can fill these jobs".

Already more than 2,000 schools and colleges are using the Edfax teletext emulator from Tecmedia – but mainly as an electronic notice board, not as a training tool.

KEYWORD WINNERS

WINNERS of the "Name the Keyword" competition in the October issue of *The Micro User* were J. Koorts, of Evesham, Jonathan Lewis, of Fradley, near Lichfield, and T.F. Jones, of Chatham.

Each receives an external ROM board manufactured by Micro Pulse.

Top software goes on 3in discs

GOOD news for BBC Micro users. The best selling range of software from Database is now available on hard wearing 3in discs.

Popular games like Micro Olympics and The Magic Sword and the monthly offerings from *The Micro User* plus practical programs like Mini Office are included.

Prices are £2 more than the 5¼in disc versions.

The order form is on Page 197.

Acorn go on record

Computer answers back

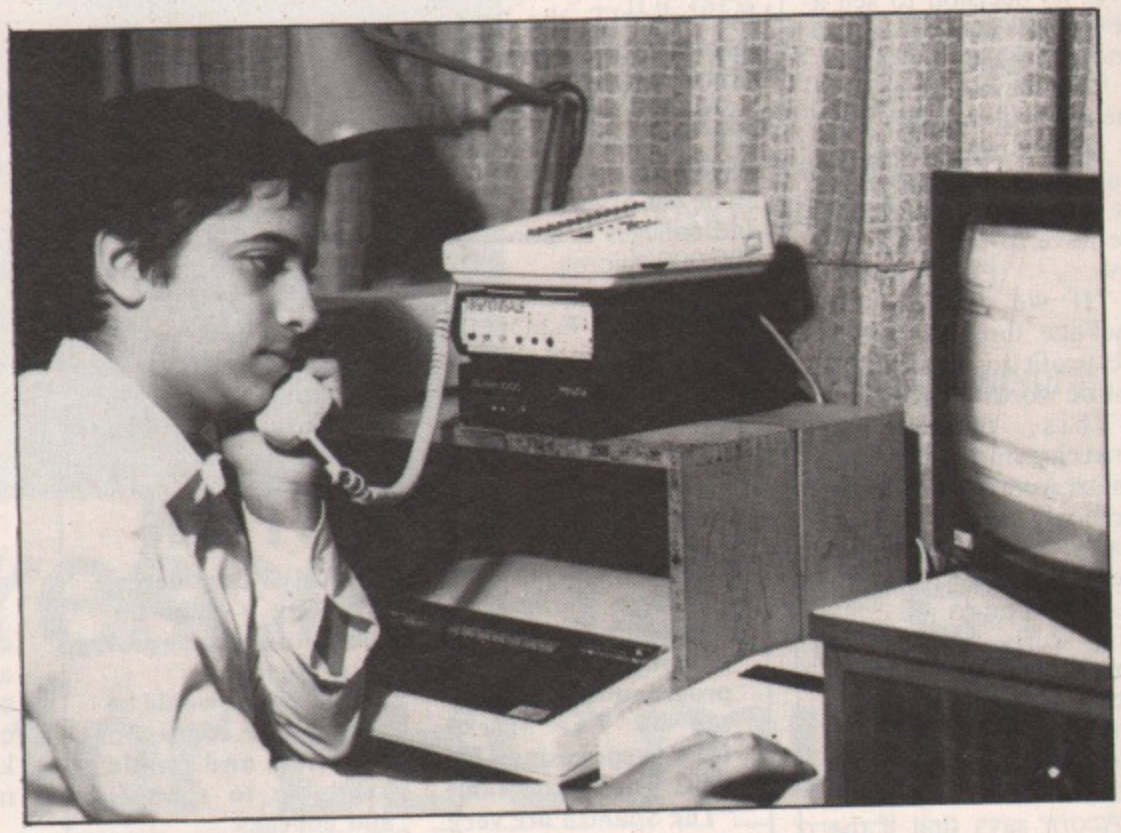
A TALKING computer facility is featured in Micro English, a complete English O-level course for the BBC Micro from LCL.

The 24 programs come with an audio cassette controlled by the micro and synchronised to 1/100th of a second – enabling the computer to talk to the student as well as communicating via the monitor.

This creation of a conventional teacher-pupil situation makes the programs of particular benefit to those learning English as a foreign language.

Adhering closely to the O-level exam, the course emphasises the rules of English and their application in practice, with nearly 600 questions set for either normal or multiple choice answers.

The course, priced £24.50, consists of either two discs plus audio cassette or program and audio cassettes in the tape version.



Ben, 14, is the brain behind Tubelink

HOMEWORK done, you won't find Benjamin Rietti kicking a ball about with his North London schoolmates and dreaming of playing for Arsenal or Spurs.

Instead he'll be bent over his keyboard helping BBC Micro owners get the most out of their machines.

Benjamin, a 14-year-old fourth former at Hasmonean Grammar School, Hendon, is editor of the magazine/database Tubelink on Prestel 258216.

It provides a wealth of information about the BBC Micro, updated at least once a week, with special emphasis on second processor users.

Its many sections include hints and tips, latest news in the "Beeb World", reviews, letters and a Tubers' directory.

There is also a comprehensive software library containing many useful programs which can be downloaded from Tubelink. Many are free although some carry a small charge.

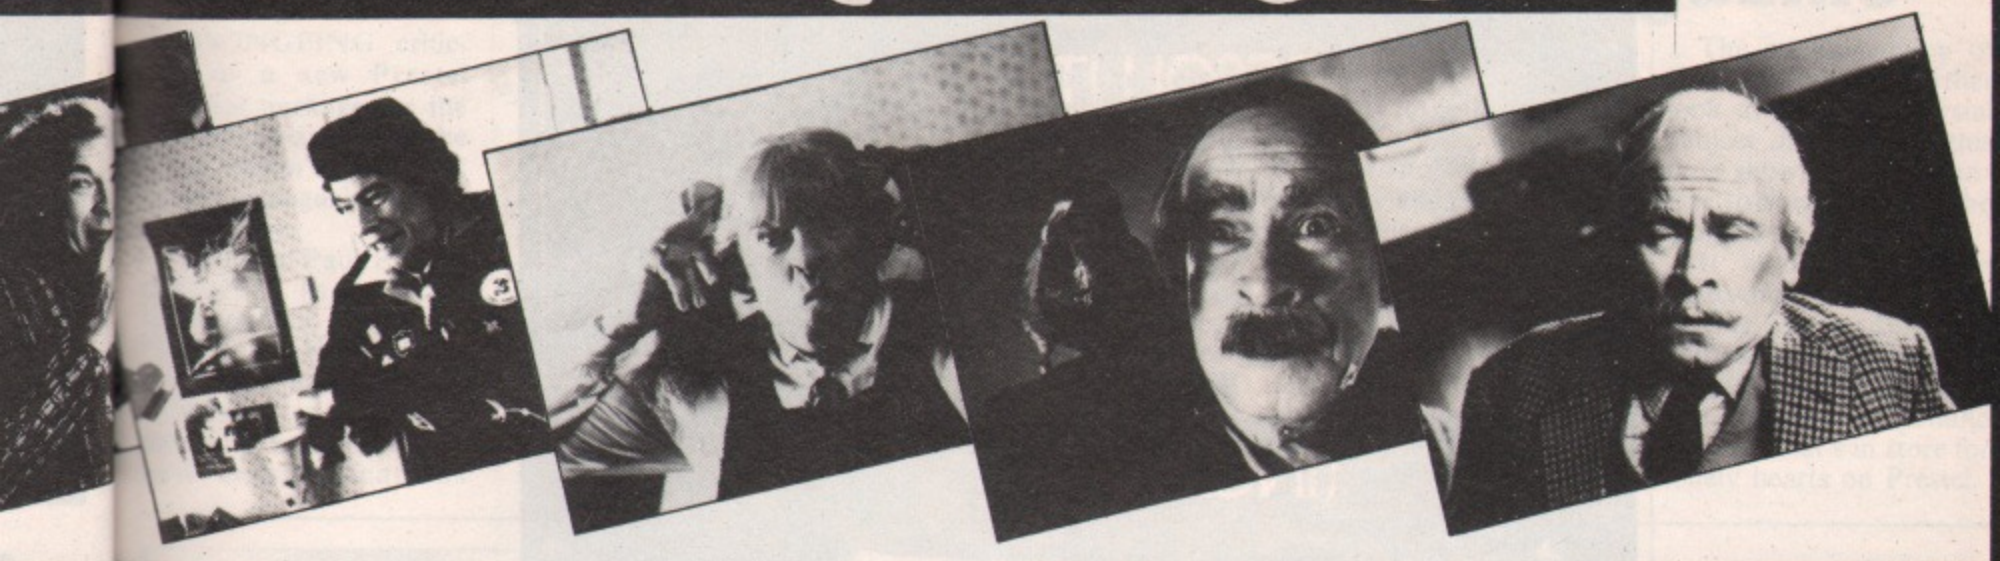
One of the largest sections of Tubelink is "Will it or won't it?" which lists all the ROMs that will or will not work with second processors.

Almost every ROM on the market is said to be listed, together with programs that also appear to be Tube compatible.

Tubelink is interactive in that its expert contributors will try to solve problems for BBC Micro users. And the directory allows Tubers to communicate with each other and exchange views and information about computing.

Benjamin himself likes to hear from Tubers via his mailbox – 919991892. "Feedback helps me to make Tubelink even more useful", he says.

rd Christmas spending spree



... aided by comedian Stanley Baxter

A RECORD total of £4.5 million was earmarked to be spent on promotion by Acorn at Christmas.

Gwyn Matthews, the company's new marketing manager, confirmed that the subject of sales over the 1984 festive season had been taken "very seriously".

For the first time Acorn aimed the major thrust of its campaign at "non-middle class parents not living in the South East" – both considered key factors for relatively low micro ownership.

Television and cinema advertising accounted for £2.1 million of the total promotional big spend.

Based on the theme of the "versatile micro", the scripts featured Scottish comedian and impersonator Stanley Baxter in a variety of character roles.

Both the large and small screen promotions were allocated the backing of a 1,000 site per month poster campaign.

On the software front, Acornsoft launched more than 20 new products supported by a £310,000 advertising campaign to boost Christmas sales.

Elite, Acornsoft's flagship title, figured prominently in the seasonal push and the company claims that it achieved a first by becoming the first game to have been used directly in selling micros.

Diet on chips!

PEOPLE with weight problems can now turn to their BBC Micro for advice.

Watch Your Weight from Acornsoft is being launched as a personal weight-loss program featuring a calorie-controlled diet and a series of menu suggestions.

The user enters personal details such as height, weight, sex and so on into the program and gets a graphical illustration of whether he is over-weight, under-weight or average.

For people who fall into the dreaded over-weight section, Watch Your Weight suggest it is time to go on a diet.

Watch Your Weight is published jointly with the Consumers Association and is available on cassette at £11.90.

Acorn shows the flag

ACORN was represented in Turkey for the first time this year at the country's biggest annual trade fair in Izmir.

Turkish distributor MAD Computers had a stand at the British Pavilion.

During the month-long fair, the Acorn stand was visited by 300,000 people, including ministers, ambassadors, university professors, teachers and businessmen.

A special British day was organised during the fair and the Acorn stand was one of the main attractions.

Turkey, a country of 50 million people, with 27 universities, 48,000 primary schools and 7,300 secondary schools, is forecast to be a substantial market for Acorn products.

Some schools are already using BBC and Electron micros. Small and medium sized businesses are also showing a keen interest because of the competitive prices of Acorn products.

Watch on stocks

WHO wants to be a millionaire? BBC Micro owners who like to play the stock market can now buy a software package to keep records of share price movements.

By keeping charts of share fluctuations, price watchers can identify short, medium and long term moves up or down, which can then be turned into profit.

At one time this was done with pencil and paper. Later it was computerised on mainframes.

Now a chart analysis company and a software firm have combined to develop a system for the BBC Micro.

The Microvest system is claimed to highlight trends, buy/sell signals and turning points.

And to save the user from having to enter his own historical share price data, the company provides it on floppy disc – freshly recorded from a central data base. The disc can then be updated week by week.

TECQUIPMENT International of Nottingham has won an order from the Open University for 150 of its new educational robots, the MA2000 which can be driven by the BBC Micro.

Structure analysers

THREE structural analysis programs for the BBC Micro have been produced by Microstructures.

Beam provides analysis for a continuous beam of up to six spans and up to 10 loads per span.

Portal provides plastic analysis for pin-base single storey portal frames, and *Panel* handles analysis of laterally loaded wall panels.

Priced £25 each, the programs are on cassette and disc.

HIGH RESOLUTION THAT COMES HIGHLY RECOMMENDED.

"There is no doubt that the JVC range of ECM colour monitors is excellent value for money . . . there is no loss in quality of picture after long periods . . . and remember, as more and more resolution is available with new micros, the need for a better display will be that much greater."

High recommendation indeed from Personal Computer News. Meanwhile Acorn User said:

"It seems that all 'normal' and 'medium' resolution monitors, including the Sanyo, are simply inadequate to deal with the Beeb's graphics and text output . . . The JVC was excellent, giving clear, legible results . . . Was the JVC better than the Microvitec?* Would I buy one? Yes to both questions."

Our RGB high resolution colour monitor (580 × 470 pixels) sells for £249.95 (including VAT) – that's a saving of over £100 compared with other leading monitors of similar specifications.

The unit has a 14" screen and is suitable for the BBC Micro, Electron, Sinclair QL, Lynx, Oric, Apple, IBM and most other leading micros.

STOP PRESS:

PRICE INCLUDES VAT, LEADS AND CARRIAGE.
THIS IS THE LOWEST PRICE ON THE MARKET, FOR IT'S PERFORMANCE.

And naturally there's a year's full guarantee.

If you order your monitor by post, you'll receive it within ten days by courier service.

Simply post the coupon below to: Opus Supplies Ltd 158 Camberwell Road, London SE5 0EE. Or telephone 01-701 8668 quoting your credit card number. Or, of course, you can buy at our showroom between 9.00–5.30pm, Monday to Friday.

Protek package slammed in new magazine

A SWINGEING criticism of a new Prestel terminal package for the BBC Micro appears in the latest edition of *TeleLink* – a sister magazine to *The Micro User*.

Reviewer Paul Procter describes the £19.95 software from Protek as: "The worst I've encountered for that machine".

He goes on to write in the second edition of the new communications magazine: "The youngest trainee programmer is taught the importance of the ability of a program to survive the unpredictability of data input from the outside world.

"The Protek software crashes with alarming regularity, the only corrective course of action being to start from scratch and reload the software from tape or disc".

Nor is the reviewer happy with the telesoftware capability.

"Its telesoftware functions are also depressingly inadequate", he insists.

"Line noise corrupting the telesoftware end-of-frame marker causes the software to hang, as does the absence of a header block.

"Attempts at software downloading, whether successful or not, overwrite the terminal software so you must reload it to go back onto Prestel".

In conclusion, the reviewer adds:

"I believe that micro users should expect terminal software ... to perform as well as a dedicated Prestel terminal and that its extra facilities should be robust and easy to use. Both these expectations are unfulfilled".

The second edition of *TeleLink* takes a further look at the controversial subject of hackers – this time showing how security loopholes can be plugged.

It also contains an up-to-date guide on the latest in modems, a glimpse of what the home of the future may look like, and takes a first hand look at what's in store for lonely hearts on Prestel.

Nigel Short – 'only a few anxious moments'

Nigel unbeaten

IT was almost a complete whitewash when Nigel Short – the world's youngest chess grandmaster – pitted his wits against 25 BBC Micros recently.

Adjudicator Commander John Peters of the British Chess Federation ruled that the youngster had defeated 23 machines and drawn with two.

However Nigel, the current British champion, wasn't entirely satisfied with this, informing onlookers that he thought he had been beaten by the clock.

The unique confrontation between boy and machine took place in the Fratton branch of the Portsea Island Co-operative Society.

All the micros used White Knight Software Mark II.

At the conclusion of the three hour contest, Nigel conceded that the chess program had given him "a few anxious moments".

Going fishing – take your BBC Micro!

THE BBC Micro, aided by peripheral specialist Cambridge Systems Technology, has come to the rescue of a fishing tackle manufacturer who needed to compile statistics on rod performance under load.

Advanced Angling Technology produces fishing rods but was unable to analyse the casting and striking characteristics of glass-fibre and carbon rods accurately.

So a local computer consultant called in CST to design the hardware and software.

The package, Right Angle, is built around the BBC Micro.

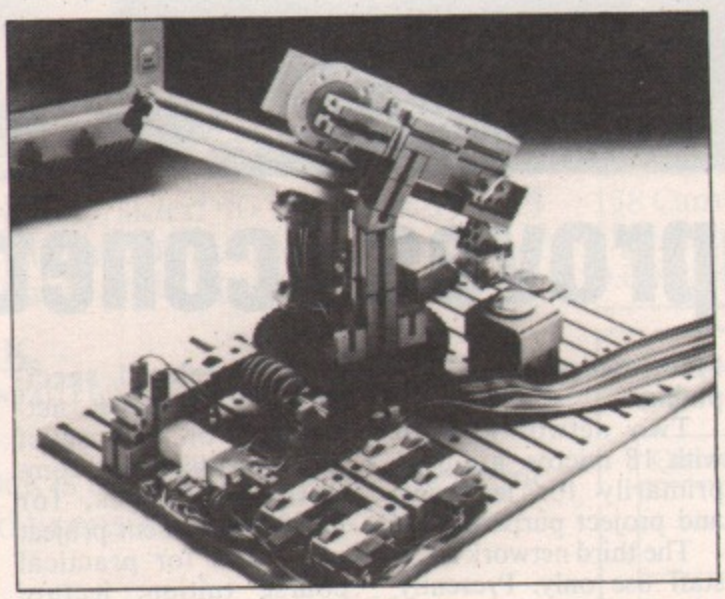
Using a customised database on a single disc drive the company wrote a routine to allow data to be loaded and referenced against specific enquiries on rod performance.

The business end of the package uses CST's Procyon IEEE-488 interface to load performance information into the database. The Procyon receives data from strain gauges mounted on the rod.

These detect the slightest bend and allow the software to draw an on-screen profile of the curve of the blank.

CST are now working on a radio link between rod and control box which will allow the equipment to be used at the waterside, with a specially packaged micro resting safely under an angler's large umbrella!

Six different robots in one



Fischertechniki's robotics kit

THE Fischertechnik building system provides a method of teaching simple robotics concepts and control theory with the aid of a BBC Micro.

The package contains all components needed to build six different robots. Each can then be broken down and reassembled into any of the others.

The six forms are a telescopic teach-in robot arm, a graphics board for music-making as well as drawing, a simple sorting machine, a lifting and sorting robot to solve the legendary Buddhist "Tower of Hanoi" problem, a plotter which uses polar coordinates and a tracking mechanism for keeping a solar cell in line with the path of the sun.

The kit contains motors, potentiometers, micro-switches, an electro-magnet and other components, as well as building parts.

Where your money went

GAMES publisher Squirrel Software has launched a home money management program for the BBC Micro.

The program – Moneywise – shows the user at a glance where all the money went – and helps him to forecast the months ahead.

To ensure privacy there is a personal password.

Treasure hunt enters final phase

THE computer treasure hunt competition, where the grand prize is the golden Jewelled Hare of Masquerade, continues with the release of the second and final cassette by Haresoft.

For those who bought Hareraiser-Prelude, this next cassette – Hareraiser-Finale – will help solve the first puzzle, and get treasure hunters on their way to the next locations and perhaps to claim the £30,000 prize.

Hareraiser challenges BBC Micro users to find the hare with the aid of clues and graphics. The appeal of this program is that it can be solved by an inquisitive rather than an intellectual mind.

It is not a game but a brainteaser, says Haresoft.

FILL YOUR SCREEN WITH REAL STARS

RECENT interest in Halley's comet has prompted Century Communications to bring out a program – Starfinder – which, they say, does something no book can achieve.

You tell the program the date and whereabouts in the world you are – and it shows you what the night sky view should be out of your window.

You can identify any star, planet or constellation by steering a "space probe" across the screen – and print out star maps for exactly the times and places you want.

The BBC Micro program was written by Ronald Alpiar, previously a department head at the University of London Computer Centre.

It was checked by TV astronomer Heather Couper, who recently succeeded Patrick Moore as president of the British Astronomical Association.

With the program comes a book written by Heather Couper.

Heather Couper: helping you map the heavens

Mighty oaks from little...

WHEN Acorn recently brought out its new ABC business machine it caused some head scratching in West Yorkshire.

Bradford-based UCC – makers of disc drives and BBC Micro furniture – was just about to launch its own BBC Micro upgrade, also to be called the ABC.

After a quick conference, UCC decided to call its new product the Oak.

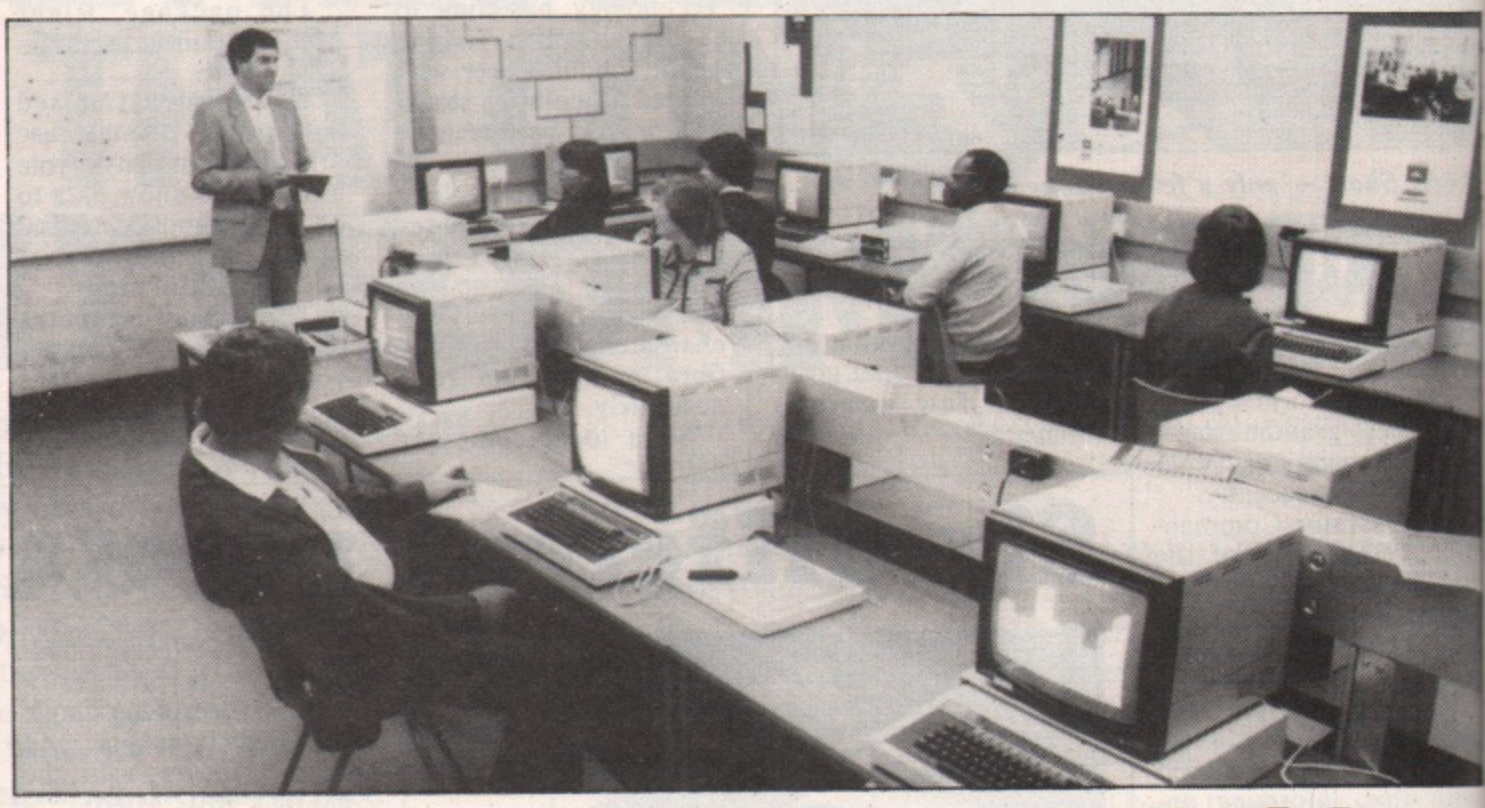
"It was about the nearest Acorn-related name we could think of", says UCC's Alan Ward.

Based on the BBC Micro, the Oak brings all its major expansions into one casing.

As well as a keyboard, the housing will take a 100 watt power unit, two floppy disc drives, Z80 and 6502 second processors, 32k memory expansion, Winchester and modem.

And because the casing is metal nearby equipment is screened from interference emitted by the BBC Micro.

For those who already have a BBC Micro, the Oak is offered in kit form. There are also four other standard models available ready-built.



Poly approves Econet bridge

ACORN Computers has launched a bridging device for Econet, its local area networking system, following a six month field trial at Manchester Polytechnic.

The bridge allows several BBC Micro networks to be interlinked, optimising data transfer and providing independent back-up and access to multiple file servers and printer servers.

Three bridged networks have been installed at the Polytechnic's Microtech Centre in the Faculty of Technology's Department of Physics, Mathematics and Computing.

Two networks, each with 18 micros, are used primarily for lecturing and project purposes.

The third network is for staff use only. Presently with only four micros, plans exist to extend this net to each staff room in the department.

A micro in each room will be capable of functioning as a free-standing micro, an Econet workstation or an intelligent terminal to the Polytechnic's mainframe.

The two classroom networks are used for courses related specifically to micros, networking or the use of structured high level computer languages, for individual student project work and for practical course tuition, lecture demonstrations and seminars.

On each student net there are two file servers, one attached to an Acorn 10mbyte hard disc drive, the other to an 800k floppy disc, a printer server and several variations of the BBC Micro system.

Said Peter Hutt, Microtech Centre manager: "Econet is worthy of merit in its own right but with bridges and hard disc store it is even more commendable".

For the future, Mr Hutt sees the Microtech Centre being increasingly used by and communicating with not only other departments and faculties throughout the polytechnic but also with outside bodies such as other polytechnics, universities, schools and education authorities.

● ***Picture shows one of the "classroom" Econet networks at Manchester Polytechnic***

CHRISTMAS CRACKER. A MEGABYTE DISC SYSTEM FOR £299.95 (INC. VAT).

If you're thinking of upgrading your BBC Micro, your hunt for value ends here.

A one Megabyte disc drive (unformatted) double sided 80/40 track, hardware switchable and a double density Acorn compatible disc interface, for a combined price of £299.95, including VAT.

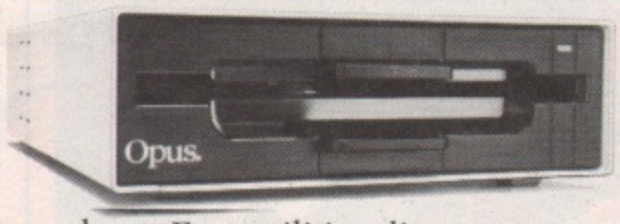
But it doesn't stop there. Because the Opus name is second to none when it comes to reliability. Our drives have been tested to the limit – running for 8,000 hours without failur – that's a year of continuous use.

And that's why we have the confidence t give a two year guarantee on all our drives.

No other company can give you that reassurance.

So get cracking. The offer closes on Christmas Eve.

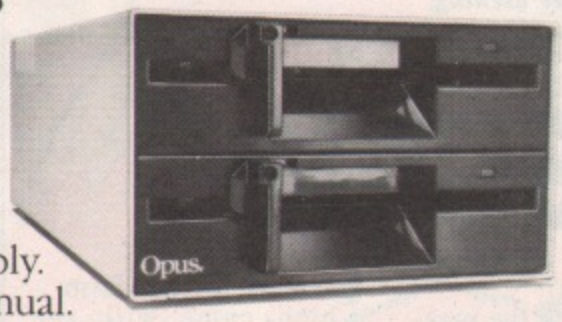
5¼" SINGLE DISC DRIVES.



- All ½ height.
- Low power consumption.
- Comprehensive manual.
- Free utilities disc.
- Direct drive mechanism.
- Fast access time.

5400 100K Single sided 40 Track — **£119.95**
5401 100K Single sided 40 Track — **£149.95**
5402 200K Double sided 40 Track — **£169.95**
5802 400K Double sided hardware switchable 80 40 Track — **£199.95**

5¼" DUAL DISC DRIVES.



- Metal cased and all necessary leads.
- Separate power supply.
- Utilities disc and manual.

5401D 200K/400K on line S/sided 40 Track — **£349.95**
5402D 400K/800K on line D/sided 40 Track — **£399.95**
5802D 800K 1.6 Megabyte on line D/sided hardware switchable 80/40 Track — **£469.95**

OPUS 32K RAMBANK.

A 32K sideways RAM board to boost the capabilities of your micro.

Unlike ROMS, each block is individually write selectable and can write protected to ensure against accidental erasure.

If you're running short of ROM sockets, the RAM card allows you to load utilities as and when they are needed.

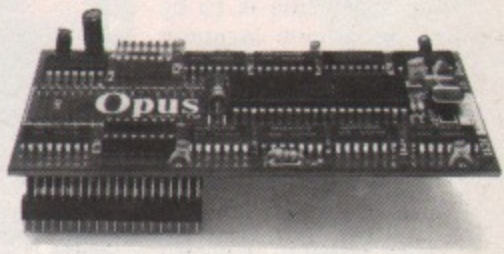
- Uses low power 64K dynamic RAM chips.
- Simple to install.
- Consists of 2 x 16K blocks of sideways RAM.
- Two year guarantee. — **£59.95**

FLOPPY DISCS.

3" cartridge **£5.75** each or **£25.95** for 5.

5¼" Discs – with full 5 year warranty and free library case. S/SS/D **£17.95** for 10. S/SD/D **£19.95** for 10. D/SD/D **£21.95** for 10. S/S 80 Track **£25.95** for 10. D/S 80 Track **£27.95** for 10.

DOUBLE DENSITY DISC INTERFACE.



The ultimate Acorn compatible disc interface for your BBC Micro Z-80 and 6502 2nd Processor.

- Utilities on ROM including: Format and verify, tape t disc transfer, automatic 40/80 Track selection, automatic density selection, unique mass copy routine, powerful machine code operating system giving up t 248 files, 80% faster than single density. Easy to install. Free user manual supplied. — **£129.9**

Red Sky Over... where?

THE scene is one of total devastation . . .

People are desperately hunting for food and medical supplies while trying to dodge rampaging mutants and the odd earthquake.

And it's all happening in Accrington!

"In fact, it's what any visitor might see if he visited Accrington on a Saturday evening", says computer programmer Duncan Evans.

"However on this occasion things are perhaps a little bit worse because it has just been under nuclear attack".

The story line is to be found in a new strategy game for the BBC Micro produced by Vampyre Software of Leeds. Written by Duncan Evans, it is called "Red Sky Over Accrington".

Mind you, Duncan Evans and his partner Mark Ulyatt readily admit they have never been to Accrington. "It's just one of those names that lends itself to things like this", says Mark.

Mark Ulyatt, left, and Duncan Evans claim this is how they found Accrington on a typical Saturday evening

Elite claims mass sales

SALES of Elite, the cult adventure game from Acornsoft, exceeded 50,000 copies in the first two months following its launch.

And this, according to the company, indicates that one in every four BBC Micro users bought a copy during that period.

Elite players are being encouraged to send their scores to Acornsoft.

Each month a specially convened Order of Elite committee selects the best player to date, judged not only on points but also on skill, tactics used and dangers encountered.

The monthly winner receives £100 of Acornsoft software and a silver badge.

Winner of the first Order of Elite was Andrew Vickery, of Epsom. In two weeks of play Andrew achieved a rating of Dangerous. The next level is Deadly, followed by the coveted Elite.

Acornsoft is also planning an Elite tournament in which the best players will be invited to compete.

The announcement of the first winner was delayed to allow Acornsoft to properly verify winners' claims through the sophisticated security coding built into the game.

The Curry recipe!

ACORN'S Chris Curry had an undistinguished academic career – he can boast only one A level – yet he currently enjoys a salary of £60,000 a year and recently acquired a 15 bedroom mansion near Cambridge.

His fame and fortune appears to be attributable to a habit which sometimes causes him to be late for work – lingering in the bath in the morning. For this is where he says he gets his best ideas.

One of these – some six years ago – was that computers could break into the consumer and education markets . . . the rest is history.

All this is according to a profile on Acorn's co-founder which is featured in the first issue of OM.

It goes on to reveal that before he hit the jackpot with the BBC Micro he had first been a student apprentice with Pye, then a scientific assistant with the MoD, and finally spent 13 years in association with Clive Sinclair working on calculators and hi-fi.

Nor does Chris Curry claim to have any real affinity with computers today. In the article he admits to being "pretty hopeless" with computers.

"I've got a computer at home. I play games on it, I'm afraid, and rather badly too", he said.

OM estimates that Acorn is currently worth at least £100 million but that just means "100 times more responsibility", insists Curry.

What has this newfound wealth meant to Chris Curry, who is single but admits to having been engaged twice?

According to the magazine profile he has accepted it as a matter of course, though he readily admits his country mansion is a "totally unnecessary extravagance".

Not that he treats himself to expensive holidays – "they bring on an attack of worrying" – preferring to instruct his gardeners on where to plant the rhododendrons or struggle to put the accounts for the farm – which came with the mansion – on computer.

"I've always assumed that somehow I'd achieve a fairly high standard of living", he says.

"Someone told Clive Sinclair once that I was starting to make quite a lot of money, and he said, 'Chris Curry? Oh, he's always behaved like a rich man'.

"I think that's very true".

Education directory

BRITAIN'S first educational software directory will be published next spring by Hodder and Stoughton. It will contain more than 500 reviews of programs written for the BBC Micro and other computers.

The directory will be available for scanning on-line on Prestel and will form part of the international educational software directory available via Dialog and The Knowledge Index.

Crib card

BBC Micro programmers who don't have two pairs of hands will welcome the sturdy, free standing crib card from Pheonix Computer, priced £1.99.

It covers keywords and operating, graphic, sound, colour, data, input/output and disc commands. Basic statements and functions, logical operators, error messages together with hints and tips for successful programming.

The unicom Modem

- Auto Dial
- Auto Redial
- Auto Answer
- Auto Baud Rate Scan
- Full Duplex (300 baud)
- Half Duplex
- Bulletin Board Facility
- Number Memory Store
- European and U.S.A. Standards
- Complete with Power Supply Leads and Manual at a Breakthrough Price of **£49.95** EX VAT AND P & P.

We've taken the best components from the best suppliers and combined them to produce a modem with everything you could want. Modern manufacturing and quality control techniques have brought a breakthrough in price. Our philosophy is to pass those savings on to you and to recover our R & D costs across increased sales.

We've made the modem easy to understand and use, you don't need to know anything about baud rates or bits, simply plug in and talk to the world.

Features of the Unicom Modem include:

Auto Answer
Unicom automatically answers, then uploads or downloads data into your micro and printer just like a telex.

Auto Baud Rate Scan
When receiving, the modem scans the incoming data and selects the correct baud rate to receive.

Full and half duplex
One (full duplex) or two-way (half duplex) simultaneous transmission.

Full U.K. European and U.S.A. standards
V21 and 23, CCITT. Fully compatible with Termi, Communicator and other existing software.

BAUD RATES
300/300 1200/1200 1200/75 75/1200

Easy to Use
Complete with all leads, power supply, operating and reference manuals. Just plug in, no soldering required. Fits all RS232/423 interfaces. (State machine).

All major components are BT approved.

Technical Enquiries: Ring Barry Krite on 01 482 1711

Dealer Enquiries: Ring Mark Simon on 01 930 1612

Orders on Access/Visa: 01 482 1711

Software features of the Unicom Modem on ROM include:
BBC only. Electron, Amstrad, Commodore, Sinclair and IBM PC to follow.

Auto Dial Auto Redial
Redials automatically until connected.

Bulletin Board Facility
Start your own or contact all information boards throughout the world.

Printer Routines
Gives the facility to use your printer to record data in and out.

Software Commands
Commands like * Download * Dial * Answer etc. can be incorporated into your own software.

Remote Facility
* Remote enables you or your friends to dial and download or upload your micro from any other modem.

Reliable Transmission
Unique error correct protocol means you can send, store, and receive files and programs reliably with no transmission errors.

Two-Window Operation
Transmitted and received messages on your monitor at the same time.

The Unicom Auto Dial Disk
Use the Auto Dial Disk to store all your commonly dialled numbers – manually driven.

Increase your fire power!

More than just a joystick—a system

- ▲ Nylon encased—Steel shafted joystick with ball and socket joint.
- ▲ Fast sprung return to centre.
- ▲ Graphite wiper linear potentiometers.
- ▲ 12 Months Guarantee.
- ▲ 7 day Money back Guarantee (on Hardware).

Complete control at your fingertips

A superb joystick and a keypad for the price of either one. Plus the software to integrate it into the computer's system. One handset will work on it's own in the A/D port as a joystick and two fire buttons. Joystick is immediately compatible with ACORNSOFT and similar software.

The interface joins together the analogue and the user ports to use the full keypads giving a total of 24 user definable keys. The interface can also be used as a splitter for the A/D port to take two items at the same time, e.g. joystick and lightpen.

DELTA DRIVER on cassette or disc: Two programs on each cassette or disc. One converts machine code programs from the keyboard to the joystick or keypad, with adjustable sensitivity on the joystick and will run on any O.S. The second program (needs O.S. 1.0 or later and an interface) duplicates any keyboard keys on the keypads, in the operating system, so that it can become a numeric keypad or will take on the function keys.

Numerous stockists nationwide or direct from us.

PRINTER SHARER

This handy UNIT is a solid state switch system designed to ease the problems of short printer leads, continual plugging and unplugging of leads, and costly extra printers by allowing up to three computers to be connected to one printer. It has four parallel Centronics connectors for easy interfacing of the BBC micro to any prihter with a Centronics capability such as daisy wheel, dot matrix or plotter type printers.
PRINTSHARER is ideal for schools and colleges for sharing their printing resources.

Price: **£65** (£2 Carr.)

BROTHER HR-15

DAISY-WHEEL PRINTER

This is a high-quality daisy-wheel printer, for the price of a dot matrix. Daisy-wheel quality gives a professional look to your correspondence. Facilities include 18CPS, bi-directional print, 3K Buffer with clear facility, carriage skip movement, text copy switch, proportional spacing, underlining, bold, shadow, super and sub-script, printing in two colours. Impact control allows use of carbon paper. Connects directly to the BBC micro with centronics parallel interface. RS232 interface is an optional extra. Other options are a single sheet feeder that automatically feeds up to 150 single A4 sheets and a keyboard to transform the printer into a sophisticated electronic typewriter.

ONLY **£329** (carr. £7)

Single Sheet Feeder	**£195**
Electronics KEYBOARD	**£135**
TRACTOR FEED Attachment	**£90**

RIBBON CARTRIDGES:
Fabric **£3;** Carbon **£3;** Multistrike **£6**
DAISYWHEELS (various typefaces) **£18**

NEW

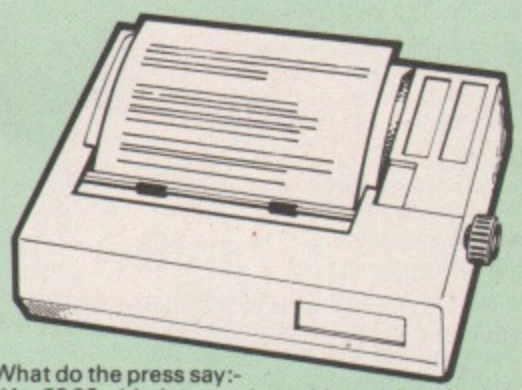
4 COLOUR PLOTTER PRINTER

How often have you wished you had a colour plotter for your computer, but have been put off by their high cost? Well, Watford Electronics can now supply you with a high quality, low cost plotter with Centronics interface. The SCP-800 printer/plotter facilitates plotting and printing in four colours on paper up to A4 size, using easily replaced pens. It can operate in a text mode, performing like an ordinary printer capable of speeds up to 12 CPS with a maximum of 160 characters per line on A4 paper. In graphics mode it offers full plotting facilities including drawing, moving, scaling of text, rotation and drawing of axes.

At an incredible low price of:

Only £179 (£5 carr.)

KAGA KP810



What do the press say:-
"At £269 this is an unbeatable product for what it has to offer." – Educational Computing.
"Offers excellent value for money." – Electronics & Computing.
This new Japanese printer has EPSON FX/RX compatible control codes and is functionally equivalent to an FX80 with the added advantage of its 'Near Letter Quality' mode. It is solidly built and features include: Normal, Italic, Enlarged, super/subscript, proportional spacing and user-defined character set. Extras over the FX80 included in the price are Near Letter Quality (NLQ) print ideal for correspondence, properadjustible tractor feed, half speed quiet mode and 3K buffer. The printer is bi-directional and logic seeking to give a speed of 140CPS for high throughput in conjunction with the standard 3K buffer. 8K RAM may be added to give more user-defined character sets. Centronics parallel interface + Watford's 12 month NO QUIBBLE WARRANTY.

Special Offer: ONLY **£242** (£7 carr.)

RS232 interface + 2K buffer to connect to other micros **£89**

KAGA KP910 PRINTER

Very similar to the KP810 but with 17" carriage for really wide print. Gives 156 columns of normal print or 256 columns in condensed mode. This printer is ideal for printing out spreadsheets and can also be used for correspondence in NLQ mode.

ONLY **£339** (£7 carr.)

PRINTER LEAD

Centronics lead to connect BBC micro to EPSON, KAGA, SEIKOSHA, NEC, STAR, JUKI, BROTHER, SHINWA etc. printers.

Standard length (4 feet long)	**£7**
Extra long (5 feet long)	**£9**

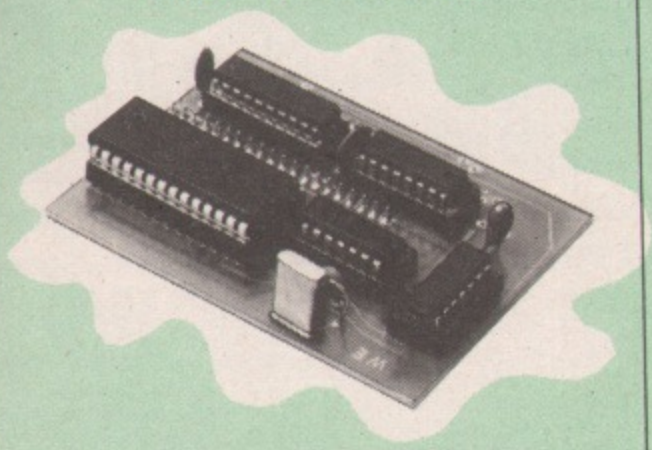
DOUBLE DENSITY
DISC INTERFACE



SIMPLE but SOPHISTICATED

We are proud to announce the launch of the Watford Electronics Double Density Board for the BBC micro. The DDFS supplied is a new version of the popular Watford Electronics DFS re-written to make full use of the capabilities of the new double density controller.

- Increases storage capacity of your Disc Drives by the maximum physically possible, 80% !!!
- Our system will use the whole of an 80 track drive. Inferior systems do not allow files longer than &3FFFF bytes, but with our system files can be as long as one disc side.
- Discs may be created in either single or double density format with the built in formatter and in single density mode are fully compatible with normal Acorn format discs.
- The density of the disc you put in is automatically sensed by the system and you are informed of the density in the catalogue display.
- The double density system is of course faster than single density.

The Watford Electronics DDFS implements an extremely comprehensive 8271 emulator so that commands passed through OSWORD & 7F are correctly interpreted. Other manufacturers thought that read and write sector alone were sufficient – we decided to implement every command of the 8271 that was physically possible. We have allowed the use of all the special registers including bad tracks, allowed access to deleted data etc., etc. The emulator itself takes up around 1K of compactly written machine code. We reckon it will run many of the protected discs now available. Gain all the advantages of the WE DFS together with much increased storage and compatibility with many existing protected discs. The price is the same as for the standard single density system that we continue to sell so you can choose between the two options without financial worries.

(please write-in for full technical specifications)

Complete Unit incl. DDFS ROM **£85**
DDFS Manual **£6.95** (no VAT)

We will exchange your existing Single Density Interface for our DDFS Unit for **£49**

(Carriage £1.50)

3M - 5¼" DISKETTES

Top quality 3M – SCOTCH Diskettes from Watford Electronics (Your 3M Appointed Distributors). All discs carry a lifetime warranty. These discs are quiet in operation and insert positively with their reinforced hub rings. Boxes of 10 supplied complete with self stick, disc labels and write protect tabs.

DON'T SETTLE FOR LESS, BUY THE BEST.

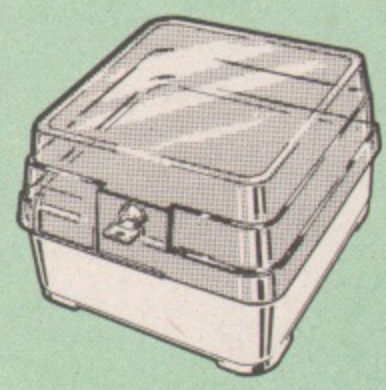
DISC ALBUMS

Atractively finished in beige leather-look vinyl, these conveniently store up to 20 discs. Each disc can easily be seen through the clear view pockets.

£4.2

LOCKABLE DISK STORAGE UNITS



Strong plastic cases that afford real protection to your discs. The smoked top locks down. Divide and adhesive title strips are supplied for efficie filing of discs.

M35 holds upto 40 discs **£1**

M85 holds upto 95 discs **£1**

FLOPPY HEAD CLEANER KIT

The heads in a floppy disc drive are precision made and very sensitive to dirt. Drive manufacturers recommend that you clean the heads approximately once a week. Unless your home or office is dust free one of these kits is very sensible precaution against losing valuable data. A dirty head can destroy many disks befo you realise the trouble. Very simple to use.

Only **£12**

We stock a range of monitors to suit all needs. Choice of a monitor is a matter of personal taste so we recommend that whenever possible, you ask for a demonstration at our shop.

MICROVITEC

- 1431 – Standard resolution as used on the BBC television computer programme **£165**
- 1451 – Medium resolution, suitable for word processing in mode 0 ..... **£250**
- 1431AP RGB + PAL and AUDIO **£199**
- 1451AP RGB + PAL and AUDIO **£305**
- 1441 – High res, exceeds the capabilities of the BBC micro **£385**
- Dust Cover for Microvitecs **£5.50**

All Microvitec Monitors are 14" RGB in their distinctive right angle sturdy metal case or the new beige plastic case. They are supplied complete with connecting lead to the BBC and a 3pin mains plug.

KAGA

- KAGA Vision 2 High resolution, Colour **£245**
- KAGA Vision 3 Super High resolution, Colour **£310**

Kaga Monitors are 12" RGB colour units housed in an attractive beige plastic cabinet. They all have as standard, a genuine etched anti-glare screen.

ZENITH

12" Ultra high resolution monochrome monitor. Ideal for word processing as its green or amber screen is very restful to read. The high resolution makes it good for games too – you can really see the detail that has been put into the graphics. ..... ONLY **£68**

LEADS

BNC for Zenith or Philips **£3**
RGB lead for KAGA **£5**

P.S. We will exchange your existing ACORN DFS or PACE (AMCOM) DFS for Watford's highly sophisticated 16K DFS ROM for **£19**

Watford's DFS is exclusively available from Watford Electronics.

We do NOT retail this product through dealers. Every ROM carries a label with our LOGO and a serial number.

NEW LAUNCH

MYSTERIES OF DISC DRIVES & DFS REVEALED

Are your tired of faulty cassettes and lengthy loading times? Do you want to upgrade your BBC micro to take discs but you get tied up in the plethora of jargon surrounding the choice and use of these systems.

For instance, what is the difference between single and double density formats, how can you use a 40 track disc on an 80 track disc drive? What is the difference between a DFS and disc interface kit? Should you acquire a single Disc drive or twin? What does 48 TPI and 96 TPI discs mean? These are just a few of the questions you may have asked yourself and never found the answer or maybe you have yet to encounter these questions.

Now the mystery of buying a suitable interface and disc drive for your BBC micro is revealed in Watford Electronic's new book entitled 'MYSTERIES of DISC DRIVES & DFS REVEALED'. It describes in fine detail, yet remaining very readable to the beginner, how disc drives operate, the type of interfaces available, which type of discs to use on a disc drive and how data is stored on the discs.

There is even a handy section describing the phrases you are likely to encounter, and how to interpret them. This book must be an essential purchase at £5.95, especially if you own or are thinking of buying a disc system. Why not ask for a copy for Christmas?

Price **£5.95** (Book – No VAT)

STAR LAUNCH

ELECTRONIC DESK DIARY
for the BBC Micro

Watford's Electronic Desk Diary and Clock is a complete Diary, Alarm Clock and a Calendar. The attractively finished desk top unit comes complete with power supply, its own on-board RAM and software in an 8K ROM.

Features include:

- A complete desk diary, planner, calendar and full feature alarm clock for the BBC microcomputer.
- Software supplied on ROM for instant access.
- Over 100 events programmable into the minimum RAM.
- Events may be assigned many levels of priority.
- Diary may be opened at any date.
- Events may cause programmes to be executed at any predetermined time and date.
- Events may repeat yearly, monthly, weekly or daily.
- BBC will be powered up automatically to execute important events.
- 2K of CMOS RAM provided as standard for storing events.
- RAM expandable to 32K.
- No BBC's workspace RAM required.
- Printout of calendar for any month and year specified (between the years 1900 and 2100).
- Printout of current time and date on request.
- Easy access of time and date from BASIC and other programmes, (including M/C programmes).
- Internal power supply (no power taken from BBC).
- Interfaces to 1MHz bus.
- Battery backup optional.
- Diary compatible with all 'legal' BBC add ons and ROMs.

Watford's Desk Diary Unit is a must for every serious user of BBC Micro

Introductory Price: Only **£75**
(Carriage £2.50)

Versatile **BEEB SPEECH SYNTHESISER** Unit

SIMPLY the best! – An unlimited speech synthesis system. Complete with easy-to-follow manual. Controlling software is in ROM so no Cassette Loading problems!

PHONEMES for word synthesis – That means unlimited vocabulary! No extra speech dictionary chips to buy!

BUILT-in Library of approximately 500 words to get you started.

ENGLISH accent – Utilises inflexion techniques to produce highly comprehensible speech.

EASY to use system – Just plug the software ROM into a socket, the Speech unit into the User Port, and away you go! No specialised 'dealer upgrade' required!

COMPACT unit – The whole system is built into a small case – easily tucked behind the computer. Auxillary output socket provided for direct connection to an external amplifier.

HOURS of fun! – Suitable for any application – Games, Educational Programs, Specialised Packages.

We know this all seems to good to be true but DON'T BE LEFT SPEECHLESS! Order your Versatile Speech Unit now!

SPECIAL OFFER £35

BEEB PRINTER ROM

This utility ROM is designed to simplify using all the facilities of your printer. It has many facilities:

★ Selection of printer modes such as underline, font and size is by 'Single Key' operations.

★ From Wordwise, a single number following OC will select a mode rather than a long and incomprehensible string of control codes. This makes using your printer with Wordwise much more convenient.

★ When using Basic (or other languages) you can have control over the formatting of the output to the printer in the style of a wordprocessor. You can define page top, bottom and side margins etc. with intelligent page skip for binders an option. All supported printers will now respond to form-feed etc. commands.

★ User defined characters are printed as you see them on the screen so that non-standard characters are automatically printed out correctly.

★ Commands select the options for the following printers:
GP100, STAR, NEC, MX/FX, KAGA, LP/VII/DMP100, DMP200.
Operates with either parallel or serial interfaces.

★ Supplied with a 50 page manual that is very comprehensive and easy to follow. Please specify printer type when ordering so that we can send the correct function key strip.

Price: £24

NEW RELEASE

THE EPSON FX/ KAGA PRINTER COMMANDS REVEALED

for the BBC Microcomputer
(The only Printer Book for the Epson FX-80 compatible printers).

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out. Once again, Watford Electronics comes to your help with our new book entitled 'The EPSON FX/KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English how to use your printer (Kaga KP810, Canon PW1080A, or any other Epson FX-80 compatible printer) with the BBC micro, both from Basic and your Wordwise wordprocessor.

It describes in detail how to obtain the maximum in graphics capability from your printer and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accompanying BBC Basic program and an example of its use from Wordwise.

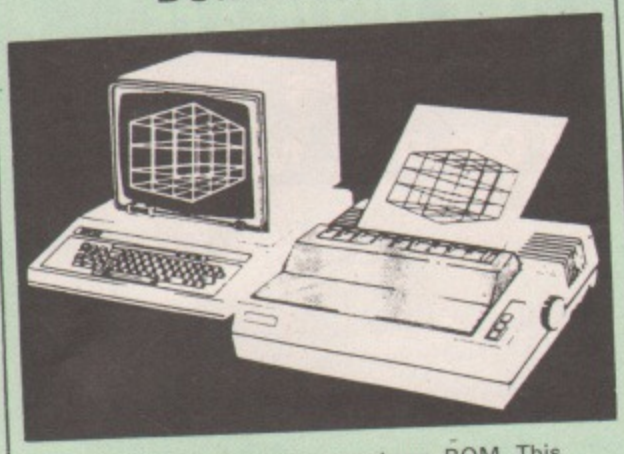
This book is superb value at only
£5.95 (Book – No VAT)

FORTH ROM for BBC

This ROM provides a complete implementation of the FIG-FORTH standard (including editor). Supplied with a large tutorial manual at only **£32**

TINY PASCAL for BBC Micro **£54**

DUMPOUT 3



A highly sophisticated screen dump ROM. This has to be the most flexible and powerful screen dump ROM yet produced for the BBC micro. It will put on paper anything you see on the screen, including all Mode 7 facilities etc. We have to admit that there is one facility that we cannot replicate – if anyone can supply flashing ink we would like to know!
The ROM also provides window setting facilities and two new OSWORD calls that allow mode 7 graphics pixels to be read and plotted using the standard graphic co-ordinate system. Two commands are used to operate the dump routines:
*GIMAGE – This provides a full graphics dump of any Mode (including Mode 8). There are various optional parameters but you need only specify the parameters you wish to change.
- V <scale>, H <scale> – These 2 byte numers give fine control over the size of the dump from minute to enormous. Unlike other dump ROMs the scale does not change with mode.
- R <0-3> – Print dump rotated by 0.90, 180, 270 degrees.
- I <indent> – Set gap from left edge of paper.
- X <min>,<max>, Y <min>,<max> – The whole of the screen graphics window area is dumped except when these parameters are given.
- P – Physical colour values are used for plotting, otherwise a negative scale is used (white darkest).
- T Two tone dump for maximum resolution.
- M <mask> – 8 bit colour mask.
- E – Contrast expansion to make mode 7 text and separated graphics stand out from the background.
- C – All mode 7 graphics are printed as contiguous to improve the shading in graphic areas.

*TIMAGE <indent> – Does a fast, text only, dump of the contents of the text window in any mode.
*GWINDOW and *TWINDOW – These commands draw the graphics and text windows, respectively, on the screen and allow them to be changed with the cursor keys. N.B. GIMAGE and GWINDOW work fully in mode 7.
Designed for use with the following printers:
CP80, GP80, GP100, GP250, STAR, KAGA/TAXAN; NEC, SHINWA, GEMINI, EPSON MX/RX/FX,LPVII, DMP 100/120/200/400, CANON.

Price including comprehensive manual **£22**

VIEWSHEET (Acornsoft) **£49**

EPSON DUMP ROM

This screen dump ROM is specifically designed for use with the Epson RX/FX printers and the Kaga KP810. It is extremely simple to use as there is only one command to remember. It will accurately dump any screen mode using multiple tones as required. Mode 7 is fully supported giving teletext graphics, double height etc. For those who like to keep life simple this EPROM is only **£20.**

NEW LAUNCH

EPSON FX/RX NEAR LETTER QUALITY PRINT ROM

Impress your friends and business colleagues with the quality of your letters and printed material with Watford's very simple to use EPSON NLQ !Near Letter Quality) ROM. Suitable for FX80, RX80, RX80F/T, FX100.

Look at the features:
- Simply type *NLQ80/100 and a single VDU code to use NLQ print.
- NLQ is then available without any modifications from BASIC, WORDWISE, VIEW (with NLQ DRIVER) or virtually any other program or language.
- Single codes select PROPORTIONAL type (yes even on the RX80); ENLARGED type; UNDERLINED type. These features can be used seperately or in any combination.
- Full UK character set.

Standard 'pica size'
Proportional spacing
Enlarged
Underlined
Normal type
The NLQ ROM is incredibly easy to fit and use. Supplied complete with Manual.

Only: £20

NEW

VIEW DRIVERS FOR JUKI & BROTHER PRINTERS

Watford Electronics are now able to supply a new View Driver package to complement any View wordprocessor system using the Brother HR15 and Juki 6100 daisywheel printers.

The facilities offered by this driver are:
Auto Underlining; Bold; Shadow; Superscript; Subscript; Proportional spacing; Pad character facility. The program is supplied on a 40/80 track disc with full instructions for its use.

The program is supplied on a 40/80 track disc with full instructions for its use.

Only £7

FX80 PRINTER DRIVER

Watford's own Sophisticated VIEW Printer Driver for FX80

To simplify using the full facilities of the Epson FX80 or Kaga KP810 use this printer driver. Full facilities are provided for selecting between fonts etc. The disc includes examples of use and instructions. Available on 40 or 80 track disc (please state which required). **£6**

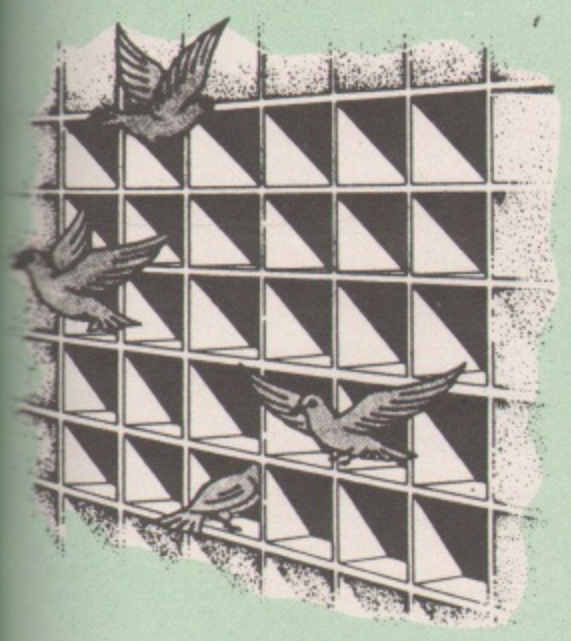
VIEW/VIEW SHEET PRINTER DRIVER for SILVER REED

(Officially approved by Silver Reed)

A range of VIEW Printer drivers to complement the Silver Reed range of printers EXP400/500/550 & 770 and converted typewriters EX43/44 & 55.

Only: £7

TWO DATABASE MANAGEMENT SYSTEMS



DISCDATA

Discdata is an entirely disc based database handling system. It is extremely easy to use through its comprehensive menu system. The simplicity is such that we do not feel the need to provide explanation on use in the written guidance supplied with the program. The first-time database user will rapidly become familiar with this package designed throughout to be simple and obvious.
Despite the ease of use this system provides all the facilities needed for complex data handling problems. The length of database that can be handled is only limited by the total space on the disc. You can have up to 20 fields with page length records up to 254 bytes in length. Adding and deleting records, amend titles, field names and records. Sort on any field and search for any record or group of records in any field. The database may be re-formatted after creation, the system will re-write all your files for you automatically. You may add extra fields and extend the length of existing fields freely.
Output formatting is very powerful. You are allowed 40, 80 or 132 column output modes going to printer or screen. Selected fields can be put in any order on the screen or printer, either across the paper or down. Output can start or stop anywhere in the file. Decimal fields are automatically totalled and records output are counted. Version 2, now on sale has improved input and amendments procedures giving full record edit as well as the 3 extra features . . . String searching, Calculations on numeric fields, and the ability to create sub files from your main files.

On disc at **Only £17**

(Please specify 40 or 80 track when ordering)

FILE-PLUS

The File-Plus package is even more powerful and flexible than Disc-Data. It is also largely menu driven but has its own command language for file searching. The 16K ROM contains all the normally required routines, with lesser used options supplied on the utilities disc. All input and output formatting is controlled through screen forms. A full screen editing system is used to define a form which allows tremendous flexibility in the format in which your data is displayed. It is very easy to change from form to form so that you can type in your data with one form, and examine it with others. You will typically design several forms before starting to access the database so that you can quickly and easily see the fields of each record that you want to appear in the layout you decide on. The form system is also used for output to your printer.
File Plus has a unique file linking system that allows the entire on-line storage of your system to be used for one database. This can give around 1.5 Megabyte databases using dual drives and double density.
The built in FQL (File-Plus Query Language) can be used for searching the database. Presented in the form of a powerful command language with looping facilities etc. this allows the most flexible access to your data possible. Full arithmetic operations are provided to allow the system to be used for statistical analysis.

Cont.

Operations supported are –, +, *, /, +–999999 9999.9999 and compare facilities =, >,<>,<=, >=, <, &,.
Many keywords are supported by the language: assign, compare, display, end, goto, iff, ift, print, read, search, spool and update.
Supplied with a very detailed 70 page manual to explain all the facilities with many examples.

PEN PAL–VERSATILE LIGHT PEN SOFTWARE

Do you have a light pen that never gets used? Then this piece of software is for you. This package offers many useful facilities that make the light pen a useful device to own. Facilities included are:

- Pixel, Line and Character definition
- Free hand drawing
- All Colours
- Fill, Refill and stripes
- User defined "Brush strokes" plus character definer
- Grid, Scale and perspective aids 2 to 200 points palletable in one design with Circles and "rubber banding"
- Move design/character to any screen position
- Save and Load screens, User defined characters and line drawings for video titles, own programmes etc.

This program has many uses in education and at home. It is supplied with a comprehensive instruction manual.

Works with Watford, RH, Acorn User, DIY and many other Light Pens.
Prices

TAPE **£10**
DISC **£11**

LIGHT PEN

This Light Pen for the BBC micro is packaged in a neat pen shape with built in switch. Supplied complete with our sophisticated Pen-Pal software on cassette (see elsewhere in this ad).

Only **£20**

(For software on disc please add £2)

DISC EXECUTOR

Disc Executor is a sophisticated disc utility for the transfer of your cassette programs to disc. If you have difficulties transferring your cassette software to your disc system then this is the answer. It handles 'locked' files and full length adventures (up to &&e blocks) and programs that load below &E00. It is very simple to operate with instructions supplied. It saves you time and money.

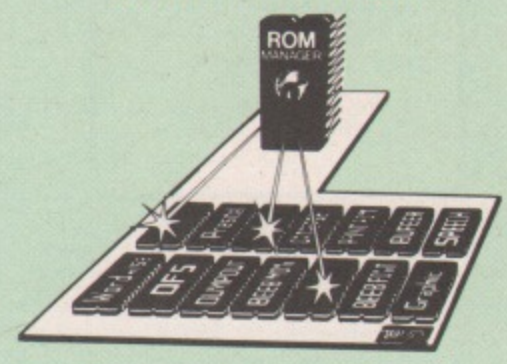
(Please specify 40 or 80 track discs) Price **£10**

ADE

Complete program development package in a 16K ROM. Full assembling and debugging facilities provided.

SPECIAL OFFER ONLY **£43**

ROM MANAGER



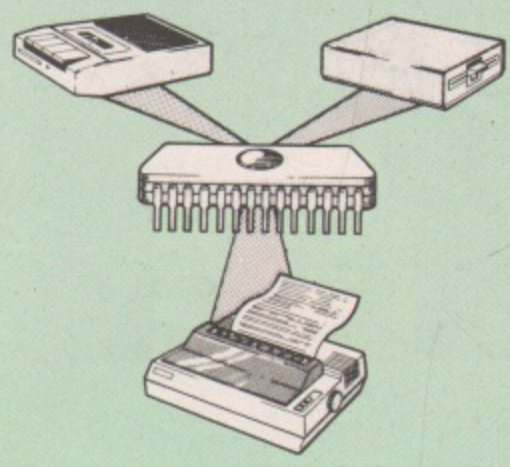
'Provides comprehensive management of all your installed ROMs – BEEBUG Nov. '84'.

This ROM is unique in its capabilities. It allows you, the user, full control over the BBC Micro's sideways ROM paging system with simple to use commands. This ROM is essential for those with several ROMs. At a simple level ROM MANAGER can be used to remove the problem of clashing command names and allow full use of all the facilities of your ROMs. This is coupled with facilities to completely enable or disable various ROMs in the machine including ROM manager itself.
ROM MANAGER can also be used to develop sideways ROMs using the machine's standard memory. This is achieved by sending sideways ROM calls to your code in RAM, saving the expense of fitting sideways RAM for ROM development purposes. ROM status reports are also given by the ROM, including ROM lengths, checksums, entry points supported and current filing system title.
The ROM also provides facilities to examine ROMs, list function keys for editing, modify RAM (using a HEX/ASCII editor) and list ROM titles neatly and concisely.

All selection between particular ROMs is by the name of the ROM and this may be abbreviated for convenience. ROM numbers can also be used if required. This ROM is very simple and obvious to use. All the facilities are explained in the clear and detailed manual.

Price **£22**

BUFFER & BACKUP ROM



For those with sideways RAM fitted in their machines this utility ROM will make full use of this facility. By using the sideways RAM area for extra memory the following features are implemented:

★ 4K or 16K buffer for parallel printer.
★ Dumps selection of Disc files to Tape.
★ Makes backup copies of tapes on to tape and disc.
★ Displays contents of paged ROMs on screen.
★ Menu display of ROM filing system contents on Shift-Break.
★ Comprehensive manual.

Only £22

BEEB MON

Watford's own Machine code Monitor ROM written by Andrew Bray (Cambridge), co-author of the BBC Micro Advance User Guide.

The most powerful and versatile machine code monitor ROM yet written for BBC Micro. It has all the normal memory editing, moving and relocating facilities, plus all editing is with a full screen editor allowing scrolling up and down memory, entering in Hex, ASCII or standard assembler mnemonics.
In use as a debugging tool, you run code under a total emulation system. Everfelt a desperate urge to set a break point in ROM? No problem – you can even have breakpoint on reading or writing locations in memory and on register contents. The system fully supports debugging of sideways ROMs e.g. BASIC can fully and easily be run from within Beebmon and from there DFS and other sideways ROMs can be used in total emulation mode.
Beebmon can even run itself. In so doing you can nest Beebmon up to a level limited only by the memory size. Beebmon uses 256 bytes of workspace, located anywhere in memory, even on the 1MHz Bus. Beebmon effectively uses no zero page workspace, so your program (e.g. BASIC) can use any or all of the base page.
How does it achieve this? By providing a 6502 interpreter all programs running under it exist in a vertual BBC, so special memory locations like the ROM latch are not actually accessed by your programs, instead they alter a location in Beebmon's workspace. Emulation also allows immediate return to Beebmon command level by ctrl-escape no matter what code is being excuted at the time. All this exceptional power and flexibility is complemented by a clear and detailed manual included in a value for money price of:

£22

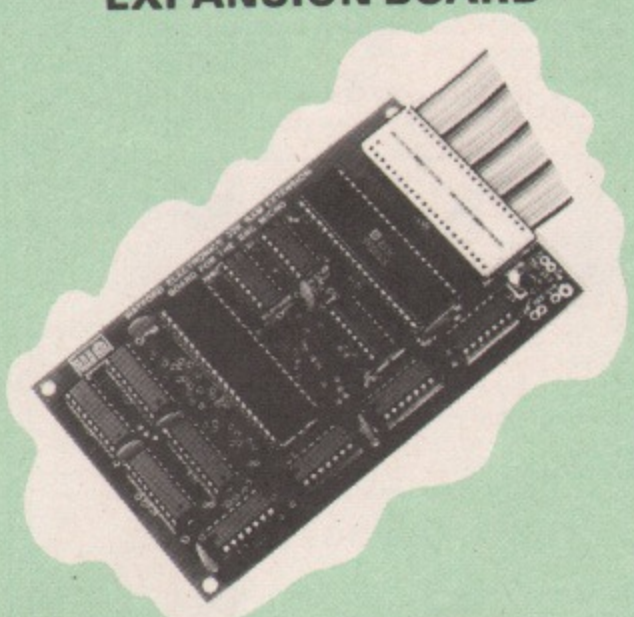
Disassembler Rom

Discover the hidden secrets of BASIC and the OPERATING SYSTEM with this easy to use programmers tool.
A ROM based machine code Disassembler for the BBC micro. It enables machine code programs to be listed in BASIC/DUMP format and thus is the perfect complement to the built in assembler. It allows Sideways ROMs, files on disk or tape to be listed, and also has a comprehensive editor, allowing mnemonics to be altered directly, as well as HEX, DECIMAL, ASCII and BINARY memory editing. There is also a full set of labelling facilities available (up to 3,200 labels), with the major locations and routines already labelled.
Thus DIS-ASM enables any monitor program, such as BEEBMON to be used to much greater effect as it is not necessary to disassemble memory each time the display is altered.

ONLY **£18**

32K RAM

EXPANSION BOARD



Now Watford Electronics brings you the latest state-of-the-art MEMORY EXPANSION BOARD for your BBC microcomputer. It simply plugs into your micro's 6502 processor socket. (No soldering required). This compact board which fits inside the computer doesn't just give you 16k or even 20k of extra RAM, but a massive **32K !!!**
There are many more useful facilities available with this board:

- The top 20K of the expansion RAM can be used as the screen display memory, leaving all the standard BBC RAM free for programs or data storage. This allows good graphics and long programs to be combined. For instance you could have MODE 0/1/2 GRAPHICS AND 28K OF PROGRAM SPACE. The extra memory can be used by virtually any language or utility such as BASIC, VIEW, WORDWISE, Etc.

- The FULL 32K or the bottom 12K of the expansion RAM can be used as a PRINTER BUFFER for SERIAL or PARALLEL printers, sound channels, RS423, Keyboard or Speech Synthesiser. This allows very long text files to be printed while you are using 28K of program and 20K of graphics! THE BUFFER IS UNIQUE because it replaces one of the BBC Micro's buffers so all the buffer options are available on it. e.g. *FX15,21,138,145,ADVAL(–no.) etc.

- This board is the ideal complement to any word processing system, disc or cassette based. There is no need to wait for slow printers as you can type in long text in 80 column display mode while printing is going on – TWO JOBS DONE SIMULTANEOUSLY!!! (an equivalent printer buffer would cost you £120 +)

- Unlike our competitors, the board is compatible with a vast range of software and hardware available for the BBC microcomputer, including our ROM expansion board, double density DFS Units and the ATPL ROM extension board. This is because our board is connected to the computer by means of a ribbon cable without soldering. It can be either be left in the micro or stuck to the lid with the 4 self adhesive feet supplied.

- The board comes with a comprehensive manual and ROM based software with a large range of commands for machine code and BASIC users, including many *HELP messages.

SPECIAL OFFER

Only: £69 (carr. £1)

GRAPH PAD

With this popular British Micro's Graph-pad, you can add new dimension to your computer enjoyment. It helps you to create your own application programs by the simple use of the Graphpad. Ideal for Educational use. Supplied complete with Cables, Manual and a two program cassette.

SPECIAL OFFER **£99**

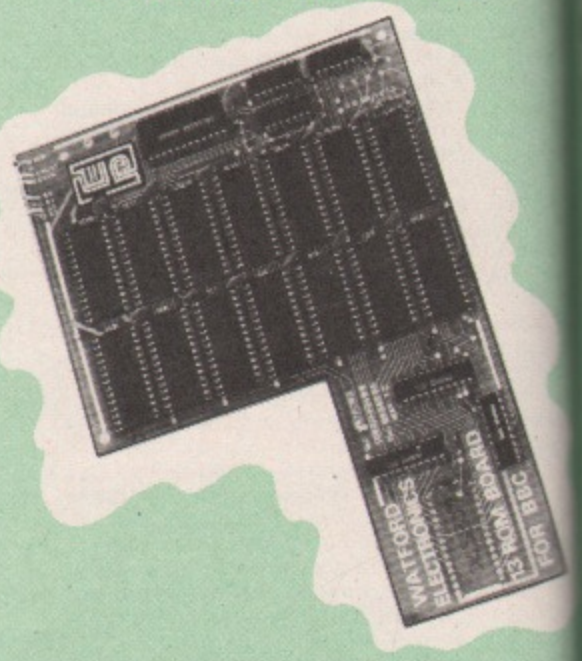
BEEBFONT ROM

BEEBFONT is a remarkable and different concept in BBC software supplied on a 16K ROM. It allows you to display on screen in 13 different styles.

It works in modes 0, 1, 2 and 4 using the full colour capabilities of each mode. Characters are printed in the same way as normal. Selection between the various fonts is very easily achieved with Ctrl-V – press this followed by a font number and the output will continue in the new font. Beebfont ROM is particularly useful in display work with the characters produced at twice the normal size.
You can create your own character fonts with the editor supplied. You can also print-out pre-formatted text files using the special characters with Epson FX, RX and NEC printers. The full range of character styles can be used, controlled from within the text. The editor and spooler program are supplied with the package on cassette or disc. The spooler allows word processor (Wordwise & View) output to be printed in the new characters.
A twenty page manual is supplied. Please state printer type and media for the editor & spooler when ordering (cassette, 40 or 80 track disc).

ONLY **£39**

Mk-2 13 ROM SOCKET EXPANSION BOARD



Now all lines fully buffered – On board battery back-up facility – will now accept EPROMS 2716, 2732, 2764 & 27128 and ROMs 6116 & 6264.

Simply plugs into one of the four ROM sockets currently available in BBC Micro. There are only 5 solder connections to be made. Full instructions are supplied. Unlike other ROM Boards, this board has been ergonomically designed to enable the user, easy further expansion inside the Micro, e.g. Double Density Board, Torch Board, RAM Card, etc., without any clash. (At Watford, we think ahead).

Our Mk2 13 ROM Socket Board enables the User to increase the sideways ROM capacity from the basic 4 sockets upto full 16 capable of being supported by current operating systems. In addition the board is designed with the facility to hold upto 16K RAM, which when switched into operation is automatically selected by any WRITE signal to the Sideways ROM area. This gives the User the ability to write a utility or language and upon pressing break have the utility or language up and running (new ROM software can be developed and tested in situ.)

The Board gives the User, plenty of freedom to explore the possibilities of the new paged ROMs due in the coming months and offers them the chance to develop their own.

All lines are fully buffered and the Board meets or exceeds all timings for operation in the BBC Microcomputer. When fully populated, the ROM Board consumes less than half the recommended maximum current limit.

Supplied ready-built and tested complete with fitting instructions.

CHRISTMAS OFFER: £28 (carr. £1)

Wordwise

Without doubt a very sophisticated piece of software for the BBC Micro. It has all the features of a professional word processor yet is easy to use.

SPECIAL OFFER THIS MONTH: **£32**

SIDEWAYS ZIF SOCKET

Now Watford Electronics brings you a ROM board for small budgets or for those of you who do not wish to open up your Micro frequently. It allows you to change ROMs quickly and efficiently with the minimum of effort – no screws to loosen or keyboard to remove.
The unit consists mainly of a zero insertion force (ZIF) socket on a small circuit board which is located into the position of the 'ROM Cartridge' and is connected to one of the internal ROM sockets via a ribbon cable.

- Very simple to install. NO SOLDERING REQUIRED. The ZIF eliminates the possibility of damage to your ROM pins when inserting and extracting them.
- The low profile of the socket allows unrestricted access to the keyboard, unlike other cartridge systems. In addition, there are no costly extras, such as ROM cartridges for every new ROM.
- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.
- This versatile hardware solves the problem of running out of socket space, simply unplug the ROM and plug in a different one. It is a real must for Professionals and Hobbyists alike.

ONLY **£16** (£1 carr.)

The UNICOM Modem

Are you thinking of purchasing a low cost high performance modem, but finding yourself confused by the features offered and the different prices? Well now the answer is here, in the form of The UNICOM Modem!

This fabulous modem offers the packed with all the features most Users will ever want (plus many more!) The software includes some of the most powerful, flexible and easy to use modem software ever written for a micro.

Just compare these facilities with other modems available on the market.

- Auto answer
- Auto Baud rate detection
- Auto dialing
- Auto redial
- 300/300 1200/75 75/1200 1200/1200 baud rates available
- Full and half duplex transmission
- Easy connection via the serial port of your Beeb
- Storage of upto 99 telephone numbers on disc for easy recall
- Bulletin board facilities
- Easy printer dump facilities
- Remote control facility
- Advanced error-free transmission protocol for sending data to other users

Price:

UNICOM MODEM	**£49.95**
UNICOM ROM Software	**£20.00**
UNICOM disc Software	**£10.00**

(Carriage £2.50)

APPROVED for use with telecommunication systems run by British Telecommunications in accordance with the conditions in the instructions for use.

MODEM 84

PRESTEL TERMINAL

For the BBC Microcomputer

The Watford Prestel package consists of the B.T. approved Watford MODEM 84 (1200/75 baud full duplex 1200 baud half duplex direct connect) and a very sophisticated Prestel Terminal ROM.

This totally machine code software:

- is fully compatible with not only the Modem 84 but also with the PRISM 1000 and most other modems that require a data link via an RS423/RS232 port making it a worthwhile purchase for those who already have Modems.
- supports full Prestel colour alpha and graphic characters including double height, flashing, conceal/reveal.
- called by simple *PRESTEL (*P.) command. Disc and tape configurations fully supported.
- includes a comprehensive telesoftware downloader for BBC and other programs with continuous on screen status report (an essential facility).
- has very powerful OFF LINE MAILBOX editor allowing colour flashing graphic mailboxes to be prepared without having to be on line to Prestel.
- auto logon sequence can be burnt into ROM if desired.
- a vital 'TAG' facility allows tagging and recall of interesting pages, avoids that common and annoying 'NOW WHERE WAS THAT PAGE' problem.
- includes simple page and program loading and saving functions for both disc and tape, automatically assigning frame and program directories.
- not one but TWO PRINTER DUMP ROUTINES are provided within the software allowing either full graphics dump (mode 7 to EPSON compatible printers) or ASCII characters only.
- a user function built into the software allows interface with specialist routines, (yours as well as ours).

WATFORD'S 1200 BAUD FULLY AUTOMATIC USER TO USER SOFTWARE

The addition of the WATFORD user to user ROM based software enables you to discover a whole new world of data communication.
This software enables you to use the MODEM 84 very powerfully.

- Send and receive error checked programs and files (even WORDWISE files) to and from other users at 1200 baud.
- 8k file transfer in under 2.5 minutes (approx four times faster than with 300 baud modems).
- The transfer of data is totally AUTOMATIC which means that the modem is automatically switched between transmit and receive under software control.
- A chat mode is provided which also has this automatic switching for receive and transmit. (This mode is essential just before and after data transfer when both hand sets are replaced to reduce noise).
- A copy facility is provided which allows transmission of all screen output.
- A continuous on screen modem status report is included.
- The software is totally function key driven enabling easy transmission, reception, saving and loading of programs and files (Basic, Machine code or Data).
- A help menu is available from within the software as an aid to use.
- Full instructions are supplied.

SURGE PROTECTOR Plug

Fitted in place of your normal mains plug, this device protects your equipment against mains surges. Nearby lightning strikes, thermostats switching and many other sources put high voltage transient spikes on to the mains. This can lead to data corruption in memory and on disc and can result in spuriously crashing machines. Suitable for computers, Hi-Fi, Fridge Freezers etc. Max. Surge current 2KAmp; max. Voltage 250. Essential for serious computer users.

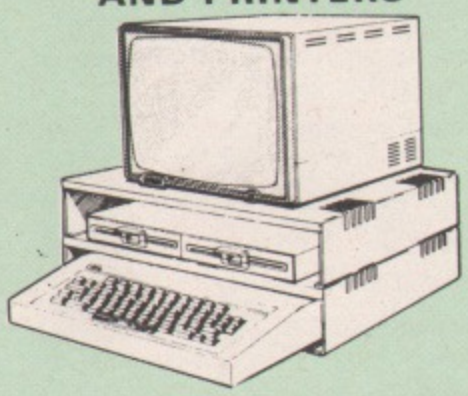
THE INVESTIGATOR

A utility program provided on disc to make security backup copies of all your valuable discs. Makes full use of all 8271 facilities to discover the precise format of your protected disc so that an exact copy can be produced. Supplied with detailed instructions. Please specify 40 or 80 track disc when ordering. Price **£25**

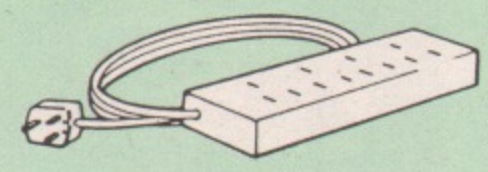
PLINTHS FOR BBC MICRO AND PRINTERS



Protect your computer from the weight and heat of your monitor. The BBC micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and monitor, whilst the double height version provides enough room for our stacked or side-by-side dual disc drives to be placed in the centre section. If you use our stacked drives, the remaining space can be used for further peripherals e.g. Speech Synthesizer, EPROM programmer or simply stationery. The computer slides neatly in to the lower section allowing easy access to remove the lid.
The printer plinth is equally sturdy but without the cooling slots. It allows for access to the paper from the front as well as from the rear, (a facility not often thought of in similar products) if the paper is located beneath the plinth. This is a very convenient way to work especially if your work area is not deep enough to take the printer and paper separately.

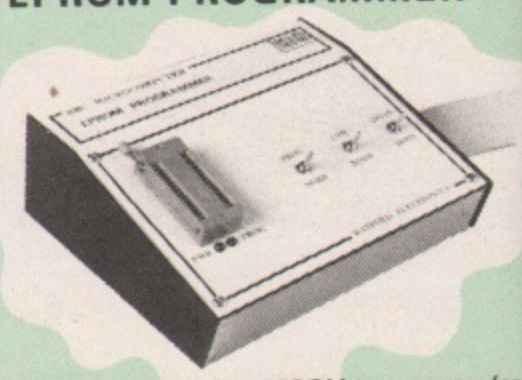
SINGLE BBC PLINTH	**£11** (carr. £1.50)
DOUBLE BBC PLINTH	**£20** (carr. £2.00)
PRINTER PLINTH	**£10** (carr. £1.50)

4 WAY MAINS DISTRIBUTION SOCKET



4 way top quality mains trailing sockets. Supplied wired up with mains plug ready for use. Can be screwed to floor or wall if required. Very useful for tidying up all the mains leads from your peripherals. Allows the whole system to be switched on from one plug. **£9.50**

EPROM PROGRAMMER



The Watford Electronics' EPROM programmer for the BBC micro is a high quality self contained package. Programs all popular EPROMs from 2K to 16K: 2716, 2516, 2532, 2564, 2764 and 27128. All manufacturers' specifications have been followed to program EPROMs at the correct speed – wrong timings could destroy your EPROMs. The unit has its own power supply so does not put heavy loads on the BBC power supply as do some other units. Connects directly to the 1MHz bus following all Acorn recommendations on addressing and bus loadings.

SOFTWARE PACKAGE
The software is supplied on an EPROM which plugs into the Micro and is instantly available with a single command (no time wasting as on Cassette/disc loading). It is a fully purpose designed and integrated package to simplify ROM development. The system is menu driven with many prompts to avoid any accidents.

Software facilities include:
Load File – Save File – Down Load EPROM – Program EPROM – Verify – Blank Check – Editing of memory contents prior to programming.
Also included is an automatic system to allow Basic programs to be put in EPROM and accessed through the *ROM filing system. More than one program may be put in an EPROM. All these facilities and more are explained in the comprehensive and clear 15 page manual.

CHRISTMAS OFFER £69
(£3 carr.)

TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** – Standard version erases up to 16 chips. **£28**
- **ERASER GT** – Deluxe version erases up to 28 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£30**
- Spare UV tubes. **£9**

VOLTMACE DELTA 14 JOYSTICK SYSTEM

The Voltmace system provides full facilities for connecting the Delta 14 handset.
Delta 14 handset – On its own makes a high quality centre sprung analogue joystick with fire buttons **£12.50**
Adaptor Module allows use of two joysticks and provides hardware to access all the keys on the keypad of the joystick **£12.55**
Transfer program allows use of the keypad keys and joystick to simulate any key on the keyboard. This works by creating a machine code patch that stays in memory while another program is loaded in. Allows any game to be used with joysticks. Supplied on disc or tape.

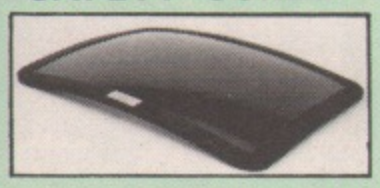
Tape **£5.10** Disc **£7.95**

STANDARD JOYSTICKS

These are standard analogue type with a fire button on each joystick. Twin joysticks go to a single moulded plug, long leads provided.

Single Player version **£9.75**
Two Players version **£15.00**

ANTI GLARE MONITOR SAFETY SCREEN



HEADACHES? TIRED EYES? Don't take pills — Use a Watford Electronics anti-glare filter! Considerable research into the possible health problems associated with monitor screens has shown that eye strain, blurred vision, watering, itching eyes and headaches can result after prolonged use. The problems are caused by extraneous reflections which force the eye to continuously re-focus to try to ignore them. The answer is our contrast enhancement, anti-glare filter which is similar to those which have been previously available on business systems, but at the low cost that you would expect for your personal computer. You will soon find the reduction in eye strain well worth your investment.

Features:

- Simple fitting with sticky Velcro pads.
- Easily removed for cleaning.
- Tinting improves colour quality and contrast.
- Works on monochrome or colour monitors.
- Curved instead of usual flat screen reduces edge distortion.
- Made in Britain by a long established glass maker.

Available in 9", 12" and 14" versions – please specify when ordering.

Introductory offer price: **£14.95**(carr.£1)

ATTACHE CARRYING CASE for BBC Micro

The Attache carrying case is attractively finished in mottled antique brown leatherette. The case is made of tough plywood, providing a very solid and safe way to carry your BBC micro. NEW RELEASE

SOUND EFFECT (ENVELOPE) ROM

Now for the sound fanatic or those of you who want to drive the pet crazy, Watford Electronics offers you this unique piece of firmware called the Envelope ROM. It contains a wide range of sound effects, in fact enough to ZAP, BANG, SQUEAK and EXPLODE your way through a whole galaxy of games. Some of the more unusual effects include ZIT, TRIMPHONE, SNAPPER, TARDIS, and a whole host of explosions, gun fire, winning and losing sounds and many other effects to aid the progress of a game.

The sounds are accessed via single star commands, the pitch and duration of any of the sounds can be altered from their default value at any time by adding extra parameters. These parameters can take the form of decimal values or the resident interger variables. With a choice of OVER 65 sounds, you should have no more excuses for failing to include some form of sound effect in your latest piece of software.

This ROM is a must for the amateur games designer and all those who hate creating envelopes. It is supplied complete with instructions for

FLEXIBLE KEYBOARD CONNECTOR

Frequent removal of the BBC Micro keyboard can result in the ribbon cable connector either breaking off or giving intermittent fault. We can now supply a highly flexible replacement keyboard connector at **ONLY: £4.95**

CHIP EXTRACTION TOOL

This extremely useful tool allows trouble-free IC removal from your computer. No longer do you have to weald a screwdriver at your valuable ROM software, instead this IC extractor is constructed from tough nylon and provides full distribution of the removal force over the whole body of any 24 or 28 pin device, thus preventing undue damage to your chips.
Isn't £1.50 a small price to pay to protect your ROMs stature?

Outstanding Modem WS2000

the only modem you'll ever need to buy.

WS2000 brings 1990's modem technology to you NOW! Link across the world – your computer to mainframes, to Prestel, Micronet, Easylink Telex, Telecom Gold, to other computer users anywhere.

Trade enquiries invited

Software packages

Off-the-shelf dedicated software packs for most major computers: DataTalk for IBM PC/PCXT, VICOM for colour Prestel plus bulletin boards on Apple, many packages for BBC, Commodore and other computers. WS2000 covers the field.

Satisfied Users

"This modem is so simple to use." – Miss VAB of Bristol.

"It's got every feature we need – even telex use." – Company director Mr JLK of Wigan.

"What a wonderful machine! Its operation is quite faultless." – Mr CJC of Beaconsfield.

Enthusiastic Press

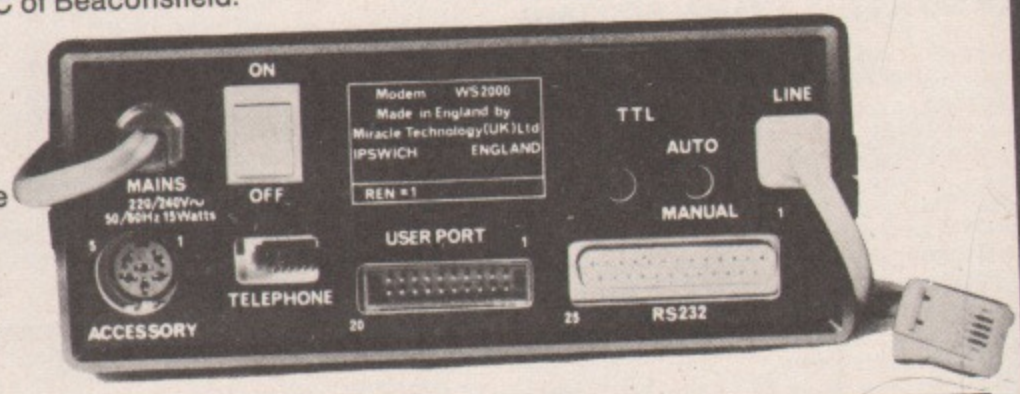
"The best value for money in the modem field." Quentin Reidford, APPLE USER.

"Very versatile; good value." Peter Tootill, PCW.

"Could turn out to be the peripheral you can't live without." Ralph Bancroft, PCN.

Expansion Accessories

WS2000 can grow to suit your needs! The modem's unique User Port lets a computer access all the modem's functions – full software control is possible. Auto answer and auto dial plug-in accessories let your computer accept and initiate telephone calls. TTL interfacing, acoustic coupling, battery back-up, process control interfacing – they're all possible for the WS2000 owner.



still only £129.95 exc.

WS2000 complete with BT modular line plug and socket and full instructions for use – £152.50 inc VAT and P/P.

STAR BARGAIN
Complete Word Processing System for only £1175 + VAT

Comprising: BBC Model B + DFS
2 x 400K 40/80T Dual Teac Disc Drive (ideal for future upgrade for Z80)
Sanyo/Kaga Hi Res. Green Monitor
Juki 6100 Daisywheel Printer
Acorn 'View' Word Processor
Juki Printer Driver
All necessary Cables, Manuals etc.
and as an Xmas bonus for the kids!! we are including a Light-Pen with Software! or Acornsoft's Elite
The choice is yours.

[illegible] 8000 cpu [illegible] UNIX operating system, or set up a network of upto 254 machines. All these capabilities are available NOW.

TORCH UNICOMM

For the Torch Z80 card user, comes a superb communications package. A BT approved modem using 1200/75 and 1200/1200 baud is supplied complete with BBC RS232 cable. Three superb software packages in CP/M included, clearly demonstrate TORCH's experience on the communications scene: UNIVIEW for PRESTEL type use, allowing saving of frames, downloading of files etc. UNITERM is a sophisticated terminal emulator. UNIMAIL is an amazing package specifically for TORCH users. Among other facilities, it allows messages and files to be accessed from distant machines — access to files can be controlled by hierarchial passwords. Hardware + software: £159(a)

ACORN Z80 2nd Processor

This processor converts your BBC into a complete business micro with all the computing power a professional would need. The system is CP/M based and is supplied with a very extensive software package. The package includes three office productivity programs, (memoplan, fileplan and graphplan), Systems generator program, three programming languages plus the ACCOUNTANT business program. Software is accompanied by extensive manuals that not only get you started but also answers your whys and hows.

All for only £399 (a) (incl VAT)

See our section on CP/M software for other packages available for use with this processor.

ACORN 6502 2nd Processor

This processor is designed for the serious computer user who wants to get even more out of his computer. This processor provides increased memory — allowing up to 44K for Basic programs and up to 60K for assembly language programs, regardless of screen mode in use. (ideal for VIEW). An increase in speed means that programs run up to 50% faster. The second processor/BBC combination offer computing power comparable to systems costing twice as much. £175 (a)

TORCH GRADUATE SYSTEM

The ultimate upgrade — converts your BBC into a powerful 16 Bit business computer and makes it disc and hardware compatible with the IBM PC. (will run Lotus 123!). With 256K RAM and single/dual drives, it simply connects through the 1Mhz bus. (The disc drives can be used in both BBC and IBM mode, without requiring a disc interface.) The top-of-the-range Model G800/2 comes complete with the superb Xchange range of software, and includes a full-feature word processor, a financial planner, a database and a business graphics package — all 'linkable'.

G800/2: £945(a) Full Spec. & prices on application.

JUKI 6100 **£340 (a)**

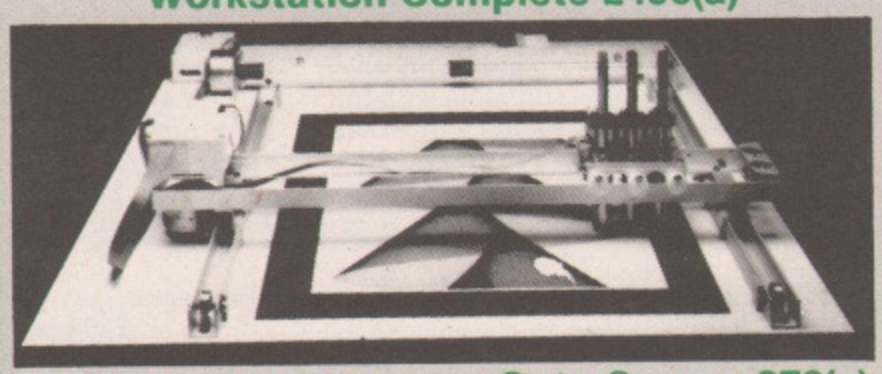
ACORN VIEW PRINTER DRIVER GENERATOR

This printer driver generator will end your search for the printer driver that suits your printer. You can fully exploit all the features of your printer by generating a driver to suit your particular printer. All you need to do is to answer a series of simple questions relating to your printer and you will have your driver. You can generate as many types of printer drivers as you require. Screen driver supplied with the printer driver enables highlighted text to be displayed on the screen showing the effects of underlining, bold, superscripts, subscripts, italics etc. MPRINT program enables more than one file to be printed at a time including the current text. Comprehensive manual supplied with the disc. **£10(d)**

GRAPHICS PLOTTER/WORK STATION

Equally at home in the artists studio, hobbyists workshop, science lab or a classroom, this system has something to offer for everyone. The 3 colour graphics plotter provides both precision and versatility. The carriage can be moved with an accuracy of 0.025cm over an A4 area — the plotter being able to accept paper and far thicker materials at sizes of up to A3. The basic plotter carries 3 colour pens each of which is software selectable. Additional accessories greatly enhance the versatility of the unit without losing the accuracy. The servo controlled drill/router, and scriber can be used on various materials. A unique Opto Sensor (using a Hewlett Packard device) turns the plotter into a high-res scanning digitiser to read & store whole diagrams and photographs. Workstation comes complete all accessories.

Workstation Complete £490(a)



Basic Plotter **£270(a)** Opto Sensor **£72(c)**
Drill/Router Attachment **£79(c)**
Power Supply: PS12V **£42(c)** PS24V **£78(c)**

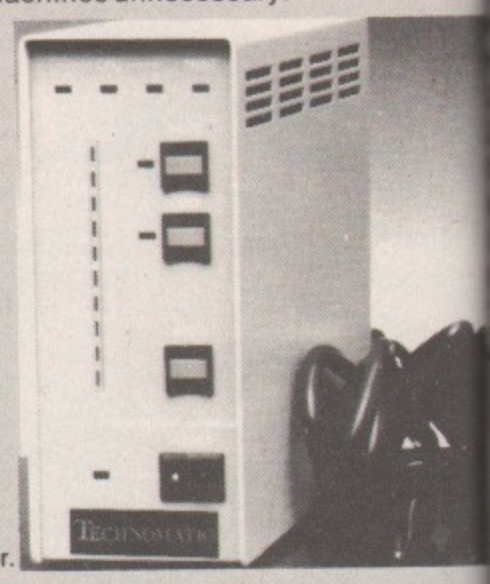
PRINTER SHARER/BUFFER

A unique printer sharer/buffer that provides a simple way t improve the utilisation of the installed equipment by reducing th waiting time for printing documents. All but the smalles documents tie up the computer while being printed and th computer remains out of use until the printing is complete. This i more so in a network which does not have a dedicated computer fo printer operation. This buffer/sharer would free the computer almost immediately for other uses and in many cases make the us of dedicated printer server machines unnecessary.

* Standard Centronics interface with 3 inputs.
* Each input port scanned every 5 secs to check for data. Switching between ports completely automatic.
* Data input rate 4800 bytes/sec
* LED Bargraph indicates percentage memory used.
* COPY key allows current document to be reprinted.
* Internal check to prove the data integrity.
* PAUSE switch allows printing to be stopped temporarily to allow paper change, adjust form feed etc. or allows temporary storage for large number of small files which can all be printed together.



* RESET allows all buffer memory to be cleared without having to hard bre on the computer.
* 64K buffer capacity. * Mains powered * Compact 7cm × 17cm × 24c

TSB 64 Buffer/Sharer **£245(a)**
Cable Set **£30**

PRINTER & COMPUTER SHARERS

Three Computers to one printer (parallel) **£65(b)**
Six Computers to one printer (parallel) **£129(b)**
Cable Set for three way sharer (ea. 1m long) **£25(c**
Cable Set for six way sharer (ea. 1m long) **£45(c)**
Above sharers can be powered from the BBC

Exernal mains adaptor for Printer Sharer **£7(d)**
Computer Sharer to connect 2 printers to one Compute (parallel) **£19.50(c)**

GRAFPAD

A low cost graphic tablet offering the performance & durabili required by industrial and educational users. It is compac accurate & reliable; working area 240 × 192mm + menu are Comes complete with a CAD package. **£110(b).**

RB2 TRACKER BALL

Marconi with its years of experience making tracker balls for use in Military and Air Traffic Control have developed a quality device for the serious hobbyist, for educational uses, and for low cost CAD/CAM applications. RB2 is a compact, ergonomically designed tracker ball that provides precise positional control and rapid direction changing using a freely rotating resin ball in any direction without the limiting stops or the zero point drift of joystick controls. Three switch buttons enable easy software manipulation to incorporate the use of the tracker ball. Appropriate software will enable the RB2 to take over the functions of cursor keys in word processing, CAD/CAM applications and two dimensional positional control of robots, drillheads etc. RB2 which plugs into the user port is supplied with utlity programme to use it as a joystick with other software, a comprehensive graphics/CAD program and a program demonstrating its editing capabilities. User guide includes instructions on writing your own programs for the RB2. **£52(b)**

SANYO DR101 DATA RECORDER

A high quality data recorder with switch selectable data/normal modes as well as cue/review and tape counter providing a reliable cassette storage system. DR101 with data lead **£30(c)** Extra Data Lead **£3(d)**

DISC DRIVES

TECHNOMATIC disc drives come fitted with high quality slimline Japanese mechanisms and represent the state of art in disc drive technology. They are built to highest standards and are all tested to their full performance capability before packaging. Single drives are offered with or without integral power supply whilst the dual drives are supplied with generously rated switch mode power supply. Attractively designed steel casings are painted in hard wearing BBC matching paint. All drives can operate in single and double density modes. Drives are supplied with cables, manual and formatting disc and are ready to be fitted to the computer.

Single Drives

1 × 100K 40T SS	: TS55A **£100(b)**;	CS55A with psu **£125(b)**
1 × 200K 40/80TSS	: TS55E **£140(b)**;	CS55E with psu **£150(b)**
1 × 400K 40/80TDS	: TS55F **£155(a)**;	CS55F with psu **£169(b)**

Dual Drives

The FLOPPICLENE disc head cleaning kit is the ideal way to ensure the optimum performance of your drives. The use of disposable cleaning discs eliminate the risk of recontamination and abrasion of the sensitive disc heads and ensure continuously reliable data capture and transmission.
Floppiclene with 20 disposable cleaning discs. **£14.50(b).**

COMMUNICATIONS

We offer the customer a choice of BT approved modems and suitable communication software, enabling the user to choose an ideal cost-effective system, perfectly suited to his individual needs. We stock modems for every requirement, whether it is for the business, or private user, whether you require access to a public database, bulletin boards or a mainframe, whether for local or international use.

MODEMS

TORCH UNICOMM See our section on Torch for further details.

ACORN PRESTEL The dedicated Prestel adaptor complete with integral, BT approved, auto-dial modem and software in ROM **£120(b)**

BUZZ BOX A full spec, BT approved, pocket size, direct connect modem with both originate & answer modes, full & half duplex, allowing access to many databases, bulletin-boards as well as intercomputer communications. It conforms to CCITT V21 300/300 Baud Standard. Battery/mains powered **£55(c)** BBC Lead **£6** External PSU **£9(c)**

WS2000 A world standard, BT approved, direct connect modem switchable between 75,300/300,600, 1200/75, 75/1200 baud. It is compatible with Bell 103/113/108, 202 and CCITT V21 & 23 standards and allows you to communicate with virtually any computer system in the world. This is the new generation modem that was chosen by the BBC to demonstrate a totally reliable USA-UK data link live on TV — it performed faultlessly in front of an audience of millions. This modem will cover Prestel, Micronet, Telecom Gold, Distel, Microweb, One-to-One, Bulletin Boards both in the UK and abroad, etc. etc. as well as user-to-user communication. It also has a rather useful facility of 'Reverse-Prestel' mode i.e. 75/1200 so that you can communicate with other users who only have a standard 1200/75 type modem. What possibly gives this modem its biggest advantage is its option of computer controlled switching between all modes of operation. In addition, separate auto-answer and auto-dial cards are available, giving this modem possibly the greatest potential of all. Mains powered. **£129(c).** Data Cable **£7**; Auto Dial Card **£30(d)**; Auto Dial Cable **£4**; Auto Answer Card **£30(d)**; Ski Software Control Kit **£14(d).**

DS1 menu driven software to hold directory of telephone nos and configuration data. Only one key entry to call any number. Operates with auto dial, SK1 and Commstar. **£10(d)** (please specify 40 or 80T).

TELEMOD-2 A BT approved modem complying with CCITT V23 1200/75 Duplex & 1200/1200 Half-Duplex standard, that allows communication with Viewdata services e.g. Prestel, Micronet etc., as well as using 1200 Baud for communicating with other computer users. Mains powered. TELEMOD 2 **62(b)** BBC Lead **£7.00**

COMMSTAR An ideal communications Rom. Extremely easy to use, yet very versatile. It features both a Prestel mode as well as a Terminal mode, thus offering very good value for money. In Prestel mode, all normal Prestel features are available including, downloading of software, saving and retrieving of pages on disc, page tag, revealing of hidden text etc. Its terminal mode is ideal for bulletin boards etc. All input may be copied into a buffer in memory over which full control is available. Controls of protocols are very simple and any type of file, (not just ASCII) may be sent using XModem protocols. Even includes an elapsed time-clock. **£29(d)**

TERMI-II A good all round package for communicating with notice boards, electronic mail services etc. Termi is a semi-intelligent terminal emulator allowing the BBC to act as a dumb terminal, slave BBC graphics terminal, or VT52 terminal. The rates at which data is sent or received is easily set up with rates of up to 4800 Baud with 40/80 col. selectable. Allows files to be transmitted from disc, or a copy of incoming data to be sent to a file or to a printer. (Termi is not suitable for PRESTEL). **£28(d)**

COMMUNICATOR This is a full 80 col VT100 terminal emulation program on 16K eprom. It is a more advanced program than TERMI and features easy to follow screen menus. The rate at which data is sent or received is easily set up with rates up to 19200 Baud with 80 column text. Allows files to be transmitted from disc, or a copy of incoming data to be sent to a file or to a printer. (Communicator is not suitable for PRESTEL). **£59(d).**

TECHNOMATIC

EPROMER II

This enhanced eprom programmer will handle the full range of popular single rail eproms. Its sophisticated menu driven software makes the programming of eproms simple and efficient. Features included in this programmer are normally found in industrial grade programmers costing many times more.

- Interfaces with the BBC tyru 1Mhz bus. Fully buffered and complies with the Acorn protocols. Integral mains power supply ensures no power drain from the computer.
- EPROMER II will handle 2516, 2532, 2564, 2716, 2732, 2764, 27128 and 27256 single rail eproms.
- All eproms up to 16K programmed in single pass.
- Fully software driven with easy to follow user friendly instructions displayed on the screen. Total control from the keyboard — no knobs to fiddle with.
- Eprom type selectable from the keyboard.
- Selectable programming voltage 25/21/12.5V.
- Defaults to normal programming — high speed algorithm programming selectable.
- Can READ, BLANK CHECK, PROGRAM and VERIFY at any address/addresses.
- Constant display of eprom type, option and address range selected.
- Full screen editor with HEX or ASCII input.
- Full TAPE/DISC filing facility.
- Several basic BBC BASIC programs can be entered on a single eprom and called up with individual name.
- Comprehensive manual.

EPROMER II with software Cassette **£99(b)**
Disc based Software **£3** extra

UV ERASERS

UVT1T Eraser with built-in timer and mains indicator. Built-in safety interlock to avoid accidental exposure to the harmful UV rays. It can handle up to 5 eproms at a time with an average erasing time of about 20 mins. **£59(b).**
UV1 as above but without the timer. **£47(b).**
For Industrail Users, we offer UV140 & UV141 erasers with handling capacity of 14 eproms. UV141 has a built in timer. Both offer full built in safety features UV140 **£8**
UV141 **£79(b).**

SMARTMOUTH

The Original 'Infinite Speech' Synthesiser — Still the Best!
A ready-built totally self-contained speech synthesiser unit, attractively packaged with built in speaker, Aux. output socket etc. Optimum sound quality is achieved due to a tailored frequency response audio stage. It allows the creation of any English word with both ease and simplicity, while, at the same time, being very economical in memory usage. You can easily add speech to most existing programs. Due to its remarkable infinite vocabulary, its uses spread throughout the whole spectrum of computer applications — these include educational, industrial, scientific, recreational etc. — simply plugs into the User Port. No ROMs are needed. Smartmouth is supplied with demo and development programs on cassette (easily transferred to disc) and full instructions. **£37(c).**

'TIME-WARP' REAL-TIME CLOCK CALENDER

A low-cost compact unit that opens up the total range of Real-Time applications and adds a new dimension to the personal computer. Though built to exacting professional standards, it is at a price previously unattainable, and brings it within reach of all BBC Computer owners. With its full integral battery backup, possibilites include an Electronic Diary, continuous display of 'on-screen' time and date information, automatic document dating, precise timing and control in scientific applications, recreational use in games etc. — its uses are endless and are simply limited by ones imagination. Simply plugs into the User Port — no ROMs needed. Extensive applications software supplied on cassette (easily transferred to disc) and full instruction manual. Please phone for details. **£29(c).**

ATPL SIDEWISE ROM EXPANSION BOARD

This is a well constructed expansion board, that does not require soldering in its installation. All buses are buffered. It allows full sideways Rom expansion to a total of 16 ROMs. One socket has been split into two 8K sockets to allow the use of 8K byte CMOS RAM chips, giving a total of 16K sideways RAM. This is ideal for sideways rom development, and will also allow downloading of software from cassette or disc. The battery backup option will allow retention of data in the RAM, when power to the computer is removed. Several link-selectable options include the choice of type of Eprom, and a 'write-protect' for the RAM option. **£39(d)** Back-up Kit **£18.**

01-208 1177

Please add carriage: (a) £8; (b) £2.50 (c) £1.50; (d) £1 and VAT at 15% to order. Carriage (a) sent by Datapost

ACORN IEEE INTERFACE

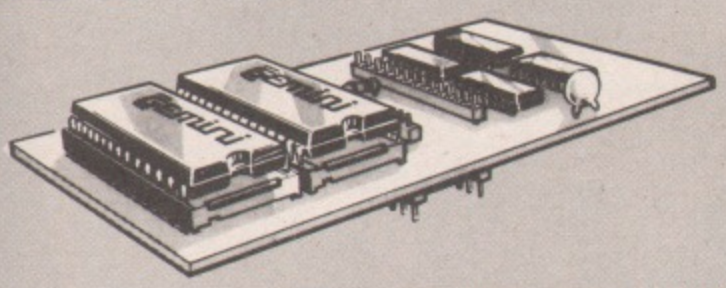
This interface enables a BBC computer to control any scientific and technical equipment that conforms to the IEEE488 standard, at a lower price than other systems, but without sacrificing any aspect of the standard. The interface can link up to 14 separate IEEE compatible devices. Typical applications are in experimental work in academic and industrial laboratories, with the advantage of speed, accuracy and repeatability. The interface is mains powered and comes with cables, IEEEFS ROM, and user guide. **£282(a)**

ACORN TELETEXT INTERFACE

This interface allows the retrieval and storage of data transmitted by both BBC and IBA. There are currently many educational and other programs being transmitted, and this unit will allow their retrieval absolutely free. In 'Terminal' mode, the system receives and decodes pages from both Ceefax and Oracle. (These pages can be stored). In 'Telesoftware' mode, the system can load, run and execute programs that are transmitted. This unit gives you a professional teletext terminal at a cost effective price. **£195(b)**

DATABASE MANAGEMENT SYSTEM

Gemini DATAGEM



The Definitive Random Access, 24K ROM Based DATABASE MANAGEMENT SYSTEM.
Datagem is the first truly flexible database for the BBC Micro that can make your system really useful and efficient, saving you money in the long run. The system includes a carrier board containing two Eproms, demonstration applications disc in both 40/80T, professional documentation with quick reference card, and 'Trans' utility program. Features include: *almost unlimited file size (max 10MByte) *supports up to 4 drives *Max of 5000 records per file *max 6K record size *max of 62 fields *9 level hierarchical search system with facilities to store results of searches. Searches can be any one of the following: Search, Include, Exclude, Combine, Common or Difference *user defined variables *generates form letters from records. Please ask for leaflet. **£112(c).**

FIRMWARE/SOFTWARE

VIEW Word Processor Rom on special offer at **£48(c).**
This is the new version V2.1. Advantages include being able to print straight from memory, as well as editing in any mode. Complete with comprehensive manuals to Acorns usual high standard.

HI VIEW Disc based version of VIEW word processor for use with the 6502 2nd processor. Allows 47K of user memory. **£52(c)**

VIEW INDEX Disc based program which will create an index from any marked view text file and sorts alphabetically noting each page number or section where the reference occurs. Marking of the words or phrases can be done while writing the file or when editing it. An ideal utility for any one concerned with writing extensive reports, books etc. **£13(d)**

WORDWISE One of the most popular word processors for general use **£34(d).** Wordwise SpellCheck Disc — A must for any serious word processor user. Normal price **£16.50(d).** If bought with Wordwise: No p&p and only **£14.**

SPELLCHECK II (Rom based) A new machine code program that works with both VIEW and WORDWISE and operates up to 5 times faster than SPELLCHECK I. A dictionary disc is supplied with a vocabulary of 6000 words and the data compressing technique used in storing the words will ensure that this can be extended to well over 17000 words on a 100K disc. The rom is fully compatible with the 6502 2nd processor. **£26(d)**

NEW

ULTRACALC This new version of the successful spreadsheet program has several enhancements to increase its power and flexibility including: * Operation in any mode * Greater printer flexibility incl. control codes £ sign definition * runs as HICALC with 6502 second processor allowing 44K of space in any mode * Spooling as ASCII text files. These features are in addition to the existing powerful features such as handling of labels as well as numbers as values, allowing search by a meaningful name rather than just a number. Facilities and commands include: variable column width, sum, replicate, insert, delete, justify and most mathematical functions. You can create and manipulate pricelists, balance sheets, payroll, c/flow order entry, small databases and scientific calculations. **£69(c)**

VIEWSHEET Acorns spreadsheet provides 255 rows and 255 columns and will operate in any mode. It distinguishes between values, labels and formulae. Windows can be created which can then be arranged to provide any type of format required for printing. Function keys provide for easy entry of commands which include insert, delete, replicate, justify etc. Most mathematical functions supported. Printer commands can be given using the VIEW printer driver. Files can be converted to VIEW files and data transferred between different worksheets. **£52(d)**

QUICKCALC An economically priced disc based spreadsheet program for personal accounts etc. It offers load, save, print, goto, replicate, histogram and many other functions. **£12.50(d)** (please specify 40 or 80T)

BCPL A full implementation of the BCPL compiler language consisting of the language rom, disc containing the BCPL compiler, a screen editor, a 6502 assembler, other utilities and programming aids and examples of BCPL code and a 450 page manual. BCPL can be used to develop games programs, commercial packages, system software, to write control systems and to produce programs which otherwise would need to be written in assembler. **£52(b)**

BCPL STAND ALONE GENERATOR Utilities in this package enable the programs developed using the BCPL rom to be converted so that they can be run on any BBC micro whether it has a BCPL rom or not. Stand alone programs for other 6502 based systems can also be developed. **£43(d)**

BCPL CALCULATIONS PACKAGE: supplied on disc, it supports floating point, fixed point and fast integer calculations. It includes the BCPL calculation files, example files and a comprehensive user guide. **£17.30(b)**

ACORN LISP Rom **£43(d)**

ISO-PASCAL: Write for details and availability **£60(c)**

ACORN LOGO Write for details and availability **£60(c)**

COMAL Write for details and availability **£43(c)**

6502 DEVELOPMENT PACKAGE Write for details and availability **£43(c)**

G:FORTH An advanced implementation of FORTH which follows the 79-Standard specification on a 16K ROM and has a full double number extension set. It incorporates an editor, 6502 assembler, very fast turtle graphics and supports extensive string and file handling. It contains 540 predefined words including those for reading joystick ports, produce sounds, set and read the time and produce random numbers. Fully compatible with disc or tape filing systems and works in any mode. Package comes complete with a USER GUIDE, Introduction to FORTH and 16K GFORTH ROM **£43(d)**

DISC DOCTOR This general purpose ROM adds 20 commands to the DFS system. It includes a formatter, sector editor, tape-disc & disc-tape routines, a powerful disassembler, commands for listing function key definitions for editing etc. This ROM will obliviate the need to go for non standard DFS systems (with their inherent disadvantages) as it overcomes many of the Acorn DFS's shortcomings. **£28(d)**

DISCMASTER Beebug's utility rom for disc users adds 11 powerful utilities. Commands include Disc editor/string search, recover, movedown, Link, overlay, format 40/80. Other facilities include colourful disc menu to automatically RUN/*RUN programs, copy non protected cassettes to disc, convert 40 track discs to 80 track and enable dual catalogues. **£16(d)**

NEW

EXMON II Updated ROM version of the original EXMON with new facilities including dual screen operation and full screen memory editor adding 60 more commands on the BBC. Dual screen operation allows running or single stepping of a game or any other program and watching it on the screen or flipping to the monitor screen to examine the registers, edit code or alter memory etc by simple switching. **£24(d)**

SLEUTH A single step debugging tool for Basic programs with features which include single stepping, Dual screen operation, Breakpoints to pause a program at any preset line or state of a variable, Acclerator to adjust the speed of the program from full speed to freeze frame, full feature control screen and sophisticated trace line facility. £24(d)

GRAPHICS ROM This Rom includes over 28 new graphics related commands which can be used in BASIC programs. Features include: sprites, LOGO Turtle graphics, fill routines, shading, large characters, rotation, scaling and 3D plotting all using '*' commands. 28(d)

BASIC COMPILER Write for details and availability.

PRINTMASTER This ROM features the most versatile screen dump for EPSON MX/RX/FX80 and Kaga 810 printers. It supports three types of dumps. The first allows any graphics on the screen to be dumped. Colours appear as shades of grey. Any part of the screen can be printed at any position on the paper in any one of four orientations. The screen dump may be magnified by any factor x2, x3, x4 etc. A special feature allows true MODE 7 screen dumps with TELETEXT text & graphics. The second dump allows any text to be dumped whilst the third dump will print the contents of a file on disc whilst the computer is doing other things. This is not all. All printer functions can be called up using the *command. *DEFINE allows the printer to define his own characters and store them. *GPRINT allows printing of enlarged text in any position, orientation, size & shade. *WINDOW allows windows to be defined in any size and position on the screen. **In short this one ROM does it all.** £28(d)

DUMPMASTER A sophisticated piece of software that produces fast, machine code, tailor made screen dumps for printers listed. It uses up to 8 shades and will copy accurately your screen in any graphics mode including the teletext mode. Once created, the routine can be called as required or appended to any Basic program. Snapshot facility allows screen dumps from a game or other program using single key as long a work areas do not clash. Printers are EPSON MX/FX, STAR 910, Seikosha GP80, 100, 250, 700, NEC PC8023, FACIT 4510 (linear), ANADEX DP9500A and 9501A and INTEGREX Colourjet 132A £10(d))

MUROM Sound Extension Rom: Helps you create your own tunes and sound sequences either with MUROM's editor and a musical score or using the keyboard to simulate a piano. Edit your creations with the full screen music editor and then switch to envelope editor to tailor the tonal quality and select instrument type. Incorporate the music into other programs or playback with or without MUROM. Instant sound effects can be called from Basic eg *ZAP, *SIREN, *EXPLODE etc. £24.50(d)

NEW

HELP Rom based comprehensive on screen HELP facility to aid and speed up programming. £21(d)

MICROTEXT This authoring system was developed by the National Physical Laboratories. It is a programming system designed to simplify the production of a wide range of man-computer dialogues. Using Microtext's simple commands, the user can draw up any number of 'frames', each containing text and/or graphics. A series of frames build up into a complete module. Each program can consist of more than one module. Using Microtext, an expert in any field can construct their own complete courses of computer-based instructional material. Applications include interviewing systems, teaching packages, training courses and interactive demonstrations and simulations. Available on Cassette and Disc; Disc £53(b); Cass £43(b). Please specify the type of format required (Torch or Acorn).

Replica II 40 & 80 Track Versions available. £10.35(d)

Design Design is a second processor which allows information to be displayed in a format suitable for demonstrations, slide projections, handouts or presentations. Graphs, Pie charts & Bar Charts are quickly produced; automatically drawn & scaled. Versatile labelling facility, 24 User defined, 4 large macro characters plus screen dump facilities included. £16.50(d) Disc (80 or 40 Track).

Superplot Superplot is ideal for screen representations of mathematical functions. It will plot on automatically scaled axes, in Cartesian, Polar or Parametric co-ordinate systems and will allow overlapping of graphs. **Cass** £8.50(d).

CP/M SOFTWARE FOR TORCH Z80 ACORN Z80 PROCESSOR

We can now supply almost any CP/M based software package in a format suitable for the Torch Z80 and Acorn Z80 second processors. The following are generally available from stock.

DBASE II **£365** (a) WORDSTAR **£295** (a) MAILMERGE **£145** (a)
WORDSTAR/MAILMERGE COMBINED **£395** (a)
DBASE II TUTORIAL (All Lessons on Disc) **£32** (c)
PROPASCAL £220(a) CP/M TUTOR £55(c)
Phone for your specific requirements.
Please specify the type of format (TORCH or ACORN) required.

Spellcheck I Menu driven spelling checker for Wordwise or VIEW. Dictionary contains 6000 words and is expandable to 1700 on 100K disc. £16.50(d) Disc (80 or 40 Track) Specify whether Wordwise or VIEW.

Masterfile II The new version of the popular general purpose file management system. It allows large amounts of information to be stored and processed. It is extremely powerful yet flexible to use. The disc version allows up to 17 fields per record, and the only limitation as to the number of records is the capacity of the disc. Typically, using 5 fields, about 2000 records may be stored on a 100K disc. This latest version features many new facilities including use with WORDWIDE/VIEW £16.50(d) Disc (80 or 40T).

NEW

Hershey Character font generator: Disc based menu driven package with 1500 new characters made up from 9 different Hershey character fonts. Flexible utility allows choosing of any characters and appending them to users programs. Screen dump routine for Epson printers included. £12.50(d)

When ordering software on disc plese specify track format (40/80)

"... the BBC Micro is, in my opinion, a machine that will be with us when others have decayed back to the sand that their silicon chips came from!"

– from the preface to "The BBC Micro, an expert guide" by Mike James.

DAVE was in his bedroom, programming. His friends ridiculed the fact that he used a computer that was now several decades old, but he ignored them. What if it didn't have two-way interactive speech, or even a speech synthesiser? What if it did have an old-fashioned keyboard, with the even more old-fashioned QWERTY layout? The point was, he UNDERSTOOD it.

His BBC Micro had belonged to his father when he had been a small boy. Dave, like every other kid, had played with modern picocomputers, from wrist-watch size, which you held up to your mouth to speak into, to the ultra-sophisticated, about the size of his BBC model, but he thought of them as inscrutable boxes.

None of his friends knew how their computers worked; it was not necessary to learn even a high level language any more to program them. You simply had to talk to them, and they answered you.

His BBC Micro, on the other hand, was much simpler and easier to understand. He had his father's old literature, including the User Guide and Advanced User Guide, both well-thumbed with the rear pages long since free of the spiral binding with so much use.

He knew that the computer used serial processing, having in fact been manufactured shortly before the invention of the very first transputers which totally revolutionised computing.

He knew also that, although it had provision for a so-called "High-Level" language, he could instruct it in something even simpler; by using machine code, he could give instructions directly to the central processor.

He enjoyed playing with machine code, in much the same way as some adults still enjoyed running and maintaining old stream locomotives. Right now, he was entering a short program that he had dreamed up:

```
10 DIM CODE% 12
20 P%=CODE%
30 [OPT 0
40 SEI
50 .LP1 LDX#0
60 .LP2 INC &7C00,X
80 BNE LP1
90 INX
100 JMP LP2
110 ]
120 MODE 7
130 CALL CODE%
```

He had just finished entering the program and starting to RUN it, when his mother called, "Dave! Please come down here at once".

He left his computer running and hurried downstairs. His parents looked grim and a little frightened.

"There's just been a news flash", said his father. "A couple of nuclear missiles have been used in the war, and they're afraid that the all-out exchange could start at any time. I think the best thing for us to do would be to go down to the cellar, and hope we'll be safer there".

They descended to the cellar, which Dave's parents had stocked with several months' supply of food shortly after the war had started in case this moment came. As they did so, a distant siren started to wail. Up above, Dave's computer continued to run its program.

One of the interesting things about Dave's computer was its power supply. With the frequent power interruptions caused by the requirement to divert energy resources for military purposes, some kind of battery backup was essential, particularly for a computer that was so old that it had a volatile memory.

Dave had obtained a small solar power supply with battery backup, and had it mounted on top of the computer, just inside his bedroom window. The solar cells and battery together were capable of running the computer indefinitely, given daily boosters of sunlight.

Another siren started, closer this time. Anybody who was in the open was trying to make for some sort of shelter, whether invited or not. In their cellar, Dave and his parents waited.

Then the sky seemed to explode.

The direction of the flash was such that, although it hit Dave's bedroom window, the computer and its solar power supply were shielded by the walls. The window was made from a new type of crystal plastiglass, which was thought to be shatter-proof and virtually indestructable. The word 'virtually', however, did not include the effects of heat from a one megaton nuclear bomb.

The window did not shatter; it simply turned to molten crystal, fell in, completely enveloping the computer and power unit, and quickly solidified again. When the blast came it severely damaged the house, but the crystal globule that had been Dave's bedroom window did not crack. No one ever emerged from the cellar.

As if by a miracle, Dave's BBC Micro and its solar power unit had been spared. The TV set and various other peripherals had been blown away, but, enclosed in its ball of clear crystal, the computer still functioned, powered by the daylight to which it lay exposed, still executing the program which Dave had entered into it ...

Report on scientific investigation of third planet

Our earlier expedition had found relics of an ancient, extinct civilisation on this planet, so we were keen to investigate further. We cannot know what catastrophe overtook the race, but there is a certain amount of lingering radiation.

Fragments of many artifacts, such as buildings, remain, but nothing sufficiently detailed was found to give any clue as to the nature of the people, or how long ago the catastrophe occurred, until we made a most amazing discovery which gave valuable information on both these matters.

One of our search parties found a lump of material which appeared to be a kind of crystaline plastic of a particularly resilient nature. Some of our communications equipment which operates at a particularly low frequency experienced interference in the vicinity of this artifact, and we realised that the lump contained a kind of electronic machine which was still operating!

We did not wish to risk interfering with the machine's functioning by breaking open the crystal, so we subjected the device to a detailed electronic scanning probe. It appeared to be a kind of electronic counting or calculating machine.

We were not surprised to discover that the circuitry operated using binary numbers; such a system is after all, the most basic possible counting system, and is used throughout the universe. We were intrigued, however, to see that the number storage circuits were arranged in groups of 8 binary bits.

This fact led us to speculate that the people who made this machine used a numbering system based on either 8 or 16. An examination of the machine's controls suggests that its operator must have had two hands with eight fingers each, or four hands with four fingers, or perhaps the machine was intended to be operated with one hand with 16 fingers.

This solitary clue as to the nature of

TIME =eternity

By MARTYN FOX

the people was very interesting, but paled into insignificance following the shock we had when we discovered what the machine was doing. Part of the number-storage circuitry appeared to have been arranged as a counter with a very large number of digits potentially 256.

The lowest-order digits were counting quite fast, but the number that the count had reached was so large that we calculate that, assuming that it had been started from zero, it had been counting for several thousands of this planet's years!

Incidentally, the designers of this machine, for reasons best known to themselves, had set all of the unused digits to 32, instead of zero, and we took this into account.

Naturally, one of our team raised the point that the counter could have gone right round several times since it started, but we were able to discount this, as the total period of the counter must be many times greater than the age of the universe, let alone this planet.

Although the investigation of this machine has furthered our research as described, we are completely unable to understand its purpose. Why would anyone want to build such a large counter?

The time that a full count would take is unimaginably long; in fact, we think that the universe will have ceased to exist before it gets even half-way. The maximum number, expressed in binary, would be 1, followed by 2048 zeros – surely, to us, a number with no practical use.

We can only speculate as we continue to probe the machine. A great deal of it appears to be unused, and it obviously has a great many more secrets to tell us. I intend, after a thorough examination, to write a book on it, a kind of User Guide.

Emergency addendum

We have, unfortunately, interfered with the workings of this machine. As you know, our electronic scanning probes work best in darkness. We therefore put the machine in a darkened area of our landing craft to investigate it.

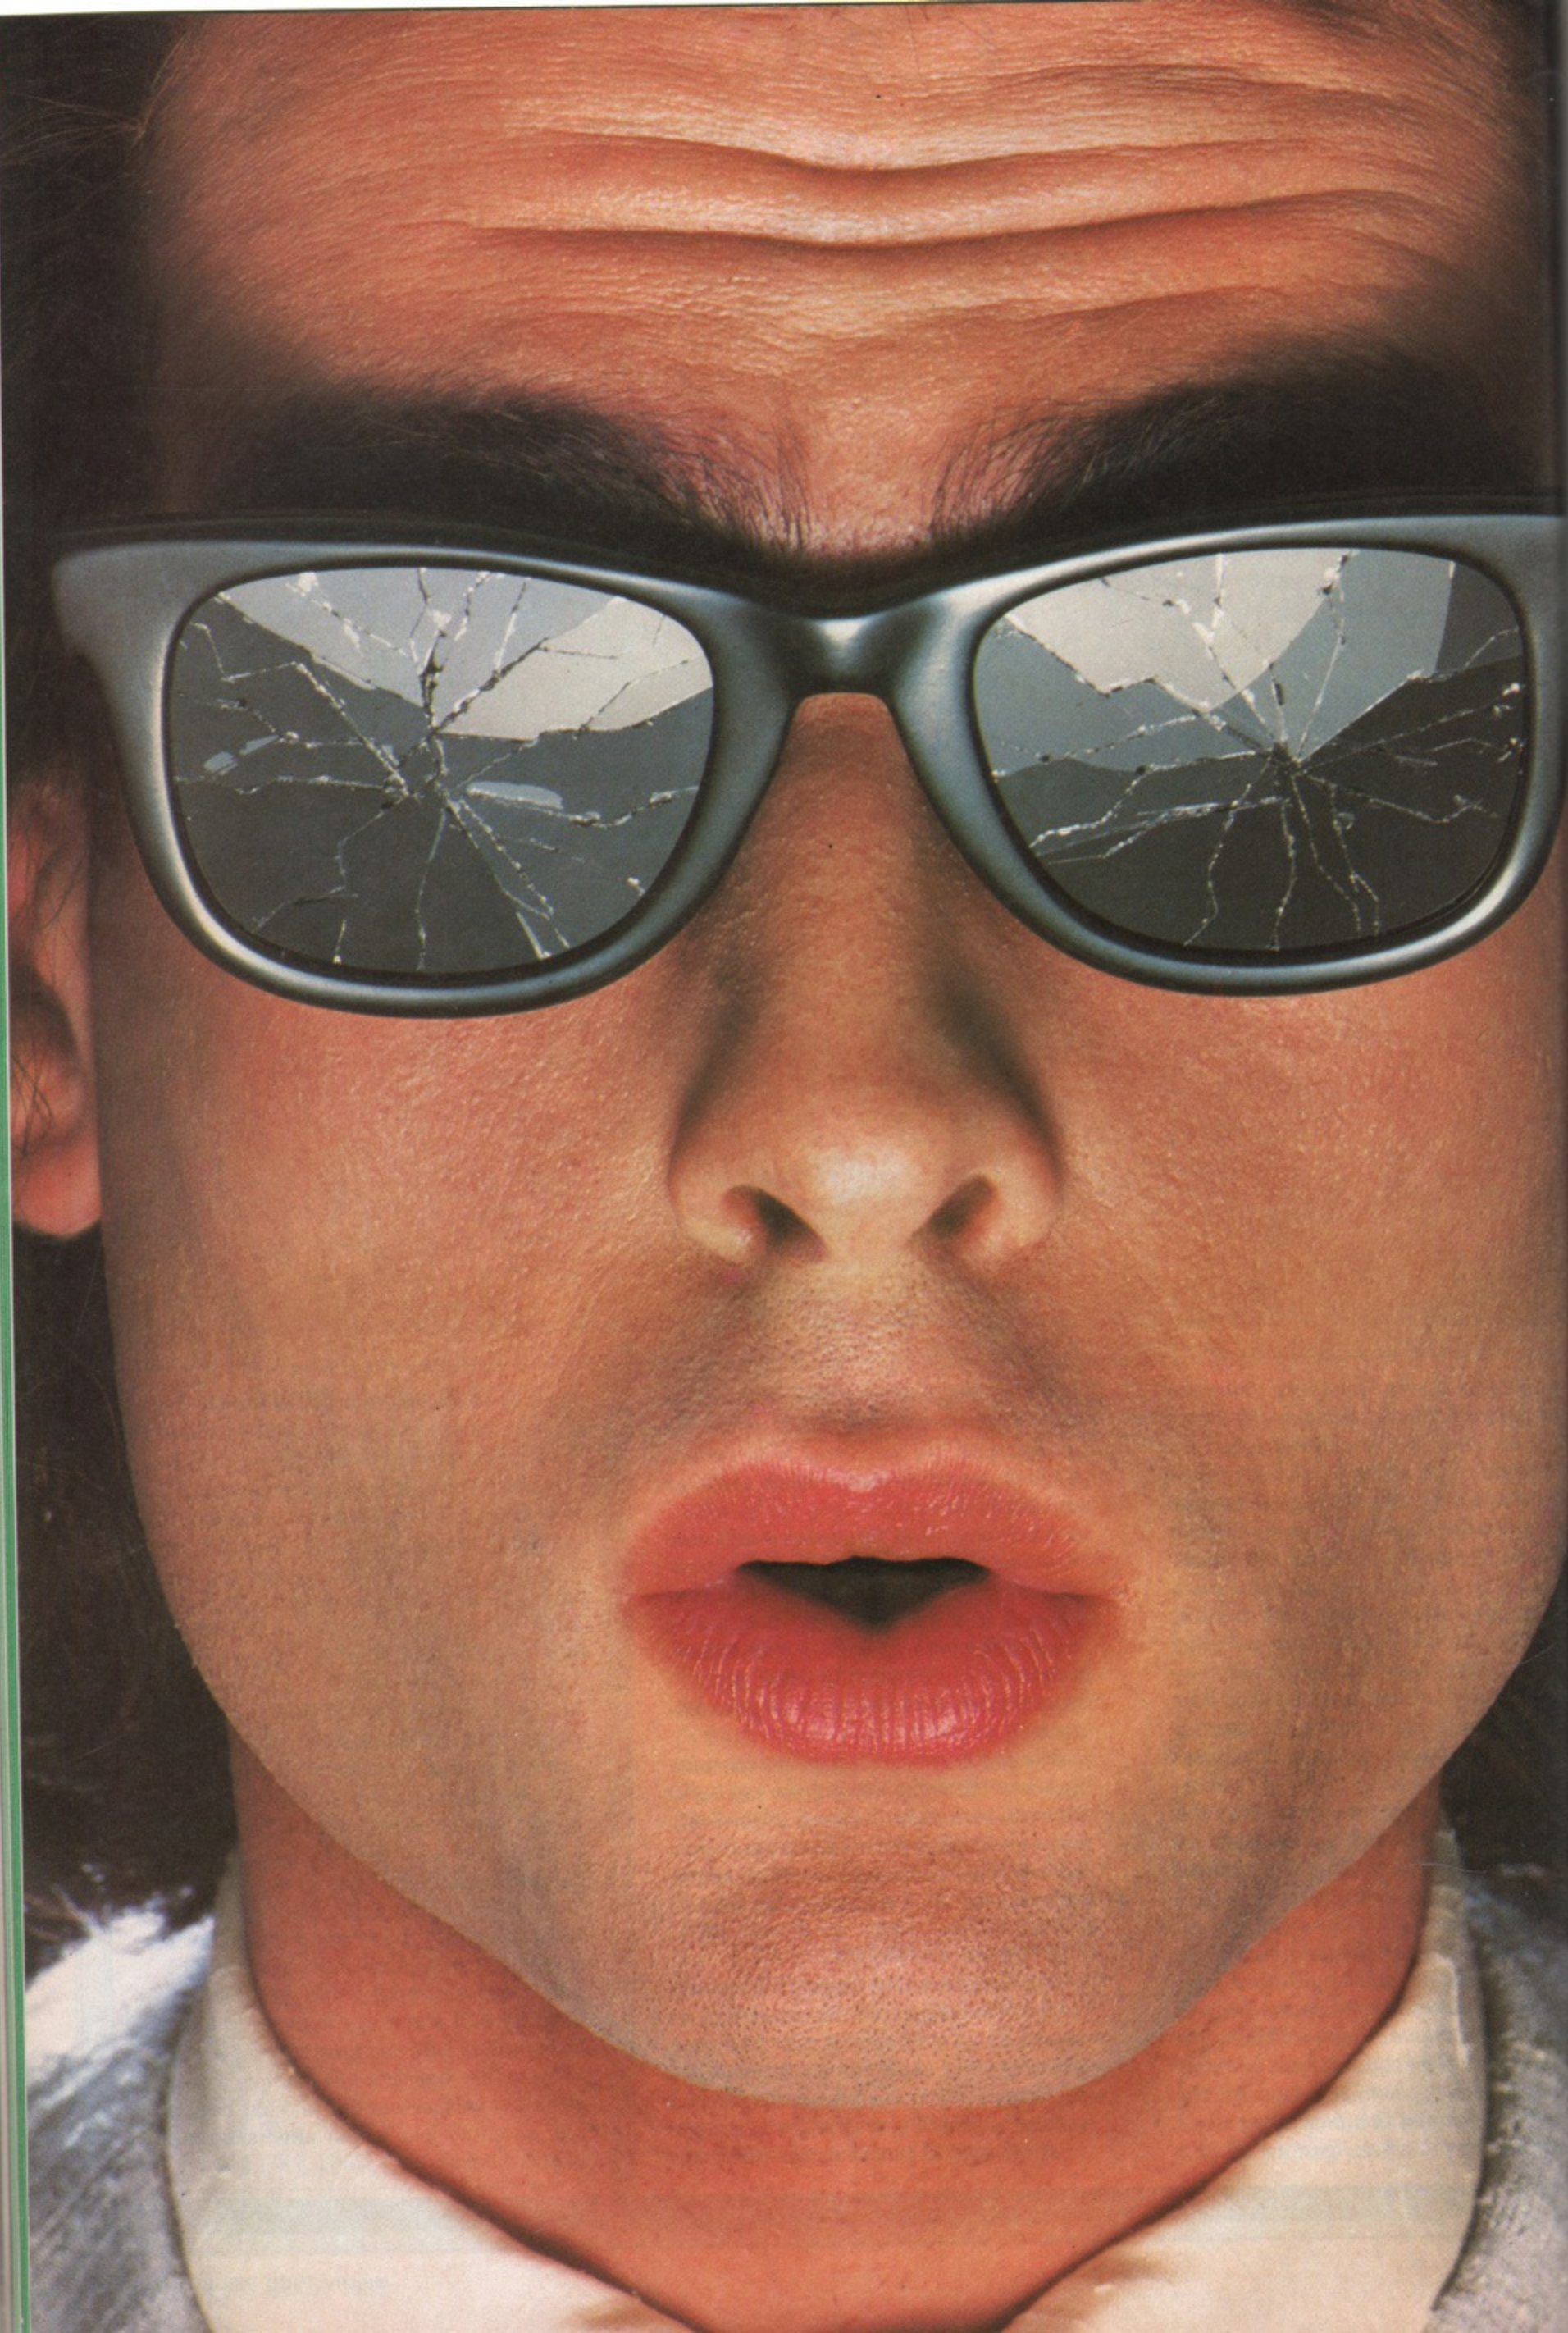
After several planet cycles inside the craft all electronic activity stopped.

We realised too late that this machine had been powered by daylight. We quickly took it out into the light, whereupon it emitted a short, high-pitched sound. Although electronic activity of some sort resumed, the counting process, which had been of such interest to us earlier, was absent, and we have found no way to restart it.

We have, however, made another startling discovery. Following this calamity, we decided that we had nothing to lose by opening the machine up. On cleaning away a certain amount of dirt, we discovered what we believe to be a picture of one of the people who used to inhabit this planet.

They had rectangular heads, with two large eyes, and a body somewhat smaller than the head, ending in two feet, each of which appears to have had three toes. A third limb of some sort appears to have been used to help support the large head.

How they operated the machine is not clear, but we feel that this find has been a real quantum leap in our understanding of this planet.



You should see what he's just seen.

Micronet 800.

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, informations and software system. Set on our mainframes nationwide.

Includes 30,000 pages and access to Prestel™ with its full range of services.

A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages and graphics at a touch of a button.

And there's the Chatline service, Swapshop and Teleshopping.

Check with daily updates on the very latest computer news.

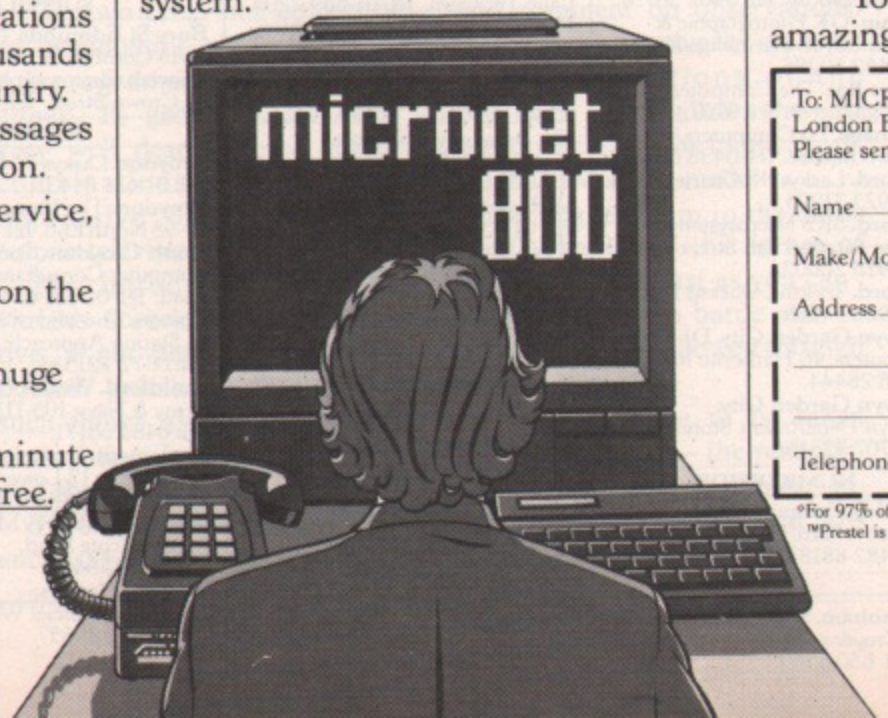
Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free.

For only £13 a quarter and just a local* telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.



Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143.
Please send me the full facts about Micronet 800.

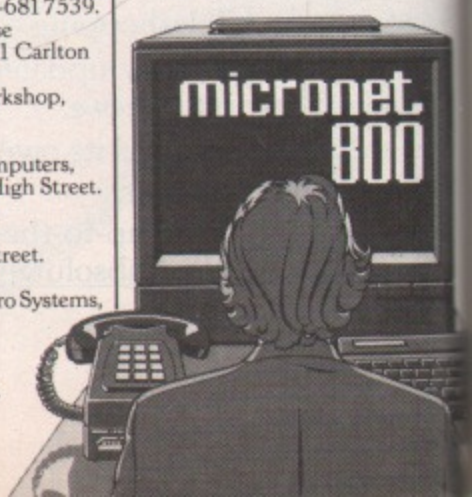
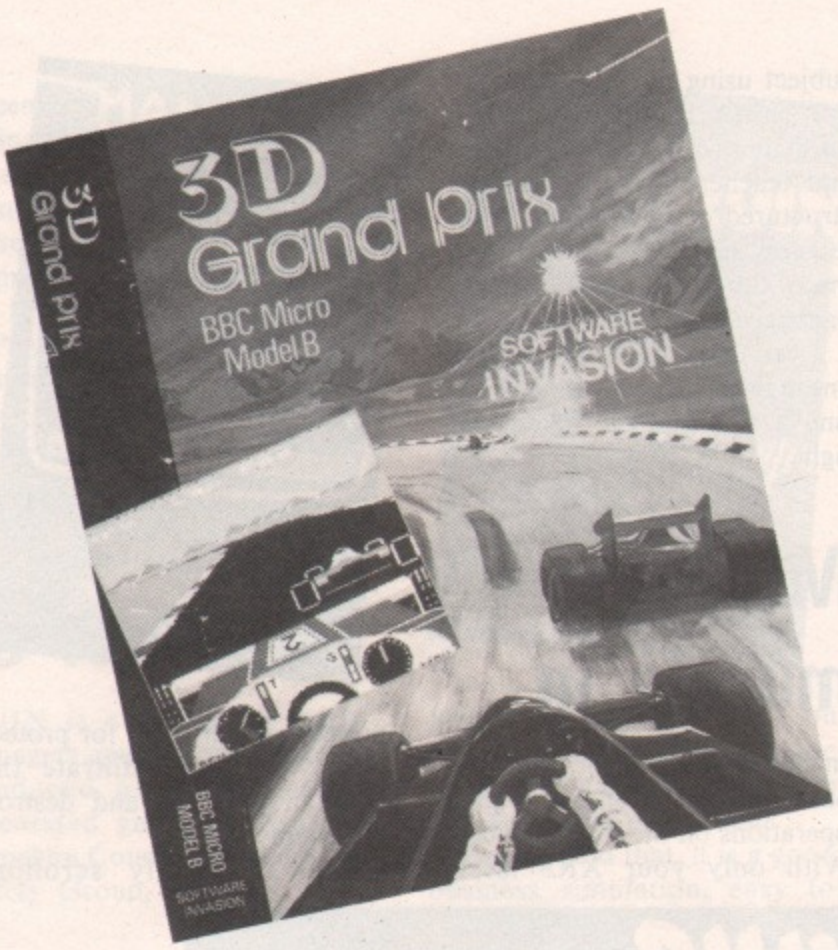


Graphically great, but sounds unexciting



3D Grand Prix – the latest release from Software Invasion – gives you another chance to stand in awe of the 3D shrink-and-grow routines so beloved of its makers.

The screen display is similar to that of the arcade original, Pole Position, with the road weaving around in front of you. You can also see your spinning tyres, and a panel display of the ever-erratic rev counter, speedometer, temperature, gear selected and the steering wheel.

The other cars in the race make life as difficult as possible as a matter of course (sorry about the pun). Unlike its arcadian uncle, 3D Grand Prix requires you to finish in the first four in each race in order to compete in the next race at one of eight different tracks.

Fail to qualify and one could say that it's the end of the road . . .

The most difficult thing about the game is trying to overtake a car in front – you either seem to end up chewing a bill board or you pile into your rival.

If you wait patiently behind it will eventually move across and let you pass provided you are ready to go rather smartly.

It's a fair game – better than most yet worse than some – with impressive graphics.

The lone car visible in front gets bigger and smaller in jerks, though the impression of movement is rather good. The mountains in the background move when you turn which is a nice touch.

The engine noise is OK but it seems a bit 'whizzy' instead of 'growly'. The real clanger is at high speeds though. A strange fluttering noise drifts from the speaker. No, it doesn't resemble a skid – it's a cross between that and the tyres saying their fond farewells to the wheels.

The controls are well thought out, though pre-defined. Joysticks are optional and again easy to control.

To sum up, it would sell excellently with its graphics but its sound effects and fellow competitors spoil it for me.

Philip Tudor

Taking the serious view . . .

SUPPLIED as a book and cassette suite, **Data Structure Demo** is aimed at those who want to use the BBC Micro for serious purposes, especially in data processing.

It takes the concept of data structures apart and then shows how you can use the various ideas involved to develop your own data handling programs.

The main headings are arrays, hash tables, linked lists and binary trees – a reasonable way to break down the subject matter.

Unlike many packages of this type the book is not simply a listing of the programs but serves a dual purpose by documenting them, teaching the concept involved by example and theory.

The theory takes you step by step from the problem towards the solution in a lively and imaginative way.

This is then followed by a section about the programs on the cassette with listings of short sections of the code where and when they are needed.

Next is a list of suggested data

→

Relive carnage of the Somme

ATTACK on The Somme is another thought provoking educational package from Tressell Publications.

"Package" is the correct term for their work as the programs are carefully integrated with the documents and together they provide an in-depth study.

In the package are a user guide, teachers' notes, two booklets (The Somme 1914-18 and Contemporary Accounts of the First World War), and the two programs.

As with other written materials produced by this teachers' cooperative, they are well designed and printed.

The two programs consist of an introduction made up of six sub-programs, and the main attack. In general these work very well despite some colour combinations that are not impressive on an ordinary colour television.

The introduction sets the various scenes and uses effective, if not particularly sophisticated, animation to illustrate such things as air and ground observation, creeping barrage, and the trenches.

Throughout, the students are encouraged to cross reference the booklets, answer questions and comment on observations. It is most instructive for students to see animations of the strategies as this allows them to see more clearly the implications of the decisions made.

All this leads up to the battle itself. Thankfully this is not of the "zap 'em as fast as you can" type but allows a battle plan to be laid out and followed through to its conclusion.

Decisions have to be taken about five things – the preliminary bombardment, mines, infantry, when to attack and how to attack.

A map of the battle area is used to assist decisions and reports are given at different stages.

At the conclusion of the battle a set of detailed comments and criticisms are given on the performance and a comparison made with Haig's plan.

Overall this is a very effective and sympathetic attempt to deal with this complex and emotional event. The authors have attained a high degree of realism and have certainly added another very useful learning aid for historians to use.

Norman Parr

From Page 57

designed to show how the program can handle specific problems.

Technical documentation follows, if required, and gives a full explanation of the essential parts of the program code, relating these to the theory already explained.

Each section ends with a set of suggested exercises, a way of testing that you have really understood the area thoroughly. Answers are provided in an appendix in case you get lost or confused.

There is no doubt that this is a well written and conceived package which will appeal to those who have to study data structures or have to teach the subject using the BBC Micro.

I think the programs in particular will appeal to lecturers and teachers due to their well structured design. This uses the features of BBC Basic that so many other serious application packages ignore.

I can't see this being number one in the charts however – there isn't a single Space Invader in sight.

Dave Carlos

Martians muscle in

In **Spaceman Sid** the Martians have muscled in on our mining operations on the Planet Tribos. With only your XR5 laser-armed combat rover for protection you must infiltrate the Martian defences and destroy the enemy camps.

The constantly scrolling planet surface is far from smooth, yet the combat rover's excellent independent suspension copes admirably with the rugged terrain.

However the craters must be jumped by pressing Shift and the larger rocks vapourised with a blast from your forward laser cannon.

The results of failing to clear a crater are quite devastating as all three wheels fly gracefully skywards and bounce away in different directions leaving the combat rover sat squarely on the ground.

The XR5's weaponry consists of two lasers, one firing forward and the other vertically upwards. The vertical firing laser is designed for shooting down the enemy scout ships which hover overhead dropping rather large

QUICK RUNS

A first look at some of the latest releases

Acid Drops: *Control your laser base in an attempt to destroy the moths, pods and spinners. Avoid at all costs the homing missiles, and the acid as it starts to drip from the bath overhead. Once in flight mode you must guide your craft through the maze to the next level.* (Firebird)

★ ★ ★

Bird Strike: *Shoot the attacking planes as they home in on you dropping bombs. A dead centre hit will destroy them but winging only releases a carrier pigeon. Shoot the pigeon to add a note to the stave at the top of the screen. Complete the tune for a bonus and the next level.* (Firebird)

★ ★ ★

Duck: *Aid Farmer Tubby to pot as many ducks and swans as you can without getting splattered with eggs. Take care that you don't trip over the birds that walk on at inopportune moments. Each wave gets more difficult and if the eggs hatch your problems will get worse.* (Firebird)

★ ★ ★

Gold Digger: *Collect the gold nuggets and crush the chasing misers. Take cover under the falling rocks as each of the six misers tries a different approach spinning hard to shake off.* (Firebird)

★ ★ ★

Number Painter: *In this educational package aimed at the 5-14 year age group you control a little man in a ladders and levels scenario. After selecting a speed, you must match a target number by painting a series of positive and negative numbers placed at random on the screen.* (Applied Systems)

★ ★ ★

Making Numbers Make Sense 1,2,3: *A suite of three pairs of educational programs on the subject of number estimation. Each looks at numbers in a different context and is designed to practise addition, subtraction and the concepts of 'more than' and 'less than'. Pack 1: Butterflies (Items) and Putting (Length). Pack 2: Time-flies (Time) and Tanker (Angle). Pack 3: Tiles (Area) and Fence (Perimeter).* (Hodder and Stoughton)

★ ★ ★

Warp 1: *As commander of a federation starship your mission is to search strange new galaxies for a fellow captain lost in space. Full colour on board screen graphics put you in full control to access six quadrants each with 48 sectors. You must overcome endless enemy onslaughts and master space station docking procedures.* (Icon)

★ ★ ★

Making Ends Meet: *An educational package aimed at school leavers designed to promote thought about money and budgets. The user makes decisions about accommodation, transport, social life and holidays with a view to making a wage packet go as far as possible.* (Cambridge)

★ ★ ★

1914: *A historical simulation for 15-18 year olds covering the first six weeks of World War 1. Students explore the consequences of their own military decisions based on information likely to have been available at that time.* (Cambridge)

★ ★ ★

Maths Topics 2: *This two-program pack for 11-14 year olds covers decimals, percentages and fractions. Percentage Families, an interactive learning program, is coupled with Percentage Snap. The latter is a rewarding game which aims to consolidate the knowledge gained from the former.* (Cambridge)

★ ★ ★

Sea Cliff Erosion: *This educational program aimed at the 13-16 age bracket is a simulation of the formation of sea cliffs. It allows the user to control the major determinants – wave action, weathering rates and rock types – to assess the relationship between these and cliff profile.* (Cambridge)

★ ★ ★

Chess Analysis System: *Allows you to enter, replay, save and load games. Within memory limitations any number of variations, at any depth, and any number of games can be restored within a single file. An index of games in the file is automatically generated, and moves and comments can be added or deleted from a game which is being replayed.* (Computer chess)

★ ★ ★

Jump Challenge: *Get the feel for bike jumping in this simulation of Eddie Kidd's*

bombs in your general direction.

So that you don't present a sitting target for the enemy bombs, you are able to manoeuvre your craft backwards and forwards on the screen by use of the Z and X keys.

The forward laser is essential to enable Sid to destroy the rocks which litter the landscape and block his path.

Small rocks are destroyed by a single shot but the larger ones must be hit twice. Another hazard at ground level is the occasional enemy drone ship which skims over the surface at high speed in an attempt to ram your ship kamikaze-style.

The planet's surface is divided into five sectors, each consisting of five sub-sectors. Your position in each sector is shown graphically at the top of the screen.

Spaceman Sid is essentially the same game as Micro Power's Dune Rider but is played at a more leisurely pace – at the beginning anyway – and there are fewer aerial aliens.

Personally I found Sid more pleasing graphically, and much more addictive.

Jon Revis

The road to ruin?

RUIN is suitable for early teenagers upwards and although produced as a road safety orientated game by Nottinghamshire County Council Road Safety Group, the road safety angle is very tenuous and I am not convinced that anyone playing the game would become any more safety conscious.

Having said that, it is a good business simulation, easy to understand and good value.

Up to six groups can be accommodated or one group can play against the micro which means that it is possible to use it for a full class.

However, unless the groups have access to individual machines which allow interaction with a central processor, pupils could become restless while waiting their turn to input their deliberations.

Each group acts as an insurance company quoting premiums for motor vehicle insurance. The game proceeds for up to 10 years.

Each year, five clients along with details such as age, type of vehicle, experience and number of miles per year, are offered and

→

achievements. Only by developing control and timing will you progress to the more difficult jumps. If you have the courage to push yourself to the limits you can become the best there is. When a successful jump qualifies for the 'Jump Challenge' competition the game is automatically interrupted and the details can be saved to tape for a chance to win a BMX bike, MSX micro or a colour TV. (Martech)

★ ★ ★

The Secret River: *In this text-only adventure, you first create your own character, select weapons, armour and spells, using the generator on side one of the cassette. After loading this into the adventure itself your task is to locate and drink from a magical green river situated in deep underground caves, rumoured to be heavily guarded by Trolls.* (Triffid)

★ ★ ★

The Wizard's Citadel: *Load your successful character from Secret River into this second text-only adventure. You have been approached by an unsavoury character by the name of Grunk the Elder. He has found a map of the Wizard's Citadel. Your task is to join him in his venture and face the hidden dangers together.* (Triffid)

★ ★ ★

Here and There with the Mr Men: *Four fun educational games aimed at 4-8 year olds and designed to teach direction and route planning. Mr Tickle's Jigsaw: Use the arrow keys to move the pieces into position. Mr Tickle and Mr Grumpy: Route planning using absolute directions left and right as you try to tickle Mr Grumpy. Mr Lazy: route planning using relative directions as you guide the lazy worm up a tree. Mr Men v Mr Tickle: Plan the movement of four Mr Men on a chess board to trap Mr Tickle. Absolute or relative direction options.* (Mirrorsoft)

★ ★ ★

Mr Ee: *You control the wily wizard as he tunnels through the earth collecting cherries. He is pursued by a band of Umphs and can destroy them by bouncing his crystal ball around the screen. Alternatively he can tunnel under, or push an apple to drop it on his pursuers. Bonus points can be achieved by running over food, and a bonus life is awarded for killing the five Letter Monsters.* (Micropower)

★ ★ ★

Roadcraft: *A graphic educational pack for 5-9 year olds designed to teach road safety. The child is asked the safest way to cross three separate roads without getting run over.* (Highlight)

★ ★ ★

Bert Boot: *In this educational package designed for the 8-12 year age group, the child is tested on multiplication and division. Correct answers are rewarded with an entertaining little arcade game.* (Highlight)

★ ★ ★

Penpal: *A light pen program to help you enjoy colour and shape through interaction with the screen. With the package you can draw with lines or dots, paint with keyboard and user-defined shapes, position text and shapes anywhere on screen, select any colours in Mode 2, plot mosaics, fill regular and irregular shapes, and save/load screens.* (Watford)

★ ★ ★

Computers, Information, Awareness: *A disc based educational package designed as a coherent, practical introduction to the ways in which computers are used in everyday life. The six programs cover creating a file of music records, managing a fictitious airline, searching a document, payroll management, word processing, and a search of criminal records.* (Pitmansoft)

★ ★ ★

BBC Micro Utilities: *A tape and booklet pack designed to assist in overcoming major hurdles in machine code programming. The tape contains Beebmon, a monitor, disassembler, and memory mover plus 17 of the longer machine code routines from the BBC Micro assembly language book by Bruce Smith.* (Shiva)

★ ★ ★

Pirate: *This is an adventure game which combines colourful graphics, animation and sound. As the captain of a pirate ship you must steer your ship through the maze of reefs and islands. Deal with the hazards you encounter on the way and gain points for finding treasure, secret objects and a password. Single function key entry provides the command selection.* (Chalksoft)

From Page 59

each group in turn presents its quotations.

These are based on the risk factor each client presents and each group has to quote premiums which attract customers but which cover the costs of any accidents.

A group starts with a capital of £50,000, and after all tenders have been received the program displays a balance sheet for each of the companies in turn.

This shows numbers of new clients, income from new and old clients, the number of claims, liabilities and overheads as well as opening and closing balances. The group with the largest balance at the end wins.

Initially, groups will find difficulty giving quotations which attract new customers at premiums showing a profit but as the game progresses players assimilate knowledge of the risks associated with different types of road user and the competition gets keener.

The game can be played several times with each group because client details are randomised and although there is an element of chance in the accidents there is a heavy bias towards real life risks.

John Daddy

Riding pretty high

IT had to come sooner or later with the current BMX craze – Superior Software unashamedly presents **BMX on the Moon.**

Fortunately, the game isn't quite as cheap as it sounds. It's a rehash of the old fashioned 'dodging and shooting while smoothly scrolling' theme.

This game comprises a lunar landscape, a moon cycle – the pseudo BMX – rocks, menacing barrels, overhead hovering nasties and liberal unpleasantness.

Each go is divided into different screens of increasing difficulty. At the start you only have hovering spaceships to contend with. These can be shot quite easily with your guns which fire both upwards and forwards.

As you progress through the screens, the existing aliens get meaner and new variants are introduced. Bouncing monsters appear in awkward positions, barrels fly towards you which are too high to jump over, too low to drive under and too high to shoot at.

Spaceships overhead start to pepper the landscapes with craters which adds something else to be negotiated.

You select which skill level you want. On a high skill level, the landscape has hills in it, which can contain partially hidden rocks. Worse still the landscape can be on the receiving end of the forward gun when you intend shooting upwards – leaving a whopping great crater.

The game has some nice gimmicks including the high scores and the level dissolving in front of your eyes rather than the screen simply being blanked instantly. The high-scores are all in chunky lettering and the 'game over' message appears to the accompaniment of vollies of explosions.

An annoying feature is that if you change to a different level and then change back to the original level, all the high-scores are gone.

The instructions are quite comprehensive giving details of what to do, and when and how to do it.

The keys are well thought out which is as well since there is no joystick option.

The graphics are nothing special, nor are the sound effects though I must say that I've seen worse.

Summing it all up – nice gimmicks, but shame about the game.

It's expensive for what it is but may appeal to the younger end of the market because of its simplicity.

Philip Tudor

Fair shares all round

SHARE ANALYSER, from Synergy Software, has been designed to aid investors who have a small portfolio of shares to manage. I found it a pleasure to use. It has superb graph-plotting capabilities.

There are disc and cassette versions which are apparently quite different in the way data is entered and stored. I have only examined the disc version and this allows up to 20 different investments to be handled.

To begin, the user would enter the details of the shares owned – the portfolio. As items are subsequently bought and sold the portfolio details would be brought up to date – number of shares and their purchase or selling price.

Expenses and dividends received can also be recorded and up to 16 lines of information can be stored for each share.

The market price of each share can be entered at any desired frequency – for example, at the end of each day.

The program simply provides 1,000 slots for the price information of each share and these can be used as desired although a careful manual record would have to be kept as to what date (or hour) each slot represented.

It is easy to amend either single entries or whole ranges of share prices.

Using the latest share prices, the program will evaluate the portfolio and work out how much notional profit has been made. Some temporary changes can be made to the data before this is done – for example to take account of estimated selling expenses.

When the share price charting option is selected the program's graph capabilities become apparent. The graphs can be automatically scaled or the user can choose the X and Y ranges.

Graphs of different shares can be superimposed and the result labelled and printed.

Various statistical processes which may be of help to investors can also be carried out – plotting centred or lagged moving averages, rise and fall indicators and low indicators.

In summary, an excellent program which I found very easy to use and which should be of considerable interest to anyone with a small portfolio of stock exhange investments.

Ken Garrett

Tourist package

TOURISM is another good teaching aid from Andrea Tapsfield and Nelson CAL.

The programs are backed up by a clearly organised set of notes illustrating all the basic steps plus running hints and instructions for a printer link up. Some very useful students' materials are included in the notes as a basis for a number of interesting lessons.

The first of the two programs includes a number of important skills and ideas central to much of geography teaching. It simulates the general development of tourism on a tropical island.

The main idea is to select suitable sites for holiday activities bearing in mind some of the economic and physical factors affecting development.

Initially a choice has to be made on the type of holiday (beach, scenery/wildlife or historical) and then the type of accommodation (self-catering chalets, package tour hotels, luxury hotels and camping sites).

Using physical and economic weightings entered from the keyboard a survey of the island is undertaken and a map produced for the particular activity chosen.

Accompanying this is a list of

the suggested sites with a grid reference location, a score count based on the weightings and suggested development costs – high, medium or low.

The program lends itself to various uses. For example: varying the weightings and assessing development locations, studying the optimum locations for different holiday types and comparing class maps with those produced by the micro.

It is in this type of work that the micro can make a very useful contribution to the subject area by allowing a variety of alternatives to be rapidly produced.

Program Two allows the student to manage a tourist business on the same island over a period of two years. There are three decisions to be made each year – the number of tourist places, the amount of money spent on advertising and the number of people to employ.

It is possible for various groups to try to develop different sites at the same time and take their turn at typing in their decisions. This could be particularly useful in a classroom with only one micro available.

At the end of the year, a balance sheet is given along with the percentage changes in the types of accommodation. It is something of a pity that summary graphs could not be provided to vary the screen presentations but this does not detract from the overall usefulness.

The programs are well constructed and easy to use. They allow the development of various ideas related to tourism such as earning foreign income, developing employment and making profits.

This is a package that could result in much useful discussion with enough interaction to hold students' attention.

Norman Parr

Colourful Kestrel

THERE are some quite nice effects to be obtained using **Art Designer** – another graphic design package for the BBC Model B and Electron.

It does not aim to be in the same vein as the usual line-arc-triangle-circle packages which all turn out to be much of a muchness.

Here they have decided to be slightly off the others' wavelength and in several ways this policy comes up with some nice touches while in others the user pays for eccentricity.

It works in Mode 2, losing sharpness but gaining all the possible colours, and has only Draw to, Text, Circle and Ellipse procedures in common with the rest of the herd.

It shows its individuality by having such functions as Airbrush – variable densities of dots sprayed at the screen in the area around the cursor; two infill techniques which give the facility to create many shades of colour; user defined characters – defined in a separate part of the program suite and then brought on command into the main drawing where required; and Kestrel.

Kestrel is a little character that the programmers have previously defined which looks vaguely like the bird, although any self respecting kestrel would sue for defamation.

It is not just plonked on the screen like the other user-defined characters but can be dragged around by the cursor leaving a trail behind it. I am not too sure what it is meant to achieve but it does give an idea of the program's off-beam approach.

My copy had a bug in it which kept giving SYNTAX ERROR whenever I tried to WIPE the screen or call up MENU.

However, this is a minor

matter – it is the command message idiosyncracies that I felt rather distracted from the enjoyment of the program.

Most of the commands have to be called using Ctrl plus character which calls for a lot of hand waving and doubles the workload, and generally the program is rather slow in setting up the effects.

I think it would take quite a while to get really proficient.

That being said, it isn't like all the others and *that* I do like.

Terry Hallard

Flexible geography

DEVELOPING CITIES from Nelson CAL is a well designed and packaged set of programs on a number of themes fundamental to urban geography.

It comes as a disc with four programs and a useful set of notes including teaching objectives and suggestions for worksheets. There are screen dumps throughout the notes illustrating all the basic screens, and the instructions for inexperienced users are particularly easy to follow.

The first program, Cities One, is a simple simulation relating to rural-urban migration. It needs only a yes or no answer to each question and so is not particularly interactive.

Some of the decisions are not all that instructive but it is useful as a vehicle for further discussion. It is the weakest of the four with rather an uninteresting screen layout.

However don't let this put you off. This disc is well worth buying for Cities Two and Three. These are excellent representations of age-sex pyramids and other endless opportunities for both lesson and individual use.

Cities Two concentrates on the population structures of five countries – the Philippines, Bolivia, Libya, Peru and Sweden. Through a very effective set of keywords the population structures may be investigated using for example birth and death rates, fertility ratios and urban populations.

What particularly interests me is the flexibility built into the program enabling the user to project the populations over five year intervals and to change the basic rates.

Here there are LOOK BACK and OVERLAY facilities to emphasise the changes taking place. Also included is a HELP request to list the keywords.

This program is complemented by Cities Three which looks at the age-sex structure changes in a hypothetical city called Neltown (Ugh).

Here is a classic city structure in a developing country with an emphasis on migration.

Through the clear screen layout it is quickly possible to absorb the fundamentals of the structure and identify the problems. Through the CHANGE RATES and NEW VALUES keywords the structures may be rapidly altered and students able to gain a deeper insight into some of the complex problems facing these cities.

Build, the fourth program, allows you to enter your own data for the population pyramids in Cities Two. The notes give instructions to assist this and even suggest a source book for demographic information with a matrix to assist this data collection.

Also included are notes relating to potential running problems and how to get a printer copy of the results. This latter section is not easy for the inexperienced user. Useful references are also made to text book materials which develop and reinforce key ideas.

Where would you use these programs in your scheme of work?

They are flexible enough to fit into various niches particularly in fourth and fifth form courses where there may be an emphasis on development studies and in sixth form advanced work.

This is a highly recommended package which illustrates just how useful a micro can be as a learning aid.

Norman Parr

Not different-just meaner!

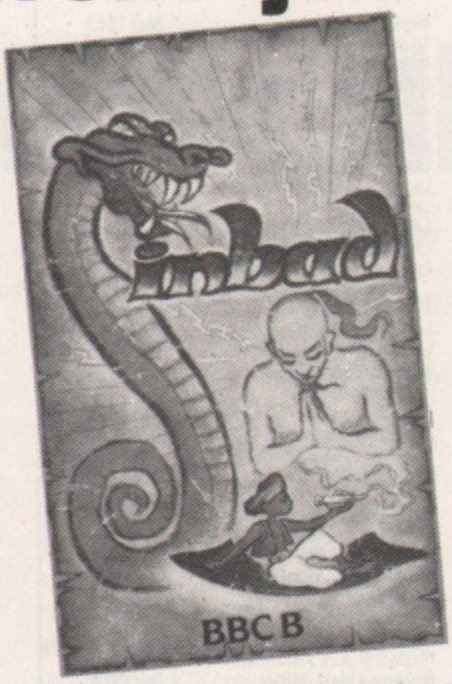
SINBAD, from Virgin, is one of those *quest for the ultimate goal* programs. Sinbad – that's you – must complete each screen in order to go on to the next one.

Unfortunately, there are only two different screens, and later screens are just meaner versions of the first two.

To start with, Sinbad must convert his enemies to a peaceful way of life by touching them – sounds familiar? His enemies float around the screen and Sinbad can leap onto a rope ladder dangling from a flying carpet when it drifts low enough.

Once he's on, it's running up and down time until one of his converts knocks him off. Converts aren't all that peaceful! On later versions of this screen, nasties lurk at the bottom. Falling on them loses energy and turns all the converts mean again.

When everything's converted, you appear on your rug just above Earth's atmosphere dodging the passing asteroids in time to a very space-age rendition of Star Trek.



You must dodge the asteroids for as long as you took to do the first screen. This time factor is raved about a great deal in the instructions. The asteroids simply get faster on later screens. Your score is the percentage of the entire adventure completed.

Getting through both screens three times yields about 50 per cent. Once again, the reams of instructions rant on about the surprise awaiting you when you finish. (Will the machine crash I ask myself?)

They do tell you the keys but you have to wade through a lot of rubbish before you get to the important stuff. Virgin do, however, put a screen picture on the cover which makes sure the user knows what he's getting.

The graphics are average but effective. The sound is quite good with various interesting noises always drifting from the loudspeaker.

Joysticks can be used and I'd recommend them because of the repeated hammering on the edge of the space bar to jump.

All things considered, it's a reasonable game but is aimed at the younger end of the market.

Philip Tudor

Hot time in the arena

IT is the year 3000 AD and the excitement hots up at the local arena. A poor little humanoid has been thrust into the arena to entertain crowds who have flocked from surrounding galaxies to see him fight to the death.

This is the scenario of **Arena 3000 AD,** one of the new releases from Microdeal.

What has this poor insignificant little soul done to deserve this? Perhaps he's just a "human-annoyed!" Sorry I

→

Choosing a printer is a lot easier than choosing a computer.

THERE are dozens of quality printers from which to choose. With quality price tags of around £250.

The Brother M-1009, however, breaks all the rules.

Stays defiantly below the £200 barrier.

Though it has far more than its fair share of features, it maintains the extraordinarily low price of £199.95.

Travels at a steady fifty.

In the speed stakes, the M-1009 is certainly no slouch, being fully capable of up to 50 characters per second.

Providing bi-directional and logic seeking printing for normal characters and uni-directional printing for super and sub script and graphics.

Prints on any paper.

Being an impact printer, the M-1009 will print on virtually any paper, including letter headings, invoices and standard office stationery.

It will even print two copies together with your original.

A superb character recommendation.

In its price range, the M-1009 has a great deal more character than many printers.

96 no less, plus international type and graphic characters.

Reliability comes as standard.

Built to the same exacting standards as Brother's elite office printers, the Brother M-1009 already has faultless credentials for reliability.

Its 9 pin dot matrix head, for example, has an astonishing 20 million character service life.

One printer that doesn't block out the light.

Many home computers tend to be a little on the large side.

In contrast, the compact M-1009, at only 7 cm high, keeps a discreet profile.

Well designed, reliable – and conscientious.

The Brother M-1009.

shouldn't joke.

Surrounded by at least 20 ravenous robots there is no time to hang about.

"Not a hope" you might say – and you'll be right if you didn't keep moving about and firing your deathray at the enemies with great accuracy and care.

Can you imagine it? This dear little humanoid dodging and running for its life while trying to shoot in the right direction.

Once you have cleared the arena of all mutants you are yet again thrust into another selection of weird mechanical failures which you must destroy or be destroyed.

This process repeats itself, presenting you with a different selection of enemies every time the arena has been cleared.

The general idea of the game is quite good and becomes addictive, although the graphics were by no means the best I have seen.

Mark Freeman

The better side of CAL

INTO the Unknown is an admirable package dealing with 15th century exploration, produced by Tressell Publications – a non-profit making cooperative of teachers.

One of their stated aims is to encourage active learning by pupils and I am convinced that materials of this quality and design will achieve that.

There is a wealth of useful material along with the actual programs. This includes an excellent teachers' handbook, 12 information sheets, a supply of exploration charts with a voyage key and posters on voyages of exploration, ship design and the world in 1459.

The authors are quite right when they suggest that this is "a substantial learning package that can offer anything up to a term's work for the 10 to 14 year old age-range for which it was designed".

The program consists of five topics and a starting unit plus a menu on the disc version. Clear and detailed loading and running instructions are included in the handbook so there should be no problems for inexperienced users.

These topics are The Unknown, Travellers Tales, The Ship, Supplies and Navigation. Together these link back to the information pack and provide useful information for the budding matelots.

All the exercises are geared to making a voyage of discovery during which unknown seas are charted along with new lands and hopefully great wealth acquired.

The ultimate goal is to return to the home port with the ship and crew intact and enough cargo to make the voyage profitable. However don't be too greedy and overload the ship with gold – there is always fear, shipwreck and mutiny to contend with.

The voyage is logged onto the exploration chart and it is a most interesting and realistic experience when moving into the truly unknown spaces.

Coastlines may be easily mapped and harbours located. From these harbours explorations may be made inland but must be carefully planned. All this is based on a real continental area which one would eventually recognise as . . . but that would spoil the fun!

Yes, education can be fun and packages like this are full of facts which help to develop intellectual/social skills in an entertaining way.

Finally, I must echo another comment in the handbook where it says " . . . there is considerably more work done by the pupils off the screen than in front of it. The computer provides the framework and the motivation. That, essentially, is what we feel that computer assisted learning is meant to be like".

This whole approach is highly recommended and tremendous value.

Norman Parr

Hazard hazards

SWAG, from Program Power, is a story of simple hill billy folk down in Hazard County who appear to have a tendency towards kleptomania.

Then again, who wouldn't when piles of gold and diamonds keep appearing from nowhere just waiting to be claimed?

The aim of this two player game is to collect a total of £250,000 worth of the loot before your opponent does.

The screen is designed in the shape of a fenced corral in which are situated a bank, a shop and you and your opponent's shacks.

As you both wander around the screen, small piles of gold and diamonds will appear. It is up to you to get there first, grab them, then head for the safety of your shack.

Unfortunately, like life, it's never as simple as it first seems. An insurance company is intent upon stopping both light fingered players from sneaking off with the jewels.

In order to achieve this they employ the use of several killer droids. Bump into them and you drop whatever you are carrying and are returned to your shack.

The droids fall into two categories, Percys and Henrys. Percys home in on your player, Henrys on your opponent's. However, when shot, a Percy will become a Henry. It is therefore possible, with a little fancy shooting, to make all your droids attack your opponent, thereby gaining yourself a little time in which to amass some cash.

Although advertised as a two player game, there is a one player practice option.

Unfortunately the possibilities of the scenario have not been used to the full, and as a result the game became tedious after only one or two plays.

Jon Revis

Get to know Europe

IF you have ever wondered what the population of Poland is, or possibly the major industry of Andorra, then **European Knowledge** is definitely for you.

It is available from Micro Power and is designed to help test and increase your general knowledge about many of our well known, and some not so well known, international neighbours.

The loading instructions are well developed and very easy to follow, with allowances made for both disc and network system users. They should be comprehensive enough for even the most inexperienced user.

The screen consists of a map of Europe with 34 different countries, some as far afield as Iceland and Turkey. All are marked, although some of the smaller countries are a little hard to identify.

There are five levels of difficulty and these later determine the time limit in which you have to answer each question.

The quiz is in the form of 40 randomly selected, multiple choice questions on varied topics about each country.

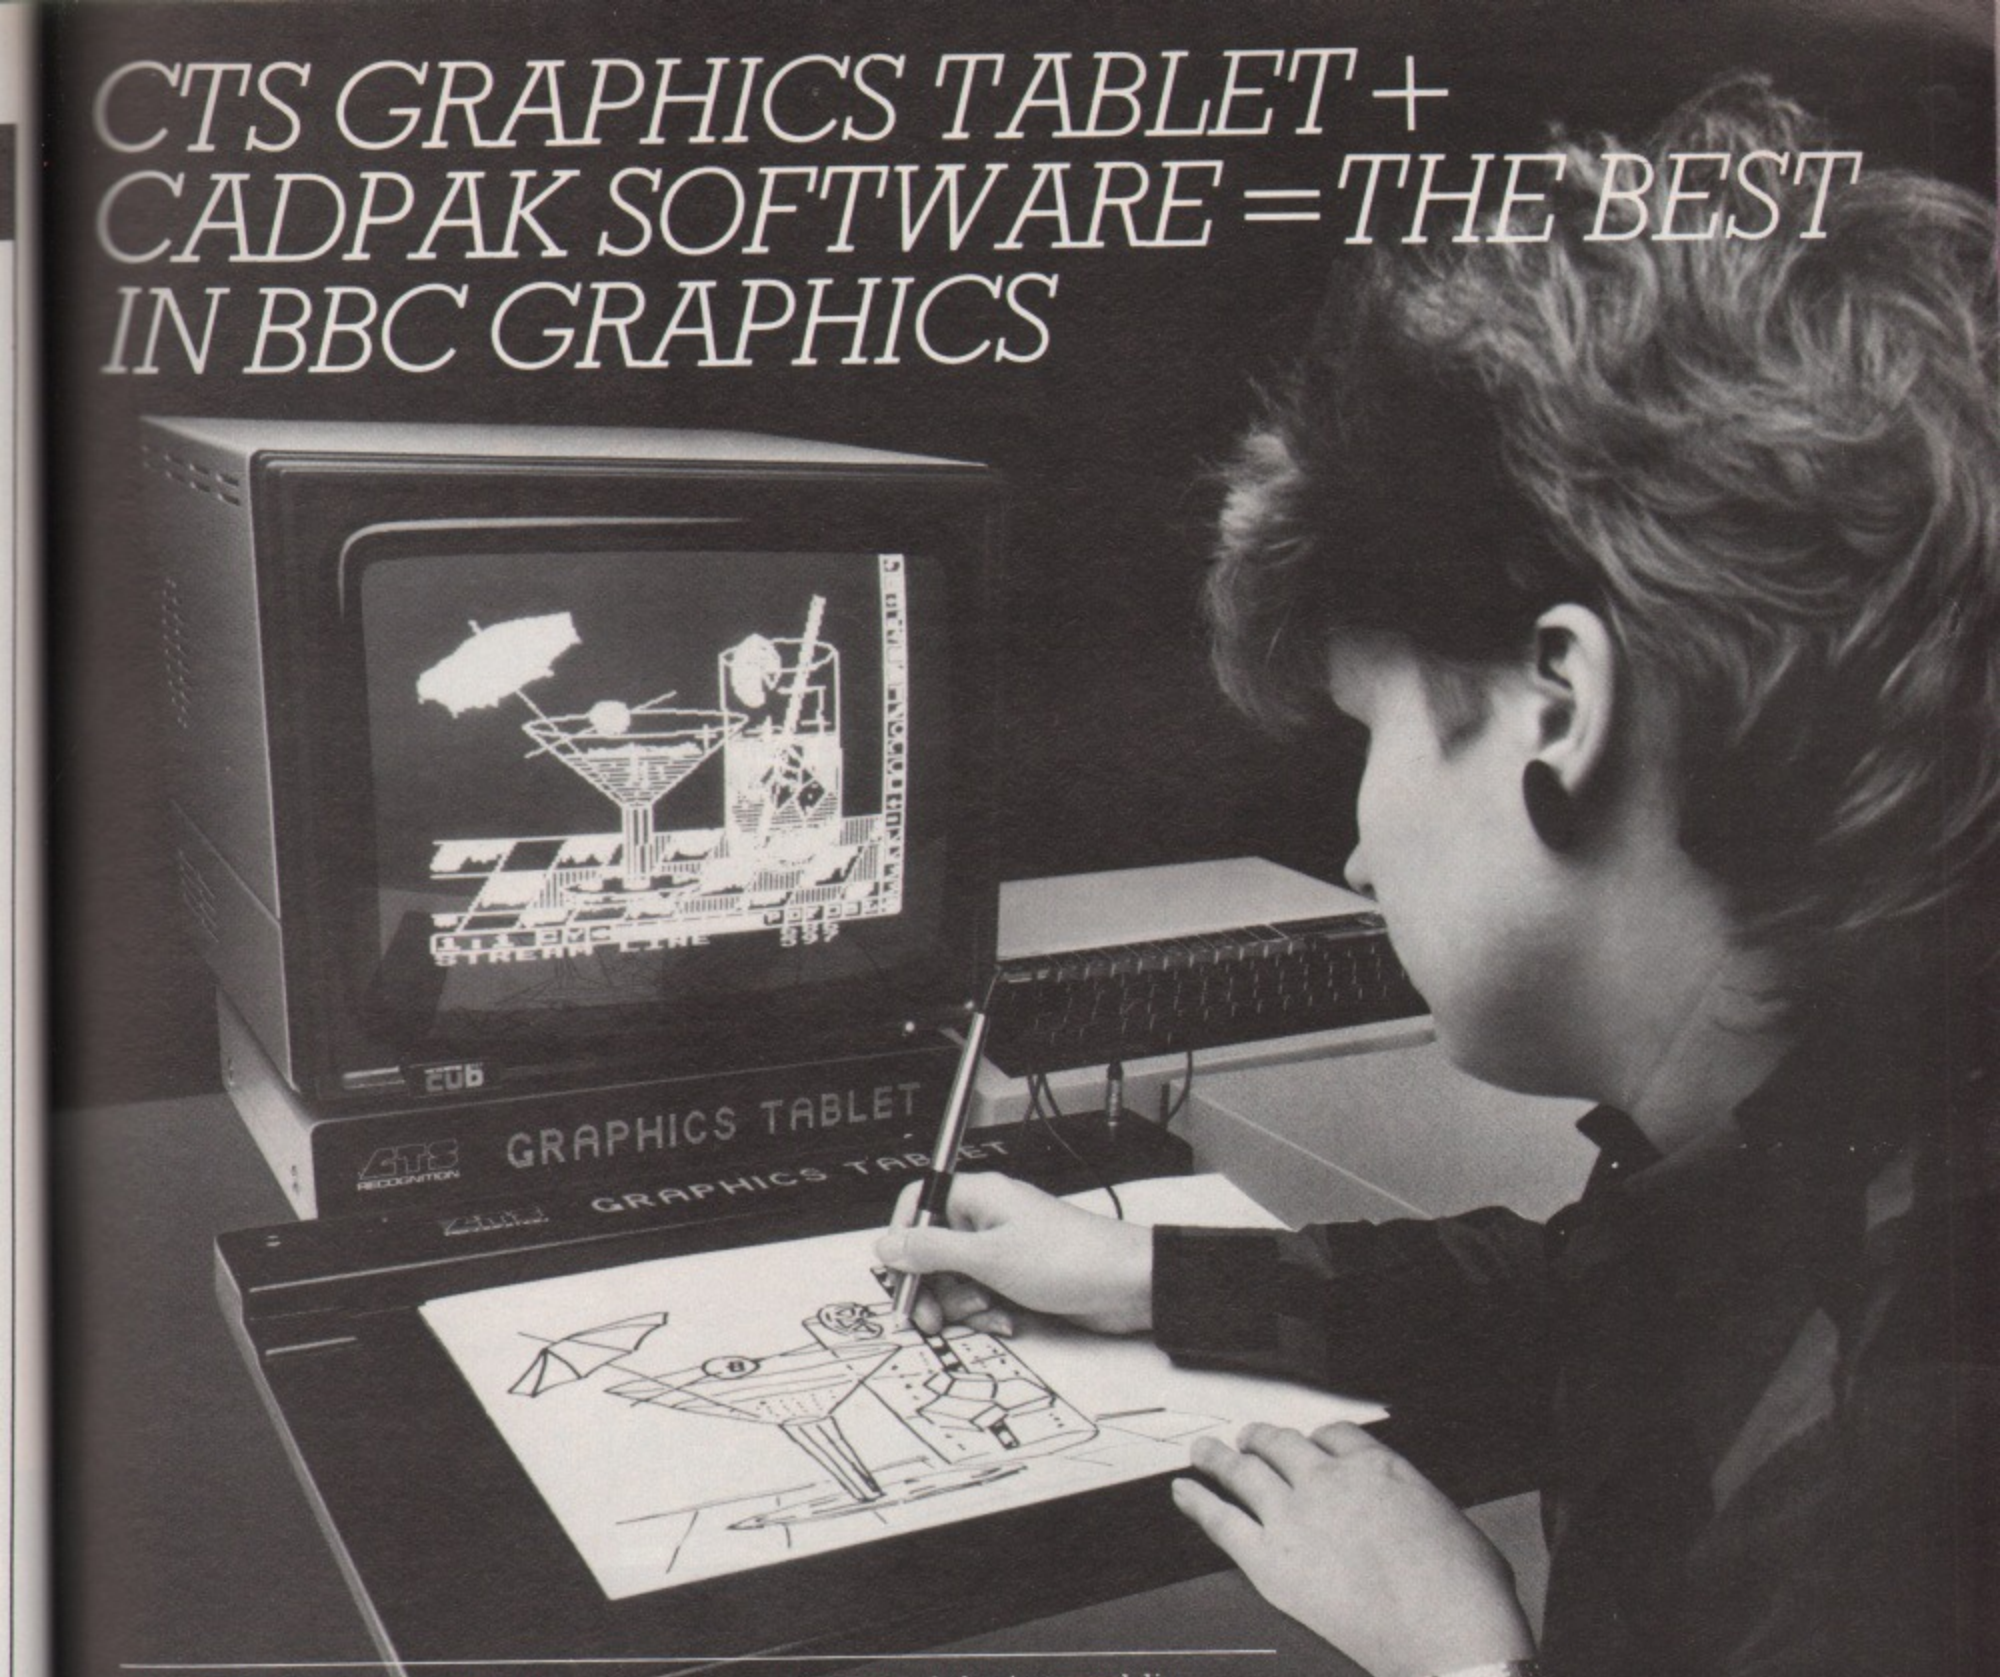
My only real criticism is that the level of play you select only alters the time available to answer each question and not the individual difficulty of the questions.

This makes it very easy to learn all the answers to a total of over 270 questions – at a low level.

Overall this is a well put together program. I feel that the most benefit wil be gained by the pre 'O' level age groups for which it has apparently been designed.

Tarquin Thomas

CTS GRAPHICS TABLET + CADPAK SOFTWARE = THE BEST IN BBC GRAPHICS



*The **CTS Graphics Tablet** is a highly sophisticated device enabling graphic drawings and designs to be input directly into the computer by the most natural method known to man.*

Data entry can be via an electronic pen or using a crosswire cursor, ensuring pin-point accuracy every time. The tablet, together with the CADPAK software, adds up to what we believe is the most sophisticated graphics package currently available for the BBC-B Micro.

But why stop here . . . ?
The experienced programmer can make full use of the tablet's high resolution for all sorts of design and menu selection applications.

*Many schools, colleges and businesses have already found the **CTS Graphics Tablet** to be invaluable . . . Wouldn't you?*

*For further information, ring Julie Davis on **(0273) 421509**, or fill in the coupon.*

two amazing new games from Software Invasion...

Software Invasion games are available from WH SMITH, HMV, all SPECTRUM SHOPS and over 1,000 retail outlets.

3D Grand Prix

This is the game you've been waiting for! A 3D high speed formula 1 car race round 8 different international circuits.

Just look at these amazing features:–

* Bends arranged to simulate 8 actual Grand Prix circuits.
* Working cockpit – Rev. counter, Speedometer, Temperature Gauge, gears, moving steering wheel.
* Other cars which alter in perspective and size as they overtake. * Signposts. * Realistic sound effects such as engine noise, skids and crunching shunts. * Keyboard or Joystick control. * Volume control.

Runs on O.S. 1.0 or greater. More than a year of man hours have gone into creating this superb game.

BBC MICRO MODEL B
£9.95 CASSETTE
£11.95 DISK
Authors: Mick O'Neill and Dave Mendes

BlitzKrieg

NOW WITH COLOUR GRAPHICS! (BBC VERSION ONLY)

Blitzkrieg is a 3D Tank Battle from the same author as our Best Seller "3D Bomb Alley".

This program is probably unique in the fact that all the graphics were created with the help of models, a video camera, a video digitiser and some very special Light Pen software.

This has resulted in extremely fine detail and realism, with fast moving real time graphics – you don't have to wait for the screen to be updated between each move.

Features include:–

* Detailed scrolling landscape. * Rotating tanks.
* Detailed explosions. * 3D shell movement. * Recoiling barrel. * 3D sound. * Keyboard/Joystick option.
* Freeze game facility.
* Optional sound.
* Demo' mode.
* High score & ranking system.

HAVE AN ADVENTURE THIS CHRISTMAS WITH LEVEL 9

"The appearance of a new program from Level 9 is a flag-day for all aspiring adventures and, in my household, a signal for the cat to hide under the bed for the duration against the inevitable moment when I go rampaging through the flat, a wild look in my eyes muttering ferociously about bricklaying birds nudist beaches and the like. Since *Return to Eden*, the sequel to *Snowball* is out, the cat may be in hiding until Christmas.

You don't need to have played *Snowball* to get into the sequel as ever, there is ample documentation with the tape which in my Commodore 64 version (it is also on the Spectrum, Amstrad and BBC), is turbo-loaded. It starts with you, agent Kim Kimberly, having been framed for sabotaging the colonyship Snowball, in a crashed stratoglider on the planet Eden. For the moment your mission is to survive the misplaced retribution by your own people, but life gets very much more complicated than that. Solving these puzzles has nothing to do with luck; you either figure your way out of trouble on Eden or die there.

One major difference between this and former Level 9 efforts is that the Spectrum and C64 versions have graphics of a very high quality and can be switched off if required. The scope of the vocabulary appears unscathed by this addition.

Even experienced adventurers will probably get fried a few times by the avenging engines of the Snowball, before discovering how to take shelter. But, once that hurdle is passed the real adventure begins, and it's a lulu. From the radioactive desert caused by the engine blast, you progress through a variety of hazards through some highly unlikely locations.

I haven't got to that point yet, and so far superhuman willpower has stopped me using the clue sheet provided, but I can't hold out very much longer since I am having what could be lethal communication problems with some robots. Terrific fun, but should carry a mental health warning.

Popular Computing Weekly, 7 Nov &

MERRY CHRISTMAS

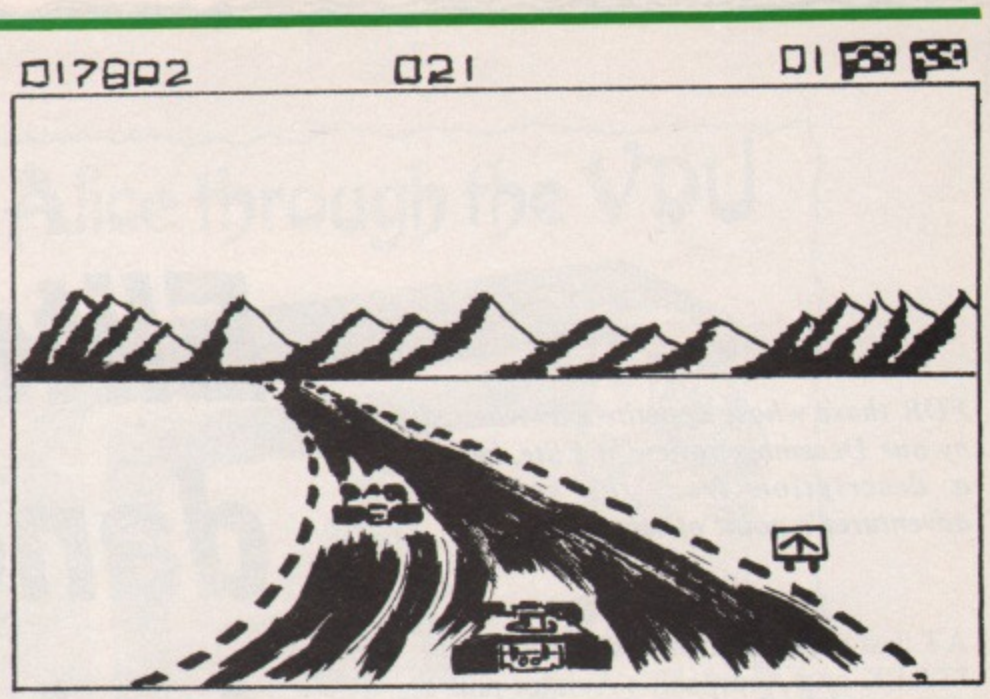
£8.50 All inclusive



Would you believe a JIGSAW for the Beeb!

Up to EIGHT entirely different colourful Mode 2 pictures—each with FIVE levels of difficulty!

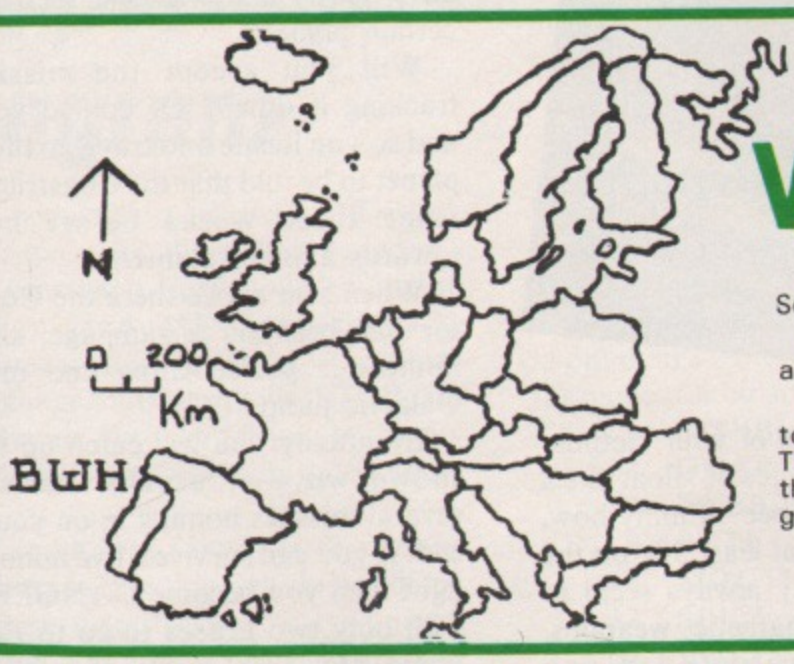
From a simple nine piece for young children, and the levels increasing in difficuly to a 144 piece for the dedicated addicts.

The board starts empty, with each piece brought on separately and positioned by the cursor keys. Any piece can be easily re-positioned as many times as required. And most important—pressing a key will bring the complete picture back again, as many times as needed, without losing the position of the pieces already on the board.

The entire range of pictures are Xmas, Pool, Surfer, Caveman, Desert, Jungle, Racing and Flowers.

(If you think a 144 piece Jigsaw is easy—remember, all the pieces are exactly the same shape...)

Program and first three pictures on tape £9.95. Four other pictures on data tape £5. If both bought together £12.50.
All eight pictures on disk £14.50. Prices are all inclusive.



The complete
GEOGRAPHY program...

WORLD MASTER

The program generates FIVE different maps—Europe, North America, South America, Australia and South East Asia/Middle East.

Upon selection you have the choice of up to 35 questions (these are always random, being just half of the total questions available).

A flashing block will appear on the screen map, denoting either a town, city, country, mountain, bay, channel, gulf, sea or ocean. The user being prompted for the name. If the correct name is given, the program moves to the next question, but if the wrong name is given there is the choice of seeing the correct answer.

Upon completion the results are shown.

£12.50 on disk only

SUPER DRAUGHTS

All the Draughts programs for the Beeb fail in one important respect—they have a weak end-game. (So says the programmer, who wrote the best one of them!)

Not only does Super Draughts have a very powerful end-game indeed—which beats the programmer every time on the top level—but some very unique facilities.

It has a Problem Solving mode, which enables the player to place a piece anywhere on the board, and then start the game from any position.

It has a Watch option, so that play can be tracked.

It has a Recall Game option—it actually remembers a game, so that it can be recalled.

It has a Retract option, so that a player can retract up to three moves.

It has different levels of play. Sound is used to denote a move. The pieces are in Red and Yellow on a black and white board.

£7.50 all inclusive

All available by our famed first class return post service. Same day despatch if ordered by Credit Card before 4pm

Remember—all our programs carry an unconditional guarantee

Elite...deadly dangerous but brilliant

FOR those whose appetite was whetted by our December review of Elite, here's a description from the seasoned adventurer's point of view . . .

AT first sight this is a mixture of the old *TREK and Acornsoft's Aviator plus a dash of buying and selling in order to become the terror of eight galaxies.

However the implementation and the result is brilliant, simply one of the best micro games I've seen so far.

The game is in two parts – the first allows you to trade (à la Ace Garp) for food, computers, narcotics and even slaves in order to equip your ship with the space equivalent of Dirty Harry's Magnum .44 – namely a military laser.

There are other fairly lethal items but the extra cargo hold is the most useful and the military laser is the most satisfying and necessary. It destroys ships that other weapons cannot reach without any of the nasty side-effects of an energy bomb.

You can take your time trading but, once launched into space, real time takes over. Actually it's (real time) × (a few thousand) otherwise the inhabitants of the planets must live on their ceilings (or "Mummy, why do I keep going round in circles?" – "Shut up or I'll nail your other foot to the floor").

A quick look in the rear view at the dreaded letter box entrance to the space station confirms the faster passage of time (otherwise they would be squashed flat in there), so hit the hyperspace button, give the station a farewell blast with the rear laser (their slave prices were sunlit robbery) and jump six light years just as the local Sweeny come swarming.

The program uses Mode 4, Mode 5 and interrupts to give a split screen effect. The top five-sixths shows the view outside and the bottom (Mode 5) shows your instrument panel complete with homing compass and "3-D" display of the local space.

Locate the new planet's beacon and space-skip in until you hear the buzz that means you have company. Thanks to the purchase of a self-centering joystick – for real bims – and three weeks practice you probably welcome the prospect of a turkey shoot and have thoughtfully left a little cargo space to

pick up any remnants of your victims.

So a couple of minutes of "float like a butterfly, sting like a bee". Funny how, although I'm pulling at least 50g on the fly-by-wire stick, they always seem to hit me with their pathetic weapons. Then into the safe zone around the new space station.

Aim for the line between the station and the planet (a mere 50 kilometres below – how do they cram so many denizens in down there?) switch on the docking computer and have a chat with the MOSTLY HARMLESS person who is waiting for his turn only to hear that the docking computer has fouled up again and scraped all your front shields away – it must have old T.I. chips and no money back guarantee.

Good job you'd saved the game at the last port of call.

Actually I'm quite useless at the game but enjoy watching good players, with an original line of repartee, relieving their psychopathic urges. By a good player I mean someone who has flown his Spitfire upside down through Acornsville and turned corners.

However even players of this calibre take a week or so to become COMPETENT and then things get potentially DANGEROUS.

At this level you will eventually receive a message that a new ship, the Constrictor, has been stolen from the navy yards and was last seen near a certain planet.

Will you accept the mission of tracking it down? Of course you will and so you locate and travel to the given planet to be told that the Constrictor left some three weeks before headed towards another planet.

When you arrive there the Constrictor has been on a rampage, shot up numerous police ships and made a Galactic jump.

Eventually you will catch up for the showdown – it usually starts with several missiles homing in on your rear end. If you can survive a five minute dog fight then you become DANGEROUS with only two grades to go to ELITE. Fame, plus £100 worth of software, is the spur.

Apparently even the authors have not attained the top level which means that true grit, of a kind only teenagers have, is required. For the more mature among us it's only a lot of lines on a screen whereas a good text adventure invokes and involves our intelligence *blah blah blah.*

Although the final step must be a grind this is not true of the early stages. The player can visit 2040 planets (via a trick similar but much more developed than Level 9's Snowball) and can choose a number of strategies in his travels.

For example he can trade honestly or

he can trade in illegal goods which give bigger profits but also attract the attention of the Galactic Police.

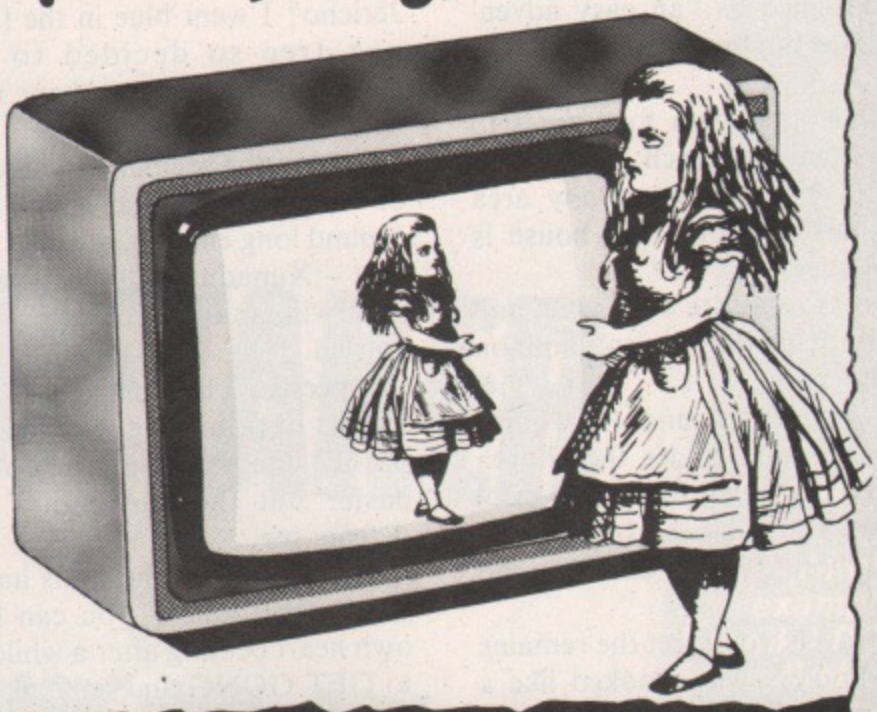
If you choose the left hand path then you should buy an escape capsule because not only is it fun to use (you see your space ship drifting away as you escape) but also you keep all your dirty money, get a brand new, similarly equipped (less capsule) Cobra space ship and a clean Bill bill.

All these delights can only be experienced after learning to dock your ship – the real reason the space stations spin so quickly.

After a while you can hum a snatch of the Blue Danube as you slot in. But out there the Thargoids are waiting in deep space, their Rigelian hot-shot is lethal and they seem impervious to military lasers. Will only an energy bomb rid you of these turbulent insectoids?

Definitely the game for Christmas 1985 but you really need a self-centering joystick to play well.

Alice through the VDU



Our monthly foray into Adventure games

In search of the perfect program

SOME people have asked about Edsgar and his quest for the perfect program. Many years ago Edsgar visited Japan and banished Mr Goto from a committee to design a friendly language – a language that doesn't just STOP but keeps saying you can't if you try to do something that it thinks you didn't want to do.

The result was you have to declare everything before you can do anything so other committees introduced UNSPEC which is a magic word that again lets you do as you please.

After that Edsgar visited the land of Oz where Col lived. Now Col was renowned the length of the land for his analysis of the smile of the Mona Lisa during a computer graphics conference and I had a certain reputation for rambling about computer theory for hours without getting anywhere (an example is this month's puzzle). We both thought that computing was more interesting than useful.

We were listening to Edsgar make the adding of two variables into an impossible task when someone asked how long it would take him to write a program to add two numbers. Edsgar replied that after 20 years practice and experience he could now do it in a few hours.

This amused the audience but Edsgar then said that he didn't travel 12,000 miles to make jokes. I looked Col straight in the eye and we both said:

"I WOULD".

For those ignorami who wondered about Chomsky 2, this defines any language that can be specified in standard Backus-Naur Form (English is Chomsky −100). Jargon and standards help professionals to talk about things – the simplest examples are the names for bit and word lengths thus:

1	**BIT (BInary digiT)**
2	**QUARTER (2 BITS)**
4	**NYBBLE**
8	**BYTE**
16	**MOUTHFULL**
32	**SLICE**
64	**BUTTY**

Of course such standards only operate at very primitive levels and cannot be applied to the current raison d'être of computers – namely solving human problems (computers were originally developed to design better hydrogen bombs).

Although the measure of all things, humans are also the biggest problem for (and nuisance to) systems programmers. Without them everything would be perfect.

For example, I remember an attempt to estimate how much time and resources should be allocated to new users on a mainframe. This machine was linked to a device that scanned bubble chamber photographs looking for and measuring lines created by the collisions of sub-atomic particles.

Now old dogs are dim and need a lot of machine time so it was proposed that the new users should be photographed and that the computer would then scan these portraits to estimate the time required by dividing the number of lines on the face by the number of hairs on the head+1. This scheme was rejected on the grounds of sexual discrimination.

Challenge from Satan

TALKING about thin hair, I recently received Satan's Challenge from Microtest on an 80 track disc. An attempt to copy it to a 40 track evoked the response that ravening wolves would tear me limb from limb, so I asked Microtest for a 40 track version.

This quickly arrived and was similarly well cursed and protected (the tracks are scrambled) so, like Mocata in "The Devil Rides Out", I got someone else to investigate.

A fortunate decision since my hair is shingled and the longest strands are about nine inches, whereas Christopher Robin will soon get all the machine time he wants if the above portrait scheme was used.

Written in Basic the program gives

→

From Page 71

(compressed) text only and has been carefully designed as "an easy adventure to get into but devilishly difficult to end".

The author gives you four areas to explore – a house, a church, a wood and a graveyard. You can enter any area from the start and only the house is difficult to leave.

Your task is to locate a talisman and then prepare a pentagram to summon up Old Nick himself.

So you wander around the rooms (note that the maze under the church doesn't need to read from the disc) locating the various bits and pieces like salt, cups, holy water, candles and horseshoes.

In your travels you meet the remains of Molly Mindley (who smoked like a chimbley) and a number of "seveer", even *crusial* spelling errors – surely "light" should be spelt "loight"?

There is no score and I've seen about 200 rooms – it's a biggy – so the only way I can judge how far I've got is by listing the objects and checking them off. I've got everything except the rope and the talisman so into the vault again for a thorough search and up comes the Angel of Death.

Now I still don't know the last two lines of the Sussamma Ritual but neither does the program so scare him off with ****, drop **** – and **** kills me five rooms later? Since REMOVE don't work I asked Microtest if this was a bug but no answer yet.

Of the 13 grades of the Occult the author is still a Probationer who must "learn to write a careful record". It's good but if you are going to write an Ipsissimus program, I think you should try to scare the player.

This may sound impossible but what would you do if the program offered to give you certain powers in its world providing you signed your soul away? Me – I'd get a listing and look at the small print very carefully.

Protection

TWO programs for the price of one and both suitable for nine year olds and over? This is certainly true for Ebony Castle, but Xanadu has some remarkable protection – it's in assembler and the Break key is trapped.

Even *LOAD and MZAP only reveal the verbs (given to you anyway) and the objects. The room descriptions are read off the end of the tape.

So I've had to play fair and, just like Colossal Cave, I got stuck very quickly – I ask you just how many nine year olds know how Joshua *fit* the battle of Jericho? I went blue in the face by the oak tree so decided to map the subterranean river – there must be a trick to it, and there is.

One of the seemingly unique features of Colossal was that if you blundered around long enough, it would give you a hint – Xanadu needs this feature badly otherwise many people just won't get started.

I persisted because of the humorous result of climbing trees and, once outside the walls, things do get a lot easier but the "anechoic" chamber defeats me.

In such rooms the walls have baffles to absorb sound – you can hear your own heart beating after a while – so I try to GET GONG and only get I CAN'T HEAR YOU! A nice touch (and it hears QUIT quick enough) but a noisy factory would be more realistic.

So far I've found the oak tree door and solved the cubic equation – which caused last month's ramble – but I can't drop the drawbridge or get back from the banqueting hall. Still I've seen enough to know that your aim in life is to stock the shelves in the cottage.

If, however, you enjoy breaking programs, then these games are good practice for 18+ year olds.

Problem

AN essential element, indeed almost a definition of an adventure is that the player moves around, picking up and dropping objects, until the game is solved and the program STOPs.

If you think you have a few good ideas but don't know how to start then you could try writing a program to solve the following problem.

You are as usual, alone in a system of caves/rooms that stretch into the distance to the East and the West. You are carrying a hod of bricks and five cards as follows:

Card	*Empty*	*Not empty*
1	DROP,E,2	GET,W,3
2	DROP,E,3	GET,E,5
3	DROP,W,1	GET,E,2
4	DROP,W,3	E,1
5	E,4	STOP

All the caves are empty and all you have to do is take the role of the computer for a change – that is obey the instructions on the cards beginning with card one which says:

IF this cave is EMPTY THEN DROP a brick, go EAST and obey card two ELSE GET the brick, go WEST and obey card three.

If you follow the instructions correctly you will eventually reach the STOP on card five. The questions are: *How many bricks will you drop,* and *how many E/W moves will you make?*

A couple of hints – you should never have to go further than 10 caves to the West. Nevertheless don't try solving the problem with real bricks.

There is a prize for the fastest Basic solution obtained on a Beeb.

Solution

THE problem posed in the September issue of how to become governor and make Filthy Fifteen STOP is difficult even though there are thousands of solutions.

The simplest general method is to modify the program to search through possible combinations; rather like solving the eight queens on a chess board puzzle.

No one has done this so the prize goes to Steven Chmiel who was first with this particular solution:

N1	1.2.3	4.5.6	7.8.9	10.11.12	13.14.15
N2	1.4.7	2.5.8	3.12.15	6.10.14	9.11.13
N3	1.10.13	2.11.14	3.6.9	4.8.12	5.7.15
N4	1.5.14	2.9.12	3.4.13	6.7.11	8.10.15
N5	1.8.11	2.6.15	3.7.10	4.9.14	5.12.13
N6	1.9.15	2.4.10	3.5.11	6.8.13	7.12.14
N7	1.6.12	2.7.13	3.8.14	4.11.15	5.9.10

CARETAKER

The BASIC utility ROM for the BBC micro

Facilities include:

- Global or selective search/replace.
- Single-key entry, similar to Electron.
- Renumber parts of programs.
- Easy function key load and save.
- Merge programs.
- Compact programs removing REMS, spaces, and creating multi-statement lines.

"Undoubtably Caretaker was the most complete program shortener."
- The Micro User

"Caretaker is the perfect tool for anyone doing a lot of BASIC programming."
- Which Micro & Software Review

"Caretaker (Compute
Concepts
*Another excellen
example of a BASI
toolkit ROM, certainly
first division stuff.*
- The Micro Use

COMPUTERAMA SOLID STATE JOYSTICK INTERFACE

*** with RAPID-FIRE feature**

Now a totally new concept in joystick control for your BBC Micro. Simply plug into the analogue port, and connect **ANY** Atari type joystick for instant joystick control. **FREE** keyboard conversion programme allows joystick control of keyboard-only games. No memory-conflicts with this one – due to our unique Relocatable Code feature. **ORDER TODAY**. Only a few available. Demand is bound to be high.

ONLY £14.95 + 50p Carriage.

EPSON FX80

A SUPERB PRINTER AT A SUPERB PRICE

This most popular of HIGH PERFORMANCE dot matrix priters has all the features you could ask for

- 160 cps. 11 - 9 matrix proportional spacing
- Normal, Elite & Italic Characters
- Tractor & Friction Feed. 10" Carriage
- Bi-directional, Logic Seeking
- Centronics Interface Standard
- Down loadable Character Set User Defined
- Condensed & Double Width Printing
- Super & Subscripts
- Dot Addressable Graphics

NOW AT THE AMAZING PRICE OF

£389 Inc VAT.

TORCH Z80 DISC PACK WITH OVER £1,100 OF SOFTWARE FREE

ORDER TODAY. Get the Z80 version of BBC Basic **FREE** (Was £125) runs BBC Micro programmes up to twice as fast, gives 32K for graphics AND 48K for Basic programme.

NOW ONLY £789

Part 21 of MIKE BIBBY's introduction to programming

BBC hot line to subscripted variables

DOES anyone remember "First Aid in English"? In those far distant days of primary school, "First Aid" was the staple diet of English lessons, which were far more formal than at present.

Although still in print, it's gone somewhat out of fashion in today's progressive education. Program I is my tribute to the work.

```
10 REM PROGRAM I
20 MODE 6
30 positive$ = "hot"
40 comparative$ = "hotter"
50 superlative$ = "hottest"
60 PRINT positive$, comparative$,
superlative$
```

Program I

You'll probably remember "degrees of comparison" of adjectives (for those of you who want to flaunt your youth, adjectives are words that describe things).

Degrees of comparison means the way adjectives change when you're describing two or more things as in:

the big house
the bigger house
the biggest house

Big was called positive because you were only talking about one thing. *Bigger* was comparative because you were comparing things, and *biggest* was superlative, referring to three or more things.

The fun was for the teacher to trick you into saying "the tallest twin" or "good, gooder, goodest".

Happy days, and such vital knowledge . . .

Still, it allows me to give you a nice example of how we can extend subscripted variables. Program I prints out the positive, comparative and superlative of "hot" – but it hasn't got a subscripted variable. However I think you'll agree that the variables I do use adequately label their values!

```
10 REM PROGRAM II
20 MODE 6
30 DIM adj$(3)
40 adj$(1) = "hot"
50 adj$(2) = "hotter"
60 adj$(3) = "hottest"
70 PRINT adj$(1), adj$(2), adj$(3)
```

Program II

Program II shows subscripts in action. We now have as a variable the array *adj$( )* (short for adjective), which is DIMmed in line 30.

(Notice, by the way, that throughout this article I ignore the *0th* element of an array. In theory this is because I want to keep things as simple as possible. In practice it's because in my "real" programs I normally reserve the zeroth element of an array for the values I'd forgotten.)

Right, so I've now got a program that prints out hot, hotter, hottest – and demonstrates my mastery of subscripted variables.

But there are adjectives in the world other than hot. Let's extend our program to deal with two adjectives – Program III shows what's needed.

I now have two arrays and, not unnaturally, I call the first array *adj1$( )* and the second *adj2$( )* (line 30). I then assign the degrees of hot to *adj1( )* (lines 40-60) and the degrees of big to *adj2( )* (lines 70-90) before printing them out.

adj1$( ) and *adj2$( )* don't differ too much, do they? Just the 1 and the 2 vary so that *adj1$( )* holds the value for hot, while *adj2$( )* holds the value for big.

If you like we could say that *adj1$( )* holds one "layer of values" while *adj2$( )* holds another layer. If we had a third layer – say tall, taller, tallest – we could call it *adj3$( )* and so on, referring to different layers by using different numbers in the variable names.

```
10 REM PROGRAM III
20 MODE 6
30 DIM adj1$(3), adj2$(3)
40 adj1$(1) = "hot"
50 adj1$(2) = "hotter"
60 adj1$(3) = "hottest"
70 adj2$(1) = "big"
80 adj2$(2) = "bigger"
90 adj2$(3) = "biggest"
100 PRINT adj1$(1),adj1$(2),adj1$(3)
110 PRINT
120 PRINT adj2$(1),adj2$(2),adj2$(3)
```

Program III

The number inside the brackets of the variable tells us which of the values, or elements, in that particular layer we want.

Table I shows how we could arrange all this, and Table II shows the same

		Element Number		
		1)	2)	3)
Layer	adj1$	adj1$(1)	adj1$(2)	adj1$(3)
	adj2$	adj2$(1)	adj2$(2)	adj2$(3)
	adj3$	adj3$(1)	adj3$(2)	adj3$(3)

Table I

		Element Number		
		1)	2)	3)
Layer	adj1$	hot	hotter	hottest
	adj2$	big	bigger	biggest
	adj3$	tall	taller	tallest

Table II

From Page 75

thing with the actual values substituted for the variable names.

Nice and ordered, isn't it, with the second element of each layer, or row, containing the comparative ("–er") form of each different adjective and so on?

To find the superlative ("–est") values of the adjectives we'd just print out all the values in "column" three – that is, those variables with the same subscript, three.

Alternatively, to print out all three degrees of one particular adjective we'd just print out all the values on that particular layer.

Take a look at Program IV – this does exactly the same as Programs I and II, printing out one layer of values – hot, hotter, hottest.

Really it's just a cut down version of Program III. Remember, the 1 in *adj1$* refers to the layer or row we're talking about, though in this case we've only got one row.

Now labelling different layers with different variables is all well and good. I think you can see by now that *team2$( )* is going to refer to data on team 2, where team 2 is one of a set of teams.

```
10 REM PROGRAM IV
20 MODE 6
30 DIM adj1$(3)
40 adj1$(1) = "hot"
50 adj1$(2) = "hotter"
60 adj1$(3) = "hottest"
70 PRINT adj1$(1),adj1$(2),adj1$(3)
```

Program IV

But the BBC Micro can't see this. To realise that the 2 in *team2$* means layer or row number 2 it needs the number somewhere it can get at it. And that means not hidden in the array variable's name, but in the brackets following it.

I know we've already got one number there, but that doesn't matter. Basic can handle two, as you'll see shortly. Let's take our last program for example.

Instead of talking about *adj1$( )* we're going to talk about *adj$(1,)*. We've put the 1 referring to the layer inside the brackets. It's followed by a comma because we still need to put a second number in – the one that specifies which element of that layer we want. (The second number is the one we're used to working with in subscripted arrays.) So:

adj$(1,1) would take the place of *adj1$(1)*

adj$(1,2) would take the place of *adj1$(2)*

adj$(1,3) would take the place of *adj1$(3)*

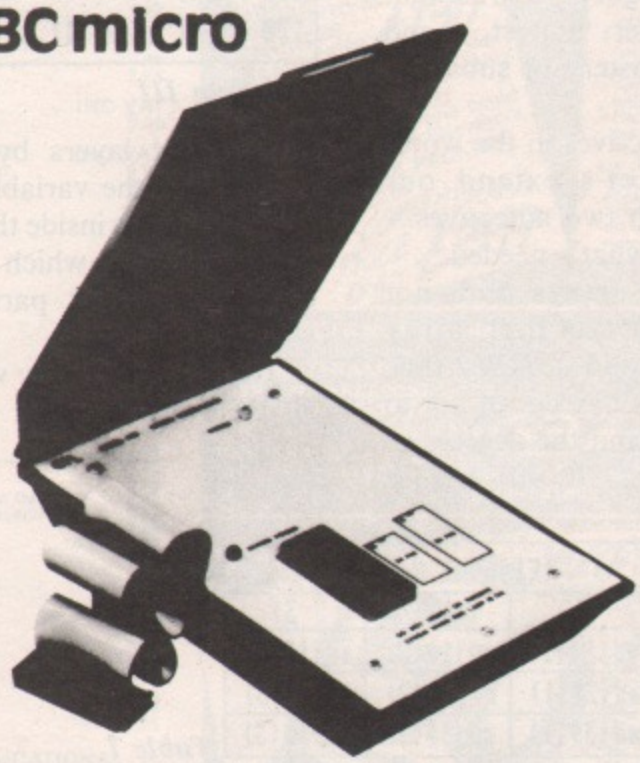
Program V is equivalent to Program IV, yet incorporates these new techniques.

```
10 REM PROGRAM V
20 MODE 6
30 DIM adj$(1,3)
40 adj$(1,1) = "hot"
50 adj$(1,2) = "hotter"
60 adj$(1,3) = "hottest"
70 PRINT adj$(1,1), adj$(1,2),
adj$(1,3)
```

Program V

Notice the modified DIM statement. We have to tell the micro that we want

EPROM PROGRAMMER
for the BBC micro



An exceptionally versatile unit, programs EEPROMS and EPROMs from 2K to 32K.

Powerful, easy to use software in a sideways ROM. Features full screen data editor, files, and softkeys.

Professionally designed hardware ensures reliable and safe programming, also detects badly socketed EPROMs.

Soundly constructed in a convenient flip-top box which protects unit when not in use. Supplied with a comprehensive manual.

£95 (excl VAT, free P&P)

2 year guarantee. Detailed information on request

Control Telemetry of London
Unit 11, Burmarsh, Marsden St.,
London NW5 3JA. Tel: 01-482 2177

DON'T

How will you know if a ROM offers what you want?

Which monitor are you happy with AFTER an hour?

Who's going to advise you on a second processor?

It's a great printer, but can you master or will you need all those control codes?

BUY IT

Of course, you can decide in the shop or at an exhibition. But you know you will only be sure when you're using it at home.

UNTIL YOU'VE TRIED IT

With good credit or a deposit, you can hire short-term, and retain the option to buy.

It's a sensible option
Find out about it now.

Phone Roger Burg: Watford (0923) 38043

		Element or Column Number		
		1	2	3
Row Number	1	adj$(1,1)	adj$(1,2)	adj$(1,3)
	2	adj$(2,1)	adj$(2,2)	adj$(2,3)

Table III: How adj$(,) works

		Element or Column Number		
		1	2	3
Row Number	1	hot	hotter	hottest
	2	big	bigger	biggest

Table IV: Values of adj$(,) in Program VI

one row of three elements with:

```
DIM adj$(1,3)
```

The first number in brackets tells the micro the maximum number of rows, while the second tells it the maximum number of values or elements, on each of those rows.

Of course we don't have to stick to one layer of three values. We might want another row so we can mention big, bigger, biggest. Program VI does this for us.

```
10 REM PROGRAM VI
20 MODE 6
30 DIM adj$(2,3)
40 adj$(1,1) = "hot"
50 adj$(1,2) = "hotter"
60 adj$(1,3) = "hottest"
70 adj$(2,1) = "big"
80 adj$(2,2) = "bigger"
90 adj$(2,3) = "biggest"
100 PRINT adj$(1,1), adj$(1,2),
adj$(1,3)
110 PRINT
120 PRINT adj$(2,1), adj$(2,2),
adj$(2,3)
```

Program VI

Table III shows how we label the two layers, and Table IV shows the values corresponding to these labels.

We now have two layers of three elements each so our DIM is now:

```
DIM adj$(2,3)
```

Since for these type of arrays we need two numbers in the DIM statement – the first for the maximum number of rows and the second for the maximum number of elements in each row, we call arrays like this two-dimensional.

The first number inside the brackets we call the row number, since it tells us how many rows, or layers, the array has.

The second number, which tells us how many elements there are in each layer, we call the column number. This might seem a little peculiar, but if you look at Tables III and IV you'll see that the elements of each layer form natural columns – and you've got the same number of columns as elements in a layer.

We could have called this second number the element number, but we want to use the word element to refer to each value the array can take.

So *adj$(,)* would be referred to as a two dimensional matrix, with two rows of three columns and six elements in all.

Some people would refer to this as a 2 × 3 matrix, since there are two rows, of three columns and 2 × 3 = 6, the total number of elements in the matrix.

You'll probably remember that the reason we "invented" subscripted variables was so we could use FOR . . . NEXT loops on them.

Program VII – again equivalent to Programs III and VI – shows us using two loops. The first prints out the values of *adj$(1,)* (line 110) and the second prints out the values of *adj$(2,)* (line 150).

However this is rather inefficient, as Program VIII, the equivalent of Program VII, demonstrates.

You might say that two dimensional variables such as *adj$(,)* were invented to take advantage of nested loops.

To work out what's happening use our old nested loop trick: work out

```
10 REM PROGRAM VII
20 MODE 6
30 DIM adj$(2,3)
40 adj$(1,1) = "hot"
50 adj$(1,2) = "hotter"
60 adj$(1,3) = "hottest"
70 adj$(2,1) = "big"
80 adj$(2,2) = "bigger"
90 adj$(2,3) = "biggest"
100 FOR loop% = 1 TO 3
110 PRINT adj$(1,loop%),;
120 NEXT loop%
130 PRINT
140 FOR loop% = 1 TO 3
150 PRINT adj$(2,loop%),;
160 NEXT loop%
```

Program VII

```
10 REM PROGRAM VIII
20 MODE 6
30 DIM adj$(2,3)
40 adj$(1,1) = "hot"
50 adj$(1,2) = "hotter"
60 adj$(1,3) = "hottest"
70 adj$(2,1) = "big"
80 adj$(2,2) = "bigger"
90 adj$(2,3) = "biggest"
100 FOR row% = 1 TO 2
110 FOR column% = 1 TO 3
120 PRINT adj$( row%, column%),;
130 NEXT column%
140 PRINT
150 NEXT row%
```

Program VIII

what's going on in the inner loop for a fixed value of the outer loop.

Well, for *row%= 1*, the inner loop (lines 110-130) will print out:

```
adj$(1,1)
adj$(1,2)
adj$(1,3)
```

that is, hot, hotter, hottest. We then drop through to the NEXT of the outer loop and *row%* increases to 2. So the inner loop will then print out:

```
adj$(2,1)
adj$(2,2)
adj$(2,3)
```

printing out big, bigger, biggest.

If you can't see how the nested loops work, try changing the references to *row%* in 100, 120 and 150 to *outer_loop%*. Similarly, change *column%* to *inner_loop%* in lines 110-130. This might make it clearer.

And while you're at it, see what effect leaving out the semi-colon at the end of line 120 has.

Of course we don't have to stick at just two layers with three elements each – or, to use more precise terminology – two rows of three columns. We'll see more of that next month.

For the moment see if you can adapt Program VIII to cater for another row – say, tall, taller, tallest or bad, badder, baddest! Remember, you'll have to change your DIM statement to take account of the increased number of rows.

And, of course, all those *adj$(1,1)* = "hot" are incredibly messy. Try reading in the values of the array from DATA statements. If you're really daring, you'll be able to do it with nested loops!

Well that's all for this month. Next month we'll do some more exploring of our two dimensions.

BANISH KEYBOARD HEADACHES FOR EVER

with QUINKEY - for just £49.95

THE REMEDY FOR "MICRO FATIGUE" - THE ONLY ALTERNATIVE FOR SERIOUS BBC USERS.

Having to face keying a lengthy piece of data is pretty daunting, but that's nothing compared to how you feel when you're only about a quarter the way in.

It's about then that eyestrain and headache combine to make you feel like the many-headed hydra, and the ache in your back makes you envy a packhorse.

And it's all because you're forced to "hunt and peck" amongst 74 keys on a keyboard that's over a hundred years old. Eyes torn between document and keyboard, up to the screen and back to the document - it's no wonder you're losing your place and errors and bugs start creeping in.

QUINKEY PUTS THE PLEASURE BACK INTO USING YOUR COMPUTER

- Quinkey is a keyboard which you simply plug into the analogue port of your BBC computer.
- You can be touch-typing in less than ONE hour. Quinkey uses the technique of Microwriting - practised by thousands of professionals in their working lives.
- Quinkey is operated with only one hand and comes with a long lead, so you can sit back and relax.
- Because you don't need to look at the keyboard - "hunt and peck" - your eyes are free to read data, either from screen or document - accuracy and speed become simple.
- With Quinkey there's no need to lose your place either - your other hand is free to follow data.
- Whether your work is with words or programs, Quinkey is a must. It can even double as a fast and accurate keypad for mass numeric data.

YOU'LL BE AMAZED AT WHAT YOU GET FOR £49.95

Quinkey is sold as a complete package ready to be used right away with your computer. Each pack for the BBC contains:

- Quinkey keyboard
- Interface and lead to analogue port of BBC
- Easy to follow self-teach guide
- "PROG" software (a utility program which interprets Quinkey signals to the BBC and gives you a comprehensive alternative/additional keyboard - all inputs except "Break". It merges easily with your application programs)
  "WP" enables you to fully use software such as "Wordwise", "View" and "Edword" for fast and accurate word-processing.

LEARN TO USE QUINKEY WITH NO OBLIGATION!

Send for Quinkey now, and you should be touch-typing in less than an hour. Before you know it, you'll be typing much faster than you write.

So confident are we of our claim that we'll give you a no fuss money-back guarantee. If you're not happy - FOR ANY REASON - you can simply send it back within 14 days for a full and prompt refund.

KEYBOARD DATA

Quinkey has five main keys which are pressed in combinations. Signals are sent on release of keys. With the addition of the control key Quinkey takes over all inputs except "break" from the BBC keyboard or can be used in conjunction.

Quinkey casing is made from sturdy FR ABS. Professional quality keys and gold cross point microswitches will give heavy-duty performance.

SOFTWARE DATA

When invoked using CHAIN "WP" or CHAIN "PROG", loads at the current PAGE value and moves PAGE up by 768 bytes. No zero-page locations required. Interrupt service vector IRQ2V, correctly chained. PROG may be incorporated into users' programs without difficulty.

INTERFACE DATA

Quinkey's interface to the analogue port of the BBC is a four-channel connector which allows up to four Quinkeys to be used simultaneously with one micro. (For further information about the Educational Pack of four Quinkeys and schools software, tick the appropriate box in coupon)

TESTED COMPATIBILITY

BBC model "B" OS 1.2 BASIC I or BASIC II (unless using INKEY with negative argument), DFS 0.90. View A1.4, Wordwise 1·17, Edword.

FOR COMPREHENSIVE REVIEW OF QUINKEY SEE ACORN USER, SEPT '84

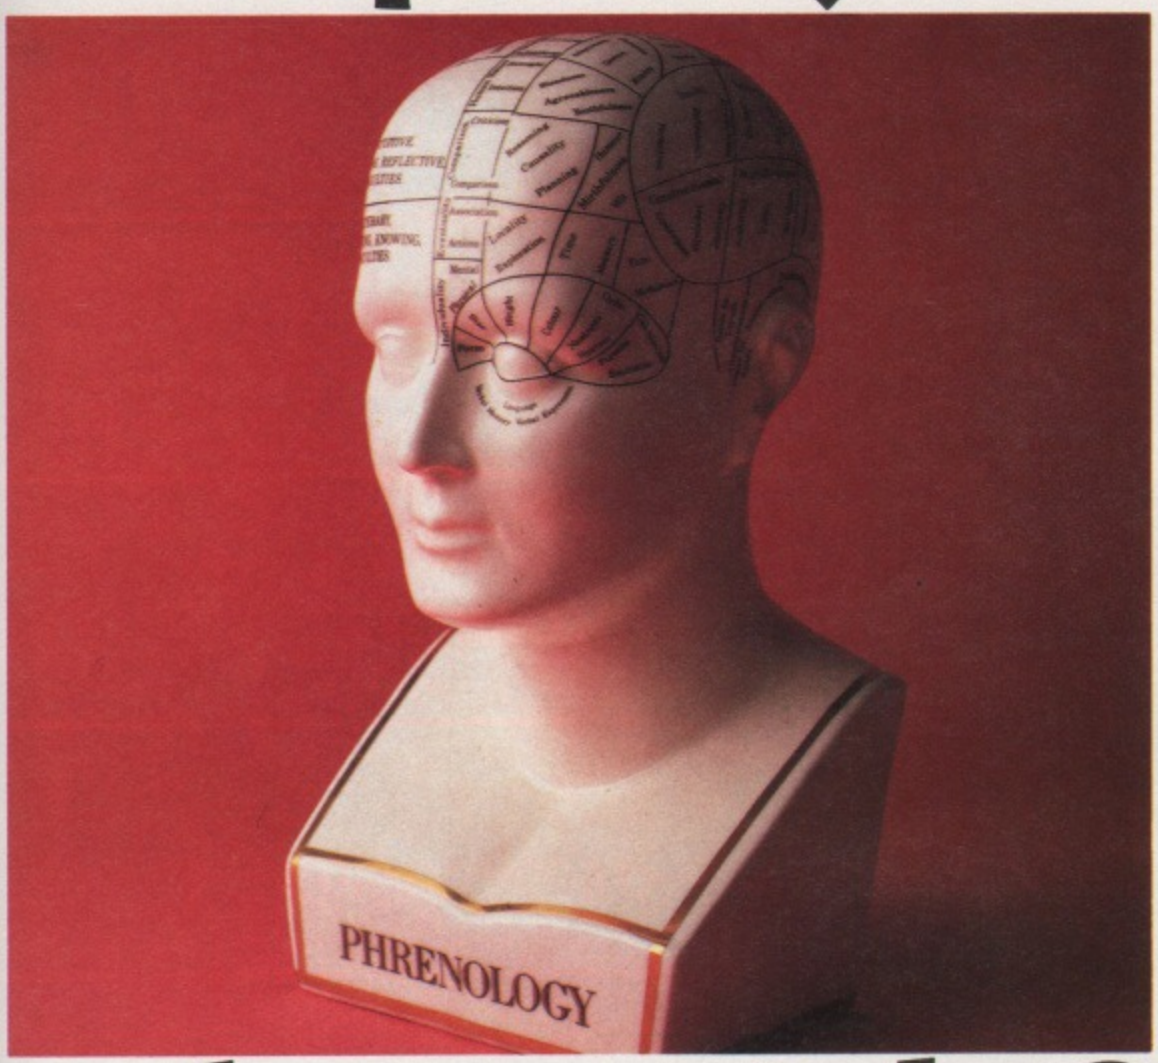
Do you want to expand your mind



or lose weight?

Home computing isn't all fun and games. The Mirrorsoft Home Discovery series of software programs can help broaden your knowledge and experience or even assist you to lose weight.

KNOW YOUR OWN PSI-Q

How strong are your Psi powers? This intriguing and comprehensive package, by Prof. Hans Eysenck and Carl Sargent is based on their book published by Michael Joseph. It checks for and helps develop latent Psi ability in individuals or groups of individuals – notably clairvoyance, recognition of hidden objects or symbols, and precognition, foretelling future events.

On cassette for the CBM64, Spectrum 48K, BBC B, Electron. **£9.95**

KNOW YOUR OWN PERSONALITY

A fascinating way to get through to the 'real' you. Devised by Prof. Hans Eysenck and Dr. Glenn Wilson from their Pelican book of the same name. You'll get a clearer insight into yourself, and others too.

On cassette for the Spectrum 48K, BBC B, Electron. **£9.95.**

STAR SEEKER

Published in association with the London Planetarium. This pair of programs, written by Dr. Paul Phillips FRAS, brings the magic of the heavens into your home.

Star Seeker accurately plots the most prominent stars from any position on Earth; at any time in this or the next century. You can obtain information on individual stars, and draw constellations. Solar System plots Planets and Halley's Comet, with us next year!

On cassette for the BBC B (Spectrum 48K and CBM64 versions coming soon). **£9.95**

MASTERMIND

Adapted from the well known BBC TV quiz game, this program lets you take the chair for general knowledge and special subject questions. It comes with two sets of each. Up to four players. Further low-cost packs of questions coming soon.

On cassette for the Spectrum 48K, BBC B, Electron. **£9.95**

THE JOFFE PLAN

A 'no-diet' personal weight control program. Prof. Joffe's Plan awards credits or penalties based on progress to a target weight agreed between the user and the computer. Food is the best reward for an over-eater. So credits earned allow you to indulge a favourite dish. Penalties mean less food, more exercise.

On cassette for the CBM64, Spectrum 48K, BBC B, Electron. **£9.95**

Also available: Mastermind QUIZMASTER – Set your own questions to run on the Mastermind program. On cassette for the Spectrum 48K, BBC B, Electron. **£5.95**

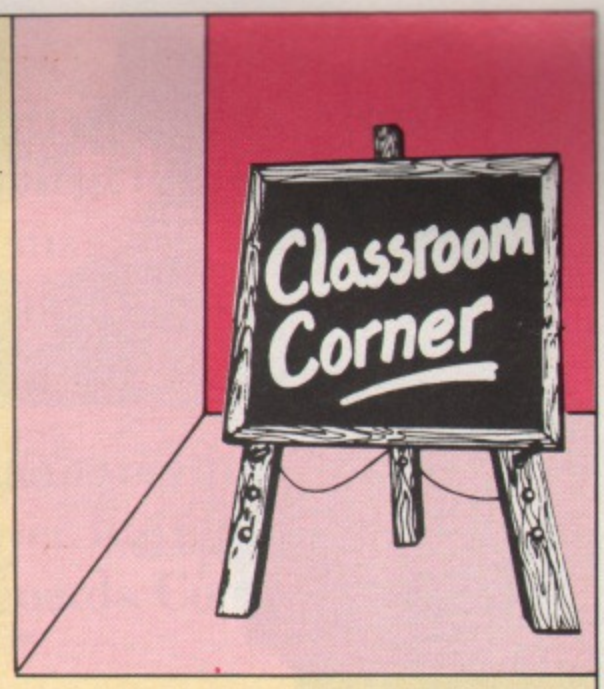
MATCHMAKER

A shape-recognition game for pre-readers

by ROLAND WADDILOVE



MATCHMAKER is an entertaining and educationally valid way to give pre-readers practice in shape recognition.

The child is shown a menu which allows him to choose between upper or lower case letters, or shapes.

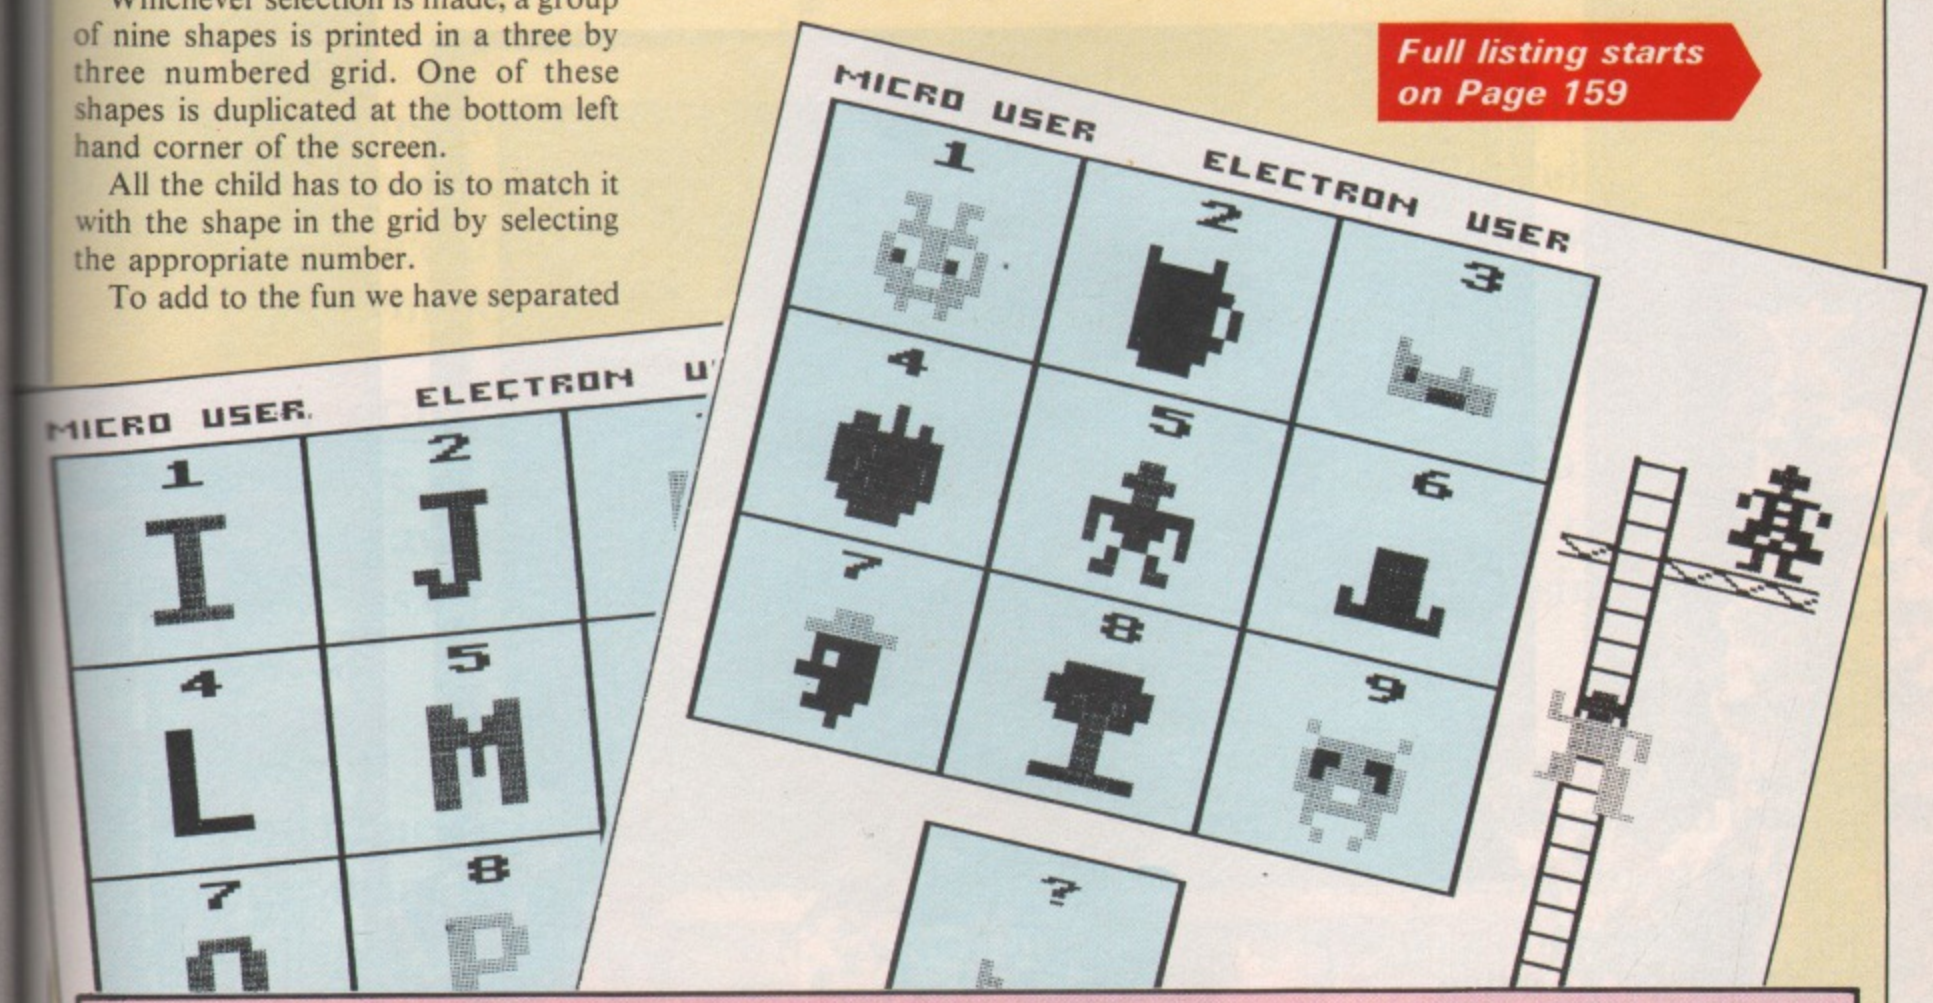
Whichever selection is made, a group of nine shapes is printed in a three by three numbered grid. One of these shapes is duplicated at the bottom left hand corner of the screen.

All the child has to do is to match it with the shape in the grid by selecting the appropriate number.

To add to the fun we have separated an intrepid Romeo from his Juliet by a first floor balcony, as the course of true lover never runs smooth!

Naturally we have provided him with a ladder but he can only ascend this step by step as the micro receives correct answers.

Full listing starts on Page 159

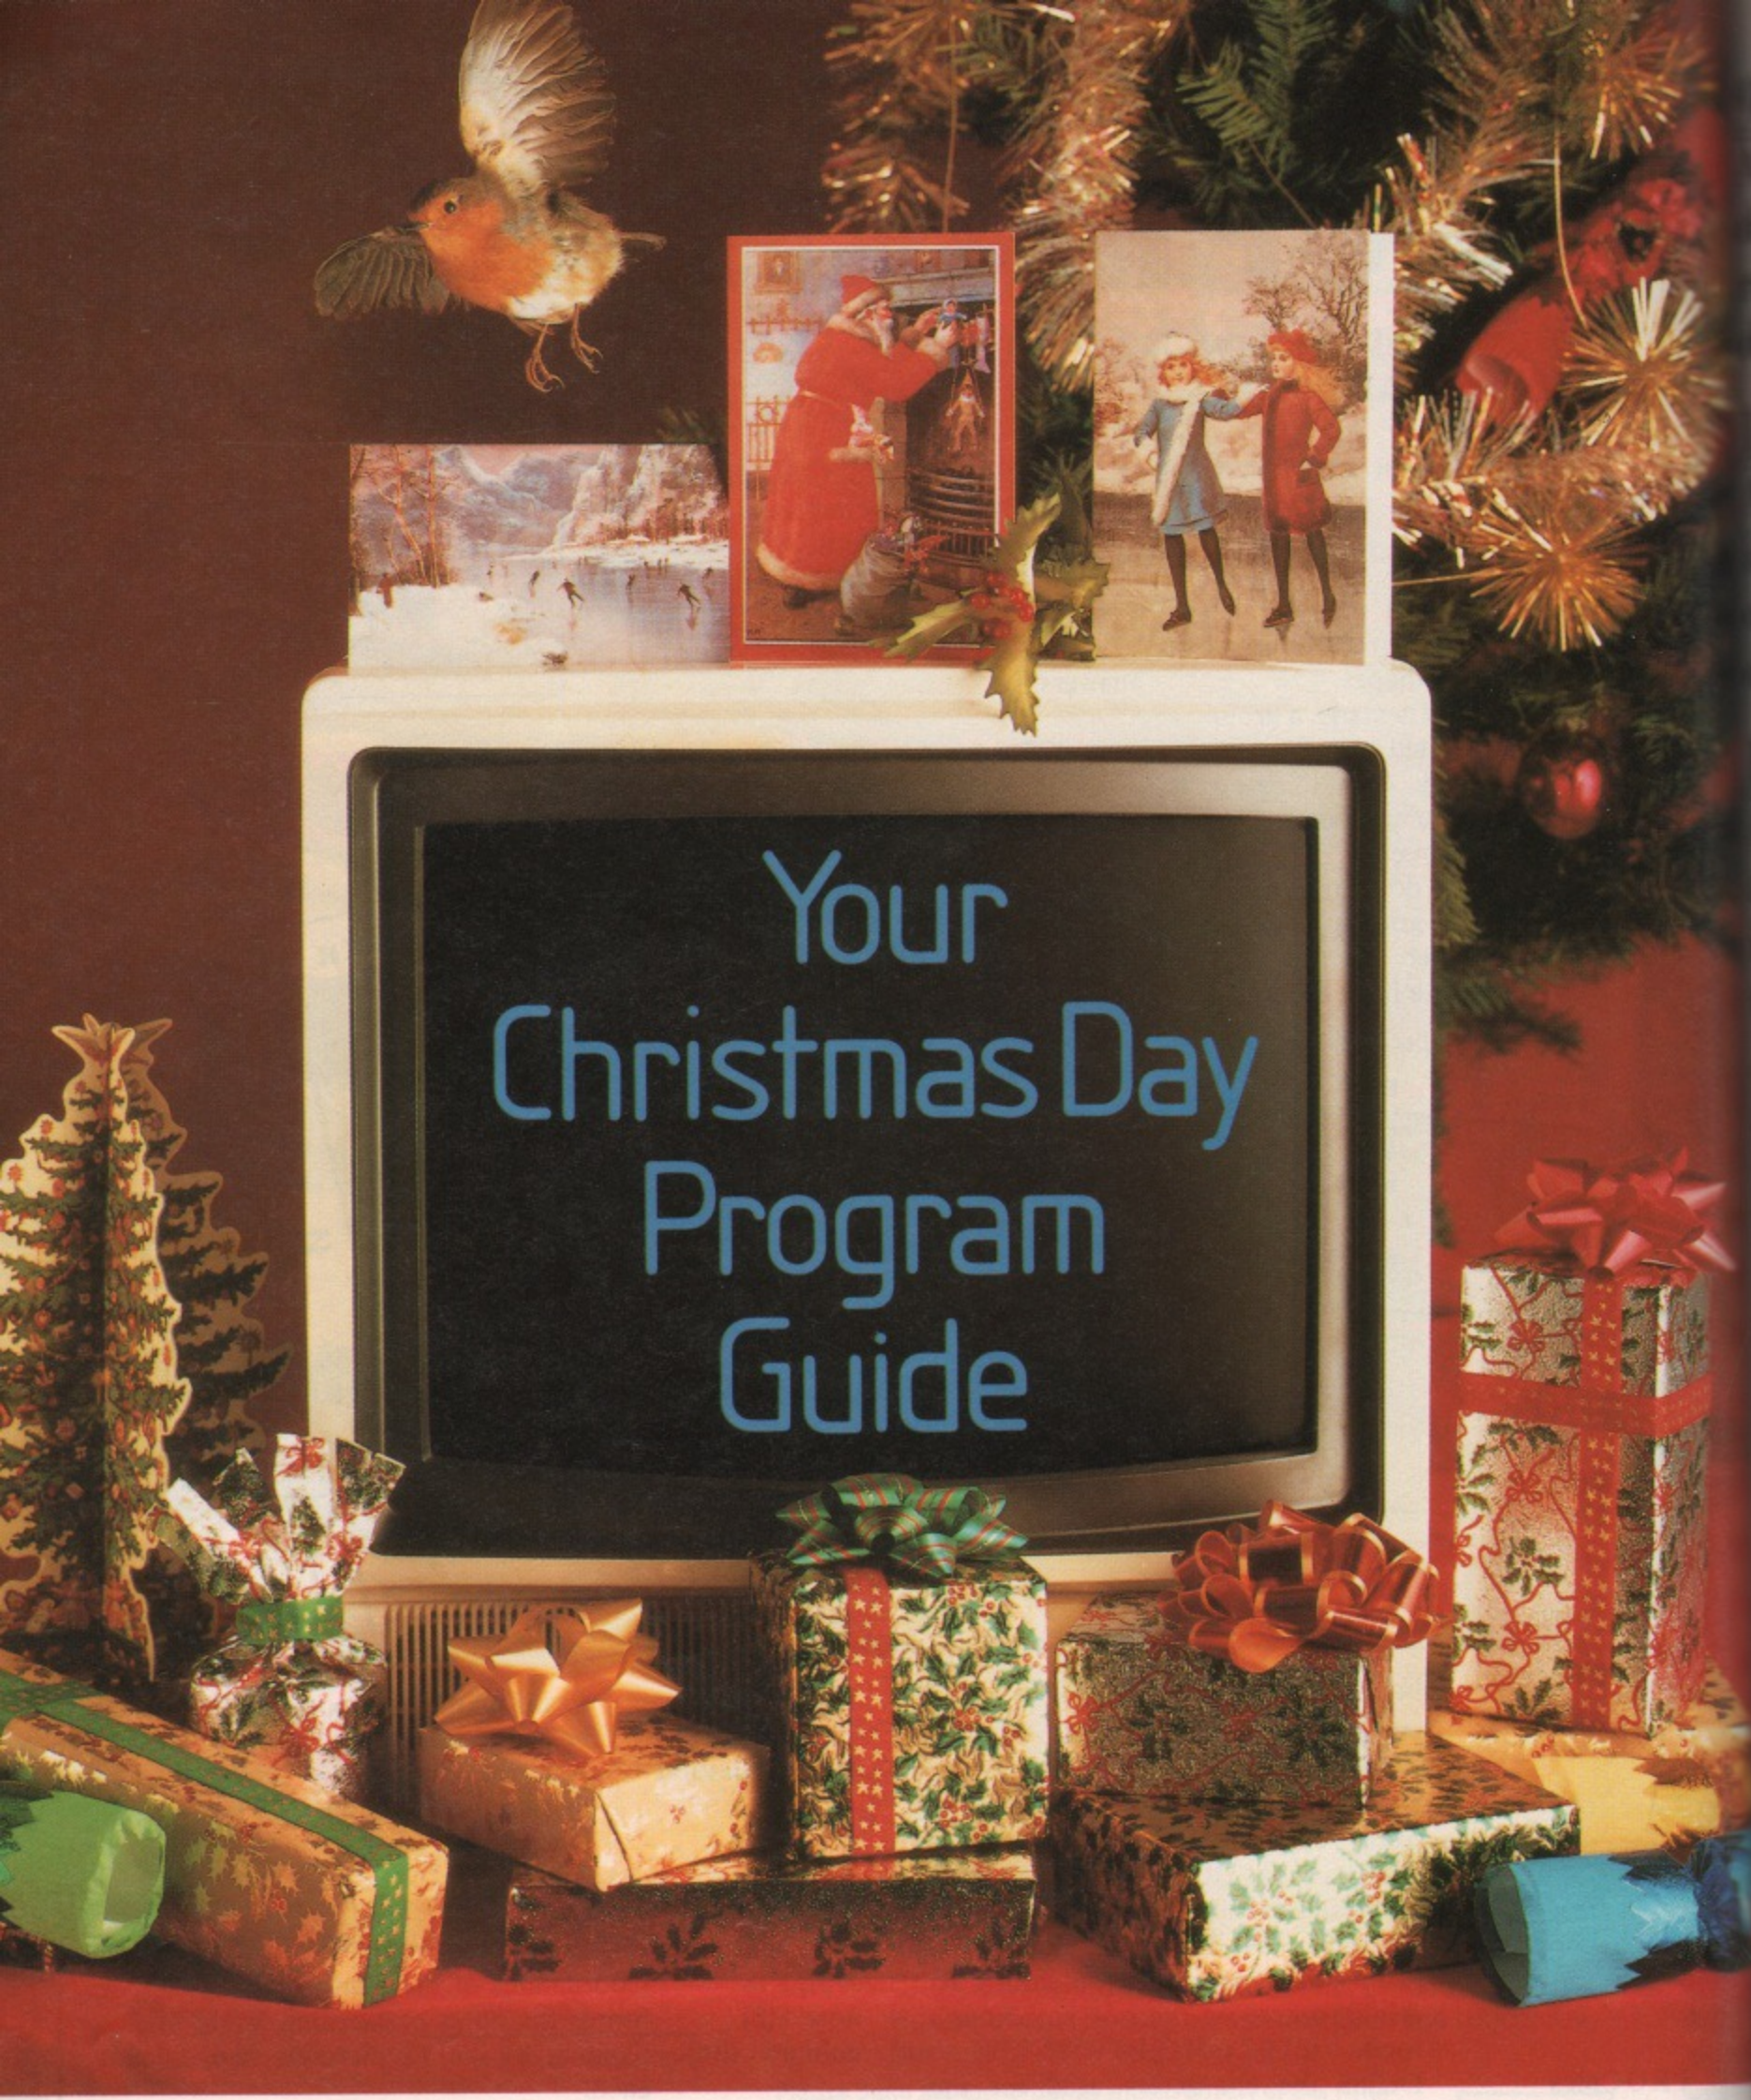


PROCEDURES

PROCassemble	Assemble the machine code for the large letters routine at &900.
PROCinitialise	Switch off the cursor keys, Esc and auto repeat, set the flash rate of colours 8-15. DIM the arrays to store notes of the tune and colours.
PROCmove	Called if PAGE>&E00, moves the program down in the memory to &E00, otherwise there is not enough room.
PROCpics	Define the characters used for the pictures.
PROCtitle	Define the characters used for Micro and Electron User.
PROCchars	Define the characters used for the man, ladder, girl and so on.
PROCtune	Plays the tune.
PROCinstructions	Print large title and instructions for parent or teacher. Choose type of question.
PROCscreen	Draw grid and letters or pictures, draw man, ladder and girl.
PROCman	Erase man at old position, draw man at new position.
PROCquestion	Ask the question – draw either a picture or letter in the box at the bottom.

VARIABLES

X%, Y%	Coordinates of the man.
note%(8)	Stores the notes of the tune.
colour% (24)	Colours of the 12 pictures, two colours each.
I%,J%	Used as general variables, loops and so on.
capitals **lowercase** **pictures**	Flags to show the type of question.
man	type of man flag, +1 or −1.
B%	&900 – code for BIGTYPE.
H%	Height of large character.
W%	Width of large character.
BIG$	Large character(s) to be printed.
answer	Which picture or letter chosen.
A%	Base for selection of pictures or letters.



Acornsoft announce tidings of great joy for both BBC Micro and Electron owners: eight brand new programs for Christmas.

Each one makes an ideal stocking filler.

They're all available at your local Acornsoft stockist. For the address or to order by credit card simply ring 0933 79300.

Or you can send off for our catalogue by writing to Acornsoft, c/o Vector Marketing, London Road, Wellingborough, Northants NN8 2RL.

Alternatively, however, you could always take a chance and drop a line to Father Christmas.

ACORNSOFT

Software for the BBC Micro and Electron

9.00 Firebug

A fast moving arcade-type game in which you are a fireman, trying to rescue some oil drums and take them to the safety of a water tank. Your opponent is the firebug who runs around lighting fires which move slowly towards the drums and fire extinguishers, destroying them if contact is made.

10.00 Maze

A gripping graphics game where you enter a top secret installation with the aim of stealing secrets from a rival company. The security system, however, has many levels each consisting of a maze of corridors patrolled by armed robot guards. Complete with full colour 3-D graphics, sound effects and a high score table.

12.00 Elite

A superb 3-dimensional graphics game that's light years ahead of any other. You are a space trader who roams the universe, making your living from buying and selling cargo in your Cobra space craft. On your travels, you will encounter aggressors who are eager to put an end to your dealings. Be warned, only the fittest will survive.

1.00 Crazy Tracer

A crazy adventure in which you guide a paint roller round the edge of a maze of rectangles, while avoiding the monsters which are trying to stop you by crushing the roller. Beware – as the game progresses, so the number of monsters chasing you will increase.

3.00 Go

'Go' is a board game for two players which originated in China 3000 years ago and is now more popular than Chess in the Far East. It requires strategic insight, intuition and a strong, calculating mind. If you wish, you can also challenge the computer at differing degrees of difficulty. A velly good game indeed.

4.00 Watch Your Weight

At last, a weight-loss program designed especially for you. With it, your computer becomes an expert wholly conversant with and sympathetic to your needs, and will help you choose an appropriate and individual weight-loss plan. The program also includes a calorie counter and a series of apposite menu suggestions to help stimulate your imagination when you just can't think what to eat.

5.00 The Complete Cocktail Maker

With everything from a Black Russian to a Betsy Ross, this program contains data sufficient to concoct a staggering 320 different cocktails.

6.00 Paul Daniels' Magic Show

Stun and amaze your friends with your astounding feats of magic. This program contains ten tricks to be performed by or with your BBC Micro/Electron. Hurry though – it's bound to disappear fast.

Disc Interface & Drive
£181.30 (inc. VAT)

Micro Disc Drive for the BBC Micro

The Micro disc drive offers a method of low cost quick access to programs. The drive is essentially a small version of a 5¼" disc drive and offers similar features to the larger drive.
The data is stored on a 3" disc, this is enclosed in a protective hard plastic cassette which features a write protect switch.
The micro drive requires the standard Acorn disc interface, but a new disc filing system rom. Acorn DFS may be exchanged for the micro DFS for £2.30. The new micro disc filing system can read and write to Acorn DFS discs.
Thus if a 5¼ inch and a micro floppy were connected on the same cable files could be transferred between them.
Capacity: 80.64 K bytes **Transfer Rate:** 125k bit/s.

Networking Torchnet/Econet

Advanced connection techniques used on our networks considerably reduce joint resistance ensuring lower end to end resistance than by any other method.

All our BBC's and Torches are networked together. Are yours:

If not phone 0329 230671.

A 3" DISC DRIVE COMPLETE WITH CHRISTMAS BONUS.

THE OPUS 3" DISC DRIVE + BONUS OF DOUBLE DENSITY DISC INTERFACE

£229·95 (INC. VAT.)

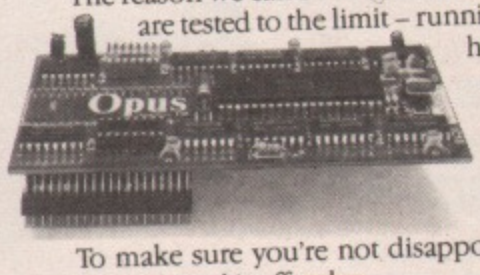
2 YEAR GUARANTEE

For only £229.95 you can have one of the best bargains this Christmas.

An Opus 500K double-sided disc drive and an Acorn compatible double density disc interface. That's over £100 off the normal retail price.

But the bargain doesn't stop there. Because these drives have the Opus name for reliability. Which is why we have the confidence to give a two year guarantee on all our drives.

The reason we can be so confident is that our drives are tested to the limit – running for over 8,000 hours. That's a year of constant use without failure.



DOUBLE DENSITY DISC INTERFACE

To make sure you're not disappointed, complete the coupon and send it off today.

Hurry, the offer ends on January 31st 1985.

GUARANTEED 48 HOUR COURIER DELIVERY. NATIONWIDE.

GENEROUS EDUCATION DISCOUNTS GIVEN. PLEASE PHONE FOR DETAILS.

Opus. Opus Supplies Ltd.

XLtron 25 ss/dd 5¼" diskettes in a MEGA•BOX £29

plus VAT and p&p

With RHINOKOTE – it's tough!

MEGA•BOX measures 6¼" x 8¾" x 6½"

Our Quality Promise

You can order XLtron disks with confidence. We buy our disks in bulk from international manufacturers, to our specifications, then test, grade and retest them in our London laboratories. Every order of 25 or 50 comes packed in the same top quality rigid plastic storage box, our **MEGA•BOX**. With four dividers. Every order of 10 comes packed in our **disco·box** library case.

Fully Guaranteed

The XLtron quality control is so stringent that we can give our famous 'two for one' guarantee. If you find a faulty disk, return it to us, and we'll send you two in exchange immediately. All part of our five year guarantee.

XLtron 5¼" Floppy Disks Prices

Code 3 25 ss/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **MEGA•BOX** £29

Code 4 25 ds/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **MEGA•BOX** £39

Code 5 50 ss/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **MEGA•BOX** £50

Code 6 50 ds/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **MEGA•BOX** £75

Code 1 10 ss/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **disco·box** £13

Code 2 10 ds/dd XLtron 5¼" 48tpi disks with RHINOKOTE in **disco·box** £18

Features: Write protect notch, centre hubs, double and single density.
Tyvex© sleeves, and with RHINOKOTE©.

Other brands too!

We also stock 3M and Athana Disks.
Prices are for boxes of 10. All disks 48tpi

Type	Athana	3M	XLtron
ss/dd	£24.80	£19.50	£12.00 (code B1)
ds/dd	£30.80	£27.00	£17.50 (code B2)

For details of our 8" floppies ring 01-631 0255.

XLtron Drives

We stock a complete range of high quality drives. All carry our full one year 'no quibble' guarantee.

XLtron Slimlines

half height 5¼" direct drives. Complete with all cables – just plug in, no soldering or extras needed. Silent running.
Apple XLtron drive (suitable for first or second drive) **£129.50** (code D1)
BBC 'B' XLtron drive (ss) **£129.95** (code D2)
BBC 'B' XLtron drive (ds) **£170.00** (code D3)
Buy two – or more – no delivery charge.

XLtron Standard 5¼"

Tried, tested and reliable, suitable for most popular makes of computer. Complete with all cables.
ss/48tpi **£75.00** (code S1)
ds/48tpi **£85.00** (code S2)
96tpi **£135.00** (code S3)
Buy two – or more – no delivery charge.

Disk Drive Cleaning Kits

Complete with cleaning fluid and applicator **£7.50** (Code C1)

Pre-formatted Disks XLtron New!

Save yourself time and trouble – we can supply pre-formatted disks for nearly every computer. Available in boxes of 10.
Single sided for AES Plus, Olivetti ETV 300, Phillips 5002/3/4 etc. **£15.00** (Code F1) and machine name.
Double sided for DEC Rainbow/Professional, Phillips 5020 (Prospect), IBM Displaywriter, Canon AS100 etc. **£24.00** (Code F2)
Please specify your computer and machine part number when ordering.

Personal Callers Very Welcome

We're now established in our new showroom in Alfred Place. You can save our £2.00 delivery charge by calling in – you'll be welcome from 10.00 a.m. till 5.00 p.m. Saturday 10.00 a.m. – 4.00 p.m.

Help Lines

If you want help or information to place an order ring our 'hot line' on 01-631 3600 or if you need technical advice ring 01-631 0255.

Official Orders

We accept orders from all government bodies, schools, universities, libraries, armed forces etc. We despatch on receipt of an official purchase order. If you can't raise a cheque without an invoice just post or telephone your order and we'll send you a pro-forma by return.

Disco Technology Ltd., Lex House, 3-6 Alfred Place, London WC1, England.

THE CARE LOW PROFILE ROM MODULE SYSTEM FOR THE BBC MICRO

Don't run the risk of damaging your ROMS/EPROMS or your BBC Micro. Whenever you want to remove ROMS/EPROMS from your BBC, why not fit our Low Profile ROM Module System and save your collection of ROMS/EPROMS in our specially designed cartridges. The CARE LOW PROFILE MODULE SYSTEM does not take any power from your BBC Micro and allows you unlimited ROMS/EPROMS.

The CARE LOW PROFILE ROM MODULE SYSTEM gives you the flexibility to plug in any ROM/EPROM, for example – Disc Doctor – Toolkit – Wordwise etc – without having to re-open your BBC Micro every time you want to change your ROM/EPROM.

The CARE LOW PROFILE ROM MODULE SYSTEM is a ribbon extension cable through the predestined slot on the left of the BBC keyboard, fitting into one of the existing sideways ROM sockets. Once you have fitted the module system, you need one CARE ROM CARTRIDGE for every ROM/EPROM.

The CARE LOW PROFILE ROM MODULE SYSTEM has been designed to fit all BBC Micros Model B. It will also fit BBC Micros Model A which have been upgraded to enable access through predestined slot to sideways ROM sockets.

Each CARE LOW PROFILE ROM MODULE SYSTEM comes neatly packaged in a special presentation case.

EACH SYSTEM CONTAINS:

1 Low profile socket housing.
1 Cable assembly.
1 Rom cartridge.
5 Blank labels.
1 Fitting instructions.

COMPLETE SYSTEM	@ £16.10 inc. VAT
Spare Cartridge	@ £4.14 inc. VAT
5 Cartridges	@ £19.55 inc. VAT
10 Cartridges	@ £33.60 inc. VAT

PLEASE ADD £2.00 Carriage

***CARE ELECTRONICS** presents* **CPX2 "X" SWITCHER**

Changing leads becomes a thing of the past!!!

★ 26 pin (As BBC) 2 Micros driving 2 Printers at the same time.
★ Can be used as a "T" Switcher.
★ All outputs BUFFERED enabling longer leads between units in excess of 20 metres.
★ No strain on your BBC power supply as the "CPX2" comes complete with its own internal power supply.
★ Easy to install and operate.
★ Colour Finished to match BBC.
★ Supplied with moulded mains plug.
★ 12 Months Guarantee.

MIKE COOK'S PROBLEM PAGE

Crowded out by the short printer lead

MY *Micro User* just fell off the table again because I am getting crowded out by my FX-80 printer plus the space needed for its paper supply.

The answer is to move the printer off the work table, but the problem is a short lead from my BBC B to the printer.

All of my BBC plus Epson owning friends (and a snooty IBM PC owner) have this problem.

When I purchased the printer, I was told by Watford that a three foot lead was the recommended length, although I notice they now advertise a five foot lead.

I find this means the printer is extremely close to the micro – there is certainly no scope for a plinth with the paper underneath.

Examination of advertisements for computer desks suggest that much longer leads are permissible, or that there are no cables connecting the stylishly arranged equipment on them.

I have searched, in vain, the pages of *The Micro User* for recommendations on parallel printer cable lengths. Thus I wondered if you would make a recommendation on the maximum and/or optimum printer cable length.

Also, if true, a short explanation as to why long leads are unsuitable for parallel operation of a printer would be interesting. – *D. Bilney, Dhahran, Saudi Arabia.*

● **Very long leads are not suitable for printers because they are only driven by TTL logic. Therefore a long lead has a greater tendency to pick up interfering signals and atenuate the wanted signals.**

There is also a tendency for all the bits to arrive at a slightly different time thus skewing the data.

That said, I have used a 15 feet printer lead without any difficulty – it's a case of trying what will work in your location.

Remember ribbon cable is quite expensive and the shorter the lead supplied, the cheaper it is – or the more profit is made.

Sounds like the alignment

MY BBC Model B (1.2 OS, Basic II and Wordwise) was bought in February this year and up to approximately three weeks ago has given me no trouble.

Since then I have had considerable problems loading programs from cassette. None of my commercially written software – including the Welcome demonstration cassette – will load, nor any of my own programs or Wordwise files written prior to that time.

They either produce no response or give garbled headers and "Data?" or "Block?" messages.

However, programs written since that time load as normal with no problems.

I have re-typed some of my own programs from their listings and these load without any trouble.

At first I suspected the tape recorder (a Ferguson 3T27) but I have since tried a different one without success and in any case the fact that I can try "old" and "new" tapes of the same program immediately after each other without changing anything else (including the volume setting), the new one loading and the old one failing, suggests that the problem lies elsewhere.

Has my Beeb developed a fault or is the problem more elementary? – *P. Sargent, Sheffield.*

● **It sounds like your head alignment has shifted. Possibly the tape recorder was subject to a knock or a fall. This would give exactly the symptoms you complain of.**

You can adjust it back, but note that none of your new programs will load after adjustment.

Lock lights stay on

MY BBC Micro Model B has suddenly developed a fault in that the caps lock and shift lock lights remain on when the machine is switched on.

This is accompanied by a continuous tone from the speaker. Pressing Break does not have any effect on the tone or lights but does allow partial use of the keyboard.

Does this tie in with "losing confidence" in your July issue of *The Micro User?* As I am based in Ghana you will appreciate the difficulty in dealing with the problem by taking the machine to a service agent. – *Paul Ramsay, Leymot, Ghana.*

● **The fault you describe can be caused by one of many things going wrong. Without a proper examination of the micro with test equipment it is impossible to "point the finger" anywhere. It could be just about any component in the system.**

Just a bit too late

I HAVE designed, but not yet built, a frequency counter which interfaces to the Beeb via the user port.

The micro is needed because the frequency meter measures the period of the input waveform.

This gives better accuracy at the lower frequencies, but means that a ratio of two numbers must be calculated before the frequency can be displayed. The component cost is about £15.

Assuming of course that the design works would you con-

→

You've got a problem with your micro and you just can't sort it out on your own? Then write to MIKE COOK. If he can't help then probably no one can . .

IF you have a technical query for this page, send it to Mike Cook, *The Micro User*, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.

Letters on other subjects should be sent, as usual, to Micromail, which this month starts on Page 197.

From Page 91

sider publishing it, possibly in the Body Building Course series? I stress the word consider, because I know that I haven't provided you with a lot of information.

I just wanted to know if the project is of sufficient interest, and if you accept this type of article from your readers. – *C. Attenborough, Monks Hill, Ensworth.*

● **Thanks for the offer, but as you have seen we have already printed a frequency meter. If yours has more to offer, then write again and tell me of the differences.**

Outputs to inputs

I'M extremely interested in your Body Building Course Number 17 (*The Micro User*, August 1984) as I need output control lines without use of the user port (where there is a speech synthesizer connected).

Although I have long experience in electronics, I am a Beeb novice.

Therefore I would be most grateful if you could tell me, what are the criteria for connecting the link on IC4 – in simple language, please – and how do I make all the lines outputs instead of inputs?

Also, how do I address a line to turn it on – that is, what is the equivalent to, for example, ?&FE60=?&FE60+4 when using the user port?

I am sorry to be so ignorant, but making the board and interfacing to external equipment will be child's play to me. However, my knowledge about the Beeb's registers is in its infancy as yet. – *Bill Garfield, Maidenhead, Berks.*

● **Table II in my article showed the effect of the address select link. It moves the address of the extra ports.**

This is so that you can avoid clashing with anything else you might have connected to the 1MHz bus. You use the extra ports in exactly the same way as you use the old port.

So to make a line an output you write a 1 in the appropriate bit in the data direction register. This was explained at length in the July and August 1983 issues of *The Micro User*.

Let us say we put the address link at position 4 the new VIAs are mapped to &FC80 to &FC9F. Therefore to perform the equivalent operation you asked would be:

Ext socket	*Operation*
A	?&FC80=?&FC80+4
C	?&FC90=?&FC90+4

Extension socket B and the aux I/O connector are on the A side of the VIA and the equivalent operation would be:

Ext socket B	?&FC91 =?&FC91+4
AUX I/O	?&FC81 =?&FC81+4

For a good description of all the VIA registers, see the Advanced User Guide.

Olympics on disc

HOW can I put my Micro Olympics on disc? I use Disc Executor from Watford Electronics to put my locked tapes to disc.

I can put all my locked tapes to disc except two programs – Micro Olympics and Aviator.

Can we expand the BBC's memory because the pins 4 and 6 from IC-45 (74LS139) are not used, and also because the video chip (6845) can handle 512 RAM? – *Bert M. Harms, 7815 AZ Emmen, Netherlands.*

● **The best way to get Micro Olympics onto disc is to buy it on disc. You see it is far too easy to copy it when it is on disc without any disc protection.**

As the lads who wrote it work in the next office it is not really practical for me to reveal its protection methods – sorry.

The memory cannot be expanded because of the limit of the 6502 microprocessor. It matters not that the video controller can display more memory (it can't actually without redesigning the circuitry around it).

Therefore barring paged memory or second processors, there is no way of increasing the BBC Micro's memory.

Clicking . . . they all do it!

I USE my micro with a cassette recorder which does not have remote motor control. When I am loading a program I get a loud metallic click (like a relay contact click) coming from the centre back of my micro, at approximately one block intervals.

Is there a fault or is there a way of turning this off?

I have had my micro since March, 1982 and have updated to 1.2 OS. The clicking noise has always been present and up to recently (when I borrowed a friend's cassette recorder with remote motor control) I believed it was caused because I hadn't a remote motor control cassette.

The clicking continued with the cassette with motor control in use. – *Raymond W. Chubb, Plymouth, Devon.*

● **All BBC Micros click when loading in a program. It is, as you said, the cassette motor control relay.**

The fact that you do not need this is not known to the micro and so it merrily goes on turning the relay off after each block.

Then when it finds out that it was not the last block it turns it back on. Hence the clicking.

Refer to Mr Bishop

I HAVE built the Eprom programmer out of the book Simple Interfacing Projects by Owen Bishop.

While the circuit itself was simple enough, I have found the software to run it rather more difficult.

Can you or anyone else help! – *G. Hall, South Croyden, Surrey.*

● **If Owen Bishop designed it, I think it is up to him to supply the software. I am sorry I have never seen the book so I can't help.**

Not a job for the inexperienced

THIS month my BBC Micro went wrong. There was no screen display, the keyboard had no effect and the only sound was a stuttering to accompany the flickering caps lock light.

Thanks to the shop extending Acorn's measly guarantee to a year, it only cost me frustration for a week having no micro.

The shop said that the power supply module had to be replaced.

Do you know what could have been wrong – in case it should fail outside guarantee.

There are several things I am worried about. Perhaps you can help:

On switch on, the screen display takes longer to settle down. Has the new power supply – or the fault in the old one – damaged the modulator?

The micro gets fairly warm in operation. Is this normal – or must I expect another failure soon.

Perhaps your can tell me what Acorn mean by "sufficient ventilation" being available. At the moment the minimum space between the sides of the micro and the desk is just under ½". Is that enough?

There is not much clearance as you know underneath. – M.J. Cowie, Norbury, London.

● **It could be just about any component in the power supply and fixing it is not a job for the inexperienced.**

The longer ON time is probably caused by the different power supply but is nothing to worry about.

Also some supplies run hotter than others – it's just component tolerance spread and is inevitable with any mass produced equipment.

Adequate ventilation is a vexed problem but can be improved if the bar at the back of the inside of the lid is removed.

This bar is on some newer micros and has been produced to prevent tiny fingers "posting" things through the slot.

The result is inhibited air flow which can lead to overheating in some circumstances.

EDWARD JOHNS concludes his review of Basic I and II

Simplified assembling with Basic II

IN last month's article we went through the main differences between the Basic commands on the two versions of Basic. As promised, we will now examine the differences between the assemblers.

The four new commands in the assembler are the equate functions shown in Table I. They allow bytes and strings to be included in assembly programs by using a single command – typically they are used to store data in the program you're assembling.

On Basic I you had to come out of the assembler, poke the bytes in with an indirect operator, increment the program counter by the relevant amount, then re-enter the assembler resetting the selected options – a long winded procedure.

One point to note is that the EQUS does not put a CHR$ 13 at the end of the string as with the string indirect operator. Also all of the equate functions add the number of bytes they have taken up to the program counter P%.

Consider the Basic II program shown in Program I:

```
100 FOR pass=0 TO 3 STEP 3
110 P%=&B00
120 [OPT pass
130 LDY#0
140 .Label LDAString,Y:BEQEnd
150 JSR&FFEE:INY:BNELabel
160 .End RTS
170 .String EQUS"Micro User"
180 EQUB 0
190 ]
200 NEXT
210 CALL&B00
```

Program I

When run the message *"Micro User"* is displayed on the screen. The EQUS in line 170 puts the Ascii values of the string into memory starting from the address given by the variable *String*. The EQUB in the next line is used as a terminator.

The example in Program II shows one method of simulating the equates on Basic I using indirect operators. As you can see this method is rather messy.

```
100 FOR pass=0 TO 3 STEP 3
110 P%=&B00
120 [OPT pass
130 LDY#0
140 .Label LDAString,Y:BEQEnd
150 JSR&FFEE:INY:BNELabel
160 .End RTS
170 .String :]
180 $P%="Micro User"
190 P%=P%+LEN($P%)
200 ?P%=0
210 P%=P%+1
220 NEXT
230 CALL&B00
```

Program II

Routines which frequently use this method become very untidy, this is because the assembler must be exited and entered each time the indirect operators are to be used.

To allow Basic I owners to use the equate commands tidily, I have written macros which perform the same operation.

Now all we need to do is to interface the assembler and the macros. This is done by using the OPT command followed by the required macro function.

Table II contains the macros which are used in place of the equates.

```
EQUB
DEFFNEqub(byte)
?P%=byte
P%=P%+1
=pass

EQUW
DEFFNEquw(word)
!P%=word AND &FFFF
P%=P%+2
=pass

EQUD
DEFFNEqud(double)
!P%=double
P%=P%+4
=pass

EQUS
DEFFNEqus(string$)
$P%=string$
P%=P%+LEN(string$)
=pass
```

Table II

Remember the program to print *"Micro User"*? Program III is a Basic I equivalent using these macros.

In addition to its new equate functions the Basic II assembler also allows code to be assembled into one area of memory while being set up to be executed at another address.

One application where this might be necessary is in writing sideways ROM software.

This of necessity starts at &8000. You can't assemble code there, though,

EQUB	&xx	Add a single byte.
EQUW	&xxxx	Add a word, two bytes.
EQUD	&xxxxxxxx	Add a double word, four bytes.
EQUS	"string"	Add a string, no of bytes depends on length.

Table I

From Page 93

since to use the assembler the Basic ROM is "paged in" at &8000. So you have to write your code somewhere else in RAM. But you still need it to be written as if it were at &8000 to get all your addresses referring to the right locations!

We're used to using P% for the program counter in standard Basic I

```
100 FOR pass=0 TO 3 STEP 3
110 P%=&B00
120 [OPT pass
130 LDY#0
140 .Label LDAString,Y:BEQEnd
150 JSR&FFEE:INY:BNELabel
160 .End RTS
170 .String OPT FNEqus("Micro User")
180 OPT FNEqub(0)
190 ]
200 NEXT
210 CALL&B00
220 END
230 DEFFNEqus(string$)
240 $P%=string$
250 P%=P%+LEN(string$)
260 =pass
270 DEFFNEqub(byte)
280 ?P%=byte
290 P%=P%+1
300 =pass
```

Program III

fashion. Basic II introduces O%, as well.

O% holds the origin address – this is where your code is actually assembled in memory.

P% still refers to the program counter – the code is assembled as if it were at P%.

Bit 2 of the pass number determines whether the code will be assembled at P% or O%.

OPT	Assembled at O%	Errors reported	Listing produced
0	X	X	X
1	X	X	✓
2	X	✓	X
3	X	✓	✓
4	✓	X	X
5	✓	X	✓
6	✓	✓	X
7	✓	✓	✓

Table III

If bit 2 is set then the code is assembled at O% otherwise it is assembled at P%.

Table III shows the eight options available on Basic II. Basic I only allows options 0 to 3.

Program IV is an example showing how O% and P% are used together. Set PAGE to &1900 before typing it in if you do not have a DFS (Disc Filing System).

The program is assembled into memory at &7000 but has been coded to execute at &E00.

To test the assembled routine we must copy it from &7000 to &E00. This is done in lines 230, 240 and 250. This moves the object code to its true execution address. Calling &E00 executes the code.

Disc users would have been unable to save the object code if it had been assembled at &E00, but the code at &7000 can be saved without corrupting it. This can then be downloaded to &E00 when required.

Well that's the end of this review of the major differences between Basic I and Basic II, and I suppose I'd better answer the question all the Basic I owners will be asking:

Is it worth upgrading to Basic II?

The answer is, if you're simply a Basic programmer, you probably should – though it's not vital.

If you use assembly language, then definitely, go ahead and get it.

```

MICRO USER OFFER

Upgrade to Basic II for a very special price!

This is what you get with Basic II:

- More accurate calculations.
- An extra file handling command, OPENUP.
- The invaluable OSCLI command, allowing you, for example, to *LOAD files with a variable as the file parameter.
- EVAL will work with PAGE, HIMEM and other pseudo-variables.
- The INSTRing bug has been corrected.
- More efficient handling of string memory.
- EQUB, EQUD and EQUW – invaluable in assembler.
- O% combined with extra values of OPT to enable offset assembly.

Don't miss this exceptional offer

Please send me the Basic II ROM at the special price of £23.50. (Includes VAT, post and packing).

ONLY £23.50

A full LOGO for the BBC model "B" from Logotron.

LOGO is a computer programming language, which appeals equally to children in primary school or to computer scientists at the Massachussets Institute of Technology. Using LOGO, you unconsciously absorb advanced mathematical ideas and fundamental principles of computer programming. LOGO has been available on microcomputers only since 1982. Only this year has it been made available on British home computers like the Sinclair Spectrum and the BBC Micro.

LEONARDO WOULD HAVE LOVED IT!

Leonardo da Vinci would have loved it because LOGO gives full rein to a child's creative imagination, using visual images to convey profound ideas. LOGO could do for computers what perspective did for pictures, bring them alive.

Logotron's LOGO for the BBC "B" was written by LCSI/SOLI, the software house responsible for LOGO implementations for Atari, Apple, IBM, Sinclair, Coleco, and NEC. It's the closest there is to an international LOGO standard, with turtle graphics and full list processing. The software is contained on a single 16k ROM, written in 6502 machine code, fully compatible with the 6502 second processor unit and Econet. Facilities are provided to drive floor turtles, create and use data files, and access routines written in machine language. Full access is provided to the BBC micro's operating system. An optional sprite board, also provided by Logotron, can be used to handle video output and provides more than 30 programmable sprites, allowing true animation.

Please send me further information concerning Logotron's LOGO for the BBC Model "B".

The Professionals in Computing Systems

We offer a design development and manufacturing service for companies wishing to improve their products using Microprocessor Technology.

ATPL SIDEWISE

SIDEWAYS ROM/RAM EXPANSION FOR THE BBC MICRO

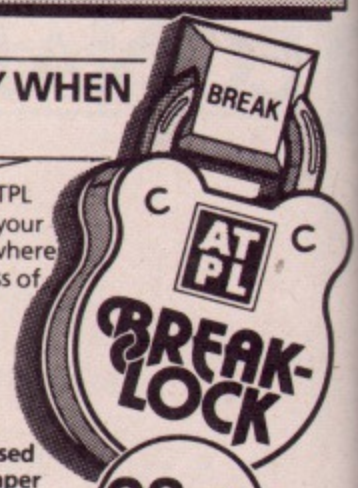
£38·00 +£1·00 p+p +VAT

- ★ FULL SIDEWAYS ROM EXPANSION to total of sixteen ROMS.
- ★ 16K battery backed CMOS RAM option – RAM is treated as ROM number 15 on read.
- ★ Software for SIDEWAYS ROMS may be down loaded and run in RAM under the true SIDEWAYS environment before transfer to EPROM using ATPL's EPROM programmer.
- ★ EXISTING sockets on BBC are usable and all EPROM sockets are accessible without removing SIDEWISE.
- ★ PLUG – IN – AND GO construction. Mounts neatly inside the BBC machine.
- ★ NO SOLDERING required to fit SIDEWISE.
- ★ FULL BUFFERING of address and data busses – prevents data bus loading problems associated with unbuffered boards.

The BBC Computer can run software packages stored on EPROM using the four "SIDEWAYS ROM" sockets on its printed circuit board. Now that an ever increasing range of software packages for word processing, financial planning and other applications are available in this format, there is a need to expand the facility and take advantage of these developments.

ATPL has designed SIDEWISE which provides you with a further twelve sockets giving a total capability of sixteen SIDEWAYS ROMS, the maximum number capable of being supported by the BBC computer operating system. In addition to the ROM expansion, one of the SIDEWAYS ROM sockets may be defined as RAM, permitting SIDEWAYS ROM software to be loaded into the RAM area of the machine using normal OS commands. Once loaded, the RAM may be used like any other SIDEWAYS ROM and the limitation of having only sixteen sockets is effectively removed.

EVER HIT YOUR 'BREAK' KEY WHEN YOU DIDN'T MEAN TO?



FOR THE BBC MICRO

Fit ATPL 'BREAK-LOCK' to your BBC Micro and avoid disaster where inadvertant use of 'BREAK' will cause loss of data and/or programmes.

ATPL 'BREAK-LOCK' is a 2 position key-switch that will:

- ☐ **Prevent accidental or unauthorised use of the 'BREAK' key.**
- ☐ **Act as a security device to prevent unauthorised use of your system more effectively and cheaper than security ROMs.**
- ☐ **Easily and neatly fit in the 'Ash-tray'.**
- ☐ **Render demonstration machines tamper-proof.**

ACORN COMPATIBLE

£125 INCLUDING V.A.T. AND DELIVERY

The Electronic Keyboard for the BBC Micro

The 'Symphony' Electronic Keyboard provides simulation of a wide range of musical instruments and sound effects through your BBC micro computer

FEATURES INCLUDE

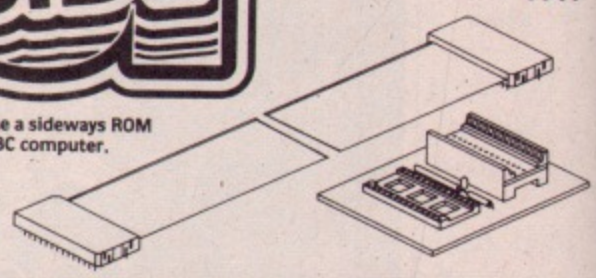
- 4 Octave 49 note C-C keyboard with full size keys
- Software included for up to 100 different sound effects to be created and modified whilst you are playing.
- Complete set of 100 effects can be saved or loaded to or from disk or cassette
- Effects selected by use of function keys
- Each effect can be given a name for easy reference and an index continuously displayed
- Software includes sound effects simulating musical instruments — piano, organ, violin, banjo, jazz bass, etc.
- Octave shift, pitch bend and auto repeat functions
- Optional 'sustain' foot switch for extra control
- External amplifier or connection to Hi-fi system options available
- The 'Symphony' Electronic Keyboard pack includes: keybord and connector cable to BBC micro user port, software (please state disk or cassette) and comprehensive user guide

ATPL offer you the full range of BBC computers and peripherals. Send an S.A.E. (A4) for full technical data and our latest competitive prices.

SIDEWAYS ROM EXTENSION SOCKET

INSIDE

ONLY **£13·00** p+p 50p + VAT



INSIDEOUT is designed to make a sideways ROM socket available outside the BBC computer, to allow for easy exchange of sideways ROM's.

CAN BE USED FROM BBC MODEL B OR EXPANSION BOARD SOCKETS ● SUPPLIED WITH LOW INSERTION FORCE SOCKET FOR EASE OF USE NO COSTLY CARTRIDGE PACKING ● EPROM PLUG IN AND GO ● NOT LIMITED TO ONE DEVICE ● SOCKET RATED AT 100'S OF INSERTIONS MOUNTED OUTSIDE THE BBC, EASILY REMOVED AND REFITTED ● CAN BE MOUNTED IN USER DEFINED LOCATION — NOT FITTING IN AN ILLEGAL POSITION

ATPL SPECIAL OFFERS for BBC Computers

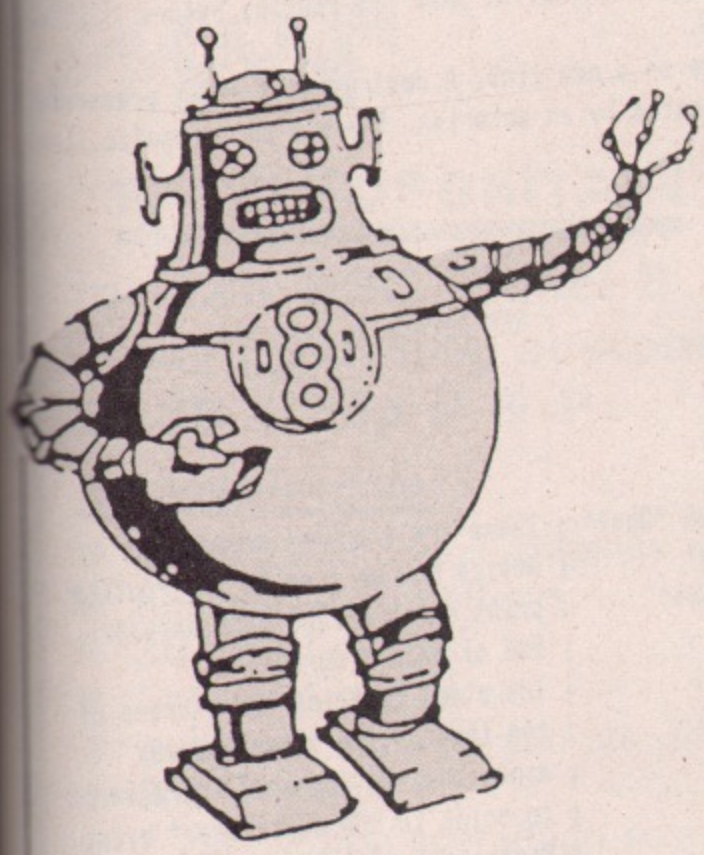
It's easy enough to do in Basic, but now

MIKE BIBBY shows you how to . . .



Get your message over easily in machine code

ONE of the nice things about programming in Basic is that if you want a message to appear on the screen all you have to do is type:

PRINT "Message"

Often such messages are vital. At the very least, they can make the difference between a program being either user friendly or a brain-teaser.

The trouble is, providing these helpful prompts in machine code programs can often be a fiddling process, involving poking messages on to the screen byte by byte.

With the BBC Micro the main drawback was its lack of a simple means of inserting the required message into an assembly.

Let's face it, all this closing the assembly with a square bracket, using $P% to store the message string, increasing P% by LEN($P%) and opening the assembly again was just too much bother.

And that was a pity, since I had a neat message-writing routine I'd been using for years on the 6502 and Z80. But what it needed was a decent way of getting strings into an assembly.

Then came Basic II with its EQUS statement, and all was bliss!

The program listed on the next page was the immediate result of my getting my hands on a Basic II chip.

The idea behind it is simple. When you jump to a subroutine with a JSR, the 6502 pushes the address of what it assumes to be the next opcode onto the stack – MINUS ONE.

That is, if the assembly were:

3000 20 00 34 JSR &3400

the address of the memory location containing "34" would be pushed on to the stack – hi byte first.

So when the 6502 encounters a JSR on to the stack would go &30 followed by &02.

To get the address of the next opcode or whatever after the JSR you would pull the lo byte off the stack, followed by the hi byte and then increment the resultant address by one.

This is what an RTS does automatically, so the 6502 returns to the correct address after a subroutine.

Normally, of course, this return address as it is known would contain an opcode and the program would continue where it had left off before the subroutine call – in much the same way as a Basic program would after completing a procedure call.

However in this program immediately after the JSR I put the message I want to output.

When I jump to the subroutine that prints this message – called, not unnaturally, *print_chars* – I pull the return address from the stack and increment it by one – only I store the resulting address in *next_byte* instead of returning to it as I would with an RTS.

The point is that, since I've stashed the message I want to print out immediately after the JSR, *next_byte* will now point to the first character I want to print out.

(Remember, *next_byte* should be considered as a pair of bytes pointing to a particular byte in memory. Such a pointer is called an indirection.)

I then take the contents of the address pointed to by *next_byte* and print it out using OSWRCH.

Then I increase the address indirected by *next_byte* by one so that it points to the next character, print that out, and so on until I reach an asterisk.

That is, *next_byte* points to the character I'm printing out. Once I've done so, I increase it by one, to point to the next character to be printed.

I've used an asterisk as my end of message marker. When I reach it I don't print it out. I do, however, carefully put its address on the stack, hi byte first then lo byte.

Since the * marks the end of the string I've inserted into the assembly with EQUS, the byte after it contains the next opcode of my machine code program.

Now, since an RTS causes the processor to go to the address held on the stack PLUS ONE, you can see how, by branching to an RTS immediately after I've encountered the asterisk I can return to the main program at exactly the right place – at the opcode after the asterisk.

You see, since the address on the

→

From Page 97

stack points to the asterisk when you increase it by one, as the RTS does automatically, it points to the right byte – the next opcode, which is after the asterisk. From then on the main program continues as normal.

By the way, once I've detected the asterisk (lines 290,300) I don't go directly to an RTS but print out a carriage return and line feed first (lines 340-370). You can omit this if you wish.

Also I've used Y in an interesting way to simulate indirect absolute addressing – a mode not normally allowed on the 6502 save for the JMP instruction.

After carefully saving Y on the stack (AFTER the JSR has stored its bytes on the stack) I set Y to zero.

Remember, the address of the byte I'm interested in is stored in *next_byte*, in page zero.

So if Y is zero, then:

LDA (next_byte),0

loads the accumulator with the contents of the address indirected via *next_byte*.

When I move on to the next location I do it by increasing the contents of the *next_byte* pair – not by increasing Y.

After reaching the asterisk I reclaim the value of Y from the stack before pulling the bytes I need to calculate my return address.

Take a look through Listing I. It's fully annotated, so it shouldn't be too difficult to follow.

Admittedly, it doesn't do anything too exciting, just printing out:

One
Two
Three

as example messages. (You can make it a bit more spicy if you like . . .)

The main program is in lines 130-170 and the subroutine we're interested in is in lines 180-440. You should be able to fit it into your own programs easily. It destroys A, but preserves X and Y.

Notice the SEC followed directly by the BCS of lines 320-330. This is just a machine code implementation of an unconditional branch – similar to Basic's REPEAT . . . UNTIL FALSE.

Well that's one of my favourite machine code tricks off my chest. I hope you find it as useful as I have.

If you have any pet machine code routines, why not send them in for the rest of us to share?

```
 10 REM Basic II version (c) Micro User
 20 REM This program allows you to print out a string in the middle of a
bunch of machine code using
 30 REM EQUS and a machine code routine. NB Call the routine before the EQUS.
Prog continues after the EQUS.

Listing I

IF you're a machine code programmer, or just getting round to machine code for the first time, you'll almost certainly want to use the extra facilities Basic II offers – as the above routine illustrates.

If you haven't got Basic II in your micro, why not take advantage of our special offer? It's on Page 94.

New from BETASOFT

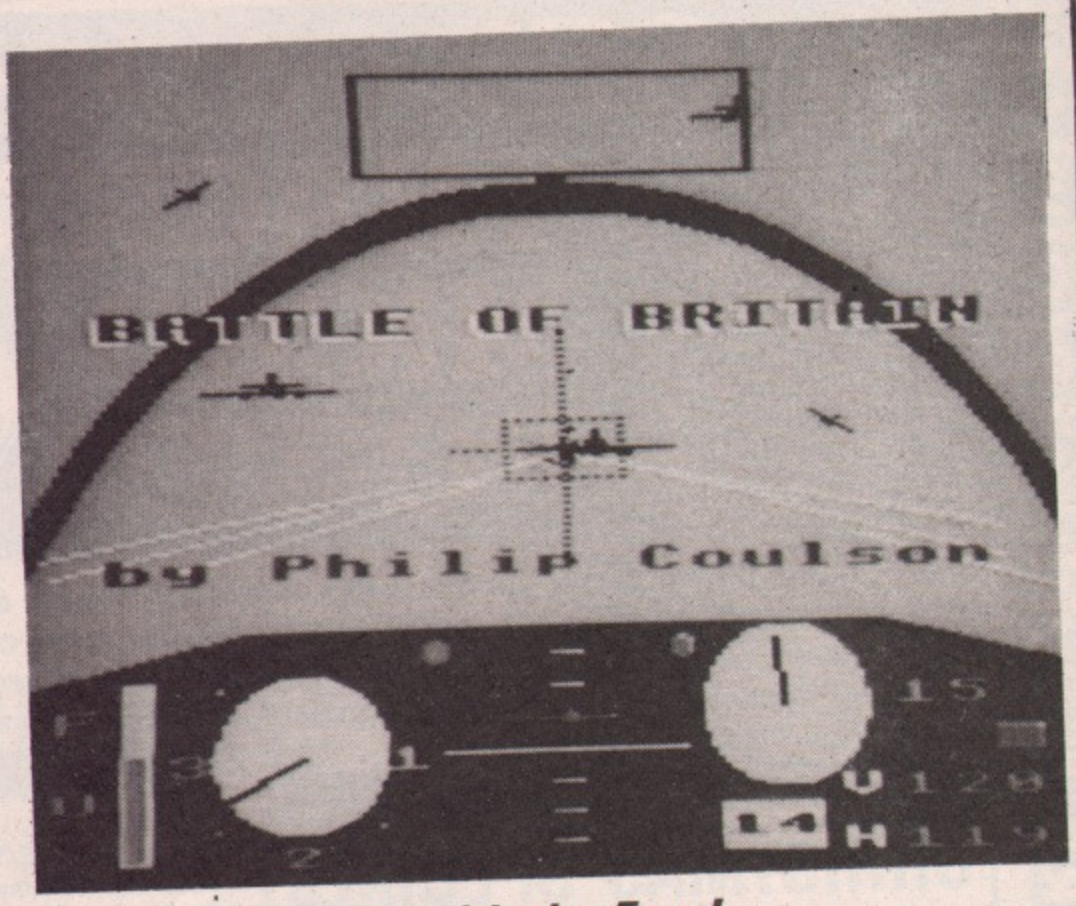
BATTLE OF BRITAIN

for 32K BBC Model B – any operating system

£9.95 + 25p P & P

Features Include:

- Mode 2 full colour graphics
- Realistic sound effects
- 3D visual effects
- Choice of skill levels
- Authentic settings and aircraft
- Full briefing
- Total mission score/high score
- Tips to improve your game
- Fuel; Oxygen; Ammunition



Now you can fly with the Few!

Scramble your Spitfire and climb through the clouds to intercept the enemy raiders. Ground Control will guide you, but accurate flying is a must, and will score you extra points.

"Tally-ho!" The sky is suddenly full of planes. You get a Heinkel 111 in your sights and have to use all your skill to hold him there as he jinks and weaves to avoid the devastating fire power of your eight Browning machine guns. Your aim is good, and he explodes in flames, strewing wreckage in your path.

Watch out! Your mirror tells you there's an Me109 on your tail. You see the flashes and hear the chatter of his guns. You dive steeply away, and manage to shake him off. A Hurricane fills your sights and you almost open fire on him. That could have cost you a lot of points! Planes zoom towards you and climb and dive around you as you seek out your next target. A slow-moving Stuka falls easy prey to your guns and with your low ammo warning light flashing, you carefully aim your last few rounds at a fleeing Junkers 88.

You throttle back to conserve your dwindling fuel supply and set a course for home. From time to time, clouds blot out your view of the horizon and you are dependant on your instruments. With the airfield in sight you lower your flaps and gear and side slip gently to line up with the runway. Although you have survived another mission, you cannot afford to relax yet, and the quality of your landing can win or lose you points.

If all this sounds too much in one go, you can opt to concentrate on just one phase of the game – interception, combat, approaches and landings – or just enjoy some stomach-churning aerobatics! *BATTLE OF BRITAIN – the one you have been waiting for.*

"CHRISTMAS STOCKING" OFFER

BLOCKADE – £6.95

Realistic submarine warfare game. Use your torpedoes to prevent the enemy ships reaching port with their valuable cargo. Have you the skill and judgement to sink them all and maintain the Blockade?

SUBHUNT – £5.95

Aboard a destroyer in the Atlantic, protecting our convoys from the U-boats. Seek the enemy with your ASDIC, then destroy him with your depth charges – before he gets you!

If you do not have these games, we offer you a seasonal bargain:

Only £8.95 + 35p P&P for both games!

★ 24 hour despatch – order now for Christmas delivery
★ Full guarantee ★ Retail/Distributor enquiries welcome

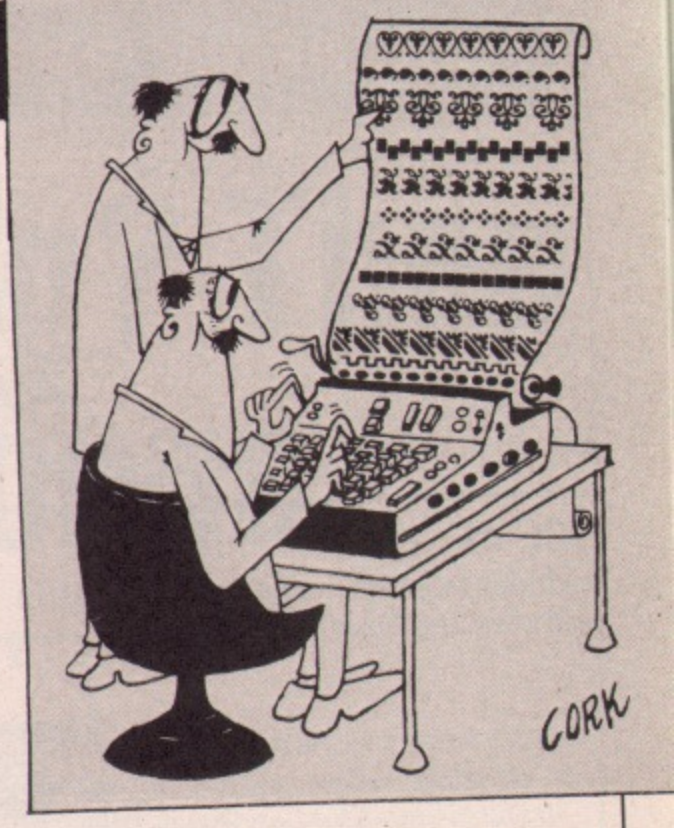
Text printing too fast? Graham Walkden offers a program that lets you . . .

Take a brake



ONE of the few endearing features of the Apple II is its ability to change the speed of printed text. This can be a great help when using the trace facility, and is useful for slowing down the speed of printed text for instructions for a game and so on.

Speeded Text is an assembly language/Basic program for the BBC Micro which will do just that. To run it, type PAGE=PAGE+256 – to accommodate the machine-code – then type it in.

To operate the program type PROCSPEED(speed) where speed is the delay between characters printed (0 minimum, 255 maximum). Alternatively just type RUN and the program will demonstrate itself.

If you use this routine in one of your programs, ensure that one of the first lines is this:

```
CLS: O%=0: PROCSPEED(O): CLS
```

This line initialises the system.

The program utilises what are called vectors, memory locations which contain pointers to another location. By addressing the vector the memory location can be ascertained and appropriate action taken.

This may not sound terribly useful, but most of the operating system routines are vectored in this way. This means that if one changes the value of the vector one can point the operating system to a totally different routine.

In this case we have re-vectored the operating system print routine, OSWRCH (Operating System Write Character). This is indirected – vectored – through the vector WRCHV (Write Character Vector) which resides at &20E.

How does the routine work out its new location? Well, the first command in the OSWRCH routine, which is at &FFEE, is:

JMP (WRCHV)

This tells the operating system to jump to the location pointed to by the WRCHV vector, the normal jump value being &E0A4.

It can be verified by reading the vector at &20E, which is done by typing:

```
PRINT ~ ( ?&20F * 256 + ?&20E)
```

This will give the result E0A4. The Speed Print routine is positioned at PAGE-256, so we have to alter the vector for the program to work.

We do this by typing:

```
?&20E= Address MOD 256: ?&20F= Address
DIV 256
```

(Standard low-byte – high byte notation)

After this has been typed the OSWRCH routine will be directed to Address. The last statement in the machine code program should be:

JMP Return

Return in this case is &E0A4, the old value for WRCHV. The return value for any routine is always the original value of the vector.

If the program does anything with the registers you must save them at the beginning of the program and restore them near the end. Failure to do this will result in a systems crash.

Lines 10 to 60 are used for the demonstration.

Lines 10010 & 10020 ensure that the parameters provided are in range. If they are not, they are changed to the nearest extreme.

Line 10030 temporarily restores WRCHV to its old value and informs the computer where to put the machine code, so that the program automatically relocates according to your value of PAGE.

Line 10040 turns off error messages in assembler and printing of the mnemonics to the screen, so it doesn't mess up your display.

Line 10050 restores all registers by placing them on the stack.

Lines 10060 to 10090 cause a delay corresponding to del, the delay variable provided by the user.

Line 10110 restores all the registers and returns control to OSWRCH.

Line 10130 inserts the new value of the address into WRCHV.

This program is just an example of what can be done by re-directing resident routines. It is almost possible to re-write the entire operating system, but any prolific use of this technique will prey upon valuable RAM.

Remember that the OSWRCH routine handles all the VDU drivers, so don't do anything to affect them.

Searching? Then string alonga

By BARRY HARRIDGE

HERE'S a very handy utility for program development, facilitating as it does a search through a program to find any string. For instance by searching for DEF you can get a list of all the defined functions and procedures. By searching for A= you can find all the spots in the program where A's value changes.

The program has been made to fit onto function key f0, with a little bit of room left for other key definitions of your own. I use an *EXEC file which defines f0 this way, but an easier way is to save all keys using *SAVE FINDKEY B00 C00, then when you want to use it, do *LOAD FINDKEY.

The difficulty in writing any such program is that Basic keywords are stored as coded tokens. For instance the word ENVELOPE is coded as the single byte &E9.

The sneaky way around this is to put the string sought for right into the program and the BBC Basic tokeniser changes it to the required form for the search.

The "funny tricks", the abbreviations and the lack of spaces used in this program in order to fit it on a function key make it rather obscure, but it's worth it to have such a powerful aid to program debugging and development.

Type in or load any program to use as a test case. Carefully type in the key definition given below, as a last line in your program:

```
32000 *KEY0|MM0.7:u=@%:@%=4:i=PA.+4:s
$=$(i+1):REP.:REP.:i=i+i?-1:i=i+(i-4-
PA.)*(i>TOP):U.INS.$i,s$):V.133:P.,25
6*i?-3+i?-2;:j=i:REP.A%=?j:CA.&B53A:j
=j+1:U.A%=13:V.10:U.i=PAGE+4:@%=u|M0|
M|K |M
```

Note that the whole lot must go in as one program line. Then GOTO 32000 will program key f0. Make sure your program does not use line 0 for anything important. It will be lost at the next step.

Type 0/ and flush up against the / put the string you want to find. Then press key f0. For example *0/A=*(press f0). This puts a rather strange line 0 at the start of your program.

Press function key 0. All the lines containing that string will be listed. The bogus line zero is then automatically deleted. At the end of the selective listing will be just 0/string – as a reminder to you of what you were looking for.

Line numbers mentioned with GOTOs, GOSUBs, etc., are not shown properly, since the Basic ROM codes them in a peculiar way.

The CALL to address &B53A within the Basic ROM uses a routine which prints CHR$(A) if A represents ordinary text (A is less than 128), but expands A as a keyword if A represents a token (A is 128 or more). If you have Basic II you should instead use "CALL &B50E".

You can use anything else instead of /. If you use, for example, 0"END or 0REMEND instead of 0/END you will find that END appears as a word within quotes or REMs rather than as a keyword since it isn't tokenised in line 0.

If you anticipate searching for the same string, say DEF, several times during program development try using 1ELSEstringsought(press f0). Using line 1 instead of line 0 means that the line won't be deleted. For subsequent searches you need only press f0.

Using the keyword ELSE instead of / ensures that it won't affect the running of the program – the ELSE means that all the rest of the line will be ignored.

```
 M                          Return. Enters line 0
 MO.7                       MODE 7
 :u=@%                      Save user's field parameters.
 :@%=4                      Set field width=4.
 :i=PA.+4                   Start of test of first line.
 :s$=$(i+1)                 String sought (skip first character).
 :REP.                      Repeat through whole program.
 :REP.                      Keep looking for search string.
 :i=i+i?-1                  Move to next line.
 :i=i+(i-4-PA.)*(i>TOP)     sneakily saying "IF TOP THEN i=PAGE+4"
 :U.INS.$i,s$)              search string must be part of the line.
 :V.133                     Magenta text.
 :P.,256*i?-3+i?-2;         Print line number.
 :j=i                       Start of line.
 :REP.A%=?j                 Keep reading characters.
 :CA.&B53A                  and writing them as characters or keywords.
 :j=j+1                     and stepping along line.
 :U.A%=13                   Until return marks end of line
 :V.10                      Do linefeed.
 :U.i=PAGE+4                until doubled back to start.
 :@%=u                      Restore user's field parameters.
 !M                         Enter the whole line of commands.
 0|M                        Delete line 0 of the program.
 !K[SPACE]                  Up, space deletes the 0 just written.
 !M                         New line.
```

CLARES No1 IN UTILITY SOFTWARE!

ENHANCED

BETA-BASE £25 DISC
8 GREAT FEATURES

WHAT IS A DATABASE?

It is a FILE which contains RECORDS. Records consist of a number of FIELDS containing the information—an analogy can be drawn with a card index in which a box of cards is the file. Each card is a record and each line on the card is a field.

SPECIFICATION

1) Random Access—disc based, single or dual drives
2) File Size—99K (40 track), 199K (80 track)
—65,000 + records
3) Record Size—up to 2048 characters and 200 fields
4) Field Size—up to 254 characters with complete line scanning
5) Access any record using Primary Key in 2 seconds
6) Holds—1200 NAMES AND ADDRESS records on 100K disk
7) Search—500 records on 5 fields in 60 seconds
8) Sort—500 records on 3 fields in 60 seconds

SYSTEM FEATURES

- CALCULATE—using any valid expression and store results
- POWERFUL PRINTOUT OPTION—Eliminates need for separate mailing program, Parallel/Serial Printout allows setting of printer control codes, line spacing, tabulation, Headings etc, plus label printing with horizontal and vertical tab control.
- REDEFINE—Titles, field widths, number of fields, number of records etc.
- TRANSFER—Records from one file to another.
- SEARCH LISTS—Allow creation of sub-Databases within main Database.

NEW *

* GLOBALENTRY enables repetitive data to be typed in once and placed in as many records as required. Can also be used with a search list to provide a powerful global edit/update facility that will save hours of typing.
* SPOOLER enables you to create spooled files that are compatible with Wordwise, View and other word processors. You can therefore present your data within a document or in varying formats etc. The spooler program will allow to format your spooled file in the same way as the print out option. You can therefore have headings, columns, titles, numbers etc.
* INPUT is a routine included on the disc which will allow you to write utilities for accessing your data and tailored specifically to your needs.
* TUBE compatible with the 6502 second processor.
* Comprehensive manual and tutorial.
All timings and sizes are relative to ACORN DFS. Compatible with ACORN DFS. WATFORD 1.3 and latest AMCOM DFS SERIES B.
* ORIGINAL USERS send your disc plus £3 for up grade.

REPLICA II: £12.00. DISC

The original REPLICA set a very high standard so the specification we set our chief programmer included some impossible features. In fact ACORN state that some of the things that we have done are impossible, it just took us longer that's all. REPLICA II transfers most cassette based programs to disk, even more than REPLICA. When you buy disk drives you do not have to throw away expensive cassette based programs.

REPLICA II transfers 'LOCKED' programs, programs loading as files, programs that load below &E00, those with up to 6 sections and those up to &6E in length eg adventure programs. No waiting for 6 minutes whilst adventure programs load.

REPLICA II is very easy to use. The user enters a name, how many sections and whether CHAIN, *RUN or *LOAD to load the first section. Press play and let the program do the rest, even a menu.
Think how much it will cost you to buy just 1 disk version of your favourite program—REPLICA II which will hold up to 16 programs, limited only by the disk capacity.

FX 80 PRINTER DRIVER £12.00

PRINTER DRIVER FOR EPSON FX80 AND VIEW
Multi-page driver with print menu allowing the setting of global (document wide) printer functions at printer initialisation.
The print menu program contains a sophisticated character generator which allows the construction of 95 user defined characters which are then accessible from VIEW via a highlight option.
Supplied on disc with comprehensive user manual.

NEW

DISCDEX: £15.00 DISC

- Catalogues all your discs quickly and easily.
- Room to store four thousand titles.
- Quick search and load option.
- Compatible with single or dual drives.
- Extensive print options for catalogue and disc labels.
- Update and delete options.
- Supplied with stick on labels to number your discs and a supply of labels for printing your own disc labels.

DISCDEX is the answer to a disc users nightmare. How many times have you had to wade through your discs looking for the file that you know is there somewhere? Now with DISCDEX those days are gone.
DISCDEX will catalogue all your discs and store them in alphabetic order. In addition to the very useful search and load facility DISCDEX will also print out a full catalogue in alphabetic or disc order. Even more useful is the ability to print disc labels for sticking on the disc or the jacket.
DISCDEX is only suitable for discs with 31 file names as in the standard ACORN system. It is not suitable for double density interfaces.

NEW

ONESHOT: £12.00 DISC

- Full feature trace utility.
- Single step through BASIC program or halt at user determined interval.
- Print line number prior to execution.
- Obey fixed instructions before executing a line.
- Trace window allows screen to be seen whilst tracing execution.
- "Printer only" will force trace output to a printer allowing full screen display.
- Ability to dynamically alter control of ONESHOT.
- ONESHOT can be configured to run in any area of memory.

ONESHOT is a 1.25kb machine code program which gives the user several powerful aids in debugging BASIC programs. These include the ability to SINGLE STEP through the BASIC code of the target program, stopping the processing at specified points and comprehensive trace functions of the variables used by the target program.
A very powerful option allows the user to enter a command string into function key 0 and instruct ONESHOT to obey this command BEFORE each line is executed e.g. *KEY0 PRINT X%¦M will print the value of X% before executing each line. This is a very simple example and it is possible to do much more complex things including printing the value of a variable only when it changes or when it reaches a certain value or falls within a certain range. This option can also be used to dynamically alter ONESHOT as it is working. The power of this option is only limited by the users ingenuity.
In addition to ONESHOT the disc also contains 3 very useful function key routines. The first will search for any DEFPROC or DEFFN and print the line numbers in which they appear together with the name of the procedure or function. The second will search for a specific procedure or function and print the line numbers containing it. The third routine will print out every active variable together with its present value.
ONESHOT is not compatible with double density interfaces.

NEW

FUN HOUSE: £10.00 DISC

FUN HOUSE is a highly original suite of educational programs suitable for ages 3 to 13. The program is designed to encourage children to spell words which relate to objects found around the home. Animation and music are used to good effect and some highly original ideas are incorporated.
Each room exercise is terminated with a warning item e.g. the lounge finishes with 'FIRE' which goes on to engulf the whole lounge. Tests with a newly hired 4 year old resulted in us having to prise him away from the keyboard after 2 hours. In that time he had gone from never having used a keyboard to finding the location of all the keys very quickly and entering the correct answer. He had thus started on the path to learning spelling and familiarised himself with the keyboard including the use of DELETE to correct his mistakes. Can you afford not to give your children the same start?

FUN HOUSE is not compatible with double density interfaces.

BROM—
ANOTHER FIRST FROM CLARES!

The first Toolkit ROM to give you full screen editing with insert and overwrite. Works just like WORDWISE but on a Basic Program instead of text.

You can enter *Err On which will trap errors within the program and drop you into the screen editor at the statement which caused your problems.

22 Extra Functions Available including
*ROM OFF allows you to disable sideways ROMS and have them stay off even on CTRL/BREAK even the DFS. A real must for users of Second Processors
*FIND and *CHANGE strings or BASIC keywords–selectively or globally
*COMPARE provides a true verify of programs saved to tape or disc

YOU CANNOT SURVIVE WITHOUT BROM

UTILITY SOFTWARE

From Page 107

accommodate different thicknesses of books.

A generous 4½ft of cable plugs into the analogue input port of the micro. The construction looks like it can stand up to some abuse.

In use software converts the angles on each arm into a pair of X, Y coordinates that can be used for inputting data. Before this can happen the DigiGraph has to be calibrated by placing the target point over each of the three small holes as directed by the calibration program.

The accompanying software performs a comprehensive set of drawing, plotting and filling routines. The operation required is selected by pressing a single key.

There are so many different modes of operation that you will need the command summary sheet with you until you have acquired a great deal of experience operating the unit.

There are a series of exercises which gradually introduce you to the functions and possibilities of the unit. These were quite easy to follow and I had no difficulty coping with them.

They were contained in the 32 page "Introductory Instructions" booklet, and used a series of separate work sheets to trace around.

I did have difficulty following the "Examples for a first time user" in the main (18 page) booklet. Not that they were difficult but they told me to stick the map onto the board and follow the instructions. Unfortunately the instructions were on the other side of the sheet to the map.

The software allows you to specify the area of the tablet which is mapped to the screen, thus allowing you to enlarge or reduce drawings to some extent.

The DigiGraph uses Mode 1 or Mode 2 graphics and the results shown in the book look impressive.

A digitiser of this type is most use when inputting freehand data such as maps and contour lines as well as drawings.

This is due to the trapezoidal distortion which is produced due to non-linearities in the potentiometers. This means that if you trace around a square you will actually get a trapezium.

In the worst case – where the maximum size area is being used – the DigiGraph has a distortion factor of 0.9, which means that the top of a square comes out as 16.5cm and the bottom as 18cm.

This is obviously unacceptable when producing engineering type drawings, so to get round this there are modes that will just draw horizontal or vertical lines. In this case you just use the DigiGraph to manoeuvre a point on the screen as it will no longer trace the arm movement.

Of its type the DigiGraph is well constructed and its comprehensive software includes most of what you need to produce impressive drawings.

Mike Cook

Phloopy, half way house twixt disc and tape

Phloopy
Phi Mag Systems

THE name Phloopy sounds as if it might have been derived from "fast loop". And it is, in fact, based on a continuous loop of tape in a cartridge.

With eight data tracks this effectively gives a longer tape with a shorter time to complete each cycle of the tape. Each cartridge can hold about 100k of information, about the same as one side of a 40 track floppy disc.

The drive is housed in a black 6in × 8¼in × 2½in box. On its front surface is a cartridge slot, a green light to indicate power on and a red light to indicate unit active.

Connections to the BBC Micro are by a cable to the auxiliary power socket and ribbon cable to the disc drive socket.

The interface consists of a printed

circuit board ($1\frac{1}{4}$in × $2\frac{3}{4}$in), which plugs into the socket normally occupied by the floppy disc controller if a DFS was fitted. Two sets of links are plugged into two other sockets on the board.

To complete fitting, the leads of two resistors are cut – not a happy experience just for a review.

Software for the filing system, as you'd expect, is on an eprom which occupies one of the paged ROM sockets. Phloopy reserves 2k of memory for its own use so that PAGE is set to &1600.

When a cartridge is inserted into the slot the drive motor comes on for about 12 to 15 seconds. During this time the drive will not accept any commands. Though if, for instance, *CAT is typed when the motor has stopped, it responds quickly with a catalogue.

One useful piece of information displayed here which is sadly lacking on the Acorn DFS is the number of bytes still free on the media.

Each time a single command is entered the response is quick, but the unit takes some time to settle down before being ready for the next command. So when entering a series of commands there is an annoying wait.

Although the commands have been made to appear much as they would in the DFS there are not so many of them. Nor are they so flexible.

For example, if you want number of files with *INFO, with the DFS you'd enter *INFO * while with Phloopy the command would have to entered with an individual file name rather than a wildcard name. Also OSGBPB is not implemented. There is an auto boot facility when the Shift and Break keys are pressed, but it will only *RUN a program. Surely there should also have been options to CHAIN or *EXEC programs as well.

Most of the command names explain what they do. For example *TRANSFER eases problems with transferring files between tape and Phloopy. *LOCK and *UNLOCK refer to locking a file to prevent accidental overwriting or deletion – more logical than the DFS's *ACCESS command.

Loading and saving are quick and easy. It only takes about five seconds for a 16k program to load which is not much slower than disc.

However it would be a mistake to compare the Phloopy and the DFS too closely when it comes to reading and writing data files. It's still faster than the tape system but is only about a tenth the speed of the Acorn 0.90 DFS.

```
BBC Computer 32K

BASIC

>*HELP PHLOOPY
PHLOOPY

 *PHLOOPY
 *TITLE <name>
 *DRIVE <drv>
 *LOCK <fsp>
 *UNLOCK <fsp>
 *RENAME <old fsp> <new fsp>
 *DELETE <fsp>
 *VERIFY <drv>

OS 1.20
>*LOAD

Drive ?
>
```

That said, the Phloopy is able to run relative (random) access files. The manual was rather vague on how to use them – a pity as the BBC User Guide to which you are referred is not too informative on this area either.

PTR# would not point beyond the current end of file end, to extend it, as is possible with the DFS. The best way to create a relative file was to *SAVE a section of memory of the required length first as a dummy file, before opening the file to enter data.

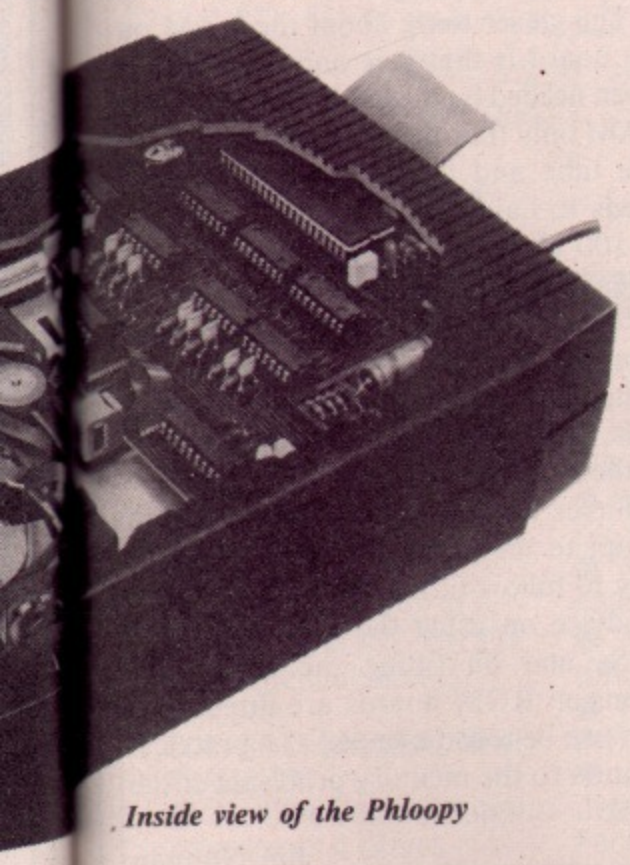
Documentation is supplied in the form of a 60 page manual. Installation of the interface is clearly covered, along with commands that operate the filing system.

As I've mentioned before, when buying any non-standard filing system you have to be sure that the software you want is either available on this new media or can easily be transferred. The last option is often not easy due to the growing sophistication of software protection.

The Phloopy is very much an in between system. Although it's much faster and more organised than the tape filing system, it is still not as fast and flexible as disc, especially with data filing.

Since the whole system only costs a little more than a disc interface it should prove attractive to those who are fed up with the cassette filing system and can't afford to move to discs.

Jim Notman



Inside view of the Phloopy

A lot to say, but what a way to say it...

D.E. Talker
D.E. Systems

IF you wish to add a voice to your BBC Micro, D.E. Talker is yet another alternative to the official Acorn speech processor upgrade.

D.E. Talker consists of a small (63 × 85mm) carrier board containing a speech chip, vocabulary ROM, and 10 other ancillary components.

The carrier board plugs into a sideways ROM socket – it will only fit into the third or fourth from the right – and a flylead is attached by a spring clip to a resistor (R11) towards the front left of the micro's printed circuit board.

Installation was simple and the device worked perfectly first time.

Incidentally, the system could also be fitted to a sideways ROM expansion board but not to a ZIF socket as the lever gets in the way. Instructions for fitting and use were quite good and plenty of examples were given.

On switching on the micro with the device fitted, "BBC computer" is announced. Over 350 words and word parts are stored on ROM and may be combined to build a relatively unlimited speech vocabulary.

The single speech command *S"any words" may be used directly or in Basic

→

From Page 109

programs. Some examples are shown in Figure I.

Much of the control and understanding of speech requires various periods of delay between words and part words. Delays from 10 msec to 200 msec may be programmed directly using spaces, commas, semi colons and so on.

Longer periods may be determined using combinations of pause commands. For example:

***S"FIVE+P100+SIX"**

produces a one second delay between the words *five* and *six*.

In comparison to the Acorn speech chip the data available on D.E. Talker is extensive and versatile. Available are word endings (-ing, -ous, -tion and so on), word beginnings (pr, br, st, sh, and so on), double vowels, hard vowels, soft vowels and stressed or alphabetic letter sounds.

Ease of programming is further enhanced as string variables can be included within the speech command. For example:

***S"H E L+L o/(name$)/H+OW +ARE+YOU".**

Having sung D.E. Talker's praises with respect to its versatility I must now turn to its sound. In comparison to the Acorn speech processor, speech from D.E. Talker is awful. The sound is very synthetic and machine-like and was often difficult to understand without repeated hearings – it makes K9 and the Daleks sound positively eloquent!

At around £40 I would certainly expect better vocal quality before parting with my money.

However, there are some better things to come. All the previous comments refer to the standard system with a version 1.00 ROM. Available as an optional extra – about £12 – is a version 2.00 upgrade ROM.

This has various talking typewriter commands which announce the characters of the keys as they are pressed.

The various extra commands – six in all – allow selection between alphabetic sounds or letter sounds with either the upper or lower case keys selected. A *SOFF command is also included to switch off this speech ROM.

Version 2.00 would seem to have good potential applications for visually handicapped people as well as an aid to those learning touch typing.

A very useful feature on the upgrade is the verbalisation of control functions. For example, pressing Ctrl B says "Print On", or SHIFT FUNCTIONn would announce the control colour.

Overall, a very well thought out and versatile utility – it is just a pity about the poor speech quality. However the only convincing test of any device of this kind is to hear it for yourself and then decide whether the sound is acceptable to your ears.

Mike Mahon

Help that poor old DFS memory along

E00 DFS
MRM Software

ONE of the annoying features of the standard Acorn DFS is that it reserves 2¾k of precious RAM for its own use. This is noticeable especially to those who have moved up to disc use after tape.

Although it doesn't sound much this loss of memory poses three main problems:

☐ It reduces the available memory in Mode 0, 1 and 2 by about a third.

☐ There may not be enough room for very long programs to run – adventure games are a problem here.

☐ Machine code programs may have to be located at a specific location which now belongs to the DFS.

It is possible to load then move the programs down in memory, but this is not practical if the DFS still needs to be active.

One solution to the problem is to buy a 6502 second processor, but that costs about £200 and there's a lot of software which won't run on it.

The easiest and cheapest solution is to get the E00 DFS. Like most good ideas it is simple.

It comes as a small piece of printed circuit board (about 2in × 2in) with the software on eprom, some RAM and two other components. This plugs into a paged ROM socket replacing any other DFS. There is no soldering.

To complete fitting, a miniature probe is clipped onto one of the legs of IC 77. *I can see these little probes coming into more widespread use with add ons to the BBC.*

Although the *HELP command announces the DFS as the MRM DFS 1.20, it can be considered to be the same as the Acorn 0.90 DFS with exactly the same commands and actions. Benchmarks showed there was no real difference in timings.

The clever thing about the RAM on the board is that it is only switched in when needed by the DFS. Due to limited RAM only four files can be open at any one time and the *BUILD command needs to have its line lengths restricted to 100 characters.

The only other problem you may encounter is with the programs that want to look directly at disc memory, rather than use proper operating system calls, as the disc memory is now private to the DFS.

Three sheets of documentation complete the package. Apart from the easy to follow fitting instructions, there is advice on using the E00 with other DFSs and on fitting the E00 when extension ROM boards are fitted.

It can be recommended as a practical solution to the memory problems of the DFS.

From Page 109

programs. Some examples are shown in Figure I.

Much of the control and understanding of speech requires various periods of delay between words and part words. Delays from 10 msec to 200 msec may be programmed directly using spaces, commas, semi colons and so on.

Longer periods may be determined using combinations of pause commands. For example:

***S"FIVE+P100+SIX"**

produces a one second delay between the words *five* and *six*.

In comparison to the Acorn speech chip the data available on D.E. Talker is extensive and versatile. Available are word endings (-ing, -ous, -tion and so on), word beginnings (pr, br, st, sh, and so on), double vowels, hard vowels, soft vowels and stressed or alphabetic letter sounds.

Ease of programming is further enhanced as string variables can be included within the speech command. For example:

***S"H E L+L o/(name$)/H+OW +ARE+YOU".**

Having sung D.E. Talker's praises with respect to its versatility I must now turn to its sound. In comparison to the Acorn speech processor, speech from D.E. Talker is awful. The sound is very synthetic and machine-like and was often difficult to understand without repeated hearings – it makes K9 and the Daleks sound positively eloquent!

At around £40 I would certainly expect better vocal quality before parting with my money.

However, there are some better things to come. All the previous comments refer to the standard system with a version 1.00 ROM. Available as an optional extra – about £12 – is a version 2.00 upgrade ROM.

This has various talking typewriter commands which announce the characters of the keys as they are pressed.

The various extra commands – six in all – allow selection between alphabetic sounds or letter sounds with either the upper or lower case keys selected. A *SOFF command is also included to switch off this speech ROM.

Version 2.00 would seem to have good potential applications for visually handicapped people as well as an aid to those learning touch typing.

A very useful feature on the upgrade is the verbalisation of control functions. For example, pressing Ctrl B says "Print On", or SHIFT FUNCTIONn would announce the control colour.

Overall, a very well thought out and versatile utility – it is just a pity about the poor speech quality. However the only convincing test of any device of this kind is to hear it for yourself and then decide whether the sound is acceptable to your ears.

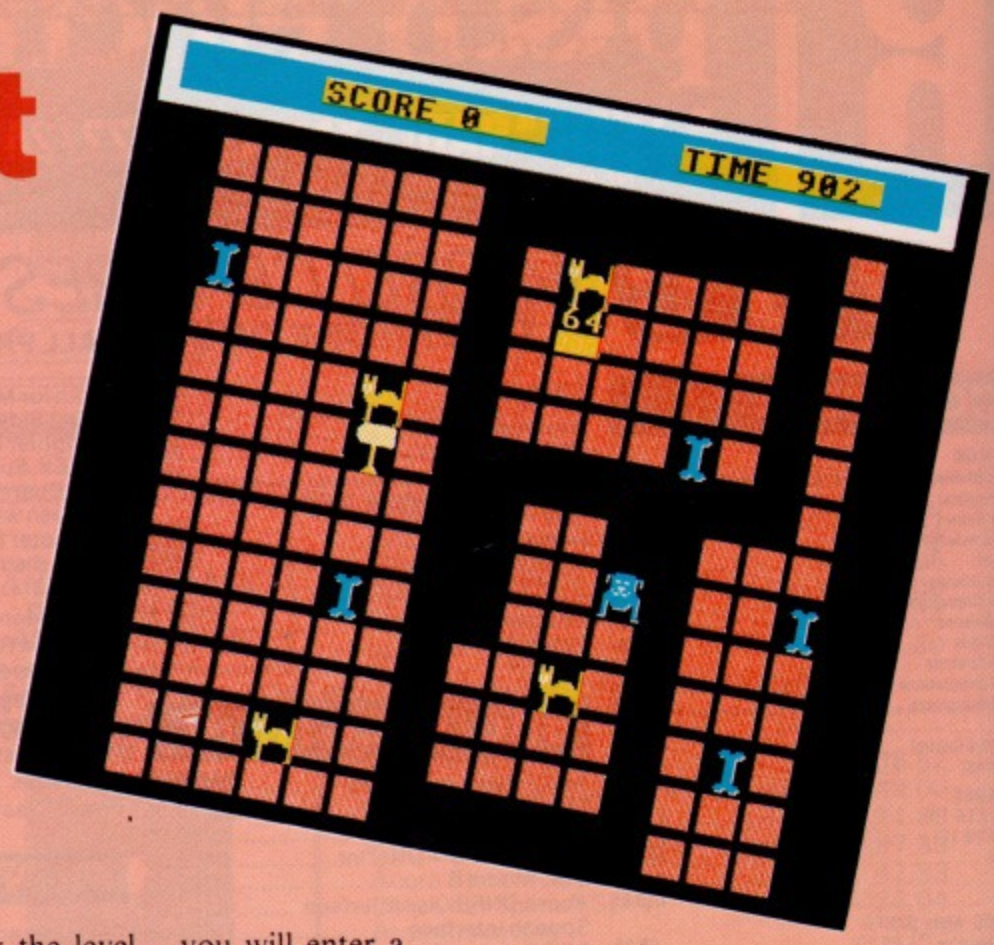
There ain't no flies on Rover!



. . . and it's your job to keep them away from his food, too, in this woof and tumble game from GRAHAM WALKDEN

IF you're the type of person who can think on your feet, Rover is the game for you. Its flat-out action calls for split second decisions – but they'd better be the right ones or you'll be in trouble later!

The object of the game is to move your dog around the screen to reach his food before the flies devour it all.

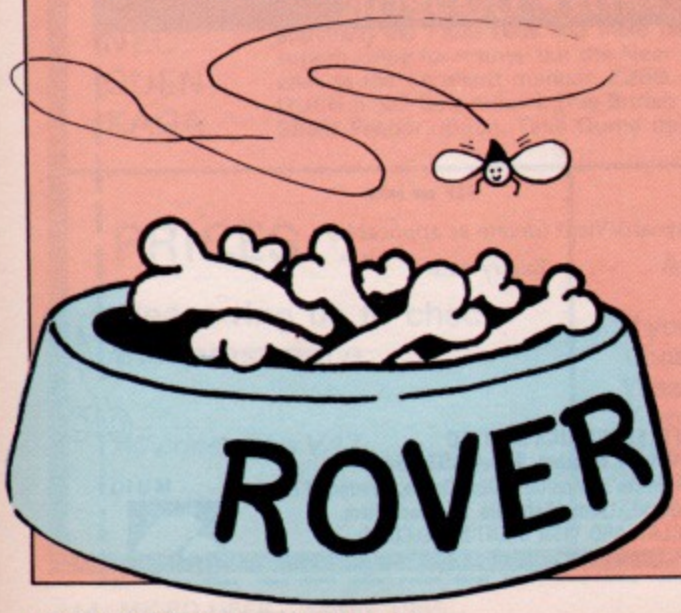
In order to eat the food, Rover must land on it. When he does, he will be given another bowlful at a different position on the screen, and your score will be increased by the time remaining.

In his journey to the food he will encounter bones and cats. If you position him over a bone, you will be given extra points. But if you make him hit a cat it will attack him and you will lose valuable time.

In later levels there will be a white, rampant cat who will attack and kill you. This feline menace must be avoided.

From time to time Rover will be obliged to answer the call of nature. The status of this particular function may be ascertained by reading the TIME indicator in the top right-hand corner of the screen.

When Rover clears so many bowls – defined by the level – you will enter a bonus mode in which Rover will move across and then down the screen. Below him will be a line of trees and one food bowl.



If you stop Rover when he is above a food bowl, he will fall on it and you will be rewarded with a bonus, the size of which decreases as Rover gets lower. If you miss the food bowl, however, Rover will hit a tree and no bonus will be given.

When the bonus stage has been completed you will be given a fresh screen, but the number of obstacles will increase and the time to reach the food will decrease. The number of food bowls per screen will also increase.

If you survive long enough to reach the third screen, you will be confronted with a cat which will move in a random manner, leaving spaces where blocks were, but leaving other objects such as bones, cats and food bowls intact.

The cat moves pretty slowly, but will increase in speed later on.

When you land on one of the red blocks you will over-print it, leaving a space behind you. You cannot return to this space so you have to work out your route carefully before moving.

During any stage of the game the food bowl may land in an inaccessible position, such as surrounded by spaces. You can get around this by using the scroll facility.

This allows the column Rover is standing on to scroll either up or down, depending on which key is pressed. The scrolling will wrap around, which means that an object disappearing off the top or bottom will re-appear at the bottom or top respectively.

The scrolling can be used to advantage in other situations, such as to move up the screen without leaving the non accessible squares behind you.

The program automatically sets you to lower case.

z	Move Rover to the left.
x	Move Rover to the right.
k	Move Rover up.
m	Move Rover down.
K	(Shift + k) Scroll up.
M	(Shift + m) Scroll down.
q	Sound off.
w	Sound on.

The keys have been chosen so that they are easily accessed and are in a comfortable position.

The reason that the keyboard must be in lower case mode is because the scroll is activated by pressing Shift and the appropriate key, thus producing upper case so a different character.

Due to memory restrictions on the BBC Micro, this program will only work when PAGE is set to &E00. This will not cause any difficulties for cassette users, but those with discs will have problems.

The following is for them only – cassette users ignore it.

Type in the program as normal, check it then save it to disc. (Do not run it.) Once done, switch off your machine, plug in your tape recorder then switch back on and load the program. Run it, and the program will automatically re-locate itself to PAGE &E00.

*Debug the program and when it is working correctly save it to tape. *CAT to check that it has been saved, then hit*

*Break, type *TAPE and load the program. Type *DISC, save the program to disc and run it. The program should load, relocate and work perfectly.*

Those with cassettes should type in the listing as normal. You don't need a downloader routine so you can miss out lines 40, 50, 60.

Disc users must not press Break while de-bugging the program. If you do, you may encounter the dreaded "Bad program" error, or at best half your program will be deleted, and the remainder filled with garbage that you didn't put there, such as OSCLI statements in peculiar positions.

I have set up the ONERROR function to stop, beep and restore the text cursor and white lettering so any errors will halt the program. Make sure that you test the ONERROR facility by inserting a deliberate mistake at line 15 when you have finished typing in the ONERROR line.

This will check to see if the line contains any errors itself. If there are and you run the program, the ONERROR line will form an endless loop which can only be terminated by pressing Break.

This happened to me while developing the program and it ruined all my work, so beware.

With the program now saved, verify it by using *CAT to check that the signal is recognised by the micro. All being well, you can now play.

If you get the dreaded "No room at line x" error message , it means that the program is too long. This is probably because you have typed in too many

→

Hints 'n' Tips

☐ *Instead of using the up and down keys, use the scroll ones. This will reduce the number of blank squares printed after you move.*

☐ *Only go for the bones if they are between you and the food. This again will reduce the number of blank squares printed.*

☐ *Don't hold the keys down, but for each movement press it again. This makes controlling the dog much easier.*

☐ *In the bonus stage, aim for the space before the food bowl. Unless your reactions are instantaneous, you should hit the bowl.*

PROCEDURES

init	Prints out the title page and displays scores.
vars	Initialises all variables.
scrn	Sets up the screen.
food	Works out the food coordinates and prints them.
tree	Same as food but with the tree.
scrollup	Scrolls the screen up.
scrolldown	Scrolls it down.
cat	Prints the roving cat.
bonus	Bonus game where dog is directed onto food bowl.
fight	Fight procedure where yellow cats attack the dog.
update	Updates the food counter and prints it.
print	Prints out the characters pointed to by *v*. This is used in the scrolling and cat routines.
telex	Prints text in the middle of the screen to make output neater.

VARIABLES

sc%	Score.
hs%	High score.
a$	Last key pressed.
x%	x coordinate of dog.
y%	y coordinate.
sq(16,14)	Memory map variable.
a%	x component of dog movement vector.
u%	y component.
dog$	Dog.
tree$	Tree.
food$	Food.
cat$	Cat.
block$	Block.
mem%	Current code value.
sheet%	Level counter.
df	How many passes of main program required before cat routine is called. (cat mobility).
ct%	Counter. Used in conjunction with the above variable.
fly%	Amount of food left.
fd%	Number of bowls consumed on that screen.
fc%	Maximum time allowed for food collection.
scr%	Total number of food bowls collected.
tlt%	Time before tree routine required.
fin%	Number of obstacles on the screen.
fx%	x coordinate of food.
fy%	y coordinate.
tx%	x coordinate of tree.
ty%	y coordinate.
sk%	Update skip variable.
t%(13)	Temporary storage for screen codes.
px	x coordinate for printing.
py	y coordinate.
y	Either 1023 or 1024; used to ensure that the squares are printed in the correct position.
cx%	x coordinate of rampant cat.
cy%	y coordinate.
d$	String for telex procedure.
ac	x coordinate of bowl in bonus mode.
x	x coordinate for dog/telex printing. (LOCALed)
y	y coordinate.
i%, j%, h%, i, j & g	Used in FOR-NEXT loops.

From Page 117

spaces at the end of lines after Return has been pressed.

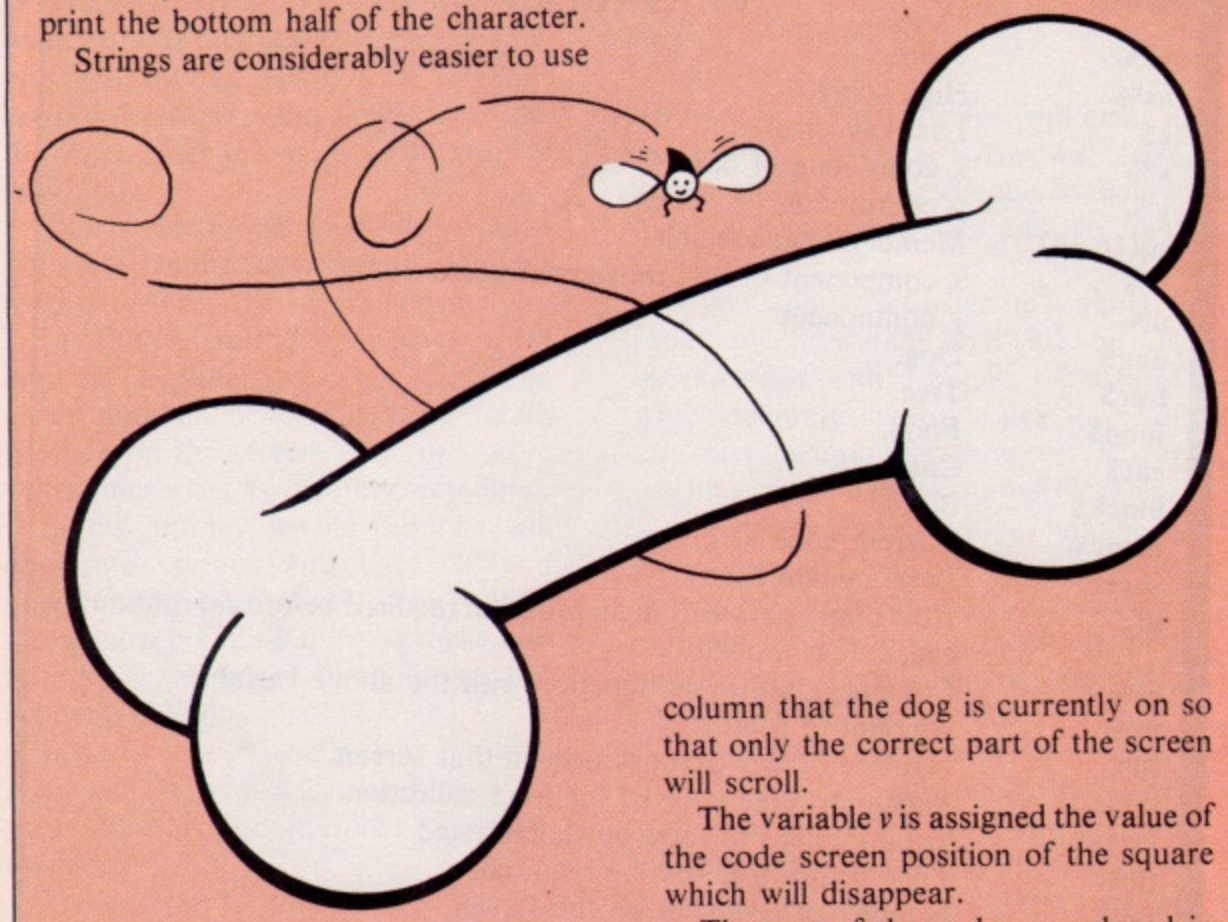
To correct this, change the character for a space to something else such as VDU23,32,255,255,0,0,255,255,0,0 – then change to Mode 6 and list the program.

Rover contains many procedures and techniques you may find useful in your own programs.

All the multi-character shapes printed on screen, such as the dog or the cat, are contained within strings, such as *dog$, cat$, food$* and so on.

The strings comprise of the actual graphics characters and the VDU control codes to move the cursor down and left (CHR$10 & CHR$8) so as to print the bottom half of the character.

Strings are considerably easier to use



than printing the characters individually, and save program space.

The multi-coloured characters such as the dog food are printed by combining the text and graphics cursors (CHR$5) and using the GCOL0 colour command.

The first shape is drawn, then the second is superimposed on top of it. In the case of the food bowl, both a positive and a negative have been defined, and the negative is printed on top of the white positive in red.

The way in which the program senses what is on the screen is by utilising a double dimensioned variable array. The numbers after the array *sq* are the x and y coordinates of the squares, thus *sq(2,2)* will refer to the square at position (2,2).

As the squares are all four characters in size, and are printed in the middle of the screen, a small formula is used to change the 40 × 25 text positions into the 15 × 13 grid positions.

The value of the grid under the dog at position (x,y) can be found by:

value = sq(x/2-2,y/2-1)

as the dog moves two characters at a time so as to always be on one square, x and y are always even numbers.

The variable *value* will be assigned the code number of whatever object is on the screen at that position. The codes for all the objects are: *0 = space, 1 = dog, 2 = bone, 3 = cat, 4 = dog, 5 = tree, 6 = food.*

The scrolling routine is short, but complicated. Before scrolling can occur, a window has defined around the column that the dog is currently on so that only the correct part of the screen will scroll.

The variable *v* is assigned the value of the code screen position of the square which will disappear.

The rest of the codes are placed in another array which is then fed back into the original array one division out from its original position. The code of the square which has wrapped around is then placed into the vacant array component.

The screen scrolling is simpler. It is scrolled up or down depending on which type has been selected. The missing square is then printed so that the line will not eventually disappear.

The cat positioning routine involves random movement. The direction in which the cat will move is determined by its position. If the cat is near the border of the grid, then the routine moves it away from the edge.

If the cat is in a safe position, it will be moved in a random direction. I did have the routine so that the cat was intelligent

and homed in on the dog, but this made the game far too difficult.

In order to make the cat transparent – that is, to restore the character that the cat landed on – the routine calls up the print procedure used by the scrolling routines.

Restoring each square made the game sluggish so I modified the routine so that these were left as spaces. This made the game slightly more difficult ... and more exciting.

The downloader routine at line 40 may be of use to disc users. This little routine will download a program from any PAGE setting to PAGE &E00.

This can be very useful for long programs which must be saved on disc, but will not work with the DFS workspace.

The *FX138,0,128 command will insert the function 0 definition into the input buffer as if one had just pressed it, and the END statement at line 60 allows this buffer to be cleared and the appropriate action taken.

SOFTEN YOUR HARDWARE

MORSE TRANSLATOR by G4MGD (BBC B)

A decoder/encoder: 6-22wpm. Program requires a CW interface specially designed by G3LIV or an RTTY interface or simple audio amplifier.
Translates morse signals received on a radio into plain language on the screen and allows text typed in plain language to sound and be transmitted in morse. Self test facility. RED keys may be programmed for standard passages. £8.50

Also MORSE INSTRUCTOR by G4MGD (BBC B)
Teaches morse from single characters to 36 word passages. No interface required. £5.95

MICRO ARTIST (BBC B)

The best BBC program we have yet seen for versatile video artwork or screen design. 8 basic colours, 20 fixed commands including reflect, enlarge, rotate, text, triangles, ellipses, fill, rubber bands, x & y coordinates, continuous or dotted lines etc. Plus 12 user defined brushes/characters instantly available for manipulation. The program requires a JOYSTICK which provides immediate on screen results using an unique expanding cursor to set size and position. Simple to use and capable of amazing results. Finished screens may be saved, loaded or printed. Straightforward instructions. Remarkable value at ONLY £7.50

EUROPE (BBC B)

A high resolution map of Europe for testing geographical knowledge of Capitals, Countries, Rivers, Seas, Populations, Currencies, EEC, EFTA & Warsaw Pact Countries. Plots and calculates distances in Kilometres and miles between any two points. £5.95

SLIDER (BBC B)

Synchronises a single slide film projector with a pre recorded tape commentary or music background. A slide projector with remote control is required. Up to 999 slides may be controlled. Max clock time 99 hours accurate to 1/10 second.
Timings may be saved and loaded.
Full instructions. £8.50

TO ORDER Please send cheque/PO payable to PAEAN Systems. Orders are normally despatched within 24 hours by first class post.
All prices are fully inclusive.

Under the influence of GCOL 3 and GCOL 4

LAST month we examined how GCOL3 and GCOL4 worked. GCOL3 Exclusive ORs (EOR) the foreground colour specified with that already on the screen. GCOL4 simply inverts the colour that is already there.

In different circumstances this will have different effects, but there is one property they have in common – when under the influence of either, if you perform the same DRAW or PLOT twice, the second time cancels out the first.

In practice we tend to use this property to erase lines in drawing programs – computer aided design (CAD), as the jargon has it.

We simply draw the line we want with, say, GCOL3,1 and if it's not what we desire we rub it out by drawing exactly the same line still with GCOL3,1.

```
10 REM PROGRAM I
20 MODE 4
30 GCOL0,1
40 MOVE 1000, 0 :MOVE 200, 0
50 PLOT 85, 1000, 1000
60 PLOT 85, 200, 1000
70 REPEAT
80 FOR height% = 1 TO 4
90 GCOL3,1
100 MOVE 0, 200 * height%
110 DRAW 1279, 200 * height%
120 NEXT height%
130 wait$=GET$
140 UNTIL 0
```

Program I illustrates the idea. It simply draws a large rectangle (lines 40 to 60) and then rules four lines across it, using GCOL3,1 – that is it EORs logical colour one onto the rectangle (lines 80 to 120).

Now these lines are in a REPEAT ... UNTIL loop (lines 70 to 140) but after initially drawing the lines the loop is prevented by the GET$ in line 130 from being repeated until a key is pressed.

When the lines are first drawn they are in logical colour number zero (1 EOR 1 = 0) where they cross the rectangle, so it appears to have been cut into pieces.

Having pressed a key though the lines are once more drawn across the rectangle. This time the segments that cross the rectangle are being EORed onto colour zero – the result of the last "drawing".

So now the parts of the lines across the rectangle appear in logical colour one, since 1 EOR 0 = 1. The effect of this is to give us a whole rectangle.

Next time round we are once more EORing logical colour one onto itself, and we regain our divided rectangle.

All this should be quite clear from the last article. And I think you'll be able to predict without too much difficulty the effect of changing line 90 to:

```
90 GCOL4,1
```

However bear in mind that GCOL3 and GCOL4 are not identical. To illustrate this, try Program II:

See if you can predict the outcome before you run it. It's virtually identical to Program I, save that we're in Mode 5 (line 20).

We take advantage of the change in mode by varying the colours of our line. The formula *height%–1* in line 90 ensures that the colours of the lines EORed onto the screen are logical colour numbers 0, 1, 2 then 3.

Can you visualise what happens? Suppose we change line 90 to:

```
90 GCOL4, (height% - 1)
```

Can you guess what would happen now? Try it and see.

The main point is that GCOL3 and GCOL4 are different in their effects.

If anything, GCOL3 gives you the more control, since you can "mix" the colour you specify with the colou already there. Whereas with GCOL you are simply inverting the colou already on the screen.

```
10 REM PROGRAM II
20 MODE 5
30 GCOL0,1
40 MOVE 1000, 0 :MOVE 200, 0
50 PLOT 85, 1000, 1000
60 PLOT 85, 200, 1000
70 REPEAT
80 FOR height% = 1 TO 4
90 GCOL3,(height%-1)
100 MOVE 0, 200 * height%
110 DRAW 1279, 200 * height%
120 NEXT height%
130 wait$=GET$
140 UNTIL 0
```

A good application of the ability t these two GCOL statements "self-erase" is when you have a point rotating around a dial. Look at Progra III.

If when you're entering it you initial end with line 80 and run the progra you'll see that the first few lines simp draw a circle.

Go through it carefully until you c see how it works. Briefly, it draws a sided polygon – which is close enou to a circle for our purposes. The meth

is fully explained in my October 1983 article on graphics.

Line 40 moves the graphics origin to the centre of the screen.

If you now type in the rest of the

```
  10 REM PROGRAM III
  20 MODE 4
  30 radius%=400
  40 VDU 29,640;512;
  50 MOVE radius%,0
  60 FOR angle = 0 TO 360 STEP 10
  70 DRAW radius% * COS(RAD(angle)) ,
radius% * SIN(RAD(angle))
  80 NEXT
  90 angle=0
 100 GCOL3,1
 110 REPEAT
 120 IF angle < 350 THEN angle =
angle+10 ELSE angle=0
 130 MOVE 0,0
 140 DRAW radius% * COS(RAD(angle)) ,
radius% * SIN(RAD(angle))
 150 FOR wait%=0 TO 400 :NEXT
 160 MOVE 0,0
 170 DRAW radius% * COS(RAD(angle)) ,
radius% * SIN(RAD(angle))
 180 UNTIL 0
```

program and run it you see that a pointer appears, rotating anti-clockwise like the hands of an indisciplined clock.

What we're doing is drawing a radius from the centre of the circle to the circumference (lines 130 to 140). We then wait for a while with a dummy loop (line 150), so we can see the line.

Next we redraw it from the centre to the circumference – but as we're under GCOL3 (line 100) this simply unplots our previous line.

Now this whole draw, undraw routine is in a REPEAT . . . UNTIL loop (lines 110 to 180).

However each time through the loop line 120 intervenes to increase *angle* – that is, how far round the "face" the arm is – by 10 degrees.

Once we've plotted for 350 degrees though, we restore *angle* to 0 degrees, since 0 degrees is the same as 360 degrees, where our next increment of 10 degrees would take us (still line 120).

After all, getting back to where we started is the whole point of going round in circles!

Again, try it with GCOL4 in place of GCOL3.

One of the nice things about this type of plotting is that we can use the techniques to pass over "background" objects and leave them totally unchanged. To see this, add the following line to Program III:

```
85 MOVE 50, -100: MOVE 50, 100: PLOT
85, 200, -100
```

These techniques are ideal for the scanners of your intergalactic battle cruiser, aren't they? As a challenge, why not tinker with the above to turn the program into a clock?

One of the most useful applications of these techniques is in "rubber banding". This is just a way of drawing lines on your screen that allows you to "slide and stretch" them back and forth until you get them to fit exactly where you want.

Program IV draws a line from the centre of the screen to a 'cross-shaped cursor defined in line 30. Now you can shift this cursor about the screen by using the cursor keys. The *FX4,1 of line 80 allows them to return Ascii values.

```
  10 REM PROGRAM IV
  20 MODE 0
  30 VDU 23, 224, 24, 24, 24, 255,
255, 24, 24, 24

  70 fix=FALSE
  80 *FX4,1
  90 VDU 5
 100 GCOL3,1
 110 REPEAT
 120 PROCinput
 130 UNTIL fix
 140 *FX4,0
 150 VDU4
 160 END
 170 REM ========================
 180 DEF PROCline
 190 MOVE oldx,oldy
 200 DRAW newx,newy
 210 ENDPROC
 220 REM ========================
 230 DEF PROCinput
 240 MOVE newx-8,newy+16:VDU 224
 250 key=GET
 260 MOVE newx-8,newy+16:VDU 224
 270 PROCline
 280 IF key=135 THEN fix=TRUE
 290 IF key=136 THEN IF newx>15 THEN
newx=newx-16
 300 IF key=137 THEN IF newx<1263
THEN newx=newx+16
 310 IF key=138 THEN IF newy>15 THEN
newy=newy-16
 320 IF key=139 THEN IF newy<1007
THEN newy=newy+16
 330 PROCline
 340 ENDPROC
```

The position of the cursor is determined by *newx* and *newy*.

As you can see, lines 290 to 320 of PROCinput vary their values depending on the key pressed (line 250). PROCinput is in a REPEAT . . . UNTIL loop so let's see what happens. Remembering we're using GCOL3 (line 100).

Line 240 draws the cursor. The –8 and +16 offsets are to ensure that the centre of the cross is at *newx, newy*. That is, *newx–8, newy+16* are the top left coordinates of the user-defined character printed by that line's VDU 244 (notice we're under VDU 5 – line 90).

Line 250 then waits for a key to be pressed. Once it has been pressed line 260 reprints the cross in the same position – but because of the GCOL3 it disappears, ready for us to move it in accordance with the cursor key that's been "got".

PROCline of 270 simply draws a line from *oldx, oldy* – which in this program never vary from the centre of the screen – to *newx, newy*.

This may seem a bit odd, since we've not taken into account the cursor's "move", but in practise this will be the deleting line, going over a line we've already drawn.

At the beginning, *oldx, oldy* and *newx, newy* coincide, so in effect no line is drawn.

Lines 290 to 320 calculate the cursor's new position and ensure it doesn't go off screen.

The PROCline of 330 then draws the line from the centre of the screen to the circle.

The next time through the procedure, after the key press, line 270 redraws – and hence wipes out – the last line. After the adjustments of 290-320, line 330 draws the new line.

The effect has to be seen to be appreciated.

As you direct the cursor round the screen a seemingly elastic line constantly joins it to the centre – hence the term "rubber banding".

If we should wish to freeze our line in one position we just press the Copy key. Line 280 then sets the logical variable *fix* to TRUE, which causes us to drop

→

From Page 123

out of the REPEAT . . . UNTIL (line 130).

You may be wondering what happens if you press other keys – after all PROCinput doesn't test for the legality of keys.

If you look carefully you'll see that all that happens is that 270 erases the line and then 330 draws it back in the same place.

Lines 140 and 150 simply restore the cursor keys and cursor movement to the status quo ante program.

There's far more potential than this though. Suppose that when we'd fixed our line we then started a new line from the last position of the cursor. Then when we'd fixed that we could start a new line from the end of that and so on . . . we'd have a computer etch-a-sketch!

It's not all that difficult. Program V has what's needed.

It's much the same as Program IV – the new lines have the new line numbers. In essence we're repeating the main

SATAN'S CHALLENGE

or (Nevil Rides Out) A Black Magic Adventure

Dare you take up the challenge laid down by the most evil and sinister of all beings . . . the devil himself.

If you do you will find yourself alone and at the mercy of the twisted fancies and whims of a cold and calculating mind.

Occult forces are threatening the lives of those near and dear to you. Their only salvation rests in your hands but in accepting the challenge your own existence is put in severe peril.

In taking up the challenge you have to find the TALISMAN and locate a pentagram which then has to be prepared for the final rite. In the mean time dark forces will be opposing you making a difficult task almost impossible.

Do not allow yourself to the lulled into a sense of security for it will be short lived.

Many have gone before only to swell the ranks of the damned.

This is the latest adventure from the stables of Microtest and has been written with the acclaimed features of other adventures in mind eg save facility, quick response, simple but extensive commands, a mixture of logical and fiendish problems to solve.

Be warned this is an easy adventure to get into but devilishly difficult to end.

CASSETTE ***£7.95*** *inc VAT*
DISC 40 or 80 tk ***£9.45*** *inc VAT (add 50p p&p)*

DAIRYFILE FOR DAIRY FARMERS

Keep on that economic line between over and under feeding!

Save time recording milk yield and calculating feed amounts!

Quickly decide feeding policy with the 'Monthly Calving Group' Performance Graph!

Print out a recording sheet with cows in numerical order. Print out graphs or tables of individual cows or Monthly Groups showing serving and pregnancy details, illness record, Calving Index, weekly and running total Margin over Concentrate. See at a glance cows due for serving, pregnancy diagnosis and drying off. Keep track of weekly total feed cost and milk sale price.

All this and more with DAIRYFILE.

Predict cow or Monthly Group total lactation yield. Compare with Standard Lactation Curves. All old data preserved – compare Monthly Groups over the years. Which is the most profitable month?

Find out with DAIRYFILE – for up to 200 lactating cows.

Available on dual 40 tk disc (For dual 40 tk drives only)
Dual or Single 80 tk drives **£69** inc VAT (add 50p p&p)
Please state on ordering which disc format and printer model.

MICROTEST FONT ROM

This exciting new ROM from Microtest will enable you to get all sorts of new characters and fonts from your BBC Computer. Once you have produced your masterpiece on the screen, all you have to do is use the inbuilt screen-dump utility to produce a hard copy onto paper.

Typing '*HELP FONTS' gives a list of available fonts and the blocks of characters which they replace.

Available fonts are:

***Accents**	Accents and miscellaneous.
***Block**	Small capitals.
***Data**	Like the bottoms of cheques.
***Greek**	It's all Greek to me too!
***Joined**	Standard capitals with joined up lower case.
***Maths**	A mix of until now unobtainable Mathematical symbols.
***Miscellaneous**	A few oddities which often are very necessary.
***Thick**	Thick text (for MODEs 0&3) to enhance 80 column mode.
***Thin**	Thin text (for MODEs 2&5) which makes modes 2 & 5 much more readable or perhaps "READABLE".
***MODE 8**	Ten column multicolour, memory-miserly mode.
***Vertical**	For labelling graphs.
***S DUMP**	A dump facility which will produce a screen dump of any MODE from 0 to 8 (including a text only dump in MODE 7) on an Epson, Star, CTI CP80 or MT80.

The ROM uses absolutely NO user memory and can be used with word processors etc. as well as normal BASIC programs. The DUMP utility will produce positive or negative graphics and will also rotate the picture produced through 90° as well as being able to position the picture anywhere laterally across the sheet of paper.

£17.50 *inc VAT (add 50p p&p)*

New Issue Microtest Starstick & Joystick Package.

announcing the arrival of the new issue 2+ ROM.

Available now the NEW issue 2+ ROM Joystick comes in three forms:

OPTION 1 The Starstick ROM and Quiskshot I Joystick
Price £22.85 + £1.00 P&P.

OPTION 2 The Starstick ROM and Quickshot II Joystick
Price £25.50 + £1.00 P&P.

OPTION 3 The Starstick ROM and Patch Lead (choose your own Atari/Spectrum style joystick
Price £20.50 + £1.00 P&P.

OPTION 4 Send your old version STARSTICK ROM back to us for reprogramming to issue 2+
Price £3.50 + £0.50 P&P.

VI.4 STARSTICK was 4K the new version has been squashed into 8K.

The NEW ISSUE ROM is compatible with latest* ACORNSOFT programs as well as REPLICA II.

As with the VI41 issue of ROM you can at last connect good "self centring", "rapid action" joysticks to the BBC Computer via the user port. (Model A owners please note that you do not need the analogue interface fitted to your computer but you will need the user port and IC76).

Pressing any combination of the BREAK key does not effect the STARSTICK software and now by pressing TAB-BREAK REPLICA II is auto booted and is compatible with the STARSTICK ROM V2+.

The software patch provided in the ROM monitors O.S. calls and patches the Joystick to the Games programs, and so will work with most games programs even programs not meant to function with Joysticks (except those using illegal direct memory addressing).

The new command summary and description is + –

*STICK	enables the ROM.
*NSTICK	dissables the ROM.
*SETSTICK	program joystick.
*KSAVE	save protocols set by *SETSTICK.
*KLOAD	load protocols saved by *KSAVE.
*MAP	remap current keyboard definitions, play games using your favourite keys.
*CLEVER	intelligent loading of software (ensuring ACORN compatibility).
*PLONK	relocate area of work memory used.
*PROP1	proportional joystick emmulator 1.
*PROP2	proportional joystick emmulator 2.
*ANA	patches joysticks via the analogue port to games.
*KILL	ROM manager, dissables troublesome ROMs.
*DOUBLE	replace up to two joysticks.
TAB-BREAK	Auto boots REPLICA II.
*PAUSE	define key to freeze game.
*NPAUSE	dissable *PAUSE.
*NAME	predefined key protocols.
*HELP KEYS	display current key protocols.
*REPEAT	enables ROM based auto repeat.
*NREPEAT	dissables *REPEAT.

Should a contention state occur when two roms or more try to use the same *command prefixing any of the above with M will help solve the problem.

'And of course, no-one's perfect'

body of Program IV. Lines 105 and 137 form the new REPEAT . . . UNTIL loop.

This time we won't want to finish the program every time we fix a line. so we have another logical variable. *end*.

If you compare Programs IV and V you see that the first difference between them is in the UNTIL of line 130 which has the extra condition OR *end* attached.

Let's suppose we've just started the program and have moved our cursor to a position where we want to fix a line. So far everything has gone on as in Program IV.

Once we press Copy though. we drop out of the inner REPEAT . . .UNTIL loop (lines 110 to 130). We then change to the "standard" GCOL0 to draw the line and then revert to GCOL3 (line 135).

Line 136 contains the clever bit. We then move the starting point of our new line to the end of the line we've fixed by setting *oldx* equal to *newx* and *oldy* equal to *newy*. Next time we'll start rubber banding from the "free" end of the last line.

Notice also that we set *fix* to FALSE again. If we didn't we'd just keep dropping through the inner loop. never getting anywhere. Leave it out and see!

Line 137 tests to see if *end* is TRUE. dropping through to finish if so.

Line 325 in PROCinput tests for the ending condition – pressing A for "abort".

Even with this rudimentary program you can have a lot of fun. but there are limitations.

For instance. every line follows on from the end of the preceding one.

It would be much more convenient if we could turn off the line until we'd moved the cursor into a new position. How else could we. for example. draw a box within a box?

And of course. no one's perfect – we might want to delete a line.

Program VI incorporates these refinements. To do so we've introduced two new logical variables. *line* and *delete*. (Notice that the terminating conditions for our inner loop – line 70 – now involve *delete.)*

If line is TRUE. when the cursor moves a line rubber bands to it. If it is false. the cursor moves with no attached line.

We use the Return key to toggle between the two states (line 460). Line 470 then either draws the line or sets the cursor coordinates to its new position as appropriate. The actual drawing of a "fixed" line is done by line 80.

You will probably have noticed that. when using these techniques. if you draw a line exactly over another line they disappear. This is because of the GCOL3 effect of which we are taking advantage. As soon as you move the top line off however. the line underneath reappears.

If you really did want to erase this line all you would have to do is press "D". which then sets *delete* to TRUE (line 450).

You will then drop out of the inner loop and line 90 will draw the line in the background colour – that is erase it – with GCOL0.0. then restore GCOL3.1.

However you came out of the inner loop, lines 100 to 110 move the start coordinates to their new position and line 120 restores the logical variables *fix* and *delete* to their default values.

The program. though short. is by no means a simple one. so persevere – the ideas behind it are very important.

Don't worry about the PLOT 13 in PROCline for the moment. we'll cover it in a later article.

That's all for this month. In the next article I'll be looking at some more uses of GCOL.

MUSIC MICRO PLEASE!!

AVAILABLE FROM ALL LVL DEALERS. (FOR FURTHER INFORMATION TELEPHONE 0602 394000).

LVL's ECHO I is a high quality 3 octave keyboard of 37 full sized keys operating electronically through gold plated contacts. The keyboard which is directly connected to the user port of the computer does not require an independent power supply unit.

The ECHOSOFT Programme "Organ Master" written for either the BBC Model 'B' or the Commodore 64 supplied with the keyboard allows these computers to be used as real time synthesizers with full control of the sound envelopes. The pitch and duration of the sound envelope can be changed whilst playing, and the programme allows the user to create and allocate his own sounds to four pre-defined keys.

Additional programmes in the ECHOSOFT Series are in the course of preparation and will be released shortly.

Other products in the range available from your LVL Dealer are our:

ECHOKIT (£4.95)* – External Speaker Adaptor Kit, allows your Commodore or BBC Microcomputer to have an external sound output socket allowing the ECHOSOUND Speaker amplifier to be connected.

ECHOSOUND (£49.95)* – A high quality speaker amplifier with a 6" dual cone speaker and a full 6 watt output will fill your room with sound. The sound frequency control allows the tone of the sound output to be changed.

Both of the above have been specifically designed to operate with the ECHO Series keyboard.

The ECHO PRODUCT FAMILY breaks both the SOUND and PRICE BARRIERS, representing outstanding quality and value for money.

* Inclusive of VAT

There's a mouse in the house!

. . . and ALAN McLACHLAN welcomes it with open arms

WHEN the opportunity came to put the Advanced Memory Systems' AMX Mouse through its paces I leapt at it with enthusiasm since I'd already seen the amazing screen dumps in December's *Micro User*.

As with most outstanding ideas, the concept behind this one is simple. You use the mouse to control the position of the cursor on the screen for a variety of different applications.

The mouse itself is a mechanical device which can be moved by one hand over a desk or any flat surface. It is a sort of liberated joystick fitting easily within the palm of your hand, although it is far more sensitive and natural than an ordinary joystick.

Inserted in its belly is a sensitive trak ball arrangement which, when rotated by rolling over a surface, moves the pointer or cursor to any screen position. The mouse plugs into the user port and the 4ft cable leaves ample room for movement.

The package, consisting of mouse, a ROM and additional software programs on cassette or disc, is suitable for use with any BBC model B with operating system 1.2 and it is compatible with the second processor. Enabled and disabled by a simple *Command, it does not interfere with the micro's normal operation.

The ROM contains fast action machine code routines to create windows, icons and pointers on screen – icon is the term for a symbol or mini picture. When used creatively in menu options and the like they make programs far more user friendly.

There are 64 icons already stored in the ROM, and they can be supplemented by using the Icon Designer program which is part of the software package that comes with it.

In its simplest form without the use of any other software the mouse may be used instead of the normal cursor keys. This is achieved by entering *MOUSE ON and *MCURSOR ON. The former turns the mouse on and the latter hands control of the cursor over to it.

The mouse has three fire buttons which can be programmed to simulate three separate keys. For example, you may choose the Return, Copy and Delete keys for use in editing.

Among the many useful commands in ROM is *WINDOW which incorporates windows in your programs. A pointer can also be implemented by typing in *POINTER ON and *SHOWPOINTER. The first command initialises the pointer, the second displays it (it can be removed from the screen with *HIDE POINTER). Using this you can for example move your pointer to an icon of a waste bin to delete a file.

The mouse really comes into its own when used with its accompanying software packages. When Icon Designer is selected the screen displays six windows of various sizes and two icons – a disc drive and a waste bin. The screen format is as shown in Figure I.

Each window has a different function. The largest, used to design your icons, is labelled with the current icon number. To the right is a small window which shows the size of the icon you are creating.

At the base of the screen are two further windows which will store the icons being worked on. Uppermost is the current set and the lower contains an alternative set.

To alter an icon simply use the mouse to position the pointer over the required icon in the lower window, hold down the "move" button and drag the icon across to the design window. There it is immediately displayed in an enlarged form labelled with its number.

If you move the pointer over any of

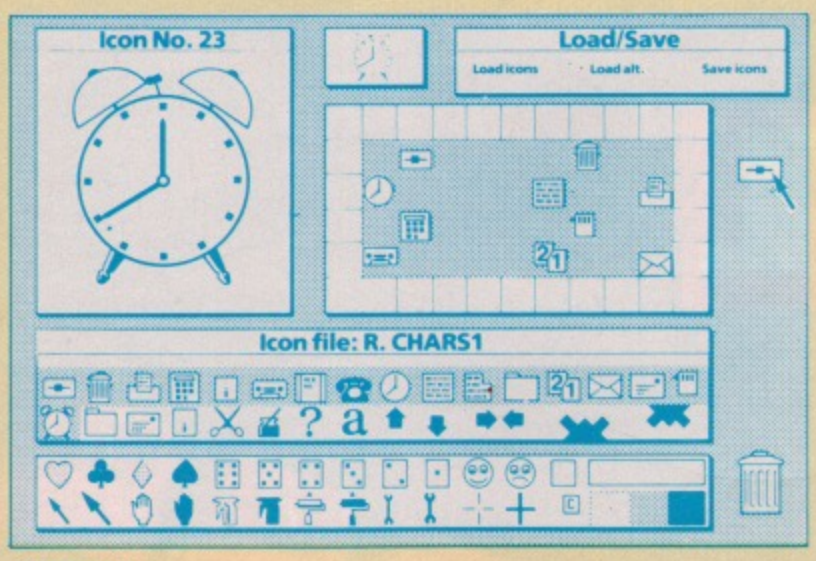

Figure I

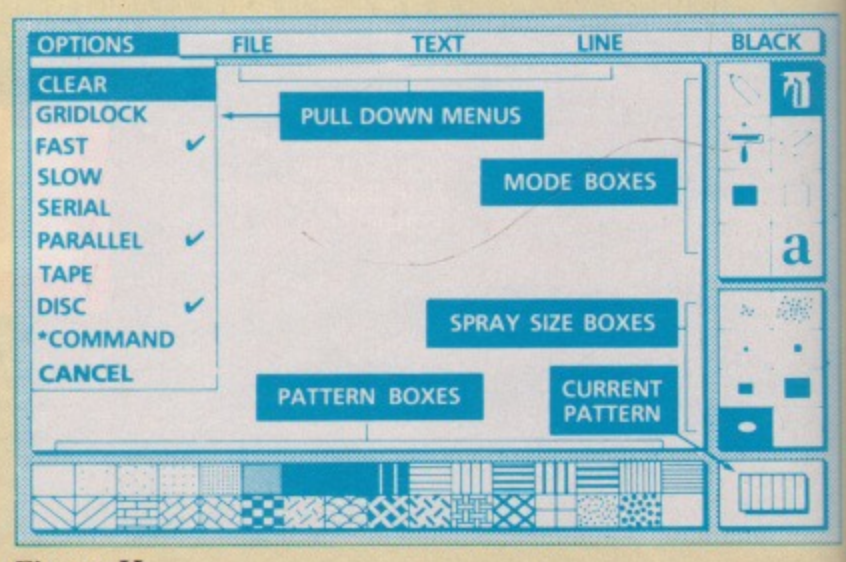

Figure II

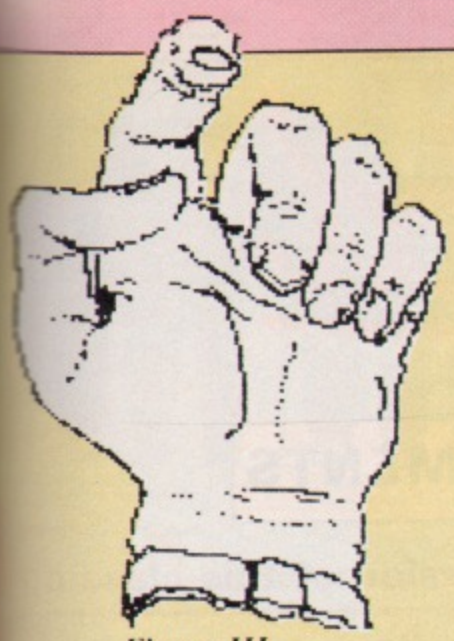

Figure III

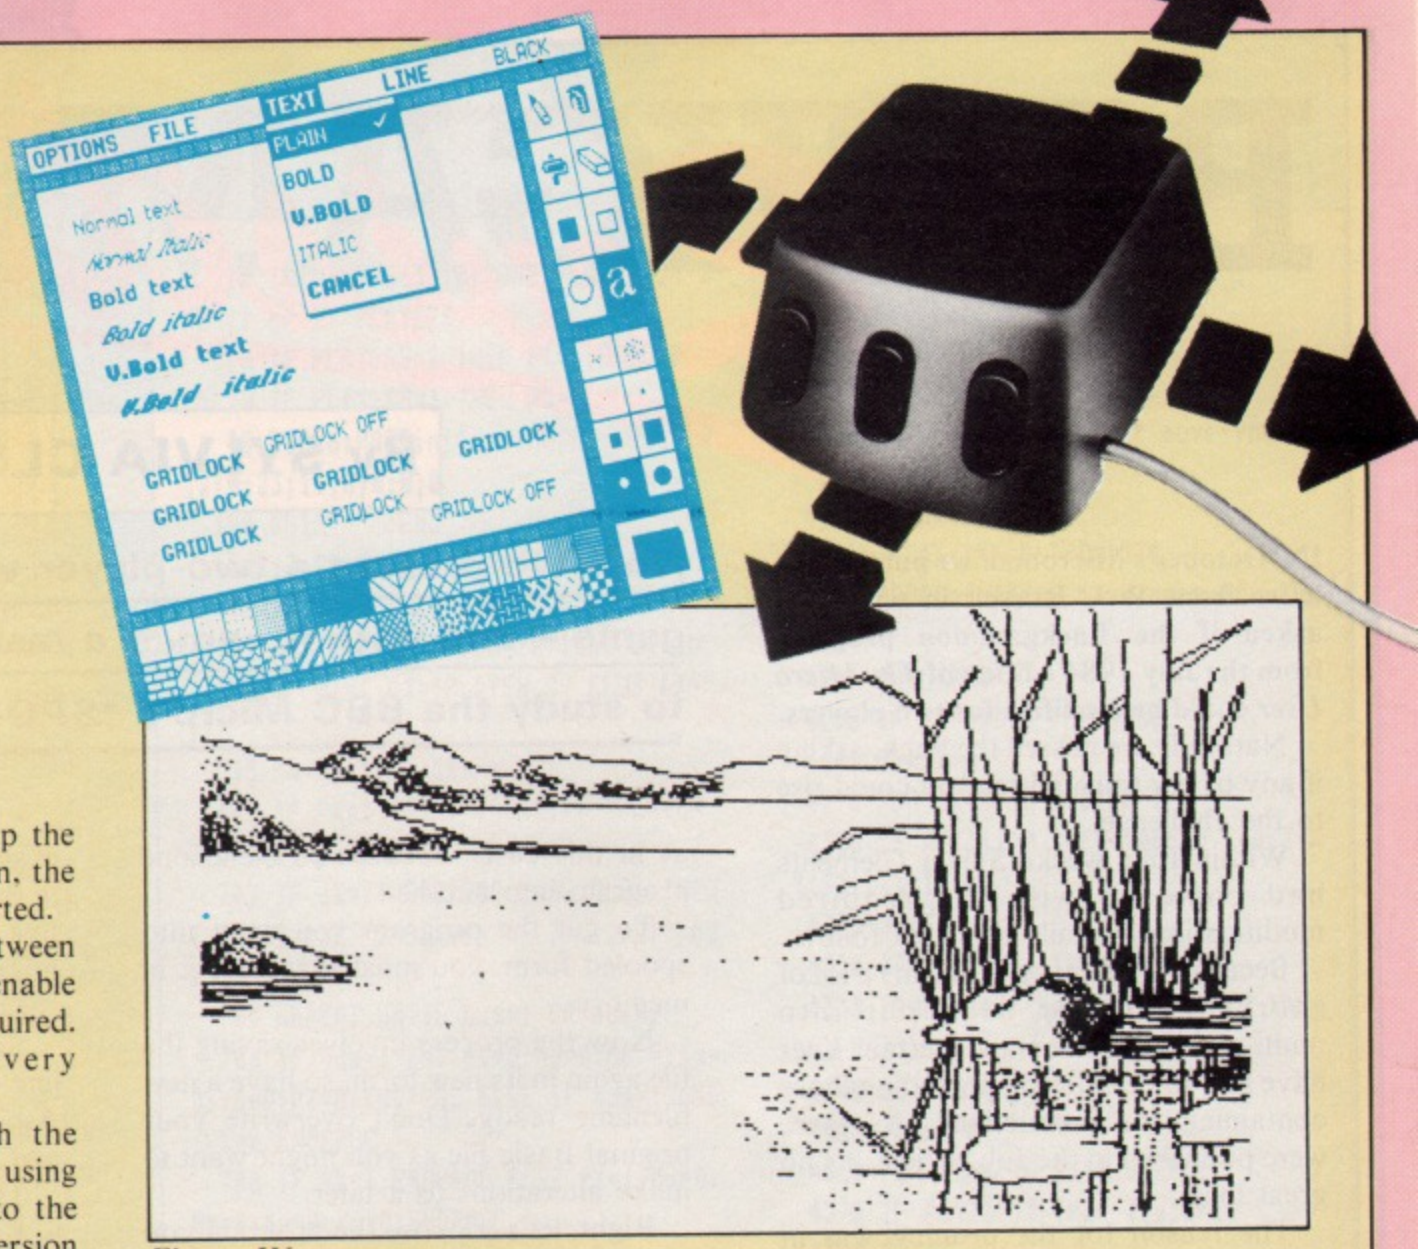

Figure IV

the black squares which make up the icon and press the execute button, the colour of the square will be inverted.

The execute button toggles between black and white in this fashion to enable you to create your own icon as required. The program is in fact a very sophisticated character definer.

When you are satisfied with the character, you simply pick it up using the pointer again, and put it into the upper icon store where the new version will overwrite the old one.

To save the new set to disc simply move the pointer to the disc drive icon, press execute and use the prompt to "Save Icons". You can in fact save as many sets of icons as you wish, taking care to save each under a different file name.

The software comes equipped with two sets of icons already and these can be loaded and manipulated to suit individual tastes.

The second item of software, Art Designer, is an advanced drawing program with a wide range of uses in the preparation of illustrations, and for technical drawing. Even if you don't intend to it use for such serious applications you'll find this part of the package totally compulsive and incredible fun. I did, and so did my children – spending lots of time at the machine just doodling and painting.

Of course all commands are available on screen in the form of icons, which can be selected by means of the mouse and its buttons. The screen displays a large drawing board (Figure II), surrounded by the full range of icons that will be used, and four menu options.

Drawing facilities include a Pencil with rubber-banding, a Spray with eight different nozzles and a Paint Roller with 32 on-screen patterns to choose from. There is also an Eraser, a Box and Frame mode, a Circle, and six text styles, all chosen via the pointer. An Options menu allows you to select Clear the picture, Fast or Slow mouse response, Serial or Parallel printer dumps, Tape or Disc filing and the facility to enter *Commands.

The Text menu allows selection of three styles in normal or italic fonts, while the Line menu gives a choice of full, dotted, black, white or inverted. The menus themselves are quite natty. You pull them down rather like a roller blind, then having made your selection they roll up to reveal your original artwork underneath.

Despite the vast range of options, the program is simplicity itself and the user manual provided is virtually redundant. It is impossible to do this part of the package in such a short review, so I've let the screen dumps speak for themselves. My young son was very soon at home with it and created the free-hand (sorry) drawing shown in Figure III, while my own humble offering is in Figure IV.

Even though this device has obvious applications for technical drawing or filing systems, my family and I got a great deal of fun out of it just using it to create pictures and patterns which we saved for future viewing.

The sensitivity of the mouse itself accounted for the high quality of the artwork, far better than we could ever have achieved with a lightpen.

All in all the mouse has become a permanent fixture in my micro *(Editor please note.)* Simple yet powerful, this is the one product I've met where the computer cliche really is true: Its potential is only limited by your own imagination.

Complete package consists of:

AMX Mouse
AMX Rom
AMX Art
Icon Designer

+ two fully-illustrated manuals

FOR ONLY
£79.95

Please send me the complete AMX Mouse package at the special price of £79.95. (Includes VAT, post and packing.)

BACKGAMMON *Revisited*

By SYLVIA CLEMENTS

IN October's Micromail we published a letter from W.J. Russell in which he asked if the Backgammon program from the July 1984 edition of *The Micro User* could be modified for two players.

Naturally we passed the buck, asking if any of our talented readers could rise to the challenge.

Within four weeks Sylvia Clements had come up with the required modifications, details of which follow.

Because of memory problems a lot of short lines have been put into multi-statement lines and certain lines have had to be deleted – including those containing the instructions. As these were published in the July article, it's no great loss.

The reason for the pruning was in order to accommodate a complete new procedure for the second player, PROCp12.

The final result is a two player version of what has already proved to be a highly professional and popular game.

In order to make the alterations we're going to use *SPOOL to merge the extra lines in – a simple process, yet one which seems to baffle many people.

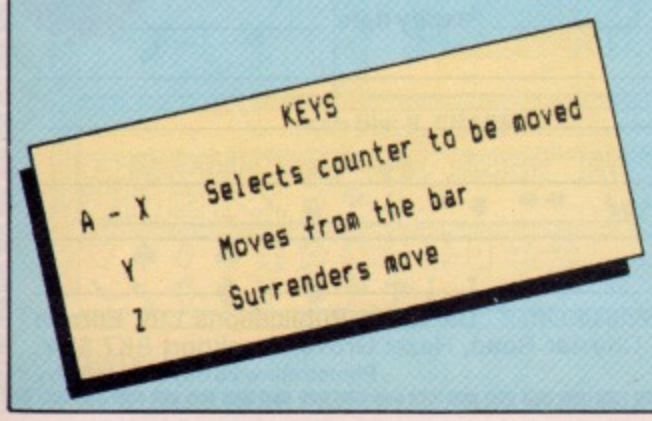
Normally, when you type in a Basic program, the BBC Micro stores it in a special way. Never mind that you took five characters to type in PRINT, the BBC remembers it as just one character, or token.

This is why, although you can get away with P. it doesn't save you any space.

What *SPOOL does is to decode this compressed Basic version, using one Ascii character for each letter.

So in a spooled version of a Basic program, PRINT would be represented by five Ascii characters.

It can be very useful having programs in this longhand form particularly when,



Now we present a two-player version of this classic game – and with it comes a marvellous opportunity to study the BBC Micro's *SPOOL command

as in this case, we want to blend one program into another.

To get the program you want into spooled form, you must first have it in memory.

Now the process involves saving the file again in its new form, so have a new filename ready. Don't overwrite your original Basic file as you might want to make alterations to it later.

Right, let's suppose the program you want to spool – called LINES, say – is in memory, and you want the spooled version to be called MODS.

Type:

```
*SPOOL MODS
```

followed by:

```
LIST
```

and to round off:

```
*SPOOL
```

(no file name this time.)

On cassette versions just follow the "Press Play and Record" prompts.

The outcome should be a spooled Ascii version of your original program saved under the name MODS.

If you now try something like:

```
LOAD "MODS"
```

you'll get:

Bad Program

You see, it just isn't stored in the format Basic wants its programs to be in.

However you can type MODS into the micro as if you were actually banging away at the keyboard by entering:

```
*EXEC MODS
```

If you look at the screen, you'll see that each line of the program in MODS appears on the screen, followed by a carriage return.

When you think about it, that's exactly how you enter a program. Type in the line letter by letter – for example, five characters for PRINT – and the micro automatically stores it in its special Basic form.

So when you *EXEC MODS, each line of the original program – now in Ascii form – gets typed into your micro and converted to Basic.

The end result is that you're left with a Basic version of the spooled file MODS identical to LINES – as you'll see when you list it.

By the way, ignore any Syntax error messages and what-not that appear on the screen while you're *EXECing – that's just the way the system works.

You might wonder what's the point of going round the houses in this way, just to end up with what you've started.

Well the way you alter a Basic program is to re-type the lines you want altering and press Return.

The new version of the line replaces the old, or, if the new line has a line number that doesn't exist in the original program, it simply takes up its correct place in the program listing.

Now let's suppose that the program you've just spooled contained modifications to another program – which we'll call ORIGIN.

Perhaps there are altered versions of lines – which will share the same line numbers as the originals in ORIGIN – and some entirely new lines, whose numbers don't appear in ORIGIN.

If you:

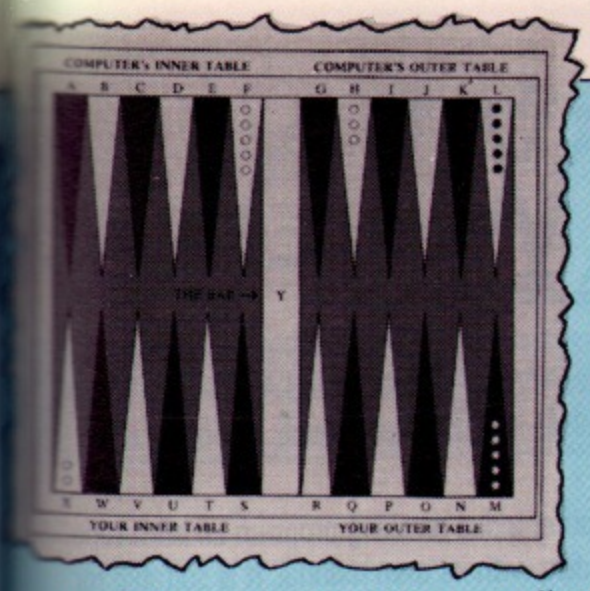
```
LOAD "ORIGIN"
```

into memory, then:

```
*EXEC MODS
```

will type out the spooled version of each altered line followed by Return – just the way you'd type in alterations to a program from the keyboard.

The altered lines from MODS will then replace the original lines in



ORIGIN (which share the same line numbers). And of course any totally new lines in MODS will take up their appropriate spot in the listing.

In other words, it's exactly as if the modifications had been typed from the keyboard.

In this way you incorporate the alterations into ORIGIN, leaving an updated Basic program in memory at the end of it. The process may seem complex and longwinded, but once you get used to it it's quite straightforward.

So much for theory. Here it is in practice:

Type in Listing I and save it as LINES. (Although you don't strictly have to save the Basic version, it's handy to have around if you need to alter it to take into account typing errors and so on).

Next:

```
*SPOOL MODS
LIST
*SPOOL
```

following any prompts to save a spooled Ascii version of the alterations on tape or disc.

Load your original version of Backgammon and, following our line numbering in the July 1984 issue:

- ☐ Delete lines 50-80, and 110.
- ☐ Make lines 150 to 200 into one multi-statement line. Similarly with lines 210 to 250, and 280 to 310. Note that lines 260 and 270 remain as they are. Delete 3090 to 3270.
- ☐ Also, to make room, delete all the blank lines, all unnecessary spaces, lines with just a colon and REMs. Now you've made all these changes you might want to save it, just in case.

Now, with this altered version of Backgammon still in memory:

```
*EXEC MODS
```

Ignore the syntax error messages, and when all the furore has died down you should be left with a two player, Basic version of Backgammon. Save it!

In case all this seems too much trouble, it might interest you to know that the two player version of the game appears on this month's cassette. See the order form on Page 197 for details.

This month's cassette tape offer includes the complete two-player version of Backgammon. See order form on Page 197

AMX ART

AMX MOUSE

The AMX MOUSE is an advanced opto-mechanical device which brings to the B.B.C. micro facilities hitherto only available on more expensive machines. It enables you to use advanced features such as ICONS, WINDOWS, and POINTERS in your own programs.

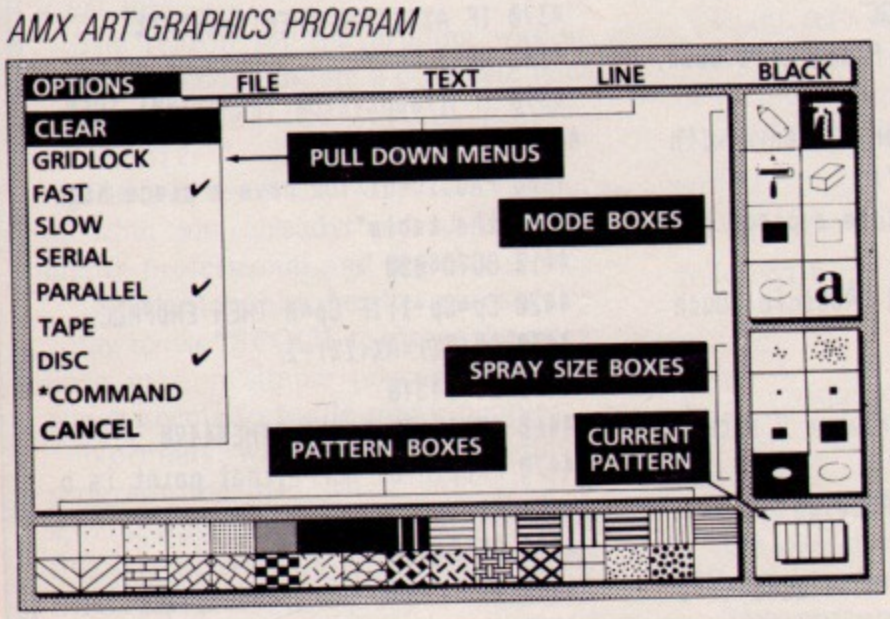
The AMX MOUSE can be used with ordinary programs to replace the cursor keys and with the AMX software it turns the B.B.C. micro into a far more user-friendly device, enabling beginners to quickly learn to use the computer for a wide range of purposes, including COMPUTER AIDED DESIGN, Word Processing, and a host of business uses – to say nothing of its inclusion in games software.

A further range of software will be released in 1985. Starting with "DESK TOP MANAGER".

THE AMX MOUSE PACKAGE

The AMX MOUSE – an advanced three buttoned mouse which simply plugs into the B.B.C. user port drawing its power from the computer.

AMX ART GRAPHICS PROGRAM



The AMX ROM – contains fast machine code routines for creating on screen windows, icons, and pointers and enables the MOUSE button to be programmed for use with commerial software such as Wordwise and VIEW.

Please send No_____ **AMX MOUSE** package/s (including **AMX ART** and EPROM) at **£89.95** inc. VAT and P&P.
I enclose a cheque/PO for £_____ or debit my credit card.

(Please tick choice of media for AMX ART) ☐ Cassette ☐ 3" Disc ☐ 5¼" Disc

To: Advanced Memory Systems Ltd., Woodside Technology Centre, Green Lane, Appleton, Warrington, WA4 5NG, England.

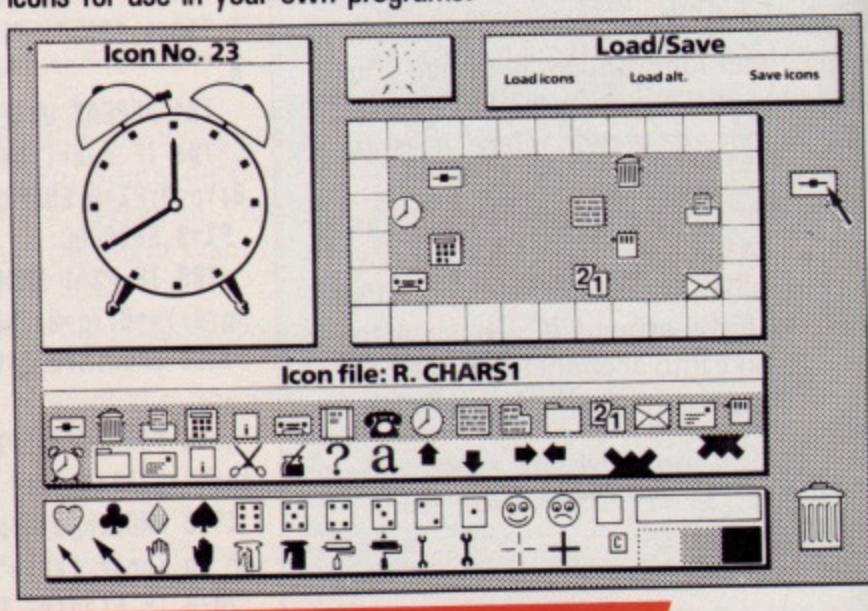
If not available from one of our main dealers, fill in the coupon and we will send you an AMX MOUSE with AMX ART with our full no quibble money back guarantee. OR phone 0925 602690/62907 for instant Access or Visa orders.

A MANUAL describing how to operate the MOUSE and the ROM routines which are available in both basic and machine code programs.

AMX ART – a superb computer aided drawing program on both tape cassette and a 5¼" floppy disc with its own manual. It is suitable for a wide range of uses including preparation of illustrations, architectural and engineering detail drawings, teachers' worksheets, and just creating your own pictures. It soon becomes addictive.

AMX ART includes full use of on screen menu boxes, icons, and pull down menus so that beginners find it very easy to learn and gain confidence in the use of the B.B.C. Micro.

An ICON DESIGNER program which enables you to create and store icons for use in your own programs.



ICON DESIGN PROGRAM

TECHNICAL REQUIREMENTS

The AMX MOUSE can be used with any B.B.C. Model B computer fitted with the Operation System 1.2 and is compatible with the second processor and disc or tape filing systems.

The AMX MOUSE is adjustable for sensitivity via software control and three buttons can be programmed to simulate 24 different key codes.

The AMX MOUSE may be disabled by a simple software command and will then not interfere with normal operation of the computer.

The AMX ART programme enables users to print out screen displays using any Epsom compatible dot-matrix printer. Owners of non-standard printers may use their own screen dump routines.

'Wordwise' is a wordprocessing program by Computer Concepts.
'View' is a word processing program by Acornsoft Ltd.

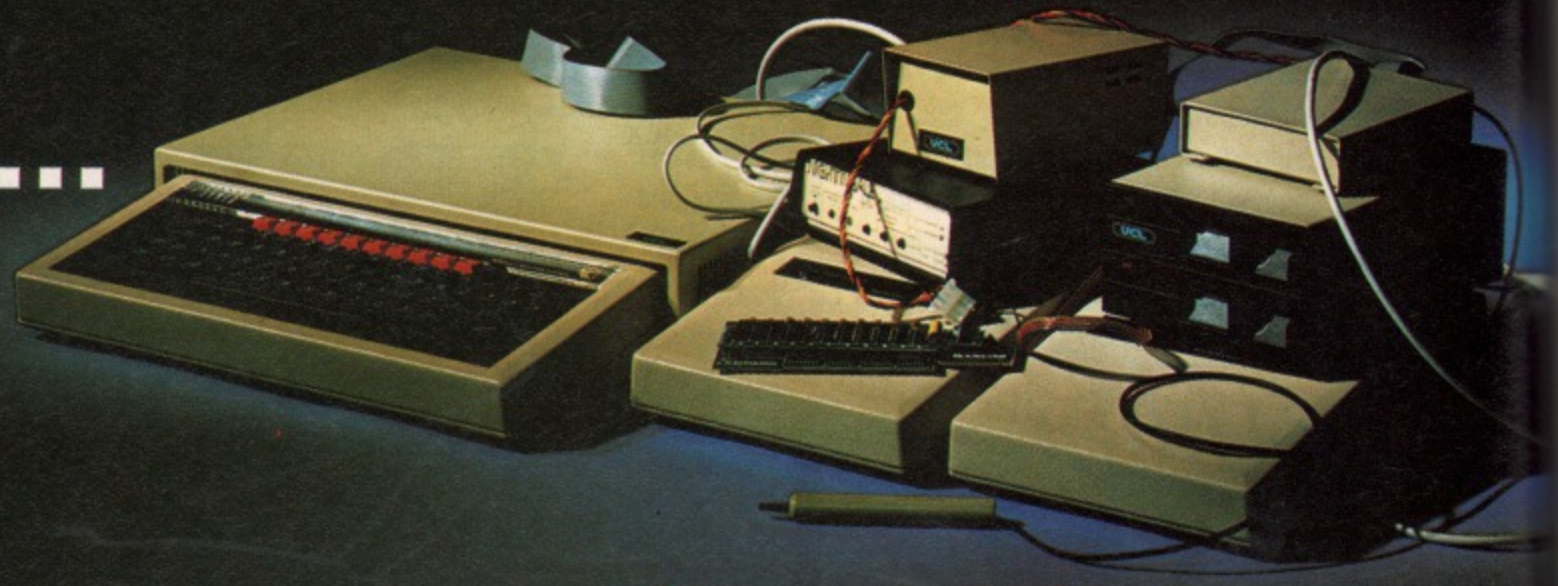
ICON SOFTWARE

CREATIVE GRAPHICS

FASTER INTERACTION

when it comes to upgrading your BBC micro there are two choices

this....



or this....

there's really only one choice -

OAK

Whether you are already an owner or thinking of purchasing your first BBC computer - then the OAK is for you. The OAK offers a versatile unit which can house as much or as little as you require - the beauty being that you can upgrade at any time without having to add-on externally to the OAK unit.

The OAK is available in practically any form, from the basic housing kit (for your existing micro and add-ons) through to the complete ready built unit which, as you can see from the specification, is a pretty sophisticated machine - the mighty OAK.

OAK

ANOTHER UCC QUALITY PRODUCT.

Because of the outward looking design, the BBC Micro Computer has become one of the worlds leading computers. Its popularity is derived from its flexibility as a powerful home computer through to a personal computer widely used in science, education, commerce and industry. This flexibility has been enhanced by the vast range of add-ons that have become available - unfortunately these in themselves have created the micro's major weakness - in many cases they are self-contained units whose cases and cables require a lot of extra space in order to site the computer. This detracts from the overall value of the system.

The OAK computer range overcomes these problems as the vast majority of add-ons are capable of being housed within its own casing.

The OAK has been specially developed to be the most versatile computer system in its field.

The OAK computer

MUSICSOFT

MUSIC SPECIALISTS FOR THE 32K BBC MICRO

★ THE SYNTH ★ (O.S. 1.0+)

"A very flexible and inventive program that's highly recommendable." (Dr David Ellis, E&MM, Oct 83). This 'synthesizer' program has features which to our knowledge are unique. ALTER RHYTHM. The rhythm of a recorded melody may be altered by tapping on a single key. REPEAT. No need to play a phrase twice, great saving in space. REAL TIME PLAYING. With alteration of volume, envelope and octave pitch as you play a note. EDITING. Back and forwards whilst hearing the tune. INPUT. May be hesitant or in correct time. TIDY. 'Cleans up' inaccuracies of input on demand! NUMBER OF NOTES. From 3000 for 1 channel to 1000 for 3, etc. Plus all the other synthesizer programs do PLUS. IE sophisticated envelope editing (very easy), larger keyboard used (TAB to ↓ cursor). No secrets, user transparent. This is the program for the experimenter who wants to make HUMAN music rather than perform mathematical finger dexterity exercises. THE SYNTH. Cassette & instructions only **£8.75** inc. P&P.

★ KEYBOARDS ★ (O.S. 1.0+)

5 programs to turn your BBC into 5 real-time keyboards. 1. 3 simultaneous voices (in Basic for easy understanding) 2. Single voice M/C with Pitch Bend. 3. 3 simultaneous voice M/C with Envelope control built in. 4. Single finger Chord organ ranging over the whole keyboard, 2 variations for each chord. 5. Chord organ 2 with different chord configuration. These are all separate programs designed for you to use as they are or in your own programs.
KEYBOARDS cassette & instructions **£5.75** inc P&P

★ MUSICTOOLS ★ (all O.S.)

"Musicsoft also produce an excellent 'Musictools 1' cassette . . . all in all, rather good value" (E&MM, Oct 83)
Five music utility programs on one tape.
Tune Generator with dynamic graphic Keyboard & Stave display. Envelope Command Explorer (**Very** easy to use), Musical Symbols Graphic routine, Simple single line organ with sophisticated controls. Over **60 procedures** for you to use in *your programs* already in working programs.
MUSICTOOLS 1 cassette & instructions **£5.75** inc. P&P.

★ PIEMAN ★ (all O.S.)

"The best version of Simon I've seen, it goes so much further than most" (Quote by a rival software firm!) Recommended for Primary & Middle Schools.
Not as simple as Simon! It develops into a fun set of ear cleaning and musical concentration games.
PIEMAN cassette & instructions **£5.75** inc. P&P.

ACORN APPROVED
ALL PROGRAMS TRANSFER EASILY TO DISC.
Cheques and official orders to:
MUSICSOFT, 12 Fallowfield, Ampthill, Beds.

ANSWER BACK Sports Game £9.95
(ages 14 and over)
Challenge the KOSMOS team at football or tennis. But be warned, we don't lose easily...
- NEW RELEASE
Whatever your sport, this program probably knows a lot more than you do!

ANSWER BACK Junior £9.95
(ages 6 to 11)
Defeat the dragon and save the princess of KOSMOS Castle...
- a superb program with vast potential... (A & B Computing, November 1984)

ANSWER BACK Senior £9.95
(ages 12 and over)
Outwit the KOSMOS robot and destroy the alien invaders...
- superb program... (Personal Computing Today, October 1984)

IDENTIFY EUROPE £7.95
(for all ages)
Solve the European jigsaw puzzle by land or sea...
- NEW RELEASE Discover Europe without leaving your home!

The IDENTIFY EUROPE program provides a fascinating way of discovering and learning the geography of Europe. The program will provide hours of amusement for all the family and everyone is sure to benefit from it.
The ANSWER BACK series needs little introduction. Each program combines a massive wealth of information with a fascinating and compelling game. The Senior and Junior quizzes each contain 750 questions and 3000 optional answers on General Knowledge. The Sports program is even larger containing a mind-bending 800 questions on Sport and two high-speed machine code games - Football and Tennis. But that's not all. For quiz fans, full facilities are provided for creating and saving new quizzes or modifying those supplied - and you don't need to be a programmer!

TEAC 55F 40/80
SWITCHABLE DISC DRIVES WITH **UDM** DISC INTERFACE

SPECIAL
TEAC 55F 40/80 800K SWITCHABLE DISC DRIVE ONLY **£169.95**

TEAC'S advanced technical features and reliability are the main reasons for TEAC being the most popular disc drives for use with the BBC computer. UDM disc interface comes complete. You require no extra chips. It incorporates the following features: * Supports single and double density * Supports 40 or 80 tracks * ACORN compatible. Runs ELITE, CLARES REPLICA II, MINI OFFICE, BASIC, FORTH BCLP, VIEW, WORDWISE, GEMINI etc. * Supports single and double sided discs * Firmware Format and Verify * Complete with 80 page manual * Simple to fit

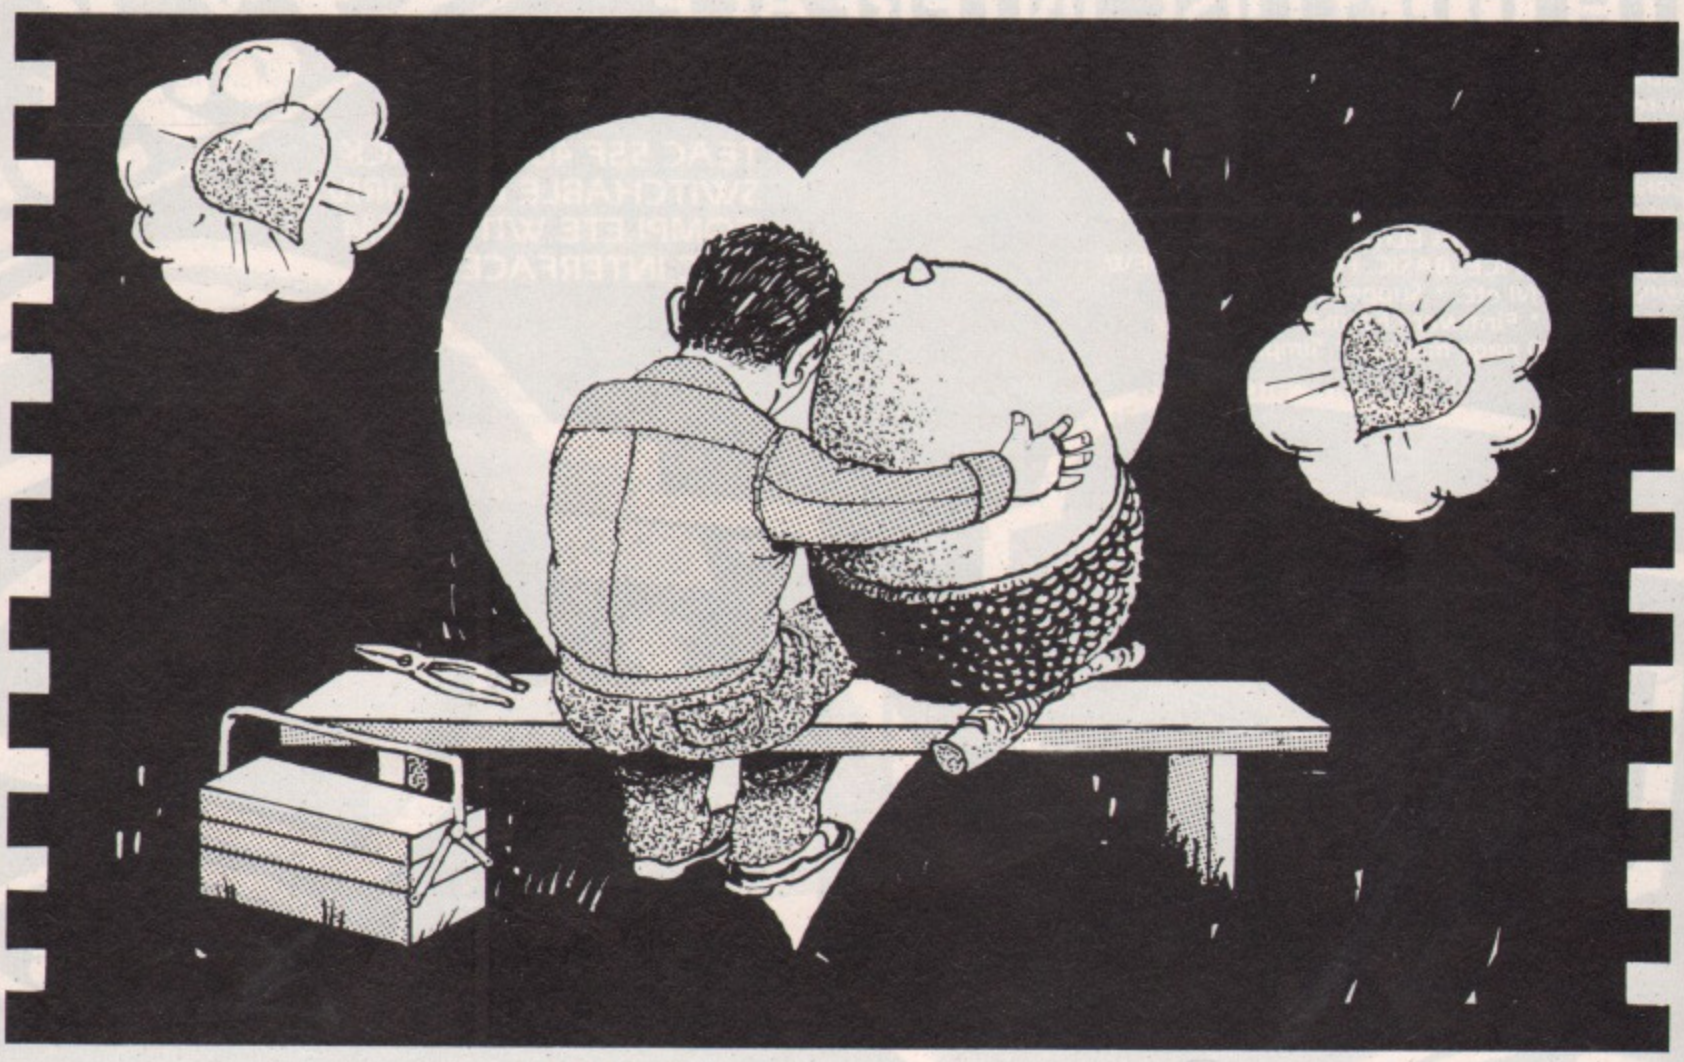
WE WELCOME EDUCATIONAL AND LOCAL AUTHORITY ENQUIRIES.

WE LOVE YOUR ACORN TOO



RCS Computer Services are the main service centre for the Acorn Computer, it is fully equipped to undertake a comprehensive range of services.

★ WARRANTY/GUARANTEE ★

If your computer (BBC or Electron), B/W Monitor, cassette recorder or disk drive as supplied by Acorn becomes defective within the warranty period, RCS Computer Services are authorised to carry out the repair and return the equipment free of charge. All charges in this connection being paid by Acorn Computers.

★ EXTENDED GUARANTEE/ANNUAL MAINTENANCE CONTRACTS ★

The experience of RCS Computer Services allows us to offer a comprehensive guarantee extension or annual maintenance contracts at competitive prices, this applies not only to the standard Acorn product by also to a range of approved peripherals including printers, colour monitors etc.

★ UPGRADES ★

Supply and installation of upgrades such as DFS, Econet, Teletext etc. can be carried out quickly, efficiently and professionally by trained staff at our Service Centre.

★ SYSTEM INSTALLATION ★

Supply and installation of Econet Systems can be arranged and fully commissioned.

THE BEEB BODY BUILDING COURSE

Part 22

Interfacing the Atari Trak-Ball

By MIKE COOK

IT all started with a cry for help. A letter came across my desk from Paul Jenkins along with a small padded bag. Inside the bag was a pair of sad, sorry, cracked and greatly abused optical detectors. The letter explained how they had been extracted from an Atari Trak-ball and subjected to all manner of torture in an attempt to connect them to the BBC Micro.

Well, needless to say I had them painlessly destroyed and, as a founder member of the NSPCC (National Society for the Prevention of Cruelty to Components), I decided to work out how to interface a Trak-ball to prevent any future outrages.

This coincided with the price of the Trak-ball falling to a respectable £19.99, so I went out and bought one. The instructions said some very boring things and gave no clue as to what might be needed, so I attempted to dismantle it.

After much prising and prodding I discovered it was actually screwed together, the screws being cunningly concealed beneath the small rubber fee. Once open I could trace the power supply lines and also the fire button. The Trak-ball has two fire buttons, but unfortunately they are connected together inside the casing so they act as only one.

The device was developed from the tracker balls used for years, mainly in military establishments, because they provide a good "feel" – that is, the tactile feedback from them is good.

They were originally used to feedback missile tracking information into a computer, hence their name. When used for this purpose they are precision pieces of equipment costing as much as £800 each.

There are basically two types of tracker ball. The first is shown in Figure I. A heavy ball is balanced on three or four rubber rollers. The ball is free to rotate and may be easily moved with the finger tips or rapidly spun.

Two of the rollers are mounted at right angles and pick up two axes of the ball's movement. These rollers are attached to a shaft, at the end of which is a slotted wheel, so movement of the ball is translated into movement of this wheel.

Two photo detectors are mounted on each wheel. They are slot-like devices

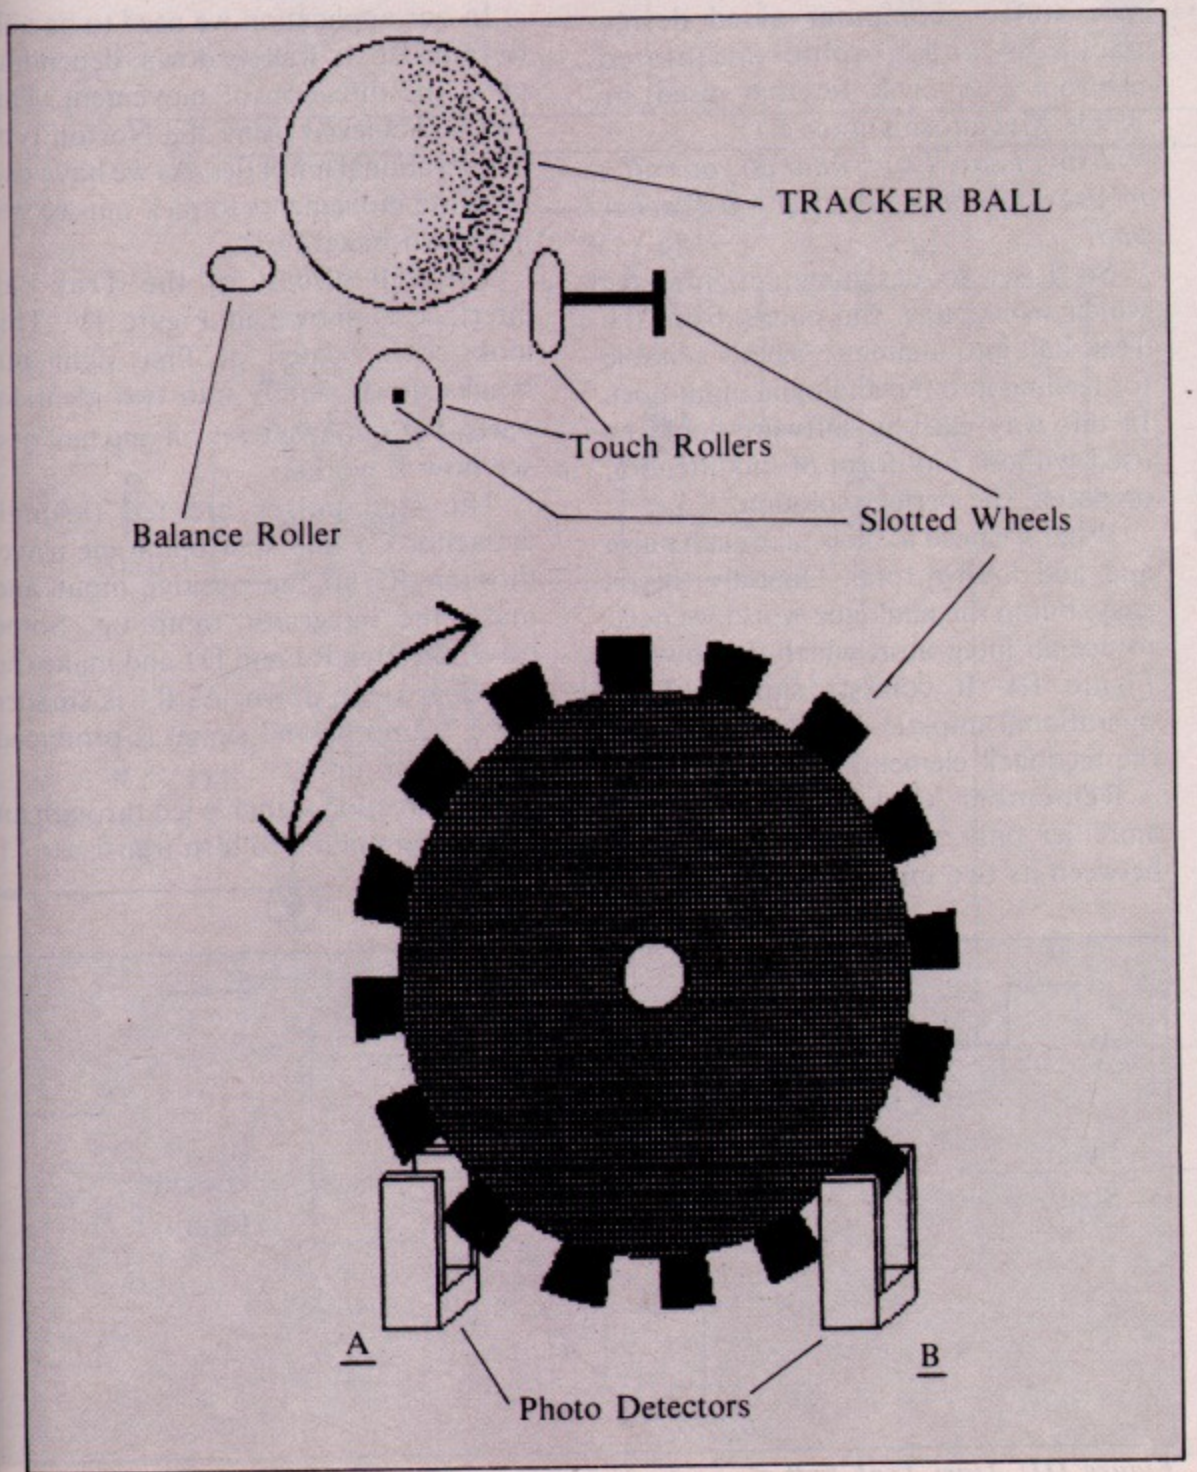

Figure I: Operating principle of a tracker ball

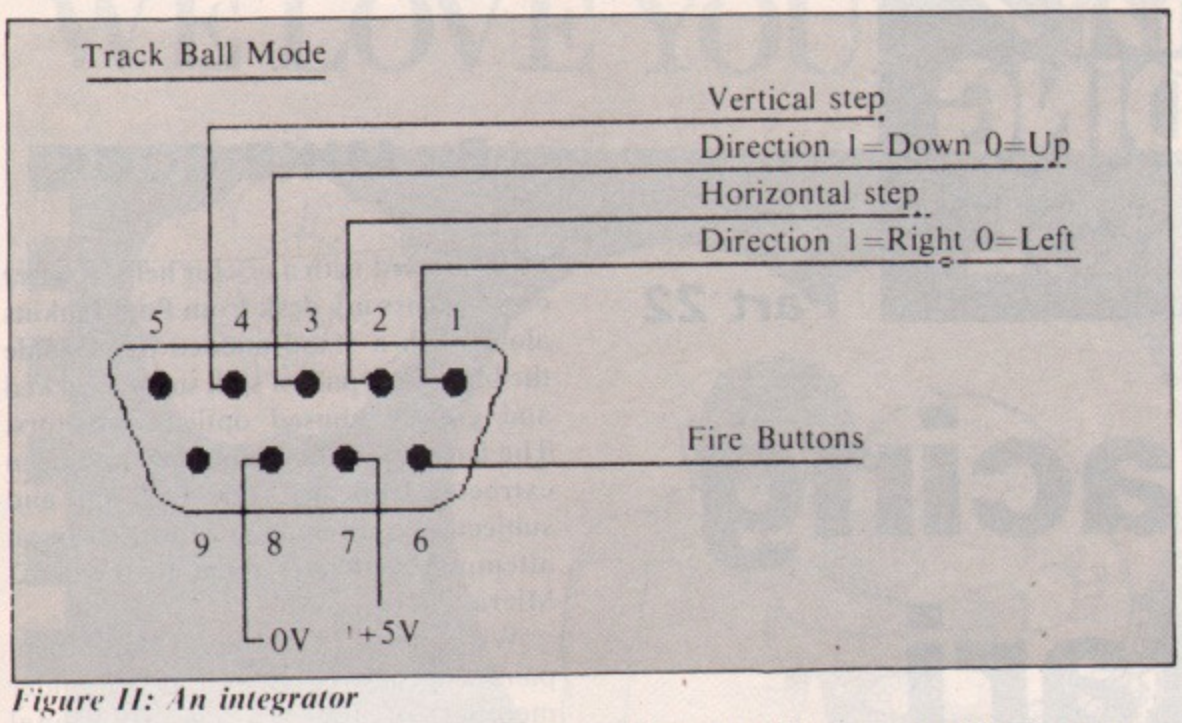

Figure II: An integrator

From Page 139

containing a source and detector. Spokes of the wheel will interrupt the light path and produce a pulse from each detector, the number of pulses being proportional to the movement of the ball.

But how do we detect which way round it goes? Consider the detectors shown in Figure I. If the wheel is turning clockwise detector B will be obscured slightly before detector A. The reverse will apply if the wheel is turning in the other direction.

We need some electronics to detect which edge is triggered first and produce a directional signal. Then we can take the straight output of one of the detectors to give us a step pulse. The Atari Trak-ball is of this first type.

The second variety uses a very similar mechanical arrangement, only the movement is transferred to potentiometers which can then be read with an analogue to digital converter. The problem with this type arises at the end of travel of the potentiometer.

There are two solutions. One is to let the rubber rollers slip, the other to give the potentiometers full 360 degree movement.

Well, I fired up the Atari Trak-ball with 5 volts and looked at the outputs. My findings are shown in Figure II.

As well as the fire buttons and supplies there are four signals giving direction and pulses for each plane of movement. The problem is how to convert these signals into a form that can be used by the BBC Micro.

It turns out there are many ways of achieving this, and it all depends upon what you want to use it for. This month we will look at one way and another couple of ways next month.

It has been said that my favourite programming language is Solder, so I first tackled a totally hardware approach.

The rational is that you would most likely want to use the Trak-ball in conjunction with existing software that makes use of the joysticks. These include games which require a good degree of control – not the violent side to side stuff – computer aided design packages and graphics-orientated environments such as that used by Apple Macintosh's mouse.

I say, I say, I say, what do you call a mouse on its back? Answer – a Tracker ball.

So I set to designing an interface which would turn the pulses from the Trak-ball into analogue signals suitable for feeding into the analogue input port. In this way existing software could be used without any form of modification or patch, the perfect solution.

What we need to do is take each pulse and add it to a total. Digitally this is easy, but in the analogue world we need to use an integrator, which is shown in Figure III. It consists simply of an operational amplifier with a capacitor as the feedback element.

Remember that an operational amplifier only amplifies the difference between its two inputs, and a capacitor will block direct current but let through changes. When we apply negative feedback, as in this case, the amplifier is trying to make the two inputs equal.

While this is the case the output will not change, but if a small voltage is placed on the negative input the output will go negative. This balances up the inputs again, but if the input is held then the output will have to be continuously changing, for it is only changes that can get through a capacitor.

The effect is that a constant voltage input produces a varying output. In mathematics if you integrate a constant you get a variable, and therefore this circuit is known as an integrator.

Note that the output will only ramp when there is a voltage at the input. When this is removed the output stops moving. Thus if we feed pulses into the integrator the output will ramp for a precise amount with each pulse and so will be at a level proportional to the number of pulses received. The speed or slope of the ramp depends upon the values of resistor and capacitor.

In our application we need to be able to ramp up as well as down, depending upon the direction of movement. This can be achieved using the Norton type of operational amplifier. As we have two separate movements to pick out we will need two integrators.

The full circuit of the Trak-ball interface is shown in Figure IV. This looks complicated at first sight but breaks down simply into two identical parts. Let's concentrate on one half and see how it works.

The step pulses are fed through capacitor C1 and split up. Some travel through R2 to the positive input and make the integrator ramp up. Some travel through R1 and D1 and make the amplifier ramp down. As R1 is smaller more "ramp down" signal is produced than "ramp up".

The direction signal is fed through an inverting amplifier to turn transistor T1

→

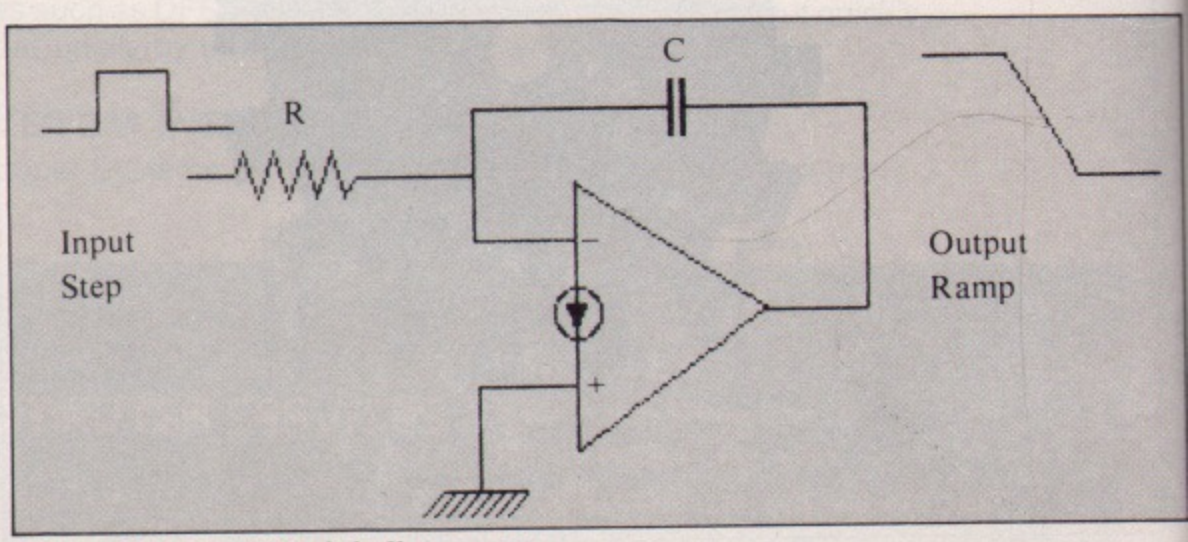

Figure III: Atari Trak-ball connector

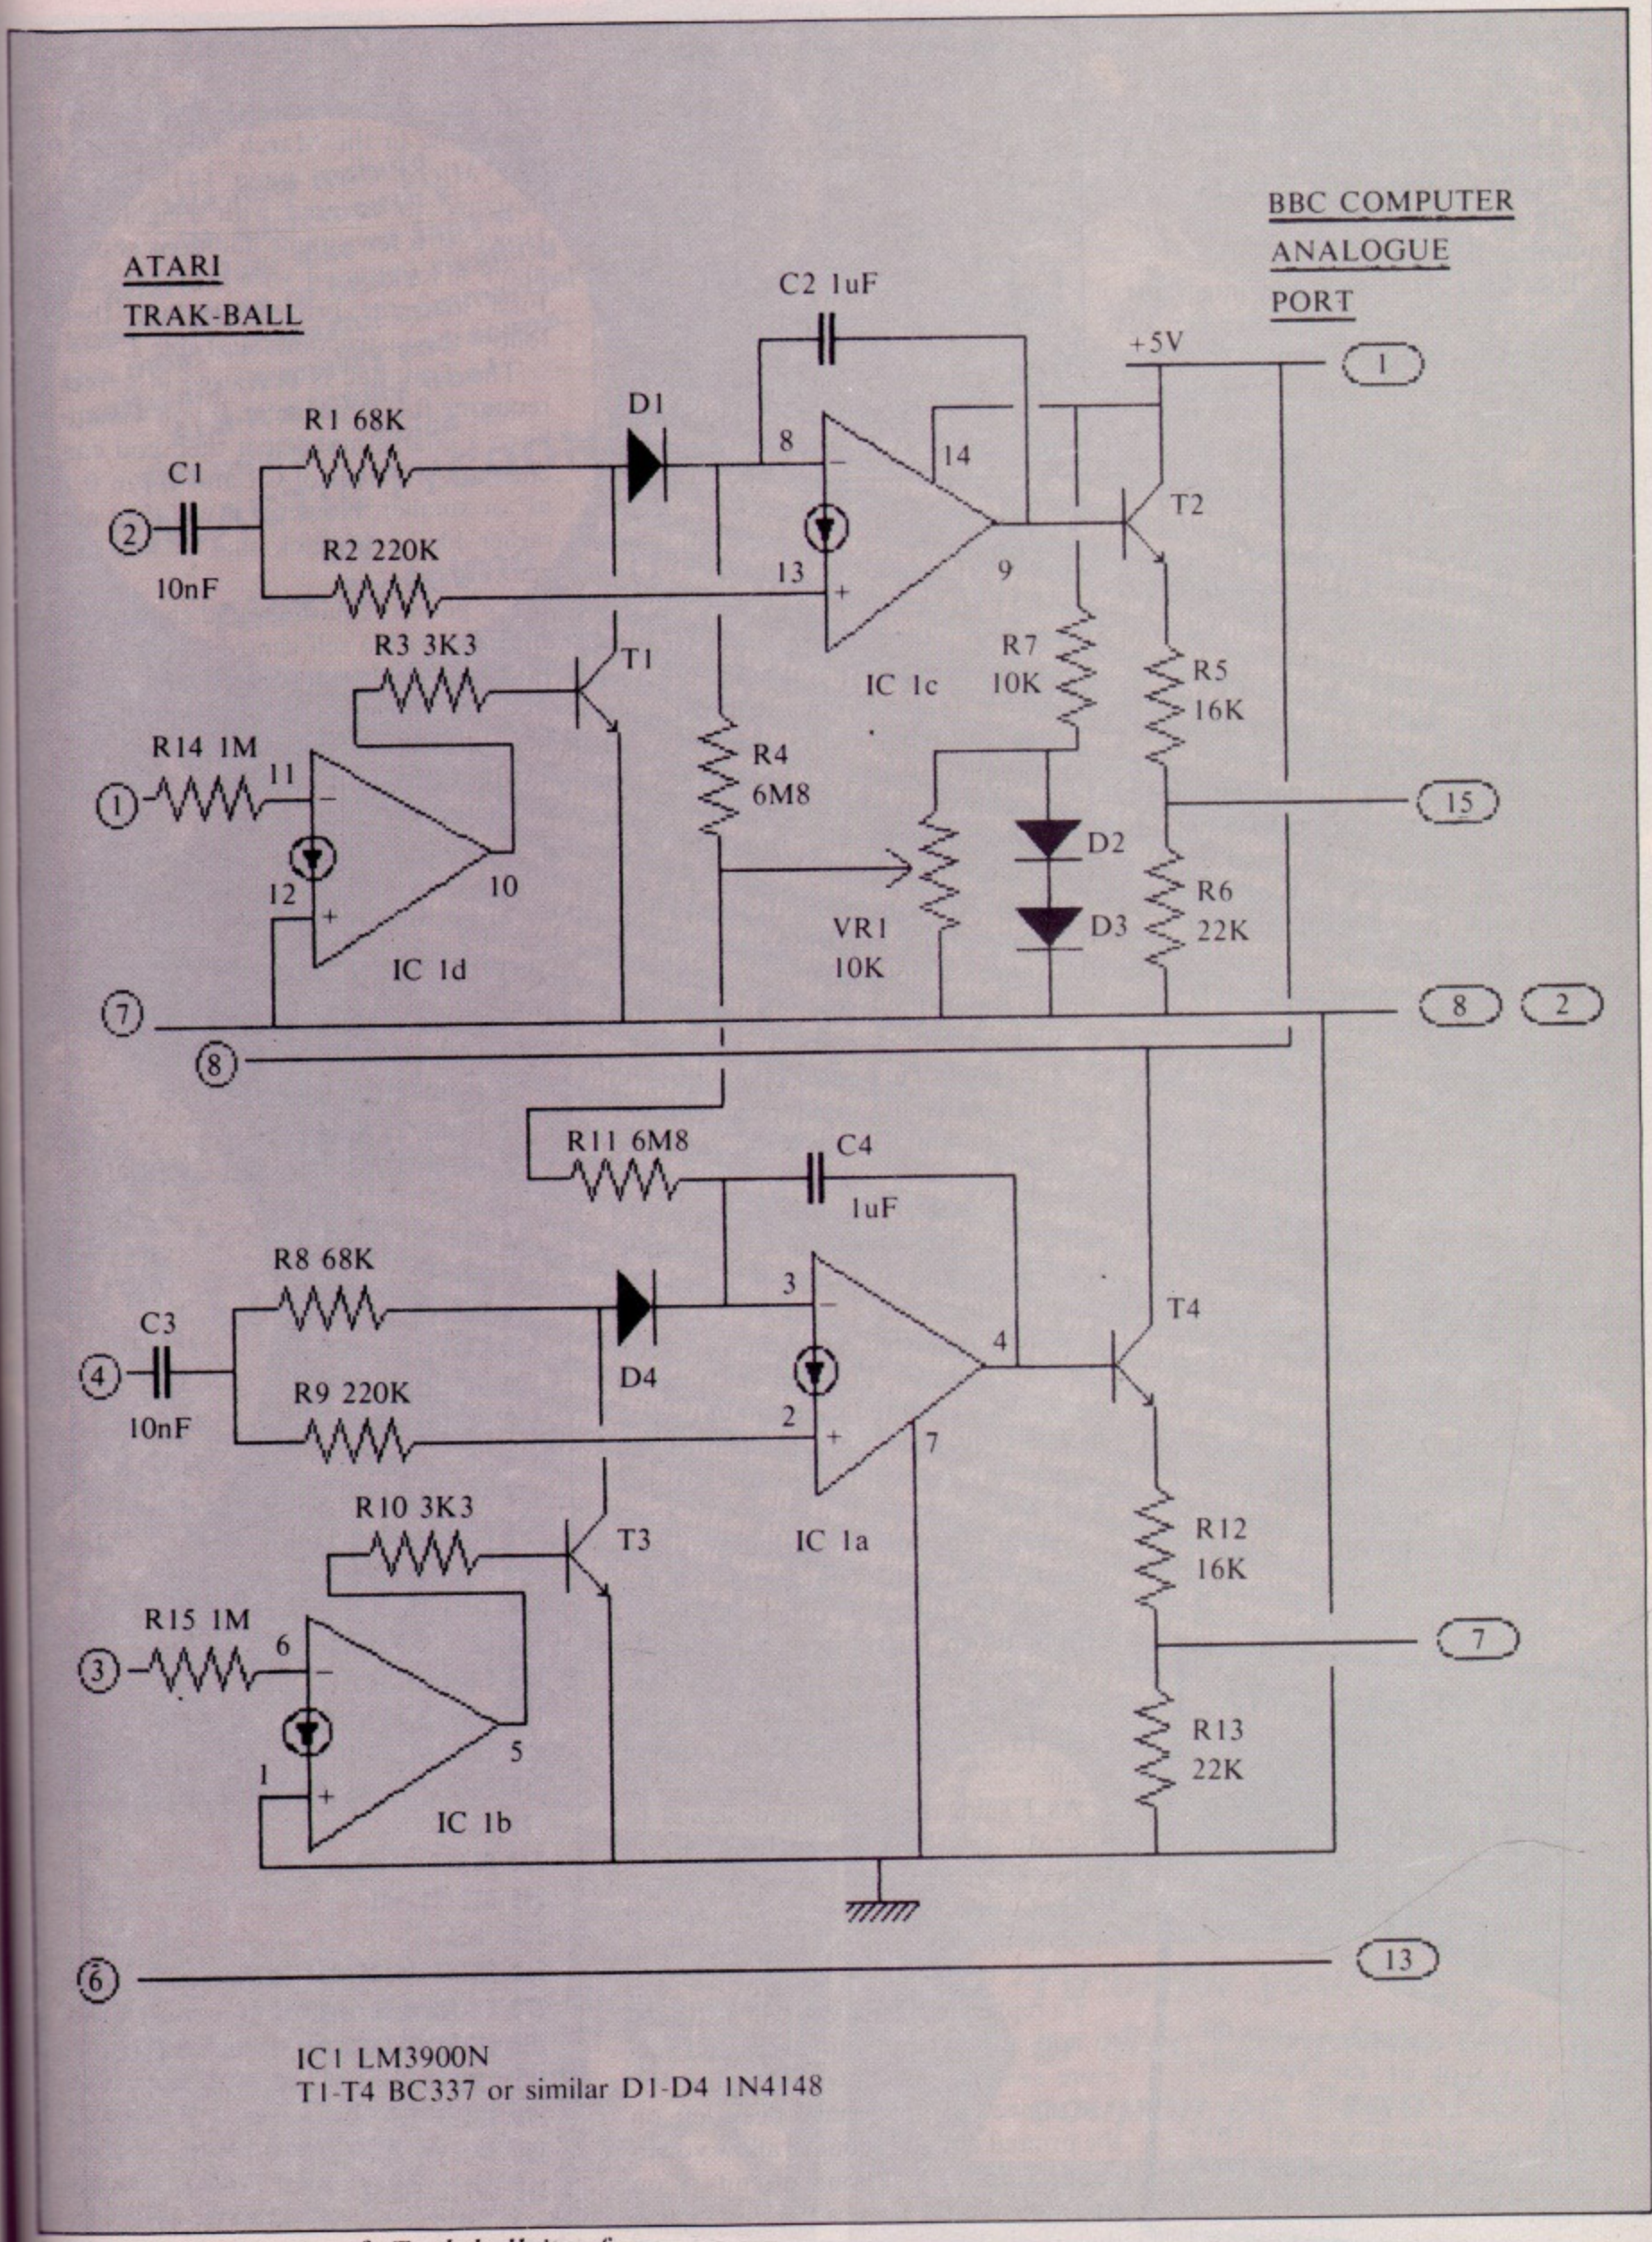

IC1 LM3900N
T1-T4 BC337 or similar D1-D4 1N4148

Figure IV: Circuit of Trak-ball interface

From Page 141

on and off. Think of T1 as a switch. If it is on then the ramp down signal will be shorted to earth and only ramp up signal will get to the integrator. Therefore this controls the direction of the integrator ramp.

The diode D1 stops the integrator capacitor C2 from discharging when T1 is on. The output from a Norton amplifier will not go to zero volts but sits slightly above this.

The transistor T2 acts as a buffer and removes this step as well as providing a low impedance input to the analogue input port. As the full range of the ramp is larger than is needed by the analogue input port, resistors R5 and R6 act as a potential divider to cut it down.

This arrangement will work quite well, but there will be a slight drift on the output. This is caused by the fact that the integrating operational amplifier needs a certain input current to maintain its output. This is compensated for by injecting a small amount of current exactly equal to that used via R4.

The voltage developed across two forward biased diodes D2 and D3 is

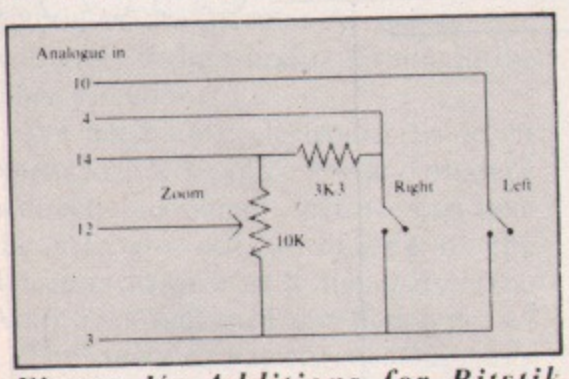

Figure V: Additions for Bitstik emulator

tapped off by VR1, and if this is adjusted carefully any drift may be cancelled. This adjustment serves for both integrators. Ideally it should be separate for each but in practice it works perfectly well.

The two inverting amplifiers on the direction signals are not strictly speaking needed. They are included to make the Trak-ball operate in the same "sense" as most games. As there are four amplifiers in a package it has not cost us anything except the price of two resistors. Finally the fire button is connected through.

I have laid out a printed circuit board for the interface and this, along with all the other components, is available as Body Build Pack No 19. It is also available ready-assembled.

The interface board plugs directly into the analogue input port with the Trak-ball plugging directly into the board.

Construction should present no difficulty. Just make sure the diodes, transistors and ICs are mounted the correct way round.

When completed move the switch on the back of the Trak-ball to the TB position and run the program in Listing I. This will allow you to change the length of each line by use of the Trak-ball.

Set the length to about half way and adjust VR1 until one line is slowly drifting up and the other is slowly drifting down. On my prototype I could get the adjustment so fine that it took over 10 minutes to drift across the full scale. In practice this will be no problem at all.

As I said, the circuit is designed to operate in the conventional way. However for those using Acorn's Bitstick this is reversed. To accommodate this operate the Trak-ball from the back by turning it around.

To replace a Bitstik you will also need to add another potentiometer and two more switches as shown in Figure V.

Connecting holes have been left on the printed circuit layout to allow you to connect up the additional circuits. I am told that Acorn have a patch to allow their new Elite game to run with the Bitstik so you should be able to use it with the Trak-ball.

If you want a free drawing package, I wrote one in the March 1984 issue of *The Micro User*, page 141. It was designed to be used with a light pen. However a few simple additions should allow it to be used with the Trak-ball. First load the program in and then follow the instructions in Table I.

The Trak-ball is best used in games requiring fine adjustment. If you want to have a coarse movement then you can change the values of C2 and C4 to 0.1 uF or smaller. However it will then act rather like a joystick that is not self centring.

For games requiring rapid changes in direction with a self-centring action the Trak-ball can be operated in the JS mode by changing a switch on the back. This makes the signals out behave totally differently and that will require another circuit and another month.

● *Body Build Pack 19 costs £17.95, and there is a ready-made version for £23.95. See order form on Page 197.*

To make the Light Pen Draughtsman program from the March 1984 issue of The Micro User work with the Trak-ball, make these changes:

SPECIAL TRAK-BALL OFFER

The Micro User **can offer readers the Atari Trak-ball at the specially reduced price of £19.99.**

To take advantage of this exceptional offer use the order form on Page 197.

EXCLUSIVE TO BUYERS OF THE MICRO USER MONTHLY DISCS OR CASSETTES . . .

We now include with each month's *Micro User* disc or tape a superb game or utility rivalling the most successful commercial software in quality and scope. And it's totally free!

This month's choice is:

GALACTIC TYCOON by Alex Antelme

OVER-population of Earth has given its inhabitants an overwhelming desire to seek pastures new. The only way to expand is upwards into the universe.

Decades of painstaking research and conspiracy have resulted in a planned financial take-over of 30 to 40 planets by the human race – and a chance for many people to become, as a direct result, very rich, very quickly . . .

Your task is to travel the universe buying whichever planets you think will make you a fortune.

Unfortunately, you have little control over where you're going – in fact your movements are controlled by something looking suspiciously like a pair of intergalactic dice!

If the planet you land on isn't owned, you'll have the chance to purchase and develop it, and, of course, charge visitors rent.

However, if it is already owned, you'll have to pay rent to the landlord.

The planets are divided into groups and as soon as you own a complete group you can start to develop a colony by building Space Domes. The larger the colony, the more rent you will receive from your casual visitors.

Alas it is not quite as simple as that . . . it never is.

You will be playing against people who are equally as ambitious as yourself and they are certainly not going to make life easy.

In addition to the obligatory landing dues for touching down on someone else's planet, you have to pay taxes, take chances and run the ever present risk of imprisonment.

On the other hand there is always the possibility of winning the Jupiter Lottery, and there's a generous annual salary every time you pass Earth.

Whatever the odds it's your job to turn them in your favour and see all your opponents bankrupt. (It's a hard life in the outer galaxy . . .)

Your playing surface is the screen, with individual squares representing the various locations throughout the galaxy. There are no dice to be shaken and no fiddly objects to move around as in other, earthbound variants of the game.

Your micro will take care of all that and will also prevent anyone "accidentally" miscounting either the numbers on the dice or the number of squares to move – it's met that sort of player before.

And that's all there is to it. The universe is there for the taking – may the force be with you!

DON'T FORGET!

Our December cassette not only contains all the listings in our December issue but also features the highly-acclaimed Omega Probe – a high speed, all action machine code arcade game that has won rave reviews from the computing press.

To order your tape or disc complete the coupon on Page 197

SUPERB HARD COVERS
for your BBC Micro & Electron

- **Engineered in top quality high impact ABS – very tough**
- **Super textured finish in cream to tone with your BBC Micro**
- **Looks good in the home**
- **Gives excellent protection**

Add forty BASIC commands to your BBC "B" or ELECTRON with this versatile new ROM.

ADDCOMM

GRAPHICS, LOGO GRAPHICS, TOOLKIT, GENERAL PURPOSE.

"ADDCOMM is a very useful and versatile piece of firmware and I would certainly recommend it to any BASIC programmer, it reduces the need to buy several ROMs as it contains almost all one could wish for."

"The thing I like most about ADDCOMM is the fact that you don't need to use those messy O.S. commands, you can enter the commands just like BASIC statements in a program."

"Marks: 10 out of 10."

"Let's hope other Companies can give us such good value for money!"

Reviewed 'VIEWFAX - TUBELINK".

"In addition to the 31 BASIC programming utilities the EPROM provides some useful enhanced graphics facilities, including circle and ellipse drawing commands, colour fills and commands to scale and rotate your creations."

"The ADDCOMM from Vine Micros is probably the best value for money out of the toolkits."

"My own preference is the ADDCOMM,"

From TOOLKIT review, ACORN USER, Oct. 1984

"The combination of a variety of basic toolkit type utilities on the same chip as extended graphics commands is very useful."

"With the addition of ready to use ROTATE and TRANSlocate commands BBC graphics become child's play."

Reviewed "MICRO USER", Oct. 1984.

Tomorrows Dream Software Proudly Presents

TITAN

The debugging monitor utility for machine code programs on the BBC B

Includes:

★ Single stepping through RAM and ROM – including operating system
★ Intelligent memory mover
★ Breakpoints in ROM
★ Microsecond timer
★ Machine code program relocator
★ Single step through graphics routines
★ Intelligent masked string search routine

Plus –'Front panel, display, OSCLII commands available within debugger, conditional breakpoints at relative branch instructions, display of four memory windows updated during single stepping, user zero page preserved during single stepping, arithmetic operators + − × −, output to printer, ASCII dump, hex dump, disassembly, block fill, plus much more.

With complete instruction booklet

ONLY £10 on tape, £12 on disc, from TDS

ACQUIRE THE RAVEN BOARD POWER

. . . at Twillstar or your local Acorn dealer

***20K USABLE MEMORY**
***CUSTOMED MADE**

The RAVEN-20 is a 20K RAM EXPANTION for the BBC MICRO, MODEL B, fitted with O.S. 1.2.
This specially designed product plugs in to the C.P.U. socket of your micro (centre socket of the 3 available) with the miniumum of effort – the pins are specially custom made, thus avoiding any possible damage to the circuitry!

The RAVEN BOARD provides the user with an extra 20K of usable RAM in screen modes 0 to 3. This together with the aid of software makes the system completely transparent to both the user and the computer.

The RAVEN-20 software ROM gives much more than just the standard commands, it has been programmed to give commands like; "STAR S. SAVE", LOAD for saving and loading the screen, "R. TEST" for testing the board; "STAT" for checking whether Board ON or OFF . . . and many more unique features – not available in any other product.

The RAVEN-20 comes complete with;
1. RAVEN-20 Board.
2. RAVEN-20 software.
3. Fitting and operating instructions (see picture).

EXPANSION BOARDS

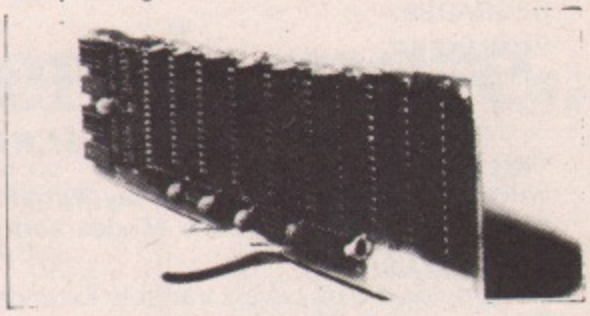
RAVEN-20 BOARD

The RAVEN-20 is a 20K RAM EXPANTION for the BBC Micro, Model B, fitted with O.S. 1.2.

This specially designed product plugs in to the CPU socket of your micro (centre socket of the 3 available) with the minimum of effort. The pins are specially custom made, thus avoiding any possible damage to the circuitry.

The RAVEN board provide the user with an extra 20K of usable RAM in screen modes 0 to 3. This together with the aid of software makes the system completely transparent to both the user and the computer.

The RAVEN-20 software ROM gives much more than just the standard commands, it has been programmed to give more and better commands! Priced at £69.95 inclusive of VAT. Please add £1.50 for post and packing.



RAM-ROM BOARD

The RAM-ROM extension board gives an extra 6 sockets for extra ROM's and 2 slots of RAM. This RAM is not an extension of BASIC. It is intended that the RAM be used to develop your own ROM based software. There are in fact seven sockets on the board, the 7th replaces the socket on the main board that would otherwise be taken by the ROM board. (The RAM-ROM board can accommodate both 2764 type EPROMS as well as 27128 EPROMS and ROM.)

The RAMAMP board will not cause overheating. it comes with fully fitting instructions, tested and heat tested before depatch.

Prices: Without RAM fitted £33.50. 1 x 16K RAM fitted £47.00. 2 x 16 RAM fitted £59.00

All prices inclusive of VAT. Please add £1.50 for P&P.

HOW TO ORDER

You may purchase any of the items listed by cheque made payable to: Twillstar Computers Ltd. Barclaycard or Access. All you have to do is fill in your requirements on a separate sheet of paper, post to us and we will despatch with 24 hours, subject to availability. All prices inclusive of 15% VAT. ADD £2.50 P&P for orders below £150. Over add £8 P&P. Credit card holders may order by telephone. Give card number, name, address and items required. Please note VAT is not charged on export orders. Export customers please ring for details of P&P.

SAVE BANK CHARGES

Produce your own up-to-date bank-statement and avoid falling between having too little money in your Current Account, and being forced to pay bank charges and ruinous interest, or having too much on which you get no interest with a Current Account.

Program **BANK** carries details of all your standing orders, and debits and credits them automatically on the correct date. You may have forgotten that on the 17th May you have to make a payment of £53.85 to the Royal Bedbug Society, but program **BANK** does not.

Enter all ingoings and outgoings as you make them and you will always know your accurate balance. If you have a printer, it will produce for you a far more detailed and up-to-date bank statement than the bank gives you. You also get a list of your standing orders if you want one. You also get a warning of any regular items due within the next seven days.

Can be used for as many accounts as you like.
Suitable for BBC(B) with 40 track disk drive with or without printer.
Send cheque for £12.50 for 40 track disc to:

MODEMS

WS2000
A world standard direct connect modem switchable between 75,300/300, 600, 1200/75, 75/1200 baud, awaiting BT approval. It is compatible with Bell 103/113/108, 202 and CCITT V21 & 23 standards and allows you to communicate with virtually any computer system in the world. This is one of the new generation modems, that will probably cover any communications standards you would ever need. This is the modem that will cover Prestel, Micronet, Telecom Gold, Distel, Microweb, One-to-One, Bulletin Boards both in the UK and abroad, ect. etc. as well as user-to-user communication. It also has a rather useful facility of 'Reverse-Prestel' mode i.e. 75/1200 so that you can communicate with other users who only have a standard 1200/75 type modem. What possibly gives this modem its biggest advantage is its option of computer controlled switching between all modes of operation. In addition, separate auto-answer and auto-dial cards are available, giving this modem possibly the greatest potential of all. Mains powered £148.00 Please phone/write for details of optional extras

TELEMOD-2
A BT approved modem complying with CCITT V23 1200/75 Duplex & 1200/1200 Half-Duplex standard, that allows communication with Viewdata services e.g. Prestel, Micronet etc., as well as using 1200 Baud for communicating with other computer users. Mains powered. TELEMOD 2 £71.00 BBC Lead £3.50

STEV (0438) 721936

VERDICT ON A SOCCER MANAGEMENT SIMULATION

In Nov. 83 we announced LEAGUE DIVISION ONE. The author, a self-confessed soccer fanatic, spent 4 years in the research Dept. of International Computers working on computer simulations of human recognition processes, and 6 years at British Aerospace and GEC working on aircraft and missile simulations. Hear his opinion:

"As both a Micro and football fanatic I bought 5 "soccer management" games, only to be disappointed that all of them substituted simple-minded mental arithmetic for "management" judgement and decision making. Not one attempted to show any meaningful "football match" which would allow a "manager" to judge players and teams. Their sales pitch was based on a headcount of meaningless features. So I set about writing my own".

But was he successful? Here is the verdict of our customers:

"Congratulations on a program that actually corresponds to the game of football". David McClelland, Bangor.
"Your game is excellent, the best simulation for any computer". N.W. Edwards, Beaconsfield.
"I think you have in your product a complete simulation of the highest standard". W.R. Moys, BRIXMIS.
"So realistic it certainly is the best game I've played (and not just on the BBC!)" W.M. van Leeuwen, Holland.
"What a superb management game it is". Neil Ormsby, Leeds.
"Thanks for a brilliant program". P.J. Sterry, Peterborough.
"FANTASTIC!" R. Foster, Benfleet.

We could fill pages of this magazine with such comments. But let us introduce you to:

BBC 'B'
(all OS)

DIVISION ONE '85'

TAPE £9.95
DISC £12.95
(all inc.)

AND

ELECTRON
BBC 'B' (all OS)

SOCCER SUPREMO

TAPE £9.95
DISC £12.95
(all inc.)

BOTH GAMES are role playing games in which you are the manager of a newly promoted 1st Division side. You have a squad of 18 players and a further 15 (12 in SS) available on the transfer market. You must first confirm yourself as a 1st Div. side, assessing your weaknesses and strengths, and then bring along your youngsters to replace your "veterans" (the game lasts for 5 seasons) and intelligently using the transfer market. All decisions are based on YOUR judgements about skills and abilities as you watch your team play through a 42 match season, each match being SIMULATED in your Micro and displayed on your TV or VDU.

DIVISION ONE '85': This game makes justifiable the term "strategic" as applied to soccer management games. Strategy implies "planning ahead" and decisions taken in the 1st season may not bear fruit until the 4th or 5th seasons (up to 20hrs later in the game) but these decisions must be taken if you are to win the Championship. This game will test your footballing knowledge to the full, coping with injuries, suspensions, financial limitations, a not always helpful press, aging players, inexperienced youngsters etc, etc.

SOCCER SUPREMO: The real game of football is enjoyed on many levels; the strategic over several seasons, the seasonal, and Saturday afternoon's excitement. While retaining the realism of management simulation described by the author this game places more emphasis on the football match simulation with a "3D", 22 MAN, FULL PITCH graphics illustration of each match. For those who don't like games that have you banging your head against a brick wall for relief but enjoy the game of soccer, then this is the version for you.

COMBO tape/disc: If you REALLY cannot make up your mind, or feel you would like to graduate on SS before moving on to DIV. 1 85 then we do supply a COMBO tape/disc for the price of one game plus £3.

CURRENT OWNERS: You will receive a discount of £7 on your tape, £9 on your disc of LD1 against the above.

BBC 'B'
(all OS)

PORTFOLIO

TAPE £9.95
DISC £12.95
(all inc.)

PORTFOLIO is an investment game for 1-4 players, or teams of players. Each player/team begins with £1,000 and invests his money in a variety of companies against a background of continually changing international, national and commercial news. The news items affect the share values of the companies in a variety of different ways, and the players must shift their money around to maximise their investments; maybe even to become a millionaire.
The game is an ideal family game, or perfect in the classroom with a high pupil/micro ratio. It's suitable for 12 years old and above, though younger do enjoy the game with some help from their friends, and in this game, competitors. For the adult we have made some of our news items somewhat cryptic, occasionally even red herrings, to really make them think about the effect on share values. Because we call it a family game we have tried to see that there is something in it for all members of the family. Teachers can even tailor the news items to suit the capabilities of the pupils.

All orders DIRECT SALE.
Orders by post delivered in 3/4 working days.
ACCESS telephone authorisation 1/2 days.

In Part V of our in-depth examination of the extra instruction set available in the second processor, PETER JOHNSON looks into . . .

The Ins and Outs of info swapping

PREVIOUSLY we have looked at the 65C02 chip used in Acorn 6502 second processors for the BBC Micro. Now I want to view the system in a more general sense, discussing the techniques for running programs in the IO processor and the second processor and how information may be passed between them.

A common source of confusion when writing programs for the Tube is what is meant by Tube compatible. In particular people seem to think that any accessing of the memory, such as using Basic's ! and ? operators, will render a program incompatible. This is not true if the memory being accessed is part of "language" rather than "operating system" workspace.

In summary, zero-page from &00 to &8F and locations &400 to &7FF are language space, and this may be peeked and poked with impunity (though not necessarily with Acorn's approval) on either side of the Tube.

For example, if you have a machine code program that returns a result in Basic's static variable A% by poking locations &404-407, it will work with or without the Tube, providing the program is running in the same processor as Basic.

"Ha," you say, "if that's true why doesn't my Computer Concepts graphics ROM return correct results in the static variables when the Tube is on?" The answer is that the graphics ROM is a service ROM.

Service code always lives and executes in the IO processor, whether a Tube is connected or not. This means that writing to &404-&407 from service code when a Tube is connected does not write to Basic's variable A%, but to the Tube code which is located in pages &400 to &700 of the IO processor when a second processor is fitted.

The rule to follow if you are writing service ROMs is not to access language workspace if you want your code to work with the Tube. Unfortunately most toolkit ROMs ignore this rule.

Acorn provides numerous MOS calls which guarantee that the IO processor memory is accessed, for example the OSBYTEs to read and write the three pages FRED, SHEILA and JIM. There are also the OSWORDs 5 and 6 for peeking and poking the IO processor respectively.

These calls should be used whenever possible, but usually carry a speed penalty with them. Faster ways of accessing the IO processor from the second processor (and vice versa) are discussed later.

It is informative to look at the hardware that comprises the Tube before we look at the software protocols.

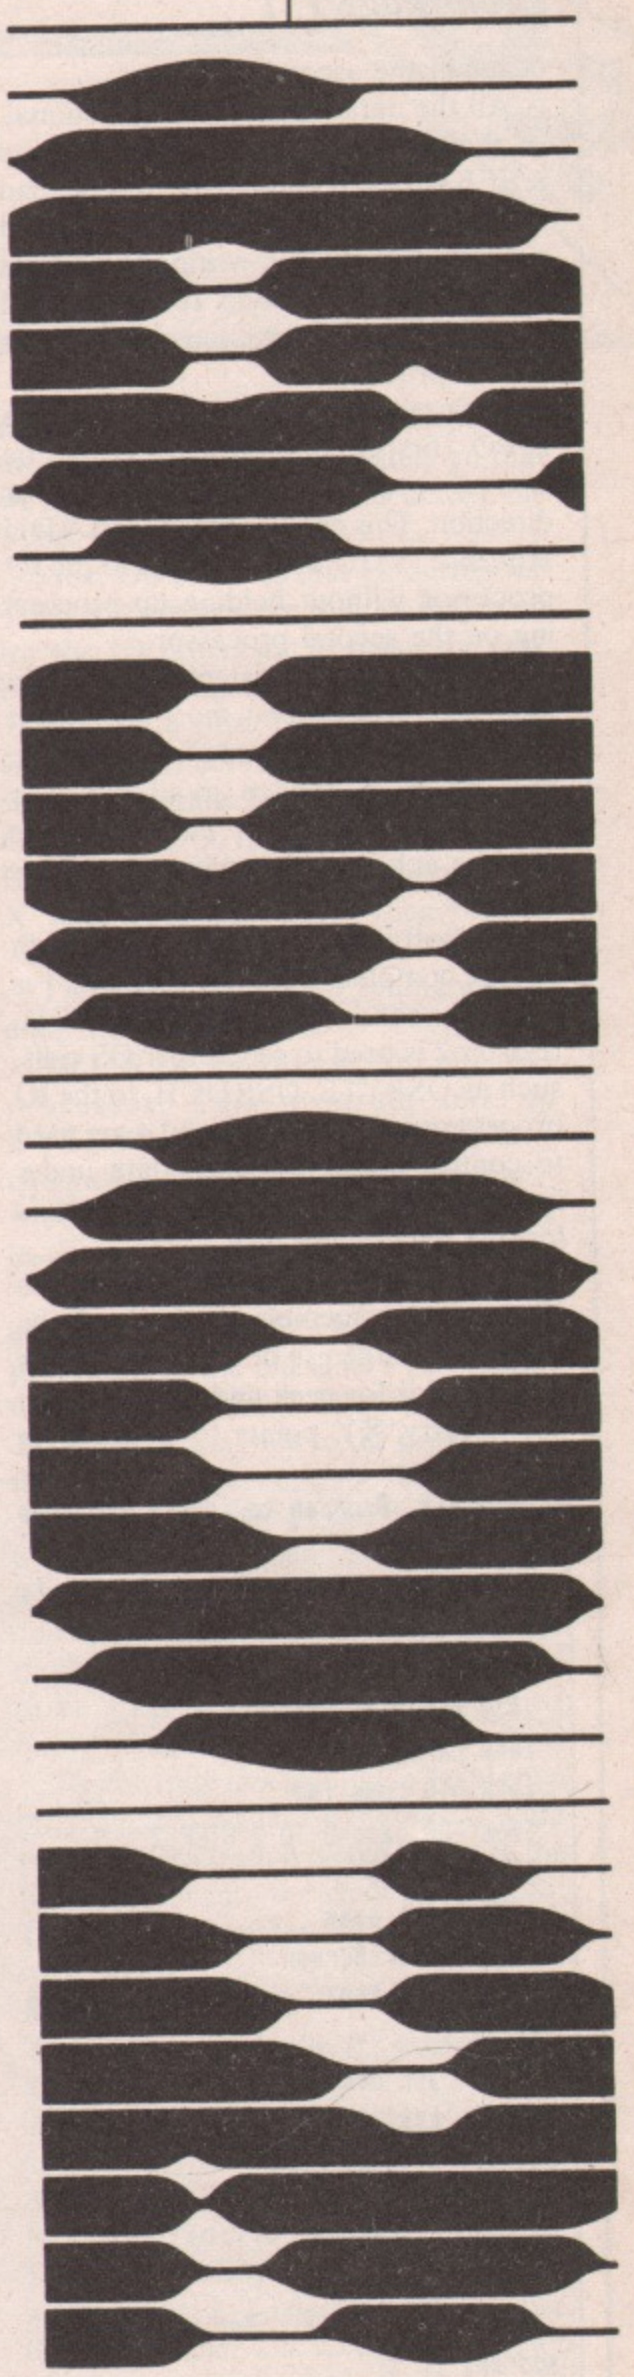
The Tube chip, which is common to all types of second processor, has eight registers – four pairs of bi-directional data/status pairs. Figure I shows how the registers are mapped into the memory of the BBC Micro and the 6502 second processor.

IO processor address	*Register name*	*Second processor address*
&FEE0	**Status register 1**	**&FEF8**
&FEE1	**Data register 1**	**&FEF9**
&FEE2	**Status register 2**	**&FEFA**
&FEE3	**Data register 2**	**&FEFB**
&FEE4	**Status register 3**	**&FEFC**
&FEE5	***Data register 3**	**&FEFD**
&FEE6	**Status register 4**	**&FEFE**
&FEE7	***Data register 4**	**&FEFF**

Figure I

Accessing registers marked * in the IO processor will cause an interrupt to

→



SECOND PROCESSOR

From Page 151

occur in the second processor.

All the data registers are birectional, so that a byte written to, say, address &FEE3 in the IO processor may be read at address &FEFB in the second processor. Similarly, writing to address &FEF9 in the second processor will transfer a byte to the latch at &FEE1 in the IO processor.

Data register 1 is actually a 10 byte FIFO (first-in first-out) buffer in the second processor to IO processor direction. This enables the longest VDU sequence (VDU 23) to be sent to the IO processor without holding up processing on the second processor.

The four status registers each contain two flags in their two most significant bits. Bit 7 is "data ready" for reading, and bit 6 is "space available" for writing. Synchronised data transfers may be achieved by polling the status registers.

The software protocols that Acorn use are complex. But briefly register 1 is used to send bytes to OSWRCH, register 2 is used to send other OS calls, such as OSBYTE, OSRDCH, to the IO processor and registers 3 and 4 are used to control block moves of data under interrupts used by filing systems's loading and saving files.

A high level facility exists to access IO processor memory from the Tube and involves the use of OSWORD calls 5 and 6. 5 is for peek and 6 is for poke.

On entry XY points to a five byte parameter block. The first 4 bytes are the address in the IO processor to access and the fifth byte is the value read or the value to be written.

Program I shows how the OSWORDs may be used to invert the value of every byte on the screen (which is in the IO processor of course) from the Tube.

For a Mode 0 screen this takes 4.06s when executed from the IO processor, and a massive 8.76s when executed across the Tube. If the routine at invertByte is replaced by the code:

```
ldy  0
lda (parBlk),Y
eor  &FF
sta (parBlk),Y
rts
```

the program only takes 0.38s in the IO processor – ten times faster than using OSWORD.

The program can be further optimised by using Y as the low-byte of the address and putting the code in line: this takes 0.20 seconds for a Mode 0 screen. CLG takes 0.60 seconds. I shall look at ways in which this speed may be improved later.

When transferring data in the other direction – that is using a program running in the IO processor – you must use the calls that are provided for filing systems.

These calls may only be used when the Tube is active as opposed to the OSWORDs which are available at all times. The routine to call is at location &406 in the IO processor.

The task performed depends on the value in A. XY always points to a four byte parameter block holding the address of the first byte to be accessed (in the second processor). Possible values of A are:

A=&00	**Start a second processor read**
A=&01	**Start a second processor write**
A=&04	**Run a program at address in parameter block**
A=&C0+n	**Claim the Tube for filing system n**
A=&80+n	**Release the Tube from filing system n**

The advantage of these calls is that once the read/write has been set up repeated access can be made simply by accessing the Tube data register at address &FEE5.

However you do have to introduce a small delay between sending bytes. This is in order to give the code in the second processor time to process the incoming or outgoing data.

The calls with A=&C0+n and A=&80+n must be given before you start and after you've finished using the

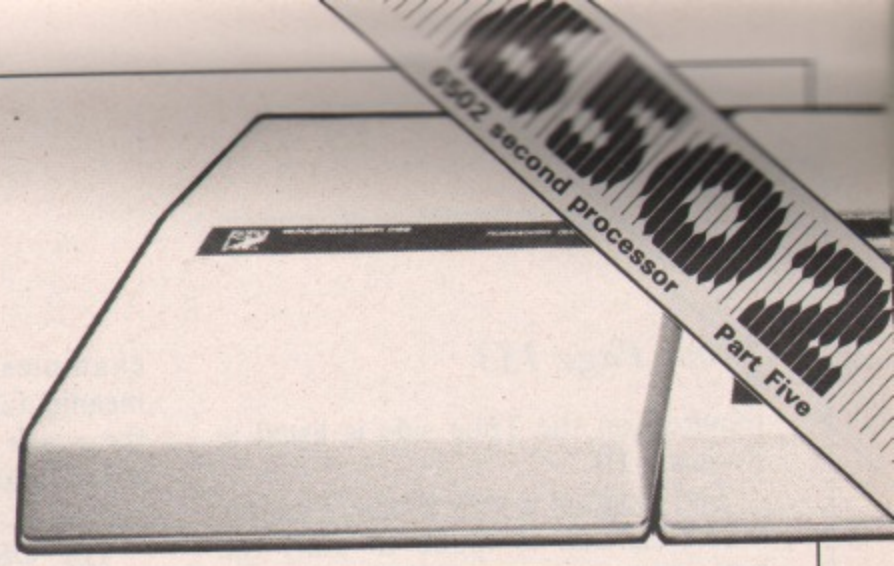
Program II



Tube. Several values of n seem to be in use, varying between filing systems. In order to avoid conflicts, I recommend that you use n=&08.

When claiming the Tube you must use a loop, such as lines 1150-1180 in Program II, to wait for the Tube to become available. No such loop is required when releasing the Tube.

Program II illustrates the use of these calls. It reads every byte on the screen, inverts them and saves them in the second processor. It then reads the bytes back, storing them on the screen.

The last line saves the object code with the correct high-order addresses, for example it loads and executes in the IO processor. To see it in action, type:

***IO_TUBE**

In Mode 0 this takes 0.59 seconds, not counting the load time. This is just three times slower than the fastest direct method, so transferring data using a program in the IO processor is obviously much quicker than doing it the other way round.

Note that the small delays introduced by "jsr del" seems to be sufficient when using the 6502 second processor. You may need to increase (or decrease) these when using, say, a Z-80 second processor.

Sometimes we want to make a program start in the IO processor, even when a Tube is attached. The easiest way to do this is set the load and execution addresses of the program and *RUN it, just like the 10_TUBE above.

However, this is very inconvenient if the program is to be called more than once, especially when using tape. A better solution is to load the program just once and then "activate" it when required.

Starting a program from the second processor is a problem because most likely we want to call a routine to start the program in the IO processor and then have it return immediately so that we can start "talking" to it across the Tube.

Most OS routines that go across the Tube will not achieve this, as they wait for the IO processor to finish the task before returning.

There is one call however, an OSBYTE, which returns straight away, without waiting for a reply. This is OSBYTE &9D, the so-called fast Tube OSBPUT. This gives the parameters in X and Y to the Tube, then returns without waiting for a result.

This is the method for setting up two cooperating processes:

*RUN a program in the IO processor. This program sets up BYTEV so that OSBYTEs are channelled through our own routine – which is also part of the program loaded in.

The new OSBYTE routine looks for calls with A=&9D. Any others get passed on to the old OSBYTE routine. Calls with A=&9D interact with the Tube registers to talk to the program on the other side.

Once the IO processor set-up program has been executed, the program in the second processor simply calls OSBYTE will A=&9D, then talks directly to the Tube. Some protocol has to be arranged so that both programs know when to return.

To illustrate this technique I present a program that reads 256 bytes (one 6502 page) of data from a paged ROM in the IO processor into the second processor. To start the transfer, an OSBYTE call with:

A = &9D
X = start page in the IO processor
Y = paged ROM number

is made. To read the first page of ROM number 15, for example,

A = &9D (our clever OSBYTE)
X = &80 (address &8000)
Y = &0F (ROM number 15)

would be used. To perform the transfer, the register pair 2 is used. The program

From Page 153

required on the Tube side is listed in Program III.

The program is very simple. First the OSBYTE call is made to start the transfer process in the IO processor. The values of X and Y are just examples, and can be any other meaningful numbers. If X is outside of the range &80-&BF (is not in paged ROM space) the value in Y does not matter.

The OSBYTE will return straight away, and the program in the IO processor will start to send 256 bytes from the required address and ROM number. The main loop simply waits for data to become ready in the data register and then stores it in the buffer. This is 256 bytes of memory that follows the program (though they could be anywhere).

After the page has been transferred

BBC MICRO COMPUTER CASES BY ANTLER.

Antler, the foremost name in British luggage announce the D618 – BBC micro computer case:- External dimensions 22" x 16" x 6" deep (560mm x 450mm x 150mm)
* High impact quality rigid ABS shells give excellent wearing characteristics and protection. * High density foam interiors with hard wearing black brush nylon. * Exclusive hardened aluminium box girder frame with radius corners for additional strength. * Steel toggle locks with lever action draw the frame tightly together. This with the tongue and groove frame protects against dust and moisture. * Double handles bolted through the frame provide a strong secure anchorage. * Cases carry after sales service and 2 years guarantee covering materials and faulty workmanship.

INTERIOR LAYOUT

Interior has profile cut foam to provide a firm grip to the computer, tape machine and 9 cassettes. Hand grip access slots for easy insertion and withdrawal of equipment. Foam protection beneath equipment. Separate spacious compartment with rigid securing top for leads, 4 block 13A connector, extras – manuals, books or cassettes, plus others.

ANTLER THE BEST OF BRITISH LUGGAGE.

£49.90 + £2.50 carr. (incl. VAT) Direct from factory.

SPECIALIST CASES DIVISION manufacturers a range of ABS cases – VIZ: Toolcases, cases for samples and sales display, carrying disc packs, printed circuit boards and many others.

Contact us for your particular needs and further information. Gordon Ashworth – Manager, Specialist Cases Division, Antler Ltd, Bury, Lancs. BL9 9EF. Tel: 061-764 5241.

the program returns, as it is assumed it would be called as a subroutine of some other program.

The cooperating program that resides in the IO processor is listed next. It is in two parts, a very short part which simply sends all OSBYTE calls to our routine, and the routine itself.

The set-up routine modifies the code in the main routine by storing the old OSBYTE address in it. I defend this rather unpleasant practice by saying that the Tube code in the second processor is full of self-modifying code.

'A system could be set up for copying sprites from the second processor to the screen – resulting in megagames with high speed graphics'

The main program checks that the OSBYTE received is one of ours, that is A=&9D. If not, the default OSBYTE in the MOS ROM is called immediately. If A does hold &9D then X will be the page address and Y the ROM number.

Note that I don't bother to save the old ROM id. before changing it – the selected ROM has no relevance when the Tube is active.

The main loop is very similar to the one in the second processor program but instead of waiting for a byte to become available, it waits for a space to appear in the data register so that a byte can be sent.

To use the program, the IO processor part must be executed using, for example:

***RUN XFERI**

Next the second processor part can be used using:

***RUN XFERT**

or by loading XFERT and calling it from machine code. This will cause the 256 bytes from address &8000-&80FF in ROM 15 to be copied across into the buffer in the second processor.

An interest variation on this theme is to transfer bytes in the opposite direction – that is write the IO processor memory. With slightly modified protocols a system could be set up for copying sprite shapes at high speed from the second processor onto the screen.

This could be a way of having "megagames" which use the large memory of the second processor and also have high speed graphics.

If you think this is impractical, consider that (rumour has it) Acornsoft has a version of Frogger which runs quicker on the Tube than without it.

There are obviously many more ways of using the high-speed data transfer capability of the Tube. Some of these may be covered in later articles.

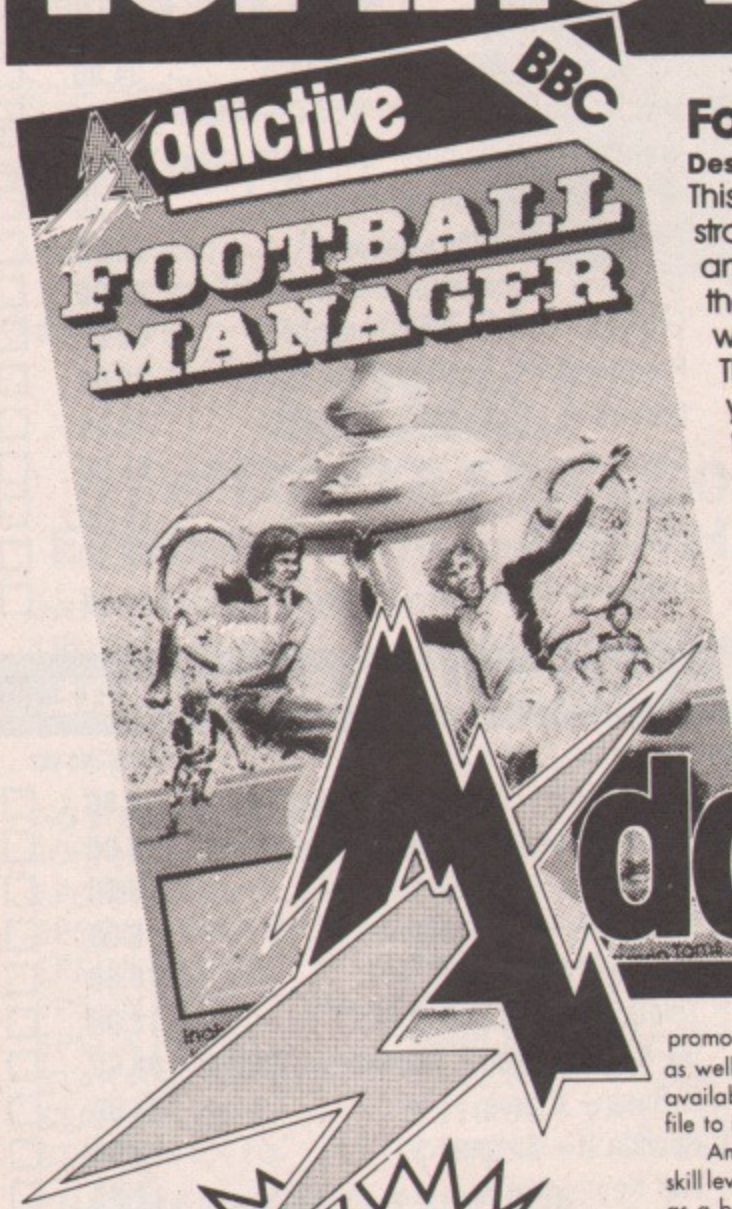
The No.1 Football Game*

Now available for the BBC model 'B'

BBC Model 'B', ZX81 16K, ZX Spectrum 48K and Commodore 64



Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game:–

★ Matches in 3D graphics ★ Transfer market
★ Promotion and relegation ★ F.A. Cup matches
★ Injury problems ★ Full league tables
★ Four Divisions ★ Pick your own team for each match
★ As many seasons as you like
★ Managerial rating
★ 7 skill levels
★ Save game facility

Addictive

* Home Computing Weekly BBC Charts 4 Weeks at No. 1.

Programmers
We want your software. Send us a sample. If accepted, we will supply generous royalties plus free advice from Kevin himself!!

Football Manager from Addictive Games should send soccer fans 'over the moon' but the game scores highly with non-enthusiasts, too.

As manager of your favourite team, it is your job to decide each week who will play in the next match on the fixture list, whether to buy or sell players, and whether to borrow money or repay a loan according to the club's financial fortunes.

Whichever team you choose, you start in division four. By the end of 22 League matches, you hope to be promoted to division one and possibly win the FA Cup as well. If the team closest to your heart is not available, the game allows you to customise the data file to include your own team and players.

Among the many other options offered are seven skill levels ranging from beginner to genius. If you start as a beginner and do well, your rating is adjusted automatically at the end of the season. The most crucial decision affecting your team's performance, however, involves the selection of players and it is based on the attributes of the two opposing teams. Their energy, morale, defence and attacking strength are valued on a scale of points, and players are chosen according to positional skills and energy they can bring to the team. True to life, players' energy is depleted after a game and restored after a rest.

Having settled all the details, you can then sit back and watch the game – a short, animated sequence showing the 'highlights'. Scores, injuries and new league placings are all displayed at the end.

The combination of graphic action and informed decision-making distinguishes Football Manager from many other strategy games and the scope and careful presentation of the program make it entertaining and absorbing.

(Acorn Programs – August/September 1984)

DIVISION ONE

As Automata have also proved. Addictive Games has shown that it is possible to write excellent programs in Basic – Football Manager started life as a ZX81 program ages ago and is still going strong.

The latest version is the most impressive yet; running as it does on the BBC B, the action is fast and the animated football sequences most impressive. On the BBC the little men have evolved from match-sticks to Subbuteo figures. Another addition is the provision of a fixture list which you can consult.

Apart from that, it only remains to summarise the game for those people who don't know it. As a football manager you choose the teams buying the players, deciding who to play, keeping morale high and basically living out your footballing fantasies as you try to move your team up the divisions.

Matches are decided according to a vast number of factors, only one of which is luck, and you get to see the highlights of each game.

Quite honestly, John, I think you're going to be over the moon about this one unless you're strictly TT on footballing matters in which case you'll probably be sick as a parrot, squire.

(Popular Computing Weekly).

Available from software stockists nationwide, including WHSMITH, Boots & John Menzies

P - for pictures

ESCAPE returns you to this page.

FIRST CLASS
Learning Programmes
for Education and Training

FRENCH REVISION

For 16+, 'O' Level and CSE

— first of a new series of computer assisted learning programs for the BBC model B and Electron.

Grade A *(Hardest level)* — Agreement of the past participle, sentence structure and idiom.

Grade B — Comparative/superlative of adjectives/adverbs formation/use of perfect tense, emphatic/conjunctive pronouns.

Grade C — Partitive article, personal/relative pronouns, formation of future and pluperfect tenses, formation of imperative.

Grade D *(Easiest level)* — Basic concepts of gender, number and agreement, formation of the present tense.

A Keyboard Introduction is included with each grade.

Students are required to complete carefully constructed sentences that contain relevant vocabulary for the 16+ examinations. Each grade has at least 4 hours revision for the average student.

Available on 40 or 80 track diskette or cassette.

Prices, including VAT, postage and packing:—

	Cassette	Diskette (40 or 80 track)
One grade	£9.95	£13.95
Any 2 grades	£18.95	£24.95
All 4 grades	£34.95	£39.95

Softlife

NUMERIC KEYPAD
for the
BBC MICRO

Any BBC user will be aware that entering numeric data on the BBC keyboard, whether for business, educational or scientific purposes, is a slow and inefficient process.

The Softlife Numeric Keypad changes all that. Speedy entry of numeric data is now possible – as on many more expensive computers.

£59
£1.25 p&p
+ VAT

Features:
- ★ N-Key rollover
- ★ Only connection to user port
- ★ High quality keys
- ★ Hand held, or use by micro
- ★ Software provided on eprom
- ★ Simple selection command
- ★ Standard mode uses no user RAM – optional fully programmable mode also available
- ★ Maximum software compatibility

Also available:
Softlife's much acclaimed EPROM PROGRAMMER *("I'd buy one" – Acorn User)* with software on Eprom and documentation – **£66** + £1 p&p + VAT
2764 Eprom (250 ns) – **£6.50** + 50p + VAT
27128 Eprom (250 ns) – **£17.25** + 50p + VAT

EDUCATIONAL AID FOR TEACHING AND LEARNING B.B.C. BASIC

Tassoft

DEBUGGING AID FOR AMATEUR AND PROFESSIONAL PROGRAMMERS

SINGLE STEP through BASIC
THE ULTIMATE IN STEP/TRACE FUNCTIONS FOR THE BBC MICRO COMPUTER

"Finally what about a decent trace/step facility to supplement the awful B.B.C. version"
— **Mike Mahon, Micro User, October Issue.**

Features:
1. STEP FUNCTION executes BASIC program one line at a time. Press any key to execute the next line.
2. TRACE FUNCTION executes BASIC program with a time delay introduced between the execution of each line. Time delay selectable from 0.05 to 120.0 seconds.
3. Both functions provide a window display of the line number. Display occupies just 5 character locations.
4. STEP/TRACE entire program or selected sections.
5. Two versions supplied. Menu driven version appends to user program as a procedure (requires 2.5K RAM). M/C version is stored under PAGE and uses the function keys to select options. (requires 0.5K RAM).
6. Demonstration program included.
7. Cassette program transferable to disc.

- **An invaluable aid for learning and teaching BBC BASIC.**
- **Development tool for amateur and professional BASIC programmers.**
- **A time saving aid for debugging programs copied from magazines and books.**
- **HIDE/RESTORE. Hide your program listings!!!**

THE PERILS OF PERCIVAL PENGUIN

- ★ Multi-screen arcade adventure
- ★ 100% machine code
- ★ Full colour mode 2 graphics
- ★ Sound adjustable during play
- ★ Exciting "animalistic" sounds
- ★ 27 Highly detailed screens
- ★ For BBC B – OS1.2

£8

Guide Percival across the slippery Antarctic ice to find the open sea but beware of Seals and Skuas and be very careful not to fall into a crevasse – unknown dangers await there!!!

(A DIFFICULT & VERY COMPULSIVE GAME)

LANDING PARTY (The Search for Spark)

A Deep Space Search and Rescue Adventure

- ★ A real-time adventure
- ★ A Galaxy with **1000** different locations
- ★ 5 levels of difficulty
- ★ Random locations – **every game different**
- ★ For BBC B or Electron

£8

One of your officers is missing. Your mission is to go and rescue him. Searching the Galaxy and planets that you encounter but beware of Zingon Spacecraft lying in wait or you may have to fight. You must avoid asteroid storms and the Black Hole and must use all your skill and judgment if you are to succeed.

TYPING TUTOR

A complete Typing Tutor – for novices or those wishing to improve their skills.

£12.95

Ideal as introduction to typewriting or wordprocessing.
Learn to touch-type easily and gain confidence in the use of the keyboard.
On-screen display of both keyboard and lesson with worked examples – speeds – accuracy – time taken – full self-test facilities.
Comprehensive Book of Instructions, with hints and additional information.

10% OFF IF MORE THAN ONE PROGRAM ORDERED

BBC and ELECTRON PROGRAMS WANTED

I will give you royalties and initial payment for your marketable and original programs for BBC or ELECTRON.
I am particularly interested in marketing your educational, business or games programs.
Send your program or description for confidential evaluation or advice

SECURIT

A ROM based SECURITY SYSTEM with additional facilities:-

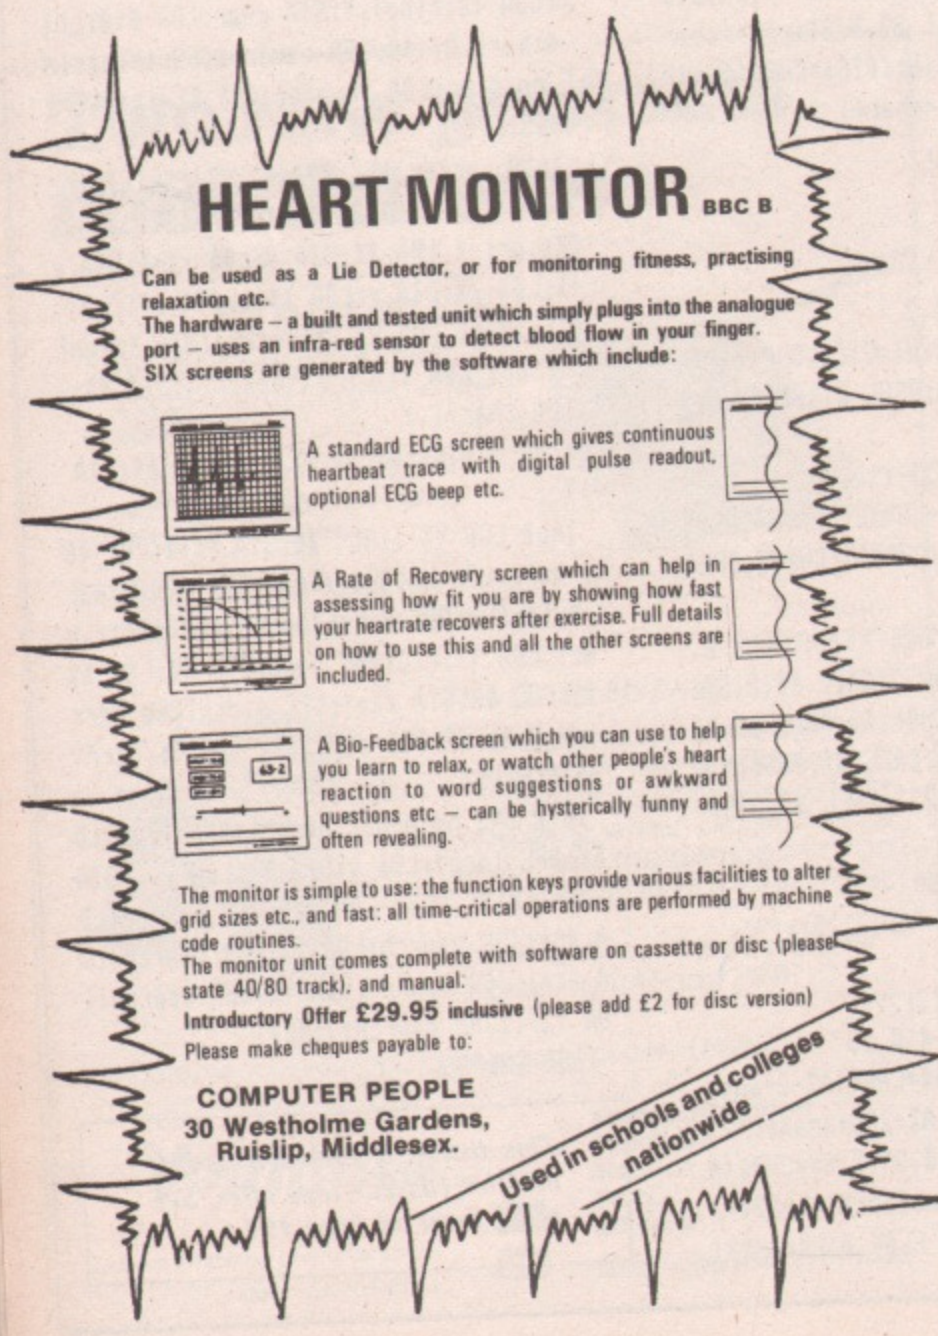
- ★ **TOTAL SECURITY** – Incorporating dynamic password facility. – Prevents unauthorised use. – A MUST for all education departments.
- ★ **PERSONAL IDENTITY** – Your name, address and BBC serial number displayed on power up and maintained until the correct password unlocks your system.
- ★ **ROM MANAGER** – Displays ROM STATUS for all paged ROMs. Allows individual ROM selection/deselection.
- ★ **REAL TIME CLOCK** – A development aid which will time stamp any basic file when it is saved.
- ★ **BASIC HELP** – A useful HELP facility giving BASIC command syntax.

Special introductory offer £16 inc. P&P.

For full details, SAE to:-

Elm Systems Ltd.

Elm Systems Ltd., PO Box 231, Newton Mearns, Glasgow, G776TX.



HEART MONITOR BBC B

Can be used as a Lie Detector, or for monitoring fitness, practising relaxation etc.
The hardware – a built and tested unit which simply plugs into the analogue port – uses an infra-red sensor to detect blood flow in your finger.
SIX screens are generated by the software which include:

A standard ECG screen which gives continuous heartbeat trace with digital pulse readout, optional ECG beep etc.

A Rate of Recovery screen which can help in assessing how fit you are by showing how fast your heartrate recovers after exercise. Full details on how to use this and all the other screens are included.

A Bio-Feedback screen which you can use to help you learn to relax, or watch other people's heart reaction to word suggestions or awkward questions etc – can be hysterically funny and often revealing.

The monitor is simple to use: the function keys provide various facilities to alter grid sizes etc., and fast: all time-critical operations are performed by machine code routines.
The monitor unit comes complete with software on cassette or disc (please state 40/80 track), and manual.
Introductory Offer £29.95 inclusive (please add £2 for disc version)
Please make cheques payable to:

COMPUTER PEOPLE
30 Westholme Gardens, Ruislip, Middlesex.

Used in schools and colleges nationwide

ADD 32K TO YOUR BBC MICRO ONLY £49.95.

Opus Supplies offer you Rambank – a 32K sideways RAM board to really boost the capabilities of your Micro.

Unlike ROMs, each block is individually write selectable and can be write protected to ensure against accidental erasure.

If you're running short of ROM sockets, the RAM card allows you to load utilities as and when they are needed.

We'll give you software and utilities free of charge, so you can save ROM based firmware on disc.

• Uses low power 64K dynamic RAM chips. • Simple to install. • Consists of 2 x 16K blocks of sideways RAM. • 2 year guarantee.

Opus.
Opus Supplies Ltd.

158 Camberwell Road, London SE5 0EE. 01-701 8668 or 01-703 6155.

CROSSWARE CROSS-ASSEMBLERS

OPERATING WITHIN BBC BASIC

FILE CHAINING NOW AVAILABLE:

The CROSSWARE D – Series of cross-assemblers will automatically load source code and save object code to disc allowing LIMITLESS PROGRAM SIZE.

A typical example of Crossware source code:

```
10 REM Satellite Boom Controller Version 3.9
20 REM Coded for the Hitachi 63B03X processor
30 DIM Crosscode1% 4000
40 DIM Crosscode2% 500
50 PROCdefine-variables
60 FOR I% = %00000100 TO %00000111
   STEP %00000011
70 P% = &500
80 O% = Crosscode1%
90 PROCinitialise
100 PROCmain
110 P% = &8000
120 O% = Crosscode2%
130 PROCshutdown(errorflag)
140 PROCchecksum
150 NEXT
160 PROCvariable-dump
170 END
180 DEFPROCinitialise
190 LOCAL loop, return
200 *MCODE OPT I%
210 .errormessage EQUS error1$
220 .initialise   LDAA #%11110011

NO EXTRA FOR UK VAT OR POSTAGE!

CATALOGUE DISC. Make a catalogue disc of the menu pages (available only from discs utilising the MENU disc program) or filename directory pages (from any standard disc). Once created, auto booting will enable you to look through all the pages catalogued and see exactly what you have done on all your discs. It is very simple to add, alter, or delete catalogue pages. This disc is essential if you are to keep track of all your discs and their contents. An ideal complement to the MENU disc **£9.00**

MENU DISC. Make all your discs menu driven. Sort out your files at last with this disc which enables files to be run at the touch of a single key. Simplicity itself to create/amend/delete the menu of your choice. Ideal when inexperienced operators or young children need to use the computer. **£9.00**

KEYBOARD COVER. Rigid moulded cover fits only over the keyboard and speaker sections, so may be used easily even when the computer is installed with only the keyboard area accessible. Protects against dust and accidental damage. **£7.00**

USER PORT INTERFACE BOARD. Interface and control or monitor external circuits for hobby, home security, process control etc. Invaluable as a software development aid since LEDs indicate the status of all 8 I/O lines and both control lines. DIL switches can simulate each input and invert each output. Separate terminal blocks for input and output logic connections and BEEB's own 5V supply. Optional relays can be fitted to each of the 8 output lines. **£35.00**
CABLE (to user port) **£8.00** OPTION RELAY (fitted) **£2.00**

SWITCHED MAINS SOCKET. Control mains powered equipment using this low cost range of computer switched mains sockets connected to the user port. Up to 8 mains sockets can be controlled independently using simple basic or machine code programmes. Central control of electrical appliances is a simple, practical and economic possibility within the home, research establishment and industry. Control most electrical appliances for hobby, security, energy management, process control etc. Each switch incorporates a 10A relay to give inexpensive high power control or a 3A solid state switch suitable for fast control of most low power applications. Available in single or double (independently switched) versions.

10A SINGLE **£25.00** 3A SINGLE **£29.00** USER PORT
10A DOUBLE **£32.00** 3A DOUBLE **£40.00** CABLE **£6.00**

The Contex Spreadsheet is one of the most versatile spreadsheet programs available for your BBC computer. It will process virtually any financial or statistical column/row analysis calculations you care to give it. Prepare your home and office budgets, process accounts, complicated invoices, job costing, small stock control operations, financial and statistical modelling, expense evaluations, foreign exchange etc.

Loaded into your 32K RAM means there is no ROM to install (which will save multiple machine installations a small fortune!). Hundreds now in use. Compare the spec. this revised, enhanced version gives you:

Over 1,000 cells in upto 26 columns by 99 rows. Formulae, data or text into any cell. Individually variable widths (1-30 chrs) and decimal places for each column. Nine digit accuracy. Various printer format options. Row and column insert or delete with auto formulae adjust. Use all BBC functions, eg LOG, SIN, SQR. Many new functions, eg. MAX, MIN, SUM, discount factor. Auto replicate formulae and data with auto adjust. Variables. Colour options. Save and restore to disc or tape. Four way scrolling. Headings stay on screen. Edit, search, help, model limits. Access to OS/DFS commands, eg. *DISC, *CAT. What-if modify command. Reference any cell by its id or by its headings. Full instruction booklet.

Cassette £9.99
Disc £12.99

TYPING TUTOR

Specifically designed for your BBC micro to teach and encourage you to fast touch typing. Professionally enhance your keyboard skills with the 90 smoothly graded lessons and the free format option. Hundreds in daily use and recommended by adult educational authorities this program will monitor your progress, intelligently check each line for errors and time you against the clock in words per minute. Optional audio key feedback, metronomic pacing and revised performance targets. Auto keyboard/finder display for all lessons including those special ones you optionally add to the course.

Cassette £9.99
Disc £11.99

Fast delivery. Discs supplied are 5¼" please specify if 40 or 80 track required.

CONTEX COMPUTING (B1)

15 Woodlands Close, Cople, Bedford MK44 3UE.

SOURCE LIBRARY MANAGER (SLM)
&
TEXT LIBRARY MANAGER (TLM)

ROM based software for DISK owners on the BBC MICRO

***** Features include *****

- Stores and retrieves any amount of BASIC and/or ASSEMBLER source code, wordprocessing files, M/C routines, data files, etc up to the full capacity of each disc (100k or 200k).
- Creates a library of up to 399 "members" per 80 track, or 199 "members" per 40 track disk.
- Uses 8 character names and a 20 character description for each "member".
- Allows up to 99 versions of the same "member" to be retained in the library.
- Will simply and easily "construct" programs developed in a modular fashion.
- Stores fully documented source code which can be "stripped" when required for execution.
- Fully menu-driven (i.e. no messy command syntax).
- Incorporates a full set of library management functions (to maintain, compress, etc).
- Many other professional features.
- Supplied on two ROM chips for a price normally associated with single chip software.
- Includes comprehensive User Guide and fitting instructions.

ACORN USER said: Source Library Manager works very well and, being ROM-based, it takes up no user RAM. The disc capacity, in terms of the number of members that can be held, is a great improvement on the 31 files allowed by the DFS.

***** FULLY COMPATIBLE WITH 6502 SECOND PROCESSOR *****
IDEAL FOR BEGINNERS AND EXPERIENCED USERS ALIKE

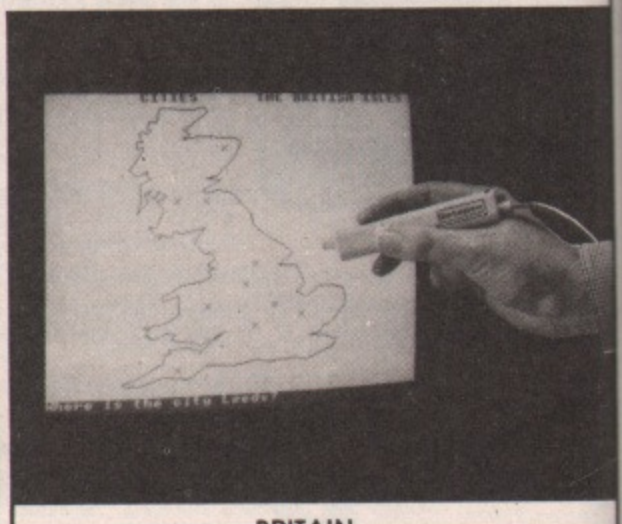
Datapen BBC Lightpen Programs Datapen

BEEBPEN DRAWING PROGRAM
A comprehensive Mode 2 colour drawing program allowing plot commands, painting, circles, text, character defining, saving and loading to tape or disc, all to be selected and used with the lightpen.
PRICE £11.95

TELETEXT DISPLAY CREATOR/EDITOR
Allows the busy programmer to quickly create Mode 7 colour graphics and test screens for combination into his or her own programs. Movable on screen menu allows use of complete screen for graphics. Full instructions and a discussion on teletext features are provided. **PRICE £9.95**



BRITAIN
The first in a series of educational Geography and Geology programs. Britain comes complete with three sets of tests, and these may be very easily changed by adding DATA statements in the Basic program. Full instructions and grid map supplied.
PRICE £6.95

SUPERIOR PERFORMANCE
- Insensitive to ambient lighting
- Responds to different colours
- Program accessible LED lamp readout
- Switch for program control

SUPERIOR PROGRAMS
- Tape storage of your work
- Good documentation
- User routines provided on tape and on printout

Please deduct £1.50 off each program if more than 1 ordered.

The Datapen Lightpen itself comes complete with handbook, software on tape including two drawing programs and a printed listing showing useful routines.

PRICE £25.00

Two drawing programs, SKETCH and SHAPE-CREATE are included with the lightpen and the programs shown above may be ordered additionally, or separately as required.

All prices above include VAT, postage and packing.

Please send your cheque/P.O. to:-

SPELLWISE
The original spelling checker for WORDWISE. Disk version checks the WORDWISE example document in 12 minutes. Disk £18. Tape £12.

SPELLBOOK
EPROM based spelling checker for use with any spooled text – very fast. 16K EPROM £40
8K EPROM (with limited internal dictionary) £25

LANGUAGEWISE
Convert your WORDWISE word processor and Epson FX80 printer into a foreign language processor with a choice of 29 European languages. Disk only £22

TOOLKIT
The easiest toolkit to use – comprehensive set of commands for BASIC (and assembler) programmers. EPROM £22

SLIDEMASTER
Specialised database for the photographer. Tailored for perfect cataloguing of a photographic collection. Disk only £22

MAM
Write your own adventure and test it on the Beeb. Requires Acornsoft LISP to operate. ELIZA is also included on the disk – the classic response program with a difference – you write the rules to suit your requirements. Disk only £12

KERNEL_ONE
Machine code multi tasking utility. Run up to four processes simultaneously. Supplied on tape – easily transferred to disc. Comprehensive manual. £14.

SPELLWISE F
Super fast version of SPELLWISE. Six minutes for the WORDWISE example document. Disk only £22

CONTENTS
Produces a page numbered contents list. For use with any word processor which spools the text file. Disk only £22

COMING SOON

INDEX
A utility to provide a comprehensive index of any spooled document. Page and line number are referenced. Disk only £22

RUSSIAN LANGUAGE
For View Word processor. Disk only. Price on application.

Further details obtainable from FLOPPYCAT the DATAWARE catalogue – a reusable 40 track single density 5¼ inch disk with a 5 year manufacturers guarantee – £3 UK postage paid.

All prices except Floppycat include postage anywhere in the world.

BBC ELECTRON

LEAVE REALITY BEHIND YOU WITH . . .

MP ADVENTURE GAMES

A new range of REAL-TIME ADVENTURES we believe the most advanced available for the BBC & Electron: intelligent characters that will move around independently, multiple command statements, advanced text compression methods allow even more detail.

*****NEW*** SADIM CASTLE** It is said that those who enter the haunted estate of Sadim Castle do not return! Long ago tragedy struck here and since then many people have died in mysterious circumstances. Can you uncover the secret and break a terrible curse!!

*****NEW*** VALLEY OF THE KINGS** Far away across the desert lie the lost pyramids of Kaculud, rumoured to contain fabulous treasure and a legendry golden mask. The pyramids may now have been discovered although strange happenings have caused the archaeologists to abandon their camp. Your task is to find the golden mask.

Further titles coming shortly: CROWN OF MARDAN, THE FALLEN EAGLE.

Our original and popular text adventures are also available: **FIRIENWOOD, WOODLAND TERROR, BLUE DRAGON, SURVIVOR.** Please send for full details.

Text Adventure Prices: £7.50 (Cass) £10.50 (Disc) including VAT & postage with UK. State which machine when ordering. Dealer enquiries welcome.

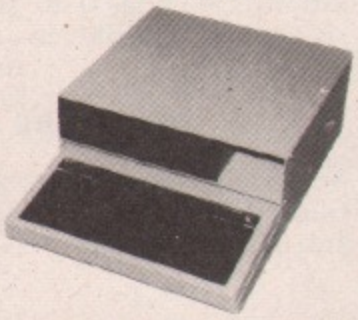
Expandable console for the BBC Micro

As supplied to Universities, Colleges, Schools, Business and Home Users.

Not just a monitor/tv stand but an expansion console which gives your micro the professional look. Protects and encloses your micro with room for disc drives and 2nd. processor or teletext adapter etc., all untidy connecting wires safely out of sight within the console. Made of light yet strong aluminium with a textured finish in matching BBC colour. Available now a bolt on extra module to the console for further expansion options. YES this console will grow with your needs. Basic BBC console as shown **£44.99** + £4 carriage.

SPECIAL TORCH MODEL AVAILABLE: £46.99
+ £4 carriage



Bolt on expansion module £14.99 + £2 p&p
Free security bracket to educational users on request.

Matching Printer Stand, can double for VDU Stand over the micro – only £14.99 + £2 carriage

ELECTRON CONSOLE

The console will house the ELECTRON and will safely support the expansion interfaces which will plug into the rear of the micro and will support the VDU at eye level. Tidies up all wiring between the micro, cassette and VDU. The console stores the cassette and tapes and will allow space for drives at a later date.
Electron console as shown £34.99 + £3 p&p

Mail order only - viewing by appointment
Please add 15% VAT.

TOWNTEST **BBC/B** **£6.50**
A very useful aid for teaching Geography in primary schools, this program tests pupils' knowledge of the locations of major towns and cities in England, Scotland and Wales. Well presented, with a high-resolution map.

BIOLOGY **BBC/B** **£12.50**
A suite of programs using text, animated diagrams, examples, and questions to assist in the understanding of Biology to CSE, 'O' and 'A' Level standards. Most suited to individual use by students, these programs also contain material teachers can extract for classroom demonstration. Topics covered include the Eye, Ear, Heart, Blood and Circulation, Skeleton, Female reproduction, Genetics, Biochemistry and the Central Nervous System.

ENJOY MATHS **48K Spectrum** **£8.00**
A suite of 4 highly motivating programs for the 8 - 14 age range: tables, simple equations, polygons and areas. The programs combine explanation with tests and make good use of colour and sound.

MASTER DIET PLANNER **48K Spectrum** **£11.95**
The ultimate in diet programs, the MASTER DIET PLANNER contains details of calories, protein, vitamins and other nutrients for 681 foods! The MASTER DIET PLANNER will help you plan a well-balanced diet, including options to restrict fats, cholesterol and salt, or to increase fibre intake - at the same time offering maximum choice of foods. Instructions and Recipe Book included.

ALL PRICES INCLUDE POST & PACKING & VAT

We require good programs to increase our catalogue and pay high royalty rates for published material.

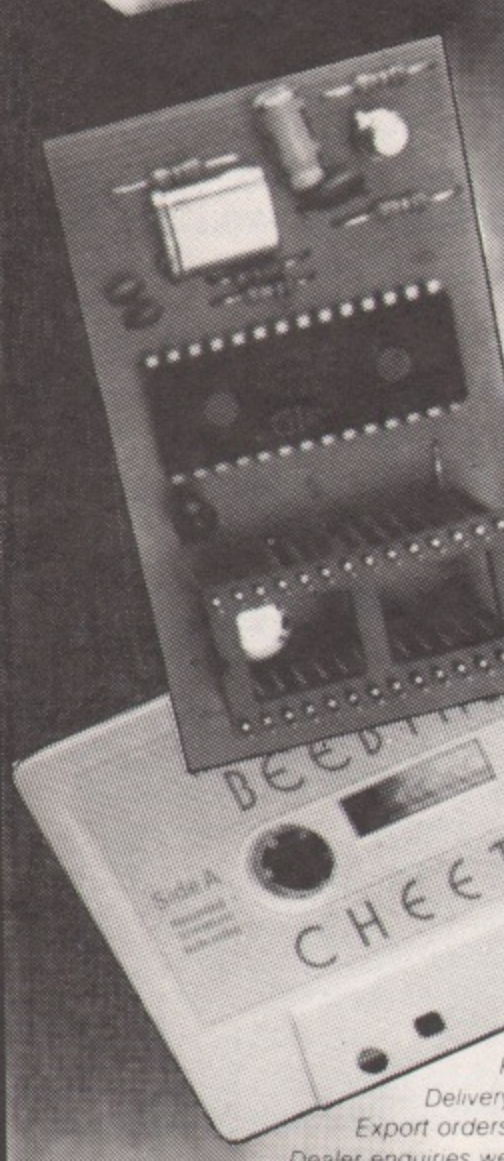
PRICE BREAKTHROUGH



BBC SPEECH
Speech Synthesizer for the BBC Computer

- Totally unlimited vocabulary is now possible with the revolutionary "SWEET TALKER" Speech Synthesizer for the B.B.C. A or B Microcomputer, any series.
- The CHEETAH "SWEET TALKER" simply plugs into speech socket IC99 within the computer. No soldering, no cutting of tracks, no headaches.
- Based on an allophone system you can easily program any word, sentence or phrase and incorporate speech into your software games.
- Fully tested and guaranteed. Complete with demonstration cassette and full instructions.

Price includes V.A.T.

ARIES-B20 NOW JUST £79.95 INC P&P+VAT

Yes it's true! The remarkable ARIES-B20 is now better than ever value at just £79.95!

Remember: unlike 'Sideways-RAM' systems, ARIES-B20 offers you *transparent* access to 20K of extra memory, replacing the RAM swallowed up by the high-resolution graphics modes. The extra RAM is switched in completely automatically, meaning that existing software can make use of it *without modification*.

This means that, if you're a programmer, you have up to 28K RAM available for BASIC, LOGO, FORTH, LISP, BCPL, and COMAL programs in ANY SCREEN MODE. If you're a business user, the extra memory is used by VIEW, VIEWSHEET, WORDWISE and many other applications. And if you're a scientific type, you can get access to a massive 47K of data storage using the Acorn-approved ARIES *FX call.

And yet ARIES-B20 takes just 5 minutes to fit, with no flying leads to connect and no soldering or cutting!

ARIES-B12 SIDEWAYS ROM EXPANSION NOW AVAILABLE

The ARIES-B12 Sideways ROM board was designed in response to popular demand for a ROM expansion board which was well-designed and well-made, simple to install, reliable when fully-loaded and compatible with ARIES-B20.

The ARIES solution is not just all of the above, but also uniquely versatile – ARIES-B12 is the first ROM expansion which may be fitted either externally or internally.

ARIES-B12 provides a total of twelve Sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS Sideways ROM system. In addition, there are two sockets for Sideways RAM, giving up to 16K of RAM using two 6264 static RAM chips.

And like ARIES-B20, ARIES-B12 simply plugs into sockets in your BBC Micro. If you haven't yet got ARIES-B20, a small adaptor unit, ARIES-B12C, is available at nominal cost.

ALSO AVAILABLE: ARIES-B488 IEEE-488 BUS INTERFACE

ARIES range hardware requirement: BBC Microcomputer Model B; MOS 1.2

HOW TO GET ARIES

The ARIES range is now available through selected dealers. You may also order directly from Aries Computers at the address below. If you are not completely satisfied with your purchase, we will refund your money in full, provided that you return the goods within 14 days of shipment, undamaged, and in their original packaging. Please allow 21 days for delivery.

Product	Price (inclusive of VAT+P&P)	Product	Price (inclusive of VAT+P&P)
ARIES-B20	£ 79.95	ARIES-B12C	£ 5.75
ARIES-B12	£ 46.00	ARIES-B488	£270.25

Please add £3.50 carriage for overseas orders.

MICROMAIL

A stoney silence about Newport...

I DO hope that you are able to laugh at your own organisation and can publish this letter.

I recently ordered some goods from Micro User giving my full address and postcode on the order form.

Three weeks later nothing had arrived so I phoned up to check if my order had been received. After some delay I was advised "Yes, your goods were dispatched about a week ago BUT . . ., the bad news is that they were sent to Newport, Gwent. As this is the only Newport that our computer has heard of".

What about the one in the Isle of Wight, I said, and for that matter the other 10 in the British Isles? Stoney silence at the other end.

Joking apart, could someone please inform your mailing department that other Newports are alive and well! – **J. St. C. Lecky, of Newport, Essex.**

● It's a good job your name isn't John Smith.

Out one side, in the other

I LIKED your article about the 6845 chip in the August issue of The Micro User. But there is one thing I'd like to know.

How can you hardware scroll so a picture can go out of the screen at one side and another one come in at the other (like in Rocket Raid)? I would be grateful if you published how to do that.

Here is one hint for readers who want to auto run a machine code program (RUN when Break pressed). You cannot stop it with Break or even Ctrl+ Break.

- *Type in the code (or load it).*
- *Type P%=&287.*
- *Type [JMP &N] where N is the start address of the code or execution address.*

Now you can Break as often as you want. You can use this in some games if you wish, but not with disc interface.

If you want to return to Basic switch off your BBC Micro or have an RTS in the end of the code that you want to auto-run. – **J.T. & S.T.G.**

● We are afraid the scrolling routine that you are after would fill an awful lot more space than we have available here.

However we will try and conjure up something for the not too distant future when we start our machine code graphics articles.

Take over by Acorn?

I HAVE subscribed to your magazine from the very first issue to date and have always enjoyed the information and articles therein.

Most of all I have always admired what I deemed to be your independence. As a magazine directed solely to the BBC and latterly to the Electron User, I found Barry Wood's articles on the shortfallings of Acorn admirable.

That was until last month when a minor piece gave the information about the scandalous increase in the price of the Z80 second processor for no good reason.

I searched in vain for some reaction to the increase. Nothing! Not despairing, I searched for Barry Wood's article. Nothing!

Can it be you've been taken over by Acorn?

I took my indignation to the Olympia show and tackled one of Acorn's representatives. I asked her how they could possibly justify such an enormous increase.

"That's because it's underpriced", she said.

"Hardly likely!" I retorted, "because a company the size of Acorn would be sure to add its profit to the manufacturing cost before setting the selling price of £299".

"Well in that case", she replied, "it's because we now include all this software as part of the package".

"But the software was part of the package at £299", I said.

"Well in that case I can't think of a reason", the honest young lady finally said.

"Oh I can!" I told her. "Greed!"

If I produced some part that Acorn used for their business at a profit to myself for say £200 and then because other people began to show an interest later told them I wanted £300 I believe the first to shout "Thief!" would be Acorn. – **Derek Denne, Brondesbury, London.**

● We can't afford to pay Barry any more. As soon as he saw the press release on the price increase he upped his rates immediately.

A fancy for the 3 inch

I AM about to invest in a drive and I fancy the 3in disc.

Problem is that your monthly disc of Micro User programs appears to apply to 5¼in discs only. Any suggestions? – **H. Morgan, Crossgal, Co. Down.**

● Now that 3in drives are becoming more popular we intend producing the monthly cassette and other software on that media.

I understand that back issues will be duplicated by request, although this has not yet been confirmed.

Simple solution

I BOUGHT second hand a BBC Model B which has given hours of pleasure to my family and worked perfectly well. However recently we typed in several of your games only to find the words "Bad Command" appear.

*The most recent was from the November issue and the game Duel where the screen showed "Bad Command on line 1840" (for example *FX21,0). Checking my BBC handbook revealed *FX21,0 is shown as new to the issue 1.0.*

There must be others in a similar situation to myself so could you please advise:

- *Whether my model can be updated and if so what should I do.*
- *Whether you could mark your games as not suitable for pre-issue 1.0 models to avoid my children's disappointment after hours of typing in.* – **Arthur Wright, Guiseley, Yorks.**

● Sorry to hear about your children's disappointment. However we have long adopted the policy of using OS1.2 as the standard for our games, as it is far superior to the earlier versions of the OS. We think you'll find that all other magazines have adopted this practice as well.

The upgrade to OS1.2 is quite simple and inexpensive. Your dealer will be more than happy to do it for you.

We strongly suggest that you have one fitted, as the more sophisticated programs appearing nowadays do make use of the extended facilities of this OS.

Infuriating Elite . . .

AS soon as I saw the adverts I bought an Elite, from Acornsoft. Having been a fan of Atari's Star Raiders for years I couldn't resist it.

I actually bought it a month ago but as it failed to work with a Pace DFS I had to by an Acorn DFS, price £28, but it would be worth it, I thought.

I got the DFS yesterday. Today I'm selling Elite! At 26

→

MICROMAIL

From Page 175

I'm reasonably coordinated and until now have had no problem with any computer game, but Elite is beyond me.

It's infuriating and potentially dangerous for computers as I've never felt more like taking an axe to the keyboard.

I can dock the ship all right, but as for combat it seems that every pirate in the galaxy is after me.

The only way to travel is without cargo, when nobody bothers you. But one ton of anything brings them like flies. They never miss a shot!

They can destroy you in less than 15 seconds. You don't stand a chance. I've even been shot at trying to dock at a supposedly safe space station!

Why does Elite not have simple left and right controls instead of this roll business? I spin like a top most of the time. My only hope is for the pirates to get dizzy.

I've yet to hit anything with the laser. I'll give Elite 10 out of 10 for graphics and content and minus five for playability. Star Raiders Forever! – **Paul R. Lemon, Aintree, Merseyside.**

. . . and more of the same

I FEEL I must write after reading your review of the new Acornsoft program Elite.

It is a superb program but it has the same fault as many other so called games – it starts off at too difficult a level.

To get to even a friendly Corporate State planet on your first try you are besieged by countless enemy ships which eliminate you before you can even find them, never mind identify them.

Your defences are pitiful and overwhelmed. You stand very little chance of even making first base after many boring reloadings.

There are numerous shapes of wireframe ships to identify, but you would be very fortunate to see one long enough to recognise it before the other ships eliminated you.

Why oh why can't these games programmers offer an easy start becoming progressively more difficult, instead starting at the very difficult and becoming impossible?

There are probably quite a few pimpled schoolboys whose reactions are much quicker than their elders but that does not justify making the games virtually impossible for the rest of us.

A game is only a game if it allows you a chance of winning. Continual failure is very depressing and I have quickly developed an anti-game attitude.

Elite has the potential to become a very interesting and absorbing game if something could be done in the early stages to reduce the numbers of those pesky marauders which prevent you from getting started. – **A.M.D., Exeter, Devon.**

● You can please some people all of the time and you can please all people some of the time, but . .

Just use a pad character

OH, tut-tut, oh woe! You seem to have slipped up a bit in your answer to Brian Kingham's letter on Wordwise in the November issue.

Maybe you use View more than Wordwise in which case I forgive you. (Being magnaminous I'll forgive you anyway!)

To get centralised underlined headings on Epson printers you don't need to do anything as longwinded as printing dummy spaces; just put a pad character between the CE and the OC27,45,1 like this:

gCEw:gOC27,45,1w
Chapter 56 gOC27,45,0w

where g and w mean green and white. Simple huh?!

You advised Gordon Price not to change mode inside procedures using VDU22,M as this will not affect HIMEM. While this is quite true there is no problem doing this if you set HIMEN at the start of your program to the lowest which it is needed to be.

For instance, if your program starts in Mode 7 (HIMEM= &7C00) but includes a procedure in which the mode may change to 2 (HIMEM=&3000) simply put the line "HIMEM= &3000" after the initial Mode 7.

Thereafter all mode changes must be made using VDU22, otherwise HIMEM will be reset.

Of course even when the computer isn't in Mode 2 you'll only have Mode 2's amount of memory to spare, but this is true even if you make the mode change outside the procedure.

Sorry about the niggle but I am laid up with the lurgi and don't feel particularly cheerful. – **Pete Gaunt, London N19**

● We have had lots of letters about our answer to Brian's problem, which just goes to show how a slight error can generate an enthusiastic response from our readers.

Thank you to all the other writers who could not be included and this closes the correspondence on this subject.

Governed by variable @%

IN the November 1984 issue of The Micro User your correspondent C.J. Rourke was having problems with number to string conversions. As he is probably aware the numbers in the examples which he gave cannot be stored as exact binary fractions on the BBC Micro.

When such a number is converted to a string using the STR$ command the string produced is the closest approximation in decimal to the binary number stored.

For example:

A=57.6: PRINT STR$(A)

will return 57.59999999.

However, executing:

A=57.6: PRINT A

will return 57.6 as expected.

This is because the format of numbers printed is governed by the variable @%. The default setting of @% is &90A, which means that any number with 10 decimal places (including the decimal point) will be displayed to nine places in a 10 character field. Thus 57.59999999 will be rounded and displayed to 57.6.

Setting the most significant

An ode to young Mike

DECISIONS, decisions, all the RND decisions. What an apt title.
New to programming we may be,
Yet bugs are there for all to see,
Three times three nine must be,
Even to young Mike Bibby.

When a six is the die,
For you to try,
Then two times three cannot lie,
Even to Mike Bibby.
Yet – the problems I fear dark as the dyke
Are now made clear by young Mike.

Selecting data lines at will,
May need to be explained me still,
Easier though they are to fill,
Of course I bear young Mike no ill.
Let him keep his job I pray,
For his articles are OK,
If he errs just once today,
He can have another say.
– **Tony Lawrance, Leicester.**

● Mike is rather embarrassed by all this, but came up with this reply:

Oh dear I fear
It's very clear
I dropped a clanger
Please don't sneer
And don't let my old tutor see
Or he'll revoke my maths degree.

So what was his mistake? We'd like to tell you but we have to work with him. Suffice it to say it's the oddest looking die we've ever seen.

● *Want to write to Micromail? The address is: Micromail, The Micro User, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.*

...e of @% to &01 will cause the ...TR$ command to display the ...mbers in the format governed ... @%.

Therefore if Mr/Ms Rourke ...pes in:

...%=&0100090A then ...=57.6: PRINT A, STR$(A), ...EN STR$(A) will return:

57.6 57.6 4

Which is the response expected.

A more detailed treatment of the use of @% can be found on pages 324-327 of the BBC Micro User Guide. – **M.K. Smith, Wrexham, Clwyd.**

Praise for Pace

MIGHT I congratulate Pace Software Supplies. I was trying to make their Amcom DFS work using OSGBPB for an automatic menu driver but when A was set above 5 it would not function in their extended mode.

After a phone call I was told that a later DFS was available which rectified this and it also had extra commands.

I agreed to buy this on a swop basis and received this in less than 24 hours. Well done! And that goes for the Post Office, too.

Well it's now in my BBC Micro and certainly worth the £5 (which included a new utility disc). The best new feature, apart from the support of OSGBPB, is the fact that system selection is now automatic, which enables me to copy files from the Extended to Acorn modes direct.

This saves a lot of time and trouble, along with the fact that after a Break I don't get a "Bad system" error when loading programs or files.

The extra commands are:

**ADD Allows you to add to a BUILT file.*

**MOVE An automatic version of *COPY.*

**SPACE Give the amount of space left and space between individual files.*

**HELP DFS Help page which it didn't have before.*

– **Mr M.R. Sarre, Norwich, Norfolk.**

. . . lend me your ears!

DEAR friends, Romans and countrymen, I believe I have invented the known world's first Roman calculating machine, but when I offered it to the local moneylender, Maximus Idioticus, he said it would not replace the abacus.

I am therefore giving away this DIY kit to anyone who owns a Beebus XVI or Beebus XXXII. All I wish in return is information on how to squeeze XII copies of Micro User into I Micro User binder.

*To use calculator enter your sums in Roman numerals with functions + – * / in logical order, press = and eureka!* – **Adrian Drover, Glasgow, Upper Barbaria.**

Replacement ribbons

I HAVE a Seikosha GP80A printer for which I am having the utmost difficulty in getting suitable replacement ribbons. When I first bought the machine I had two original ribbons with it and, although I had to make a slight modification to the machine to make even those work properly, I had little real trouble.

Since the second one of those gave up the ghost about a year ago I have tried every source possible to obtain suitable replacements.

I have been offered GP100 ribbons and told they would suit when they are patently unsuitable being 11in instead of 8in, which the GP80's are.

I have taken the original ones into all the shops within reasonable reach only to find that all they could offer were clearly longer than the original, although that had obviously stretched in use.

The machine depends on the ribbon being under tension for its correct operation and if the ribbon is too long to start with, it won't feed properly. And they do tend to stretch in use. In addition, the original ribbons were obviously specially woven in a continuous loop.

The only ones I have been offered in all my efforts are made with a joint in them. A very neat joint admittedly but I can't help thinking that a lump of hard adhesive going under the print head every few seconds cannot do anything but reduce its life.

I would greatly appreciate any help you can give me. – **R.G. Ledieu, Thornton-Cleveleys, Lancs.**

● You should be able to get what you want from DRG Business Systems 13/14, Lynx Crescent, Winterstoke Road, Weston-super-Mare, Avon. Tel: 0934 419914.

They say that if they cannot give you the name of a local agent they can provide you with the goods themselves.

I want to make war!

PLEASE can we have a tank battle game? You know, the type that was on the very first video games. I have that game, but don't know of any version for the BBC.

Can someone write one with a →

MICROMAIL

From Page 177

few BBC goodies as improvements. (Better graphics etc.) and options of joystick or keyboard control.

How about encouraging readers to suggest games and new ideas? It strikes me that the major software houses are running out of ideas. – **D.J. Steel, Leeds, Yorks.**

● We are sure you'll find exactly what you want on our Classic Arcade Games cassette. It is called Panzer Attack and is one of four games on the cassette which can be obtained from our mail order department.

See the order form on Page 197.

Radiotherapy challenge

I WOULD be grateful if you or your readers could help me design a program to be used in the radiotherapy department of our local hospital.

As part of this program I wish to display the contents of a two dimensional array which will be too large to display on the screen at any one time.

I would like to be able to vertically and horizontally scroll the display so as to be able to alter or update any individual "cell", but can find no reference as to how to do this. I suspect that I am really asking for help in designing a form of spreadsheet. Can you please help? – **John Hammonds, Plymouth, Devon.**

● What you suggest could be done in Basic using a two-dimensional array. However, even at the speed of the BBC Micro it might be too slow. Any reader care to prove us wrong?

Transferring Mini Office

I OWN a BBC B and would like to know if I buy the tape-based Mini Office will I be able to transfer it to disc when I upgrade to disc drives sometime later this year.

Also I will shortly be taking delivery of a Brother HR5 printer. Since this is about the cheapest one on the market I believe it may become very popular with BBC Micro users, so how about a screen dump program or an amendment to the Epson dump published sometime earlier. – **A. Potter, Horsham, West Sussex.**

● Sorry, the cassette version of Mini Office is protected, as is most professional software these days.

With regards to the screen dump, perhaps one of our clever readers might come up with something.

Problems of free-space

*SOME of my programs write data files to disc and incorporate a free-space informer as follows using the *RECOVER Disc Doctor command:*

```
10000 DEFPROCfreespace
10010 *RECOVER 0 1 1 900 0
10020 F%=(((?&906 AND
3)*256)+ ?&907)-(((?&90E
AND 1)*256)+ ?&90F+ ?&90D+
((?&90C>0)*-1))
10030 PRINT''F%" (&";~F%;")
free sectors"
10040 ENDPROC
```

*For non-Doctored users, the *RECOVER command can be replaced with something like:*

```
!&90=&00090000
!&94=&00530300
!&98=&00002101
X%=&90:Y%=0:A%=&7F:CALL
&FFF1
```

However I often run into problems when trying to save a small data file for which there is ample room because the operating system defaults to a file size of 16k.

Is there any way to change this default? – **Ray Watson, Washington, Tyne and Wear.**

● We're afraid we know of no way to change the 16k default.

In support of PROC

I WAS interested to read the letter from Colin M. Johnson in the November issue of Micro User. What puzzles me is why someone who can write such a witty letter can be capable of missing the point.

I certainly cannot stop him using GOTO and GOSUB in his programs if he wishes, so long as he does not want to sell them to me, but he obviously doesn't realise what the argument in favour of procedures and functions is.

He says that GOTO is considered muddling while PROC although "it can take a minute or two to find, is oddly thought a great improvement".

The risk of confusion is not in the line containing the GOTO, it is in the part of the program to which it points.

As I read through a program if I see DEFPROC I am immediately aware that this piece of code is called from another part of the program and, by looking for the corresponding ENDPROC, I can determine the limits of the called segment.

In addition to these advantages I can, if the procedures and functions have been given sensible names, tell what the called segment will do as soon as I see the PROC statement.

PROCprint labels must be more informative than GOSUB 1500.

Another factor, rarely considered by home programmers, is the maintenance of programs. It is no test of the quality of a program that it works – if it doesn't it has no right to be called a program.

A much more sensible test is to ask how easy is it to make minor changes. If someone asks for the high score table to be written to, and read from, a disc so that high scores can be retained from one session to another, does it require a major rewrite of the program or can we merely amend those parts of the program which deal with the score table?

A reason often put forward by opponents of structured programming is shortage of space. I recently bought a commercial program that contained what I though was a flaw, so I wrote to the suppliers asking for this flaw to be put right.

Their reply was that there was no room in the program for the additional code but they said that I might be able to patch it myself.

With a challenge like that I had to do something, and so I examined the program carefully and, by using some structured programming techniques, was able to put right the original flaw and take about 300 bytes out of the program.

I suspect that many people are misled by the number of letters used in the program. ENDPROC has seven, while GOTO60 has only six, but it takes at least three bytes of program space as opposed to ENDPROC's one.

Finally, may I suggest that Michael Jackson's book "The Principles of Program Design", which was originally aimed at mainframe programmers, would be much more useful reading than most of the books on machine code.

If the program is designed properly, before a word of Basic, or any other language other than English, is written, much of the dispute about GOTO will cease to be relevant.

As an aside, if Mr Johnson hates BBC Basic so much why did by buy a BBC Micro? – **David H. Wild, Hemel Hempstead, Herts.**

GCOL – short and sweet

I NOTED with interest the recent number of short programs in your magazine to show the use of the GCOL statement on the BBC Micro.

I must confess to not being graphically minded, but I did manage to put together the following short program using different values for the two parameters of GCOL.

On a monitor the display is obviously better than on a normal domestic set.

Not only does it demonstrate the graphics on the Beeb but also the power of the procedure – being able to pass information.

The information passed is the string to be printed, its position on the screen, the GCOL parameters and a count.

– H. Banks, Bolton, Greater Manchester.

Japanese English

IF you buy a Shiwana Printer CP-80 you will receive a manual which is pretty well incomprehensible to an Englishman.

Further, if you should write to the suppliers you will find your letter ignored in the best traditions of modern British business methods.

I have struggled through the bit that says "... make it stands as the bottom of the case be vartically face to you ...", and consider that in the circumstances I have done pretty well; but what do I do with "LLIST" on a Beeb?

How do I get the thing to print all those characters shown as part of its repertoire? Can the example programs be translated into "Beeb English"?

Please, is there somebody out there who can make this very versatile machine do what it ought to, or explain in plain English how to cope with, for example, the "bit image mode"?

– Edmund W. Jupp, Lympstone, Devon.

● As far as we can tell, LLIST should be interpreted by the BBC Micro's LIST with the printer turned on with a Ctrl B. Is there any "honourable son" out there can help this gentlemen with the other problems?

The case for a cheaper BBC

I AM the education supplies officer for a local education authority involved in the purchase of micros for use in schools.

I am in no doubt that the authority's decision to purchase the BBC Model B as the

MICROMAIL

From Page 179

standard machine was right in view of the facilities offered.

Moreover, the Government scheme to subsidise the purchase of the schools' first micro was extremely welcome, as it gave British firms the opportunity to establish their products and was most helpful in getting computer studies onto the curriculum.

However, as we draw to the end of this scheme, it appears that with the very high levels of sales achieved, any development and tooling cost incurred in the production of the BBC Micro will have long been recovered and my colleagues and I feel that a substantial price reduction could be made rather than high profits at the expense of the education service.

What I fear most is that Acorn will fall back on their laurels rather than attempting a bold marketing strategy, confident in the fact that now most education authorities have chosen BBC that they will be reluctant to change the standard.

I consider this attitude to be unjustifiable and misguided.

It is apparent that new machines are coming onto the market at regular intervals and sooner or later one will either match or exceed the capabilities of the BBC at a lesser price.

I sincerely hope that both Acorn and the BBC will reconsider their marketing policy and institute measures to offer the Model B at a much more realistic price and, if necessary, adjust production capacity to meet the much greater demand which will inevitably ensue.

Not to do so can only result in the Japanese (MSX and so on) doing to the British computer industry what they did 10 years ago to the car industry. – **M.J. Drinkwater, Cheadle Heath, Stockport.**

Read Kevin, and feel smug

FIRSTLY, thank you for your excellent magazine. Under its influence, I am progressing from total ignorance towards pseudo-concepts. That is, I am beginning to think that I understand some of what goes on when I press these keys.

Recently I delved into the interior to fit a Watford zif sideways ROM socket, and I discovered that my other ROMs have no names on them.

This roused my curiosity and I attempted to get the Beeb to tell all. I have apparently OS 1.20 and Wordwise 1.10, but what Basic?

I've been through The Micro User, the User Guide (surely User's Guide?), The Advanced User Guide (I have delusions of grandeur) and Basic, Sound and Graphics but cannot find a command that will make the Beeb display the Basic version.

REPORT only displays "(c)1982 Acorn".

So, at the risk of asking you to repeat yourselves, how do I find out what version of Basic I have? – and what difference does it make? – **Keith Phillips, Daventry, Northants.**

● The copyright display tells you that you've got Basic II. I suggest you read Kevin Edwards' article in this month's issue and feel smug.

And finally, with tongue firmly in cheek . . .

The Wizard of OS?

Dear Trev,

Would you say that I was a thespian? When you think of me do images of greasepaint and footlights spring into your mind? Of course not, so you can see why I was surprised when Andrea passed on Clive's message:

"The Rogues are trying to raise money for the Save Our Basic I appeal. They've decided to do a pantomime and they want you in on the planning. It's tonight".

"Why me?" I asked as icy fingers clutched my heart, "I know nothing about pantomimes".

"That's not what Clive says", A. replied nastily.

As it was I had no choice. It was A.'s turn to play host to the Romchester Women Bellringers Against The Bomb Consciousness Raising Group. As A. put it, "Men aren't welcome but you can stay if you want".

So that was how I found myself in a smoke-filled room above the public bar of the Ram and Buffer planning a panto. The main problem was which panto to present.

The first suggestion was "Ali Baba And His &28 Thieves". That was vetoed on the grounds that it was too accurate a description of the Rogues for comfort. I did suggest Ali Baba And His Forty Beebs, but that met with even less enthusiasm.

Aladdin was my choice. "We could have Andrea playing the part of Widow Inkey$" I enthused, but they weren't keen.

Even the prospect of a wicked Baron Biriani going round crying "New ROMs for old, new ROMs for old" failed to get them going.

The trouble was that no one else was coming up with an idea, yet they were all looking at me. I later learnt that A. had told them that I was an expert on pantomimes on the sole strength of my having played the beanstalk in primary school.

"What about a musical? We could do the Wizard of OS. Dorothy could have a dog called Goto and she could sing a song called Somewhere, Over The Spectrum".

Groans greeted me. By this time I was getting hysterical. "Could we do Puss in !Boot? We could rope Andrea in on the bells and have them saying 'Repeat Until Whittington'." More groans.

I even suggested Peter Pan with Mike Cook's Real Time Croc, but nobody got it.

In desperation I made my excuses, hurtled down the stairs and phoned Micro User. "We don't take phone calls", was the first thing they said. "But it's me, Wally".

"Don't call me a Wally", came the reply and the line went dead.

"Let me try", said Clive, who'd crept up behind me. He dialled the number. "Would you like a pint?" he said quickly as the phone was picked up at the other end.

"Here", he said, handing me the phone. "you've got their undivided attention".

And they come up with the goods. "Cinderella", they suggested. "You can have Mike Cook playing Cinders, he's just had an accident with his soldering iron. And AMS could supply the mice. Forget about the pumpkin, you could have an Electron turning into a Beeb but it must be back before the six months guarantee runs out".

"Alice could play the fairy godmother while Mike Bibby could be Prince Charming (for a change). Instead of the glass slipper you could find a 6845 CRTC chip".

I must admit that the idea appealed to me. "Fly Buttons, you're undone" has always been one of my favourite lines. "But what about the Ugly Sisters?" I asked, naively.

"Ring Acorn User".

I think they deserve the beer token I'm sending them. Cheers! **Buttons**

FORGET ABOUT THE REST!

Plug your BBC Micro into the exciting world of telecomputing

– the package to get you started

THE Pace Nightingale modem and Commstar software has been hailed by the computer press as the perfect combination to go with the BBC Micro.

Now *The Micro User* can offer the total package for £139.95 – which includes VAT. And with it we will send you vouchers giving substantial savings off the enrolment fee to two of the biggest on-line services in Britain.

You will receive a 20 per cent discount to Knowledge Index, which has a database totalling 22 million different items, and a 50 per cent discount to One-to-One, which offers an electronic message service and links you to the international telex network.

The Nightingale modem, which is fully BABT approved, allows a variety of baud rates, including Bell standards that enable you to log on to computers in the USA. It is supplied with a lead suitable for connection to the BBC Micro.

The Commstar ROM is the most comprehensive software yet written for the BBC Micro. It is extremely easy to use and lets you link into Prestel, Micronet, Viewfax and Telecom Gold, as well as bulletin boards and databases all over the world.

This total package will allow you to talk directly to other computers, to send your own telex messages, to go tele-shopping – even to download hundreds of free software programs directly into your BBC Micro.

To take advantage of this offer use the coupon on Page 197.

Tele Link

– the magazine with all the facts

IT'S your ideal introduction to all the fascinating opportunities that become available to you when you link your BBC Micro to the telephone.

You'll be able to learn all about the many facets of the exciting new world of videotex – about the vast databases held on Prestel and the other public and private viewdata services. About how to use electronic mail and bulletin boards. About how to go teleshopping, and how to download telesoftware into your micro.

TeleLink deliberately steers away from technicalities to present the facts in vivid detail – to help you play your own part in the communications revolution that is going to change all our lives.

Subscribe now on the coupon below and SAVE £2 off the normal price

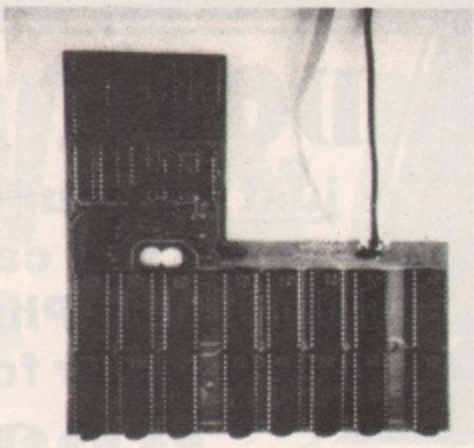
16 SOCKET ROM/RAM EXTENSION BOARD



Fully buffered the board offers the following features:

All 16 sockets may contain 8K or 16K roms.

Up to two pairs of sockets may be configured to accept 8K eproms to simulate a 16K eprom without the expense of a 27128.

Up to 16K of CMOS RAM type 6116LP (made up of 8 2K ram chips) may be fitted to 8 of the available sockets leaving 6 free for roms.

or 2 8K Ram chips (6264) leaving 14 available sockets.

The advantage of sideways ram is twofold:

1. Programs can be assembled directly to hex 8000 and debugged before being committed to eprom.
2. Programs intended for sideways roms may be stored on disc and downloaded into ram. Many more programs may be kept on disc allowing the extension board to be fitted only with roms that need to be resident.

This is a high quality PTH board and plugs into the extreme right hand rom socket.

4 wires to the paging register and one lead to the R/W line have to be connected.

Separate power leads for the board

are used to eliminate possible crashes that may occur due to trying to draw up to 650mA from a sideways rom socket.

Board fully assembled and tested complete with full installation and operating instructions.

Cost £34.50 + VAT, £1.00 P&P

EXTERNAL RAM/ROM CARD

THE NEW EXTERNAL 28 ROM EXPANSION SYSTEM FROM HCR ELECTRONICS

This extremely powerful but versatile machine has the capability of: 32K RAM & 24 sockets available for ROM *or* many various combinations to your personal requirements.
This machine has its own separate power supply which eliminates drain on the BBC's switched mode supply.
NO SOLDERING IS REQUIRED.

The unit consists of two modules:
1. An adaptor board to plug into the BBC sidways Rom socket 15.
2. The expansion case.

The case comes complete with an inbuilt power supply and one expansion card. This card will hold 12 Roms or a combination of Ram/Rom (Ram can be 6116's, 2016's or 6264's). This gives a total of 16 Roms (including four in machine).
A second board identical to the above can be fitted at a later date, giving a total capability of 28 available sockets for Rom or Ram.
The second board can be selected as an alternative to the first board, either by a switch on the case *or* via software control.

SOME ADVANTAGES
1. No soldering required.
2. No access into machine required after initial fitting.
3. No overheating problems.
4. Does not physically interfere with other internal expansion add-ons.
5. Built in power supply (does not overload BBC's supply).
6. Computer will still function with external box powered down or unplugged (using Roms resident in machine).
7. Will make available 32K Ram plus 24 Rom sockets at a varied combination to the customer's needs.

Cost unit complete with one board £70.00+vat. Second board £29.00+vat. Postage & Packing £3.00

SEE OTHER VIGLEN ADVERTS ON HOW TO ORDER

MAIL ORDER OFFERS

It's the most popular program we've ever produced!

If you want to start doing more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

Contains 32 page booklet giving clear, easy-to-follow instructions on all 4 programs

Word Processor: Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode – perfect for young children and people with poor vision.

Database: You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

Spreadsheet: Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program . .

Graphics: Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the dullest figures!

Also available from selected branches of Boots and W.H. Smith

THE MICRO USER MAIL ORDER OFFERS

THE MICRO USER Bibliography

£7.95 5¼" disc **£9.95** 3" disc

TIRED of spending hours searching your back issues for that article on interfacing? Sick of thumbing endless dog-eared pages for that hint on reprogramming the Break key? You know it's there somewhere – but where? Does tracking down a program remind you of an adventure game?

It's about time you let your BBC Micro do the donkey work for you. Why waste precious programming time searching for an elusive reference?

Now help is at hand – in the form of the Micro User Bibliography.

This long-awaited database, developed for us by Jim McHugh, contains over 1,000 references from 18 editions of *The Micro User* (March 1983 to August 1984). It covers:

games ● reviews
educational utilities
peripherals ● books

and much much more. All the accumulated wit and wisdom of *The Micro User* is indexed to make life easier for you.

For instance, if you want to know where and when we talked about ENVELOPE just use the Micro User Bibliography. It will recall every occasion we wrote about this subject and tell you which pages to turn to.

The disc based utility contains an option to search for one or two strings and will complete the task in a maximum of 45 seconds. Alternatively you can view the whole Bibliography at your leisure. You can even generate hard copy if you need it.

So stop wasting your time searching and use *The Micro User* Bibliography to make the fullest use of your back issues.

Your BBC Micro needs protecting!

Our luxury dust cover is made of soft pliable water-resistant transparent vinyl, bound with strong cotton and decorated with the *Micro User* logo in black.

Keep your copies neat and complete

These handsome binders are bound in PVC with the Micro User logo in gold blocking on the spine.

only £4.25 (UK)

Don't miss our two specials...

THE MICRO USER MAIL ORDER OFFERS

THE BEEB BODY BUILDING PACKS

Upgrade your BBC Micro with these Beeb Body Building Packs.

- **Packs 1 and 2:** *These packs let you safely and simply interface your micro to the outside world.*
- **Pack 3:** *Give your Micro data-processing muscle by building a dual cassette system.*
- **Packs 4 and 5:** *Control mains equipment in complete electrical isolation. Pack 4 is rated at 2 amps, pack 5 at 10 amps.*
- * **Pack 6:** *All the components for the Micro User light pen.*
- **Pack 7:** *Experiments to investigate pendulum behaviour and capacitor discharge.*
- * **Pack 8:** *A versatile sound to pattern converter.*
- * **Pack 9:** *Remember all those vital appointments with the help of this real time clock.*
- **Pack 10:** *A high speed A/D with many applications. For instance, turn your microcomputer into an oscilloscope!*
- * **Pack 11:** *A pulse rate monitor. Ideal for keep-fit fanatics and experimenters alike.*
- **Packs 12 and 13:** *Components to control stepping motors in two different ways. Pack 12 uses the micro to control the stepping sequence. Pack 13 uses a dedicated chip.*
- **Pack 14:** *Turn your micro into a communications terminal by building an acoustically coupled modem. (Handset retainer not included.)*
- **Pack 15:** *Add the tremendous power of 4 extra User Ports.*
- **Pack 16:** *The ribbon cable and socket needed for pack 15.*
- * **Pack 17:** *All you need to make a digital to analogue converter (programmable as a waveform synthesiser).*
- **Pack 18:** *Mercury switches, leads and sockets to make your own foot-operated switched joystick.*
- * **Pack 19:** *Interface for Atari Trak-Ball when used as a CAD tool.*

**** All these packs are also available fully assembled. For a small extra charge constructors who run into difficulty assembling pack 8 can send it in for testing. It will be returned fully operational.***

ATARI Trak-Ball

AT LAST!
HANDS ON COMPUTER GRAPHICS

The ideal CAD tool for the BBC Micro
(see the Body Building feature on page 139)

Trak-Ball **£19.99**
with kit pack **£37.94**
with assembled pack **£43.94**

The Advanced User Guide *is the essential companion for the BBC Micro . . . with 512 information-packed pages*

Featured in its 512 pages are:
★ the BASIC Assembler
★ 6502 machine code reference section
★ complete descriptions of all FX calls
★ BBC memory usage and vectors explained ★ full interfacing details for the user port, tube, analogue port, 1 MHz bus
★ paged ROMs explained ★ and lots, lots more.

With many examples to illustrate the text, this guide is the indispensable reference work for the serious BBC Micro programmer.

£11.50

Assembly Programming Made Easy *puts the magic world of machine code at your finger-tips*

Here is a really easy guide for the enthusiastic beginner to assembly language for the BBC Micro. Using easy examples, cartoons and short, very simple programs you will quickly learn how to put graphics on the screen, use the BBC operating system and bring the machine to life.

£4.95

To make learning assembly language even easier send for the combined book and tape cassette containing all the programs.

£6.95

ACTION REPLAY!

Build your own handy, action-packed cassette library of these all-time Micro User favourities. Only £3.75 per cassette (three games in each). All six for £18.

ACTION REPLAY No. 1:
Deathwatch Hold the fort against a combined tank and helicopter assault on your positions. Fast and furious – one of our most popular games. **Pelmanism** Defeat the computer by remembering more pairs of cards than it can. **King Kong** Use your helicopter to rescue two maidens from the Empire State building – avoiding a deluge of rocks from King Kong.

ACTION REPLAY No. 2:
Fruities Fast-paced, fun-packed extravaganza. Guide your man up ladders, avoiding – and digging traps for – the marauding Fruities! **Nim** Find out just how nimble your mind is in this intriguing battle of wits against the computer. **Space Pilot** Desperately fighting off hostile life-forms, you must dock with satelities to replenish dwindling fuel supplies.

ACTION REPLAY No. 3:
Robin and Marian Medieval melodrama! Rescue Maid Marian from the Sheriff. A hilarious, action-packed game. **EECGAL** in charge of the EEC's Picture Gallery, you have to put some order into the frames – but it's not so simple as it sounds. **Air Strike** You need to fly fast and low for this dangerous intrusion into enemy air space.

ACTION REPLAY No. 4:
Barrel Battles Fast and furious video action. Dodging an avalanche of deadly barrels you climb towards the telephone. **Frogs 'N' Dogs** Loved by young and old alike. Simply take Freddy Frog for a walk, avoiding Fido and poisonous lilies! **Tenpins** Stunning simulation of ten pin bowling. This addictive game will hold you spellbound.

ACTION REPLAY No. 5:
Tower of London Ghosts have broken out of the Tower of London and taken the treasure. Can you recover it? **Blackjack** A true-to-life recreation of the casino favourite. Can you beat the bank? **Galactic Invaders** The only thing between you and imminent destruction by waves of hostile aliens is your proton gun. A compulsive classic.

ACTION REPLAY No. 6:
Alien Intruders Stunning version of the all-time arcade hit. No one can resist this classic! **Goblins** Frolics in fairyland! Guide Kaplan the pixie home through the forests, avoiding the nasty goblins – a delightful game. **Gone Fishing** Superb simulation of a day on the riverside. This enthralling program will give hours of enjoyment.

THE MICRO USER MAIL ORDER OFFERS

Go for gold with the...

MICRO OLYMPICS

11 great track and field events for only . . .

£5.95 cassette **£7.95** 5¼ disc **£9.95** 3" disc

YOU are challenged to beat the Olympic world records – with the packed stadium cheering you on to victory . . . or defeat!

Just like the real thing, you'll want to keep on improving your skill until you're up there among the greats!

MICRO OLYMPICS is more than a game. It's a brilliantly written collection of ELEVEN track and field events.

And because they're selling in their thousands we've been able to bring the price right down – to just £5.95.

Ever imagined yourself as another Seb Coe? Then try to run against the world record holder at 1500 metres. And if that distance is too much for you then there's always the 100, 200, 400 and 800 metres to have a go at.

Not much good at running? Don't worry, MICRO OLYMPICS has many more challenges for you. Why not try your skill at the high jump or the long jump?

And if you can't beat the computer at running or jumping then you can always throw things around in frustration! The trouble is that it's just as hard to be a champion at the discus, the hammer or the javelin.

And the pole vault takes the event to new heights!

Yes, it's fast, furious fun, pitting yourself against the world's best times and distances on your micro.

You may not be another Steve Ovett or Alan Wells, but with practice you COULD become the Micro Olympics Champion!

Now on 3" disc

What a bargain! *Four classic arcade games for less than £1.50 each*

Now on 3" disc

ALIEN INTRUDERS – With only your laser for protection you must destroy the waves of aliens who threaten to engulf you. **PANZER ATTACK** – You are a tank commander engaged in vicious combat against encircling enemy forces. **SNAPMAN** – Guide your man through the maze as he munches energy pellets and avoids hostile aliens. **MAYDAY** – A futuristic adventure! As captain of an interstellar cruiser you must guide the sole survivor of a stricken space freighter through the wreckage of his craft.

£5.95 (cassette) **£7.95** (5¼" disc) **£9.95** (3" disc)

Use the special order form on Page 7 – No stamp needed!

THE MICRO USER MAIL ORDER OFFERS

ALL the programs from The Micro User from Day One are now on tape and disc!

MARCH 1983: Deathwatch, a superb arcade game **Bingo,** clever uses of the randomise function; **Bubblesort** routines; **Tests** function keys in machine code. 0.1 **Colour** and **Graphics Routines:** create a kaleidoscope of screen designs.

APRIL: King Kong, rescue girls from the Empire State Building before killing Kong. **Nim,** a structural game of strategy. **Tokens,** unravel the Basic ROM; **Formatter,** an essential disc utility; **Disassem,** a full machine code disassembler.

MAY: Air Strike, a fast and furious arcade game; Test your mental powers with **Pelmanism; Anagrams,** the word game. **Character,** generate vertical and inverted text. **Teletext,** animation in Mode 7. **Beeb,** two joystick exercises.

JUNE: Space Pilot, lost in space you must fight off repeated attacks from alien life forms. **Nomism,** you are a nomadic herdsman desperately trying to eke out a living on the plains of Africa. **Colourful Characters Plus** other listings from the June issue.

JULY: Tenpin, a simulation of Tenpin Bowling; **Spacepods,** beat the alien hordes; **Cup,** exciting 3D graphics techniques **Test** and **Steady,** programs to accompany the Beeb Body Building Course. **Breakfix,** don't let Break destroy your precious variables!

AUGUST: Fruities, driven by strange urges you climb the ladders of adventure to risk all in the gardens of unearthly frights. **Animation,** a suite of programs that really bring your screen alive; **Casdisc,** the machine code downloader for your disc system; **Mode 7** colour routines.

SEPTEMBER: Robin & Marian, rescue Maid Marian from the Sheriff of Nottingham. **Galactic Invaders,** an exciting arcade game. **DFS Benchmarks,** 14 DFS test programs. **Animation,** new techniques. **Terminal,** connect a BBC Micro to a mainframe.

OCTOBER: Fishing, a compulsive day's angling. **Joykey,** convert programs to joystick. **Pentest** and **Bellringer,** for Micro User lightpens. **Contours,** an educational program. **Link** BBC Micros to each other. **Plus** all the listings from the first Electron User.

All our discs incorporate an automatic downloader. Just boot up the disc, make a choice from the menu – and away you go!

Save wear on your fingers and ensure all your programs are error-free by using our monthly tapes or discs. They are only:

£3.75 cassette
£5.75 5¼" disc
£7.95 3" disc

You can also take out a year's subscription and have them posted to you each month.

Cassette £40
5¼" disc £60
3" disc £80

NOVEMBER: Goblins, an enchanted journey. **Blackjack,** the casino favourite. **Charge** and **Pendulum,** Body Building Course part 9. **Sideways,** programs in ROMs. **Pendraw,** a light pen sketching program. **Plus** all the programs from the second Electron User.

DECEMBER: Tower, rescue London's treasure. **Santa,** help Father Christmas. **VDU 23,** an invaluable character defining utility. **Paged,** graphic techniques. **Plus** all the listings from the third issue of Electron User.

JANUARY 1984: Barrels, an all-action arcade game. **Noteplay,** an entertaining musical utility. **Dump1** and **Dump2,** multitone screen dumps. All the programs from our **Sound, Beginners'** and **Graphics** articles **Plus** 12 programs from the fourth Electron User.

FEBRUARY: Invasion, the classic arcade game. **Frogs,** fun for all the family. **Engvgen,** a logic game. **Balance,** a number learning program. **Key,** single key entry for the BBC Micro **Plus** nine other programs from *The Micro User*.

MARCH: Mazemunch, block-busting arcade action. **Birthday,** family fun for our anniversary. **Derrick,** number fun for infants. **Pixelpen,** high resolution for lightpens.

APRIL: Microgolf, the simulation. **Eastermaze** and **April Fool,** seasonal games. **Seawall** and **Magic Square,** maths fun. **Filer** and **Album,** a database of sounds. **TRX1, TRX2, RS423** driver. **Heartrate,** monitor your fitness.

MAY: Dug Dig, asteroid adventures. **Damraider,** naval action. **Envaid,** easy envelopes. **Steppers,** Body Building motor control. **Spiro,** graphics windows. **Adventure,** a trapdoor maze. **Renumber,** program utility. **Bigletter,** large type. **Memory,** RAM efficiency.

JUNE: Roadracer, 3D driving action. **Quadline,** four-in-a-line logic game. **Monitor,** machine code debugging routines. **Toolkit.** 8271 disc controller explored; **Areas,** easy maths. **Spell,** spelling education.

JULY: Doomrun, deep space drama. **Backgammon,** the classic board game. **Keys,** user defined key editor. **Save?** and **Tidisk,** disc utilities. **Alice1** and **Alice2,** mini-adventures. **Terminal1** and **Terminal2,** two communication programs. **Acoustic,** software for the Body Build Modem.

AUGUST: Castle, an enthralling adventure program. **Gridman,** a high speed game of strategy. **Tedit,** a superb Teletext editor. **Dsquare,** simple number fun. **Dedit,** a versatile disc editor. **Input,** the ultimate general input routine. **Bells,** Alice's mini-adventure.

SEPTEMBER: Villains, save your crystals from the evil onslaught. **Rollerball,** an intriguing game of strategy and agility. **Microterm,** comms terminal. **T/Textdump,** Mode 7 screen dump. **Numbersign,** simple number skills test for infants.

OCTOBER: Wampus, explore the labyrinth and slay the beast. **Balloon,** brave the caves, escape the Goulogs. **Splits,** split screen utility. **Pageram,** paged RAM programs. **Input1/2,** alternative inputs for the disabled. **Morecol,** extended colours. **D/A,** a waveform generator. **Integer,** direct addressing speed.

NOVEMBER: Buster, can you line up the diamond blocks? **Duel,** compulsive two player action. **Seaside,** picture fun for the young reader. **M7letters,** teletext large letters utility. **Dseload,** loading large disc files to &E00. **6502,** three second processor programs. **Synth,** two musical Body Building programs.

DECEMBER: Painter, can you paint the precipitous pyramid? **Miner,** delve into the deadly mine's depths. **Snowvad** and **Carol,** two seasonal programs. **Garden,** shape-matching for infants. **Medit,** a memory editor. **Catalog** and **Save,** useful disc utilities. **Ladders,** Alice's mini-adventure. ***Plus Omega Probe – a full length machine code arcade game.***

JANUARY: Rover, guide our retriever to his rations. **Backgammon,** an exciting two player version. **Matchwood,** shape recognition for infants. **Messages,** machine code printing. **Speedtext,** display text at different rates. **Search,** a powerful programming tool. **Second processor,** Body Building and graphics routines. ***Plus Galactic Tycoon, our superb free game.***

NEW RELEASES

PORTCOM

This powerful port control module connects to the user port of your BBC Micro and can form the basis of a computer control system for use in the home or in schools.

- User port still available.
- 2 Mains outputs, rated at 2.5A, 625W, optically isolated and zero voltage switched.
- 4 Relays to switch DC loads, rated at 3A, 28V DC, SPCO.
- 2 DC outputs can be used for rapid switching, rated at 5A, 50V, 50W max.
- 2 x 8 LED displays to monitor the user port and output devices.
- Mains powered, regulated 5 and 12V supplies available to the user.
- Many input and output modules available. Further modules soon to be released.
- Demonstration software including a teaching program supplied on cassette or disc. All connecting leads and user manual supplied.

PortCom in rigid plastic case £126.50
PortCom in metal case £143.75

REAL TIME CLOCK

This product can form the basis of calendar type programs, desk diaries etc. Useful in control situations. The clock has its own battery back up and never forgets the time. Connects to the user port. Supplied with user manual and software demonstrating its use.

Real time clock £36.80

BBC – ZX PRINTER INTERFACE

Still available, this popular product allows a ZX Printer to be used by the BBC Micro for listings, program development etc. Complete with user manual and fully relocatable machine code printer driver software.

BBC – ZX Printer Interface £29.95

SPEECH SYNTHESIS

An almost infinite vocabulary can be produced by simple software. The unit contains its own amplifier, loudspeaker and volume control. Connects to the user port. Supplied with user manual and demonstration software.

Speech synthesis £36.80

1MHz BUS TO USER PORT ADAPTOR

Not enough user ports? Then you need this adaptor. Generates 2 more user ports from the 1MHz bus. Jumper links inside the unit allow the user to select the address of the ports. Mains powered. Complete with user manual.

1MHz bus to user port adaptor £51.75

1MHz bus buffer unit £28.75
1MHz bus decoding unit £32.20
User port monitor £27.95

Prices include VAT, Postage and packing.
All products guaranteed.

Micro-Scope

THE DEBUGGER FOR BASIC PROGRAMS

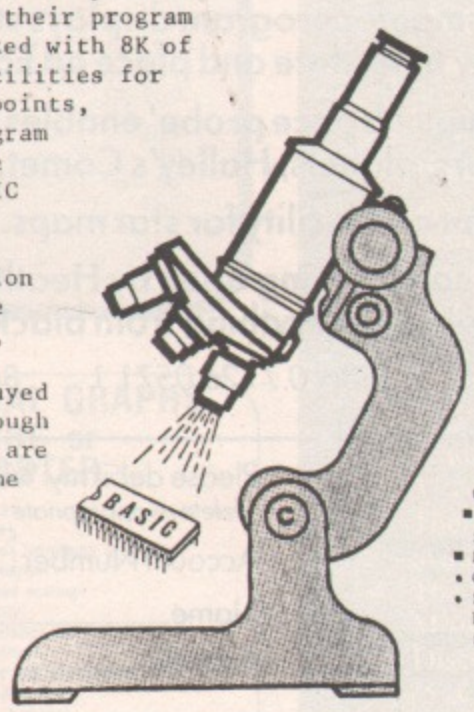
Available NOW · NEW · BBC Model B

Only £20 inc.
(No other costs)
Educ. Estabs. 10% discount
(UK official orders only)

For some years machine-code programmers have had powerful utilities at their disposal to aid them in their program debugging. Now, the MICROSCOPE Eprom, packed with 8K of machine code, provides the same type of facilities for the BASIC programmer. Trace limits, Breakpoints, Single-stepping and Dynamic Display of program information are only a few of the available features previously only dreamed of by BASIC programmers.

This ROM allows its own debugging information and the BASIC program's output to share the screen. This means that past line numbers, variable's values, memory areas and the contents of the current line may all be displayed and updated as the program executes. Although these and the many other unique facilities are extremely powerful and will satisfy even the professional programmer, the inexperienced will find them surprisingly easy to use. We believe that this ROM will become an indispensible aid to any programmer and to anyone learning or teaching the BASIC Language.

Please do not confuse MICROSCOPE with the many Toolkit type ROMs on the market. Although Toolkits are excellent for program development, they provide only minimal assistance when the program does not work or needs modifying. MICROSCOPE is the only ROM dedicated to this task and should not be compared to this type of ROM.



Provides 25 new commands for the BBC Micro.
- Display of any part of memory.
- Display of up to 20 of the previously executed line numbers.
- Display of user selected variables and values.
- Displays the contents of currently executing line.
- The above features are continually updated as the program executes and may all be displayed together.
- Microscope and BASIC output may share the screen.
- Single-step through the BASIC program.
- Up to nine user selectable BASIC Breakpoints.
- Extended error reporting feature (shows location).
- Displays line in error with error message ready to edit.
- Compatible with any screen mode.
- Close any files currently open.
- Debugger output sent to screen, printer, tape or disc.
- Debugger commands may be included within the program.
- Listing of the program route (last 20 lines executed).
- Multistatement line-splitting feature.
- Powerful expanded listing feature (to single statement lines) which allows use of BASIC's own LISTO settings.
- Direct entry of operating system commands (eg *HELP DFS) as the program executes.
- Comprehensive *HELP menus built into Microscope.
- Clears resident variables (A% - Z%).
- Relocate a BASIC program within memory.
- Compatible with existing ROMs and Toolkits.
- Facilities to totally reset Microscope should it become corrupted in any way.
- Six other useful debugging commands.
- Displays status information about the current BASIC program.
- Compatible with OS 1.0 and OS 1.2.
- Supplied with a comprehensive, easy to use 36 page manual which has both elementary and advanced debugging sections and with full fitting instructions.

Condition of Sale. That neither the purchaser nor any 3rd party shall copy either the Microscope program or the Microscope manual onto or into any kind of medium or retrieval system.

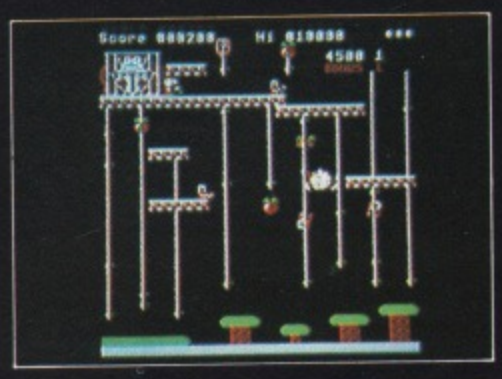
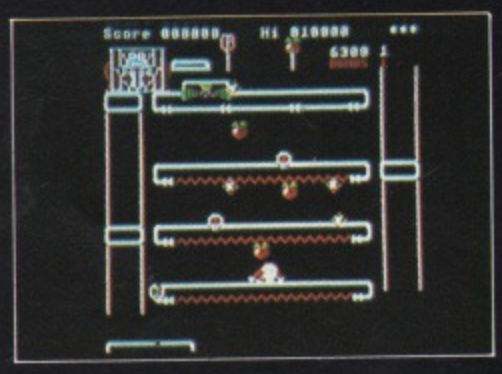
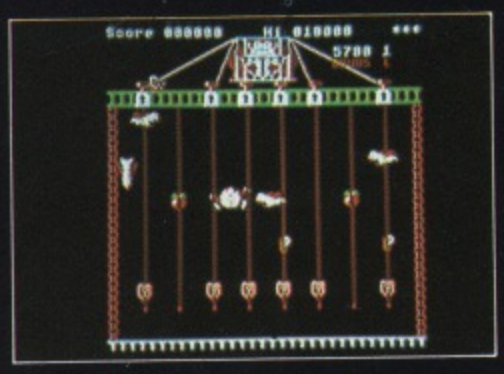
BBC MICRO

SPECIAL OFFER!
Order both directly from us and deduct £1 from each.







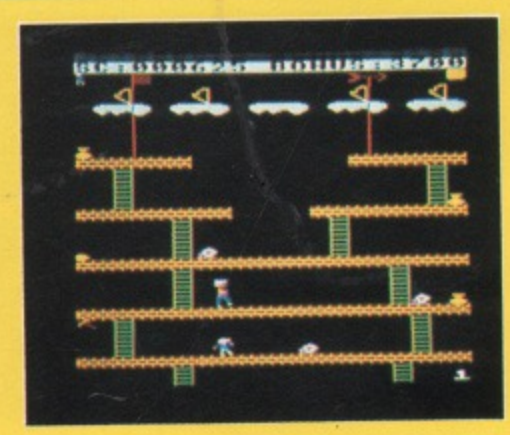
ZANY KONG JUNIOR (32K) **£7.95**

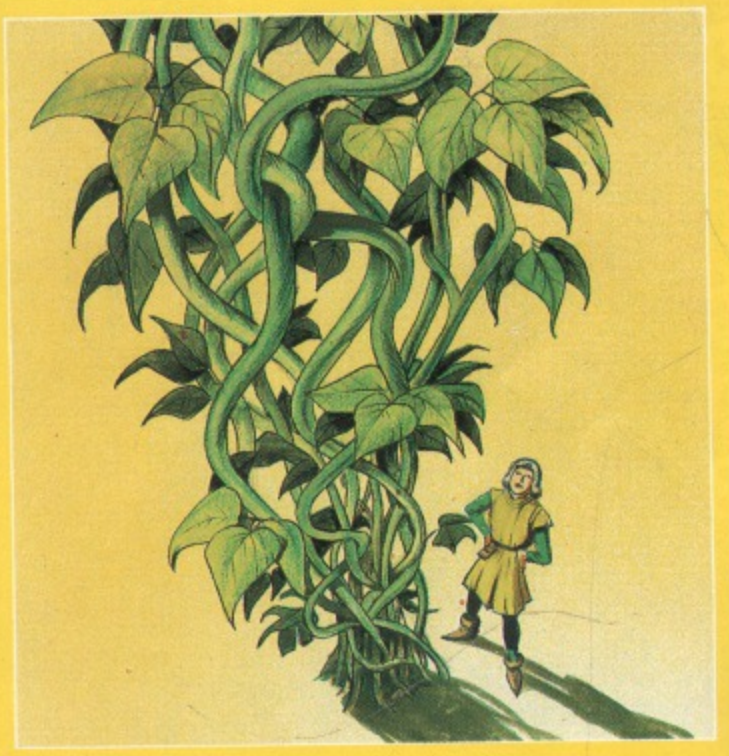
The evil Morris has kidnapped Zany Kong. Your objective is to collect the keys to release Zany Kong from the steel cage in which Morris has him imprisoned. There are four action-packed screens: The Jungle, The Spring House, The Generator Room, and Morris' hideout. Climb the vines, chains and laser beams avoiding the Snappers and the vicious Ardvark Birds, but don't delay – there's no time to spare. A brilliant arcade-style game which we believe is our best release ever! But why not judge for yourselves?
Author: Christopher Hyde.
(KEYBOARD OR JOYSTICKS)
•••*NEW RELEASE*•••

ZANY KONG JUNIOR IS ALSO AVAILABLE FOR THE ACORN ELECTRON AT £7.95

DISC SOFTWARE ALSO AVAILABLE

The following titles are available for the BBC micro on disc at £11.95 each. (Please state whether you require 40-track or 80-track discs).
ZANY KONG JUNIOR, OVERDRIVE, SPACE PILOT, MR. WIZ, STAR STRIKER, BATTLETANK, WALLABY, SMASH AND GRAB, AIRLIFT.





JACK AND THE BEANSTALK (32K) **£7.95**

An arcade-type game with an appropriate seasonal flavour. Each level has two screens: your homeland and the giant's castle. Your aim is to bring three bags of gold from the giant's castle down to your homeland. Your enemies include the giant (who will chase you down the beanstalk if you have his gold), the snails, the caterpillars and the butterflies. Bonuses are scored for collecting the harps and the golden eggs. An enthralling game with excellent graphics.
Author: Andrew Harley.
