## **MEGA BYTES** FOR MINI BUCKS

f you want to increase your storage capacity up to an incredible 112 MBytes you need a Winchester; but not just any Winchester ... the new Viglen System is 100% compatible with the Acorn Winchester, it's simplicity itself to install and it costs a lot less than you think.

The Viglen Winchester is ready to plug straight into your BBC Master or if you have a B or B plus you will simply have to fit an ADFS ROM. You can use up to two floppy disk drives in conjunction with the unit and, fitted to the B+ or Master, the floppies can double their capacity by running in double density mode.

The 112 MBytes Viglen Winchester System is equivalent in capacity to over 1000 100K floppies or 250 400K floppy disks. It takes under 2.5 seconds to save 200K bytes,

making it at least ten times faster than the equivalent floppy disk options. The system is designed for virtually every application from education or business to home use.

#### WHAT DO I GET FOR MY MONEY

1. Winchester Unit – (winchester drive, controller boards, power supply and fan all fitted in one compact case). The fan is recommended in order to keep the winchester at the correct operating temperature.

2. Master Reference manual part I (for a BBC B or B plus you will require the Acom ADFS ROM and utilities available at an extra cost)

Winchester user guide.

4. Additional utilities on the winchester including formatter, verifier, ADFS menu and backup program.

#### PLUG IN SECOND DRIVE

The Acorn ADFS can handle up to two winchester drives. These are accessed as drive 0 and 1 (the floppy disk drives being accessed as drives 4 and 5). Viglen winchesters are supplied as Drive 0 (single unit) and Drive 1 (Second drive for single unit). The Viglen drive I can be instantly plugged into drive 0 and used either as a backup for Drive 0 (and perhaps taken off and stored away) or for more online mass storage. This will enable you to back up 20 Megabytes in under 7 minutes.

#### **STORAGE OPTIONS:-**

Drive 0	Drive I
20 Meg	20 or 40 Meg
28 Meg	28 or 56 Meg
40 Meg	20 or 40 Meg
56 Meg	28 or 56 Meg

## **BEEBUG** For users of the BBC Micro, Master and Compact

## RISC USER For Archimedes users

Subscribe to BEEBUG or RISC User and not only will you receive an informative magazine mailed directly to your own address for 1 year,

But you will also benefit from:

- Unlimited access to our technical support team to assist with any computing problems that you may have, and to provide impartial advice.
- A swift mail order service for all your hardware and software needs at competitive prices, and with 5% members' discount.
- A showroom with knowledgeable staff on hand, where you can try out the latest hardware, peripherals and software.
- Free members' adverts in BEEBUG to sell your unwanted kit.
- A trade-in service to upgrade your BBC/Master to a new Master/Archimedes.
- 25% members' discount on the entire Beebugsoft range of software.
- An Acorn appointed specialist support and service centre.

## BEEBUG

The magazine is now in its sixth year of publication with 20,000 subscribers throughout the world. Its proven format has been invaluable to serious BBC Micro and Master computer users in the home, education and business.

Each issue of BEEBUG provides 72 pages of articles, programs (utilities, applications etc), tutorials, workshops, reviews, hints & tips, news and information for beginners and experts alike. All our programs are tested on all versions of the BBC Micro, and are also available monthly on disc or tape.

## RISC USER

This is the magazine for everyone interested in Acorn's RISC computer, the Archimedes. Launched at the same time as Archimedes, RISC User provides lively and informed coverage of what's happening in the world of Archimedes.

Reviews, hints, programs and articles are all specifically written for Archimedes, showing how to exploit the many features of this sophisticated computer. RISC User is all about the Archimedes; it does not contain modified programs originally intended for the Model B or Master.

## Acorn ups Arc prices

ACORN has increased its recommended retail prices for almost all the Archimedes range, along with a number of the machines' peripherals.

Only the Archimedes 305 emerged unscathed in what general sales manager Terry Shurwood described as a demonstration that "Acorn is not immune to the fluctuations affecting the computer industry".

Shurwood told *The Micro User*: "In the interests of market stability, it is our policy to minimise the frequency at which we make changes to our recommended prices".

He pointed out that "the previous alteration to Acorn prices was in the last quarter of 1987 and in the months since then there have been a number of changes in the commercial climate that Acorn has to operate in".

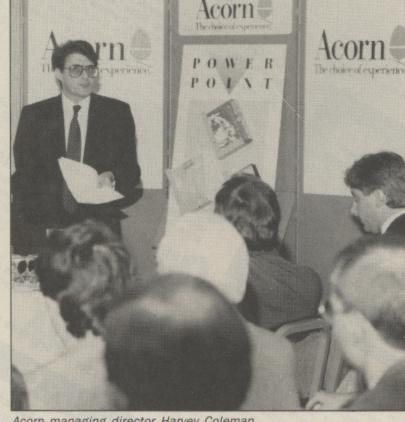

The Archimedes 310 will now sell for £835, with mono monitor £895 and with colour display £1,055.

The new price for the Archimedes 440 is £2,529, with mono monitor £2,589 and with colour display £2,749.

The 0.5Mb ram upgrade for the 300 series now costs £149, an additional floppy disc £125 and 20Mb high speed hard disc and controller card £499.

For both the 300 and 400 series, the I/O expansion card is £85 and the music Midi add-on £39. The recently released separate Midi expansion card is £69.

Prices of the Master 128 and Master Compact remain unchanged.

Acorn managing director Harvey Coleman addresses dealers and distributors

#### MICROS AND MEDICINE W Acorn technology is helpmedical science was illus-GOON SHOW

HOW Acorn technology is helping medical science was illustrated in depth during the UK's largest health care exhibition at Brighton.

Treatment for Aids, optical research, advanced interactive video training systems and patient rehabilitation were some of the medical applications of Acorn computers demonstrated at Healthcare Computing 88.

Acorn dealer and image processing specialist Wild Vision created much interest with its Hawk V8 video system running on a Master 128.

Video images are digitised and written in real time directly into the Master's video display memory for instant frame grabbing or moving picture analysis. The data capture and transfer is transparent to the microprocessor, leaving it free to run image processing software.

One of the applications of

the Hawk V8 seen at the exhibition is the animal activity monitor, developed by Wild Vision with the help of Dr Paul Flecknell of the Comparative Biology Centre at Newcastle University.

An animal is observed by a video camera, then the signals are digitised and fed to a Master 128 which calculates the centroid of the animal in order to analyse and record its movements.

Also based on the Hawk V8 system is the Pedobaroscope

PBS100 for scanning pressure distribution under feet, and an image analysis system for use in applications like medical scanning, quantitative microscopy and particle size analysis.

Also at the exhibition, an advanced interactive video system illustrated other programs used in knee and Aids treatments. Wild Vision is currently developing image

## **SKY WATCH SCRAPPED**

ONE of the most popular features of Prestel has now been withdrawn.

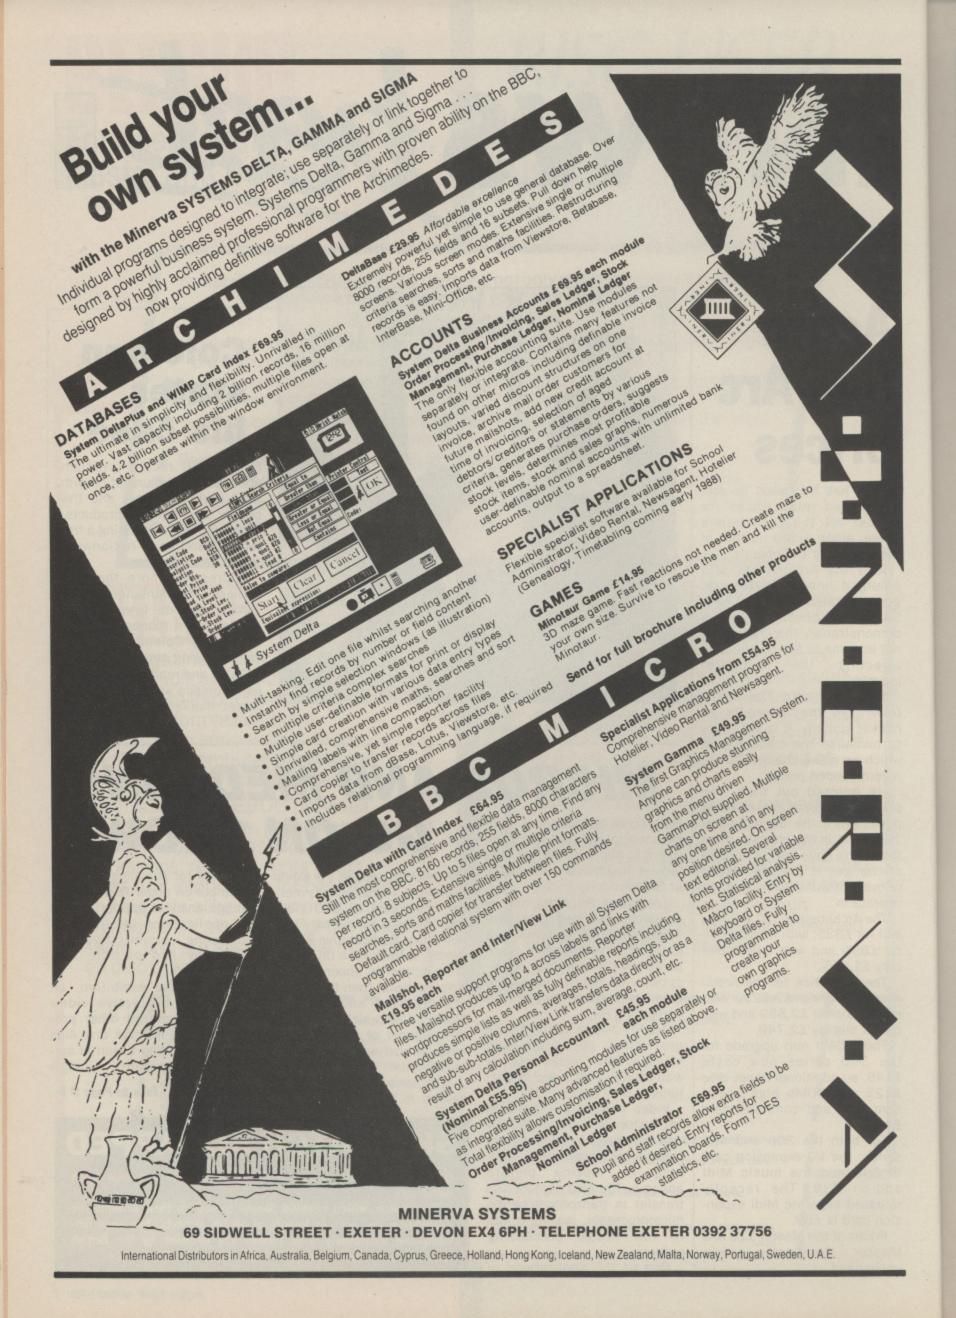

Sky Watch, which enabled people to see on their screens the departures and arrivals boards at all UK airports, has been discontinued indefinitely. This follows the decision by the British Airports Authority to withdraw their support for the service.

## Coleman states his case

FOLLOWING recent criticism about poor communication with third party suppliers and the people who sell its products, Acorn has been extending a fraternal hand in a nationwide series of conferences.

Addressing more than 50 dealers and distributors in the company's home town of Cambridge, Acorn managing director Harvey Coleman outlined his marketing strategy.

Sales and marketing director lan Laurence spoke about new target markets for the Archimedes.

# NEWS beat

## Teletext for BBC Micro

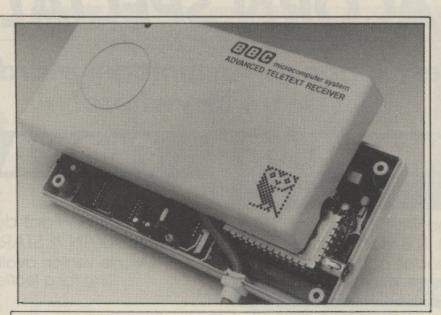

A NEW advanced teletext receiver has been developed for use with the BBC Micro and Master by General Information Systems (0480 87464).

"The design incorporates many of the advances made possible by recent developments in teletext chip technology", commented a GIS spokesman.

It takes its power from the micro's auxiliary output. Tuning is carried out by an auto-scan system and the adapter is capable of keeping up to eight channel frequencies in non-volatile storage.

The director of GIS, Mr Ram Banerjee, said: "The potential for the imaginative enthusiast is almost endless since the program mode allows development of a countless number of applications.

"Once transmissions start the unit will be capable of producing higher definition – level three – teletext and some parts of level five". Price £149.

## **DEMAND SLOWS 400 DELIVERIES**

ANYONE intending to buy an Archimedes 410 could have a long wait ahead of them. Acorn says it will probably be the end of the year before supplies of the expandable version of the 400 series are available.

The reason is that demand for the 440 has been much greater than anticipated.

Both enhanced machines share the same production line so something had to give – and as the 440 earns Acorn approximately £1,000 more than the 410, the less powerful machine had to give way.

"Demand for the 440 has been very high indeed, and frankly we underestimated the strength of its popularity", said an Acorn spokeswoman.

"Demand is slightly less for the 410, and as both machines use the same production line we are concentrating on the 440 for obvious reasons".

The 440, costing £2,529 to  $\pounds 2,749$ , is a much more complete system than the 410 which is about £1,000 cheaper.

Although the 410 is expandable to 440 capability, it has not caught the imagination like its bigger brother.

As one buyer put it: "If you don't intend to expand you might as well get an Archimedes 310 for under £1,000. If you know you will expand you might as well buy the 440 in the first place and save yourself the bother of fiddling about with add-ons".

Another main reason why demand for the 410 has lagged behind is that the 440's big memory and hard disc are much more in tune with what the market wants.

And that market is increasingly the lucrative sectors of education, software development and large organisations.

## Innovative entries are pouring in

ENTRIES already received for the 1988 Micro User Innovation Awards include an integrated package which manages all the administration associated with a continually assessed double option GCSE science course.

Also in the education field, another entrant uses the BBC Micro to help children with profound and multiple learning difficulties – children who cannot use the keyboard at all.

And in the commercial sector, a company has designed a program to cope safely and efficiently with the intricacies of high explosive storage.

The international competition is open to all BBC Micro users — individuals or groups, schools or businesses — and the project entered for consideration can be serious, commercial or just for fun.

In the BBC Micro category the winner will receive – among other prizes – an Archimedes, while the winner in the Archimedes section will take home a 24 pin Brother 1709 printer.

The closing date for entries is October 14 and the winners will be declared at the Electron & BBC Micro User Show in November.

## **DTP for ARC**

ACORN Computers has signed a contract with British-based software house GST to develop a desktop publishing package for the Archimedes.

Scheduled for release towards the end of the year, the DTP software – based on GST's popular Timeworks package – will take full advantage of the machine's speed and graphics capability.

#### ◄ From Page 7

analysis systems to exploit the power of the Archimedes' Riscbased environment.

Vital information for the treatment of glaucoma can be obtained by the use of Digit, a program designed by Dr Brian Hayes from the Institute of Ophthalmology in London.

To enable image analysis of the eye, a digitiser tablet is connected to an Archimedes to measure the area of the optic disc, located on the optic nerve at the back of the eye.

Also running on the Archimedes at the exibition was a selection of rehabilitation programs for patients recovering from head injuries. These have been developed at the Burden Neurological Institute, Bristol, for monitoring results and upgrading and adapting treatment.

Patients returning home are given a micro and modem so that exercise programs for regaining concentration can be undertaken and monitored remotely.

lan Laurence, Acorn's sales and marketing director, presented a paper entitled Implications of Risc technology for the NHS.

The paper included a description of how Acorn's Risc developments can benefit the Health service.

# NEWSpeat

## Hospital wins in spreadsheet challenge

YOUNG patients at the Great Ormond Street Hospital in London have been given an Archimedes to mark an attempt at a new entry in the Guinness Book of Records.

Staged at the Electron & BBC Micro User Show the event involved an Archimedes and a brand new accounting software package from Minerva Systems called SigmaSheet.

The combination calculated a complete set of annual consolidated accounts for a company with 1,260 branches – covering nine financial categories including sales, costs, rents and expenses – in only 23.48 seconds.

Minerva (0392 37756) says SigmaSheet can calculate a 32-year cash flow in under 25 seconds and analyse figures for a period up to 333 years.

It all makes for a lot of paper – produced at the show was the longest spreadsheet in the world, all of 235ft long with up to

Minerva Systems team wrapped in its 235ft spreadsheet left to right: Roger Jane, programmer of SigmaSheet, Barry Stearn, technical director, and Nova Fisher, managing director.

1,000 columns by 16 rows of figures.

Leading international accountancy firm Touche Ross pulled out of a challenge to compete against SigmaSheet and the Archimedes at the last minute.

"Maybe they discovered how fast our spreadsheet really is and didn't feel they had a chance of winning", said Minerva managing director Nova Fisher.

Despite the lack of a challenge the day did provide a winner — in the shape of the Wishing Well appeal fund at Great Ormond Street Hospital.

Acorn donated an Archimedes which will be used by children in the hospital to continue their education while undergoing long-term treatment.

#### Mini modem for Z88

WEIGHING in at only 130 grammes, a miniature modem is the latest addition to the range of peripherals suitable for the Z88.

Available from Cambridge Computer (0223 312216) the battery-powered Z88 Pocket Modem is small – about the size of a cigarette packet – but offers a comprehensive range of features, including variable baud rates, choice of protocols and auto-dial and answer.

The modem is fully Hayescompatible, with 300 and 1200 baud rates. It supports Bell 103/212A and CCITT V21/V22 communications protocols and can be switched between the two.

Price £172.45.

## £1,000 competition winners

THE great £1,000 music competition sponsored by EMR in the April issue of *The Micro User* brought an absolutely massive response.

First correct entry out of the sack was from W.Stephens of Sudbury who wins the magnificent Farfisa TK80 digital keyboard. EMR's Scorewriter goes to S.Shaw from Stanmore, while the EMR Performer and Midi Interface were won by Ian Elson from London.

K.Milner from Knebworth; P.Sykes, Brighton; T.Pegg, Leeds and A.Highet, Granby each won the new music package for the Archimedes – Soundsynth.

Copies of Mike Beecher's book – Midi, Micros and Music – go to each of the 50 runners-up: D.Lally, Bromsgrove; S.Smith, Ormskirk; M.Smith, Aughton; R.Billington, Warley; A.Mas, Lower Kingswood; C.Stops, Bridgwater; S.Hubbard, Basingstoke; R.Grant, Sheffield; J.Marshall, Tollerton; N.Kennedy, Northwood; M.Needham, Sheffield; A.Gray, Ruislip; D.Radford, Bolton; A.Launchbury, New Barnet; R.Escolme, Nuneaton; G.Heayes, Woodhurst; T.Lancaster, Haverhill; F.Chaplin, Chorley; M.Pegg, Derby; A.Rogers, Bracknell; P.O'Leary,

Welling; Worksop; T.Rowe. A.Barker, Watford; R.Masters, Gillingham; Q.Pak, Sevenoaks; P.Smart, Tunbridge Wells: Wellingborough; N.Geeves, lvinghoe; J.Stone, A.Smith. London; J.Sawyer, High Wycombe; S.Crump, Chorley; K.Nelson, Patna; C.Williams, Coventry: R.Davenport, Iver Heath; W.Taylor, St Annes; R.Calvert, Newtownards; T.Lister, Salisbury; Z.Iqbal, Sheffield; A.Smith, Doncaster; S.Barber, Oxford; P.Robson, Lordswood; A.Smith, Long Eaton; M.Lancastle, Orpington; I.Braithwaite, Ruislip; H.Steel, Glasgow; S.Hardie, Ampthill; J.Sampson, Weybridge; M.Street, Biggin Hill; V.Barnett, Soton.

## Arc aids athletes

AN Acorn-donated micro was the star attraction at a fund raising event for the British Olympic Appeal in Wales.

The Archimedes – fastest micro in the world – was a logical choice to raise money to speed British athletes to the Seoul Olympic Games.

Together with other prizes at a gala dinner and grand auction in the presence of the Princess Royal, it helped raise £56,000 for the appeal.

Alf Gooding, spokesman for the British Olympic Appeal, said: "It seemed entirely appropriate that a high performance British computer should help raise money for our althletes".

No hike in MicroLink charges

DESPITE this month's surprise Micronet/Prestel price rises, MicroLink has denied reports that it will be forced by BT into raising its own charges.

From July 1 Micronet/Prestel subscriptions go up 21 per cent from £66 to £79.95 a year for home users, with business users paying £119.95.

Peak time charges rise from 6p a minute to 7p, and free off-peak usage has been scrapped – users now have to pay 1p a minute. For the first time, full peak time rates also apply on Saturdays between 8am and 6pm.

However, although some communications industry observers are predicting that MicroLink will have to follow suit, the company says its annual subscription will remain at £36 for home and business users alike and it will continue to operate off-peak rates for the whole of Saturday and Sunday.

The potential for Archimedes software without a ROM podule is severely limited. There will be many ROM based programs in future, in addition to INTER-WORD, SHEET, CHART and SPELL-MASTER, which are already available. Remember, ROM based programs on the Archimedes still have many of the same advantages over disc based programs that they had on the BBC; programs load faster, they are more reliable, they are permanently available and, most important, such programs can use overlay techniques to save a large proportion of the available memory. Consider running a document processor, spelling checker, drawing program and perhaps a thesaurus; the total program size could easily be over 600K—totally impractical, even on a 1 Meg machine.

In addition the Computer Concepts'board can be used as a very fast RAM filing system, and our experience is that many boards are used for this. A program that uses the floppy disc intensively will gain from the RAM filing system, which is about 10 times faster than floppy.

Our board is fast, cheap, flexible, expandable and easy to use. We also provide a no quibble money back guarantee. In a comparison, the facts speak for themselves.

Please note: A backplane must be fitted in order to install any podule expansion card.

Computer Concepts Ltd

Gaddesden Place, Hemel Hempstead, Herts HP2 6EX Telephone 0442 63933

**Another Sensational Offer from Copper Mill Computers** INTRODUCING OUR NEW 20MB WINCHESTER DISC DRIVE SYSTEM FOR THE ACORN BBC B/B+ AND MASTER 20 MEGABYTES OF MEMORY FROM ONLY £299.95 inc VAT

- Comes complete with:
- \* 1m cable to 1MHz bus + through socket
- \* User manual
- \* Utilities disc (FORMAT, VERIFY, DIAGNOSTICS)
- \* 12 Month Warranty

OUR NEW WINCHESTER COMES AS A COMPLETE PACKAGE. NO HIDDEN EXTRAS! Attractively packaged our system is totally compatible with the Acorn ADFS and associated software. Our manual covers operation and use of the available high speed memory. This whole system is manufactured in our own factory where we have gained great experience in the service and repair of virtually all types of disc drive, thus you can be well assured should you require any service backup.

Please send cheque/P.O./Access or Visa to: Copper Mill Computers, Unit 13, 193 Garth Road, Morden, Surrey. SM4 4LZ.

Please write or call us on 01-330 4838, for further details. Official orders from Educational Government Dept's welcome.

## NEAPPLE SOFT

#### Programs for the BBC model B, B+, Master and Master Compact with disc drive

#### DIAGRAM II now also available for ARCHIMEDES

Diagram II represents a major breakthrough in the techniques used for drawing software on the BBC micro. It works on a completely different principle to other drawing software by storing the drawing information straight to disc as coded 848 pixel blocks.

This technique has three major advantages. First, the size of the diagram is only limited by the amount of space on disc. Second, there is no limit to the amount of information which can be stored on a given diagram as the information is stored on disc and not in computer memory. Third, the disc storage technique allows the smooth scrolling of the screen over the whole surface of the diagram.

For people not familiar with Diagram, the basic operation of the program is to first display any part of the diagram, either by quoting an index name or screen number. At this point you are free to scroll the diagram around the screen using either cursor keys, trackerball or mouse. You may stop scrolling at any point and enter the edit mode which allows you to modify or add new information to the diagram. When you have finished making alterations, the new information is stored to disc and you are free to scroll elsewhere on the diagram stopping to edit at any time.

The edit features are now very comprehensive. Text may be typed straight rom the keyboard, and if other fonts are stored as user defined characters hen these fonts may be printed using the normal keyboard keys.

The print routines are now completely 'scaleable' with both the horizontal and vertical scales being totally variable in 1% steps between a size that will give 18 mode 0 screens on an A4 sheet and a size that would print just one pixel on a sheet! The routines are adaptable to most types of dot matrix printer and full advantage may be made of wide carriage printers. The printouts may be rotated through 90 deg. if required.

The new editing features make DIAGRAM II suitable for all types of serious drawing application including scale drawings, flow charts, architectural, family trees, and many other subjects as well as circuit and schematic diagrams. As an example of what Diagram II can do, this complete advertisement (with the exception of the PCB drawing) has been produced with the package.

- Works on any model BBC computer with either DFS or ADFS.(ADFS only if Shadow memory available).
   Will automatically take advantage of shadow memory (any make) to provide more User Definable Characters, 880 with Shadow, 381 without Shadow.
   Rapid horizontal and vertical line drawing routine with automatic joins for circuit diagrams.
   Full rubber band line drawing and circle drawing modes.
   Takes advantage of the Acorn GVR rom to provide drawing of arcs, sectors, chords, parallelograms, ellipses, and flood filling. Note this rom is already fitted to Master and Compact machines.
   Pinel cursor drawing and deleting mode allows very fine detail to be added.
   Defined areas of screen may be moved, copied, deleted or saved to disc.

- added.
  7. Defined areas of screen may be moved, copied, deleted or saved to disc.
  8. On-screen indication of cursor position shows either the cursor position on the overall diagram or the distance from a preset point.
  9. Keyboard keys may be predefined to print User Defined Characters, enabling new character sets to be stored as user defined characters and then printed straight to the screen using the keyboard keys.
  10. Wordprocessor files may be loaded to the screen and automatically formatted into any shape screen area.
  11. Index names may be set up to point to given areas of a large diagram, to enable rapid access to a given point on a diagram.
  12. Fully compatible with Marconi trackerball and most makes of mouse.
  13. All Diagram 'Utilities' are included, enabling screen ident numbers and borders to be added, and any area of diagram to be moved or copied. The whole diagram may be displayed in reduced scale (either 4\*4 or 8\*8 format) on a single screen, and the size of the overall diagram may be increased or decreased.
  14. Completely scaleable print routines allow any area of the diagram to be varied in 1% steps allowing up to 18 mode 0 screens to be printed on an A4 sheet (still with readable text).
  15. Complete with 40 page easy to understand handbook.

MITEYSPICE

PRICE £ 119.00 + uat

ADFS Utilities Rom - ADU

Miteyspice is a very powerful AC & DC circuit analysis package with graphics suitable for use with any model BBC micro including those with 2nd processors. As well as all the usual facilities available with this type of program, non-linear effects, small signal, noise measurements and sweeps may be performed. Component values may be swept, allowing component tolerances to be investigated as well as thermal performance etc. Comprehensive transistor modelling is incorporated using a 20 parameter Ebers Moll description. The program is supplied on disc with a very comprehensive 49 page manual.

Diagram II consists of a set of disc files and a 16k Eprom. The disc supplied is formatted in 40T on side 0 and 80T on side 2. Please state if this is unsuitable for your system, or if you require a 3.5" Master Compact disc. ARCHIMEDES version on 800k 3.5" disc. RFAR ELEVATION **CFTI, TBB** DIAGRAM II - £55.00 + vat P & P free (except overseas) П N.B. Upgrades are available to existing Diagram owners. Please contact Pineapple if you have not received an upgrade letter. INN

#### PCB

TICE Pineapple's now famous printed circuit board drafting aid produces complex double sided PCB's very rapidly using any model BBC micro and any FX compatible dot\_matrix printer. The program is supplied on Eprom and up to 500 component and 500 ASCII for a given PCB although the maximum board size is restricted to 8" \* 5.6". Using a mode 1 screen, tracks on the top side of the board are shown in red, while those on the underside are blue. Each side of the board may be shown individually or superimposed. A component placement screen allows component outlines to be drawn for silk screen purposes and component numbers and outlines entered on this screen may be displayed during track routing to aid identification of roundels. The print routines allow separate printouts of each side of the PCB in a printing to be used on resist covered copper clad board. The print routines are very fast taking typically 5 minutes for a 1:1 print of a 7" 5" board. This program has too many superb features to describe adequately here, so please write or 'phone for more information and sample printouts.

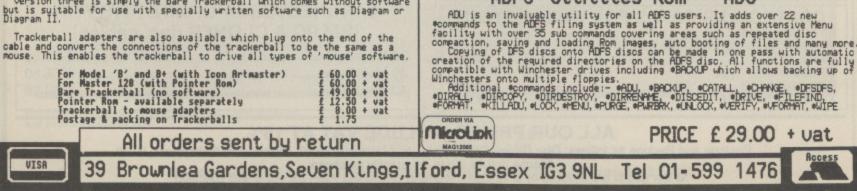

#### Plotter Driver to suit most plotters £ 35.80 + vat PRICE £ 85.00 + URT

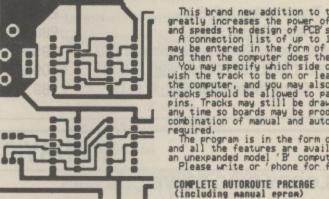

#### MARCONI TRACKERBALL

This high quality device comes in three versions. Version one is for the standard BBC micro and comes with the Icon Artmaster drawing package from Micro-Draw, and Trackerball Utilities which allow the trackerball to be used with other software.

Version two is for the Master 128 computer and this comes with the Pointer Rom. This is a Rom which allows the Master to be configured for use with the Trackerball and has commands to enable the Trackerball.to intercept the cursor key or joystick routines of other software. Commands are also available to reverse the axes of the trackerball and set the sensitivity. The three buttons may also be set up to produce any ASCII code.

Version three is simply the bare Trackerball which comes without software but is suitable for use with specially written software such as Diagram or Diagram II.

#### AUTO - ROUTING PCB

This brand new addition to the PCB program greatly increases the power of the software and speeds the design of PCB's even more. A connection list of up to 190 connections may be entered in the form of a 'rats nest' and then the computer does the rest! You may specify which side of a board you wish the track to be on or leave the choice to the computer, and you may also say whether tracks should be allowed to pass between I.C. pins. Tracks may still be drawn manually at any time so boards may be produced by a combination of manual and auto techniques if required. The program is in the form of a second Eprom and all the features are available even with an unexpanded model 'B' computer. Please write or 'phone for full details.

£ 185.00

+ URT

#### **REALTIME SOLIDS MODELLER**

"Realtime Solids takes all the hard work out of truly impressive graphics displays on your BBC micro. It doesn't take much imagination or effort to create extremely complex shapes from very simple beginnings....full hidden line removal and hardly a trace of flicker" - BEEBUG (APRIL '88).

if

out

be

nt.

rs

ted

is

The complete 3D Solids/Wireframe package for architectural design, interior design, engineering design, teaching CDT and 3D geometry, molecular modelling, mathematical plots, scientific processing and high speed flicker-free 3D animation.

Hidden Surface Removal can be performed for full colour realistic solid displays at high speed. The 3D solid images can then be incorporated into other art designs.

Supports all plotters including HP-GL, Plotmate, Penman II, Hewlett Packard, Epson HI-80, Hitachi 672, Watanabe, Graphtec, Calcomp, Seckonic, Houston DMP, Roland and paper sizes from A0 to A4 for professional results.

The package consists of a 32k Realtime Graphics Language rom, Solids Design disc, Wireframe Design disc, Multi-plotter and printer driver disc, Demonstration disc, Applications disc, Database library disc and a fully comprehensive 150 page manual designed for complete beginners and experts alike.

Design facilities include 3D Solid/Wireframe Editors to design objects with lines and surfaces, create symmetrical objects by Sweeping or Extruding simple sections, use objects as building blocks to create more complex objects which in turn may be used as building blocks, specify individual surface and line colours for multi-coloured objects, dynamic 3D viewing in any graphics screen mode and a Data convertor for interfacing to other CAD systems and applications.

The Solids Realtime Graphics Language (RGL) rom provides 52 star commands to write your own 3D applications. The facilities include 3D Rotation, Scaling, Translation, Perspective and Isometric displays, Orbiting, 3D Turtlegraphics, Geometric processing, unique 35,000 pixels/sec line generator (faster than Acorn's 9000/sec) for high speed 3D animation and many more options.

The Solids RGL is compatible with all the BBC graphics screen, plotting and colour modes including Shadow screen and is up to 5 times faster than the original RGL. The 32k RGL rom board can be plugged into any 16k rom socket.

Minimum requirements: BBC B/keyboard/single drive. Also compatible with BBC B+, Master series, all versions of DFS & DDFS. The system will also take advantage of a 6502 2nd Processor/Turbo or AMX/QUEST Mouse. REALTIME SOLIDS MODELLER: £89.95.

#### **3D CAD/ANIMATION SYSTEM**

#### **ARCHIMEDES & BBC VERSIONS**

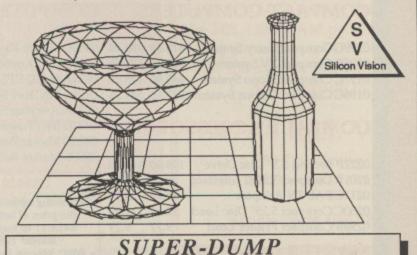

Once again Silicon Vision steals the lead with this incredible offer. It's true we're offering our international, best-selling wireframe 3D Graphics Development System (3D GDS) at an incredibly low price. No we haven't gone mad, it's simply our way of introducing you to our unbeatable 3D Solids Design & Animation Systems.

3D GDS is a full blown 3D CAD & Animation system that can handle wireframe models of any complexity. The package consists of a Design & Animation disc, a database disc to get you started, and a comprehensive 95 page manual. The standalone animation facilities for the BBC include a unique 30,000 pixels/sec line generator for high speed flicker-free 3D animation -ideal for games & simulations.

In the future, you may find that you need a 3D Solid Modelling system for more professional results or more powerful animation facilities for better effects.

Well, then you'll find no better company to do business with than Silicon Vision. As Europe's fastest growing CAD software house, there's no-one more capable of satisfying your future needs. In the meantime we offer you 3D GDS with our compliments. Worth over £25 it can now be yours for only £12.95 (BBC version) or £19.95 (Archimedes version). Super-Plot plotter driver: £15.95 (BBC).

Minimum requirements: BBC B/single drive. Also compatible with BBC B+, Master series, Archimedes 305 to 440, all versions of DFS, DDFS & ADFS(Archimedes 3.5" disc). Order one today and enter the dynamic world of high speed 3D computer graphics.

#### 1920x1024 Resolution Breakthrough! Near Plotter Quality hardcopy at a fraction of the cost.

At last a printer driver which takes advantage of the highest resolution capability of ordinary Epson compatible printers to provide 1920x1024 resolution as opposed to the 640x256 resolution limitation of most printer dumps.

Fully compatible with the Realtime Solids Modeller, 3D GDS and all other CAD packages and applications that can produce a VDU text file of a screen image. An example program is included in the package.

Unlike other printer drivers, Super-Dump does not use screen images directly but instead operates on text files of VDU codes that represent the image to be printed. These files can also be created by your own graphics programs with the addition of two simple \*SPOOL statements.

The package consists of a Super-Dump disc complete with documentation and provides fully proportional dumps at resolutions of 1920x1024, 640x512 & 640x256. Images can also be scaled, positioned and previewed before printing.

Minimum requirements: BBC B/single drive. Also compatible with BBC B+, Master series, all versions of DFS & DDFS. SUPER-DUMP: £15.95. (Enquire for Archimedes version).

Contact your local dealer or order directly by cheque/P.O./Access/Mastercard/Eurocard from: SILICON VISION LTD, SIGNAL HOUSE, LYON RD, HARROW, MIDDX, HA1 2AG. Tel: 01-422 2274 or 01-861 2173. Fax: 01-427 5169. Telex: 918266 SIGNAL G.

## **TELETEXT ADAPTER**

Would you like access to free high quality software and over a thousand pages of information, but Prestel access charges and phone bills too expensive? Then read on!

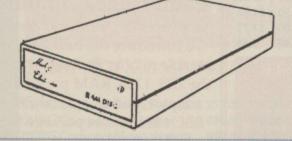

The answer is Teletext. Yes the same system everyone has seen incorporated into television sets, but with a difference. When Teletext is read by a computer you can actually use the data. The MORLEY TELETEXT ADAPTER introduces you

to the world of Teletext at a price that won't break the bank. Inside it you will find the latest in second generation Teletext chip technology, which unlike our rivals who are still using chips designed more than ten years ago, will be fully compatible with any future

advances in the Teletext system. With the Morley adapter you will get a state of the art unit that automatically tunes itself into the required station (no more messing around with screwdrivers or twiddling little knobs in the back of the case), a user friendly menu driven program, easy to follow instructions and a 12 month warranty. Add to this the free downloadable telesoftware and we are sure that you will agree that we are offering you one of the best bargains on the market today.

#### FEATURES:

Advanced design uses the latest technology, will handle ANY future enhancements to the Teletext

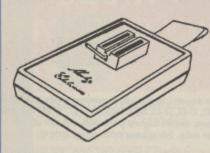

Now available! The first true MEGA capacity RAMdisc for the BBC, BBC B+ and MASTER computers. This fully compatible unit, currently available in either 1 or 2

megabyte versions comes complete with operating software on ROM, power supply, and a comprehensive user guide.

#### FEATURES:

One megabyte of RAM connected to the 1mHz bus. Used with the supplied ROM software programs and files may be saved and loaded from the RAMdisc in the same manner as from a floppy disc with a large increase of speed, for example, a 20k mode 0 screen takes about 3-4 seconds to load from disc and about 0.2-0.3 seconds to load from the RAMdisc. The RAMdisc ROM operates as a utility ROM

## EPROM **ROGRAMMER V2**

The MORLEY EPROM PROGRAM-MER V2 is a small self contained unit that plugs into the BBC or MASTER user port. It comes with a high quality ZIF (zero insertion force socket) and contrasting plastic case. Also included in the package is it's own user friendly menu driven software on ROM or disc. This state of the art unit, allows programming of 2764 (8k), 27128 (16k), and 27256 (32k) EPROMS. Not only does the hardware allow

programming of the usual NMOS devices, but will handle the new generation CMOS equally as well, and with the average time taken to program a 16k at less than 30 seconds we believe it to be one of the fastest programmers available today

#### THE HARDWARE

The Unit is completely under software control, there are no knobs or switches to baffle the novice, and the extended features provided should excite the pro's. THE SOFTWARE

The comprehensive user friendly software included in the package has two main parts, the first allows EPROMS to be read, programmed, verified and edited, also allowing a ROM image to be loaded or saved to disc. The second is a full ROM management system in its own right, which has a host of useful features and routines, such as KILL and RESURRECT ROM to disable or enable a sideways ROM, dump ROM image to buffer or disc, move ROM image in buffer to sideways RAM, and VIEW-SEARCH any sideways ROM. The whole system is available now for less than the price of one WORDWISE

chip. So get yourself the all new MORLEY EPROM PROGRAMMER V2 today and start using those expansion boards for what they were made for! ROMS. Immediate delivery no quibble 12 month guarantee.

system e.g.: full field; 8 bit data transfer; 2k pages

- Simply plugs into the user port.

\* Low power consumption, less than 200ma. Optional power supply available. \* User friendly menu driven software including extended OSCLI and OSWord commands for access from BASIC programs.

Supplied with 16k ATS (Advanced Teletext

Software) and 16k support ROM software inc. printer dumps, page

spoolers etc. \* FREE Telesoftware, no access charges (updated

weekly). \* Save selected pages to disc/tape for later retrieval. \* Full access to all Teletext services and channels

e.g.: CEEFAX, ORACLE, 4-TEL. Gives you a real-time clock at your disposal

(\*TIME)

Software upgrades to allow for any enhancements to the Teletext service, e.g.: extra channels, full field data on cable & satellite systems etc. (only the media charge).

Easy to follow comprehensive user guides. No hardware limitations, it can for example receive

virtually unlimited numbers of channels. \* Utils disc available including printer drivers allows pages to be selected and dumped direct to a printer

June, 1986).

working with the current filing system rather than as a separate filing system Therefore ensures compatibility with any Acorn compatible DFS (not ADFS). The RAMdisc can be selected by a \* command to take the place of any drive number from 0 to 9. If the RAMdisc replaces a floppy drive as 0 for example, all commands addressed to drive 0 will be intercepted by the RAMdisc. The default drive number is 4. Any 'Dangerous' \*commands such as \*COMPACT, \*COPY, \*BACKUP etc can be intercepted and the BBC's RAM from page 2 to &7FFF saved to RAMdisc workspace, and may be recovered using a \*command. This prevents accidental corruption of any programs/data in RAM you may have been using at the time. The filing system wedge ROM supplied supports load/save, byte file access, all relevant OSFSC commands, and contains a formatter verifier and 'sector' editor for use with the RAMdisc. Catalogue structure allows up to 2,688 files

Well that's the spec., add to this our usual 12 month no quibble guarantee and we're sure you'll agree the Morley RAMdisc is the sensible alternative if increased storage capacity and speed is your requirement.

## MASTER CARTRIC

Designed and manufactured by Care Electronics to Acorn specifications. These high quality Master expansion cartridges will take two 16k sideways ROM's, and will, unlike similar cartridges available from other manufacturers, accept the new second generation programs, such as Computer Concepts Interword and Spellmaster ROM's.

These Cartridges come in a high quality, robust, formed-plastic case, that fits neatly into either one of the Master's cartridge slots.

QUADS-also available quad cartridges, specifications as Duels but 4x16k ROM's.

## IASTER SMART CARTRI

This device was designed and manufactured jointly by Morley and Care Electronics

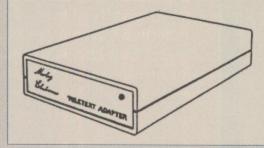

The Smart cartridge will at the press of a button halt any program running in memory and execute any one of a host of useful built in, or user defined procedures, and once completed will return to the program and continue where it left off. The only limiting factor with this device is the programmers imagination. The Smart cartridge will prove useful to the novice, allowing him to do the simple things like dump any screen to printer, and make backups of protected tape or disc based software, but has an open ended specification for the advanced 'HACKER' allowing advanced programming techniques to be incorporated into almost any program at the touch of a button.

BUILT IN FEATURES (at the press of a button) Autosaves computer's entire memory. Freeze program at any point. Screen dump (any mode) to printer or disc. Allows any OSCLI command without disturbing memory.

Copies 90% of protected software.

Tape to disc, disc to tape. User friendly menu. Sound On/Off.

ALL CARTRIDGES COME WITH A

.In terms of price, performance, future expansion

possibilities and those little touches that show thought for the end user I would recommend the

Morley unit."-(Acorn User, January, 1986). "...The Morley unit has been designed to ensure

that its operation is simple and smooth. It is the ideal

Teletext adapter for school use."-(A&B Computing,

Using it over a number of months in different schools, it has proved utterly reliable, and may confidently be recommended."-(The Times

Educational Supplement, September, 1986)

THIS IS THE BIGGEST SELLING TELETEXT

ADAPTER CURRENTLY IN PRODUCTION WORLDWIDE, AND COMES WITH A FULL MONEY BACK SATISFACTION GUARANTEE.

(no more TV or Radio Times to buy).

## BOARD 'AA'

MORLEY

At long last the add-on all MASTER users have been waiting for, an internal ROM board.

No more need to turn the computer off to insert the cartridge containing the ROM you need to debug the program in memory.

The new **MORLEY MASTER BOARD "AA"** allows you to have up to 8x16k and 4x32k extra Roms installed inside your MASTER and still leaves the cartridge slots free. This in effect allows your MASTER to support as many as 24, 16k ROMs installed permanently, whilst retaining the standard 4 x sideways ram banks and four banks by using cartridges

#### A staggering 32 ROM images installed and accessible at any time

Included in the package is a utility ROM which has many useful features such as 'FICOPY', a clever file transfer program that transfers files between DFS and ADFS formats or vice versa.

So for less than the price of four external cartridges you get a MASTER BOARD "AA" which with twice the capacity has got to be THE ROM expansion for the serious MASTER user.

The unit comes with the usual Morley, full no-quibble twelve months warranty, and our usual after sales service

## THE COMPLETE RANGE OF TELETEXT SOFTWARE from M/B SOFTWARE

\*NEW ... DESIGN 7 PLUS – now 'the best' is even better. Held in high regard by reviewers and hundreds of satisfied owners, DESIGN 7 has been further improved, with revised keystrip & even more features. Design/load/save and MODE 7 screen with ease, up to full CEEFAX/Oracle standard. Will convert ANY MODE 7 screen to a BASIC procedure, for inclusion in your own programs. ROM version includes a file copier, printer dumps useable from BASIC etc. B/MASTER/COMPACT.

TELETEXT EMULATORS/SCREEN DISPLAYS/INFORMATION SYSTEMS – A complete range of teletext programs to cater for all needs, with full teletext adapter interfacing.

\*NEW . . . DESFAX – totally new version – streets ahead of the competition – run your own information/display system. Stores hundreds of screens on dual 80 track drives (96 screens on single-sided 40 track), with access to any screen with a SINGLE KEYPRESS. Lots of special effects – screens can scroll, slide, overwrite etc. Animation, loops, subroutines – send for details – not enough space here to even begin to describe the advanced features!! B/MASTER/COMPACT

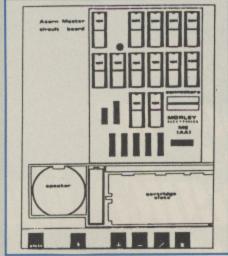

\*NEW ..., MASTERFAX – 84 MODE 7 screens in memory at once. 148 screens possible with cartridge RAM. An advanced teletext/carousel program featuring SINGLE KEYPRESS or 3-digit page selection. Runs entirely from memory – no disc accesses after pages are loaded. Superb animation and other effects. MASTER/COMPACT only.

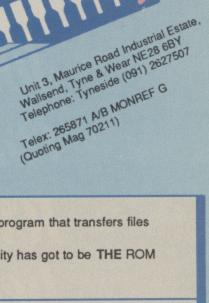

\*NEW ... VU-FAX – 1000 screens and no disc accesses! Screens stored on MORLEY 1MByte RAM DISC. SINGLE KEYPRESS gives instant access to any screen (or emulate teletext). This is the ultimate MODE 7 screen management system – there is nothing else like it. MODEL B/ MASTER 128.

\*ALSO ... MASTERcopy – DFS/DFS, DFS/ADFS, ADFS/DFS, ADFS/ADFS file copier. Uses the MASTER 128's memory to the full to permit fast disc copying. 31 DFS files to ADFS disc in less than 2 minutes. Creates directories automatically. You will wonder how you ever managed without this program. Described by reviewers as 'unexcelled'. MASTER 128 and COMPACT's fitted with DFS ROMS.

## Joining the communications revolution has never been easier...or cheaper

All you need to link your BBC Micro to the exciting world outside is a phone – and the MicroLink Communications Pack

Use feleconcolo FREE\* for a month!

The MicroLink Communications Pack contains everything you require to go on line. There's a powerful modem that sits between your BBC Micro and your telephone, a lead to connect them together and easy-to-use communications software.

You'll also be given a unique invitation to join MicroLink, with FREE registration and telex validation (normally costing £15), and a month's FREE\* connect-time to your MicroLink/ Telecom Gold mailbox. So you can find out for yourself what MicroLink is all about without it costing you a penny.

Of course you can also use your MicroLink modem and software to access thousands of other services all over the world, from giant databases in the USA to innumerable privately-operated bulletin boards throughout Britain that cover a vast range of subjects.

To take advantage of this very special package deal simply complete and mail the coupon opposite.

There are two options you can choose from:

MULTI-SPEED

MODEM

MicroLink dual-speed modem: This stylish modem works at two speeds – 1200/75 and 300/300. Fully BABT approved, it satisfies most users' requirements for a modest price.

#### MicroLink multi-speed modem: This offers the additional speed

This offers the additional speed of 1200/1200 full duplex for users who want super-fast two-way transmission. Plus many extra features.

including powerful auto-dial and autoanswer facilities. A remarkable price breakthrough for a really exceptional product.

\* This exclusive offer relates to connect time only and does not include telephone, any possible PSS charges or surcharged services. /ou

ig nat

tion to pectified ject to pm, *MicroLink* is Britain's fastest-growing electronic mail service. It offers ALL the services of Telecom Gold – and a whole lot more besides.

With MicroLink you can link up with other users all over the world to send and receive electronic mail. It turns your BBC into a telex machine – without the need for expensive equipment or special phone line. It lets you send telemessages for next-morning delivery to ANY home or business in the UK or USA.

*With MicroLink* you can tap into a weather satellite and see pictures from space displayed in colour on your BBC monitor. You can use it to obtain legal and financial advice, to order flowers or book theatre and rail tickets.

With MicroLink you can receive free telesoftware programs over the phone to feed into your BBC. Your can use it to turn text into typesetting or Braille. You can link in seconds to a database in New York, or key into the 400,000-word Great European Dictionary in Luxembourg. And it gives you direct access to up-to-the-minute financial information on every company in Britain.

The communications software that comes free with each modem is the complete Comms module from the acclaimed Mini Office II. To simplify preparing messages off line it also includes the COMPLETE Word Processor module of Mini Office II, which has many enhanced features not included in other word processors.

able on a single chip, for the Archimedes and soon for the Z88.

All versions of SPELLMASTER offer instant spelling and typing checking – as you type. The single chip contains almost 60,000 English words and user created dictionaries can extend this number.

A range of dictionary search utilities are provided, in all versions, that rapidly search the entire dictionary and enable any of the following to be found;

- 1) Words that sound like the one specified.
- 2) Words that are spelt approximately like the one specified. This is ideal for correcting typing errors where words have a pair of letters transposed, one letter wrong, missing, or one too many.
- 3) Words where only a few characters are specified, (solves crosswords).

4) Words that have the correct letters, but are mixed up, (solves anagrams). All these search facilities are accessible from any program that can issue star (\*) commands.

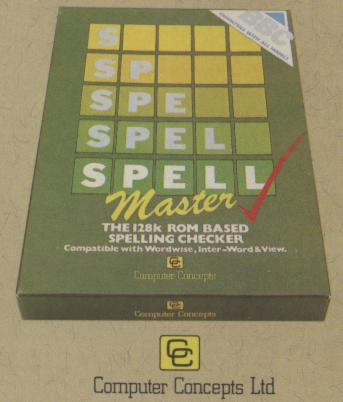

In addition there are facilities to check text directly within a variety of text editors or word processors, to check the word at the cursor, to check all text from a specified point, or to just browse through the dictionary.

The BBC SPELLMASTER can check-asyou-type in INTER-WORD, WORDWISE, and VIEW, in all versions of the BBC Micro. The Archimedes version can check-as-you-type in INTER-WORD, is compatible with ArcWriter files and requires a ROM expansion board.

SPELLMASTER for the Z88 is compatible with Pipedream files and contains its own powerful text editor.

Full details on request.

## SERIES

#### **Compiled by Steve Turnbull**

WE get lots of Library routines and can't use them all, but we do hang on to the better ones until a space is available – so keep sending them in. This month we have a number of interesting routines including a little program to enter your favourite program editor when an error occurs – very useful as you develop your own routines.

On the 6502 front there is a complete 100-byte language for BBC B and B+ to combat the lack of No Language Environment of the Master. And finally there's a machine code routine to tidy up the format of input strings.

#### Title: String Tidy Language: 6502 Author: Richard Owen

Getting someone to give your program input in a particular format is difficult. One solution is to write your own routines which force correct input, but even then a name could be entered like this:

RICHARD q OweN

or:

rIcHArd q. oWEn

... the possibilites are endless. The

10 REM String Tidy 20 MODE7: PROCdeclare 30 PROCassm:PROCtest:END 40 DEFPROCdeclare 50 DIM code 256, buf 256 60 punc\$ =":,.- \_"+CHR\$34 70 ptr=&70:caps=&72:ENDPROC 80 DEFPROCassm 90 FOR L%=0 TO 2 STEP 2 100 P%=code:[OPT L% 110 .stringTidy 120 STX ptr:STY ptr+1 130 LDY #&FF:STY caps 140 .tidyLoop 150 INY:LDA (ptr),Y 160 CMP #13:BEQ endTidy 170 CMP #ASC"A":BCC notLetter 180 CMP #ASC"Z"+1:BCC isLetter 190 CMP #ASC'a":BCC notLetter 200 CMP #ASC"z"+1:BCS notLetter 210 .isLetter ORA #820

routine given here will take a string and convert it to standard upper/ lower case format:

RQ. Owen

It works by scanning through the string and setting a flag, *caps*, each time it comes across one of the punctuation marks – *PUNC* – in its list.

Each letter encountered is first

220 BIT caps:BPL notCapital 230 AND #85F 240 .notCapital STA (ptr),Y 250 LDA #0:STA caps:JMP tidyLoop 260 .notLetter LDX #LEN(punc\$) 270 .scanLoop CMP scanStart,X 280 BNE notFound:LDA #&FF:STA caps 290 JMP tidyLoop 300 .notFound 310 DEX:BPL scanLoop:JMP tidyLoop 320 .endTidy RTS 330 .scanStart OPT FNs(punc\$) 340 ]:NEXT:ENDPROC 350 DEFFNs(s\$):\$P%=s\$:P%=P%+LENs\$:= 1% 360 DEFPROCtest 370 REPEAT INPUTLINE"Line:"\$buf 380 X%=buf:Y%=X%DIV256:CALLstringTi dy 390 PRINT\$buf':UNTIL FALSE:ENDPROC

forced to lower case and then, if the flag is set, is changed to a capital. All you do is set up a buffer, put the string into it with:

then call the routine with the address of the routine in X% – low byte – and Y% –high byte. You can change the way the string is formatted by altering the contents of *punc\$*.

Title: No Language Environment Language: 6502 Author: Michael Firth

In response to the letter by Ben Byram-Wigfield in the November 1987 issue of *The Micro User* about the lack of a No Language Environment mode on the BBC B and B+ here's a routine that provides one.

To work the code needs to input

10 REM NLE Emulator 20 PROCinit:PROCassem 30 PROCsave:CALL NLE:END 40 DEF PROCinit 50 oscli =&FFF7:osbyte=&FFF4 60 osword=&FFF1:oswrch=&FFEE 70 osnewl=&FFE7:code =&0900 80 data =&0700:brkv =&0202 90 errptr=&00FD:ENDPROC 100 DEF PROCassem 110 FOR L%=0 TO 2 STEP 2 120 P%=code:EOPT L%:.NLE 130 LDA #ASC"N": JSR oswrch LDA #ASC"L": JSR oswrch 140 150 LDA #ASC"E": JSR oswrch 160 JSR osnew1:JSR osnew1 LDA #error MOD256:STA brkv 170 LDA #error DIV256:STA brkv+1 180 190 .main\_loop LDX #&FF:TXS LDA #ASC"\*": JSR oswrch 200 LDX #parblk MOD256 210 220 LDY #parblk DIV256 LDA #0:JSR osword:BCC DoCLI 230 240 BRK:OPT FNb(17)

lines and feed them to the command line interpreter. It also has to generate an *Escape* error if Escape is pressed while inputting text and handling errors generated by the rest of the system. In fact the utility represents the minimum requirements for any language for the BBC Micro.

Although the routine is assembled at &900, it is quite logical for it to be located anywhere from &400-&6FF, or even in page zero, as it is only &64 bytes long. From here you can extend it as far as you like.

250 OPT FNs("Escape"):BRK 260 .DOCLI 270 LDX #data MOD256 280 LDY #data DIV256 290 JSR oscli:JMP main\_loop 300 .error 310 LDA #126:JSR osbyte 320 JSR osnewl:LDY #1 330 .errlp 340 LDA (errptr),Y:BEQ errend 350 JSR oswrch: INY: BNE errlp 360 .errend 370 JSR osnewl:JMP main\_loop 380 .parblk 390 OPT FNw(data):OPT FNb(255) 400 OPT FNb(32):OPT FNb(126) 410 ]:NEXT:ENDPROC 420 DEF FNb(B%):?P%=B%:P%=P%+1:=L% 430 DEF FNw(W%):!P%=W%:P%=P%+2:=L% 440 DEF FNs(s\$):\$P%=s\$:P%=P%+LENs\$ :=L% 450 DEF PROCsave:PROCoscli("SAVE N

#### Title: Error correction Language: Basic Author: Keith McDowell

After an error report you usually list the appropriate line. By adopting the technique shown in the accompanying program you can get your micro to automatically enter in the appropriate command for you.

It works by using the \*FX138 command – via CALL &FFF4 – to insert the necessary key presses into the keyboard buffer. Then, for tidiness, it switches off the screen drivers – with VDU21 – while the line is processed, and switches them back on to list the line – using CHR\$6. With:

??? PROCout("LIST "+STR\$ERL+CHR\$6)
or:
 ??? PROCout("EDIT "+STR\$ERL+CHR\$6)
or something similar, you can alter

the command string to invoke a builtin editor if you have one.

10 REM Error correction 20 REM by Keith McDowell 30 ON ERROR MODE 7: PROCerror 40 Silly mistake 50 END 60 DEF PROCerror: VDU7, 4:\*FX4 70 REPORT: PRINT" at line ";ERL 80 PROCout("L."+STR\$ERL+CHR\$6):END 90 DEFPROCout(\$&700) 100 LOCAL A%, L%, X%, Y%: A%=138 110 FOR LX=0 TO LENS&700:YX=LX?&700 120 CALL&FFF4:NEXT:VDU21:ENDPROC Get it 50 = FD2E 390 = BA9F A 00 10 =100 = F5DF 2 20 = 00 60 = EFDØ Ø 30 = 868F F 70 = 6BDF E 110 = 5DA6 440 = F92E 780 = CEDF 5 120 = FF32 2

M.I.C.R.O HIS series is devoted to explaining all the things about your BBC Micro that you never knew – or may have since forgotten! If there's something you want

 $M \cdot I \cdot K \cdot E \cdot S$ 

you never knew – or may have since forgotten! If there's something you want to know about getting the best out of your micro, or if you just want some of the more puzzling code explaining, write to: Mike's Micro Memos, The Micro User, Europa House, Adlington Park, Adlington, Macclesfield SK10 4NP.

## **Random thoughts**

IF there's one thing I've learned about life it's that it's definitely not random. Despite the best efforts of my maths teachers, I know for certain that buses arrive in pairs, bills come in threes, toast inevitably lands butter-side down and I'm always left with the Q and Z at Scrabble. So it came as no surprise whatsoever to learn that the so-called random number generator in my BBC Micro was anything but.

The idea of random numbers is simple enough. Every time we throw a die we're generating a random number between one and six. At least we assume it's random – that is, each number is equally likely to come up – though my seven-yearold cottons on quickly enough when I try to use my non-random die in Snakes and Ladders.

Of course a die doesn't have to have six sides – it could have four or even 20 giving you random distributions of the numbers one to four and one to 20 respectively. Wargamers and adventure role-players use dice like these all the time.

BBC Basic takes the idea several steps further, allowing you to generate random numbers over wide ranges of numbers, integer or decimal. This is very useful for introducing the chance element into games and simulations.

It uses the keyword RND, a function which returns an integer between -2147483648 and 2147483647. Try:

repeatedly - you could put it in a loop or define a function key - and you'll see you get different

When you're debugging a program that involves random numbers add a line with a negative seed at the beginning. That way you generate the same sequence of numbers each time you run it. With luck,

this "predictable randomness" will show you where you're going wrong — or at least where you aren't!

numbers each time, such as:

	6	8	1	5	3	3	4	3		
2.	Ø	9	6	6	2	7	7	6	E	9
1.	Ø	4	8	5	1	1	4	9	E	9

The E, by the way, means that the number before it should be multiplied by 10 to the power of the number after it. This notation is used for rather large values. As with other functions, you can assign the value of RND to a variable:

Using RND like this, though, is rather cumbersome: There's not much call for a number like 68153343 in a game of Snakes and Ladders. Fortunately we can give RND a parameter in brackets. For instance:

will give you random whole numbers in the range 1 to 6 inclusively.

Generally RND(X) — where X is a whole number greater than one — will give you an integer in the range 1 to X. Notice that greater than one. If you were to use RND(1) you'd still get a random number, but this time it's any decimal in the range 0 to 0.999999.

In practice you'd use statements like:

to give a decimal range from 0 to nearly 10. RND(0) is also a special case: It repeats the number that RND(1) last gave you, so in a sense it isn't random at all. This comes in handy when you're trying to debug programs. You see, sometimes when you're using random numbers it's hard to tell whether you're constantly varying and erroneous output is due to the laws of probability or your own inept programming. By using RND(0) to repeat the last RND(1) you can weigh

## FEATURE

the odds a bit more heavily on your side.

The trouble is, though, the numbers RND gives aren't random – they can't be. Think about it: A computer can only do as it's told, following a fixed sequence of instructions or program.

Somewhere inside the Basic rom there's a machine code program telling your BBC Micro how to generate your numbers. If you could decode that program you could work out the pattern and use it to predict the next number.

It's like telling a robot how to shuffle cards – if you know the sequence they're in at the beginning you'll know what they are at the end. Having said that, the shuffle the BBC Micro uses to generate its numbers is pretty clever so there's not much bias in the spread.

Unfortunately, the number it starts to shuffle at power-up – known as the seed – is always the same. This means that from switch on the sequence of random values is the same. The following program demonstrates this.

20	FOR Loop=1 TO 5
30	PRINT RND(6)
40	NEXT

Save it, then CHAIN it from power-up a few times. I always get 6,6,1,1,3. Not very random! We can

#### \*INFO Info

ONE of the disc system's exotica is the \*INFO command. Basically it's a super \*CAT command telling you as usual the files on a disc, the directory they're in and whether they're locked or not. That's straightforward enough. It's those four numbers after all this that are problematical....

Well, first of all, they're in hexadecimal, so don't panic – we covered that last month. Here are their meanings one by one:

Load address: The first value shows the address in memory the file will be loaded to. For instance, &FF1900 means that – like most Basic files – this file will load on top of PAGE which is &1900 on my DFS. A machine code file might load to &900.

**Execution address**: Just because you've loaded a file at one address, it doesn't mean that the machine code routine that the operating system should use to run it shares that address. For a

#### Extra info

NOTICE the &FF in the &FF1900 start address of the Basic file. This is actually the DFS abbreviation of the full &FFFF1900. The &FFFF is to distinguish the I/O processor (your standard BBC Micro) from the equivalent second processor address – &00001900 or &1900 for short.

S.DEMO I S.CODE S.SCREEN	000	900 000	023 000 900 000 000 000	006 02	?F
--------------------------------	-----	---------	-------------------------------	--------	----

The above figure shows the part of the output of a \*INFO \*.\* on a disc after the accompanying demo program is run and saved as the locked file DEMO. It shows three types of file:

DEMO: A Basic II program running in the I/O processor.

• CODE: A six byte machine code program poked into memory at &900. Enter CALL &900 to see what it does. Notice that, because the \*SAVE get round this, though, by altering the seed number. To do this we use the negative of our new seed in RND. For instance – picking a number *at random* – let's make 123456 our new seed by adding line:

Notice that now when you run it you still repeatedly get a fixed sequence – but at least it's different to the first. Change the seed and you change the sequence – dummy is just a waste variable to allow us to use RND.

And that gives us the idea for making our random numbers truly random ... nearly. We just use the *pseudo-variable* TIME to give us a seed that we're unlikely to be able to predict. This gives us the following program:

10	dummy=RND(-TIME)
20	FOR Loop=1 TO 5
30	PRINT RND(6)
40	NEXT

If you really wanted to make things random, you could set TIME using a keypress – on the grounds that there's no way you can be sure how a human will respond.

Basic II file the execution address is &FF8023, the initialisation routine of the Basic rom.

Our putative machine code at &900 might have its first few bytes taken by data, so that its execution address could be &906. If, like a saved screen image, the file has no realistic execution address, the second number merely echoes the start address.

Length: Measured in bytes, this is exact – 000006 bytes means six bytes, not seven.

**Start sector**: Your disc drive is divided into rings, or tracks. These tracks are themselves divided into sectors, each holding 256 bytes. The DFS uses these sectors as minimum units, so a 257 byte file would use two sectors.

Files are saved in successive sectors, so all the DFS needs to know is which sector – beginning with sector zero – the file starts at.

The most usual form of the command \*INFO is:

\*INF0 \*.\*

which displays all the files in all the directories. To display only those, say, in the route (\$) directory use:

\*INFO \$.\*

and to display all the files on drive one the command is:

\*INF0 :1.\*.\*

doesn't specify the &FFFF prefix for the I/O processor, this isn't shown.

10	REM Demo program
	MODE 7
30	PRINTTAB(14)CHR\$141CHR\$129"Demo"
40	PRINTTAB(14)CHR\$141CHR\$132"Demo"

#### **Giving commands**

WE'RE all familiar with star commands, which go straight to the BBC Micro's operating system for processing. In fact it would be virtually impossible to work without \*CAT, \*SAVE and the ilk. Sometimes, though, this star system can be a little restricting. For instance:

*LOAD Screen
--------------

is acceptable, but if you try:

\*LOAD screen\$

you're in trouble — star commands can't handle variables. This is a pity because, for instance, *screen\$* might be the input from a menu of pictures.

Fortunately you can get round this by using the Operating System's Command Line Interpreter – oscli – routine. The accompanying program shows a procedure – PROCoscli – which handles things: The full star command is passed as a string variable – *star\$*. Of course this string itself

## **\*OPT** option

IF you enter \*OPT 1 1 from then on each time you access a file on your disc you'll be shown the same data as you'd get from a \*INFO. Enter \*OPT 1 0 to turn this effect off.

can be built up of strings. For instance, the coding for the screens problem could run something like:

If you've got Basic II you won't need PROCoscli as it's been incorporated as the standard function OSCLI. Again you pass a string as parameter so line 70 in the listing becomes:

and lines 100 onwards are defunct.

August 1988 MICRO USER 29

# More than a pipedream

Rory McCloy finds something better than his beloved View

Product: View Professional Price: £99 incl. VAT Supplier: Acorn Computers Ltd, Fulbourn Rd, Cherry Hinton, Cambridge CB1 4JN. Tel: 0223-214411

OR the past five years I have been a confirmed View user. Would any new product induce me to change from the word processor which had become second nature? Well, View Professional did. I do not often use spreadsheets and my first reaction to View Professional was to wonder if I wanted a word processor which looks like a spreadsheet.

In fact, the columns of the screen layout provide very powerful tabulation functions for the word processor, all the usual features of a spreadsheet and the sorting of entries normally associated with a database.

For once, here's a truly comprehensive package for all models of the BBC Micro from Model B to Compact – the plastic slipcase contains a 5.25in DFS disc, a 3.5in ADFS disc, two 16k roms and a 192-page guide which is relatively easy to understand.

There are images of the two roms on disc which you can use if you have two banks of sideways ram. There is also a disc-based second processor version which runs on the Master Turbo – but with no extra bytes free – and it runs on the Archimedes 6502 emulator without modification. However, an enhanced Archimedes version – PipeDream from Colton Software – is also available.

Yet other versions of the same program, also called PipeDream, is available for the PC and is built into the Z88.

View Professional is a wysiwyg word processor with spreadsheet-defined expressions. When you first enter it you are in the equivalent of the View edit mode and ready to enter text. The rows are numbered and the ruler at the top of the sheet is laid out with alphabetically headed columns, though both can be switched off.

The width of each column on screen can be altered and in addition each has its own definable wrap width which determines the point where whole words are carried on to the next line.

By default the wrap width of all the columns is set to the end of the row, allowing you to type in continuous lines of text across the screen. If you define the wrap width to extend for only one column or a few columns you can type in multicolumn text on the same page.

Page layout — with top, bottom, header and footer margins — is not found on the edit sheet screen, pressing Escape puts you on the options page shown in Figure II. The bytes free, filename and printer driver currently loaded are all there, together with the definitions for page layouts, headers, footers, formatting, justification and many other powerful features.

This options page should not be confused with View command mode — it conveniently keeps all these features off the main screen and allows easy re-definition at any time. Page settings are saved with the text, enabling you to load in a personalised layout at the start of session.

The major disadvantage of the options page system is that definitions cannot be redefined in the middle of a page or file, so you can't change to double line spacing for a table halfway down a page. However, the option page settings are independent for each file and can differ for each part of a multifile document.

The 85 commands can be entered from the edit screen by prefixing a one, two or three character mnemonic with a backslash; the cursor then jumps to a command window at the top of the screen where the command is entered. A unique feature is that all commands can be assigned to any of the three tiers of function keys.

Many of the default definitions are identical to the fixed set of View and where the keys are different, a !BOOT file containing your choice can increase the coincidence with View keys. Preceding key definitions with \*FX228,176 allows a fourth tier of definitions accessible by Control+Shift+function key.

Each file is formed from spreadsheet cells or slots formed by the intersection of rows and columns. These are normally text slots for word processing, but they can be expression slots – users of spreadsheets will be familiar with this concept.

Any mathematical expression can be placed in an expression slot and the screen display will show the result of evaluating the expression. All

#### Points for

REVIEW

- Powerful word processor
   Spreadsheet
- features Sort facility
- On screen highlights
- Comprehensive
   manual
- Pipedream compatibility

#### Against

- Expensive
- Whole file page layout only
   No macros

## REVIEW

the usual functions are available such as number format, left/centre/right alignment and decimal places.

The options page allows leading or trailing characters defined by the user to be added to an expression slot or block of slots. For example you can add pound or percentage signs - the defaults or character strings such as a.m., pm or mins. This facility is very useful for large tables or lists to which these prefixes or suffixes can be added by a single block command.

The database facilities are limited and amount to a sort routine that operates on any marked block of text, numbers or dates. All the entries on one row can be sorted into ascending or descending order. An example would be a table with columns of names, ages and birth dates separated by tabs. The name column can be sorted into ascending or descending alphabetical order and the corresponding entries in the other two columns on the same row would be carried with the name.

Blocks of text or numbers are delineated with markers set at the beginning and end of the chosen section by a single command. The marked block is highlighted by reversed video characters on the screen, which you can see in Figure I. However, you can only highlight complete columns, which can be troublesome when copying, moving or deleting text, since most is written in the first column.

To mark a block which starts part way along a line it has to be split at the chosen place and the cursor moved down the next line, which now contains the split part of the line, which is then marked. This has to be repeated if the text at the end of the block also lies in the middle of a line. Finally, the revised paragraph has to be reformated to remove the gaps caused by the split lines

A major feature of View Professional is the power of the Tab key. Pressing it jumps the cursor to the next column of the sheet - Shift+Tab to jump back. The cursor then remains indented to that column. This is a much simpler way of indenting paragraphs than the setting of multiple rulers used by View.

One disconcerting feature is that if you have typed across the page in column A and then Tab to column B, all the column A text vanishes although it re-appears when you Tab back. Another source of confusion to the novice is that inserting and deleting lines or rows only applies

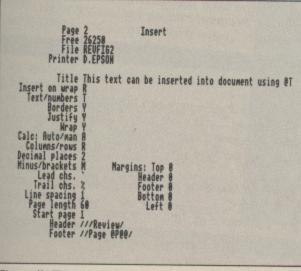

Figure II The options page

#### MICRO COMPATIBILITY

PipeDream from Colton Software - 0945 211472 - is built into the Z88 and now also available for the Archimedes and PC. These versions are all very similar to View Professional but have more menu control, dialogue boxes and other enhanced features.

The Archimedes will run both View Professional and PC PipeDream on the appropriate emulator, but the Archimedes version is faster and has several extra features such as more spreadsheet functions.

One very important feature of the software is that the file structure is compatible on all versions; the Archimedes and PC versions even have built-in import and export facilities. So passing files between micros and using them in their new environment has never been easier.

View Professional and PipeDream are the ideal choices for anyone who uses more than one type of micro.

to the column the cursor is in.

become secon

ten use spread

is to wonder if readsheet

In fact

In an otherwise excellent package, View Professional has one shortcoming which still sends me back to my old faithful View - it cannot perform macros. An example of a macro would be a standard letter which contains windows into which personalised details, such as name and address, can be fed automatically - different

ne coromus or cue

unctions for the w

spreadsheet and

row, allowing you to type in continuous 1 the screen. If you define the wrap width

a Low a

here's a truly comp licro from 25in DFS Tatively easy to underst two roms on disc which yo ways ram. There is also a which runs on the Master T - and it runs on the Archi tion. However, an enhanced

> ysiwyg word processor wit sions. When you first ent iew edit mode and readu

#### ◄ From Page 31

details appearing in each copy of the letter.

The nearest that this package comes to performing a macro is the ability to transfer the details of a slot into the text of a document using an @-field. This can be done by entering a slot reference, such as column A/row 19 into the text with:

#### @ A19 @@@@@@@

The trailing @s indicate the size of the field, six characters in this case, so that the text can be formatted and justified correctly following the insertion. The @-sign can also be followed by a P, D or T to insert the page number, day and date on machines with a built-in clock - or title of the piece respectively.

In the final outcome any word processor is only as good as its printer driver - that software patch which interprets text highlights into codes the printer understands. The printer driver that comes with View Professional is limited to eight highlights, which are entered into the text with a highlight command followed by a number. It is possible to use View printer drivers with View Professional provided you stick to combinations of h1 and h2 which correspond to the View codes.

The disc supplied contains two ready-defined printer drivers, FX80 and JUKI610 for Epson and Juki-compatible printers and also a printer driver

editor so you can define your own. I successfully produced drivers for the Hewlett Packard Laserjet Plus and IBM Proprinter XL modes of my Brother HL-8 laser printer.

However, I continued to be frustrated by the limit of eight highlights until I acquired the latest printer driver rom, Hyperdriver, from Dabs Press. This allows any number of printer driver codes to be defined from View or View Professional.

Last year Acorn was developing an enhanced version of View Professional to run on the Arthur operating system of the Archimedes but I was very disappointed to hear that in January this project had been dropped. However, Colton Software, the original author of View Professional, has developed the fully-fledged Archimedes version which is available now. Not only that, the Archimedes also runs Colton's PC version on the PC Emulator.

Up to now View Professional has not been a big seller, probably due to its cost. But all that is now changing, as in its PipeDream guise it is being introduced to other micros. The full file compatibility between View Professional running on my Master or Archimedes with PipeDream on the Z88 was a major factor in my changing from View and buying a Z88. Buying a serial cable to connect the two micros has provided me with a truly portable word processor.

View Professional is an under-rated and underpromoted package which deserves more serious consideration and a far wider usage.

The truth about TEL

## How much does it cost to go on Telex?

You could go the conventional way and buy a dedicated Telex machine. The cheapest will cost you £1,604 (the Whisper), the dearest £2,892 (the Cheetah). You will also need a separate telephone line, costing £101 to install, plus £404 a year rental. That's a total outlay over the first year of a minimum of £2,109. (All prices include VAT.)

Or you could do what more and more BBC Micro users are doing - use your BBC Micro to double as a Telex machine. And just use your ordinary telephone

## How do I turn my BBC Micro into a Telex machine?

All you need is a modem and appropriate communications software (see the advertisements in this issue), a telephone, and a subscription to MicroLink.

Telex is just one of a growing number of services available to micro users on MicroLink. You can also read the news as it happens, go teleshopping, create your own closed user group, send telemessages and electronic mail right round the world, download free programs directly into your micro . . . and much more.

## But why use Telex?

Because it's a standard means of instant communication between businesses. Today there are 150,000 Telex machines in use in Britain - and more than 2 million worldwide. It's used to dramatically speed up business communications - it's just as quick as using the phone but far more efficient, because you have a hard copy of

every "conversation" for your records. But there's a big bonus you get when you use MicroLink for Telex that the

With MicroLink you don't HAVE to be in your office to send or receive Telex conventional way doesn't offer. messages. You can just as easily use your computer at home (or even a portable). So now you can check whether there are any Telex messages waiting for you anywhere, anytime. How's that for your business efficiency?

#### The bottom line...

**Definitely for the** serious user, but easy to use and better than View

SOF

Price: £5.95 (3.5in disc, mail order only)

Supplier: Gem Electronics, 17 Tandragee Road, Portadown,

Mastermind game for the Archimedes - particularly when

such things are so easy to write as short magazine listings.

The games run on any Archimedes except a 305 and

running the program is simply a case of Shift+Break. There's

a short delay marked only by a Desktop Games v2.1 message

and finally the icon bar appears at the bottom of the screen.

Except that instead of being a pleasant cream colour it's now

dirty pink and there are three new icons - a star, a pair of

headphones and a little space invader with the word Logic

Clicking the star gives instant access to operating system

star commands and the headphones bring up a volume con-

trol in the form of a slider - like the palette. Both are useful

Clicking the space invader produces a menu of three games: CrakCode, Slider and Leapfrog. Each appears in fixed-size windows which continue to work perfectly even if

partially obscured. In addition, if you remove a game window

and then restore it you get back to the position you were

previously at. And if you're feeling really macho you can play

CrakCode gives a very nice representation of the original Mastermind game board with 10 rows of four large holes in a

row, with a square of four small holes at the side for the

The idea is that the micro selects four of the seven colours

answer code - and seven colour blocks along the bottom.

in some combination and you have 10 goes to figure out

what that is. You play by clicking a colour and choosing the

position you want to play; the selection also sounds a note

When you successfully work out the choice and order of

colours, a not entirely happy smiley face appears at the top

with the corresponding code. Pressing the menu button over

the board produces a list of options to allow colours to be

repeated, leave gaps - effectively another colour, give the answer - which produces an unhappy face - or restart.

Slider is the sliding block puzzle. The picture occupies

so if you're bored you can play a tune.

additions to the desktop.

all three at once.

But we should always look before we leap.

ing on om e to ha lerous

H. Itlay to

888

the middle button on the mouse brings up the menu with options allowing different grid sizes, three levels of difficulty, the chance to load a different picture, give the sol-WHEN the press release announcing this product arrived at ution, restart, or run the picture maker option. The Micro User office, we couldn't believe the gall of anyone proposing to sell a sliding block puzzle, solitaire and a

DESKTOP GAMES ... bit of a puzzle

Selecting any option apart from load and maker puts you straight into the game with the picture mixed up and one piece missing. Clicking on a block adjacent to the missing one slides that block very quickly into the space, allowing you eventually to put the picture back together. The moment you complete it the missing piece is also replaced.

about one quarter of the screen and is complete. Pressing

SCEN

The picture maker is the poorest part of the whole thing and it crashed the first time I used it - although this problem never recurred. It allows you to take any Mode 12 screen, or an ArmPaint picture, and convert it to the format required for the puzzle. It's then included in the load menu list.

Leapfrog isn't anything to do with Frogger, but is three versions of Solitare: Standard, where one of the pegs on the board must finish in the middle; Blue Peg, where a specific peg - the blue one - has to end up in the middle; and

ARE

Surround, where four pegs have to finish one in each corner of the central nine hole block.

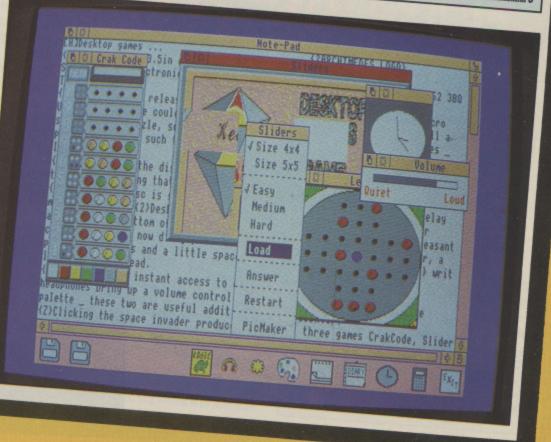

When a peg is clicked it turns yellow and you can move it to a legal position by clicking the appropriate hole - the one that has just been jumped will disappear.

While not spectacular the games are produced with a professional finish seldom seen on games two or three times the price. They are perfectly integrated with the rest of the Desktop - and this review was written in the notepad with the games on screen simultaneously.

But, despite my admiration of the programming, it takes time to load and is it worth the effort when the Desktop is supposed to provide fast entry to other programs?

#### August 1988 MICRO USER 33

## BARBARIAN ... could slay you

Price: £9.95 (cassette) £11.95 (disc) Supplier: Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX. Tel: 0532 459453

AFTER the blaze of publicity that preceded this game's release, with an expensive advertising campaign featuring two rather well-built and scantily clad models, I was really looking forward to a game full of excitement and action.

Sadly, I was disappointed. It seems that Superior Software is suffering from a shortage of new ideas. This game is almost identical to Yie-Ar Kung Fu, only this time the figure you control uses a sword instead of his hands to fight opponents.

In this one or two player game the scenario is a fight against the 10 evil minions of the sorcerer Drax - and finally the sorcerer himself - in order to free the beautiful Princess Mariana. At first the opposition is easy to despatch but as they get more proficient the task gets harder.

From boot up you can select your preferred keys for both players or you can play the game with a joystick. From there you are presented with the choice of combat practice or starting the game itself: The Fight to the Death.

The former gives you the choice of a demonstration which shows the 16 different fighting moves you can make, or you can practice against a passive opponent. This may seem pointless - it did to me - but it was while I was busy hacking away at some poor, helpless chap that I discovered that it's possible to decapitate an opponent, which in turn leads to

PRIZE

The Ultimate Warrior

VORNSOFT

the most entertaining sequence in the whole game:

SOFTWARE

SCENE

This involves a goblin-type creature which normally comes on at the left-hand side of the display once a combatant is dead, crosses the screen and exits at the right-hand side dragging the body behind him. If there's been a decapitation, the goblin collects the body as usual but casually punts the head off screen.

While still in combat practice mode you can opt for either one or two player modes. In the first you are pitted against a warrior who you must defeat in order to have the privilege of fighting another, slightly more proficient, one.

This goes on until either you defeat 10 of them or, as is more likely, one of them beats you. A fight ends when one of the combatants has taken 12 hits or is decapitated. In the two-player mode you each control a warrior and fight against each other. The same victory conditions apply, but you also have the added pressure of having to complete the duel in 90 seconds.

Of all the modes these two seemed the most pointless to me. If you're going to practice fighting 10 opponents, you might as well practice while playing the actual game. That way if you do, by some miracle, manage to defeat all of them, you can get to enter Superior's own Barbarian competition.

The Fight to the Death is almost exactly the same as the combat practice mode. Again you can watch a demonstration, fight a passive opponent or a second player. The only difference is that if you opt for the Fight to the Death in

BARBARIAN

one-player mode, you get to fight the evil sorcerer Drax after defeating the 10 Conan lookalikes.

Combat is punctuated by the sound of swords biting into flesh and the satisfying thunk as your warrior head-butts his opponent. These few sound effects can be turned off by pressing function key one. There is no signature tune, which some would say is a blessing, but I find Superior's tunes are better than most and it's unusual for them not to bother with one

TH

rec

aw

WC

th

S

n

My biggest disappointment was with the graphics. I've no grumble with the quality - which is excellent - but I was disappointed with the quantity. There seem to be only four screens, and the two arena ones featured on the packaging are the only ones I've come across in Fight to the Death mode.

You begin fighting in front of someone sitting on a throne. In the second bout you face your opponent in front of Drax and the captive Mariana - who, by the way, bears no resemblance to the young lady featured on the packaging. Then it's back to the man on the throne again and so on.

The other two screens only appear in the combat practice mode. Again they alternate, this time featuring two wilderness scenes, the first in daylight and the second at night.

Another point is that your adversaries are exact clones of your warrior except that yours is wearing a white vest. Even so, there have been a few times when I've smugly watched one of the warriors making mincemeat out of the other congratulating myself on some nifty swordwork, only to realise that it's the bad guy who was doing the hitting

I don't want to give the wrong impression about this game: If you are a fan of games which simulate physical combat, martial arts and the like, you will find Barbarian an excellent addition to your collection. To it's credit, Barbarian has little for me to criticise, except for the fact that I've seen it all **before** Desmond

Supplier: Mastertronic, 8-10 Paul Street, London EC2A 4JH. Tel: 01-377 8411

THIS is a re-issue of a piece of software which was so well received when it first came out that it won a number of awards. It is a karate simulation game in which your aim is to work your way through the various skill levels until you reach the 10th Dan.

Unlike other similar programs, the setting is very definitely sporting. The rules of karate are adhered to in a fairly strict manner and no weapons are used at all - just the hands and feet

As is usual with this type of simulation, the main problem is getting to grips with the mind-boggling number of actions. There are 16 different functions which can be controlled either from the keyboard or joystick. They give you a full range of punches, kicks, somersaults and other movements to be used against a micro-controlled opponent or another person

SOFTWARE

SCENE

The best way to practice moves is to select the two player option, without actually having a second player. Having coped with the keys required, you will be ready to tackle active opposition.

Your first opponent is remarkably unskilled in the art of karate. It should be no time at all before you have scored a victory over him. This will give you a chance to move on to the next competitor who is much more adept at dodging your moves and then felling you with a quick roundhouse kick.

With a lot of practice you will be able to beat a whole series of opponents, each a little more skilled than its predecessor.

The graphics are very good with fast, flicker-free movement and the sound is adequate with nothing too spectacular.

If you missed Way of the Exploding Fist first time round and haven't found it on a compilation this re-release is a snip. **Rog Frost**

## NOT A PENNY MORE, NOT A PENNY LESS ... no sale

Price: £14.95 (cassette) £19.95 (disc)

Supplier: Domark, 204 Worple Street, London SW20 8PN.

THE books of popular author Jeffrey Archer sell in their millions, and I enjoyed Not a Penny More, Not a Penny Less when I first read it some years ago: It is a light-hearted romp of the "Don't get mad, get even" genre, with an amusing

Consequently, I was delighted when the adventure game was released. I booted the 40/80 track disc - to receive an error message. I managed to load the program by switching my disc drive to 40 track mode but, try as I might, I could not boot it in 80 track format. I have ordinary Cumana switchable drives and an Acom DFS.

The loading screen showed a cleverly-drawn picture and there was a prompt asking which of the game's three parts I wished to play. I loaded part one and discovered I was to be cast as Stephen Bradley, the American academic working at Magdalen College, Oxford. My task was to recover the money I had lost by investing in an oil company floated by that rogue Harvey Metcalfe who was now laughing all the way to his Swiss bank at my expense, and that of three other luckless **punters** 

I confess I liked neither the constant use of upper case letters nor the sloppy screen layout of the descriptions. They looked amateurish, as if the conversion for the BBC Micro had been delegated to the tea boy, but I persevered.

Starting in my room at Magdalen, I began to enter instructions, and rapidly discovered the limitations of the parser. I

began to suspect that the tea-boy's understudy must have

Opening and examining various things I discovered a camera, three dossiers, Principia Mathematica, The Tatler and some phone numbers.

I dialled Scotland Yard and my stockbroker answered! He proceded to give me details of my fellow victims and I began to suspect the tea boy of even darker designs. Tea boys don't know that an essential input from an adventurer is Inventory - or Inv or even I - so that we can keep track of what we are supposed to be carrying. Naturally, the parser of Not a Penny More does not acknowledge the existence of such a combination of letters.

Similarly, tea boys don't expect the present-day player to abbreviate direction input: There was no response to commands like N or S, and only GO NORTH and the like produced

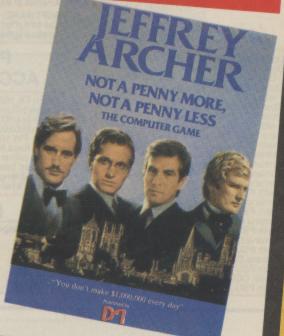

Opening a door and leaving my room proved impossible was I to be trapped there forever? Never! Trust your old Hatter friend to try the daftest procedures known to mankind

EXAMINE ROBIN produced a door-knocking policeman, full of

EXAMINE JEAN-PIERRE instantly transported me to Bond Street, and I then found my way to Pall Mall and did some

EXAMINE JAMES teleported me to the Bodleian, an attractive librarian and various tomes.

At this point my waning interest finally evaporated. Usually I try to find at least some redeeming feature in an adventure

game - well, the package includes the book which I enjoyed. As for the rest, there's a reversible disc with approximate value 50p - not a penny more, not a penny less.

## **Glasgow Font's** face lift

Conrad H. Gempf tries his hand at producing a natty line in letters

FEW days ago, I totally redesigned Glasgow. Despite the sentimental memories I had of it, the time had come for a total reconstruction. The Glasgow in question is not the city, however. As a new micro user a year and a half ago, I bought a font designer and produced a typeface I called Glasgow in honour of the Glaswegian architect who inspired it, Charles Rennie Mackintosh.

£48.00 £48.00 £28.50 £59.00

١RE

1 etc

It was my first project, and my inexperience showed. Using experience gathered from more than a year in the "font biz", I herewith offer some tips and observations, some of which helped considerably in the Glasgow face-lift.

The first step in designing a typeface is to know what you want the alphabet to look like. Clarify in your own mind the features that define the font. An outsider looking at your typeface should be able to see at a glance that all the characters in your font belong together somehow.

If you don't have a copy on paper of every letter in the font, sketch one out with pencil and paper. Fine though the BBC Micro is, pencil and paper are much better tools with which to begin the process. Savour the effortlessness of constructing curves and diagonal lines. You are about to enter the less flexible world of the pixel.

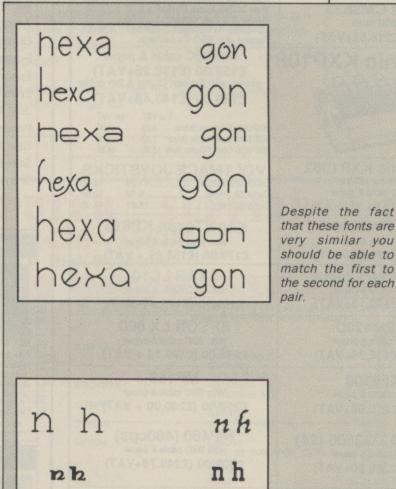

There are certain key letters that, in most fonts, force decisions that will affect many of the other characters. Start by working on the lowercase letters n and h of your font. When they look right, notice their width and their relative heights.

The width will normally turn out to be the

average width for the rest of the letters, while the heights will be shared by most or all of the other characters.

In addition, you will find that many characters are variations on this basic shape. The m is an n with more, as the r is an n with less. The I, t, f, i and j are all related to the straight part of the h in

n h

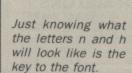

c-- a g

c -- a g

should be able to match the first to the second for each

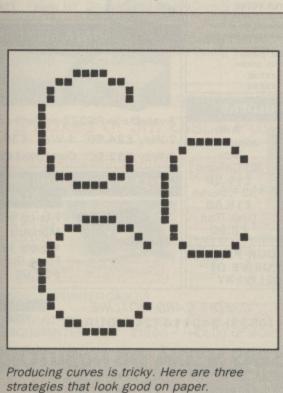

FEATURE

B B+ hi date

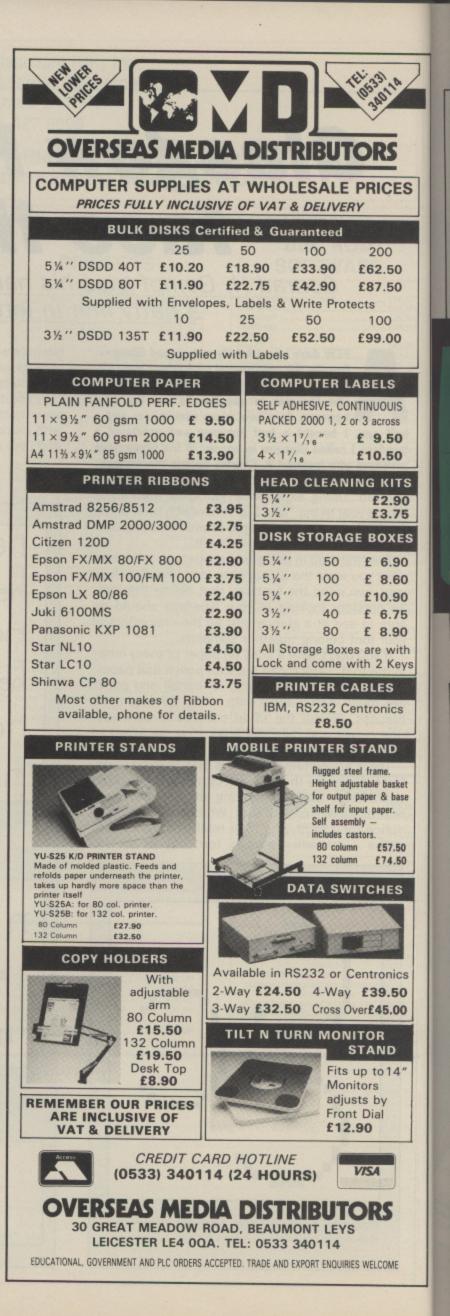

nh

In some fonts a and g are based on c but not in all.

RICES

#### one way or another.

The next character to receive attention should be the c. The same height as and comparable in width with the n, your c will demonstrate how you plan to handle most of the curved letters. The lowercase o and e come from the c, and so do all the variations with "sticks": The b, d, p, q and sometimes g and a.

The more elaborate versions of the a and the g

will take some attention, as will the s in any alphabet.

FEATURE

Occasionally the letter y fits in with the abdpg lot, but more usually it belongs to the most awkward group of letters which are primarily diagonal. Along with y, there are v, w, x, z and k. Expect trouble when working with these, as the pixel is not very well-suited for representing diagonals.

Capital letters may be similarly broken into three categories: The basically straight ones -IHLEFTJ, the round forms - OQCGDUBPRS, and the diagonals – AVWYMNKZ.

On the whole the caps are easier to make - at least partly because they are permitted so much more space. Our old friends W and S are usually the worst of the bunch.

When you have the main alphabet up and running, please take the time to put in the accented characters. Just copy the a and add the relevant accents. It will only take a few minutes, but it will greatly add to the usefulness and the professional quality of your font.

Finally comes the really difficult part - finding a city name that isn't already taken. Will Bourton-On-The-Water be accepted as a filename do you suppose?

Font designer screen from the font Style package. See offer on Page 45.

DON'T ORDER ANY MORE PRINTERS, MODEMS, OR PLOTTERS UNTIL YOU HAVE READ THIS - IT COULD SAVE YOU AT LEAST £1000! Did you know that most computer peripherals-printers, plotters and modems-are under-used and standing idle? Now there's a way to get more out of these expensive peripherals. . . and support more devices than you or the manufacturer ever thought possible!

Our switches keep that costly equipment running as productively as possible, so you get more from your computer, whatever its size and whatever you use it for.

NOW YOU CAN SHARE ONE PRINTER BETWEEN TWO PC'S WITH OUR 'T-SWITCH'

LISTAR

# Setting the scales

Peter Davidson continues his investigation into the features of Watford Electronics' Dump Out 3 rom

HIS month I want to investigate the commands that affect the size and position of the printout from Watford's Dump Out 3 rom. And I have a listing that lets you get the most out of the software easily. The size of dump is changed by adding two parameters to the \*GIMAGE command – H and V followed by numbers – and they can be used either together or individually.

print, ii (cps). Or

us form

ints. And ut sheet he printe lard draft

HEETS

APER

H changes the horizontal scale while V alters the vertical one and if you just use one of them, or you use them set to different values, the output will be elongated or squashed.

So H and V can be used to give, say, half-size dumps, or they can be used to adjust the proportions slightly if the default output looks distorted. Drawing a circle and dumping it is the best way to check the proportions — Listing I does just that.

But H and V are both followed by a number, so let's look at how to calculate that. First, decide by how much you want to scale your output – I'll show the calculations for half and double size, but the principles are the same for any size. Now divide 256 by the scale and convert the result to hexadecimal.

For a half-size printout you divide 256 by half – which is equivalent to multiplying it by two – and convert the result, 512, to hexadecimal – &200. So the command for a half-size dump is:

\*GIMAGE EPS H&200 V&200

In a similar way, the parameters for a doublesized dump are calculated by dividing 256 by two and converting the answer to hexadecimal. The command is:

#### \*GIMAGE EPS H&80 V&80

Let's move on to the position of the dump on the paper. The parameter I followed by a number determines the indent from the left-hand edge of the paper – useful if you want to centralise the output or print two small dumps side-by-side.

This time we're working in decimal, and the value is in tenths of an inch. So for a 1.5in indent the command is:

Pictures can be printed on their side or even upside down. To rotate the output the parameter is R followed by a number representing the number of right angles it is rotated through. So R1 gives a dump on its side, R2 produces it upside down and R3 gives one on the other side.

If you are dumping Mode 7 screens there are two useful parameters you can use. To make characters stand out more clearly from the background – for example if you have red on blue – use the parameter E – for expand contrast. To make separated graphics print as contiguous use C. In some cases the filled-in areas produced look better on the paper.

A parameter that can sometimes make dumps look better is L. Using it a whole number of dots on the paper represents pixels on the screen. Only certain values of H and V can be used with this – see the manual for details. The proportions of the dump may be distorted on some printers if L is used, so the best way to see if it improves your image is to try it.

Last month we looked at dumping part-screens using \*GWINDOW to select the area. If you want to dump a fixed part of a screen – say from within a program to miss off icons down the side of a display – the parameters following the \*GIMAGE command are X and Y together with the screen co-ordinates. The coordinates to be used can be found using \*GWINDOW and pressing P as described last month.

The numbers are output in the order you need

#### ◄ From Page 41

RS

for a VDU command - xmin, ymin, xmax, ymax. It's a simple matter to put them in X<min> <max> Y<min><max> form the Dump Out rom needs, so the command to print a top right-hand portion of the screen would be:

#### \*GIMAGE EPS X508,1279 Y492,1023

The final command is M for Mask. To use this one you need a knowledge of technical things beyond the scope of this article – as it would take a full feature to explain the concepts of masking in simple terms.

So, let's move on to Listing II, a program to evaluate the Dump Out command for you and, if you wish, print a screen or define a function key ready for future use. Type in the listing, check it using Get it Right! and save it.

When you run it you are prompted for the code for your printer. If you're not sure, enter ? and, providing you have a Dump Out rom installed, you will be presented with a full list of the options. If you always use the same type of printer, say Epson, you can change line 140 to:

#### 140 printer\$="EPS "

to save having to enter EPS every time. Note that there is a space after EPS.

The next prompt you'll get is for the function key that will be defined as you exit from the program. You can then press the key to implement the command – especially useful for a keytriggered dump – or use it to insert the appropriate command into one of your own routines.

If you always want key 0 defining you can change line 150 so that *fkey\$* is defined rather than input:

#### 150 fkey\$="0"

To prevent any key being defined set *fkey\$* to the null string.

You are next presented with a menu of the options you can evaluate from the program. Features are selected by highlighting the one you want to change using the up and down arrow keys. You can also move straight to one by pressing its first letter, so to move to the fast option, press down-arrow six times or just hit F.

Options can be toggled on or off by pressing Return. The ones switched on are indicated by the appropriate code being printed alongside the feature and are also included as part of the command displayed at the bottom of the screen.

Rotations are selected by repeatedly pressing Return while the feature is selected: You will cycle between nothing, RO,R1 and R2. The angle of rotation will be displayed on the right of the screen.

Indent, vertical and horizontal scales are selected by moving the highlight to the appropriate one and using the left and right cursor keys to change the values. Confirm your choice with Return. You can cycle through the values 10 at a time by holding Shift down as you press the arrow keys or you can step 100 at a time by using Control.

The effect is displayed on the right of the

screen, and in the case of indent this is the distance in inches that the output will be moved over. The effect for vertical and horizontal scales is shown as a percentage so, for a half size dump you select 50 per cent while for a double size one select 200 per cent.

The final two options are Dump screen and Quit. The latter leaves the program, and if you requested it at the start, defines a function key for future use. The Dump option prints a screen previously saved to disc or tape using the parameters you've set up.

You'll be asked for the filename of the saved

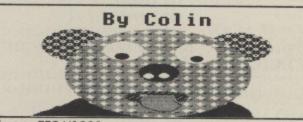

Gimage EPS

By Colin

Gimage EPS H&200

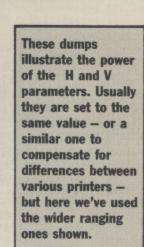

Gimage EPS H&200 V&80

Gimage EPS V&200

screen and then the mode that it is in. The screen will then be dumped, but remember, that no account is taken of palette changes. Once the printing has finished you'll be asked if you want to dump another screen. You can keep outputting screens until you answer N when you'll exit the program – defining a function as if Quit had been chosen.

So there you have it. If you've got Dump Out 3 you can now make more use of its many features. Remember, to get the best dump you must experiment with the various parameters on your own printer.

Now everyone can use the BBC Micro or Electron to design superb fonts and print them on an Epson-compatible printer. It's easy to use, and the results look so professional.

How? Just type in your text using your favourite word processor - Mini Office II, View, Wordwise and Wordwise Plus are all fully supported - put in the easy to remember formatting codes and save it. Then load up the FontStyle Print program and in minutes you have a professional, high quality output.

**Print in style on** 

your micro with

### YOU CAN:

DBB

USER

- Print in fast draft mode to check the display
- Use up to eight different fonts in any paragraph - (disc only)
- Print double height, double or quadruple width or condensed
- Use temporary or hanging indents

Two fonts are provided: Bold for classic output and Olde for the medieval touch. But, using the FontStyle Designer, you can produce any typeface you want. Not only can you design letters and numbers this versatile program lets you:

- Produce specialised characters, for circuit design or foreign languages
- Make border designs to brighten up your pages
- Design a special logo for your company
- Even print music

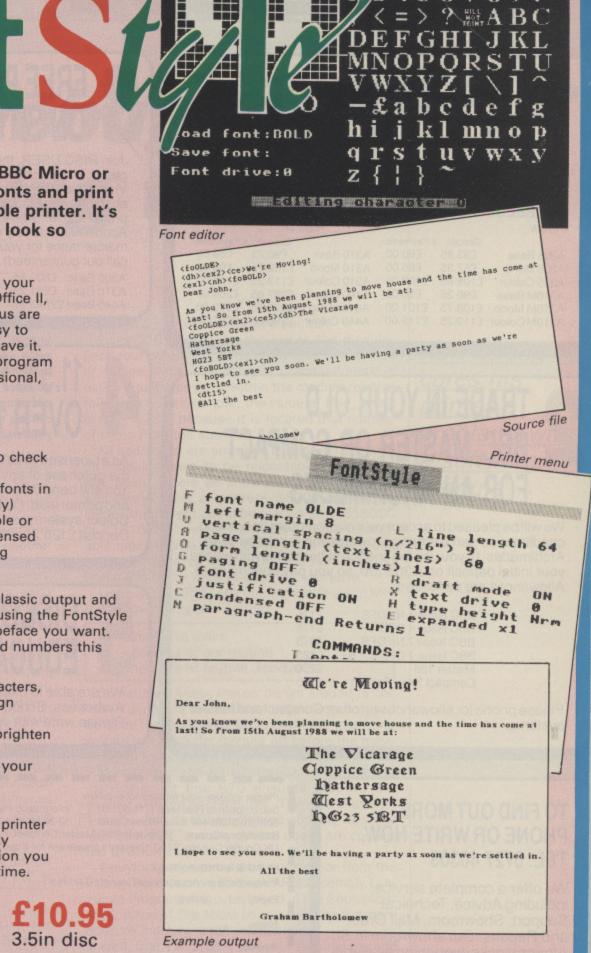

£8.95

Cassette

Say goodbye to boring dot-matrix printer fonts! With this package, the clearly written manual and your imagination you can produce perfect results every time.

## The Best Deals on Archimedes From BEEBUG The Archimedes Specialists

## **0% FINANCE**

For a limited period we are able to offer 0% APR finance over 9 months on the purchase of any Archimedes. You pay no interest at all. This is a brand new scheme only available from BEEBUG. The deposit and repayments are shown below

	Deposit 9	9 Payments		Deposit !	9 Payments	
A305 Base	£83.85	£80.00	A310 Base	£90.25	£89.00	
A305 Mono	£87.35	£86.00	A310 Mono	£102.75	£94.00	
A305 Colour	£106.85	£103.00	A310 Colour	£113.25	£112.00	
A310M Base	£96.25	£96.00	A440 Base	£267.85	£264.00	
A310M Mono	£108.75	£101.00	A440 Mono	£271.35	£270.00	
A310M Colour	£119.25	£119.00	A440 Colour	£290.85	£287.00	

## TRADE IN YOUR OLD BBC, MASTER OR COMPACT FOR AN ARCHIMEDES

We will be pleased to accept your old computer (in working condition) as part exchange towards the purchase of an Archimedes. (If you use the finance scheme this will replace your initial deposit on a 305/310, so you pay nothing now). Allowances are as follows:

BBC Issue 4 No DFS	£125
BBC Issue 4 DFS	£175
BBC Issue 7 No DFS	£175
BBC Issue 7 DFS (Or B+)	£225
Master 128	£250
Compact Base System	£215

Please phone for allowances on other Compact and Master systems.

## FREE PC EMULATOR OR ON-SITE MAINTENANCE

Join RISC USER, the Archimedes magazine and support group, and purchase your Archimedes by Cheque, Access, Visa, Official Order or 11.5% finance and we will supply you, absolutely free, 10 3.5" discs, a lockable disc storage box, printer lead and the latest version of The PC Emulator from Acorn. Alternatively we will provide 1 year on-site

maintenance for your Archimedes absolutely free (8 hour call out guaranteed).

A305 Base £803.85 A310 Base £891.25 A440 Base £2643.85 Mono £861.35 Mono £948.75 Mono £2701.35 Colour £1033.85 Colour £1121.25 Colour £2873.85

## 11.5% FINANCE OVER 12 TO 36 MONTHS

As a Licensed Credit Broker we are able to offer finance on the purchase of any equipment, including the Archimedes. You still benefit from the free PC Emulator, discs, disc box and printer lead. (Typical APR 23% on the purchase of a 310 Colour system over 36 months. Deposit £126.25 36 payments of £37.36).

## DISCOUNTS FOR EDUCATION

We are able to offer attractive discounts to Education Authorities, Schools, Colleges and Health Authorities. Please write with your requirements for a quotation.

## TO FIND OUT MORE PHONE OR WRITE NOW. TEL: 0727 40303

We offer a complete service, including Advice, Technical Support, Showroom, Mail Order and Repairs. Our showroom in St. Albans stocks everything available for the Archimedes. Call in for a demonstration.

Please indicate your requirements below. Subscription to Risc User (£14.50 UK) Information Pack a 305/310/310M/440 Base/Mono/Colour 12-36 Months Fina Base/Mono/Colour Trade In BBC/Master/Compact P UK Courier Delivery £7.00. Overseas please ask for a quotation	urchase 305/310/440 Base/Mono/Colour

## Stop Debugger upsetting things

EBUGGING machine code on the Archimedes is fraught with difficulties, not the least of which is your printer going haywire when the Debugger module sends it unfiltered control codes. This problem can, however, be solved by writing a module that stays resident while you work, filtering characters as they go to the printer. If it finds control codes it converts them into something printable.

ists

, I, X,

n

es

XC

10

Software modules on the Archimedes are equivalent to sideways roms on the BBC Micro, but as they are ram resident they have to be loaded up each time you switch on.

Also, on the BBC Micro each rom has to perform its own command line decoding to check whether a particular star command is addressed to it. However the Archimedes operating system – Arthur – does this job itself, scanning each module in turn. So all you need to do is provide the commands and routines within your module. Arthur does the rest.

What we want to do is intercept the route that characters take on their way to the printer check if they are printable and if not replace them with a full stop. The best place for this is the *Insert into buffer* vector, which Arthur allows us to legally intercept by using a software interrupt – SWI

By calling the claim vector SWI with the number of the vector we want and the address of our routine, we arrange for Arthur to jump to our code when the vector is used. Then our routine makes sure that the printer buffer is being used examines the output character and if it's not printable converts it to a full stop.

With three commands to turn the filter on, off and print the current setting, we're all set to design the module itself.

The listing is thoroughly annotated so you should be able to work out what's going on. Remember that the ARM chip has 16 (0-15) registers to play with. Of these r15 is the program counter, r14 the link register containing the return address for a subroutine jump. and r13 is usually used as the stack pointer.

When Arthur enters a user routine r12 always

contains a memory workspace pointer.

Lines 110 to 210 are the key to the module. Each four byte word holds addresses of routines or tables within the module. Each address is actually just a position within the module relative to its start. For example, the value of *title\_string* is 44 - &2C - because it is located that number of bytes from the start.

All addresses are arranged in this way because all modules have to be relocatable. Unlike the BBC Micro, where we know that a sideways rom will always start at address &8000, the Archimedes equivalent could be loaded at &181500C or &1816784 – in fact anywhere in the relocatable module area, RMA. So we must never make any reference to absolute addresses; when working with the ARM everything is relative.

Lines 320 to 350 carry out the vector claim with the following register set-up:

- r0 Vector to claim
- r1 Address of our routine
- r2 Address of routine workspace

Sometimes Arthur moves things around in the RMA. To prevent the software becoming confused we need the *finalise\_code* to allow the operating system to switch the module off before the move – it gets switched on again afterwards.

Moving on to the actual processing routine, the instruction at line 670 ensures that we are dealing with the printer buffer. Then the character - in r0 - has its top bit cleared, making its value less than 128, and any control codes are converted to a full stop.

Everything else should be quite clear from the listing. Pete Cockerell's book ARM Assembly Language Programming – reviewed in the September 1987 issue of *The Micro User* – explains the more obscure machine code instructions.

Well, that's it. Type it into your Archimedes and try it out. And if you're feeling adventurous why not try out some extensions – like converting all output to hexadecimal.

## REVIEW

Screens by Design

lan Waugh checks out a professional Mode 7 screen maker

AVE you ever marvelled at the Mode 7 screens you've seen on Ceefax, Oracle and 4-TEL? Even information pages with their titles standing out in relief are very impressive — not to mention the graphic

screens.

E

75

75

50

10

19

19

0

And if you've tried to produce anything but the simplest Mode 7 screen you'll know how difficult it can be, especially from Basic.

Typing in control codes and looking up the characters to produce a specific pixel arrangement is hardly conducive to creative programming. You need a Mode 7 screen editor – such as Design 7 Plus.

The program boots from disc and offers two choices: The Editor and a Basic Converter. In the former a status line at the bottom of the screen tells you the cursor's position and the character covered by it, plus its Ascii code. The teletext control codes are translated so, for example, 148 is shown as G.BLUE – Graphics Blue.

The control codes are accessed by pressing Shift or Control with a function key. You'd expect this from any Mode 7 editor but it's the extra features and automatic functions which make the program so interesting. So let's see what goodies are available.

You can change the colour of the screen from the cursor position across to the right and down to the bottom of the screen or a frame centred on the middle of the screen, even define a pixel-wide rectangle up to 37 by 22 characters in size.

Text can be entered normally, automatically in double height or selected from one of three big special fonts. The largest produces characters eight lines high by eight characters across and that's big. You can space text – and graphics – by inserting and deleting lines or characters and there's a line copy facility.

You can change a single character or code to any other code across the whole of the screen. This lets you easily change a colour, for example.

There are several aids to help you design graphic screens: In Sketch mode you can draw graphics using the cursor keys. Pixel mode allows you to use QW/AS/ZX to toggle the six graphics pixels in a character on and off, and pressing I in this mode inverts the pattern. Having defined a pixel pattern, the Paint option lets you put it anywhere on screen.

Particularly useful are the Cut and Paste options which allow you to define a section of the screen -a window -and save it to disc. It can then be pasted on to any position on the screen

so you can use a special design on many different pages.

A section of the screen can be marked and five operations performed: It can be copied, erased or recoded to change a specific character. All the graphics shapes can be inverted, while Mirror flips the whole marked area over – left to right – producing some fascinating results.

There's a word-wrap facility similar to that used by word processors. It saves you having to work out the length of your lines and words when entering a lot of text.

Using a Morley Teletext Adapter – see the special offer on Page 68 – you can drop a broadcast page on to the screen. And there's an Epson-compatible printer dump to give you hardcopy output.

The Basic Converter program, available from the main menu or as a direct command from the editor, turns the screen into a set of Basic statements which can be \*EXECed into a program.

Finally, you have access to star commands – what program would be complete without that?

Design 7 Plus is a well thought out, carefully designed piece of software. It's extremely easy to use once you've mastered the keys. Text and information screens are an absolute doddle to produce — it can be almost as quick as entering text into a word processor.

If you have even a little artistic ability the special drawing routines will help you make the most of Mode 7. It doesn't have routines such as circle drawing or rubber banding standard in drawing packages using higher resolution graphic modes. Though possible in Mode 7, they are not very easy to implement.

Nor does Design 7 Plus allow you to create carousels or customise the display of a series of pages but then it wasn't intended to. If you want these features then check out Ted, Desfax, Masterfax and Vu-Fax which let you do this – and more.

Design 7 Plus is a super program and I have no hesitation in recommending it to anyone requiring a good Mode 7 screen editor. And look at the price – value for money indeed.

## Music for pleasure

MPLE is an acronym for Advanced Music Production Language and Environment. It can be used for a variety of programming applications but it was specifically designed for music production and this is what we will be concentrating on in this three-part series. Unlike virtually any other computer language you don't have to learn great chunks of Ample before you can do anything useful with it. This is, in part, owing to very user-friendly front-end editors, themselves written in Ample and each a self-contained application program.

Ample was designed to support the various parts of the Hybrid Music System, in particular the Music 5000, a stereo digital synthesiser which can generate up to eight different voices – the BBC Micro's internal sound chip is not used at all.

The software-based editors and modules to drive the hardware are loaded from disc when required. Ample Nucleus is the rom-based core of the language and it manages the whole environment quite cleverly so the loading of modules is virtually transparent.

An important feature of Ample is the total integration of all the modules allowing data to be passed freely between them. The more I use Ample, the more aware I become of just how flexible, versatile and fascinating a system of music creation it is.

The user guide supplied with the system is excellent but in case you're not one for reading manuals or you don't have a Hybrid Music System, this series will work through the construction of a piece of music using the three main editors. Suggestions will be given for altering and modifying the music and, at the end of part three, you will have a customised and individual performance – even if you can't read music.

Ample has two modes – Command and Edit – and Tab is used to toggle between them. In Command mode a % prompt appears and indicates the system is waiting for user input. The format of Edit mode varies but you always use the Tab key to return to Command mode.

One of the most important features of Ample is concurrency – the ability to do more than one thing at the same time. It handles the playing of several music parts in parallel and, most importantly, lets you control the music from the keyboard simultaneously.

In Basic, for example, when you type RUN the program shuts you out until it's finished its task. In Ample, RUN starts the program then returns to Command mode. It will continue to accept other instructions while program execution proceeds.

When the system is booted you are presented with a menu of 10 options - Figure I. The cursor

keys are used to highlight and Return is used to select. Pressing f0 in Command mode will always bring you back here ready to select another option.

Select the Staff Editor. Here music can be entered using traditional notation. If you can't read music, don't worry – all you need do is to copy the score shown in Figures IIa and IIb.

Press Tab to enter Edit mode and you will see a block cursor above the stave on the right square bracket. The brackets mark the start and end of the music and at the moment there is nothing there.

Press c to enter a Clef, press the minus sign to enter a flat for the key signature then press k to place it correctly on the staves.

Press q to enter a 4/4 time signature: Both

<u>lan Waugh</u> <u>begins a</u> <u>hands-on</u> <u>series</u> <u>exploring</u> <u>programming</u> <u>in Ample</u>

Run program	
Notepad	CONTRACTOR AND A AND ADDRESS OF THE
Mixing Desk

Save program	
Catalogue	
New program	
Commands	

Figure I: Main menu

values can be altered by using Shift and the cursor keys – see what range of time signatures it will accept then set it back to 4/4. If the block changes to a straight line you've pressed the up cursor without Shift. Press the down cursor to get the block back. Now we'll enter some notes.

Press Return and a note will appear on the stave and the block will step on ready for another note. Press the left cursor key to site the block over the note and use Shift and the cursor keys to

Turn to Page 54 ▶

## PROGRAMMING

alter its pitch and duration. The higher the note sits on the stave, the higher the pitch; the shorter the duration, the more tails it acquires.

Set the pitch and duration to match the first note shown in Figure II. Press Return to get another and adjust it to match the second note.

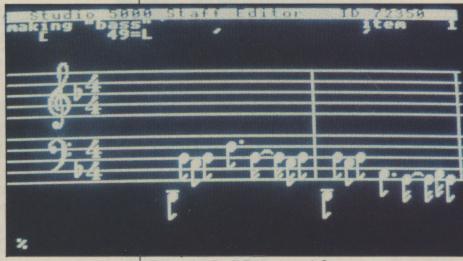

Figure IIa: Staff Editor bars 1-2

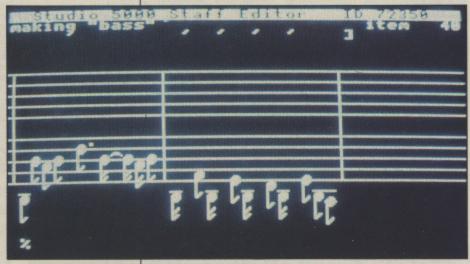

Figure IIb: Staff Editor bars 3-4

Carry on until you reach note five which has a dot after it. A dot extends its duration by a half and is entered by pressing the full stop after entering the note with Return.

The sixth and seventh notes are joined by a curved line – a tie which means the second is not played as such but its duration is added to the first note. Enter note six – it's of shorter duration than the others – press Return then press  $\tilde{}$  (the tilde just below Break) and a tie will appear. Enter the seventh note as normal and they will be tied. Enter the remaining two notes then press I to insert a bar line.

To hear this now, in Command mode enter:

followed by Return. This tells the system there is only one voice or music line and which instrument to play it on. A chord, for example, would require two or more VOICES. Press Tab then press f1 and the bar should play. The system automatically checks the length of the bars. If it is not correct a *Bad bar* error will appear leaving you in Command mode. Press Tab and the cursor will appear above where the error occurred. Enter the notes in all four bars as shown in Figure II, ignoring the symbols above the stave for the moment.

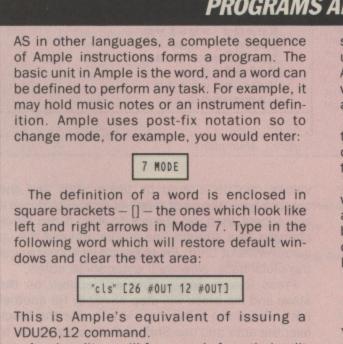

Now, having got this into the system, there are lots of ways we can modify it. Let's alter the tempo – the default is 125. In command mode enter:

then play the piece. Try different values. Then play it on different instruments. Enter:

"CHANS"FIND

to list the available instruments. The FIND command displays the names of all the words which use the specified string and CHANS is used

Ample editors will form words from their edit

54 MICRO USER August 1988

## PROGRAMS AND WORDS

screen almost automatically. The names of user-defined words are normally in lower case. Ample commands and instructions are also words but they are built into the system and to avoid confusion their names are in upper case.

User-defined word names can be 15 characters long but the screen displays will be clearer if you keep them down to nine characters or less.

SHOW produces a list of all user-defined words in a program. The tempo, articulation and instrument words aren't shown as they are built into the system. WRITE will list a complete program and individual words can be listed with the TYPE command:

You can obtain a printout by pressing Control+B first.

## PROGRAMMING

#### ◄ From Page 54

in all instrument definitions. Creating instruments, however, is beyond the scope of this series.

To alter the articulation of the piece – legato or staccato – use *Len* with a single number before it which sets the gate period – length of time a note is actually on – regardless of the actual duration of a note. A staccato note will be on for a shorter time than a legato note.

Position the block cursor above the first note and enter text mode by pressing the up cursor. The block will change to a straight line. Enter:

1	2	Le	n
	80	22	105

and the notes will move along to make room for it. Leave Text mode by pressing unshifted down cursor then press f1 and you will hear the notes play staccato. Reposition the cursor and change it to:

<b>a</b>	100
10	Len

Now the notes play smoothly, legato. Try different values – the effect of the *Len* command will depend upon the instrument being used. Try *Organ* and *Upright* to hear the difference.

Rather than having to write *Len* commands above the stave, you can define words to do the job. In Command mode enter:

"st" [12 Len] "lg" [Ø Len]
-------------------------------

Now you can use st and Ig above the stave instead.

Enter Edit mode and Text mode again, move to the start of the notes and type:

The word =L sets the volume of the music - the default is 64 which is maximum.

A single quote mark above a note represents an accent. Insert it above the notes as shown in Figure II. An accent adds 15 to the volume level. You can define your own volume words:

"mp"	[15=L] [35=L] [64=L]	
------	----------------------------	--

Insert accents, volume settings and articulation words until you're happy with the way the music sounds. At any time during your experiments you can turn the piece of music into an Ample word. The editor will do this automatically, you only have two things to do. First, you must tell the program what you want to call the word. In Command mode enter:

"bass"NAME

You will see the top line change from:

making "newword" making "bass"

Next type in MAKE or press f3, and you will see

the Ample equivalent of staff notation scroll up the screen. You can change names and MAKE pieces as often as you like. To edit an existing music word use GET:

but this will only work in the Staff Editor if the piece was written on it or designed to be displayed on it.

You can save the program with:

Next month we'll see how flexible the Notepad Editor is. Meanwhile, you may like to experiment further with the Staff Editor. If you NAME and MAKE pieces called part1, part2, part3, and so on, typing RUN will play them all together.

The Hybrid Music System is available from Hybrid Technology Ltd., Unit 3, Robert Davies Court, Cambridge, CB4 1TP. Tel: 0223 316910.

HE Z88's clear, crisp supertwist LCD display is a joy to look at but there comes a time

when you want to see more than just plain text. Graphical output, even in elementary form, can be extremely effective, be it bar charts for business, graphs for mathematics or pretty patterns for fun.

Most Basics come with a PLOT command - the basis of the high level interface to the graphics capabilities of the machine - but unfortunately, the Z88 doesn't. Or rather it does, but its action is simply to apologise for not being implemented.

In this article I will provide some Basic procedures to allowing plotting of chunky graphics, and demonstrate them with a program to display arbitrary mathematical formulae. Finally there's a routine to transfer pictures drawn using this system into Pipedream documents at an even lower, but nevertheless effective, resolution

On the Z88 there seem to be two ways of creating graphics: Implement chunky graphics by means of User Defined Characters - UDCs - or use the Z88 map.

I've chosen the former, primarily because the map is so small on the unexpanded machine and even on an expanded one it can be no wider than about three inches. A second reason is that the map is inaccessible from Basic, and even if machine code is used, it requires meddling with some rather unsavoury parts of the operating system.

Let's look briefly at how the chunky graphics approach is implemented. It relies on using sixteen of the Z88's UDCs, labelled A to P - UDC's are fully described in the June issue of The Micro User. For our purposes each UDC is broken into

four rectangles arranged into a two by two square.

The plot

thickens

Andrew Moore shows how to give your

Z88 elementary graphics capabilities

For each (which we'll label ASC"A"+i) i is a four bit value and the colouring of the character is determined from these bits according to this diagram:

Bit	3 B	it	2
Bit	3 B 1 B	it	0

For example, character 4 - 0100 binary - is white with the top left hand quarter black. As it is not possible for Basic to read from the Z88 display, we do this ourselves, storing which UDC is in which screen location in a virtual screen - SCR which must be updated whenever we do a plot.

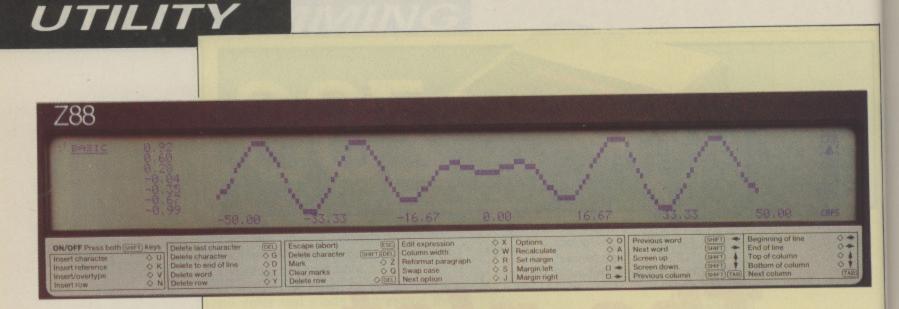

To try it out, type in the routines in Listing I, save them, and enter the following program:

	10 PROCINITG
	20 PROCCLV
1	30 REPEAT
	40 PROCPLOT(RND(180)-1,
	RND(16)-1,2)
	50 UNTIL INKEY\$(1)<>"
	60 VDU 1,67

Alternatively, you can run Listing II to demonstrate and test the routine of Listing I. This is a utility to plot arbitary mathematical functions of one variable - X - on the display.

You can supply the limits for the minimum and maximum values of X, and the program then chooses the optimal scaling for the X and Y axes. I recommend trigonometric functions - the long

There are two ways of creating graphics . . . User defined characters or the Z88 map

#### ◄ From Page 57

thin Z88 display is certainly suitable for demonstrating their periodicity – repeating pattern.

The details of the main procedures are: **PROCINITG** initialises the UDCs and the virtual screen.

**PROCCLV** clears both the Z88 display, and the virtual screen and also switches off the cursor. To get the cursor back you must enter VDU1,67.

**PROCPLOT(X,Y,C)** plots at a position X chunky pixels from the left of the display and Y from the top. If X or Y are out of range nothing happens. If C is zero the pixel is plotted as white, if one the pixel is plotted black and it's inverted if C is two.

Finally, there is a short routine to copy a graphical display into Pipedream. This will not want anything to do with user defined characters, and so we have to go to the lower resolution of character sized pixels. The transferred image is converted to be 16 characters high, so at least we don't lose any vertical resolution.

After you have typed in Listing III, create a chunky graphics image to your liking — say by using the function grapher — and then go into Pipedream and place the cursor where you want the image to be drawn. It's necessary that there be only one Pipedream suspended activity.

Return to Basic, and enter PROCGRAPHTOPIPE – you needn't worry about writing over the graphics image on the display. Bizarre things will appear to happen for a while, but when the FINISHED message appears you can return to Pipedream and you'll find the graphics image has been transferred.

How is this done? As you may notice from the listing I've made use of the Z88's CLI. This is

```

DY

ELE

As the plug of an adapter is inserted into anything that is battery powered there is a short pause between the device taking its power from the batteries and it being supplied by the adapter. If that is not plugged into the mains, connecting it will usually disconnect the power to the device completely.

But the Z88 has to have power continuously to retain its memory. There's a capacitor inside that holds enough power to bridge the gap when the plug is inserted — it also powers the micro as you change the batteries — and there's also a diode which allows the supply to revert to the batteries if the adapter is connected but not plugged in to the mains. This diode has a voltage drop of nearly 1 volt.

A set of new batteries starts at approximately 6.5v and the BAT LOW warning comes on when this has fallen to 4.5v. But the first thing that happens as you plug in the mains adapter is that the direct battery power supply is cut and replaced by the one via the diode, so the BAT LOW indicator comes on if your batteries are down to 5.5v.

Although the mains adapter supplies 6v the indicator remains set. Turning the machine off and on again will clear it.

Your article on using the printer in the April 1988 issue of The Micro User showed how to print but how do I get effects such as bold in the output?

A You can send the codes to control your printer directly using VDU, PRINT# or BPUT#. But the easiest way is to use the Z88's printer driver which is already programmed with the codes. This only works if the printer is set up as a file by using:

and sending the text using BPUT#X% and PRINT#X%. The printer driver is operated by the ENQ character – Ascii code 5 – followed by a

character to say what should be done. The most useful of these are shown in the table.

ENQ,[ ENQ,J ENQ,U ENQ,B ENQ,X ENQ,I ENQ,L ENQ,R ENQ,A ENQ,E	Turn printer driver on Turn printer driver off Highlight 1 – Underline Highlight 2 – Bold Highlight 3 – Extended sequence Highlight 4 – Italics Highlight 5 – Subscript Highlight 6 – Superscript Highlight 7 – Alternate font Highlight 8 – User defined
and the second sec	

You need to bear in mind that the printer driver will turn most of these effects off after a Return which is sent following each PRINT# statement.

To use an effect the printer driver first has to be turned on by:

Effects can then be sent either by using BPUT# in a similar way or by incorporating the characters into the PRINT# line. For example:

10	ENQ\$ = CHR\$(5)	
20	PRINT#X%,"Normal "+	
ENQ\$4	"B"+"Bold "	

will print Normal and Bold on the same line.

Will all BBC Micro Basic programs run on the Z88 provided there's no graphics in them?

A Unfortunately no. Apart from graphics there are three other areas of difference between the two Basics. For a start, with the exception of the Ascii characters, the Z88 VDU drivers use totally different codes from the BBC Micro, for instance VDU2 does not turn the Z88's printer on – there are several different methods of printing from Basic on the Z88 and we'll cover them in future issues. Also, most Oscli or star commands

Turn to Page 60 ►

### Hint

When your Alkaline batteries are "flat" – the screen display won't work – the memory is retained for up to one month by the small amount of power left.

With re-chargable batteries this time can be as low as 12 hours, so while they work out cheaper you should use them with caution.

#### From Page 59

are different which means, for example, that \*FX commands cannot be used on the Z88.

The third area is a little more subtle: Basic on the BBC Micro uses separate stacks for the return addresses of different types of control structures – FOR...NEXT, REPEAT...UNTIL and so on – making it tolerant of poor program design. There is just one stack on the Z88 so some programs will run on the BBC Micro but not on the Z88. Take a look at the following:

	PROCtest
20	PRINT "Main Program"
30	END
	DEFPROCtest
	FOR I = 1 TO 10
60	IF I = 6 THEN ENDPROC
70	NEXT
80	ENDPROC

Here the FOR loop inside the procedure never completes – the value of *I* never reaches 10. A BBC Micro will return from the procedure to the main program and execute line 20. However, the Z88, quite correctly, gives the error message:

No PROC at line 60

because ENDPROC cannot be executed before the FOR return address has been pulled off the stack.

The Z88 seems capable of handling vast amounts of memory. How is this organised?

A combination of two techniques are used: There is bank switching, which is like the BBC Micro's sideways ram. The Z80 microprocessor at the heart of the Z88 – like the 6502 in the BBC Micro – can only handle 64k of memory directly. To allow more, different chunks of ram and rom are switched in and out of the main memory when they are required.

In addition, application workspace and files are located in fragmented ram. The fact a file is 995 bytes long it doesn't mean that a consecutive 995 bytes are used to store it – the file can be fragmented into a number of pieces anywhere in ram. Of course, a file won't be fragmented across a ram device – otherwise you could unplug a cartridge and lose half a file.

The exception to all of this is BBC Basic, which was written before the Z88 was designed and requires a continuous block of memory.

W

le

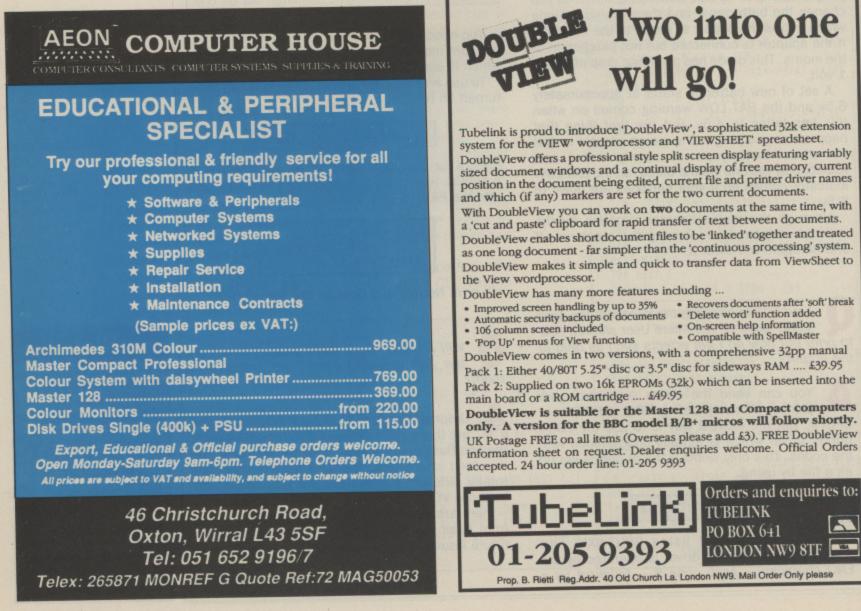

DI

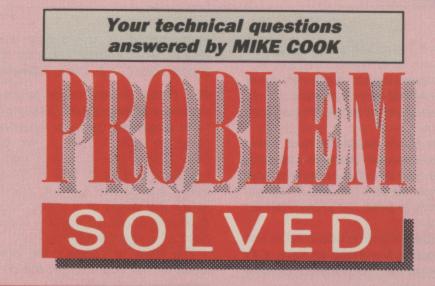

b

C

il

When you call Basic the operating system will find up to 40k of continuous memory for it and if necessary other activities are moved to a different part of memory. When you leave Basic everything is restored to its previous position and the Basic activity is collapsed into the smallest space it can occupy, plus about 2k for a copy of the screen.

MY Brother M1009 dot matrix printer prints out with a gap running along the middle of the letters. What would you advise me to do?

Also, my function keys are not working properly. When I use them in a program to display coloured letters they seem all right, but when I list the program, different statements come up instead. - **H.R. Baijee, Forest Gate, London.** 

• The problem with your printer is that a needle is blocked or broken. This is most likely due to ink clogging up the hole it passes through, so carefully disassemble your print head and clean it in alcohol. If the problem persists it could be the solenoid or its driver at fault.

As to the function keys, if the colour control characters are inserted directly in the program they are interpreted as Basic keywords when you list them. That, and the fact that we can't print them in The Micro User is why it is always best to use the CHR\$(X) statement for Mode 7 control characters.

## Half-formatted discs

I RECENTLY updated my Model B with a Watford Mk2 DFS interface and a CS400S disc drive, but I am having some problems formatting discs with 80 tracks – single or double density. The head appears to come to the end of its travel just over halfway through the formatting procedure and reports back something like Sector 00/02 not found. – **P. Stonebridge, Ipswich.** 

 It sounds very much as if your disc drive is only a 40 track one. This would explain your problem.

## More micro colours

IS there any way of creating your own screen modes, such an eight colour Mode 1? I understand that this would take up more memory, but could shadow ram be used? – **Antony King, Borstal, Kent.** 

• You can get a so-called Mode 8 which has all the colours but half the resolution of a Mode 2 screen. Full details of this are given in the Advanced User Guide. However you can't get more colours or more resolution simply in software.

It is not just a question of having extra memory available but how that memory is wired up inside the machine. Without completely replacing the video ULA, cutting tracks and adding a lot of extra logic, there is no way of improving the display.

## Accessing telesoftware

I HAVE a BBC B fitted with the Acorn 0.9 DFS and an 80 track disc drive. As a monitor I use a TV which has teletext installed. What do I have to add to be able to access telesoftware? I am a novice and am bewildered by all the literature on teletext adapters. – **Anne Stuart, Sunbury-on-Thames, Middlesex.** 

• Unfortunately there is no way to connect the teletext circuitry inside your TV set to the Micro. Therefore if you want to download telesoftware you will have to get a teletext adapter like the Morley one advertised on Page 45. All the information you need to download telesoftware comes with the adapter.

## A bite at an Apple

I OWN a Master Compact but I have a lot of software on 5.25in discs. I also have an obsolete Apple II+ with two 5.25in drives. Would it be possible to connect one or both Apple drives to my Compact? – Alistair English, Staveley, Nr. Kendal, Cumbria.

• Apple disc drives are unique in the field of computing as they do not contain the electronics used in conventional ones. The functions of the control board were performed by the software, making Apple drives cheap, very slow and, unfortunately, totally unusable on any other system.

## Picture break-up

I AM using a remote monitor as an information board in an entrance foyer. With a three metre lead I get a good display, but with a 10 metre one – which I would like to use – the picture breaks up. Can you help please? – **David M. Sims, Stockport College of Technology, Stockport, Cheshire.** 

• The problems with sending the four necessary signals over separate long leads is that they all arrive at different times and the signal suffers, due to the high capacitance of the lead. You

Turn to Page 62 ►

## On the agenda...

- Clogged print head
- Disc formatting trouble
- New multi-colour modes
- Breaking up display
- Trouble with joysticks
- Persistent noise and flicker
- Micro battery backup
- Using 80 track drives as 40
- Receiving telesoftware
- Using Apple disc drives

#### ◄ From Page 61

could try replacing each signal lead with a low loss co-axial cable – not the type sold for TV aerials, as these are often only low loss at high frequencies.

The best solution might be the sort of cable that consists of four separate screened co-axial leads. They use this type of cable in professional TV studios but it might be that the BBC Micro will not have enough drive to push the signal that far even with good cable.

Perhaps the cheapest solution would be to use the modulated output of the micro to drive a TV set. In this way most of the problems are circumvented.

### **Battery operation**

I WOULD like to construct a new power supply for my BBC B incorporating a standby 12v rechargeable battery. The disc drive – powered by the micro – requires only 36mA at 5v and a full board is fitted.

From experiments, I have found that the micro can be run off a non-switched mode power supply but can this cause any problems if continuously used for prolonged periods?

Also, should the supply be connected to all three positive and negative connections on the motherboard, or would only one be sufficient? Finally, what current capacity should the power supply have? – **A. Clark, Sittingbourne, Kent.** 

● A battery switch mode power supply was described in the April 1987 issue of The Micro User. I am surprised that you have a disc drive that takes so little current — are you really sure of this? The problem with a conventional series regulator design is that it dissipates too much power and so will run hot. The BBC Micro takes about 2.5 amps at 5 volts, so you will need to dissipate about 18 watts — the same amount of heat as a small soldering iron.

You have to connect the power to all three leads on the board to get the correct distribution impedance. Finally, if you want the sound, cassette and serial interface to work you have to supply a -5 volt supply at about 100mA.

### 80 into 40 will go

I HAVE recently bought an 80 track nonswitchable disc drive for my BBC Micro. It works perfectly and I can use my old 40 track discs on the new drive by a software fix. My problem is that when I connect both drives to my micro using a two into one adapter I can only use either the 80 track or the old 40 track drive, but not both together.

I assume the software fix makes the 80 track

drive double step and this must alter the 40 track stepping so the discs on the 40 track drive become unreadable.

Can you suggest another software fix or, even better, a way to make my 80 track drive switchable? – Alan M. George, Cockett, Swansea.

• There are two ways you can solve your problems The first is to use the disc switcher board – Body Build pack 2 – described in the October 1985 issue of The Micro User. The second way is to use a DFS like the Watford one which allows individual drives to be switched; the latest versions will automatically adjust to the type of disc you have in the drive.

oth

ack

I OWN an issue 3 BBC B and recently I have started to get a sort of rustling noise from the loudspeaker. I then noticed that when this happened the screen gave a slight shimmer.

Although not a serious fault – it does not affect the micro's performance – it does get annoying. I would be pleased if you could give me any help on this matter – **Andrew McIntyre, Tranent, East Loth**ian, **Scotland.** 

• The persistent sound crackling and picture flickering are signs of impending doom: It sounds as though there are rapid fluctuations in the power supply. These are too fast to affect the operation of the micro, so it will still work.

A typical cause is a smoothing capacitor breaking down, and the short circuit current causes the electrolyte to reform so the capacitor continues to function a little longer.

Eventually it will break down permanently – when it will be easier to locate and replace. It is probably located in the switch mode power supply.

## Analysing an analogue fault

I HAVE a joystick for my BBC Micro and after a year it seemed to fail, so I took it back and it was replaced with another of the same make. This one developed the same fault – or so I thought – as did the next few.

I realised that all these joysticks couldn't be faulty, so I tried a test program and got the reply that the joystick was not plugged in. If I waggle the plug I can get a positive reply, but it is almost impossible to keep it in that position. If I select joystick on Elite, I dive and spin to the right. Could you help me please? – **Chris Betterton, Dunstable, Beds.** 

• Clearly your micro is at fault and not the joysticks. It could be a fault on the socket of the analogue input port itself caused by a cracked track or bad solder joint nearby. From your description it sounds like a faulty earth connection. Have you any hardware problems with your BBC Micro? If so, write to Mike Cook, The Micro User, Europa House, Adlington Park, Adlington, Macclesfield SK10 4NP, giving full details of your system and the problem.

Unfortunately, Mike cannot send you personal replies, but as many questions as possible will be answered on the pages of The Micro User.

WATCHING YOUR BBC PROGRAMS ON TAXAN'S SUPERVISION 620 OR 625 IS A FEAST FOR THE EYES. BECAUSE THEY'RE PROFESSIONAL COLOUR MONITORS THEY GIVE YOU A BETTER QUALITY PICTURE THAN EITHER A TV OR MEDIUM RESOLUTION MONITOR. AND WITH THEIR SUPER HIGH CONTRAST TUBES (FOR SHARPER TEXT AND MORE VIVID COLOURS) AND FOUR SWITCHABLE COLOUR TEXT MODES, THEY MAKE EXCELLENT VIEWING. (HOWEVER IF YOU PREFER TO WATCH IN MONOCHROME ONLY, TAXAN HAVE A RANGE OF MONITORS - THE KX117, KX118 AND KX119). TAXAN ALSO OFFER TWO BBC COMPATIBLE DOT MATRIX PRINTERS, THE KP815 AND KP915. THEY'RE QUICK AND QUIET AND BOTH PROVIDE NEAR LETTER QUALITY. SO NOW YOU'VE SEEN OUR IMPROVEMENTS FOR THE BBC," GIVE US A RING. WE'D LOVE TO HEAR YOUR POINTS OF VIEW.

TO FIND OUT MORE ABOUT THE TAXAN RANGE OF PRODUCTS, CALL US ON 0344 484646.

## Your BBC Micro's eye on the world's weather

Robin Nixon takes a look at new <u>high</u> resolution satellite maps

NUMA MESTALE FROM DARICOM (B/W)

EATHERLINK is a unique service for subscribers to MicroLink. Using state of the art technology it provides detailed maps of the world's weather taken directly from orbiting satellites. Recently the service has been enhanced to include very high resolution maps in up to 16 different colours or shades of grey on an Archimedes or eight on a BBC Micro.

It offers daily updates on the weather over Britain and Western Europe and brief summaries of each map.

There are also a number of demonstration maps covering the Mediterranean, North and South Africa, France and Spain. Shortly it is hoped that a regular weekly update of holiday spots will be made available, so you can see exactly what sort of weather to look forward to.

For anyone not familiar with MicroLink or the WeatherLink section, extensive help is available. Setting up your micro to receive the maps is a very easy process which you are guided through step by step, while downloading the maps themselves consists of merely typing the name of the day for the map you wish to receive.

There are two types of weather satellite: Polar orbital and geostationary. Examples of the polar satellites are the North American NOAA series and the Russian Meteor and Cosmos satellites. As the name suggests, they orbit the Earth passing over the North and South Poles with an orbital period of around 100 minutes, and are between 600 and 800 kilometers – 400 to 500 miles – above the Earth's surface.

The European geostationary satellite, Meteosat, circles the globe around the equator. However, it has an orbital period of 24 hours and so appears to Earth observers to be stationary – over the Greenwich meridian. It is about 36,000 kilometers – 24,000 miles – above the equator.

The NOAA series of satellites transmits visible light and infra red images, while Meteosat has a timetable of four minute slots for visible light, infra red and water vapour images.

Normally to receive these pictures you need some very expensive equipment, including aerials, decoders, computers and display units. However, with the help of WeatherLink, all you need to view the maps is your BBC Micro, a modem and a subscription to MicroLink. At 1200/1200 baud each map only takes between four and five minutes to download – costing less than 20p at cheap rate for a satellite's view of earth.

## **Obtain FREE** software at any time with this teletext receiver

MAIL ORDER OFFERS

USER,

With the Morley Teletext Adapter you can download software whenever you like at no charge whatsoever. Programs are updated every week and range from educational and utility software to exciting games.

You'll also be joining the 3.5 million households who regularly access the thousands of pages on Ceefax, Oracle and 4-Tel to check programme details, football results, share prices, up-to-the-minute news bulletins and much more.

The Morley Teletext Adapter is the most popular unit on the market with more than 10,000 satisfied customers - including the Department of Transport who use it to display weather maps at service stations throughout the country. It plugs straight into the user port, includes menu-driven software and automatically tunes itself to the required channel.

You'll be able to store pages in memory, use the real-time clock in your programs and automatically load associated pages each time you select a page from the menu - considerably speeding up access time.

The Morley Teletext Adapter is an ideal companion for your BBC Micro system.

IMPORTANT: The BBC points out that a teletext adapter, like a TV set, will not work satisfactorily without a good outside aerial. Nor will it function correctly if you experience reception problems such as ghosting. They emphasise that

MAIL ORDER OFFERS

THE

**Teletext Adapter you** will also receive a FREE gift of Morley's Design 7 Plus Mode 7 editor, worth nearly £10.

Note: If you use your BBC Micro's auxilliary power socket for your disc drive, or any other external device, you will need a power supply which we can provide for an additional £9.95.

these problems only affect a few areas of the country. However if you have any doubts as to the quality of signal available in your area you should contact the BBC Technical Support Service during office hours on 01-927 5040.

## EDUCATION

## **Compact prize**

RS

E

ey

7

SUTTON comprehensive school in Ellesmere Port, Cheshire, has won a Master Compact donated by Acorn in the county's Career Countdown 88 competition. The Duke of Westminster handed over the micro, won in competition with 109 other secondary schools, during a visit to Sutton.

[]\_P,C

Organised by the Manpower Services Commission, the competition was launched last November to encourage school leavers to visit education and training exhibitions throughout Cheshire. Entrants had to produce a guide for future visitors, highlighting the uses, importance and aims of careers conventions.

Sutton comprehensive's winning entry was a video explaining how to benefit from the conventions, and a series of pocket-size guides. Both ideas are to be adopted by MSC.

## Archimedes helps literacy project

A POWERFUL tutoring program with a difference is the latest project to be embarked upon by System Applied Technology (0742 768682). It will help adult literacy course participants learn a variety of language skills, as well as how to fill in forms and write CVs.

The Manpower Services Commission-funded project will be centred on a word processor tailor made for the needs of literacy students and will run on an Archimedes.

Linked to an extensive database, it will offer the student a wealth of learning material. Under the forms option, for example, a variety of areas will be available – including tax returns, passport and job applications. Other options contain sample letters, curriculum vitaes and other reference text.

Artificial intelligence techniques will enable the micro to tell students what is wrong with their work. The system will then draw attention to the need for tutoring in comprehension, style, punctuation, spelling, layout, proof reading and vocabulary.

The training strategy within the system will not be fixed – the micro will collate information about the student's abilities and weaknesses and provide guidance through the learning tasks.

But the computer will not force students to take its advice – at all times it will judge when help is required and offer it.

The Archimedes-based system will be wysiwyg with high resolution graphics and a colourful and pictorial interface.

The Duke of Westminster (centre) presents children at Sutton Comprehensive School, Ellesmere Port, with their Acorn Master Compact prize.

## Phonics package

TEACHERS of reading generally agree that children should learn whole words to build up a sight vocabulary of around 100 common words. One strategy is to provide systematic instruction in phonics, giving children of ages six to eight the skills to build up new words and extend their vocabulary.

Letters and Pictures, a new package from Chalksoft (0775 69518), is intended as a tool to start off this phonics work. Designed by experienced teachers in reading, the seven-program disc employs powerful graphics. The child uses only two keys to select a letter to match a picture – the initial letter, final consonant or middle vowel – building whole words in the final section.

When a child indentifies the picture he is shown he presses the spacebar to move a pointer to the appropriate letter and then presses Return.

If correct, the child is rewarded by animation of the pointer and sound effects. If the answer is incorrect the micro bleeps and the pointer disappears, returning a few seconds later for another try. When all the pictures in a program have been matched there is a colourful on-screen reward with sound effects.

Letters and Pictures on 5.25in disc for the BBC Micro and Master costs £13, on 3.5in disc for the Master Compact £15.

## EDUCATION

Ian Waugh investigates packages aimed at easing music practice

## **Points for** Value for money Good exercises Against Poorly pitched

Careless programming

## **Programs of note**

Product: NotePerfect I Price: £9.95 Supplier: NotePerfect Software, 97 Valence Road, Lewes, Sussex BN7 1SJ. Tel: 0273 473135

USIC is a subject which lends itself to computer assisted learning, especially on a BBC Micro which has a built-in sound chip. NotePerfect aims to take advantage of the chip by providing a set of scale exercises the music student can follow and

play. The idea is a fairly simple one. The micro plays

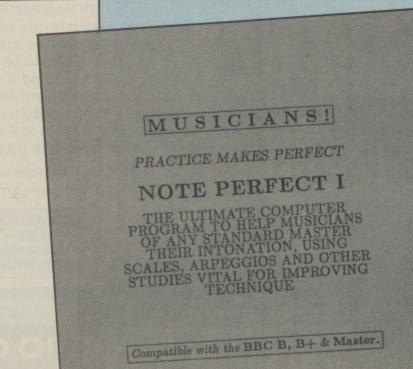

the scales and the student must follow them, thus helping develop his sense of pitch and articulation - an essential part of Associated Board music exams.

The program was designed specifically for flute, oboe and violin players but it could also be used for trumpets, piccolos, clarinets, cor anglais and viola players too.

When you boot it up, you are presented with a list of 10 options: Tune up, major scales, minor scales, major arpeggios, minor arpeggios, dominant 7ths, diminished 7ths, chromatic scales, major double stops and minor double stops, the last two being only relevant to string players.

Tune Up is used to tune your instrument to the BBC Micro's sound chip. This section is designed for the violin and offers A, D, G and E notes to tune against. Others could simply tune to the A.

The program, however, obediently uses a value of 89 in the SOUND command - as mentioned in the user guide - to produce the A pitch. This value produces a pitch of 449.3 Hz, not 440 Hz - the internationally accepted pitch of A. A value of 88 would be closer - 443.1 Hz - although even this is still not close enough for anyone with a half

decent musical ear. If you use this program you must be prepared to tune your instrument to the sound chip and then back to international A to play with other instruments. This is a nuisance to say the least, especially if it is difficult to tune or you would rather not to be constantly retuning it. When you select one of the scale options the

program asks you. What key, how loud, how fast, how many octaves and how many times? This is fine, but it asks you all these questions every time you select a new scale. You should be able to set all these options - except the key - at the start of a session. Also, it would be helpful if you could enter a number of scales at once. For instance all the major scales incrementing chromatically, so you could play through a complete series of exercises without stopping.

Although the sound chip only has a range of five octaves, the program lets you input any number in answer to the 'How many Octaves?' question. If it is outside the sound chip's range the pitch wraps around.

When in a sub-menu, Escape takes you back to its start and Break is supposed to take you back to the main menu. In some sub-menus, however, the Break key is configured as \*RUN SCALES which is the main menu program - but it's a Basic program so it crashes. The sub-programs are rather short anyway and all 10 could probably be fitted into memory at once.

This sort of thing sums up the programming side of NotePerfect extremely well - extremely sloppy. The presentation is functional - barely and there are few, if any, checks made on user input. The key must be entered as a capital letter and if you enter c instead of C for example, it runs you through the speed, loudness, octaves procedure before realising the mistake and then simply plonks you back at the start of the questions again. Questions requiring a Y or N answer will scroll up the screen if you enter anything else.

The range of scales, however, is good and the minor selections give you the choice of harmonic or melodic minor - but yet another prompt to reply to. Practice Sheets are included with the program - you may photocopy them - and you can record your progress on them.

NotePerfect have Site Licence Options for both schools and LEAs. Costs range from £35 for schools up to 500 pupils up to £10 per school for LEAs with more than 25 schools.

To sum up, NotePerfect is a nice idea but badly implemented. The aim of a CAL program should be to help and encourage pupils to learn and practice. It certainly wouldn't encourage me if I had to enter all that information before each exercise.

If you - or any of your students - are finding scale practice a real problem the program could be a help and, as it doesn't cost an arm and a leg, it may be worth investigating. I had hoped, however, that educational software had improved beyond this backroom development stage.

Price: Grades 1 & 2 together £16.65 (cass), £18.45 (5.25in disc), £19.85 (3.5in disc). Grades 3, 4 & 5 individually £14.85 (cass), £16.65 (5.25in disc), £18.45 (3.5in disc) Supplier: Perfect Fourth Software, 11 Hempstead

Lane, Potten End, Berkhamsted, Herts HP4 2QJ. Tel: 04427 6311

HE aural part of any music examination is often the most unpopular with students. It can also be the most difficult to practise as another person is usually required to play some notes and ask questions. Aural sets out to ease the practice problem by using the computer to provide a series of exercises the student can do at home.

It was specifically designed for individual use and although Perfect Fourth says it could be used in a classroom, it is not, I think, so well suited to group use. The program boots from disc and, as a form of copy protection, asks you for a threeletter code which must be read from one of 676 on a Loading Card. The manual warns that if you lose the card you'll have to buy another program although the cards and codes for each of the programs are the same.

The program uses Mode 7 and all on-screen instructions are in upper case – I thought software had progressed beyond the big letters stage. It also addresses you as if the micro is talking and periodically throws out such comments as "Are you singing?" and "Nice and loud, I can't hear you". You can enter your name and if you do it will be tacked on to the end of some of these messages. OK for the under fives, I suppose.

We'll start with Grades 1 and 2: The first option plays the major scale to remind you what it sounds like. Next the program plays a note and you must sing it. The third option plays a key note and then one of the first five notes of the scale which you must name. The fourth option plays a short tune and you must clap the rhythm of it.

Grade 2 develops the exercises and adds Scale Singing in which you must sing a certain interval of the scale. It also adds Sing Three Notes which is a prelude to the other grades which ask you to sing a short melody.

Each exercise gives you four tests of its type after which you can try another four or go back to the main menu. The manual says the options are numbered 1, 2, 3 and so on, but the program uses letters. Also the Sing Three Notes exercise in Grade 2 appears as second choice in the manual but last choice on the program menu. Although admittedly minor points, the lack of agreement between software and manual never ceases to amaze me. Is it so difficult to get the two to match up?

When you reach Grade 3 there are exercises in which you must sing the upper or lower of two notes which are played together, sing notes of the scale, sing short melodies and clapping exercises.

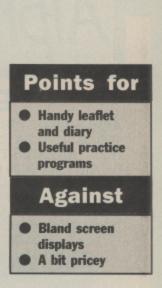

Grades 4 and 5 introduce slightly more complex questions, longer melodies and larger intervals.

All grades have three beating time exercises. These play a short tune and you must beat time to it. The answer is supplied by an arrow which points in the direction you would move a baton if you were conducting. The time signatures aren't given, though, which would have been helpful. As these are three-part tunes, you only get a few per exercise, unlike the scale and interval tests which can produce countless variations using the random number generator.

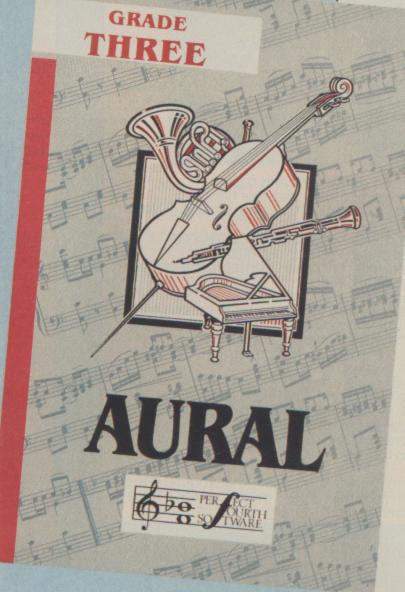

None of the exercises can accept feedback from the user – they are presented purely for you to practise on your own. The only way you can tell if your answers are correct or not is by using your own ears. As this is what the program is trying to develop it is, in a way, like marking your own examination paper. To get the best out of the exercises it will be important to get your progress checked by a teacher.

The presentation isn't particularly exciting – bland Mode 7 screens and inane comments – although the packaging is good. All the programs contain a "These Music Exams" leaflet included with the permission of the Associated Board and a Music Student's Practice Diary. The leaflet is excellent reading and the Diary can serve as an incentive to monitor and improve your progress.

The software provides practice rather than tui-

B B+ M diate

tion — which is, after all, what it was designed to do — and is not a substitute for a good teacher. It also strikes me as being a touch pricey which may deter potential users from buying it. However it is aimed at a specialised market and that usually seems to justify a higher than average price tag.

There's no doubt these programs could help improve your aural ability but you'll need the will to work through them.

## The bottom line...

Neither program really stands out but both work satisfactorily

## rchimedes ARNESS 7

Alpha-Base

## £49.95

Alpha-Base is the successor to Beta-Base, the top selling database for the BBC micro. Alpha-Base really does 'HARNESS THE POWER' of the Archimedes. does As with all Clares products we have made **Alpha-Base** powerful but easy to use. You can be using a database within 5 minutes of receiving the program - that's easy. But don't be fooled, you do not lose any functions or power. Here are just some of the functions:

- \* WIMP based using icons and mouse
   \* Hard disc compatible massive files
   \* Free format screens with on line editing of field

- order
  \* Upto 400 fields & 27600 chars per record
  \* Upto 2.14 billion records per file !!!
  \* Multiple display, entry and printer forms can be used with each file
  \* Fast search by fields or record
  \* Plain English entry of search & sort criteria with many inbuilt functions
  \* Five data threes including formulae

- \* Five data types including formulae
   \* Calculation facilities with inbuilt min, max,
- average, age etc

- \* Comprehensive print options inc labels
  \* Validation on each field if required
  \* Transfer fields from one file to another
  \* Password security if required
  \* Data stored on disc so computer failure will not result in loss of the data result in loss of the data

If you want a powerful database that you can boot up and run within 5 minutes then buy **Alpha-Base** now. Absolutely no programming skills required.

- \*
- Graphics editor
- Page format controls page length, headers,
- footers, pad and pound characters. \* Page Composition allows placing of graphics, mini preview etc
- Multiple print out options Auto page numbering even through multiple documents

To create a document with Graphic Writer you type in your text, using the many text styles available, leave room for the graphics and then place the graphics using Page Composition. It's simple and easy to use. You can have up to 14 documents in memory on a 310, that's equivalent to about 220 pages of A4 text.

See what the magazines say:

the scrollling is unbelievably smooth ... I can highly recommend this excellent product as being THE word processor for the Archimedes

MICRO USER April 1988

excellent value ... bowled over by its stunning use of graphics.

**RISC USER December 1987**

N the trackless wastes of the Sahara Desert you stand alone with your map. Hidden in the shifting sands is the Pharaoh's treasure, and you are determined to find it. But with a three month time limit and a limited supply of food and water can you survive?

This educational game not only encourages logical thinking but also gives lots of practice with compass directions and coordinates.

With 100 locations to search and only three opportunities to dig, you need as much help as you can get. Fortunately you have six clues giving an approximate direction to the treasure. But to get a clue you must answer a compass or coordinate question correctly. You can also re-stock with food and water by passing over an oasis, each marked as a blue square.

To enter instructions press the appropriate key and hit Return each time you want to send that command. When answering a compass question press the spacebar to move the pointer of the compass display. Coordinates are entered with the number keys - the squares in each direction are numbered zero to nine. The X coordinate should be entered first.

Happy hunting. May your oases be plentiful and your fortune good.

# **TECHNOMATIC WINCHESTERS**

Technomatic offer the most popular range of Winchester drives for BBC micro systems at competitive prices. The drives are fully compatible with Acorn ADFS system. Fan cooled switch mode power supply ensure efficient and reliable operation. Combination of floppy and winchester drives in our elegant plinth housing provides an ideal solution for need to have large storage and ease of transferring data to floppies.

Technomatic front end utility for the Master supplied with the winchesters at no extra cost provides an easy and efficient file management system. The entire contents of the drive are displayed on the screen on boot up, each file or directory appearing as an icon. The icon type indicates whether directory or file and type of data if latter.

Larger capacity drives available on request.

# NOVACAD

**Computer Aided Draughting** System

Novacad can drive a plotter to produce drawings of highest quality... Novacad is excellent. It is flexible, genuinely easy to operate Beebug Dec 86 without much practice, and a pleasure to use. sophisticated CAD package with unique

facilities. Thousands of Novacad packages are being used in widely differing fields ranging from industries for producing engineering drawings to accountants offices for producing flow charts. Architects, engineers, plumbers, kitchen planners and many other professions requiring easy to use facilities for producing high quality output are making extensive use of Novacad's unique features. Novacad is proving to be an invaluable teaching aid in technical schools simply because of the ease with which it can be used.

Scale 18 : Level 8 only. Date 18/87/86 Sect Engino

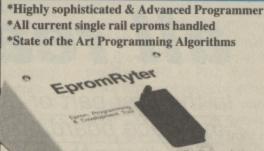

Novacad is compatible with all models fitted with Acorn DFS. Hardware requirements can be minimum; single drive and FX80 compatible printer are enough to get started, though its performance is enhanced considerably by use of 6502 2nd processor, dual drive and to a degree with B+ and Master's shadow ram.

The major features offered are:

- \* Simple and easy to use with logical command sequence. A large drawing area (approx 15 screens)
- Unique ability to create complex icons made up of upto 500 lines instead of the usual 15 to 20 pixels, store them in a library and recall them at different scales and orientations.
- Zoom facility.
- Create multi level drawings.
- Text entry at any 90° orientation anywhere on the screen.
- Grid scaling and locking, displacement measurements.
- Printer routine for FX80/100 compatible printers
- Cursor control from keyboard/tracker ball/ mouse.

Plotter driver generator available as an optional utility, configures a routine for any BBC coompatible plotter. Pre configured routines for popular plotters like Epson HI80, Hitachi, Plotmate are included. Drawings can be scaled to maximumm plotter size. 49(d) 61(c)

NOVACAD T/M Version	£49(d)
NOVACAD T/M + Plotter DG	£61(c)
Plotter Driver Generator	£15(d)

EpromRyter is a powerful eprom programmer designed for use with the BBC Master Computer. It takes full advantage of the latest developments in the eprom technology and the extra facilities on the Master to provide fast, simple and efficient programming and editing facilities.

The software is totally menu driven and on screen help messages make the programming simple for both specialists and novices alike. The EPROMRYTER interfaces with

Master through 1MHz bus. It is mains powered with its own psu. 3M Textool zif socket has been fitted to ensure consistent and reliable service over long periods.

META Ver III ASSEMBLER

"All the good features you would expect to find in a good source code editor are present ... Meta assembler lives in a different world. It is structured to work with any new processor ... as new instruction sets can be added ... as needed ... has a well featured editor with colour highlighting, a sound modular approach." Acorn User October 1986

- Assembles for over 30 popular processors, including Z80, 6800/01/02/04/05/09/11 etc - and 68000 - using native mnemonics for each processor, eg LD A, (HL) for Z80 and MOV A0, \$1000 for 68000 etc.
- Fully integrated Editor: four field, all search, search/replace, block copy, delete, move, marked save, load etc.
- Compatible with Portal Eprom Emulators and Team Disassembler.
- Send object code in Intel Hex, S-Recor straight binary etc. down to discs, RS23 parallel port, Eprom Emulators etc - a during Assembly.
- Over 50 directives included as standar handling nestable macros, condition assembly and twenty types of table definition directives.
- 32 bit labels; 31 character names. Arithmet and Boolean arithmetic to 32 bits.
- Modular source code with numeric and strin parameter passing.
- Serial communicator area with eight optio lines: echo, control code trap, LF suppressio addition etc.
- Over 500 in use throughout the world universities and many different industries.
- . Two 16K Roms, two 80 track discs, J Two 16K Roms, two strip. ring-bound manual, function-key strip. £145()

A proven Eprom programmer for BBC Model B and B+ with thousands in use in industry, educational and R&D establishments. It offers many of the powerful features of the EpromRyter and can program all single rail eproms upto 27256. Full details on request. £89(b)

**EPROMER H** 

# PORTAL EPROM EMULATORS

- Emulates 2716, 2732, 2764, 27128, 27256, 27512 eproms at 150ns Access time.
- Load at 4Kbytes/second No "erase" time.
- 28 pin header plugs into Eprom socket on target system - status monitored on 13 Leds.
- software controlled from Fully Meta Assembler.
- 100 times faster than standard EPROM program/erase cycle.
- Fully CMOS compatible; draws no power from target system.
- Four portals may be independently programmed off same user-port cable
- Complete with all cables, manual and disc PORTAL 512 (2716, 2732, 2764, 27128, 27256, 27512).

£245(b)

# TEAM DISASSEMBLER

The third part of the Universal Development System: a Meta labelling disassembler.

Supports 1802, 8080, 8085, #HD64180, Z80, 65XX (includes 65 col, 6511 etc), 68XX (includes 00, 01, 02, 03, 08 etc):

- Up to 64K of object code translated back into META compatible source code modules: labels automatically inserted on all jump targets, memory references etc.
- Pre-editing stage allows marking of object code areas as byte, string, word, long word etc, tables. These areas disassembled into appropriate directives instead of garbage mnemonics.
- Reconstituted source code ready for immediate re-assembly by META.
- Omniversal search/repalce for re-naming arbitrary label names with meaningful ones.

# THE BEEB BODY BUILDING COURSE

# A board for all reasons

In the first part of an experimenters' interface board project, Mike Cook introduces the principles involved

N the dim and distant past, I agreed with the editor of a then unpublished magazine that I would write him four articles about adding extra parts to the BBC Micro. *The Micro User* was launched — and here I am at article 60 and to celebrate I am going to look at a bigger project than usual. Not that it will be complicated, but there will be so much to do with it that it will take several articles to

cover its potential. Many schools, colleges and individuals are taking an interest in micro control technology and most of my articles have covered some aspect of the subject. However our new project will attempt to include most areas of control by producing an experimenters' interface board.

I intend to cram as many devices as possible on to one board to enable many different experiments to be undertaken. The board will be totally re-usable and will be supplied in kit form or ready assembled. The latter will find favour with those of you who are not quite sure of your construction ability.

Finally, for the dedicated enthusiast, the printed circuit board will be available separately to allow you to add the components as time and pocket permit.

No project is ever complete without software, and again I want to break with tradition slightly. All the software so far in this series has been written either in Basic or machine code. There are better languages for control applications and to this end I will produce the software in the traditional Basic/machine code mix and also the equivalent routines written in Forth.

This is a language ideally suited for control, as it is extensible – code written becomes part of the

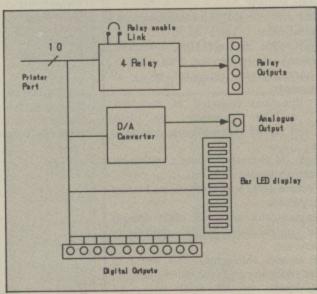

Figure I: The output side of the board

language itself. I shall be using the Acorn version of Forth which, despite not being the best implementation I have seen, will allow easy translation to other versions. So you will have an opportunity to look at a task written in two different languages – the most painless way to learn Forth! in

it in ac

Fi to th

ar

CC

th

b

de

01

a

In this first part I want to outline both the board and the language, then next month I will look at the detailed circuit of the board, its construction and its testing. Finally we'll go on to look at the experiments we can conduct with it.

One of the major factors in designing this project was to cram in as much usability as possible at a minimum cost, so I decided to connect the board to the user VIA rather than the 1MHz bus. Interfaces that use the bus are, by necessity, that bit more expensive.

However I wanted more than the signal lines provided by the user port, so the board uses both this and the printer port. The latter is buffered inside the micro and so can only be used as an output, while the user port can be used as both input and output. Therefore most of the output devices will connect to the printer port and the

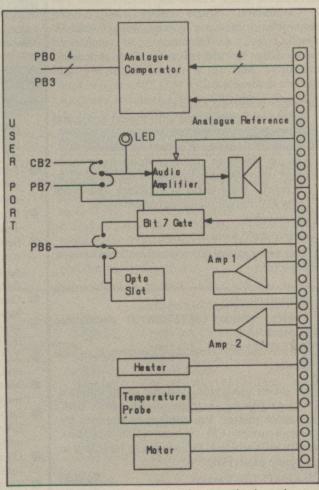

Figure II: The user port connections to the board

Forth is a language ideally suited for control, as it is extensible

#### inputs to the user port.

The hardware itself is chosen so that not only is it interesting to control in its own right but also interacts with the other pieces on the board. In addition, you can control external devices.

Figure I is a block diagram of the output section the part that is connected to the printer port. First the signals are brought out to screw connectors to allow connection to any device. On the way they are also used to drive an LED bar display so you can monitor the logic state of each output.

The outputs are also fed to a digital to analogue converter so we can generate sound waveforms and construct an analogue to digital converter.

Finally four of the lines drive miniature relays, and as it might not always be convenient to have these connected, there is a link that can be broken when you want to disable them. They are double-pole change-over capable of switching one amp and can be used for controlling motors and lamps. Four are sufficient to control a buggy.

Figure II is a block diagram of the rest of the board which is the part connected to the user port. Here we have a more dedicated allocation of devices to interface lines. The first 4 bits – PB0 to PB3 – are connected to an analogue comparator

which allows them to be used as simple digital inputs with signals that do not conform to the standard logic levels, as well as those that do. In addition it allows us to compare the level of two analogue voltages which, as we shall see later, allows us to construct several different types of analogue to digital converter.

SERIES

B B+ hn

There is an amplifier and loudspeaker which we can drive from an external signal or from one of the lines CB2 or PB7. With them we can look at many different ways of generating audio signals. An optical slot switch and photo-detector will allow us to perform sensing experiments and using the gated input from bit 6 we can measure frequency.

Finally some devices are not connected to any line, and they can be wired up via the screw terminals when required. We have a heater element and temperature sensor, along with an electric motor fitted with a fan. With them we can construct feedback control systems to regulate motor speed and temperature. Finally there are two amplifiers for general purpose use in boosting signal levels.

Next month we will be looking at the board's detailed circuit diagram and there will be an order form if you wish to buy one.

# AN OUTLINE OF FORTH

Forth works by defining words, which are similar to procedures in Basic. A word normally consists of a few words that have been predefined as part of the language. However once you have defined your new word you can use it in the definition of others.

In this way you build up a collection of words until the whole program is just represented by a single one. To execute a word, you simply type it on the keyboard. This means that it is simple to debug a program as you go, by testing each word as you define it. In this way you build up a set of words in the area of application you're interested in — control, in this case.

Forth is the only language I have used that allows the writing of non-trivial programs that work first time. You spend a lot more time thinking about what you are trying to do than clattering at a keyboard unsure of what you are doing.

The one thing that puts beginners to Forth off it is the way it handles the parameters to words – procedures. It uses a stack notation, and I must admit that I did not like this aspect of the language at first. However it is an extremely elegant way of handling numbers and one that you will soon appreciate as you become more proficient in code.

In stack notation, numbers are placed on a push down stack and all operations work on that. For example, take addition. Conventionally we may write:

If you scan that from left to right it says take the number five and perform an addition operation – but to what? We can't do the operation until we read the next number which is four. So what we need to do is to suspend the operation until all the numbers have been defined – a relatively simple task for us, but a messy and wasteful one for the micro.

With stack notation, operators are executed when they are encountered on parameters

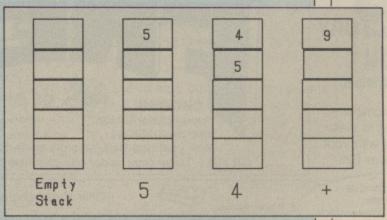

Figure III: Stack operation

already on the stack, so the same expression in Forth would be written:

Scan that from left to right and you will see it is in a much more sensible order. Take the number five, put it on a stack, take the number four, put it on the stack and add. Add what? The top two numbers on the stack. These are removed, added and the answer is placed back on the stack.

This operation is shown graphically in Figure III. You see there is no suspension of operation so the micro works quicker and more efficiently with less memory requirements. This allows Forth to run very quickly compared to a conventional high level language and speeds approaching that of machine code are not uncommon.

The Acorn Forth rom is available at a specially reduced price to readers of *The Micro User*. See the offer on Page 112 for full details. 13

# Dave's been

Unfortunately, they sent him back. His father did all he could, but to no avail. Apparently David was beating the Aussies at "Hopper" (as well as cricket) and they didn't like it. Anyway, he's back, so if you come to see our full range of BBC software and hardware, disc drives, printers, monitors, cables etc, and you hear an Australian accent, it will only be David showing off. Actually, he sounds better than he used to!

N the past few weeks *The Micro User* office has been deluged by word processors and text editors for the Archimedes. While choice of word processing software is a matter of preference selecting the right one for you is always difficult. This review covers two text editors – Twin and Archi-Text – which you would use for writing programs, not novels.

So, what distinguishes a text editor from a word processor? Primarily, output formatting. The latter gives you word wrap, control of print styles, indents, margins, centring of lines and so on. While useful for producing documents these things – particularly word wrap – are a liability when programming.

In addition, text editors always save files as pure Ascii, unlike most word processors which distort text into convoluted formats. But what a text editor must do is facilitate entering and correction of listings.

produces

Price: £29+vat Supplier: Acorn Computer Ltd., Fulbourn Rd., Cherry Hinton, Cambridge CB1 4JN. Tel: 0223 214411

TWIN comes in a large plastic box/folder containing the 3.5in disc, 64 page manual and a function key strip with six rows of options.

The software is designed to interface smoothly with any other interpreted language like Basic or compiler such as C. The name Twin covers several aspects of its operation: It can have two screen windows, one of which can have a task running in it. This means you can actually be running a program in one window and edit a copy in another.

Each window opens on to a buffer that all the output from a task and input from the keyboard go into. Since you can view different parts of it – just like any word processor – any text that has scrolled off the screen has not been lost, you can go back and look at it.

The concept being exploited here is that you write and edit your program in one window and use the copy facility to load it into the task in the other to run it. If any errors appear you can edit and run it again without the need to switch between applications.

Although this seems useful, I'm not sure how good it really is. For a start the majority of applications on the Archimedes will be graphical – Twin filters all screen output and any control codes just get converted to inverse characters. For example, the Basic command:

1010	PRINTTAB(5,10)"Hello"
	Anter a constant of the second

For compiling C. Fortran, Pascal and so on it may speed up the debugging of syntax errors – all those errors which would be flagged during the compilation process itself. But again, it would be pretty useless for checking the application itself. If a text editor can speed up the actual coding

EJHello

# A word from an editor

# Steve Turnbull tests and compares two text editors

of a program it can't be bad and to aid this Twin has structures: All languages have particular groupings of control structures: IF...THEN...ELSE, REPEAT...UNTIL and so on. Twin has a facility to allow you to enter something like:

CASE	0 F
WHE	1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1
1.	ERWISE CASE

with just two key presses - you can then fill in the details. Not only that, you can define your own.

The search and replace facilities are quite extensive, and are derived from the Edit package available on the Master – but it's a lot easier to use.

When one of the search options is requested the two top lines of the six level function key strip come into play. These give you options like selecting with or without case sensitivity and including control characters and ones over 126 Ascii. Selection from restricted sets of characters is possible, as are strings of indeterminate length.

There are clever facilities for loading and saving files via complex directory paths if you need them – for instance using a C compiler on a multi-user network.

The biggest surprise to me is that the product is completely keyboard-driven – no mouse use at all. I know some people will consider this a mercy, but when compared with ArchiText it's a failing.

Product: ArchiText Price: £19 Supplier: Hopesoft. Hope Cottage. Winterbourne. Newbury. Berkshire RG16 8BB. Tel: 0635 248472

THIS package has been produced by a new software house using Acorn's C compiler. The disc comes with an 18 page photocopied manual plus a two-level function key strip with several empty

#### ◄ From Page 85

spaces. The product is designed to replace Twin, so that from Basic you can enter the TWIN command and get ArchiText instead. Using TWINO8 you get an Ascii version of your program without line numbers.

The first thing that struck me about it was that, while the Twin screen display is utilitarian, the ArchiText one is colourful, but ugly. The last three lines of the screen are divided into a block of four scroll boxes, a scroll bar, line and screen number displays along with filenames and a message line at the very bottom. The rest of the display is devoted to the program text, and the edit position is marked by a thin red caret which sits between characters.

The mouse is used by ArchiText for all scrolling operations and the pointer is a light blue caret when in the text area, changing to a long, thin, very unaesthetic arrow in the lower area. Position control within the current text is very precise and fast and the line-by-line scrolling is smooth – using the rectangle move command.

ArchiText can handle five files at once, with two being displayed on screen at any time. Text can be block deleted just using the mouse and copied or moved between text areas — even if the block being duplicated is in an area not currently being displayed.

Search and replace is perfectly adequate - in

fact you can do block moves and copies to and from these areas as well. This feature allowed me to replace a piece of text I had accidentally deleted.

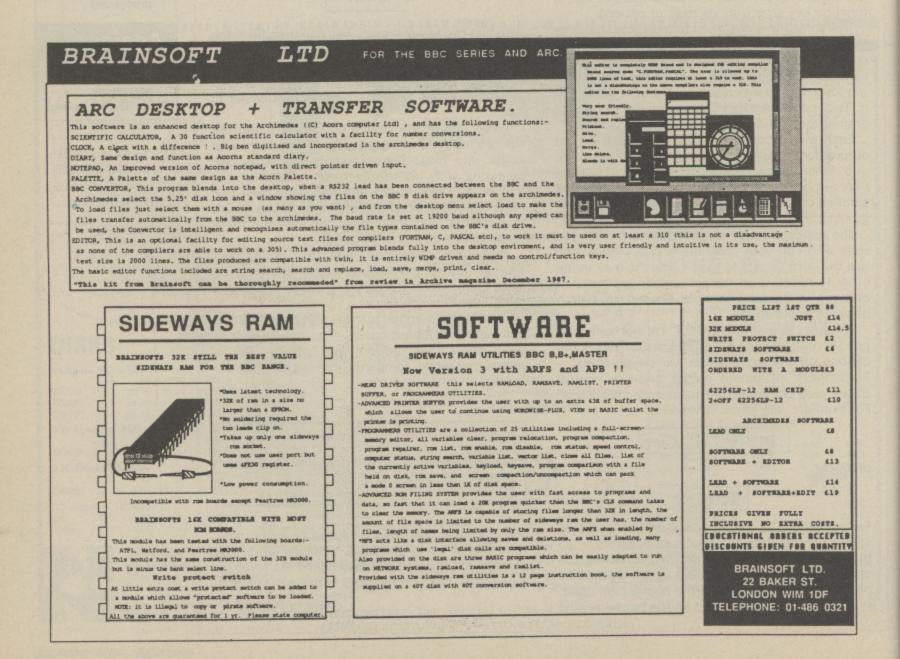

The only real problems I had were that it couldn't handle lines longer than 255 characters, and you have to press a number on the keypad to leave the star command section. These were annoying but hardly serious.

### Conclusion

Twin is a far more complex product than ArchiText and essentially does the same task with a lot more frills. It's also half the size – Twin is 38k whereas ArchiText occupies a massive 86k – and this is due to the inefficiencies of the C compiler. ArchiText requires work on the display – I would have preferred the real Wimp environment, not this home-grown substitute.

With all the extreme cleverness and complexity of Twin – and I've hardly mentioned its extensive buffer options – I'm still left with the question: Do we really need such convoluted facilities, or is the software going the route of the messy inefficiency of recent microprocessors?

The ARM chip is a Reduced Instruction Set Computer. Don't we need reduced complexity software?

# Points for • Easy operation • Uses the mouse

Against

 Tatty display
 Can't handle long lines

# The bottom line...

If you need to work while you compile buy Twin; if you want clean simplicity get ArchiText.

FEATURE

# ADVENTURING

# The ultimate hack

Enter the world of fantasy with the Mad Hatter

OR several months a couple of discs had been sitting in my desk drawer: At the Manchester Micro User Show, Howard Roberts of Heyley Software took me gently aside and reminded me of their existence. Much chastened, as soon as I got home I began exploring Heyley's first adventure, The Ultimate Prize.

The setting of the game is a type I enjoy from time to time – straightforward Dungeons and Dragons-style swashbuckling action. A mighty warrior already, you are invited to enter a contest which has as its prize the ultimate status of deity – hence the title.

It's a three-part adventure and each must be completed before you can progress to the next. First you wander through an underground labyrinth, part two finds you exploring a forest and finally you roam mountainous territory.

The beginning is straighforward enough. You find a knife in the opening location and, not too far away, is a rope that simply asks to be cut. From then on the puzzles escalate steadily in complexity. Fortunately it is possible to explore a good deal of the labyrinth without having to solve specific problems, and this is very useful.

As I always advise, you need to examine things, sit on things, dig, jump – in fact undertake just about every conceivable action if you are to

# **Problem Corner**

Jonathan Lee has problems. In **Escape from Pulsar 7** – how does he repair the lathe and the oven so as to bake the cake? What, it anything, can be found or done in the wrecked cabin? Jonathan would also like to know where to find the black and silver figurines in **Ten Little Indians** and how to open the gates.

Robin Keith has trouble with a few games I don't know. In **Golden Baton** how does he use the quartz to get the guard's knife? What does he do after finding the prism in **Time Machine**? Finally, how can he rescue Ant-man in **The Hulk**.

Tony Burton needs help with **Legionnaire**. Neither my colleague Pendragon nor I have it, so would someone like to quality for a Hall of Fame rating by being the first to send in a solution? master this adventure.

Some things about the game I found very useful, others less so. The instructions are set out well. The screen layout is attractive too – Heyley uses multi-coloured text depending on whether the text describes your action, something that may be manipulated or your location.

There were, however, some very irritating aspects. The parser has a limited response at times. For example, you will come across an object described as an empty silver flask. A good parser would allow you to GET FLASK, GET SILVER or GET EMPTY. The Heyley parser only allows GET EMPTY.

I also felt at least one puzzle was too farfetched, even for a Dungeons and Dragons environment. You have to leap 500 feet into a piranha-infested river. I'm not complaining about the piranhas – there's a way of dealing with them – but I think a 500 foot jump is a bit much, even for a fantastic warrior like me.

I had a further problem with the SAVE and RE-STORE facilities. Whenever I restored a saved position I got the error message *Type mismatch*. The initial location description remained on screen, while the exits and any treasures shown were those belonging to the saved position.

Making several moves to get new data loaded in from the disc cured it, but this nonetheless remains a drawback. Howard tells me he is working on the parser and the protection to eliminate problems like this.

The Ultimate Prize is available from Heyley Software, 24 Ley Hey Road, Marple, Stockport SK6 6PQ on 40 or 80 track disc for BBC B, B+ and Master at £7.95 and for Master Compact at £9.95. A clue sheet is also available for an additional £1.

That's it for now, so until next month, happy adventuring.

# Hatter's Helpline

Nine-year-old Stuart Quinn has a novel suggestion for dealing with Thorin in **The Hobbit**. Once you have got the ring in the goblins' dungeon, take Thorin back to the troll's cave and lock the old perisher in.

After that continue as usual until you meet Bard on the way to the mountain. Instruct him to go to the mountain and kill the dragon, walk in and collect the loot, free Thorin on the way home and Bob's your uncle.

However, I don't see how you can get maximum points this way, and I shall be offering readers assistance for the later stages of this adventure shortly.

Jonathan Lee can offer Anthony Graham some help with Micropower's **Adventure**. The runaway princess can be found in the magician's bedroom in the castle. If she bolts again, look for her in the bedroom up the beanstalk. You can kill the dragon with your bare hands, and treasures should be dropped in the left luggage office.

David Alexander has horticultural problems in the adventure L: He can't work out how to plant

ems in plant the trees. I suspect others are in this predicament also, so here's the correct order:

T * * * T	
** T * *	
T*T*T	* is a blank space and
** T * *	Trepresents a tree
T * * * T	

Adrian Jackson wants to know what to do with the sphere in the same game – the answer is nothing, it's purely a location marker.

Aidan Walsh has written with some **Elite** queries. Like others, he wonders if generation ships, space dredgers and transporters really exist. As I've said before, I've never come across the first two in all my roaming through the eight galaxies, but transporters definitely exist.

They can often be encountered leaving the space station en route for the planetary surface as you prepare to dock. You can have a lot of fun by blasting them if you fancy a fugitive's life.

He also asks about swapping ships: You cannot swap your type of ship; you always have a Cobra MkIII. The only method of ship exchange permitted is by using the escape capsule, which I don't advise unless you are in extremis – you lose your cargo and no-claims bonus.

Finally, Aidan wonders how to get back from *Witch Space*, happy home of the Thargoids, to normal space. All you do is lock-on to a star and jump into hyperspace as normal, but you have to have enough fuel to get there.

# **Deeper into the labyrinths**

According to Roger White's excellent solution to **Labyrinths of LaCoshe** the thief can be an ally and then killed once his usefulness is at an end.

When you receive the message A furtive figure just brushed past you, it indicates that the thief has struck. He steals any treasure you are holding and takes it to his lair above the Cyclops Room see last month's column for details of how to get there.

His usefulness to the player concerns the porcelain egg which is found up the tree in the forest. The egg can't be opened safely by the player, but if the thief steals it, he opens it to reveal an additional treasure, a tiny jewelled bird.

Once the thief has stolen the egg, check his lair to see if both the egg and bird are there. If you can't get robbed conveniently, Roger suggests going to the lair yourself, dropping the egg and going away for a while.

This is not 100 per cent foolproof – there is a slight bug here. If the egg isn't opened, take it away and try again. Roger says this always works. The main thing to remember is never to try and open the egg yourself. The thief is a random element in the game, and your chances of meeting him are about 100 to 1 for any given move.

If you want to kill the thief, you need the sword or the knife and remember that, although the odds are in your favour, he has one chance in four of killing you, so SAVE before you try. If you are successful, you can also get the thief's silver chalice.

In Labyrinths, the weight of different objects is a factor that has to be taken into account before you can expect to solve the adventure in the minimum number of moves. I'll leave you to work out the details.

Another problem that should be solved fairly early on in the game is the Round Room, which is reminiscent of Bedquilt in Colossal Adventure. Leaving the Round Room deposits you in one of six random locations until the room has been stabilised.

Don't try pushing the buttons in the Machinery Room until you have the plastic pole, or you'll get a shock. The pole can be found at a Dead End in the twisty passage maze, N, S and D from the Troll Room. The Machinery Room can be found S and S from the Troll Room by solving the riddle – no, I won't do it for you – and then doing things in a bucket.

You can push three buttons. Two of them reveal treasures as well as stabilising the Round Room, and the third provides an surprisingly attractive experience.

Once you have stabilised the Round Room, N always takes you to the room with the skin of wine, S to the Cold Room, E to the E-W path beside a ravine, W to the room with the spade, U leads to the Troll Room and D to the twisty passage maze.

Light can be a problem, too. The lamp has an inbuilt move-counter with a total life of 100. That makes the torch a necessary item, but it's vulnerable to the thief.

Roger suggests this strategy: Collect the egg, enter the caves through the Grotto and kill the Troll. Then stabilise the Round Room and set about collecting the torch, which is itself a valuable treasure.

To get the torch you first need the rope from the Very Chilly Chamber. From the Troll Room go E, N, N, E, E, D. To get back you must go S, N, N, S, S, S. Collecting the torch is a mini-adventure in its own right. There is a complex of 17 rooms in the region of the Torch Room contained a number of treasures.

Go to the Gallery, tie the rope to the rail and go D to the Torch Room. Go to the East side of the Lake via the Round Room and then into the Small Room to get the wrench and push Button V.

After that, you can go to the Control Room, using the wrench to turn the bolt in order to drain the lake. If you then throw the torch into the Cold Room you'll melt the snow and reveal another room containing a jade figure.

Whatever you do, don't enter the Small Cave while holding the torch – there's a gas leak! You can get the ruby by dropping the torch before going into the cave because you can survive in the dark just long enough. Getting the shield involves taking the spade from the Damp Cave, going to the Sandy Room and digging three times.

Well, that's all the help you're going to get on this adventure, but I hope it's enough to get you through the tougher areas.

# HALL OF FAME

My thanks go to Mike and Neil Aldridge for the first full solution to Geoff Larsen's *Puppet Man.* Gray Robertson is the first person to send me a full solution and pictorial map of Robico's *The Hunt,* and Darren Higgs has provided the first pictorial map of *L.*

# The 80186 Co-Processor

This package consists of the Master 512 board, Watford Co-Pro Adaptor, 1770 Disc Upgrade and Acorn ADFS. This is a complete package, with its own power supply, ready to interface with your BBC Micro. The Master 512 board using the 80186 16 bit Processor at 10MHz and running Digital Research DOS Plus, gives a high degree of IBM compatibility at an extremely reasonable price. Included in the 512k package is a mouse and the amazing Digital Research GEM suite of software; GEM Paint, GEM draw and GEM desktop giving a complete Mouse lcons environment (All other GEM packages will work on the 512k). Famous packages that will work with the 512k board include.Wordstar, Dbase II, Lotus 123 and many others. The only requirement to upgrade any BBC Model B to this system is you must have twin 80 track disc drives. drives

# **CO-PRO** Adaptor

Now for the first time you can add the Master Co-processor boards, to your standard BBC model B, or B Plus. With this brand new launch from Watford Electronics you can attach any BBC Master co-processor to the original BBC Micro. Once again Watford strides ahead with a new concept in BBC B Micro add-ons. This unique external Co-Pro Adaptor, is protected by patent applications. applications.

Use the super fast Turbo Board with your BBC B, it is much faster than the 6502 2nd processor

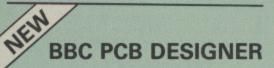

it is much faster than the 6502 2nd processor superseding it. With the 512K addon your standard BBC machine achieves IBM PC compatibility at a realistic price running GEM, Lotus 123 and many other pro-grams. Included with the 512k package is a high precision mouse and the Digital Research GEM suite of software; GEM Desktop, GEM Write GEM Paint. This requires both the 1770 DFS and the ADFS to be fitted to your computer. To use other co-processors you require a BBC B

ADFS to be fitted to your computer. To use other co-processors you require a BBC B with DNFS 1.20 or higher, or BBC B+ fitted with 1770 DFS 2.20 or greater. Co-processors work exactly like a second processor. Master owners may use Co-Pro to add a second Co-processor externally. Watford, brings power to your BBC at only:

2

At last! A PCB design package for the BBC Micro that eclipses some industry CAD software. Hard to believe, isn't it? Just look at some of the impressive package specification:

- Library Component Designer
- Component Library (over 200 parts)
- **Component List Editor**
- . NetList Editor
- PCB Board Designer
- . **Plotter Driver**

Dot Matrix Printer Driver

This integrated suite of programs is packed full of sophisticated PCB related features making the design of a circuit board a dream instead of a nightmare.

nightmare. Input for the design may be manual, taking components from the library and connecting them, or highly automatic starting from a netlist and list of components. In auto mode, PCB Desig-ner will never allow you to forget a connection again! And of course, either in manual or auto mode, connectivity is maintained no matter how you later move the parts around and route the tracks. Connections snap together and angles are corrected, Through hole vias and track thickness are established automatically and many more features, far too numerous to mention here, are included in the system.

- Some of the PCB Designer's features are:
- Over 120 library pad sizes/shapes
- Four colour adjustable palette
- Zoom range 2:1 to 1:4
- . Highlighting of specific tracks
- . Normal and surface mounted components
- Rapid screen review
- . Menu driven
- . Variable gridlock
- Switchable measurement grid
- . Pre-select pan/scroll facility
- Large 24" x 24" Board size
- Copy route facility .
- Connectivity held at all times
- Ratsnesting of part connections
- Auto-plaement of text references
- Text linked to parts
- Automatic placement of vias
- Printer and plotter outputs provided Comprehensive manual

# TYPES OF PLOT OUTPUT

Top and bottom track artworks, top and bottom silkscreens, solder resist mask, drilling detail drawing and check plot. All these may be with pad holes on/off, scale of 2:1 or 1:1, board edge on/off, 90 degres rotation, mirror image, width of pen, x & y offsets and batch plots to disc

The above is only a taste of the superb features of this software, surely capturing previously unknown performance from the BBC Master computer. BBC B owners will need to fit at least one block of sideways RAM, Shadow screen memory and a disc drive. A trackerball or a mouse is also required.

BBC PCB Designer is supplied on a 32K PAL PROM and comes complete with two discs and a comprehensive manual containing examples and useful information on PCB design.

By the way, as a bonus, PCB Designer is also suitable for many other schematic drawing applications such as circuit diagram drawing.

# Introductory Offer: £99

(Please write in for further technical details)

# Archimedes **Real-Time Digitiser**

Watfords' Archimedes Video Digitiser is the most sophisticated digitiser ever designed for a micro. It provides a fast and flexible means of capturing images from a video camera or recorder for display and manipulation on the Archimedes range of Micros. Off-air television signals may also be digitised via a video recorder or TV tuner. Once captured, Video images can be stretched, squahsed, rotated, stored on disk, printed, or used by applications software.

software.

software. Applications include desktop publishing, graphics, anim-ation, image analysis and recognition, medical imaging, auto-matic inspection and measurement, databases, interactive video, remote transmission of pictures via a modem, move-ment detection ... or anything else you can think of!

# SPECIFICATION

#### SOFTWARE

All the driver software for the digitiser is contained in a ROM on the podule. Facilities provided include: Grabbing of images to the screen or dumping to memory. Continuous grabbing and display for previewing or camera

alignment.
'Hot key' grabbing - pressing a (configurable) key combination grabs and displays an image on the screen while another program (e.g. paint software such as Artisan) is running.
Scaling (zoom/shrink) any section of an image to any size in X and Y directions, with optional X/Y flip, window clip and logical (AND/OR/XOR) plotting.
Rotation and scaling to any angle and size, rotating about any point, with optional window clip, and logical (AND/OR/XOR) plotting.

any point, with optional window clip, and logical (AND/OR/XOR) plotting.
Very versatile matrix printer screendump facility for Epson FX. LQ and EX compatible printers – pictures can be printed to ANY size (including multiple sheets) at any orientation, using any available printer density and one of six internal sets of dot patterns, or with user definable patterns (pattern editor supplied). The screen-dump can also be used for general purpose graphics screen printing.
Pixel value lookup tables: pixel values can be passed through a user defined lookup table to allow contrast enhancement, thresholding pseudo-colouring etc.
Smoothing and noise spot removal to enhance image quality.

 Creation of sprites from all or part of a digitised image.
 Saving and loading of digitised images in compressed format

 Combination of pictures by adding, avaraging, subtracting, Much faster versions of the Arthur \*ScreenLoad and

\*ScreenSave commands. Software facilities are accessed via operating system star (\*) commands and SWI calls. High resolution screen modes using MultiSync type monitors are supported. UTILITY DISK

A disk is included, containing sample pictures, examples and utility programs including the following: Colour image grabbing using colour filters with mono-chrome or colour cameras, including colour balance adjust-ment and scaling facilities. Pattern editor for 2 colour display modes and printer screen-

512 line interlaced display for non MultiSync monitors.
Thresholding to create two colour images.
Capture and replay of animated sequences.
Several example programs illustrating the use of digitiser

#### RESOLUTION

**RESOLUTION** Images are digitised to 512 (h) x 256 (v) pixels, and then scaled to fit the Archimedes' screen. It is possible to digitise to 512 x 512 pixels if the picture is stationary for about 0.1 second. 512 x 512 images can either be displayed on a MultiSync monitor, or on a normal monitor using interlacing. Pictures are digitised to 64 levels of grey (6 bits). Note, however, that it is only possible to display all 64 levels on a monochrome monitor, or a colour monitor which has a composite (CVBS) input. For this reason, the Philips CM8533 monitor is recommended instead of the standard Archimedes monitor. It is also possible to connect both a colour and a monochrome monitor at the same time.

Any 2,16 or 256 colour graphics mode can be used to display digitised pictures. In two colour modes, grey levels are repre-sented using dot patterns, which may be redefined if required ttern editor is supplied). SPEED

SPEED Video fields are captured in real time (1/50th sec.), and then transferred to Archimedes' memory or the screen. The grab/ display rate is dependant on the screen mode and picture size, up to 25 fields per second for guarter screen images, or 12.5 per second for fullscreen (Mode 9). HARDWARE

HARDWARE The digitiser is a single width podule, with a BNC socket on the rear panel for the video input, which may optionally be terminated via a link. There is 128K of on-board memory to store the digitised image, and a 32K ROM on the podule contains all the driver software. Automatic wideo level control and black level clamping circuitry is used to ensure that the optimum contrast is obtained from a variety of video sources. A filter is included to avoid patterning effects when using colour sources.

All Monitors are supplied complete with BBC connecting leads FREE.

#### THE EPSON RX-FX-KAGA PRINTER COMMANDS REVEALED

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have

to show its capabilities – he may even have offered you a special price. However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face. your face.

your face. Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out. Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX-KAGA PRIN-TER COMMANDS REVEALED'. This book describes in plain, easy to under

This book describes in plain, easy to under-stand English, how to use and make the most of your KP810, PW1080A or any other Epson FX80 compatible Printers like Panasonic KX-P1080/1, with the BBC Micro, both from BASIC and Wordwise.

It describes in detail how to obtain the maximum in graphics capability from your prin-ter and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accom-panying BBC Basic program and an example of its use from Wordwise.

# **MEGABUFFER 256**

4

This new Megabuffer 256 from Watford is a full featured 256K Printer Buffer. It allows the com-puter to print 256,000 character in a short time thus freeing the computer very quickly. In short it makes light work of printing large documents, screen dumps, etc. It is extremely simple to con-nect. The features are:

Low Cost, High performance.
 Improves efficiency by making more efficient use of computer and printer.
 Compatible with any computer and printer that uses Centronics Parallel connections including all BBCs, IBM PCs, etc.
 Total compatibility with all software.
 Cheaper phone bills when using your Modems

Cheaper profile units when using you.
Modems.
Ideal for those doing large graphics screen dumps that are slow to print.
Multi-Copy facility allows you to print several copies via Megabuffer without going through your computer.
Data Dump facility is included.
Built in test unit for both the buffer & your printer.

printer

In conclusion it can safely be said that MEGABUFFER 256 is the ultimate printer Buffer for both the amateur and professional user.

Only £149 (carr £2)

**CASHBOOK** – A complete "Stand Alone" accounting software package for the cash based sole trader/partnership business. It is designed to replace your existing cashbook system and will provide you with a computerised system complete to trail balance.

FINAL ACCOUNTS – Will take data prepared by the Cashbook module and produce a complete set of accounts as following: Trial Balance with inbuilt rounding routine; Notes to the accounts; VAT Summary; Profit & Loss A/C; Balance Sheat

MAILIST – A very versatile program. Enables you to keep records of names and addresses and then print, examine, sort and find them, all with special selection techniques.

EASILEDGER - A management aid software tool designed to run alongside an existing accounting system. Essentially a Debit/Credit ledger system which can handle sales, purchase and nominal ledger routines to provide instant management information.

INVOICES & STATEMENTS – Greatly reduces the time and cost of preparing Invoices and Statements by storing essential information like customer names, addresses and account numbers. Has VAT routines and footer messages facility.

STOCK CONTROL – Allows you to enter stock received, stock out, summary of stock items and current holdings together with details of total cost, total stock to minimum level, units in stock ordering, quantity and supplier detail.

All this for only £21 (Disc)

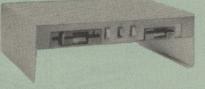

DATABASE BEEBCALC SPREADSHEET BEEBPLOT GRAPHICS

DATABASE – Set up a computerised card index system with powerful search facilities. SPREADSHEET - Offers many calculation and editing features.

BEEBPLOT – Provides visual representation from Spreadsheet data.

OFFICE MATE Only £10 (Disc)

# **New Launch Offers** Disc Drives DP35-800S

A Double disc drive – with a difference! Times are changing fast for the floppy disk, and whilst the current standard for the BBC B and Master Series is the 5.25 inch disk, the standard for the future will most certainly be the smaller; faster and more reliable 3.5 inch disks – now a standard feature of both the Master Compact and the Archimedes Series

standard feature of both the Master Compact and the Archimedes Series. To support the present disc drive users, and cope with the future, we have designed our own plinth-mounted disk system – called the DP35 800S, it contains both the 5.25 inch and the 3.5 inch drive formats as well as offer a firm and rigid support for a monitor on top. With the BBC Micro underneath, the plinth makes a surprisingly small footprint on the desk – leaving you more space to work with. The 5.25'' disc drive is 40/80 track switchable. For ease of access, the switches are front mounted. DP35-800S has its own power supply, independent of the BBC Micro. Watford's new plinth enables users to read,

Watford's new plinth enables users to read, write and format disks both in DFS and ADFS format – currently the accepted standard for the Master Compact and the Archimedes, it also enables the user to read disks written for the Archimedes. Ideal for both BBC & Master.

# DISC DRIVE SHARER

# (Ideal for educational establishments)

At last, a low cost alternative to the Econet system. Watford's Intelligent Disc Drive Sharer allows you to connect 3 BBC micros (model B, B+ and Master series) to a single or double disc drive. Running under any DFS or DDFS, this intelligent unit will automatically queue the computers. Each computer has a status light dedicated to it. If it is green you will get immediate access to the disk, and red means that you are next in line. The unit plugs directly into the disc drive socket on each computer and is powered by the mains. (N.B. Not for use with ADFS.)

Launch Price: £65

NEW

Price includes 3 Cables

### NOW WITH EXTRA FEATURES AT NO EXTRA COST – Watford's latest DFS 1.44

Incorporates Acorn's Official Tube Host Code so that those with 2nd processors no longer need to waste a ROM socket on the DNFS.
Option to DOUBLE the speed of BPUT and BGET.

# WATFORD's & ACORN's SINGLE DENSITY DFS

Watford's popular and widely acclaimed DFS has now been available for five years and has gained a large following amongst serious and educational users of the BBC Micro. Owners of Acorn or any other standard DFS can upgrade to our "Ultimate" DFS merely by replacing their DFS ROM. See below for this upgrade. (P.S. Watford's highly sophisticated DFS is fully compatible with Acorn DFS). (not Acorn's 1770 DFS)

- Complete Disc Interface Kit including DFS ROM and fitting instructions
   <u>f58</u>
- Acorn's 0.90 DFS Kit complete
   DFS Manual (Comprehensive) (no VAT) £6.95 (P.S. Our DFS manual is the only comprehensive Manual available for the BBC micro and covers both Acorn & Watford DFSs).
- £16
- Watford's sophisticated DFS ROM only We will exchange your existing DFS ROM for Watford's Ultimate DFS ROM for only £12
- DNFS ROM only £17 
   ADFS ROM only £25

# WATFORD's Mk II Double Density **DFS INTERFACE**

Many of our customers have wanted to use our superior DDFS and Acorn ADFS together. Now our MkII DDFS board has been adapted to allow the use of Acorn ADFS as well.

NEW

- Added features include: Acorn ADFS compatible Use ADFS on our DDFS board. Tube host Code No longer any need to have the DNFS in your machine to use Co-Processors, even the CoPro and Master 512. Auto 40-80 Track sensing no need to fuss with 40/80 track switches (even works with protected disks). An extremely powerful 8271 emulation ensuring compatibility with almost all software. New low profile small footprint board. Fits with all third party ROM boards. Option to double the speed of file handling operations BPUT and BGET. Operates in both single and double density modes. OSGBPB has been recoded, increasing still further the speed of file handling.
- .

- handling

Please note that not all DDFS's are capable of providing either the full 80% storage increase or of allowing a file the full size of the disk – Ours allows both of these!

If you already have a DDFS (any manufacturer), and wish to upgrade to our MkII version, then simply return your existing ROM and DDFS board and we will supply the new DDFS for only £30.00.

- Special introductory offer £39.00 (No VAT) £6.95
- DDFS Manual
  - We will exchange your existing DFS Kit for our sophisticated DDFS for only £25.00

Please note, as the MkII DDFS is a hardware and software upgrade, it is not possible for existing Watford DDFS users to simply exchange their ROM for the new version.

# Mysteries of Disc Drives & DFS Revealed

Are you tired of faulty cassettes, and lengthy loading times? Do you want to upgrade your BBC micro to take discs but you get tied up in the plethora of jargon surrounding the choice and use of these systems.

Then The Mysteries of Disc Drives and DFS Revealed is the book for you. It explains in detail the different types of systems available, how they are installed and how to use them. Many examples are given including pre-written programs to call various functions of the DFS available only through Operating System calls. Different types of disc, 40/80 tracks etc. are all explained. This book is ideal for the beginner confused by the plethora of choice available in the marketplace.

£5.95 (Book No VAT)

# DISC ALBUMS

Attractively finished in antique brown leather look vinyl. Stores upto 20 Discs. Each disc can be seen through the clear view pocket.

£4

# FLOPPY HEAD CLEANER KIT

The heads in floppy drives are precision made and very sensitive to dirt. The use of a cleaner Kit is a sensible precaution against losing valuable data. It is recommended to clean the drive head once a week. It is very simple to use. Available in  $3\frac{1}{2}$ " &  $5\frac{1}{4}$ ", please specify.

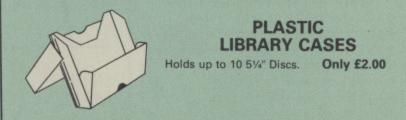

£6

# ANTISTATIC LOCKABLE DISC STORAGE UNITS

Gives double protection – Strong plastic case that affords real protection to your discs. Antistatic helps avoid data corruption whilst in storage. The smoked top locks down. Dividers and adhesive title strips are supplied for efficient filing of discs.

- M35 holds upto 50 51/4" discs
- M85 -- holds upto 95 5¼" discs
   M25\* -- holds upto 25 3½" Discs
   M50 -- holds 50 3½" Discs

M10-holds upto 10 Data Cartridges

# DISC PLONKER RACK

When using ones micro, there is a tendancy to have more than one Disc on the desk. This exposes them to the hazards of fingerprints, scratches, dust, coffee and

an untidy desk. Why not protect your valuable data from all these hazards with the help of our extremely handy and low cost DISC PLONKER RACK. It holds up to eight 5<sup>1</sup>/<sub>4</sub>"

Protection at Only: £2

# Quality Disc Drives from Watford

To help you decide which drive is the most suitable for your needs (and your pocket!), we have produced the table below.

The first capacity given in the first column indicates capacity in single density mode. That within the brackets is the capacity in double density mode. All disc drive type numbers start with the prefix "C".

The tinting on some of the boxes is used to indicate which Drives are 40 track (non-tinted) and which are 80 track (tinted). All our 80 track drives are already fitted with a 40-80 select switch.

All our Disc Drives are Double Sided and will operate in both Single and Double Density modes. Extensive experience of the usage of disc drives suggests that the JAPANESE drives currently represent about the best in terms of speed, reliability and overall "elegance" available for the BBC Micro.

Various other "manufacturers" of disc drives for the BBC micro (more accurately, "packages" label other manufacturers drives with their own name). We buy the high quality JVC and Mitsubishi drives in large quantities directly from the manufacturers, package them and sell them at "dealer" prices direct to the public.

S

f

If you look around the popular BBC micro press, you will find that the prices we quote for the top quality, new slimline disc drives are, virtually without exception, some of the best around. These prices, coupled with the backup of one of the country's largest distributors of BBC peripherals provides a superb deal.

superb deal. Unless you anticipate using dual drives in a fully expanded BBC system for long periods of time with little ventilation, then we suggest that our range of "CL" disc drives without the PSU (Power Supply Unit) would be quite adequate (extensive tests within our workshops have confirmed this). All drives are supplied complete with a SPECIAL UTILITIES Disc, Cables and Plugs. The Drives with power supply have a mains moulded plug for safety purposes. Ideal for Schools & Colleges. We are now able to supply all single disc drives with Power Supply, in either single or dual case. (Dual case has a twin data cable and a power supply capable of driving two disc drives) allows easy expansion to a dual drive unit, at a later date. Prices stated in the pricing boxes below are for single drives in standard single cases. Single drives in a dual case cost an extra £5. (At Watford we anticipate your needs of tomorrow, not just today)!

When using a BBC Micro, most people find themselves short of desk space. The Watford's BBC Micro plinths form an ideal way of recovering some of this precious space) your BBC, Disc Drive and Monitor can all occupy the same vertical footprint and still be comfortably situated. With the Watford Double plinth, your Disc Drive is mounted vertically at one side, leaving a very valuable area directly in front of you for such useful items as spare discs, pen, paper, reference manuals, etc. Follow the trend with Watford plinth. (Turn to the 6th page of our advert for the Plinths). P.S. All our 5¼" Disc Drives with PSU are compatible with the Compact Micro. All you require is the special Compact Disc Drive Cables designed by us.

# MICRO AWARDS 1987

# QUEST MOUSE

谷UEST

MOUSE\_

The ultimate in Mouse technology, the Watford Electronics Quest Mouse must be the most powerful Mouse package yet produced for the BBC Micro. Featuring state of the art 32K ROM software the Quest Mouse package is filled with features essential to the budding artist. The Quest Mouse is a high precision, low profile and large footprint mouse. It has three large comfortable buttons and its RUBBER COATED STEEL BALL is smooth and easy to use on virtually any work surface. This also eliminates any directional bias that one encounters on the most well-known mouse for the BBC. The Quest Mouse is FULLY HARDWARE COMPATIBLE with the AMX MOUSE so that it will work with any of the AMX range of software.

The two parts of the Quest package are available separately so that existing Mouse owners can upgrade to the Watford's sophisticated Quest Paint software or replace their existing worn out mice for a minimum cost.

# **QUEST PAINT**

The Quest Mouse software is supplied on a PALPROM unit to allow the sophisticated 32K program to be used from a single ROM socket. It is compatible with the BBC B, BBC B Plus and **BBC Master Series machines.** 

The software is used to draw high resolution Mode 1 pictures in full colour. All menu selection and control of the drawing process is performed with the mouse so that you will hardly ever touch the keyboard.

#### SOFTWARE FEATURES

The software is far too powerful for us to describe it fully in such a small space. Below is a list of the various features. Please write to us for a fully descriptive leaflet.

Disk interface not required. Utilities disk has facility to create and print big screens. Colours applied can be solid, either pattern of user defined pattern. Drawing can use brush or airbrush. Brush shapes can be defined and stored. Airbrush sprays colour/pattern randomly with four jet sizes and even or center spread. Colour cycles. Colour protection to stop particular colours from being overwritten by selected drawing actions. All standard drawing facilities like: rubber, straight pencil lines, triangles, circles, ellipses, rectangles, parallelograms, polygons, etc are provided. All shapes can be solid or just a boundary line. Once a shape has been set up it can be repeated anywhere on the screen. Global colour replace in a rectangle. Powerful fill facility for areas and vertical/horizontal lines. Full cut and paste of rectangular areas with rotation and size with screens from Watford Beeb Video digitiser. Load and Save screens with colour pallet information, save brush and pattern definitions etc.

Take The Guesswork Out of Selecting a Mouse Package

With reviews like this how can you go wrong. Popular Computing Weekly, 9-11 June '87

What you actually get for your money is a well built, three button mouse (far superior to the AMX mouse).

"Overall the combination of a quality mouse and decent art package gives Watford Electronics a real chance of supplanting AMX as mouse supremos.

#### Micro User June '87

"Quest Mouse and Quest Paint can hold their heads high in the market. . ."

#### A&B Computing June '87

Watford Electronics, a company famed for excellent hardware add ons and versatile software packages. Called Quest mouse, "this is a very special mouse driven drawing package ..

you will have one of the most comfortable and professionally built mice I have used in a long time. The buttons are responsive, the mouse movement is smooth and without directional bias - a pleasure to use.

7

"What we have here is probably the best art package there is for the BBC Micro . . ." Quest Paint is a major leap forward in BBC programming.

Quest Paint is an original piece of programming, it is friendly and well endowed with many useful facilities. I would comfortably say it is easier to draw good pictures with Quest Paint than it is with more expensive 'Professional' art packages for the Atari ST and the Commodore Amiga. A recommended buy if you are looking for the best in BBC micro based art packages'

Acorn User, September '87 "The mouse (Quest) performs well in the face of competition from AMX, Wigmore and the rest

this package represents excellent value for money. If you are interested in art then this program is for you to buy'

"Given time, I can see no reason why Quest Paint shouldn't take on the title of the definitive art package available for the BBC Micro to date

'All in all, Quest Paint is a very professional package. It contains virtually every feature the budding artist could require'

"What makes Quest Paint so versatile is the addition of a sub-menu which allows you extensive control over each function

"Until recently, Superart from AMS had been judged as the definitive mode 1 graphics package for the BBC micro. But now it has a serious rival in the form of Quest Paint, from Watford"

'As a measure of what is contained within Quest Paint, I would say it had all the features of Superart plus

"In most art packages, provision is given for drawing triangles and rectangles. Quest Mouse goes 14 better, allowing any regular polygon of upto 16 sides

"One facility, not found on any other Art package to my knowledge, is the ability to access a digitiser from within the program' The reviewer concludes by saying, "The result is an extremely comprehensive and professional art package'

#### John Kilby, Head of Computer Science, Bishop Wulstan High School, Rugby, writes:

"Quest has been an excellent piece of equipment. The problem that seems to occur everyday is that at lunchtime the pupils rush to the computer room to make sure that they are first in the queue for the 'Quest' mouse

#### Lt. Cln. C.G. Holton, G2 HQ 1 (BR) Corps, BFPO 39, writes:

"As ever your service is superb and the Quest Mouse proves every bit as good as the adverts claim'

Beeblet User Group, New Zealand Oct '87: "One of its nicer features is that the top menu is done in Mode 0, the drawing itself is in Mode Thus on screen together are two different Modes. A neat way around an old problem

"PAN is used when a larger than one screen size image is required. The mind boggles at an A3 size drawing'

"I like it partly because of the mouse itself which is smooth and easy to handle but mainly I suppose because of the features I longed for and previously never got. Its easy to use with almost everything at your fingertips from the mouse. The software is simple where needed and complex where complexity is required'

Watford's Quest package is an extremely powerful and flexible drawing package, with very wide and unusual features. However, since its launch various suggestions for even more advanced & powerful facilities were received from the Quest users. ConQuest allows you these more advanced facilities, like, distortion of a cutout to any shape and a full font designer. If you also have a GXR ROM in your machine or you are using a BBC Master then ConQuest will take advantage of this to give ellipses at any angle, sectors and arcs, etc. Quest combined with ConQuest and Acornsoft GXR ROM make up THE MOST POWERFUL drawing packages available for the BBC range. Quest Paint is able to take advantage of almost any additions to your machine, such as Shadow or Sideways RAM. ConQuest takes this principal even further, by utilising the otherwise normally incompatible Sideways RAM facility by holding pictures in them. pictures in them. Some of the features are: Pick filenames off the screen for loading and

saving Rotate a cutout to any angle and Distort it to

Notate a cutout to any angle and Distort it to any four sided shape.
Has Built in Font editor.
Default brushes and patterns on startup.
16 x 16 font available on start up.
Ability to reset patterns, fonts and brushes to default at any time.
ROM based enhanced Epson and compatible printer dump.

# MARK II LIGHT PEN

Our Mark II Light Pen is the very latest in light Our Mark II Light Pen is the very latest in light pen technology. It is totally insensitive to local lighting conditions and works with many different monitors. The pen only responds to the High Frequency light produced by your monitor/TV. An LED indicates when valid video data is being produced. A conveniently located switch is also fitted.

# **DIAGNOSTICS DISC**

The BBC Micro is a very complex machine and thus diagnosing a fault can be very difficult. At Watford Electronics, we realise how difficult it can be when faced with a problem, finding yourself a long way from your nearest dealer, or even just uncertain about your Beeb's health, but not wanting to waste time and money taking it to be looked at.

The solution to these problems is here now, in the form of the Watford's Diagnostics Disc. This excellent utility is specially designed to test out the following areas of your Beeb: RAMs, ROMs, ULAs, Sound, Keyboard, Disc, RS423, ADC, User Port, Printer Port, Cassette, Joysticks, Speech, Disc Drives, 6502 and Z80 2nd Processors.

2nd Processors. This utility is an invaluable aid for all those who take the reliability of their system seriously. A comprehensive manual provides full operating details and a list of possible causes and remedies for any faults that you may find along the way. The package also enables a permanent equipment and service record to be maintained.

# BEEB **VIDEO DIGITISER**

8

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro

This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket.

Images produced can be compressed, stored to disc, printed on an Epson compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem.

The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

Both the black and white levels can be adjusted manually for the optimum picture, or switched to automatic for unattended use. The image produced can be reversed if necessary.

Full controlling software is supplied on a normal sideways ROM and this is easily accessed via additional \* commands. The package i designed to allow easy input of complex screens and give full access of the data to the user. Once on the screen, the image can be used as a normal graphics screen, allowing any of the usual graphics commands in BASIC or other ROMs to work on it.

A special print dump routine is included with the driver programs. This is specially designed to produce a fast, correctly proportioned picture, with reduced "contouring", resulting in an accurate reproduction of the original image. Detailed examples of driving this unit from BASIC or other languages are all provided in the extensive manual supplied.

# £109 (Carr. £3)

(Price includes) Digitiser Unit, Software in ROM & a Comprehensive Manual) (BBC B+ and Master compatible, except Master with Econet)

# Magazine Maker

(As seen on TV) A combination of the Pagemaker and Watford's

A combination of the Pagemaker and Watford's Beeb Video Digitiser. Using any video that provides a composite signal and the digitiser, images from a camera or TV can be converted into a graphics screen on the BBC Micro. They can then be used within Pagemaker to illustrate magazines or newsletters – in fact anything that needs to be created on A4 size paper

paper. With Pagemaker's many features, a variety of pictures can be composed – the only limit being

the imagination. Pictures can be doctored using Pagemaker's graphics option to produce any number of

Text can be formatted around the digitised photo on screen using the facilities available, which include 16 typefaces, character and pattern definer, text formatting and the ability to load in wordwise and viewfiles plus much

Once created the picture can be printed out. The Magazine Maker is suitable for any use that requires illustrated documents.

# PLINTHS FOR BBC MICRO, **MASTER & PRINTERS**

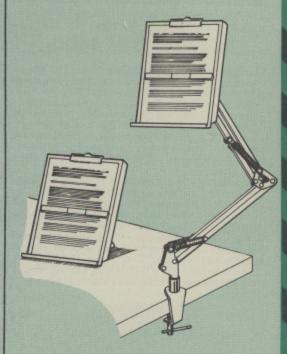

Protect your computer from the weight and heat of your monitor. The BBC micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and monitor, whilst the double height version provides enough room for our stacked or side-by-side dual disc drives or TORCH Disc pack, to be placed in the centre section. If you use our stacked drives, the remaining space can be used for further periph-erals e.g. Speech Synthesizer, EPROM pro-grammer or simply stationery. The computer slides neatly in to the lower section allowing easy access to remove the lid. The printer plinth is equally sturdy but without the cooling slots. It allows for access to the paper from the front as

allows for access to the paper from the front as well as from the rear, (a facility not often thought of in similar products) if the paper is located beneath the plinth. This is a very convenient way to work especially if your work area is not deep enough to take the printer and paper separately.

SINGLE BBC PLINTH	£11 (carr. £1.50)
DOUBLE BBC PLINTH	£19 (carr. £3.00)
PRINTER PLINTH	£10 (carr. £1.50)
SINGLE MASTER PLINTH	£14 (carr £1.50)
DOUBLE MASTER PLINTH	£24 (carr £3.00)

# COPY HOLDERS

How often have you been about to type hand written notes into your computer when you find that there's nowhere to rest the paper or that your notes are resting at the wrong angle to read the type? Whether the notes be your latest pro-gram or the draft of a new trilogy, the new Manuscript Holders from Watford are superb for holding your paper at the ideal height and angle to allow you read and type in ease and comfort. Available in 2 versions, desk resting and shelf clamping versions, these two units hold your paper firmly by means of a plastic retaining ruler and a clip grip. Both units are full A4 size. How often have you been about to type hand

Amazing value at only Desk Top £10 (carr. £2) Angle poise £14 (carr. £3)

**Continued**-

# ARIES CORNER

# The Aries B-32 Shadow RAM Card

Like the BBC B+, the B32 provides 20k of shadow screen RAM and 12k of sideways RAM. Unlike the B+, the B32 has simple software commands which allow the user to reconfigure the RAM as 16k of shadow RAM and 16k of sideways RAM, or all 32k as sideways RAM. With the B32, the programmer gets up to 28k of RAM available for Basic, Logo, Comal, Forth, Lisp and BCPL programs in any screen mode. The business user gets extra memory for View, ViewSheet, Wordwise Plus, Interword and many other applications. For advanced applications, the scientific user gets access to a massive 47k of data storage using the Acorn approved \*FX call. Sideways RAM enables you to load sideways ROM images from disc, allowing you to have a large library of sideways ROMs (subject to the copyright holder's permission) stored on disc. The B32's sideways RAM can also be used to extend any operating system buffer (such as the printer buffer) or to load tape programs into a disc system. The B32 simply plugs into the 6502 processor

disc system. The B32 simply plugs into the 6502 processor socket on your BBC micro – no flying leads to connect and no soldering. Provision of the on-board ROM socket means that the Aries-B32 control ROM does not use up one of your existing ROM sockets.

Recommended by Computer Concepts for use with their Inter series of ROMs.

Price: £80 (carr. £2)

**CREDIT CARD 24 HOUR** Ansaphone Hot Lines (0923) 50234 or 33383

### Aries B-12 Sideways ROM Board

This board is extremely well made, simple to install, reliable when fully loaded and compatible with the Aries-B20 and the Aries-B32 The B12 provides a total of twelve sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS sideways ROM system. In addition, there are two sockets for sideways RAM, giving up to 16k of RAM using 6264 static RAM chips. The B12 system consists of two parts: a large

RAM chips. The B12 system consists of two parts: a large detachable "mother board" which carries the extension ROM sockets and a small "base board" on a short ribbon cable, which plugs into the existing sideways ROM sockets. This two-board design eliminates the reliability problems previously associated with some other ribbon-cable based systems. If you do not have a B32 or B20, a small adaptor module (the Aries-B12C) is available at a nominal cost.

cost.

Price:	Aries	B-12	£40
		B-12C	£5

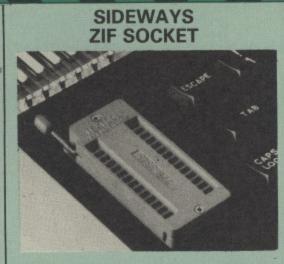

# **ARIES B-488** IEEE-488 INTERFACE UNIT

The Aries-B488 is an interface unit to enable the BBC micro to control and monitor IEEE-488 bus systems. The IEEE-488 bus (also known as the 'GPIB' or 'HP-IB') is the standard method of interconnecting programmable laboratory instru-ments and control equipment. Using the B488, up to 15 devices may be connected in a single high-speed data network.

• 0 £238 (Carr £3)

10

9

Allows you to change your ROMs quickly and efficiently, without opening the lid. The ZERO INSERTION FORCE (ZIF) socket is located into the ROM Cartridge's position.

• Very simple to install. NO SOLDERING required. The ZIF (Zero Insertion Force) eliminates the possibility of damage to your ROM pins when inserting & extracting.

The low profile of the socket allows unrestric-ted access to the Keyboard.

 All data and address lines are correctly termi-nated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage static damage.

• This versatile hardware solves the problem of running out of socket space. Simply lift the ROM from the ZIF & insert a different one (No pulling or pushing of Cartridges. It is a must for all professionals and Hobbyists alike.)

 BBC, B+ and Master compatible. ONLY £16 (carr £2)

# **Low Profile** CARTRIDGE SYSTEM

Complete System consists of: Low profile ROM Cartridge, Socket housing, Cable assembly, 5 labels and a library storage rack for the BBC B.

• Com	plete System	£11
• Spar	e Cartridges	£2.50

Spare Rack £1.50

**ROM Cartridges for the BBC Master** Twin £7.50; Quad £11

# **16K Sideways RAM Modules**

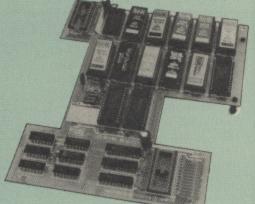

Complete with such features as read and write protection, these new modules from Watford Electronics are ideal for the hobbyist, software developer and ROM collector.

Key points to note about this new addition to the Watford range of products are:

- Write protection (useful in a variety of circum-
- stances). Read protection (allows recovery from ROM crashes).
- Compact construction. May be fitted in systems even with a ROM board. .
- Multiple units may be fitted, even with a ROM . board.
- No overheating or overloading problems. Free utilities disc supplied. Can be used as a 16K PRINTER BUFFER. Ideal for professional software development. Supplied with utilities software disc.

# Only: £24 (carr £2)

# SOLDERLESS SIDEWAYS ROM SOCKET BOARD

In the May 1986 Micro User's independent review, the writer concludes, "The board has been well laid out. Its position is much better than others – not over the HOT RAM chips and further away from the disc controller area". "I give the solderless ROM board the thumbs up and wish it success" success'

This brand new board from Watford Electronics is designed specifically for those wishing to add a ROM board to their own BBC without the need to perform any soldering.

This new board expands the total possible number of ROMs in a BBC from 4 to 16.

Unlike our competitors inferior boards, the ONLY upgrade required for fitting battery backup to the Watford Solderless ROM board (all Watford ROM boards, actually) is the fitting of the battery itself. (No other expensive components are required.)

- The key features of this new, no fuss, easy to install quality product from BBC leaders Watford Electronics are as follows: Increase your BBCs capacity for ROMs from 4 .
- to 16.
- No soldering required.
- No soldering required. Very low power consumption. Minimal space required. Compatible with Torch, DDFS, RAM Card, 2nd Processor, etc. Socket 14 takes two 6264 RAM chips. Read protect to make RAM "Vanish") allows recovery from ROM crashes. Battery backup option for RAM chips. Supplied ready to fit with comprehensive .

- Supplied ready to fit with comprehensive instructions.

# Price: Only £32 Battery backup fitted £36 Battery Backup only £3 (carriage £2)

• Sideways RAM Utilities Disc for Solderless ROM Board. Includes the options to load and save ROM Images and the facility to use Side-ways RAM as Printer Buffer.

Only: £8

# **USER PORT** SPLITTER UNIT

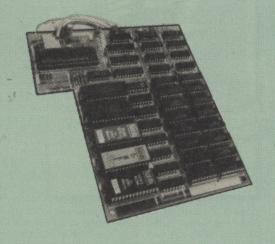

Gone are the days when you had to plug and unplug devices from the User Port. This extremely useful little device allows two units to be connected to the User Port simultaniously, and select between them simply by toggling a switch. This device is particularly useful for those people using Quest Mouse and the Watford Video Digitiser or any similar combination.

# **Optional extras**

READ and WRITE protect Switches £2 each Battery for Battery Backup £3

# ROM/RAM CARD

Watford Electronics announced the first ever commercial ROM board for the BBC micro, the Watford Electronics 13 ROM Socket Board 3 years ago. Following the success of this board, we have designed what probably represents the ultimate in expansion boards, the new Watford Electronics ROM/RAM board. This highly ver-satile and sophisticated board represents the latest in "2nd generation" sideways ROM tech-nology for the BBC micro, designed to satisfy the serious BBC user.

NO SOLDERING required to fit the board.

NO overheating problems.
 No User Port corruption (avoids problems with the mouse, modems, Eprom Programmers,

- Fully buffered for peace of mind.
   Firm mounting in BBC micro.
- Compatible with all BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8. .
- Up to 8 banks of sideways RAM (dynamic) Option for 16k of Battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM (ALLEVIATES crashes during ROM development).
- Separate RAM write register (&FF30 to &FF3F). Automatic write to currently selected RAM
- socket for convenience.
- Accepts any ROM. FREE utilities disc packed with software.
- Compatible with our DDFS board, 32k RAM Card, Delta Card, sideways ZIF, etc.
- Large printer buffer.
- UNIQUE Fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
   ROM to RAM load and save facilities.

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD &7F for ROM-SPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster. The ROM-RAM Board plugs into the 6502 CPU socket. This leaves free all the existing ROM sockets, which can still be used normally. Any ROM that can be plugged into the BBC micro's own ROM sockets may be used in the ROM-RAM Board. The ROM-RAM Board is supplied with all ordered options fitted as standard. Upgrade kits (with full instructions) are available for all of the options, for later.

options, for later: Please write in for further details.

#### The MODEM from Watford

At last a professional MODEM for the BBC Micro. Unlike other 'Modem packages' this is a complete package there are no extra software costs to get 'up and running'. Of course Le MODEM is multi-standard, i.e. 300/300, 1200/75 & 75/1200 UK and BELL (USA) are all supported.

The features that make Le MODEM such good value are:

• A complete communications terminal that transforms your BBC Micro into a very powerful World-wide data transfer system.

 Auto Dials, Auto answers, and is completely controlled by your micro. There are no external controls!

Allows you to access PRESTEL, B.T. GOLD, THE SOURCE, MICROLINK, MICRONET, MICROWEB, THE TIMES NETWORK, MICRO LIVE (BBC TV database), CITY BB and more.

• Designed to be SIMPLE but SOPHISTICATED. To LOGON to a data base all you have to know is its TELEPHONE NUMBER, Le MODEM does the rest.

• Supplied with a comprehensive telecomms package in a 16K sideways ROM which includes a FULL PRESTEL terminal allowing TELE-SOFTWARE to be downloaded.

• A comprehensive 80 column terminal. This includes XMODEM error checked transfer proto-col, to allow error free data transfer anywhere in the world!

• FULLY controlled by simple '\*COMMANDS allowing you to control it from your own BASIC programs. To get you started we supply a FREE disc of bundled software!

• Connects to the 1MHz bus. A \*AUDIO ON-OFF command allows you to actually hear the tele-phone line through your BBC micro loudspeaker.

• Completely self contained with internal mains power supply. (Even a free mains plug is fitted!) A \*TEST facility gives ON SCREEN indication that Le MODEM is working correctly.

 Packaged in such as way that you need noth-ing else except a BBC Micro to communicate with computers all over the world.

# FREE Registration to MicroLink.

#### SPECIAL OFFER

(Price includes, Le Modem, Software ROM, Cables & Comprehensive Manual) (Write in for further details)

# **REPLICA 3**

This new improved REPLICA 3 from Clares is a very powerful disc based TAPE to DISC Utility. It now transfers even more programs than ever before. Replica 3 will not work with all programs but then neither will anything else. 30,000 Replicas have been sold to date. It has to be coed be good.

#### £15 (40 or 80 track)

Acorn's Speech Synthesiser package, complete Special Offer £18

# APOLLO

### The NEW Modem from Watford

Following numerous requests from you, our dis-cerning customers for an APPROVED, Low Cost & High Performance modem with Auto Dial & Auto Answer facilities as standard) we bring you the versatile APOLLO Modem. Just compare the fea-tures and look at the price (which incidentally includes the cost of the Software, manual and BBC connecting cable). We are sure you will agree that Watford Electronics in their traditional way are giving you a super 'value for money' deal.

Just look at these features: • V21 for Bulletin boards, Microlink, Telecom Gold, etc.

- V23 for Prestel, Home Banking, and other Viewdata services.
- Reverse V23 allows User run Viewdata service.
- 1200-1200 half duplex for communications.
- XMODEM, HEX and ASCII file transmission.
- Auto Dial of given 'phone number.
- Auto Answer for User's Bulletin Board.
- 80 column terminal with split screen facility.
- Prestel text screen dump.
- Fully BABT approved.
- FREE Registration to MicroLink.

The Apollo is attractively finished in matt black. It opens the doors to world communication to both, the Hobbyist and the Professionals alike. With baud rates varying from 300/300 Originate and Answer, 1200/75 and 75/1200 full duplex and 1200/1200 half duplex, virtually all the popular tele-services can be accessed. A comprehensive Comms ROM oversees the use of the APOLLO, providing simple commands for all the software controlled facilities. APOLLO is an ideal modem for both the first time buyer and the seasoned user. Join the Telecommunications Revolution – Buy a Watford APOLLO!

Price includes, the Modem, Comm Software Cables & Operating Manual). (Write in for full specification)

Espana Viva – 3 Discs

A Vous La France Disc

Take control of your Sideways ROMs with ROM Manager. This powerful utility ROM gives you power over your sideways ROMs. Disable whole ROMs, send commands directly to named ROMs and many other powerful facilities facilities.

"Provides comprehensive management of all your installed ROMs". (BEEBUG November '84.) **ONLY £20** 

The only low cost EPROM Programmer for the BBC Micro that will program both the standard 21V and the new 12V5, 27128 EPROMS. Adder is the ultimate EPROM programmer for the BBC Micro. It will program many different EPROMs up to the very latest 27256 32K

devices. The Adder unit connects to the User Port and draws its power from there too. The EPROM is mounted in a top quality ZIF socket. There are no switches or controls as Adder is entirely software controlled. The Adder software provides sophisticated facilities for programming EPROMs from a RAM image produced by loading disc files. The software is menu driven and designed for ease of use. of use. Features

of use. Features: • Two ultra fast programming algorithms or standard slow algorithm. • Supports standard 21V programming and newer 12.5 volt EPROMs. (Software switched). • The RAM image to be programmed can be built up in many ways. Sections of image can be loaded separately. Part programming. Read EPROM. Edit data in memory. • Automatic processing to handle a list of files to program into the EPROM. • Automatic disc buffering to allow programming of 32K 27256 devices from a 32K file without extra effort. • Verification gives detailed error list and checksums are maintained. There is also a blank check facility. • Works with all standard filing systems. Generates header code for RFS ROMs to allow Basic programs etc. to be stored in EPROM. More than one file per ROM permitted. • Programs the following EPROMs: From 2K to 32K: 2516, 2716, 2532, 2732, 2764, 2764A, 27128A, 27128A, 27256 (Both 12.5V and 21). 21V).

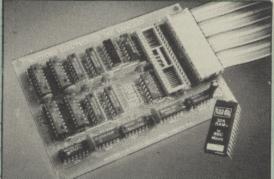

£75 (£3 Carr)

#### TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work

ERASER EB - Standard version erases up to 16 chips. £28 (carr £2)
 ERASER GT - Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. £30 (carr £2)
 Spare UV tubes. £9

A MUST FOR WORD PROCESSING

Watford Electronics now brings you the latest state-of-the-art MEMORY EXPANSION BOARD for your BBC microcomputer. Don't throw away your BBC B for a BBC B Plus or BBC Master. Just plug the ribbon cable into the 6502 processor socket, and fit the compact board inside the computer. Immediately you will gain not 16K or even 20K, but a massive 32K of extra RAMIII

• IMPROVE your WORD PROCESSING system, whether disc or cassette based. Don't wait for a slow printer – type in text while printing. TWO JOBS DONE SIMULTANEOUSLY and £100+ saved on a printer buffer.

"VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28,000 bytes free – 5 times as much as normal.

• In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24K of text in memory. This product is recommended as an ideal complement by Computer Concepts.

• Combine GOOD GRAPHICS and LONG PROGRAMS. Use the top 20K of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs. Benefit from MODE 0/1/2 graphics and 28K of program space program space.

• Use the FULL 32K or the bottom 12K of the expansion RAM as a PRINTER buffer for PARALLEL or SERIAL printers, sound channels, RS423 etc. Print large text files while running long graphics programs, and have all your buffer options available as well (\*FX15,21,138,145,ADVAL etc). Please note only a 12K printer buffer can be used with Wordwise or Wordwise-Plus, due to the way they are written.

written.

• Unique facility to turn ROMs off and on again. Unlike all other ROM managers, this feature does not use 'unofficial' memory. Two bytes of normally user-inaccessible memory on the RAM card are used to ensure ROMs are disabled WHERE OTHER ROMS FAIL.

Recommended by Computer Concepts for use with their Inter series of ROMs.

# INCREDIBLE WORDPROCESSING DEAL

Watford's 32K SHADOW RAM CARD and Computer Concept's INTERWORD Wordprocessor package.

#### THE COMPLETE BBC COMPUTER USER HANDBOOK

"Why has no-one written a book like this before? It's long overdue". If you own a BBC-B, BBC B+, Electron, Master 128, Master Compact or Archimedes then this book is for you. It shows you how to get the most from your computer, and how to make the computer work for you. Although some sections are machine specific, most of the information, programs, hints and good solid experience are for the whole range of BBC machines. The general style and level means that both beginner and expert will feel satisfied with the quality and quantity of the material.

GENERAL - Uses and abuses of computers.

HARDWARE – How to design your own work station. Hardware additions (disc drives, ROMs, printers, 2nd processors, etc). DIY alterations.

HARDWARE RUNNING BBC-BASIC – All BBC machines are described with their differences. Compatibility between the various BBC machines. Networks. The Archimedes and its advantages.

**GETTING ORGANISED** – so that you keep track of your programs and control of your software. Setting up for easier programming sessions.

**NEAT PROGRAMMING** – Good style. Writing structured programs. Getting the best from BBC-BASIC, Graphics and screen displays. Speeding up programs. Saving space.

GENERAL PROGRAMMING TIPS AND HINTS with a multitude of examples (eg input vetting, dealing with dates, blanking out function key messages, error trapping, disabling ESCAPE and BREAK, use of EOR with colour, etc).

DEBUGGING – Specific errors and how to handle them. How to test programs fully.

STANDARD PROGRAMS – Assessing word-processors, spread-sheets, databases, graphics packages, communications etc. How to customise them to your own requirements.

COMPUTERS AT HOME AND IN THE OFFICE – Introducing the computer to the office. Program

protection. Computers and the law. Communications. Selling your own programs. 28 FULL CHAPTERS, elegantly written and extensively indexed. To dip into, consult, or read from cover to cover, again... and again... and again ...

# NEW The Advanced **Reference Manual** for the BBC Master

At last Acorn's long awaited Advance Reference Manual for the BBC Master Series of Microcomputers has now been published. Watford Electronics' own authors have edited and added missing sections to the original script and produced a very high quality publication

- It features information about:
- Memory Organisation
- Slow data bus
- Detailed circuit description
- Keyboard controller
- Screen display
- User port
- Serial Processor
- Peripheral bus controller
- 1 Mhz Bus
  - Machine operating System
- Second processors Internal, Z80 and 80186 Disc Filing Systems
- ANFS
- Terminal Emulator & Editor
- View internal format

 Detailed differences between Model B, B+, Master 128K and Compact

- Comprehensive appendix on 65C12
- instruction set

At the rear of the manual there are pull out circuit diagrams for the Master 128K. A worth-while addition to any Master owner's library.

All this for just £19 (NO VAT)

# THE WAPPING EDITOR

Watford Electronics bring professional quality Desktop Publishing to the Beeb. The Wapping Editor is a totally self contained mouse-driven desktop publishing package designed to run on the BBC B, B+ and Master computers. The massive 64K ROM contains ALL the software you need to do your own publishing. It 'Brings the Freedom of Press' to your fingertips. Its caliant features are: salient features are:

Graphics Package This section is a fully functional word processor specially tailored to suit the Desktop Publishing environment. Gone are all the unnecessary and cumbersome text formatting commands – these are dealt with in the 'Page-Layout' section. Text input can of course be taken from existing word processor files like Wordwise, View, etc.

#### **Page-Layout Section**

Page-Layout Section Page Layout becomes easy using these mouse-driven routines. The user simply 'pulls' a rectangle onto the page and states which text document or graphic is required to fill the space – it's as simple as that! Text can be automatically printed in a pre-set number of columns, left justified and/or right justified, or centered. Several different typefaces can be held in memory at one time. Graphics may be stretched, squashed or cropped to fit any size rectangle. Graphics input can be from the software provided in the package or, using the 'mode convert', from any graphics mode screen. screen.

The Font Editor Allows editing of ALL 95 characters. As well as being able to design your own typefaces, fonts from other DTP packages or from Quest Paint may be loaded into the editor and converted for use with the Wapping Editor. Some of the numerous functions including slide, flip, invert and rotate individual characters or the whole font. Individual characters can be mirrored or copied and a mask feature allows you to superimpose two characters. Lines and columns can be inserted or deleted allowing the character to be stretched or squashed. This package is the latest in the line of integrated professional quality mouse-driven software from Watford.

P.S. For details on Quest Paint and ConQuest, please refer to Page 7 of our advert.

# SURGE PROTECTOR Plug

Fitted in place of your normal mains plug, this device protects your equipment against mains surges. Nearby lightning strikes, thermostats switching and many other sources which put high voltage transient spikes on to the mains. This can lead to data corruption in memory and on disc and can result in spuriously crashing machines. A must for every computer user.

Protection for only £7.50

# **4 WAY MAINS** DISTRIBUTION SOCKET

4 way top quality mains trailing sockets. Supplied wired up with mains plug ready for use. Can be screwed to floor or wall if required. Very useful for tidying up all the mains leads from your peripherals.

# John Tissandier helps keep crashes less critical

ROGRAM development can be a risky business – you make a couple of changes to your masterpiece and suddenly it doesn't work. So you go back but can't quite remember what you did – and you are left tracing a bug

that you put in yourself. The Automatic Archiver can help you by keeping one earlier generation of any file that is SAVEd or \*SAVEd. So when you save a version of your program the archiver keeps the previous copy.

When a SAVE or \*SAVE is issued the utility checks to see if a file of the same name already exists on the disc. If it doesn't the disc operation continues as normal. But if it does, the original file is renamed as *b.filename* before the new one

410 .ok

is saved – producing two versions of the program on the disc. If we save the file with the same name a third time the following happens: Ri

- b.filename is deleted.
- The existing filename becomes b.filename.
- The new one is saved as filename.

So the two latest versions of a file will always be on disc and it works with any software that uses the standard *osfile* routine. The utility can be overridden by specifying a directory in the filename. In addition, by providing a drive number multi-drive systems can be incorporated. Type in the source program, check it with Get it

BBC B and the Master. For the latter change line 130 to:

You can also modify some of the program variables to configure it to your requirements. The backup directory name is held in *bdir\$, zero* is the start address of the zero page bytes required, and *code* is the start address of the machine code.

The final user parameter *break\$* controls the action of the Break key: ARC works by changing the address in the vector *filev*. Pressing Break normally resets all vectors, therefore although the code will still be in place *filev* will no longer point to it.

To get round this you can either arrange for the utility to be simply disabled, have it automatically re-initialise itself or set the Break key to perform \*ARC which will re-run the routine.

# **FILE SAVE PROBLEMS**

If a file is saved but no backup is produced check the following points:

• The current directory has been set to the directory selected for backups. The routine will be exited if this is detected, though the normal SAVE operation will proceed.

• A directory is specified in the filename. This is the method for overriding the backup operation. Use \*DIR instead to select a different directory.

# **Check your Leaky Listing corrections**

ERE are the corrections for last month's Leaky Listing, the Printer Set-up program that was on Page 26. Remember there is always more than one way to solve a problem, so provided you've found the errors, you may be right even if you've changed the program in a different way to us.

In line 40 the quotes at the end are missing, as is the \$ sign after the GET on line 120. The UNTIL command at 130 should have an AND instead of OR to give:

130 UNTIL A\$>"0" AND A\$<"5"

since, as it stands, anything typed at the prompt has to be either be above 0 or below 5 - that's all numbers - and what we want is to allow past only values that are between, not including, 0 and 5.

Line 180 gives a Type mismatch error because we're trying to compare a string with a number: The 4 should be in quotes.

A common error when writing short routines with procedures is missing the END from the main routine. In this utility if you select option 4 to quit,

£££'s

SAVE ££££'s SAVE ££££'s SAVE ££££'s SAVE ££££'s

££'s

PROCrestart will be executed - thereby cancelling all the effects implemented - and the error No PROC will be generated when Basic hits ENDPROC. So an extra line is needed:

In line 200 "@" needs to be preceded by ASC to give the Ascii value rather than the string. The final error won't be noticed until you request condensed type, when you'll get:

But, as we cannot say often enough, just because the error is given at line 160, the actual mistake may be somewhere else. In this case line 210 where we have PROCCondense, instead of PROCcondense. The upper/lower case discrepancy generates the error.

As for the poor display, by adding a CLS after the REPEAT in line 30 and a semi-colon - ; - at the end of line 110, the whole screen becomes much tidier.

INCE becoming the proud possessor of Genie, the electronic organiser for the BBC Micro and Master, I've become an addict. My complete address book has been computerised and I now have dozens of quick programming tips available at a keystroke in Genie's notepad. The only problem is that it's hard to use a BBC Micro on a train.

I certainly hadn't found anything to be lacking from Genie's comprehensive collection of goodies, so when the existence of the Genie utility disc came to my attention, I was eager to investigate its possiblities.

Created as a direct result of customer suggestions, the new utilities allow you to make hard copies of the information or produce files suitable for transfer to other packages or even other micros such as the Z88.

Available in all possible disc sizes and formats, the disc contents are identical. Booting up presents you with a short menu containing four options: Address Book, Notepad, Desk Diary and Phone Book. The stylish Genie banner, complete with lantern and Genie, is displayed at the top of the screen.

Selecting Address Book produces another menu, this time containing five choices. First is the Print by keyword option which allows you to make hard copies of all addresses matching a given name, occupation, street or postal area.

You can also print all addresses that fall between two given limits. This means that you can furnish two surnames, and any addresses whose surname fields fall alphabetically between these names will be printed.

The next two options are similar, except that the output is to a spooled file, using a filename of your choice. So you can now export data from different sections of Genie into Mini Office II, View or Wordwise.

The final option in this section imports data into Genie's address book from tape or disc. Your data must match the format expected by Genie exactly, however.

Failure to ensure this could fill up huge areas of the address book with garbage which could take ages to delete, item by item. Still, this is a very valuable option for those who already have a computerised address book, but would like it transferred into Genie's much more accessible environment.

Going back to the main menu, Notepad comes next. Offering four choices similar in function to the address book utilities: You can print items in page number range and keyword, and send both to a named spooled file.

The Desk Diary option contains some of the most interesting utilities. The first two allow you to output diary entries, which fall between and include two dates, either as hardcopy or a spooled file.

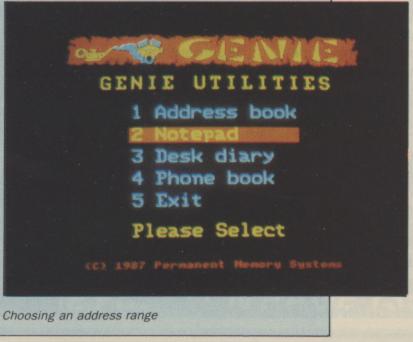

Next come two very useful facilities: You can print a planner for a particular week containing all the diary entries and including a neat little calendar for the month in which that week falls.

Alternatively, you can print out a calendar for any month this century. As you can imagine, a couple of minutes would see a full year's calendar printed – which, by the way, is just the right size for a wallet, or for pinning to your in tray.

The final item on the main menu, Phone Book, contains two options. You can choose either to print or spool the whole phone book, the result being a very neatly formatted list with a gap of one line between each letter of the alphabet.

Having thought that my personal organisation was complete thanks to Genie, I find that whereas before I had to manually copy information now I am free to manipulate the data as I please. And at last I can print the data I'll need while travelling on that train.

The Genie Utilities Disc completes what was already an incredibly useful package, and transforms it into what must surely be the ultimate personal filing system for the BBC Micro.

Chris Nixon adds a utilities package to his Genie Organiser and waxes lyrical over its data handling capacity

Only the Atari Summer Pack gives you the world's best home computer plus the world's best games. Twenty-two software titles that most people would give their right arms for, are yours absolutely free.

gam

ames. y free. There's no catch. You really do get a 520 STFM and £414 worth of great games for just £399.99! But only until September 1st. What are you waiting for?

## Featuring

The Living Daylights Sphere of Destiny Codename:Droid Life of Repton Strykers Run Crazee Rider Omega Orb Psycastria Arkanoid Ransack Impact

# Help Corner

Kevin Sinclair of Luncarty, near Perth, has an answer to Carl Dimelow's problem – April 1988 – with The Living Daylights. Carl could not get past the man with the balloons on level five. Kevin says that you must shoot the balloons with the balloons with the

# Re-living past glories

hile making a plea for help with *Repton* 2 in our February 1988 issue, I also mentioned that I had been devoting a lot of time to *Life of Repton*. Among the many readers who very kindly sent me the complete set of Life of Repton passwords is John Hughes of Bridgend, Mid Glamorgan, who suggested that they would help me cut my time down.

I am very grateful to John and everyone else, but you may be surprised to learn that in fact I rarely use my own — or anyone else's — cheat routines, especially when I am trying to achieve a new high score. I have still not even quite finished Around The World In Forty Screens but I'm sure that, given time, I'll get there.

Since I started this column I seem to have spent a lot of time discussing the many aspects of compatibility between the various models of the BBC Micro family caused, unfortunately, by illegal programming techniques.

This general subject is not a particular hobbyhorse of mine but I just can't agree that once a game has reached the end of its effective selling life it is virtually worthless. I regularly play games that date from the earliest days of the BBC Micro – I'm sure I can't be the only one – and if I've upgraded to a Master why should I have to give up playing my favourites?

When I receive letters saying that older games do not work on newer machines I try to help. But in a hard world business sense must prevail if a software house is to survive. Previous columns have shown that many software houses do their best to help all their customers – but this should

# Hac Man discusses playing old favourites on updated machines

be counted an exceptional bonus, rather than a consumer right.

Since I first discussed software – particularly games – clashing with certain sideways roms, I have received letters from John Terry from Ruislip, Middlesex, and Andrew Thacker from Croydon, Surrey, with further examples of such clashes. Both problems concern our old friend Commander Stryker – John's with **Stryker's Run** and Andrew's with **Codename:Droid**.

John points out that Stryker's Run will not work on a machine fitted with the AMX Pagemaker roms. And Andrew has found – as I have – that Spellmaster corrupts the ropes in Codename: Droid, making it impossible to climb them. He has also found that if the machine has the Acorn TFS (teletext) rom fitted, with the Teletext Adapter switched on the game locks up with a blank screen instead of displaying the first title page.

The Acorn Teletext Adapter also interferes with both the cassette and disc versions of the Gary Partis' games **Psycastria**, **Sphere of Destiny** and **Impact** – all published by Audiogenic. If the adapter is plugged into the machine these games will crash, resetting to the power-up state.

This time, moreover, it makes no difference whether the unit is switched on or off, or even if there is no TFS rom: If the adapter is connected these games crash. The problem is that the

games' protection runs through a number of checks before loading the main part and if the adapter is present one of these checks crashes the program.

The protection is too sophisticated to allow this routine to be modified to make it ignore the presence of an adapter – the only answer is to unplug it physically.

Now on with the hints, and until next month – happy hac-ing.

## Crazee about Opus

Owners of the Opus DDOS disc system may remember a conversion routine published in the October issue to allow the Codename: Droid disc to run on their system. Mrs Eileen Powney of Bristol, author of that routine, has now come up with another, this time for **Crazee Rider**. Put the disc into the drive and enter the following lines:

		_
	PAGE=&1900	
	LOAD"MENU"	
	*LOAD LOADER 1B1E	
	!&1846=&41472E4C	
8	!&1B4A=&D454D	
18	!&1B4E=&26D6Ø929	
	!&1B52=&D363134	
	?&1904=&F4	
	RUN	

Although this routine refers to the original Crazee Rider disc, it should work for the version of the game featured on **Play It Again Sam II** – but I haven't been able to try it yet.

Roger Griffiths of St. Davids, Dyfed has sent in a very useful conversion routine to allow Audiogenic's **Bug Eyes II** to work on the B+ and Master. Master owners should enter Listing I, and type:

	ron.	RUN		
h r	nach	ines	should	d
	LOAD	D'STAR	MAN"	I

then type:

and the game will load and run perfectly. This routine works with both the original stand-alone game and the version of Computer Hits 10

## Chocka with cheats

Arkanoid, one of Peter Johnson's best-ever games, seems to be full of surprises. Jamie Pearce has brought me news of yet another builtin cheat facility. If you press Delete to pause the game, followed by pressing D, H and J simultaneously, you will advance to the next level.

Also, if you hold down P, A and J while on the high score screen, you will start a new game on the level on which you lost your last life.

# Ransacking

I recently received a letter from Peter Scott, the first I had heard from him since he went off to university last year. Peter will be well known to many readers for his great arcade adventures, such as Omega Orb and the Thunderstruck series. Towards the latter part of last year he sent me a copy of his then new game, **Ransack**.

He described the two built-in cheat facilities, on the understanding that I would not publish them until the game had been out for a while, to give everyone a chance to play the normal game.

For the first one, play the game until you are invited to enter your name for inclusion in the high-score table. Type in:

#### WAMALAMADINGDONG

exactly as shown, without any mistakes. The next time you play the game, the counter will be corrupted but you now have about 230 lives.

The second one is a level jump: When the highscore table is being displayed press Control+f4. You will hear a quiet beep amid the music – which is, incidentally, a superb rendition of Kraftwerk's *The Model*. When you now press the spacebar, you will find yourself on Level 2.

Repeat this procedure to tackle any of the eight levels. However, the game will crash if you try to jump to a ninth, so be careful. Also, you'll always restart on the selected level and to return to a lower one you must reload the game, so exercise a little restraint.

On the general subject of Mr Scott, his previous offering, **Omega Orb**, also features a cheat facility. When you are accessing a computer terminal, type GROVEL and you'll be awarded an extra life, which you can sell if you are a bit hard up. You can use this feature repeatedly, so it can be quite useful for building up stocks of both lives and credits.

FEATURE

Stick at it!

Mike Cook gives some hints and algorithms for his devious programming problem

N our July issue we set a challenge to see if you could simulate the process of sticker collection – the sort where you buy a pack of five stickers at a time and put them in an album. This month we'll see how you can tackle such a problem by translating it into plain English. You can refer to the July issue to compare the techniques here with the original problem.

It's a

challenge

In the next issue of *The Micro User* we'll give you a no-frills program that will do the job along with suggestions for further improvements. You'll be able to check this against your own efforts and perhaps sort out any points you had difficulty with.

Remember, as far as a program is concerned, there are as many right answers as there are wrong ones, but the solutions I prefer are simple and readable. I will avoid, as much as possible, using fancy tricks or so-called clever programming techniques, as most of the time they are not necessary. So, without further ado, let's move on to a sticky problem...

ch

We can represent each sticker with a unique number ranging from one to the total number in the collection. As we have five stickers per packet we can represent each as an element of an array and the number of sticker it is by the value in that array.

For example the first sticker in the packet could be called *PACK(1)* and this variable would contain a number identifying the picture on it. To generate a packet of stickers we need to assign each element of *PACK* a random number between one and the maximum number of stickers.

Next we need a computer representation for the album. This has to indicate if we have a sticker corresponding to that number. Again we can use an array: ALBUM(T) where T is the sticker number. In this we only need to indicate if we have that sticker or not and we can do this by assigning each array element to be either true or false. Initially, of course, we have no stickers so each space – array element – is assigned to false.

Now we have to stick the stickers in the album. With a little thought this is easily done: The value of the sticker becomes the index number of the album array. Simply assign those array elements to *TRUE* to indicate we have the sticker. If it is already assigned as true then we have a duplicate so it can be ignored.

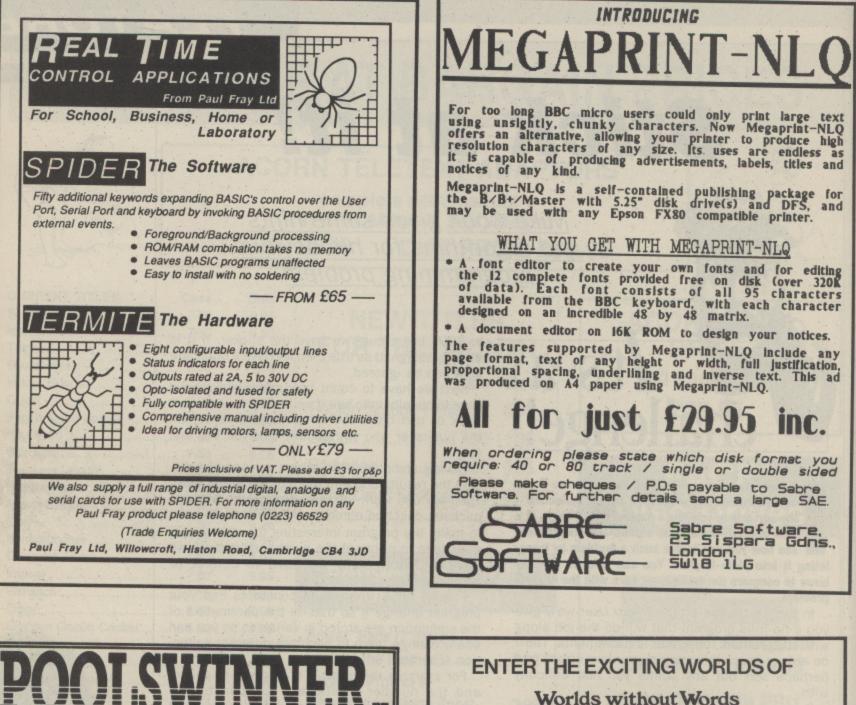

Next we have to count how many stickers we have in our album to see if we have to buy another pack or can order the remaining stickers from the publisher who will usually sell you the last few.

Having completed the album we need to display the results and add them to the grand total. Then we can work out and display the average packets, cost and number of duplicates. In order to make the program interesting to watch it is a good idea to print out the number of stickers we have and how many we have to collect to complete the current album.

Finally, rather than build constants into your program arrange it so that all the parameters of the simulation are stored in variables so you can easily change them to simulate different collection schemes.

For example the number of stickers to collect and the number of stickers you can buy to complete your collection should be declared in a line near the start rather than being hard coded in the program. Get the inner routine working first, the one to fill up one album, and then extend it to calculate the average of many tries.

So there it is: All the help you could want short of me doing it for you – which I will next month. So, before then, see if you can write the simulation yourself.

#### Morse

Teach yourself Morse code with this easy to follow tutorial guide. Practice reading code generated by the micro or enter your own words for translation. The program can also monitor the user port to detect any Morse code being sent, storing it in memory until you are ready to listen. Alternatively, code can be sent to any suitable device connected to transmit the signals.

# Globe2

A very clever piece of animation, showing the BBC globe rotating. A superb demonstration of the display characteristics of the BBC Micro.

#### Timer Tmr/Inf

A routine to keep track of your recordings - on video, cassette or

sideways roms are constructed and in particular the structure of the rom header which identifies it to the operating system. Service calls are also discussed.

#### Strangers

Parents will already know of the dangers of children being lured away by strangers – but it is very difficult to impress upon youngsters the need to be continuously alert to this type of peril. Even the most attentive child may find it difficult to remember the frequently quoted phrase *don't go with strangers* if such a situation were to arise. The program helps to impress children with this vital message.

#### Lister Instruc

File Make voi

Make your printed listings of programs neat, tidy and very readable. Routines are highlighted and many other useful features employed to ensure debugging, held on the disc in the specified drive. Suitable for both DFS and ADFS.

#### ClkSet SetClk

A very simple to use utility to correct the internal clock of the BBC Master computer using the Ceefax information via your tele-

#### Flip

text adapter.

A unique and interesting game to keep your mind active and your fingers nimble.

#### T/SWR03 NewCom

#### Trace

Continuing with the sideways ram programmers series, T/SWR03 shows how a simple onecommand interpreter can be constructed so an additional star command can be implemented.

#### Archive

An automatic way to safeguard

Software is currently transmitted for a period of one week. The files are updated on Fridays and there will be periods during the update day when they are unavailable. The program details given are provisional.

reel-to-reel. Timer calculates the duration of recordings from the tape counter, and vice-versa.

#### T/SWR01 ReadROM

Part one of a series to help BBC Micro owners get more use from sideways ram and rom facilities. Sideways ram is available as standard on all Masters and as an add-on option for the BBC B. T/SWR01 describes how banks of rom or ram are switched in and out of the micro's memory map, and how to read the contents of a rom that is currently switched out.

#### Pinball

A superb arcade simulation of a pinball machine from the February issue of *The Micro User*.

July 8 to 14

#### T/SWR02 Trace Readrom

Part two of our series looks at how

modifying or just studying a program is made as simple as possible.

Produce wordsearch puzzles

automatically. Just give the micro

your selection of words to be

included and wait as the

CDinfo

#### your disc files by copying them to tape. Published in the January issue of *The Micro User*.

July 22 to 28

#### T/SWR04 Enable

EnabTst

T/SWR04 looks at the \*ENABLE command and shows how to use it from your own software.

#### Backup IBack

A rapid disc backup utility for use with a Master 128. Large time savings can be achieved for owners of single disc drives, with an 80 track disc being copied in under two minutes involving just four disc swaps.

#### Wordbox Intro WBdata

Can you work out the hidden

message in the wordbox before your opponent does? This twoplayer game will keep you thinking.

#### Recover

An easy-to-use utility to help you rescue lost disc files. It was first published in the February issue of *The Micro User*.

#### July 29 to Aug 4

#### T/DFS00 IDSDump Verify

Beginning a major new series for programmers wishing to know more about a variety of aspects of the BBC Micro. The first eight modules of the new opcodes series looks at the Acorn DFS and how to utilise its various facilities and functions at any of the three available levels – via OS commands such as BGET and \*SAVE, using osword calls or by directly accessing the floppy disc controller chip itself.

In studying the principles of storing information on disc, producing non-standard format discs for copy protection is also discussed. Opcodes tells you everything you ever needed to know about the DFS.

#### T/SWR05 Cursor

More from the series explaining the intricacies of using sideways ram areas of memory. This module explains how to incorporate arguments typed in after a star command into your own software.

#### Alginon

A set of useful routines to incorporate in your own Basic programs, all concerned with producing graphical representations of data.

#### T/Strip M/Strip

M/Spool Routines to save text from the

View word processor in a form that can be used by any other word processor – even on a different type of micro. The programs operate as printer drivers, but send the output to disc rather than paper, overcoming the problems of using the inflexible SAVE and SPOOL commands.

#### **Gloop Gulp**

In this super game from the November 1985 issue of *The Micro User* you must take charge of the Gulper before the Green Gloop gets out of hand and covers everything.

# FEATURE

Has upgrading your BBC Micro given you hardware you no longer need? Or have changing interests left you with unwanted software? Then THIS is the place to advertise your surplus items. Our 179,000 readers are always on the lookout for a bargain and this is the first place they'll look!

An added bonus! Your advert will be automatically displayed on MicroLink, the electronic mail service operated in association with Telecom Gold. This means it will be seen by thousands of computer enthusiasts who can send an instant response.

I HAVE encountered a disaster which can happen when using random access filing techniques with the disc system. The file I was using contained records of length 514 bytes and was accessed like this:

#### 3820 X=OPENUP"SENTS" 3830 PTR#X=5+(N%-1)\*514

p

ć

C

Ċ

X

d

Line 3820 sets the file pointer to the beginning of the N%th record.

As a result of some careless coding earlier in the program it was possible for the value of N% to be zero, causing PTR#X to be assigned a negative value.

I would have expected the program to stop with some sort of error message. What actually happened was that the DFS replaced the whole file SENTS with a series of

# **ACCESSING A BUG** LEADS TO DISASTER

null characters right to the end of the disc.

I have tidied up the earlier coding to make sure the N% cannot take a value of zero. However as a precaution there is also a trap in lines such as 3830 to guard against possible file destruction:

3830 IF N%>0 THEN PTR#X =5+(N%-1)*514 ELSE CLOSE #X:STOP
--

Can you explain this strange DFS behaviour? -Peter Davy, Wakefield, West Yorkshire.

It appears you have come

across a combination of a feature and a bug. The former relies on the fact that no matter how many bytes the disc can store the DFS will accept any pointer value - so that your programs don't need to be altered to take advantage of bigger storage devices when they appear.

Pointer values can range from 0 to 4,294,967,295 what would be negative to Basic is treated as an even bigger positive number.

The bug is that if the DFS thought it had a big pointer value it should have just extended the file and not overwritten the original data.

LETTERS

# **Z88** control codes

IN the June edition of The Micro User, D.H. Griffin wrote describing a problem with transferring programs to his Z88 from a BBC Micro: He was finding that all his % signs were changed to %PC%.

This is due to the fact that the file was edited with Pipedream and saved directly. It should have been saved with the Plain Text option set to Yes on the Save menu.

Pipedream uses the % character in its internal format to introduce special markers. The sequence %PC% means this is not one of these markers - it really is a percentage sign. - Paul M. Fellows, Software Manager, Cambridge Computer.

# Dangerous RUN

MACHINE code programs which make use of routines in the Basic rom will only work if the rom is paged in to &8000 to &BFFF. Basic will be paged in if the program is activated by CALL, but if \*RUN is accidentally used - perhaps from force of habit - disaster could strike.

For example, if a DFS is in use it will be paged in and the disc could be corrupted when the program is executed if it is not write protected. In any event the program will not work.

Such hazards can be avoided by starting the assembler code with the

routine listed below.

It works by first checking if the Basic rom is paged in. If it is, control goes directly to the program proper, which is then executed.

If it is not paged in, a message is displayed instructing you to CALL the start of the program and control goes to command mode. After the CALL the program executes normally.

The routine has been written so that it can be run as a demonstration and when executed simply prints S. Type it in, save it as ROMCALL

and then run it. The object code will automatically be saved as ROMCAL#. Now try:

\*LOAD ROMCAL#

followed by:

Then switch the micro off and back on and try:

For inclusion in your own programs the following alter-

# Breaking from software

BEFORE getting my Master 128 I used a standard BBC B and with certain hardware/ firmware I was able to simulate the Break which was necessary to enable the firmware to grab workspace. This was done by using either CALL !-4 or sometimes \*BREAK – available on the AMX rom.

Both these methods proved very useful from time to time as they could be incorporated into appropriate Boot files – particularly when trying to make software user-friendly or idiot-proof.

However it seems that the Master series requires a Control+Break to initialise certain roms and my previous method no longer works.

Is there a neat software solution to the problem, or is it mandatory to physically press the keys? – H.L. Smith, Little Bealings, Woodbridge.

• Put \*FX151,78,127 in your software before the CALL !-4 command. This works on all versions of the 8 bit BBC Micro without second processor, but note that the FX call disables the keyboard so it can't be used directly from Command mode. Do any of our readers know a second processor compatible method?

# **Overheating** micro chips

SOME of the ICs in the BBC B tend to get rather hot, particularly if an internal rom extension board is fitted. IC14 – an 74LS245 dual bus transceiver – is a common victim and I have replaced this twice so far.

It plugs into a 20 way DIL socket and everything works until the micro gets hot when all sorts of strange things start to happen.

Basic programs behave abnormally or crash and odd letters and bits of text appear or disappear from word processor output. The effects get worse with time, but spray freezing the chip usually brings things back to normal.

One odd thing is that the defective chips from my BBC Micro behaved quite normally under load on an IC tester when cold.

You can get clip-on heatsinks, but there usually isn't room to fit one under an extension rom board. I chopped a TO220 heatsink in two, bent the fins nearly flat and stuck it to the top of the chip with epoxy. This fitted under my extension board and seems to have cured the problem.

A top hat of 18 gauge aluminium sheet should also work. You must check that the heatsink is clear of the extension board and of the other chips – you don't want to turn a problem into a catastrophe.

The chip costs about £1.50 and is a good first guess for the DIY repairer with a load of roms, a sick BBC Micro and a can of freezer. I would like to thank Watford Electronics for this tip. – C.J. Chapman, Nuneaton, Warwickshire.

# Archimedes OS bug

THERE is a bug in the Archimedes operating system with the \*FX220 command.

Normally it allows selection of an alternate Escape key. For instance Space has the Ascii code of 32 therefore \*FX220,32 will cause the spacebar to act as the Escape key in the place of the real key.

Similarly Control+A, which generates Ascii code 1, can be set to act as Escape with \*FX220,1.

However \*FX220,0 which

should turn Control+@ into Escape also makes pound, accent and some other keys generate Escape too.

The Contex Computing Archimedes Bank Manager used \*FX220,0, and as a consequence a user can inadvertently Escape from a module.

This has now been fixed by a different command and if you have version 3.0 or 3.1 you can return the original disc to Contex with an SAE for a free upgrade. – lan Whiting, Contex Computing, Cople, Bedford.

# Servicing the MOT

I HAVE a problem with the Disc MOT program from the October 1987 issue of The Micro User. I have typed it in and, thanks to the checksum, eliminated all my errors except one.

The problem occurs in line

# **Plugging** the leaks

HERE'S a corrected and improved version of the Leaky Listing program published in the May 1988 issue of The Micro User.

It includes procedures and functions making the program structured and easy to follow. It does not jump out of a loop, as the original routine did in line 90.

Keep up the great work: These Leaky Listings are excellent – try to make them even harder.

More assembler programs too please. The one in the April issue was great but taxing to me as I'm quite a novice in machine code. And I like the idea of printing the answers in the next issue – it stops me from peeping at the answers.

The series is brill – and so is the whole magazine. I buy both The Micro User and Electron User and I haven't found a fault with them yet. – Paul A. Clarke, Golborne, Warrington, Cheshire.

#### 1800, for which I have typed:

OPT.FNequs("Fixing Track:\_\_\_\_"):OPT FNequb(131):OPT FN equs("Sector:\_00"):OPT FNe qub(42)

This generates a checksum of D686 D and not the one published – CF25 5.

I have checked it many times and still can't find an error, but when the assembled program is \*RUN it works fine until it formats the disc and then reports Fatal disk error.

This happens with all discs, including healthy ones.

Could you please tell me what is causing the checksum difference? – David Key, Heanor, Derbyshire.

• The program unfortunately contained embedded teletext colour codes – namely character 135 – which we didn't spot, and our typesetting

# Take part in our nationwide search for innovation in action

Last year's Innovation Award was an outstanding success with more than 500 users of the BBC Micro competing for the prestigious accolade.

Entries came from all over the world, from health researchers, engineers, teachers and students – all with remarkable applications which pushed the BBC Micro to its limits and beyond. The press response was enormous with top coverage in hundreds of newspapers throughout the country.

Now you can join our search for the innovations of 1988. And this year the competition is twice the size, with a special section for Archimedes users.

Tell us what your BBC Micro or Acorn Archimedes is doing that is out of the ordinary. It may be a project with exciting commercial

....

potential, with significant social benefit — or even just for fun. Whether you're an individual, group, school or business, this contest is open to you there's no restriction.

Your typed entry should not exceed 500 words, and you can also include any supporting illustrative material such as black and white photographs, colour transparencies, diagrams or screen dumps.

Complete the coupon below, attach it to your entry and send it to arrive no later than October 14, 1988.

The two winners will be announced at the Electron & BBC Micro User Show at the New Horticultural Hall, Westminster, from November 11 to 13.

## THE PRIZES

The winner in the BBC Micro category will receive a magnificent Archimedes, courtesy of Acorn. This 32-bit workhorse is the fastest micro in the world with 512k ram, 512k rom, 800k 3.5in disc drive, mouse and colour monitor. It comes with a Welcome disc containing an excellent painting package, a music editor and much more. Value:  $\pounds$ 1,034.

In the Archimedes category the prize will be a powerful Brother 1709 printer, supplied by Kelator, Acorn's distributor to the trade. The 1709 can output text in three different modes – draft, near letter quality and letter quality – at speeds of up to 240 cps. The package will also come with unique software to make the most of the Archimedes' special features. Value: £685.

And both winners will receive an impressive plaque in recognition of their achievements.

#### ◄ From Page 128

machine converted this into the underline character.

However the program should work. There were some amendments to cater for all DFSs in our December 1987 Letters section.

Also anyone using Basic I will find that the colons within strings in the assembly language cause errors and need to be replaced by another character, say =.

# Doctoring databases

I HAVE built up many files on Acornsoft's disc-based Database, and now need to merge files to carry out a sort on the combined file. Can you suggest a simple routine to merge two files of an identical format?

Of lesser priority, but nevertheless useful, would be a routine to delete fields and to rearrange the order of fields to bring files into the same format. – Allan Swift, Dorking, Surrey.

• Combining database data without a utility is very unlikely to succeed – even when they are of the same format – because the file pointers which keep track of where the data is within the file, will not be set up correctly.

Perhaps one of our readers has a utility that can merge these files?

HERE is a useful tip for any users of Acorn's PC Emulator on the Archimedes. Initially when you re-configure the machine as suggested by Acorn, you have little over 300k to use.

This is not much good for most programs, so by using my method, you can increase the usable memory under MSdos to about 580k. It works as follows:

□ Note current configuration on piece of paper or spool it to a disc file.

□ Type \*MODULES

□ Most of the resident modules claim workspace on power-up, so you can unplug them as they will not be

# Checking up on a checksum

AFTER I bought the February 1988 issue of The Micro User for the first time in months I was instantly impressed by the new format. Write on lads! Definitely worth the money and a subscription.

I think your Library section and Checksums are a brilliant idea, but after typing in the Vertical labeller program I found a small mistake. The problem I had was in line 100 where I kept on getting a

Missing ) message. So I checked the program with the Checksums program and found that my checksum didn't correspond with what was in the magazine.

required under MSdos. All but

the top four modules may be

unplugged. This is achieved

\*UNPLUG <Module name>

\*UNPLUG WaveSynth

Repeat for modules 5 to 20.

□ Finally press Control+

Break and type \*MODULES

- only modules 1,2,3,4

When you boot up the

emulator you will see that

approximately 576k of

by using:

For example:

should remain.

I'm not exactly excellent in Basic so after a bit of mathematical genius (if I may say so myself) I bunged in a minus sign (-) and lo and behold it worked. The correct line corresponds to the given checksums and should be :

100 MOVE X%,Y%-32\*(LEN (L\$)-N%):VDU255

After that I tried other math-

memory is registered.

**MORE MEMORY** 

**ON PC EMULATOR** 

To reset the modules, the handiest method is to switch off, hold down R and switch on twice to reset the cmos ram as detailed in the Welcome guide.

Also, I've got Inter-Chart to run to the Archimedes – proving it is legally written software. It is very simple: All you need is a rom image of ICHART and the 6502 Emulator.

Run the emulator, type \*ICHART and it will work as normal except that function key f0 is now the Print key. – Richard Charles, Londonderry.

ematical, symbols and combinations of other symbols and thought your readers may be interested in a few suggestions to brighten up their displays:

> 100 MOVE X%,Y%-32\*(LEN (L\$)\*N%):VDU255

really spreads out the text.

100 MOVE X%,Y%-32\*(LEN (L\$)+N%):VDU255

reverses the text down the screen. – Andrew Leong, Eccles, Manchester.

# Laser printing

I HAVE recently bought a Hewlett Packard Laserjet series 2 printer and it works wonders on my Apricot Xen. But it does not work on my BBC B – it keeps on repeating on one line and does not go on to the next. Please could you tell me how to correct this? – Nicholas Longfield, Thirsk, N. Yorks.

Unfortunately nobody in the office has any experience with this printer which – don't be fooled by the name – is not a laser printer but is actually a high quality inkjet. So we can't help; can any reader?

# **ZERO IN ON THE STARS**

QUITE a long time has elapsed since I learned to navigate my way around the night sky with a bubble sextant and a copy of the Air Almanac, but I still maintain some interest in star recognition.

I was very interested, therefore, in Mike Cook's Body Building Course in April's issue, and intend typing in his listing soon.

However, when reading the

comments about setting up the theodolite I was rather puzzled by one fact.

Mr Cook suggests using a compass to see the azimuth to 0 degrees when pointing North, but does not mention that an allowance should be made for magnetic variation the angular difference between Magnetic and True North — when doing this.

At the moment I believe that the variation for this part of the world is eight degrees East of North as indicated by the compass.

This is quite a substantial amount, and I feel it might be sufficient to cause problems for a newcomer. – W.H. Foggan, Newcastle upon Tyne. Good point, but we think that using a home-made theodolite the few degrees of

that using a home-made theodolite the few degrees of error are likely to be outweighed by the inaccuracies of the device itself.

M PRODUCTION COSTS

Mini Office II is a comprehensive integreated suite of programs setting a new standard in home and business software.

These sample screenshots illustrate just a few of the wide range of features, many of which are usually only available on software costing hundreds of pounds. Most are easily accessed by using cursor keys to move up and down a list of options and pressing Return to select.

Mini Office II takes over where the original, highly successful Mini Office left off, with numerous extra features, two additional modules, a program to convert existing Mini Office files to Mini Office II format, and a 60 page, easy to follow manual.

And it's at a price everyone can afford!

## DATABASE SOFTWARE

Europa House, Adlington Park, Adlington, Macclesfield SK10 4NP

#### Now available on a power-packed rom board!

- Four 32k roms on one board packed with 128k of super fast machine code.
- Easy to install no soldering needed.
- Split second application selection.
- Frees valuable ram space for much more data.
- Fully compatible with the whole BBC Micro range, Aries or Watford shadow ram board, and tape, DFS, ADFS and ECONET filing systems.

# t ONE package

#### **SPREADSHEET**

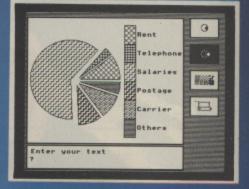

Prepare budgets or tables, total columns or rows with ease, copy formulae absolutely or relatively, view in either 40 or 80 column modes, recalculate automatically – and more!

In this delightful game you control BLOB, the Biologically-Operated Being, navigating him through 500 action-packed screens to rebuild the unstable planet's core.

9

Bubble Bus' Starquake is one of the biggest-selling games for home micros, due to its incredibly-addictive gameplay and cleverly-animated graphics. It has received

such accolades as Game of the Month in Computer and Video Games, and was awarded a Crash Smash. What Hac-Man said about the BBC Micro version:

'I am now firmly hooked and every spare scrap of paper is being turned into a map of the game. Buy it - it's great.'

### ADD-ONS:

#### TELETEXT (AND TV) ADAPTER: OUR PRICE: £89.99 INC. VAT

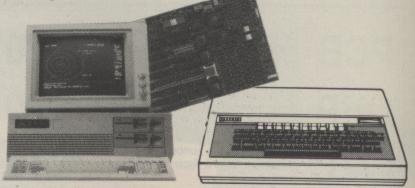

Compatible with Archimedes, BBC, Master and Compact. Professionally built and tested, mains powered, on/off switch, TV picture and sound outputs for Philips monitors. Connects to the user port on BBC or Master, joystick port on Compact and printer port on Archimedes. Downloads free software and preselected pages manual or automatic. Stylish 2-tone brown and beige case. Supplied with lead, software disc and manual.

#### PC 500 and PC PLUS:

They can be left plugging into the TUBE connector and switched on when required. The PC 500 is basically an Acorn 80186 co-processor in a case. 512K RAM, 10MHz 16-bit CPU, mouse, GEM and DOSPLUS. Runs most PC software. OUR PRICE: £239 INC. VAT. The PC PLUS comes with 1024K of RAM, OUR PRICE: £339.00 INC

#### SOLIDISK SUPER AT SYSTEM:

Our fully IBM compatible PC At (12MHz 80286) offers realistic computing power at much lower price than the Archimedes. Please ring for catalogue. Example of prices: System unit, keyboard, PSU, serial parallel, Real time Clock: £399. WD's HDD/FDD controller + 40MB, 40ms hard disc: £265. RAM chips: £6 each. Display options: mono, Super EGA and VGA multisync. All prices are excluding VAT.

#### THE MULTIFUNCTION TWOMEG 128K:

4 extra ROM sockets (plus 4 already on the BBC), 128K of Shadow RAM and Sideways RAM will massively improve your BBC computer. Ring us for full specs. OUR PRICE: £60 INC. VAT.

#### 1772 DOUBLE DENSITY DISC INTERFACE:

The new Acorn DNFS and ADFS require the WD1772 to run. Our 1772 is inexpensive and totally hardware compatible with these ROMs and the 80186 co-processor. Full specs available. OUR PRICE £35.00 INC. VAT.

#### 1772 + 8271 DFDC:

Our DFDC will add the 1772 Double Density while retaining your 8271 chip on the same circuit board. Some DFS ROMS cannot switch, please check with us before you buy. OUR PRICE: £40.00 INC VAT.

#### DOUBLE DENSITY DFS 2.2 ROM:

This will work with both 1772 and 8271 (single density only). Overcome DFS 31 file limit, 60% increase of storage on DD, disc format, verify, edit, recover and restore. 16K ROM, truly superior code. OUR PRICE: £15(£10 if purchased with our 1772 or DFDC).

#### ADVANCED ADFS 2.1 ROM SET:

This works only with the 1772 chip. It has all the features of 2.2 DFS plus a more powerful ADFS than the Compact or Master. Two 16K ROMs the best disc operating system for the BBC. OUR PRICE: £30(£20 if purchased with our 1772 or DFDC

#### **REPTON — THE TIME TRAVELLER**

Where did Repton come from? Does he have an Egyptian mummy? Is he the real Jack the Repper? Where is he now? Where is he going to?! We have been inundated with these and many other questions about our lovable hero. Now all is revealed in 40 new screens that vividly reveal Repton's evolution from prehistory to the future.

The PREHISTORIC screens with their caves, mountains and volcances, have Repton battling against pterodactyls and dinosaurs to collect edible berries. In EGYPTIAN times, Repton chases around pyramids and sphinxes collecting scrolls and meeting a mummy or two! Amidst the smog and grime of VICTORIAN times, Repton collects gold coins – but can he avoid the police and the gallows? PRESENT DAY Repton has even greater dangers to face as he rushes around the city's jungle of parking meters and skyscrapers, looking for cans of cola. If the gangster's machine gun doesn't get him, the traffic wardens will. Amazingly Repton may make it to the FUTURE. As he zooms through space collecting crystals, the Martians give chase. Will he succeed or disappear forever into the infinite depths of a black hole? Only you can help Repton Thru Time!

OUR GUARANTEE All m All mail orders are despatched within 24 hours by first-class pos Postage and packing is free. Guilty cassettes and discs will conclused immediately.
