

RISCERE SCSI

- ANSI SCSI Level 2 Compliant
- Acorn compatible
- CDFS compatible
- ☐ Fits any RISC OS computer
- ☐ Upgradeable ROM chip
- ☐ Fastest RISC OS SCSI card available
- Guaranteed to work with any ANSI compliant device

The Morley SCSI card is faster than any other currently available for RISC-OS based computers. It has been tested with numerous SCSI devices (only a small number of which are listed opposite) with no problems.

The card should be regarded as an investment for the future as it can be used on all Acorn RISC-OS computers from the A3000 to the A540. With its incredible data transfer rates it will also be able to keep up with the fastest devices and drives for years to come.

Stick tothe Best – The Morley SCSI Card With up to 4.0 MB/s you'd better be quick to catch one

BUDGET DTP 4 95 ROGER AMOS

"using the bright & brash approach of Roger Amos"

'a book that any impoverished but enthusiastic publisher, should not be without' Jerry Glenwright - ACORN USER

"offers all the help you will need to get you producing DTP documents on a shoestring" For the paitry sum of £12.95 this book could

well save you over £100"
Paul Gaunt - ARCHIMEDES WORLD

Introductory book for the Arc, covering the basic operations and use of !Edit, !Draw, etc. Useful summary of OS examples. (£21.95) with disc.

ARCHIMEDES

The only tutorial and reference on ARM assembler on the market, with many RISC OS examples. (£21.95 with disc.)

A practical guide to programming in BASIC V on the Acorn Archimedes, with a wealth of easy-to-follow

BBC SOFTWARE

Hyperdriver

The ultimate printer driver ROM, with over 80 commands, a built-in NLQ character set, WYSIWIG previewing, access from View, Wordwise, Interword or BASIC. 100 page manual. For B/B+/E/M/C. Price £29.95 ROM, £24.95 disc for

Minidriver

As HyperDriver but for Mini Office II. Includes Viewdata terminal. £24.95 ROM. SRAM version £19.95.

Mos Plus

Utility ROM for Master 128s only fixing EDIT and CLOSE#0 bugs, ADFS format, verify and backup in ROM, backup/compacting in SRAM, alarm clock and configurable startup facility and much more. Price £12.95 ROM, £7.95 SRAM.

Sidewriter

Pop-up notepad for SRAM users (any SRAM machine), works with any

software. Price £7.95.

Games Action from

Assembler Bundle

Two Bruce Smith books on 6502 assembler with discs and Master Series update booklet. For B/B+/E/M/C/ RRP over £30, yours for £4.95!

Fingerprint

SRAM or main memory 6502 machine code monitor/disassembler/memory editor. For B/B+/E/M/C/ Price £9.95.

Conversion Kit

Ready-made 6502 assembler routines, for learning or development. Price £7.95

BBC BOOKS

View Dabhand Guide

Bruce Smith's comprehensive guide to View wordprocessor. "For those who want a complete thorough and readable guide to View, then Bruce Smith is your man' (Beebug). £12.95 or £17.95 with disc.

Master Operating System

David Atherton's definitive reference work including the famous differences between all eight-bit models' section used by countless programmers to ensure compatibility across the full eight-bit range. £12.95 or £17.95 with disc.

Mini Office II Guide

Detailed tutorial by Bruce Smith and Robin Burton for the BBC/Master versions of the software. Price £9.95 or £14.95 with disc.

Mastering Interpreters and Compilers

Fascinating Bruce Smith title on creating high level languages. £14.95 with free disc.

MASTER 512

Master 512 User Guide

Full instruction for using the 512 and DOS Plus, with tips on software compatibility. £9.95 or £14.95 with disc

Master 512 Technical Guide

The companion guide with full 512 programming information and hardware expansion projects. Price £14.95 or £19.95 with disc.

Master 512 Shareware Collections

Two collections of PC shareware, all tried and tested on the 512. Includes WP's, spreadsheets, databases, games etc. Five full 800k discs in each. Each collection normally £29.95, special offer £25 for both.

ARCHIMEDES SOFTWARE

Instigator

Utility system providing disc sector editor, memory editor, disassembler, command line archiving, and much more. Price £49.95

Arc PC Emulator Shareware

Similar to Master 512 Shareware but for the Arc PC Emulator. Two collections of five discs each. Normal Price £34.95. Now on special offer, both collections for £25.

Very popular program to provide full DFS facilities on desktop or 165Host/165Tube. (Not A5000 compatible). Price £29.95

ARCHIMEDES/BBC BOOKS

Basic V Guide

BASIC V guide covering differences between earlier BBC BASICs and the superior version for the Archimedes.

C: A Dabhand Guide

Massive 512-page complete guide to C programming. No previous experience required. Arc & BBC sections £14.95 or £21.95 with disc.

OTHER BOOKS

Z88: A Dabhand Guide

Introduction to the Z88, by the designers of the machines own software. £14.95

Z88 Pipedream Guide

John Allen's detailed work on all aspects of Z88 PipeDream. Good explanations of printing. Price £14.95

Psion LZ OPL Guide

lan Sinclair's guide to OPL programming on the LZ series of Organiser machines, £12.95

There's an electronic Aladdin's Cave of shareware and PD programs ... just waiting to be explored!

Due to the tremendously high demand, the price of the acclaimed EuroLink modem has been reduced to £149 – a reduction of £80 on the previously advertised price of £229.

This means it is now even better value – still with the same full specification and all the advanced features of more expensive modems.

It is the easy-to-use key to the ever-widening world of communications. Simply connect it to your computer, your telephone and with a communications software package you're ready to go.

With your EuroLink modem you can access leading information services such as the UK's Prestel and Telecom Gold, the legendary CIX, and the world-beating CompuServe, the biggest online database and information service of them all.

Use the EuroLink modem as your own complete communications centre – to send fax, telex and electronic mail messages, keep up

NOW 6149 + ONLY 149 VAI

weather and financial markets, or even roam the world searching and retrieving data from the leading electronic libraries.

Or you can simply explore some of the many hundreds of amateur bulletin boards all over Britain where people with the same computer as yourself, and with similar interests, help each other with practical ideas and advice that you wouldn't be able to find any other way.

And CompuServe comes free!

With your EurolLink modem comes FREE membership of the world's biggest online information service, CompuServe. You'll get your own personal ID number and password, the ideas-packed CompuServe magazine, and \$15 of FREE usage credit.

One of the many attractions of CompuServe is its vast library of nearly 30,000 shareware and PD programs you can download directly into your own computer.

And CompuServe, plus your EuroLink modem, also turns your computer into a 24hour, seven-days-a-week fax and telex machine!

What the EuroLink modem offers

- Four speeds including 2400 baud
- Intelligent microprocessor controlled
- Autodial, Autoanswer, Auto redial
- Automatic baud rate scanning
- Auto terminal baud rate sensing
- Easy-to-understand built-in Help pages
- 32-number telephone directory
- Six progress-checking LED indicators
- Software-controlled pulse/tone dialling
- External plug-mounted power supply
- Built-in 'watchdog' circuitry
- Internal loudspeaker
- Fully Hayes compatible
- Fully BABT approved

NEWS BEAT

Going for gold

New faces

RHEINGOLD Enterprises (0484 846126) is the new company of Alan Wrigley with a series of products due for imminent release. First off the blocks will be TextAid priced at £9.95.

This program lets you define, edit and store up to 20 text macros of 40 characters each of which can be inserted with a mouse click into any desktop publisher or wordprocessor and so on.

The current date and time can be added as can items such as an incremental value, while an additional facility intended for such text processors as Edit lets you include control codes in documents to access printer functions such as bold or italic. Support for these facilities is provided as modifications to the printer driver.

The other major function of TextAid is to transfer text from any text icon or window title bar visible on the desktop into any document. In addition there is a facility to convert CSV or TSV files to text and vice versa.

Rheingold's second release will be TimeLord which is heralded as a comprehensive time management application providing multiple stopwatch and timer facilities among others. This will be followed by Archetype, the successor to Labelmaster Plus.

Vertically distributed

GREYHOUND (0532 621111) have now got the exclusive distribution rights to the products of Vertical Twist - formerly known as The Serial Port.

These include the Archimedes Joystick Interface, a Midi Sampler and software such as Worldscape, Tracker and Investigator.

MD of Vertical Twist, Andrew Foyle commented: "The move will allow us to specialise in research and development and to concentrate on the things we do best. Greyhound are specialist Acorn software distributors and we have little doubt that the Acorn market will be well supplied and supported by them".

WHAT have Acorn Computers, Krisalis Software and the Chafford Hundred all in common? The answer came in the form of a media extravaganza at the Queen Elizabeth II Centre in Westminster recently with the launch of the Acorn Olympic Challenge and a new Learning Curve combination to coincide with the Barcelona games.

The Acorn Olympic Challenge began on July 4 and saw members of the public competing against 170 of the best athletes in the world. This is not a test of strength or speed but a computer simulation which takes you to the actual track and field events themselves.

Within the game you'll meet such famous world class athletes as Steve Backley, Linford Christie, John Regis, Sally Gunnel, Yvonne Murray, Colin Jackson and Dalton Grant as well as team captain Fatima Whitbread.

All are members of Fatima's presti-

gious Chafford Hundred Athletic Club and have been an integral part of the game development.

The Challenge is based around Krisalis Software's olympics game, Quest for Gold. In its full implementation the simulation comes in two parts. The first section places you as the trainer who must decide the schedule for your 10 olympic hopefuls.

On-screen help is offered by the Chafford Hundred athletes which you can follow or ignore.

Asked about Quest for Gold, Fatima commented: "The game is great fun and we all hope it will attract a great deal of interest among budding athletes who may themselves one day be competing at Olympic level".

The Acorn Olympic Challenge presents a special version of the arcade section of the game and each competitor will be given a certificate and the opportunity to win one of several hundred prizes.

Highest scorers go forward to the four regionals and from there to the post-Olympic athletics meeting in Sheffield in August for the Grand Finale.

Not only will they get a chance to meet the top athletes, they will also be invited to look behind the scenes. Full details of all the 100 locations throughout the UK taking part in the challenge can be obtained by phoning 0800 678 888.

In June Hugh Symons held a recruitathon to introduce the Quest for Gold promotion to Acorn dealers. Fatima Whitbread was the guest of honour and was presented with a caricature of herself specially drawn by Hugh Symons' Advertising and Marketing Manager, Geoff Storer.

Quest for Gold is also being included in Acorn's Learning Curve packs for a limited period only. You can read more about the full game in this month's ScreenPlay.

Fatima Whitbread as you've never seen her

Created by Dave Hollett these discs are top quality multi-layer drawings for use with the My World program. Ideal for Schools, and a useful tool for the National Curriculum (KS 1/2). "EXCELLENT" A&B Review June 92 Disc MW001 ANCIENT EGYPT £12.95

.£21

The original Arthur operating system came with a diary application; unfortunately Risc-OS lost that very useful little utility. !Diary offers you all that the original program had and more: you can browse and search through your diary, customise it to remember family anniversaries, and create diaries and print out planners for next year long before they are available in the shops. You can also print out your appointments for any given month or the whole year.

PLEASE ADD V. A. T. TO ALL PRICES

Where to find us

From Chester follow old A55 past Holywell until you see Moor Lane on your right, turn down Moor Lane, we are at the bottom (Big White Farm Gate), From Rhyl (As Above) but turn left into Moor Lane before Holywell

21meg Floptical Disc Drives

Drives are the same physical size as a standard 3½ inch floppy but will store 21meg of data, even more if the data is compressed, drives come in external case with its own power supply, cables and 1 Floptical disc.

Requires SCSI Interface AS ABOVE WITH CARD.
FLOPTICAL DISCS (each

A5000 INTERNAL UNIT.

!Condense

!Condense is a Spritefile Compression utility, it will allow you to store more files on disc or in memory. Unlike most routines unpacking is not done on loading, but as and when you are ready to display or use the Sprite(s) in the spritearea. This means that a large number of sprites can be loaded into memory, unpacked to the same 'User Sprite Area' and plotted using normal Acorn Sprite Calls. An example of this is in a demo file (!Condemo2) on the disc and can be seen running. This loads in approximately "THREE MEGABYTES" of sprites but uses just over 400 Kilobytes of discs space or computor memory. Ideal for use within your own programs for really fast sprite and screen manipulation.

£8 +vat

Disc MW002 CHRISTMAS

UK residents add 17.5% VAT to all prices except books. Prices and manufacturers specifications subject to change without notification. Goods offered subject to being unsold and/or available. Goods not offered on trial basis. Orders under £25 sent recorded delivery please add £1. Next day delivery £12. All goods despatched within 48 hours subject to availability. Restocking fee on non-defective returns.

A standing Ovation

RISC Developments (0727 40303) have released the first major update to their DTP package, Ovation. The price is still only £99 and the discs are no longer copy protected.

Ovation is used in education as well as for business and home use and the new features of version 1.3 are partly in response to feedback from users. These include the ability to merge Ovation documents with CSV files generated by databases and the like, and scaling and rotation

for printing booklets with correctly ordered pages.

There's also the facility to rotate drawfiles - and sprites if you have Risc OS 3 - to any angle.

There is also increased connectivity with other software packages with 1st Word Plus files able to be imported directly complete with style information. A Desktop Thesaurus hotlink automatically transfers words between the Thesaurus v1.10 and

The Thesaurus was launched earlier this year and the new 1.10 version has been significantly expanded to include over 13,750 keywords and nearly 135,000 synonyms.

An improved compression system ensures that the entire application takes less than 450k of disc space. Upgrades cost £3.35 when you return your original disc and the complete Desktop Thesaurus is priced at £19.

A host of other improvements include a fast draft print option, an easy-toread System font in four weights, faster drawfile rendering and improved key short-cuts.

Readers with an A5000 and Risc OS 3 can also rotate text in drawfiles. have 256 grey-level sprites and a desktop boot facility.

Expand scanning options IRLAM Instruments (0895 811401)

are now providing colour scanning systems that can use the built-in ports of the A5000. Not only does this free your expansion slots for other products but it significantly reduces the cost as there is no expansion card to

Two options are available: One with the A4 flat-bed Epson scanner and the other with the Sharp JX-100 mini-flatbed model. The complete range of Epson scanners is supported by the Prolmage software.

Epson use the parallel port for fast data transfer while the Sharp model uses the serial port. Irlam's software, the I-Mage, ensures that the maximum possible data transfer speed is obtained at all times and offers the same powerful features as Prolmage.

Both pieces as software are fully multi-tasking and you can see the image built-up on screen as it is scanned. Once scanning is complete you can edit the sprite immediately.

There is a comprehensive number of sprite output formats with monochrome, 16 and 256 grey levels as well as 256 colour in normal, multisync and VGA modes. Huge scanned image support lets you scan to disc without using memory for the image. The Epson GT6000 costs £999 with the Sharp JX100 retailing at £495.

If you have an Archimedes but not the A5000, you can buy an expansion card for your machine to let you use these scanners and their software. The price is £49.50 for the Sharp JX100 and £98.50 for the Epson

Acorn Open Days

Acorn and dealers hold regular Open Days all over the country throughout the year. Look out for the ones in your area, it's your chance to talk to Acorn themselves as well as a selection of hardware and software manufacturers. Look in your local press, contact your Acom dealer or Acorn directly for full details and updates:

CD-Rom prices fall

THE price of Cumana's CXX436 multiple six-pack CD-Rom drive unit has been dramatically cut by £500 from £1,995 to £1,495. The six-pack features six highquality CD-Rom drives and is designed for use on a network.

All six drives can be run simultaneously and this multiple feature distinguishes the CXX from the juke box drives which load just one disc at a time.

Each drive offers an average access time of 350 milliseconds and data transfer is at 153.6k per second and complies with the standard High Sierra format

The caddy system of loading enhances the easy handling and storage of the CD-Roms and the entire CXX436 is housed in a heavy duty metal case and requires a single power source.

Really useful CDs

APA Multimedia (0634 295222) have announced their first CD-Rom for Risc OS machines. Given the name of The Really Useful CD-Rom Volume 1, it contains clip art in draw and sprite format as well as a host of sound samples.

Digitised images are provided from their soon to be released Wildlife on Rom which should get its first public showing at Bett '93. Many different applications in the CD Rom fall into the categories of programming, utilities, games, communications and education and all for £49.

From the people who brought you Pro-Artisan, Render Bender and Illusionist; another link in the chain.

With Artisan II, Pro Artisan, Render Bender and Illusionist you can create amazing graphics and superb animations. But a picture, however detailed and complex it might be, can only say so much.

and complex it might be, can only say so much.
So with just that in mind, allow us to introduce
Titler. It does exactly what the name suggests. It
enables you to add words to your pictures. Titler is
two programs combined, Titler and Sequencer.
Titler is used to create screens containing text of

any size and colour. It can provide drop shadows, underlines and rub out boxes. Using Sequencer you can present your screens using effects such as, unroll, scroll, fade, wipe, almost anything you can imagine.

Add some animations from Render Bender or Euclid, some music from Sound Tracker and you have an amazing presentation to stop people in their tracks. Add a

Genlock board and you can transfer the whole thing to video, overlaying onto any video source just like the professionals do.

In short it links you with the world of professional video, via the Archimedes.

Obviously this is only part of the story, so for more information write or telephone for a fact pack. And we'll send you more words and pictures about Titler.

words and pictures about Titler.

Price – £149.95 inc VAT – from all good dealers or direct from Clares.

Heavyweight printing

FOR people with large needs the A4/A3 LZR 1560 laser printer from Wenger could be of interest especially as it offers both PostScript Level 2 and HPGL compatibility.

This is a heavy duty printer and prices start at £4,500 with a 15ppm output in A4 mode and 8ppm for A3 production. It can print in either 300 or 400dpi - though your ability to access 400dpi will depend on your third-party printer driver.

As to be expected for a heavy duty model there are several paper feed options. You can choose a 250-sheet single, double and triple tray model as well as a 250-sheet correct order col-

The LZR 1560 will also handle a good range of paper weights from 60 to 90gsm handled automatically with the ability to process 116gsm paper manually. It comes as standard with 4Mb of memory which can be upgraded to 16Mb.

Bookshelf

CREATIVE Basic is a new book from K&M Publishing (0490 2328). Priced at £5 it has been written by D. Martin Evans a veteran commercial programmer on a variety of machines.

The book describes functions, procedures, sub-routines, programs and tips for making Basic more productive. The routines are written mostly in Turbo Basic so they can be readily transferred to other dialects and machines.

The routines covered are the result of years of problem solving and cover, among others, string manipulation, dates, numeric functions, box drawing, menuing, conversions, indexing and designing fullscreen editors.

Intrepid Treloar

THE Lord Mayor Treloar College in Alton in Hampshire is the largest nonmaintained special boarding school in Britain. It caters for students between 9 and 18 years of age with physical disabilities and has used Archimedes computers since they were first launched

They now have 40 machines in use, for both teaching and administration, playing an important part in helping students - with a wide range of handicaps - with academic and vocational work.

The staff of the college have devel-

Helen uses a trackerball and keyguard

oped a range of adaptations and a technical aids department produces special equipment tailored to the needs of individual students.

They quickly developed a miniature trackerball for students who haven't sufficient arm movements to use a mouse - it has a locking Select button to make it even easier to use.

Students with cerebral palsy found the keyboard and mouse impossible to use but the solution came in the form of a robust joystick. This resists the muscle spasms that make the control on other devices impossible.

> A more complex problem arose when it came to customising a system for the many students with muscular dystrophy who found the standard keyboard too wide and deep to reach across.

> The solution was a miniature keyboard with mini keys so that they cover as little area as possible. The numeric keypad was omitted and the keyboard has some special keys to combine

Shift/Break and Control/Break as well as a Shift Lock.

These variations all help one-handed students and have allowed students with a pointer attached to their head to work effectively on a wide range of packages.

The Archimedes range now forms the nucleus of the teaching system and allows the students to follow the National Curriculum especially when using such packages as ASP and SpKbd from from Bristol Semerc .

SpKbd offers a versatile mouse emulator on the numeric keypad. The program can be customised with the teacher being able to alter the input acceptance time, post acceptance delays and sticky Shift and Control

ASP offers full keyboard and mouse emulation using a system of scanning boards set up for individual users and/or applications. These boards can include sprites and special fonts as well as standard text icons. ASP can be used by people with single or double switch input devices as well as a combination of pointer moving device and a single switch.

A high-speed concept

USING a modified Concept Keyboard, ComputeRace (0386 792545) have developed a single-user lap-timing system for up to 48 cars in a single race. For each event an overlay is placed on the keyboard and a segment assigned to a particular car.

As a car flashes past, the user touches the relevant segment and the time is entered into the system. For even better accuracy a beam can be used to record the time while the keyboard identifies the car.

As well as acting as a computerised stopwatch, the system sorts the data into a variety of formats. By keeping a precise account of lap speeds teams can gauge when to fit the slicks - a highly expensive set of tyres which increase the speed potential of the car.

Originally designed for the IBM PC range, the Concept Keyboard Company (0962 843322) report that this process will work on any machine with a serial port.

The Birmingham Super Prix has already benefited from this system where the harsh race track environment rules out a conventional keyboard.

Indexing the facts

ARCSCAN III is a reference finder for books, magazines and manuals providing indexes for Archimedes User Guides and manuals on Basic, C, Fortran 77 and the DDE suite. In addition there are up-to-date indexes to all the BBC and Archimedes magazines.

Library discs and new indexes are available and constantly updated. The complete package is £15.95 with library discs and upgrades varying between £4.45 and £9.95. All are available from Risc Developments (0727 40303)

Achtung baby

THE demand for foreign languages has never been so high and LCL (0491 579345) are reacting to this by releasing their first new title in over two years, Micro German for the Archimedes and BBC Micro.

This is the first computer course to take beginners up to

GCSE standard in spoken and written German. The course

also covers business German.

The complete course of spoken and written German is suitable for travellers, students, enthusiasts and businessmen as it includes a program to generate business letters automatically.

The aim is to de-mystify German and make it fun with the inclusion of graphical adventure games and puzzles which are alternated with more serious programs on verbs

Micro German costs £24 and covers pronunciation, colours, gender, tenses, cases, plurals, opposites, time, conversation, commands, aural work and much more.

FRESIES

The right moves

APRICOTE Studios have just launched Prophet, their new accounts package for the Acorn 32 bit machines, and with that comes a unique utility !Transfer.

And there's a free copy waiting for five lucky readers.

With it you can copy text from any icon to any other, or to a text editor such as !Edit or Impression with just two clicks of the mouse:

- Click with Adjust to copy the text
- Edit it, if needed, in the !Transfer iconbar menu
- Click with Select to paste the text to another icon

What to do

The first five readers' names and addresses pulled out of the sack after August 30 will receive a FREE copy of !Transfer.

Either replace or add to existing

Now, with !Transfer, you can copy

the results of a calculation in a multi-

tasking calculator directly to your doc-

ument whether it's a simple text edi-

tor, spreadsheet or DTP package.

Just write to: Micro User Freebies Offer (August), Europress Direct, P. O. Box 2, Ellesmere Port, L65 3EA.

Drawing you in

PROFESSIONAL-looking graphs can now be created quickly, accurately and easily with a new package called Graph_It from Sherston Software (0666 840433).

Designed with schools in mind it has no complicated spreadsheet or database package to master first. Graphs are produced by moving and clicking the mouse.

If you wanted to create a bar chart, simply *pull* the bar up to the height you want or rotate a segment of a pie chart just by grabbing the handle and moving the mouse. If you prefer values can be added using the number keys.

Graph_It also has facilities to draw line and scatter graphs and you can flip between them at the touch of a button. Where appropriate you can have 3D versions for a professional feel.

Labelling is just the matter of adding, editing and placing manually on your graph and displayed in any available fonts. Sherston package Graph_It with the Junior, Montclair and Tabloid fonts.

Finished work can be saved as drawfiles for importing into other applications or in its own Graph_It format. The price is £19.95.

Second generation ScanLight scanners

THE next generation of Computer Concepts' (0442 63933) ScanLight handheld 256 grey-level scanners is now available. The latest addition to the ScanLight range has a new scanner head, software and a lower price of £233.92.

ScanLight 256 offers a maximum resolution of 400 dpi true 256 grey levels at full 105mm width with support for monochrome, 16 and 256 grey-level scanning at 100, 200, 300 or 400dpi.

The new software is available as an upgrade for £11.75 to all registered users of ScanLight models. The enhanced features include on-screen dithering, instant image rotation by any angle, flexible image enhancement control – sharpening,

edge enhancement and a precise grey map control tool.

Other aspects have been made easy to use such as the brightness and contrast controls as well as the choice of sampling sizes. The software also makes smaller demands on memory than some similar programs as only one copy of the image is held in memory at once.

Adding the power

COMPUTER CONCEPTS (0442 63933) are ready to release a new generation of Turbo printer drivers for the Archimedes range of computers. First off the line is an ultra-fast Risc OS driver for the Canon inkjet, the BJ10e.

The drivers merit the accolade of turbo because of Computer Concept's FastText rendering technique first seen in the LaserDirect range of laser printers. This gives fast and effective outline font printing with printer times reduced by one third when compared to the standard Acorn drivers returning control to the desktop up to 10 times quicker.

Using these TurboDrivers, once the

page has been rendered printing goes on in the background so that the computer can be used while the printer is running. Printing from disc or from memory can also be done in background mode.

The iconbar icon informs you if the printer is on line and there is additional information available in a status window which shows the number of pages in the queue and the current state of the printer.

TurboDrivers comes with 12 Acorn outline fonts and the outline font manager as well as a printer lead and manual and costs £49, though you can buy the printer, TurboDriver, lead and software for £249.

Pricey but it's colour

ONE of the leading suppliers of colour PostScript laser printers is Colorgraph (0734 819435) who have just reduced the price of two of their models.

The A4 CHC-S445P is an A4 colour model which has been cut in price from £13,750 to £11,450. This is a dye sublimation printer with a 300dpi resolution and was launched last Autumn when it was the only such machine in the UK.

The standard model comes with 32Mb of ram and produces colour print which look like traditional full colour photographs. It achieves this by using up to 16 million colours per dot which gives better colour control than has been possible with 300dpi printers.

On the thermal transfer side of colour printing the A4 300dpi CHC-445P has dropped from £5,600 to £4,695.

RISC Developments & BEEBUG Ltd. 117 Hatfield Road, St Albans, Herts, AL1 4JS. Tel. 0727 40303 Fax 0727 860263

Steve and Pam Turnbull take an in-depth look at the Archimedes A4 portable and its competition from other manufacturers

Acorn nthe

Product: A4 Price: £1,399 (2Mb ram), £1,699 (4Mb ram, 60Mb hard disc) Supplier: Acorn Computers, Fulbourn Road, Cherry Hinton, Cambridge CB1 4JN. Tel: 0223 245200

AVING escaped relatively unscathed from embargo and rumour the new Acorn portable is out and about - but you'll have to wait until September to actually buy one.

But where is the A4 positioned in

the marketplace and who is going to

Acorn are predominant in the education market. With government moves encouraging the purchase of portable computers in this area it was only a matter of time before Acorn answered the challenge set by Apple

and the hundreds of IBM PC portable clones. They see a wider market opening before them, but does the A4 put them in the position to launch such an attack?

The very fact that Acorn have released a notebook-sized portable says much about the company's change in direction over the last few years. Gone are the days when they refused to admit the existence of other machines or to acknowledge other consumer needs than those they were already meeting.

A quick glance at the machine and you may be excused for thinking that it is a Triumph-Adler notebook because the casing is the same. This is understandable because Acorn's major shareholders - Olivetti - also own Triumph-Adler. The casing is slightly bluish grey with an almost flock finish and once opened is very

The keyboard is an 83-key PC layout which means that you lose the keypad. However a special blue function key gives alternate actions to cer-

All the ports you'll need

The 1.6 Mb floppy is standard

The Apple alternative

Product: PowerBook 140 Price: £2,195 (4Mb ram, 40Mb hard disc) Supplier: Apple UK, 6 Roundwood Avenue, Stockley Park, Uxbridge UB11 1BB. Tel: 081-569 1199

The stylish PowerBook range is considerably more expensive than the Archimedes A4, yet they are both aimed at the same market: Teachers, school resources, businesses and professionals.

The nearest in price and specification is the PowerBook 140. It too has the connectivity seen on the A4 with Econet but this time through the built-in AppleTalk. The user interface is probably the next best to Risc OS and with the latest version of System 7 as standard it is very intuitive to use.

The keyboard is very nice as the slope makes it easy to use because there is somewhere to rest your hands which reduces stress on your wrists.

A trackerball is built-in and quite large, making it easy to use - the single button works very well with a trackerball. The keys are the same size as on a desktop model.

The PowerBook has some features to provide access for people with disabilities. CloseView magnifies a section of the screen for instance and third-party companies have products which let you charge a PowerBook battery from a wheelchair battery as well as special attachments to mount it on a wheelchair tray.

No similar third-party products are available at present for the A4 but the magnify option comes as standard - using !Magnifier - and it also shares the PowerBook's ability to use certain keys in lieu of the mouse.

You can opt for a Fax/Data modem which fits internally but the A4 has no room for an internal device like this. You could fit an external device but at present there is neither software nor hard-

The PowerBook 140 does have sound input and output while the A4 only has output. However the A4's printer port can be used with a wide variety of devices such as sound samplers and even video digitisers.

The 140's 40Mb hard disc is smaller than the A4's and much of it will be taken up with the cleverer bits of Apple's proprietary operating

tain keys. With it F11 and F12 appear as special functions F1 and F2 while the keypad uses a group of keys in association with the special function lock. The feel of the keys is solid but the layout and angle of the keyboard will take a little bit of getting used to.

A mouse comes as standard though we did feel that the lead was a too long for a portable - it's exactly the same as the desktop models.

The inclusion of a trackerball was considered and the casing actually has a place for one. However, as most people are used to a mouse, and using three buttons with a trackerball is not very practical, Acorn decided against this option.

Mouse movements can be reproduced using the special function key with the cursor keys for movement and QWE as the buttons.

A simple carrying case comes with the A4 but for £35 you can get a padded shoulder bag with a net for the mouse and space for everything including the manuals. Many bag manufacturers specialise in this area so you could easily pick up your own.

On display

The screen is 182mm x 137mm LCD with a fluorescent edgelighter and brightness adjustment. The resolution is 640 x 480 pixels or VGA (PC high resolution).

Acorn have opted for a mono 16 greyscale display even though on the PC side colour is becoming more common and considerably more expensive. Some PCs do claim 32 or even 64 greyscales but you find that only eight are really noticeable any-

You can add an external monitor via the 15 pin VGA D-type plug should you be using the machine for applications such as presentations which would benefit from colour and a larger screen.

On LCD screens the time for the image to disappear can be up to half a second. For a mouse pointer moving around the screen the result is smudge - nothing can be done about it so you just have to get used to it.

We also found that we tended to lose the pointer occasionally and moving it around the screen guickly the usual method of locating a lost pointer - doesn't help much, you have to learn to go slower.

Power is from a rechargeable battery pack or the mains. When on

mains the battery trickle charges, but it does take around seven hours to reach a full charge.

How long your battery lasts depends on your usage - as a rule, hard disc access takes a lot of power - but you can get from 2.5 to 4 hours. You can buy extra battery packs for around £50.

Most portables these days come with built-in power managers and Acorn's system gives an on-board independent microprocessor the management of battery charging and power use.

Power consumption is minimised between keystrokes and you can customise the power saving setting when it comes to blanking the display or spinning down the hard disc.

If you do run out of power an auto-

The A4 screen is high quality

This could be an A5000

All your normal programs still work

matic shutdown is preceded by a standard Risc OS warning box which is repeated when you restart.

A petrol gauge-type indicator at the front of the keyboard gives an idea of the state of the battery and there is also an onscreen monitor.

The power supply is auto-ranging which means you can plug it into any mains supply from 100 to 240v, so working abroad is easy. Full details of this is given in the documentation which is easy to follow and has an excellent troubleshooting section.

As well as adding an external monitor, you could opt for another keyboard, keypad or even a modem there is no room left inside for an internal system.

Econet, but not Ethernet, will be available too - though not in the model we saw - and the full Econet network filing system is included on rom as you'd expect.

The unit has both serial and parallel ports so you can add the full range of printers and add-ons but the A4 is not designed for adding expansion

Sound facilities

The sound comes from a small internal speaker which is not very good headphones will give a better result. Having said that there isn't another portable around that gives you a 7position 8-voice full stereo sound system as standard.

As far as software goes the most remarkable thing about the A4 is the fact that it is an unremarkable A5000 - anything that runs on an A5000 will run on it. Everything on the A5000 has been squeezed into the A4's box with no exception and a few addi-

The PC competition

Product: CF-380

Price: £1,895 (2Mb ram, 60Mb hard disc) Supplier: Panasonic, Panasonic House, Willoughby Road, Bracknell, Berkshire RG12 8FP.

Tel: 0344 853550

Panasonic's Notebook 380 is only one of the many machines available in the IBM PC-compatible area but its specification makes it a good comparison to the A4. It also has a graphical user interface as standard -Windows 3.

This model boasts a 32 greyscale screen but in comparison to the A4 and 140 there appears to be very little difference in use. All have adjustable screens for changing the angle depending on the lighting conditions. Again all three models have power saving built in such as screen blanking and so on.

The mouse is optional but as with all these models you can use the cursor keys instead. If you opt for a mouse you'll have to open a flap and plug it in.

The A4 uses the same system, and this is one area where in our opinion the integral trackerball scores. It is a more robust system to use when on field work rather than just office hopping.

The CF-380 has a similar casing to the A4 but lacks the nice angle of the PowerBook. The petrol gauge battery indicator on the individual battery packs appears to be unique to the A4.

Although the PC doubles up keys for the keypad it does have all the function keys. One particular dislike with both A4 is the swapping of the Caps Lock.

the PC and

Control and Shift keys - very irritating.

We were a little concerned about the mouse smudge on the A4 but this is much smoother than the flickering action of the mouse used with Windows - rather than smudge it blinks very quickly which can be quite offputting until you get used to it.

This is not the type of article to go into the merits of Risc OS 3 over Windows 3, but let's just say that Risc OS is significantly faster and the A5000 users will see no difference in access time.

Both the A4 and PowerBook computers can read 1.4Mb Dos disks on their standard floppy drives as well as their own format - with PC portables you're stuck with Dos.

Although the CF-380 has a 60Mb hard disc, it has the added handicap of both Dos and Windows 3 occupying huge amounts of space - 10Mb before you even start to add applications. Not only that but Windows applications also take enormous bites out of the hard disc. For example LetterPerfect - a cut-down Dos version of the popular WordPerfect - takes 3Mb while the full Windows version will take 10Mb.

tions. Two versions are available: One with 2Mb of ram and a 1.6Mb floppy drive, the other with a 60Mb IDE hard disc and 4Mb of ram. Both

have Risc OS 3 as standard. The operating system is in rom, as

are the eight applications of Draw, Paint, Alarm, Calc, Chars, Configure, Help and Pinboard. The other standard A5000 applications come on disc as usual.

The hard disc model also comes with the PC Emulator.

Summing up

Taking the each system on its own merits it's fairly clear that the A4 easily beats the CF-380 on both quality and price without difficulty. Although the Apple portable is of equivalent quality - and probably easier to use - it has a much higher price.

Operating systems take memory and disc space on all but the A4, although the PowerBook is a switch-on-and-go machine like the Acorn. With the PC you actually have to install the operating system when you first buy it.

Having said that, your preference is bound to be related to the machines you're currently using although, in our opinion, the capabilities of the A4 make buying a PC-compatible portable a waste of time.

- 4 page per minute Canon LBP4 printer
- Small and lightweight. The perfect personal laser printer
- PC compatible as well as direct drive from the Archimedes
- 1 year on site maintenance included
- 1 300 or 600 dpi printing resolution
- Built in multi-purpose tray for 50 sheets
- Optional additional sheet feeder for 250 sheets
 - Network software available for Econet and Nexus networks
 - Min 2MBytes RAM recommended

LaserDirect software offering:

- Epson LQ emulation for printing from BASIC,1st Word Plus etc.
- The fastest print times of any Archimedes printer around control is returned after printing 4 pages of text from Impression in less than 35 seconds (ARM2) or 16 seconds (ARM3). The printer then continues to print at the maximum rate at which it can feed pages.
- 128 grey-level printing for top quality grey-scale scans.
 - Background printing and page queueing so the computer can be used whilst printing.

Requirements: Risc OS

LLUSTRATING documents on the Archimedes is relatively easy – you can trust to your own drawing skills, use clip art, or grab artwork from the screen. But if you want to capture a particular real-life image you will find yourself picking up a camera.

Now you could dash outside with your trusty 35mm and then scan in the results once printed. Or you could take a look at a still video or digital camera.

You take your snap – some have time-lapse facilities – and the photograph is recorded on disc or in ram. Hook up your Archimedes and transfer the information across.

Let's take a look at the two different approaches.

Jo Giles looks at two new systems for capturing pictures from real life

The Canon approach

Cambridgeshire Software House provide the Canon RC-260 and RC-560 still video cameras to take the shots. The 260 is the system in use in many schools and is a simple point and shoot device which has autofocus, flash, flash interrupt, a macro facility for close-ups, rechargeable batteries and a mains adaptor.

It is very ease to use even for the non-photographer, while the more experienced might like to experiment with the optional telephoto and wide angle lenses. To take your photo just move the main switch to REC and a

number one will appear on the display panel.

After you have decided on your picture press the button. If there are any problems – such as forgetting to put the disc in – a red light will flash at you. Take a bad shot and you can erase it. You can opt to have each photo dated too which is useful.

An option for continuous shooting is handy for fast moving objects and there is also a self-timer option. One very nice feature is the interval shot which lets you take time-lapsed photographs for instance.

Your handiwork is saved on a 2in disc which is reusable and holds 50 images. An outlay of £5.10 will get

you an extra disc. Images are saved as a PAL digital signal which is easily transferred to any machine in the Archimedes range from A3000 to A5000. The system will operate in a 1Mb environment, but at least 2Mb is recommended.

Top of the range

The 560 is the top of the range and its facilities are more in keeping with professional work. The camera is slightly larger but still fits comfortably in one hand and uses the same discs. It has all the facilities of the 260 with the addition of 3 x zoom and wide buttons.

The major difference though is the resolution. I was very pleased with the results of the 260 until I saw the

is actually taken twice and one laid over the other to increase the resolution.

The cameras are powered by batteries which will last between 30-35 minutes in continuous use but a power pack is available for £50 and will give enough power for 2,500 pictures.

The ColourMaster systems have an expansion card fitted in the standard way and the software is Techno-I from Technomatic. All the cables you'll need come as standard. Loading the images into the software is simply a matter of connecting the camera to the adapter and card.

You can now port the pictures, manipulate them in Techno-I and save them as sprites for working on in such packages as Revelation or incorporating into a DTP document.

Techno-I digitiser

Techno-I is a real time colour 25-bit video digitiser. It handles colour with 18 bits chrominance controlling the RGB inputs with seven bits - rather than the more usual six - for picture luminance.

The colour information is stored separately so can be used to control contrast, brilliance and gamma correction without affecting the original colour information.

It also provides facilities such as flip, zoom, print or save or even separate in CMYK or RGB formats. A full review can be found in the November 1991 issue of The Micro User.

What you see on screen are two windows: One shows the pictures once you have decided which one you want and what you want done to

Techno-I is truly multi-tasking and as it operates in real-time you don't have to save your image before manipulating it. Anyone who has used this type of package before will appreciate the automatic noise reduction and cleaning of the synch part of the incoming signal.

The Professional ColourMaster system which features the RC-560 also comes with a screen splitter as standard. This gives additional control over the editing and presentation.

A remote control unit - similar to ones used with videos - lets you select how many images you want in the picture field - 1, 4 or 25. You can rearrange the picture sequence, access images by track, erase the shots you don't want, turn on the date function and so on and then digitise it.

Once your images are sprites they can be printed as you would any other sprite as a mono or colour

on your printer, driver and the quality of paper you use.

However, if you really want photo quality you could take a look at a video printer. Hitachi have a basic model

at around £1,400 and Canon are due to release a £2,230 machine into the UK market which will work on the Archimedes.

Fotoman solutions

From Logitech - who make the Acom mouse - comes the Fotoman which looks totally unlike any camera you've ever seen. It's a vertical unit which fits comfortably in either hand with a viewing port, flash and main lens which has a screw mount that can accept extra camcorder lenses for close-up and telephoto. The shoot button is in the centre.

Unlike the Canon the images are held in 2Mb of ram that will take up to 32 black and white pictures at a time - there's nowhere to fit additional memory units. The flash and shutter speeds are automatic and the lens is fixed - without add-ons anything closer than one metre will be out of focus.

① ※ ·

The camera plugs into the serial port of the computer so no special hardware is required, but because of this the downloading time is quite long. The package from DT Software will interface the camera with the A5000 and A4 portable which have an identical serial port to the PC.

A special adapter is needed for the A3000, A300, A400 series and A540

Fotoman interior with flash...

...and a cloudy day exterior

These shots show different versions of some Fotoman A is processed scale sprite and produced on the Apple Macintosh

while the A3000 will also need its serial port chips fitted. Essentially the Fotoman is a true computer peripheral - it can't be used without a computer - while the Canon Ion plugs into a computer if that's what you want.

Software control

There are no fancy attachments with this system - when you press the button it takes the picture, no more, no less. But it can be made to take a snap under software control so you can shoot from either the main package using an option on the iconbar menu or invoke a special snapshot utility to take a frame.

For example the Risc OS 3 !Alarm program has the ability to run a program at a specific time. This could be the snapshot utility, so timed shots are available with a lot of software

The camera seems to need to be on permanent recharge. It takes six hours to charge up from when you buy it and the software will then tell you that it's on about 97 per cent charge. After taking nine shots, five with flash, it was down to 86 per cent.

Without taking any further shots it maintained this level, but when you consider that it takes 32 pictures you can see how fast the power drains. Unlike a still video disc, power is needed to keep the picture once it's been taken, so it is a high priority to get it transferred to a computer.

The Fotoman manual suggests having a car lighter adapter so you can use it in the field and maintain the power level. This is probably a good idea if you intend to use it away from a mains power source.

Inside the Fotoman a rom of basic upload software must be supplemented by additional software transferred from the host computer. The upload must be performed before pictures can be taken and downloaded. If the battery in the camera goes flat the software is lost.

This method has the slight advantage that if an enhancement to the software is produced it can replace what's currently being used. However I suspect an upgrade is unlikely given the limited quality of the results. A new camera is more likely.

The limitations of the camera are compensated to some extent by the software. The !Fotoman application by DT Software allows manipulation of the raw data files from the camera.

Downloads

Two forms of download are available: Thumbnail and Full. A Thumbnail image is short - only about 16k - and takes about five seconds to transfer. The Full image is 90k taking over a

What's transferred is the raw 256 grey level image as shot by the camera. This is held in memory while the software applies translation to sprite form. The translation parameters used can be altered although they're not as extensive as the Techno-I options.

You can sharpen up a mushy picture and what can initially appear as a grey blob can be forced to reveal

Images can be displayed in 2, 4, 16 or 256 shades of grey and in the

last format they save as Clear files rather than sprites.

From Clear you can use the PD software !Creator to convert to TIFF then perhaps use the powerful !ChangeFSI from Acorn to render it back into sprite form. It may seem a long slog but with Risc OS it's a lot

easier than using with a PC for which the system was originally designed.

Image processing, through whatever system you choose, can go a long way to restoring a poor image but it doesn't really make up for the fact that you have almost no control over the picture taken.

Summing up

For schools the Fotoman is quick and easy - though the hardware/software link is a little temperamental - and it's lower priced than the Canon. But bearing in mind the lon camera is colour and you don't lose pictures when the battery goes flat perhaps the price difference isn't so important.

In the long run it's horses for courses - if you need professional quality and colour the Canon Ion is the only choice. But if you want ease of use, low cost and colour isn't necessary the Fotoman is worth a look.

Pigs to rain forests

THERE'S no stopping Sherston Software this month with releases for both the BBC and Archimedes ranges. First out of the sack is The Three Little Pigs at Home. Priced at £25 this is a topic based package aimed at infants,

It's full of activities based on the classic story of huffing and puffing. The first part follows the traditional story and presents numerous maths and language activities as they help the Three Little Pigs build their houses of straw, sticks and bricks. What of the wolf? Well he is around and he lands in trouble when he climbs down the chimney.

Two Peek-a-boo programs retail at £21.50 each. Peek-a-boo Around Our House gives young children the chance to take their very own trip into the exciting world of Peek-a-boo. It is full of all sorts of magical objects and events just waiting for young infants to discover as they explore inside and outside the house.

Each scene has several activities concealed in it and to find them children move the arrow keys to where they want to peek-a-boo. There are animated nursery rhymes, games and activities to find in this first in a new series of infant discovery packs.

Peek-a-boo at Opposites with Goldilocks and the Three Bears is the second in this series. It provides children with language activities as they join his intrepid foursome. The software follows the usual storyline and children can explore each scene to see how many opposites are hidden in the picture.

For Archimedes users The Crystal Rain Forest is Sherston's first full educational adventure and it costs

£35. It's a classic Simon Hosler creation full of humour, puzzles and problems. The graphics take full advantage of the Archimedes.

The setting is the planet Oglo whose last rain forest is disappearing as the Cut and Run Saw Mill Gang hack their way through. Naturally the king is upset by the destruction and has banned all felling. But poisoned by the unscrupulous Gang he now lies in hospital. It is down to the children to save the day.

The adventure is intended to be both a starting point for conservation and nature work as well as a fun way to teach Logo. All the puzzles and problems encountered are related to Logo and presented in a carefully structured manner so children learn the language without realising it.

The CD Story

CUMANA (0483 503121) have published their latest CD-Rom Portfolio for Education which is a no-nonsense

Take your pick of CD-Roms

guide to CD-Rom discs of special interest to both primary and secondary schools.

The portfolio is designed to help in the search for good CD-Rom software and includes over 40 titles suitable for 9-18 year olds. It also gives a brief introduction to CD-Rom terms, applications and technology.

MD, John Simnett, commented: "By building the range on two themes, titles that have educational merit and those published in the UK, Cumana hope to encourage the growth of home produced educational software relevant to the National Curriculum."

EDUCATION

MoRRRe

TEN out of Ten is a new range of educational software from Triple R Education (0742 700661) for the Archimedes. Aimed at both home and school, the first of the series is Mathematics - Number.

It comes on two discs and costs £25.99. Six educational games cover 36 specific topics from Attainment Target 2, recording progress as you go in two ways.

The Achievement chart not only tells both child and adult the topics covered by a specific game, but it also lets them know how a particular child is doing.

The chart starts black and moves through red, yellow, green and blue recording how each child improves.

The High Score Tables take into account the game elements such as speed and bonuses.

The games have been designed in consultation with teachers and aim to cover practical as well as academic problems. They all have six built-in grades each aiming at a higher Attainment Target, but progress to Grade two can't be made until you've managed at least 50 per cent in Grade one.

The details of 64 children can be kept on the Achievement Chart and certain options are set by the parent or teacher such as different graphics for different age groups, sound, passwords and when to show details of the attainment targets.

Carnival, Cover Up, Bang, Grab It, Silicon Brain and Cheers cover everything from simple addition to fractions, powers and percentages in a fun and challenging way. Good use of graphics and rewards - you even get a certificate at the end - make it suitable for home or school.

Braille maker

THE recently-opened Dorton IT Support Centre (0732 63187) have released a piece of software designed to help teachers and support staff of the visually impaired.

They have developed the first comprehensive Text-to-Braille translation program written specifically for the Archimedes. The program will accept any Ascii text file and will convert to a fully contracted Grade 2 Braille file which can be output to suitable braille

You can also customise the braille output to provide features such as grade changes and capital signs. When the program has been loaded a text file is simply dragged to the icon bar icon and a braille file is created which in turn is just dragged to the same icon.

The cost of the Text-to-Braille translator is £25.

The Concept and the Somme

THE Battle of the Somme has been developed by Alastair Wells, the head of IT at Netherhall School in Cambridge. This multimedia package runs on the Archimedes and aims to help pupils gain an understanding of the events which occurred around July 1, 1916.

The package offers text, sound, graphics, photographs, databases, maps, laservision stills and moving sequences many provided by the Imperial War Museum. The Concept Keyboard has become an integral part of the software as it enhances its interactive nature.

Alastair Wells remarked: "The way in which the Concept Keyboard is used in the Battle of the Somme demonstrates that it has far greater potential than being limited to special needs applications".

Three Concept Keyboard overlays are available, although the keyboard can be used to access all areas of the package in multiple layers. Oak Solution's Genesis II was used to create the network of interlinked pathways used in The Battle of the Somme which is now available.

As well as the software, worksheets support its use in history, English, maths, geography, music and art National Curriculum activities and projects. An NCET-funded booklet is also included and the whole package including laservision disc cost £125.

Product: Detect-A-Pet Price: £49.50 Supplier: ESM, Abbeygate House, East Road, Cambridge CB1 1DB. Tel: 0223 65445 Requirements: Risc OS

NCE, and only once, we were asked to look after a neighbour's pet – a hamster. We were not asked a second time because we lost it. Memories of the search and its aftermath were starting to fade but reviewing Detect-A-Pet has brought them all back.

Published by ESM and originating from the Department of Education in Queensland, Australia, Detect-A-Pet is a substantial software package based on the search for a missing pet. The package has four major components: The software, the teacher's guide, a story book and a game board, all of which are very impressive.

The teacher's guide makes it abundantly clear that the materials represent an integrated approach to learning. The software is merely a part of that approach and should be regarded as a stimulus rather than an end in itself.

In fact in some respects the software is secondary to the teacher's guide which is a treasure trove of ideas using headings like reading, writing, science, drama, listening, art and craft, social studies, music, health, physical education, maths and much more.

Within the guide these headings are combined to provide thematic work based on Pets or Our Neighbourhood. Activities are suggested for individuals, groups or whole classes and are, on the whole,

Home sweet home

You've no key, so match the door to get inside

Down und

of good quality as are the 18 pages of photocopiable masters again providing a useful resource.

Produced in Australia, the package has not been re-written for our part of the world and so contains quite a few antipodean references – dollars and cents rather than pounds and pence and pictures of strange post boxes for example. Mrs Mangel fails to put in an appearance, thank goodness.

The software installs itself on the icon bar and is fully multi-tasking. Opening the first window gives a clue on what to expect. The graphics are uncomplicated, bright and bold – really inviting for the target audience of 4 to 8 year olds.

The language, too, is very simple:

Throughout it has deliberately been kept to a carefully controlled minimum and details of all the words used are given in the teacher's guide in an attempt to make sure it is introduced naturally.

Clicking on OK on the first screen and then entering either an individual or group name places you in front of Home. Further clicks moves you nearer to the front door until finally, after matching a picture of the door with three alternatives, you're in. Unusually, in England at least, a bedroom lies just inside.

At the bottom of this screen are five large icons which are common throughout the adventure. Clicking on the first gives you an eye which reveals objects not initially visible – something which needs to be done on arrival at any new location. The second icon gives you a pair of feet, enveloped by training shoes, used to move to another location.

The remaining icons, two of them hands, one taking and the other dropping, and the fifth one, a handbag, control objects and clues which may or may not be useful.

Once taken, an object is automatically transferred to the bag. You can open the bag to see it again and if you forget the clues they can be found written on a notepad.

The careful use of opportunities for language development pervades the entire package. Children are encouraged to use the spoken and written

First call, your bedroom

Do you want to give or take the bone?

Frank Jukes joins the sleuth trail on an antipodean adventure

cetective

word in a wide range of circumstances - simply reading from the screen is not enough.

Children are encouraged to discuss and describe what they are experiencing both orally and in writing. Work involving a variety of other media is also suggested.

Tape recordings of pet sounds, for example, could be used as an extension of work done at one of the locations while the classified ads sections of newspapers are seen as sources of further raw material.

Even the accompanying story book, Something Very Special, is presented as not only a reading resource and introduction to the program, but also as an example of a particular type of book which can be an item for discussion and learning in its own

As the children move around the program's 12 locations they are able to use the game board to record

Can you find the missing pet?

where they have been and what they have discovered.

Slips of paper placed in the various locations can be used to remind themselves of clues found and objects taken or dropped. At a very simple level, counters can be left to mark locations visited.

For the busy teacher there is a

complete description of each location, a copy of all the text which may appear on screen and details of what tasks need to be performed at each place.

These tasks are varied and involve reading for information, the development of hand-eye coordination and word-picture matching among others. Unfortunately, individual tasks do not change a great deal between dif-

ferent attempts to find the pet.

The various locations are interesting and give plenty of opportunity for language development. Moving between them to search the neighbourhood is accomplished by clicking on arrows in the direction of the movement required.

Once at a particular location click-

ing on OK initiates the problem solving. Success in solving the various problems provides help in finding the lost pet.

However, unsuccessful attempts can result in the child being unceremoniously dumped out of the program. Not very friendly or helpful.

Similarly, some of the manoeuvres needed to complete a screen are quite difficult to achieve - it took me ages to use the key to let my pet out of its cage. The youngest children will certainly struggle in one or two locations unless adult help is available.

To compensate for this it is possible for pupils to save their present position. As well as providing thinking time this option also helps the teacher with organisation and makes sure that work away from the computer can go on in parallel.

Summing up

This is a very well thought out package with a sound educational philosophy. Both the teacher's guide and the program are impressive and useful resources in themselves and coupled with the story book and board game, Detect-A-Pet provides a wealth of experiences for infant and lower junior classes.

Problems are few with almost all connected with the package's roots. However, while some teachers will regret that the publishers have not removed the more obvious Australian references, I am sure that just as many will be able to turn this problem into a feature. G'day!

The five icons give you game control

There are some tricky puzzles to solve

Product: Bookstore Price: £39.50 (£59.75 licensed user) Supplier: ESM, Abbeygate House, East Road, Cambridge CB1 1DB. Tel: 0223 65445 Requirements: Risc OS

OOKSTORE is principally a reviews database which aims to encourage children to write book reviews and help teachers manage reading activi-

It is simple in concept, but how useful will it be in practical terms?

The samples folder provided is only meant to get you up and running quickly, mainly a facility to find out how to operate Bookstore without having to type in lots of reviews. Dragging it over the Bookstore icon opens the sample set of reviews.

In practice, these provided a good introduction both for myself and the children who used it, allowing us to see the potential of Bookstore before we created our own work.

As a result of intense negotiations with a colleague from the English department it was decided that the software could be used by a third year group in the process of evaluating Macbeth. Pupils were not all at the same point in the study, which was good for computer congestion.

As part of the study of Macbeth, pupils were encouraged to appraise the play. This can be a difficult task for children, even when guided by the expertise of the teacher.

However, Bookstore encourages a very structured approach to book appraisal. The program is designed so that it is quick and easy to use, allowing the storage and retrieval of information that pupils have created.

In the book store

A new piece of software with a literary bent comes under Ian Dickenson's critical gaze

The sections to be filled in are straightforward. Some need options to be selected by simply clicking on the relevant button, others require a response which will involve keyboard input.

When a review is created the pupil has to pass through a total of 11 screens. Though this sounds a lot, in reality it was simple and quick. It is also possible to go back to a previous pages to change any information.

When the review is complete it can be used in several ways. It can be read on screen or printed copies can be obtained to use in displays, projects, and so on.

Eventually many reviews will build up and can be grouped into classes

Structure is encouraged

for easy access. Once the reviews have been saved to disc they can be accessed in a variety of ways: Title, Author, Reviewer and Type.

Listing by reviewer appeared to be the most popular as pupils liked to see their classmates names listed on the screen, as well as their own, giving them a sense of ownership.

The whole process of selecting items in Bookstore is done via the use of buttons or listed items, which makes it easy.

The data is collated into a series of pages that form the final review. In manner, this Bookstore allows for a very structured approach to

reviewing literature and yet still has the flexibility for the reviewers' opinions and thoughts.

Searching through a list is intuitive. You use the vertical scroll bar to move up and down or click on a letter of the alphabet displayed on screen.

The list will then display from the selected letter onwards. There is even a find option that will search for words as well as other features to rename and delete.

Bookstore can be used with virtually any age group from primary to secondary because of its ease of use. Statistical information tells you how many reviews, titles and authors are held in a database.

As classes create their reviews the teacher can pass them on to the library to be used by other children and so they too get the benefit of the work that another pupils have put into the review.

However, the best use of Bookstore is when it is used as one of many activities, as it is not intended to be the sole focus for the lesson.

The documentation is concise, compact and easy to follow. This has much to do with the fact that the software is very straightforward.

However, any niggly problem is only a phone call away as ESM's telephone support is excellent and reassuring. Special thanks go to Owen Love. Not only did he answer my technical questions but also assured me that other users of the software would get similar treatment.

The software would be useful to any school, but how could it fit into the National Curriculum?

The documentation devotes two pages to explaining how Bookstore can be integrated to NC needs of English. It can be used to address Attainment Target 2 - reading, level 3.

Also, levels 4 and 6 are catered for. The program also helps the implementation of level 7 iv to 10 iv and reflects the needs stated in programs of study for key stage 2.

All this is great stuff and directly applicable to everyday classroom requirements. However, it should be stated that Bookstore can easily be used outside the NC to encourage and record pupils work in this area.

Cross referencing is simple

Charlotte

Children

Title

Summing up

Bookstore is an application that can easily and appropriately fit into classroom activities concerning English and library projects. It is easy to use and provides a very structured approach to what can be a difficult subject.

Used as part of an overall scheme it proved to be a strong motivator for pupils and allowed the teacher a larger degree of control and monitoring of pupils work. It is a practical piece of classroom software.

Product: Sparkle Price: £59 Supplier: Morley Electronics, Morley House, West Chirton, North Shields, Tyne and Wear NE29 7TY. Tel: 091-257 6355 Requirements: Risc OS

PARKLE falls into the category of Control software. While it can do a great deal on screen, to use it fully a user port, analogue port and appropriate interface and buffer box are needed. Supported interfaces include Deltronics and those which connect to the user and printer ports.

A separate version of the software is available to work with the Lego Dacta system. As well as this collection of hardware, a set of input and output devices will also be needed.

These include switches and light sensors, buzzers, motors and bulbs. Such items can be self assembled but the makers of interfaces sell them with the required plugs already

Putting together all that gear costs a lot of money so it is not for the faint hearted. Schools, of course, have a statutory requirement to allow pupils to experience control technology at all levels from infants upwards.

It is an area in which many schools have always found a problem and such establishments must address the situation rapidly.

They could, thus, be interested in Sparkle, as could the hobbyist who enjoys poking wires into the back of the computer to make things happen. The question such people must conTwinkle, twinkle...

Rog Frost and Phil Tayler add some sparkle to their lives

Use Basic or the comprehensive built-in language

sider is whether Sparkle meets their

For many Archimedes programs a manual is not required. They all follow similar formats and it is easy to guess at what to do.

Control software, though, is different. Most of us are nervous when connecting things up to the faithful computer and we need re-assurance.

That is why looking at the manual first is imperative.

It should be good and easy-toread, but Sparkle lets us down in this area. It is woefully lacking in explanations of what it does, how and why. It gives poor advice on technical matters such as backing up the disc.

The Lego version handbook seems to have been written with the user in mind as it is much more readable but only covers areas where using Lego is different to using other interfaces.

Sparkle comes with a selection of demo programs and even a cursory look at these will tell you it is really rather clever.

It can load standard drawfiles and merge them to provide a very basic animation. For better animations, files from Euclid or Tween can be used.

The program can run Tracker music pieces and - subject to computer memory - all these effects can occur at the same time.

The on-screen display can get a bit cluttered. Apart from drawfiles and animations, your program listing is displayed - along with a highlight to show which line is implemented.

You can access the state of the input switches and output devices as well as see in which direction the motors are running.

It is possible to run a control pro-

gram without connecting anything to the computer. This is because the function keys can be used as the input switches - an idea which other control software writers might use.

You can see simple commands being carried out. For example, OUT-PUT 2 ON or WAIT 10 SECONDS or even MOTOR 1 BACKWARDS.

Using any standard text editor you can write a sequence of events using sensible English commands. Every Archimedes user has one since Edit is supplied on the Applications disc. A 1Mb basic machine has sufficient memory to run Sparkle and Edit at the same time.

If you're an old hand when it comes to Basic programming, commands like Repeat/Until. While/Endwhile and For/Next will be second nature and you'll soon be putting together some interesting sequences to produce an all music, all flashing, all screen animated dis-

More advanced users could try a bit of logic with And, Or and Eor while checking for conditions with the If/Then/Else commands. In fact. Sparkle provides a comprehensive programming language for controlling events on and off the screen.

But what about year 9 (14-yearold) pupils on a Friday afternoon? How many would cope with the language level required, or with the need to run two programs at once?

How many would end up smashing the computers in frustration? Well, probably not many would actually turn to violence, but my guess is that only the brightest 20 per cent would get a lot out of it.

Merge drawfiles to create animations

Summing up

Sparkle is not a general program for schools. No doubt some of the brightest pupils would cope well with the complexities and such pupils will love it.

As a fun program for enthusiasts, it is a great. To make full use of it, though, you would need all that extra hardware and additional soft-

Mirror, mirror on t

Body Building projects is that you add something extra to your computer. Usually this is electrical, but occasionally we have a look at a not so obvious add-on. This month is such an occasion as we are going to use a polished Coke tin.

I would like to explore the topic of Anamorphic art, in which a seemingly incomprehensible picture is rendered normal when viewed through a cylindrical mirror. This I believe first came into prominence with the Jacobites, where no mention of the King was allowed.

To keep up their allegiance they

Mike Cook reflects on some distorted images

devised designs that looked quite abstract but when viewed in the polished surface of a tankard gave praise to King Charles. Today we are much more used to distorted images so I don't think any modern day roundheads would be so easily

A normal mirror is flat, it is called plain, and when light strikes it, it will be reflected. Do you remember from your school science lessons that the angle of incidence is equal to the angle of reflection? This means that a plane mirror forms a virtual image behind its surface. That's why they are so useful.

On a curved mirror, the angle of incidence is still equal to the angle of reflection but different parts of the image reflect off different parts of the mirror. This means that any image formed will be distorted, see Figure I.

I am sure you have all seen the fairground mirrors that make you look fat or thin. Of course if you are already that shape they can make you look normal.

In principle that's what we are going to do with our cylinder. First of all you need a cylindrical mirror. One way is to strip the paint off a drinks can with paint stripper and then polish it up to a good shine. If you have access to a buffing wheel you can make a quite good job of it.

Alternatively you can use aluminium coated plastic – you can even get cylinders of this from specialised publications. One I used and that provided inspiration for this month's article is *The Magic Cylinder Book* from Tarquin Publications, Stadbroke, Diss, Norfolk IP21 5JP.

Plotting the transformation

What we have to do is to model the distortion that takes place in the cylinder and mimic it on the computer. The technical name for distorting an image is *transformation* and to turn it back to its original form we use an

Figure I: The effect of two different reflecting surfaces on parallel rays

he wall...

Figure II: How straight lines are converted by a cylindrical mirror

inverse transformation.

This sounds rather grand but all we do really is subject the coordinates of a picture to a few mathematical processes - the clever bit is knowing which processes.

Let's see what a cylinder will do to some straight lines - Figure II. Horizontal lines are converted into

arcs and radial lines are converted into vertical lines.

Therefore, to transform the X component of a point we have to treat it as if it was an angle on a polar coordinate plane.

Similarly, to transform the Y component we have to pretend it is the radius on a polar coordinate plane. In addition, as there is a mirror, and mirrors invert, we have to apply an additional inversion to the Y coordinate. Having expressed our transformed

point in polar coordinates we have to turn it back into Cartesian coordinates so we can plot it on the screen.

To draw a line, we can't just transform the start and end points and connect them up. We must transform every point along the line. In practice if we split the line up into enough segments we can join them with straight lines. This is what happens in Listing

The Beeb Body Building Course

I, which can be run on any Acorn computer and provides a template for your own designs.

Running the program

When run it you can request a grid, design or picture and illustrate three different ways of drawing on a computer screen.

You are then asked if you want it to

be normal or in the transformed form.

The normal form is useful to see if you have got the picture right. When you request the Magic Mirror transformed format, a distorted version of the image will be formed along with a circle.

You can then place your cylindrical mirror on the circle to view the correct image. If you tend to get embarrassed holding up a polished drinks can to the screen and squinting up at it, get yourself a screen dump utility for

Picture this ...

...but you'll need a mirror for this

An interesting montage...

more portable and relaxed viewing.

There are two basic procedures, one at line 540 which will draw a line and the other at 650 to draw a circle. Both are passed a parameter that will determine whether to draw the points normally or to transform them first. The actual transformation takes place in PROC_MAGIC starting at line 750.

If you want to save your fingers, stop at line 860, which is the data for the picture. The picture is a series of points to connect up with a straight line. Younger readers will recognise Johnny Yellow Hat.

This is just the start. You can write all sorts of drawing routines and by using the two procedures here you can produce your own Magic Mirror drawings.

However, for those of you with the

32-bit computers, or a Master and lots of patience, we can go one better. Instead of transforming the drawing commands we can take a whole screen and convert this into a Magic Mirror screen. It can be from Paint, a drawing program or from a video digitiser.

If we take each point on the normal screen and then convert it to our

Magic Mirror plane we will run into some difficulty. This is because there is not a one-to-one match between points on the two planes. This would lead to duplicate points and holes.

What we need to do is to take a point on the Magic Mirror screen and convert this into Magic Mirror coordinates. By transforming this into normal coordinates you see the colour pixel. Finally plot that pixel colour at the original point you started from.

As you can imagine this takes time – about 15 minutes on an A310. Also, not all the points on the final screen

will map to the original screen so some time is wasted. This can be minimised by not taking every point on the screen.

The program is shown in Listing II. You are asked for a sprite file name and a destination name. Then the sprite is loaded so we can find out what mode it wants.

Shadow screen

A shadow screen is set up and the sprite loaded again. The screen is then switched to the default bank and the work begins. Finally, the Magic Mirror screen is saved to disc using the file name you put in at the start.

You will see from the listing that quite a bit of maths is going on. The biggest problem is getting the inverse tangent of the angle as the ATN function can only give an ambiguous quadrant.

When you have finished you might

You can say that again

There are three versions depending on what printer you have – see the order form.

For those of you with a Master and lots of time it should be possible to modify Listing II to work with your computer, although I have not had

time to try this. Basically you need to replace lines 50 and 350 with an appropriate LOAD command to fill your screen. Also the logic of lines 260 to 330 needs putting on the single line of the IF command and finally you need to remove references to TINT. However I can't youch for how long it will take to run.

So now you can baffle friends, form secret signs and generally have a Magic Time.

Requirements: Risc OS

ELL here it is at last, the first of the Last Ninja saga. Is it worth the wait? - I think so. First the really good news: This isn't a straight conver-

sion from the 16-bit formats so you get the whole screen for the graphics

and 256 colours.

The title screen is really nice and the menu page fairly simple. You'll have to check out the full details about the controls in the manual which is the inside of the inlay card in usual Superior style.

In case you've never come across The Last Ninja before here's a brief summary of the story so far... You are a ninja whose clan has been wiped out by the evil Shogun. He

coveted some scrolls used in a special ninja ritual of your clan and stole them after killing almost all the brotherhood in a fiendish trap.

As the only survivor it's your duty to take revenge and recover the lost scrolls, so you enter the lair of the wicked Shogun and begin to deal with his minions.

The main display shows the separate screens in an isometric projection. You can walk across these, keeping to the path.

Movement is diagonal so the keys - which can be changed - are A. Z. and ?. You can also jump using Alt. It's similar to Pandora's Box but if you've never come across this before you'll probably find it awkward at first, but it really is the best way of controlling things in this type of game.

I tried the mouse option but gave up almost immediately. I think you'll

Moving around you'll find the two niggles I have: As you move along you can position your ninja so that he's off-centre as he walks off the screen. But regardless of his position on leaving he's always on the centre of the path as he enters the new screen. It's not very important but it grated because the rest was so good.

well.

Rather more aggravating, though again not really important, is that the terrain you walk along is not logical and cannot be mapped without paths backtracking and crossing in places where they clearly don't. This seems

to have been deliberate to confuse mappers but just ends up being annoying.

-000

STAGE

Another barrier to movement are pits and water that you have to jump across. The pits aren't really a problem but the water is a different matter. You have to position yourself exactly right to jump halfway across to the mud banks and logs that are available to land on. Positioning is critical and failure is death.

Occasionally you'll meet the servants of the Shogun - now done up in ninja garb themselves - and a fight follows, although in some instances you will be able to avoid them. You use the same keys for fighting as for hold down Return. Return+" and Return+?

moving except that you

are attacking moves while Return+A and Return+Z are usually defensive - except you're when using shuriken or bombs in which case these keys mean

throw. The Shift key is used to rotate through the available weapons while Control rotates through the objects you currently hold.

When you start you have no weapons but you can soon find a sword and the bombs while a bo stick and the shuriken are available on Level 2. There are many objects to pick up in addition to the weapons. There's a fly, potion bottles, gloves and so on. Not every object has a use - but you can't be sure until you've played the game out completely.

Watch out for the buddhas and shrines. If you pray in front of one it may tell you what items you should collect on the level. It's quite important to know otherwise you may find you can't get past the guardian at the end.

Yep there's a big nasty to contend with at the end of each level. The solution is never a matter of fighting but it always requires some astute thinking. There's always some relationship between the nasty and an object you are holding. But you do have to be careful because accidentally blundering into the nasty will lose you a life.

The Last Ninja is a great game go silently and leave no witnesses.

Steve Turnbull

Price: £24.95 Supplier: Krisalis Software, Teque House, Masons Yard, Downs Row, Moorgate, Rotherham S60 2HD. Tel: 0709 372290 Requirements: Risc OS

VERY four years the computer games market responds with a new Olympic bid of its own. The most likely contender on the Archimedes is Quest for Gold coded by Tony Love from Teque, published by Krisalis and promoted in a special Olympic Challenge by Acorn themselves.

Those of you with PC, ST or Amiga buddies can wave this game under their noses too as it is basically the same game due to be published by Psygnosis. The only difference is that where the Archimedes game features the top British track and field athletes, the other versions carry the name of Carl Lewis - a pity he didn't qualify for his main events.

There are two sections to the game and three ways of playing. You can opt for just the training side, take your squad from training into the stadium and waggle your mouse to victory or you could just play the arcade section.

The support of such top notch athletes such as Fatima Whitbread, Dalton Grant, Colin Jackson, Linford Christie, Steve Backley and John Regis is not just a gimmick as all through the training section you'll get hints from them on the best way to

approach training - these are applicable to the game and to real-life competition.

... viva España

You are the trainer and it is your job to manage the squad to success, so ignore this advice at your peril. Each athlete has four attributes: Agility, speed, power and stamina. Events require different combinations and various training techniques enhance different attributes. For

instance hollow and repetitive running increase reaction time and speed.

Up to four trainers can play at once each choosing a different country on a very nice menu screen. The database holds details on 17 countries and 170 individual athletes.

The training option is educational because it follows real sporting practices. The dangers of over training

> are apparent and you are given statistical charts and profiles to let you see the progress of your olympic team.

If any one of your athletes doesn't rank at least 30 per cent in any attribute they'll fail the medical examination and won't be able to compete. This is a simulation.

You are given five weeks to train the members of your team to peak performance and make the final selection for each event. If you have opted for just the training side the computer will take over and the events will run solely on your earlier training techniques.

Arcade-only players are presented with a ready-trained squad all with average statistics. Your team won't reach world class standard but it's a good way to practice your mousewobbling technique.

There is no keyboard option and if you are too vicious with the mouse you'll find it working against you, so skill and technique are what's needed. You can also just sit back and watch a demo version.

There are two ways to control your mouse: Speed or rhythm. The first is a matter of wobbling your mouse as fast as possible - it's the changes in direction that count.

The second requires you to time your mouse button presses accurately in line with the gauge on the

screen. I much prefer the wobble method even when you have to add mouse clicks to throw or jump at the right time.

The graphics are rather good. A standard camcorder was used to shoot the athletes in training, the frames were then digitised and the game sprites designed around them. The movement is superb and gives a very realistic feel to the arcade section.

There are five events to compete in: 100m, javelin, 110m hurdles, high and long jumps. To get to the final and a chance of the medals you'll have to qualify.

You'll have four athletes to run, jump or throw against. The qualifying time or distance and real-time scores are given on screen and you must qualify in all four heats to get to the final. An arrow shows which competitor is yours.

Initially you're working against either the clock, a height or a distance, rather than against the other athletes. It's just that the number you have to beat gets harder in each

There is an action replay after each running event too - this can be quite embarrassing. Take a look in the outfield and you'll see a lot of other things going on, though what that woman is doing with those bottles I'm not quite sure.

Once you get to the the finals - if you've got your training regime sorted out - there are some enhancements in the running especially if you are competing against your fel-

low team members. For example, if you had three squad members in the same final, there would be three versions of the same race. The first runner will compete with the other attributes of his fellow team mates show-

The second and subsequent runners compete against the recording of the previous players. This is quite exciting and the digitised sound of the starter and gun create quite an atmosphere especially is there are a few of you playing.

As sports simulations go this one is very impressive. The management side is especially good and interesting and informative even for nonsports fans. All in all this game is a must for every couch potato who can now get the gain without the pain.

Pam Turnbull

Game Maker's Manual

...the truth at last

Supplier: Sigma/Wiley, Baffins Lane, Chichester, West Sussex PO19 1UD Tel: 0243 775878

HE User Guide supplied with the original BBC micro was an excellent tutor/reference manual for all users, irrespective of programming competence.

The same cannot be said for the large tomes supplied with the 32bit machines which, unlike the former, provide little in the way of helpful example listings.

Because of the complexity and architecture of Risc OS it was hardly surprising that some topics were only covered perfunctorily - such as sprites and graphics. New owners,

like myself, were left wondering how to deploy the wonderful sprites, designed using !Paint, in their own

Now help is at hand in the form of Archimedes Game Maker's Manual by Terry Blunt.

This has to be the definitive guide to manipulating sprites using Risc OS via simple calls from Basic and it is packed, crammed, nay verily stuffed, with easy to understand and comprehensive listings, the majority in Basic thankfully.

That's just for starters: Remember this is a game maker's manual. Having discovered how simple it is to initialise sprites and plot them - how easy it would have been for Acorn to explain it, as opposed to providing oblique references spread across half a dozen manuals a foot thick.

It's all here, from scaling sprites to parallax scrolling, collision detection in many forms, wire frame drawing manipulation, in fact everything you always wanted to know about making games on the Archimedes but were afraid to admit you hadn't a clue.

The book starts off with some general dos and don'ts when it comes to writing games and how to plan one from inception, all the time providing a number of different solutions to every problem.

All types of games are explored from shoot-'em-ups and Breakouttype games through arcade/ adventure, strategy, platform, puzzle, role playing - it's got the lot.

The ingredients necessary for these type of games are discussed

Archimedes

Game

Maker's

Manual

Terry Blunt

separately, and sensible suggestions are made when it comes to trading off speed against playability for example. All the commands to enable anyone to use bank switching, screen scrolling or anything useful are for the first time anywhere - explained to the full.

At every stage example listings are provided and. although

always minutely described, their quality renders any further description superfluous. There's none of the familiar "I haven't provided an example here as you should now have sufficient knowledge..." nonsense here.

There's no trial and error either, it's all done for you which is how it should be. The book continues like this for its entire 275 pages revealing astonishing hints and tips by the cartload.

The example listings are superb and form the main part of the manual while the last few pages contain handy sprite calls, plot codes and mode resolutions and the Index. The best 40 listings from the book are available on disc as an option.

If, like me, you thought the chapter on sprites had been lost from the Archimedes User Guide well fret no more. I've found it and I'm using it. So if you want to know how to use the Arc's graphics capabilities and sprites to full advantage and make better games, buy this book now. It's the only one you'll ever need.

HAVEN'T enjoyed an adventure game as much as this since Pandora's Box. It's a ladders and levels challenge with puzzles, traps, great music, graphics, scrolling and just the right level of difficulty. Brilliant.

of difficulty. Brilliant.

Richard Walker has made a very nice job of the conversion – I look forward to seeing what he has done with Populous. The introductory screens are very nicely put together and Nation XII's Into the Wonderful is a very nice piece of music with sampled voices thrown in.

The polish is what you expect from Krisalis and although the game is not original in concept it is good fun, time consuming and addictive.

Mythical gods were always a strange breed and those in this setting are no different. They have laid down a challenge – the one who succeeds will join their pantheon and gain immortality. That's you –our hero, bronzed, muscled and unflinching.

It would appear that a legendary city built as a plaything by the gods has been lost, stolen by forces of darkness and watched over by four great guardians and their minions. Rid the city of the invaders and the prize is yours.

You enter the city to explore, join battle with aliens, gargoyles, harpies and apemen – among many more – and do a spot of shopping.

The four levels are the city, temple, labyrinth and underworld, each split into three sections called worlds. You must exit each world by finding the key and the door that it fits.

Killing the beasts of

Gods

...one of the chosen

chaos reveals a treasure, food, a key and so on. Shields are very useful, as

is extra speed and improved weapons.

Keys open doors.
Closed trapdoors
and switches
sometimes need
keys, or they
may just require
you to discover
the correct
sequence to reveal
a secret passage or
help you escape certain death.

Much of the adventure is trial and error and you have three lives in which to complete it, although careful exploring will find things to give you more energy or even an extra life.

As you enter the third world you'll meet up with the shopkeeper, who pops up in a similar way to that visitor into the humdrum life of Mr Ben.

He offers you a range of potions, weapons, energy and protection, but all for a price – now you know why

you should have collected all those crystals.

purchases you are unceremoniously dumped
back into the adventure. I was immediately mugged by
some alien types
and immediately
impressed by my
new fire power.
As you progress

through the worlds

When you have made your

and levels the monsters
you encounter become
more imaginative and that old
D&D principle that statues always
animate is borne out yet again.

If you're lucky you'll also meet the thief – a drone of a creature who can be used in quite a callous way to achieve your ends. But beware of the apes, they are a bunch of magpies who will steal keys and anything else not in your pockets. This can end your career as a god before you start if they pinch the world key at any time.

The puzzles are nicely put together and the difficulty level increases at just the right curve. Control is via

joystick or keyboard and the response is good – although I do wish that you could fire and turn at the same time.

Positioning is all important in

Gods and the teleport crystals are real life savers.

The clues are one of the nice details of this game. A question mark appears and as you run over it some scrolling text at the bottom of the screen gives you a hint or tells you what to do next.

A word to the wise though: Don't stop too long to read this as in my experience this is the cue for you to become submerged in all kinds of grobblies – after all that is what the F1 pause key is for.

The sprites are large, their movement lifelike – when you drop things they bounce – and the detail and smooth movement is just what is needed in this kind of arcade adventure.

I would have liked a save option, but there is a password system builtin for each completed level.

One aspect which the original Bitmap Brothers spent some time on was zoning. It can be very frustrating to have negotiated a very tricky move through some hazards to then die and find yourself stuck five or six screens behind where you finished. In Gods you will go backwards but not as far in some similar games.

Classic adventures of this kind require a suitable monster at the end of each level. What does Gods give you? Why spoil the fun, you can work that one out for yourself. Definitely recommended.

Pam Turnbull

If music be the food of love...

USIC has always been very popular on the Electron, BBC B, Master and Archimedes. The 32-bit range has been able to purloin some ideas from the Amiga side of the tracks and the results can be quite staggering.

Pre-eminent among the very good players in the PD must be STracker, but this piece of code now has a new contender for top slot in the form of ProTrack.

Written by BASS members Gil Damoiseaux and Bernard Jungen this program lets you play music from the Amiga's ProTracker – a more recent version of the Amiga's SoundTracker – and from the Archimedes' Tracker, but in an enhanced form.

Control is similar to using a tape player with information about the current track such as the name of the instruments, length of the score, number of patterns and so on. You can also configure the program to

Teri Paul takes
a bite out of
the music side
of the Acorn
PD world

your own preferences.

A ProTrack file uses effects which are all supported on the Amiga and gives a higher quality sound when the samples are played on the Archimedes. ProTrack is easy to use: Just double-click on the icon, double-click on a music file or drag it to the ProTrack icon on the iconbar.

There are four channels of stereo positions with eight arrows at the sides or you can use one of the three preset positions: Centre – all channels are centred, Amiga – the same setup as the Amiga, or Full –

All the information you could ever need?

channels 1 to 4 are full.

Tracker and ProTracker implement some sound effect commands differently, so BASS advise that you keep all your tunes in their original format. The ProTracker format for four voices also uses less disc space.

ProTrack will try to reconstitute the maximum tune data without alteration but some data may be lost or may have been modified by the conversion and/or by the user using Tracker.

Sibelius to samples

David Radford has been working on a selection of programs to enhance the use of samples. His Compress v1.15 allows you to compress and decompress Armadeus sample files. The compressor is actually one of a suite of programs available in the PD – the others are Player, CompUtils and SoundCtrl.

Player lets you play back the compressed samples without decompression in single or sequence

format. Anyone who has dabbled with sampling will realise just how space consuming the results can be – on average a one second sample takes 20k of memory!

Compression and decompression are mainly accomplished in the background although removing the status window will speed things up somewhat. This window gives you information of the current files as well as options to flag which affect the compression.

SoundCtrl is a more general package which gives you access to what is going on with many music or sampling packages. You can control and alter most of the parameters as well as monitor the sound system.

This leaves CompUtils which is really a programming tool giving additional support for anyone who wants to add compressed samples to their work. In particular a piece of code called Expand uncompresses samples produced by Compress. Do remember the courtesy of contacting

Keeping control of your sounds

David before you use any of these programs in a commercial product.

BBC selective

A new utility also from David Radford, BBCSelect, allows you to doubleclick on a BBC Font file without the messy command window appearing. It's for people with an Archimedes and a large number of BBC fonts, who can't remember what they look

Joint BBC and Archimedes house, Mad Rabbit Systems, are now being managed from Merseyside and they are the only official stockists of The Yorkshire Boys' products.

Next from this tribe is Retribution. a demo which has taken about 14 months to code. Available as shareware - the registration fee is £5 - it contains a game. As this is the second such demo in as many months to follow this format, I wonder if this is to be the trend?

Good and bad news

Following on from last month's story that Duncan Webster was folding 8bit Software, comes the news that DG Shimmin has taken over the library. You can get a free copy of issue 20 of the catalogue if you write to: 8-bit Software, 1 Oakwood Drive, Heaton, Bolton BL1 5EE with a formatted DFS DS 80 track disc and return postage and packing.

But just as I heard the good news about 8BS, Morry of the Moribund Hedgehog let me know that he has now closed MHPD as the demand

was too much! Oh well. To finish on good news there is Dan Wilson, the man behind BrokenARM Music. He actually writes music for the Archimedes - rather than downloading Amiga files - but he has kept quite a low profile as his work was never released into the PD. This is about to change.

Dan is about to admit some of his music into the PD and he is also working on the feasibility of setting up a PD library dealing with quality native Archimedes tracker music.

Despairing of the missed music capabilities of the Archimedes over the Amiga is he is also working on some hardware projects to rectify this with Vertical Twist and on his own. These won't be PD but should enhance the music power of the 32bit over the 16-bit machines.

Mastering DTP

Leaving both music and Archimedes behind, John Farmer is distributing a desktop publishing package which he wrote using Andy Nibb's Aristotle windows rom for BBC machines.

PD Publisher is a rather nifty piece of programming but it is unfortunate that it is only available for BBC Master owners. It also requires four banks of sideways ram to be both empty and enabled.

Once it's loaded you are presented with a choice of background and text colour. The main program is controlled through five icons for text, tools, converting clip art, changing the colours and saving your work.

The pointer is moved with the

cursor keys and Ctrl is used to simulate the mouse click to select an option - it is also accompanied by a pling noise.

Starting with text you can decide the height and width of your purple prose, but the documentation warns that if you choose too high a number the entire program will crash. Not the most friendly of results but at least you've been told.

You type in the normal way with Return fixing the text in place. Your next bit of text must be positioned with the cursor before you start typing. This can be a little fiddly, but it's easy enough to master. If you don't fix the text before you return to the menu screen, you'll lose it.

What makes DTP special is the

ability to illustrate or incorporate drawings with text. PD Publisher v2.15 lets you use clip art found in the PD or from such commercial DTP packages as Wapping Editor and AMX Publisher. This can be positioned and repositioned as you want. However, if you prefer you can make use of the basic drawing facility

HIVER me timbers, splice the mainbrace and keel-haul those pesky ducks! Yes, summer's here and Rom has gone all nautical. Trouble is he's making waves and Ram is sick of Rom splashing it all over. So Ram has devised a computer version of the maritime mayhem that Rom is causing: Battleships.

The action takes place between two opposing navies - yours and the computer's - represented by blocks placed on two grids. The port (left) grid is where you arrange your own fleet and the starboard (right) grid is where the enemy hides its fleet. Whoever sinks the other's fleet first is the victor.

Firstly you are invited to arrange your fleet which consists of three cruisers (1x2 blocks), two destroyers (1x3 blocks) and a battleship (1x4 blocks). Use the cursor quays - sorry, keys - to move each ship and Shift to alter the ship between horizontal and vertical. When you are happy with the position of a ship press Z to anchor it in place.

Now repeat the process for the

When it's your turn move the yellow box on the Beeb fleet grid to where you think the computer has hidden one of its ships and fire with Z or Return.

If you miss, a yellow cross

NEFERAYOWN

ABANDON

denotes where you have fired and you cannot fire there again. If you hit something you'll hear a ripping noise and the square will turn black with a yellow border.

What you've hit remains a mystery until every part of it has been struck - only then will it be sunk. Each sinking is accompanied by a heartwarming arrrr! and sounds of destruction.

When all six ships are sunk that fleet has lost and you can start again.

Unlike Rom the program is reasonably intelligent when it comes to destroying your ships. Like you it first fires at random until a hit occurs. From then on fire will be concentrated around the first hit until a further hit occurs.

The computer will continue to fire in a certain direction until either it misses, in which case a different direction is tried, or the ship is sunk.

Or put simply, if the computer scores a hit it's Abandon ship! Women and children first! mode. After that it's back to a random search of your fleet and a repeat of the above process.

A substantial part of the program has been written using GOSUBs as well as procedures see the Duck's Brig. This is to demonstrate the usefulness of Gosubs when you may feel using a procedure tantamount to overkill.

The only drawback with Gosub, and its naughty cousin GoTo, is that there is no parameter passing. Keeping track of where you are in a program can get to be a problem although a hearty helping of REM statements should help titanically.

 Well, time and tide wait for no man so our two buoys, Rom and Ram, must weigh anchor, take their bows and set sail for the sunset. Fifteen men on a dead man's chest, yo ho ho and a Battle with

The Safe

Scientist

Finding ways to keep your house at an ideal temperature is an ongoing problem for researchers. Now you can carry out your own experiments

Anyone for draughts?

2:PRINTTAB(2,24)"NO DRAUGHT EXCLUDERS

YOU'RE probably in the middle of your summer holiday by now, enjoying the sun, sea and surf. We scientists, though, need to keep ahead and start thinking about keeping warm in the winter.

So this month's program is about trying to prevent houses from freezing up in the winter. Mind you, it works just as well for keeping them cool in the summer.

The idea is very simple. A house is being kept at a

nice, steady 20 degrees Celsius when the heating fails. The temperature inside will probably start to drop, particularly if it is winter.

When you run the program you must first enter the season of the year. The computer will work out a suitable set of day and night temperatures for that season. This has a random element, just like the real weather.

Then, the simulation starts with two hours of time passing by in just a few seconds. Every two hours you get an update on the temperature inside and outside the house. You can see the effect

of installing a number of different types of insulation. First of all, you can fit draught excluders around the doors and windows. Then you can put down some insulation in the loft. You can also fill the wall cavity and install double glazing – each at the press of a key. You could experiment to find out what seems to

You could experiment to find out what seems to have the biggest effect. If you are keen on research you could try to find the cost of fitting each type of insulation. You may be able to tell your parents about how to save some money, and earn extra pocket money.

Or you can play the program as a simple game. Select winter and try to keep the house above freezing point (zero degrees). You can rapidly install insulation if it is cold outside, and just as rapidly remove it if the temperature rises.

This is a big area in science. As is often the case with my programs you will be involved in an investigation with no single right answer to find. You will also be learning about energy conservation and, perhaps getting some financial awareness as well.

• That's got this article well wrapped up. Next month we'll reflect on the world of mirrors.

The Pineapple Colour Video Digitiser Big Price Reductions!!!

Since we originally introduced the Pineapple Video Digitiser almost two years ago we have not needed to modify the design of the hardware in any respects. However, the software has been continually improved to the point where the quality and quantity of software supplied is second to none.

Now, because of the large number of sales, we are able to offer a big price reduction which makes colour digitising available to everybody. Also, because we are so confident that you will find the Pineapple Digitiser superior to anything else available, we are happy to offer our Digitisers on 7 days free approval so that you can see for yourself the power of our software.

Some of the features of the Pineapple Digitiser, many of which are still exclusive are as follows:-

- ☆ 16 bit true R G B storage in 256k ram.
- Sequences of frames of a moving picture can be grabbed and stored in memory. Up to 30 frames in a 1 mb computer, 200-300 frames in larger computers!!
- ☆ Full screen area normally viewed on a TV set is grabbed in full.
- Images may be processed using our own high speed software routines or Acorn's ChangeFSI
- Quite simply the most powerful and easily used zooming and cropping routines available with any processing package.
- Two independent multitasking applications supplied. Non-multitasking software allows digitising without windows for adding still images to videos.
- Our hardware does not use interrupts so other applications run at full speed.
- à Latest software includes built in print routines. (Existing owners please contact us for a free
- Hard locking synchronising circuits for best results from video recordings.
- Available in a stand alone box for use with A3000. In this mode it can also be used with 300/400/500 series computers only occupying one expansion slot.

Virus Protection Scheme

Viruses are unfortunately now becoming a serious problem on Archimedes computers and at the present time at least seventeen families of virus have been isolated and each family has different variant strains. The effects of the viruses vary from being fairly innocuous messages to potential loss of data and program files. Network systems can be most seriously affected , but some viruses can easily spread even on floppy disc based systems.

The virus protection software -IKILLER- developed by Acorn Computers, from the basis of Pineapple's virus protection scheme. The software will be continually updated as new viruses are discovered and all registered customers will receive updated versions on a regular basis.

Don't wait until you discover that your Archimedes has caught a virus!! The cost of the virus protection scheme is just £24.00 + vat for one years protection. Low cost School and County site licences are also available

Pineapple PAL Coder

The Pineapple PAL Coder is a stand alone unit which provides a coded video signal which can be recorded onto a VHS recorder or fed to a monitor with coded input.

The unit is inserted in the lead to the R G B monitor and provides an R G B output for the monitor together with a full specification PAL coded output. A second version provides a standard coded output but also provides an S-VHS output for improved quality recordings on S-VHS recorders.

> Standard Version S-VHS Version

£69.00

BBC PCB Designer

The full auto-route facilities are available even on an un-expanded model 'B' computer. An Archimedes version is available as a free upgrade to existing BBC owners or at a similar price to the BBC version.

'PCB Auto-route is remarkable. No similar software comes near the price.

Printer posers

I HAVE just purchased a Canon BJ10-ex bubble-jet printer, which I am assured will work with my son's BBC B. However, despite an appropriate lead – 26-pin to 36-pin centronics – from Tandy, both of us are unable to get the computer and printer to communicate with each other. Is this an irrevocable marriage breakdown, or can we save it? – V.G. Hughes, Eccleshall, Stafford.

• First the good news. Yes, the BJ10 printer can be used from the BBC model B. The bad news is that you have been sold a duff connector. Tandy are notorious for not knowing the difference between their own computers and the BBC.

The problem is with the busy and acknowledge signals. Tandy systems use the busy line where the BBC uses the acknowledge line. Most likely these signals have been swapped in the cable you have. On a centronics connector busy is on pin 11 and acknowledge on pin 10 and you need a signal on pin 19 into the BBC.

No hardcopy

I HAVE a BBC Micro and I am using Mini Office with a Victor daisy wheel printer. Unfortunately, I am experiencing difficulties in getting the printer to respond when using the wordprocessor and database.

I can print the spreadsheet and have no problems with Wordwise Plus, but with the other Mini Office applications when I try to print the paper goes back and forward, stops and prints one line. – R. Lewis, Clitheroe, Lancs.

 Mini Office is really designed for a standard dot matrix printer and as such uses its control codes to product the best results. Unfortunately, these codes are being misinterpreted by your printer or ignored.

Mini Office has these commands built-in to make it much easier to use than Wordwise but in your case it does have the disadvantage of incompatibility. I'm afraid there's little that can be done.

Revitalising the Compact

IS IT possible to implement the standard Compact 3.5in drive as a second drive on my A3000? I have recently upgraded from my somewhat defunct

PROBLEM

Mike Cook helps with another selection of technical questions

Master Compact to a dazzling BBC A3000.

If so what extra components will be required, will my desk resemble a plate of spaghetti or can the drive be fitted into an existing housing such as those sold by Pres?

Are there any other bits from the Compact I could use – chips, serial port and so on – or should I convert them all into earrings for my girl-friend? – Simon Dent, Bath, Avon.

· Electrically it is possible to fit your

old Compact drive into the A3000. All you need is a lead that contains another IDC connector in the centre. Then you need to change the identity of your original disc to disc 1 by changing a link.

Finally you need to remove the bus terminating resistor pack from the internal drive. As you have hinted the real problem is where the drive is to be fitted.

You can opt for the spaghetti option, fit it in its own case or go for a

On the agenda...

- Compact games
- Combining an A3000 and Electron
- Adding a Compact

Monitoring the drive on a Master 128

LOOKING through some old copies of *The Micro User* I became interested in the disc drive monitoring unit featured in the Body Building article in the April 1990 issue.

I have a BBC Master 128 and a single-sided 40/80 switchable disc drive and I was hoping to connect one of these monitoring units to my disc drive. Unfortunately, I don't know much about electronics and I am unable to understand how this connects to my disc drive.

Neither am I sure of how to get the 5v to power this as my disc drive uses auxiliary power output and I have a mouse connected to the user port.

I would be very grateful if you could tell me how I could make such a unit which includes LEDs to show write protect, direction, writing, track zero, head position and whether my disc is switched to 40 or 80 tracks.

Finally have you designed one of these monitoring units for printers? If you have could you send me some details? – Edward Rees, Thronbury, Bristol.

Body Building articles are written for a very wide audience and as such are more demanding than some other features. Many people are not happy about delving inside their computer and so many projects are designed to be simply plugged in.

Occasionally the only way to perform a project is to delve inside the computer and that does require some skill

with electronics. The April '90 article on the disc monitor was one such case and on these occasions the articles are written so as not to tempt absolute beginners to mess up their computers.

For example, the logic chips I used did not show any power supply connections as I expect anyone competent enough to tackle that project will know enough to do this themselves.

Therefore, what you need to do is to first become familiar with electronics and construction and many good books can help you with this. Then tackle some of the more focused Body Building projects. An SAE to Musbury Consultants will produce a list of these.

As to the disc monitoring article, I do say how to tap into the disc signals in paragraph three on page 82. You can easy get a power supply from a splitter plug from the auxiliary supply or by tapping into the 5v line that goes to your drive. Alternatively, if you are mounting the lights in your disc case you can get the power from the drive board.

With regard to a printer monitor, I am not sure there is anything useful to monitor here. All you have is eight data lines, a very fast strobe pulse and an acknowledge line. I suppose you could connect LEDs to the data lines but the transfer is so fast that they would not appear to flash but to dim slightly when the data was being sent.

racking system like the Watford Ultimum. The rest of the chips are of

Some years ago when the original operating system on the model B was updated we ran a competition about what to do with the old chip. Out of the printable replies, a toast rack for Cindy proved to be the winner.

Combining technology

I HAVE only just upgraded to a BBC A3000 after being an Electron user for several years. I was wondering if it is possible for me to connect my old Electron AP3 to my A3000 as a second drive. If so how and how much will it cost?

I am also interested in adding a joystick to my A3000 but I am unsure of the options available. For example, can I add my old Electron Voltmace Twin joystick? - Geoffrey Willis, Bournemouth, Dorset.

 The AP3 is a combined disc drive and interface, and all you need to use it with the A3000 is the actual drive. However, most of the Electron disc drives were single-sided holding about 300k. The A3000 really expects a double-sided drive. Although it will successfully read single sided discs, it can't format them.

This means that you would only be able to use half the disc and only those that had been formatted on the Electron. In short, it's probably not worth the effort of fitting the drive to your computer.

As to joysticks, you'll have noticed there is nowhere on the A3000 to plug one in. You can get an input/output podule fitted and this indeed will have a socket for your joystick. However, most games will not recog-

nise a joystick fitted here although there is nothing to stop you writing your own software.

Most commercial joysticks for the 32-bit computer such as the Voltmace Delta Cat, plug into the mouse port and require a software patch to be loaded. As you can imagine the hardware to do this is very different from that needed on the analogue port of the 8-bit machines.

Sounding out the Electron

IN THE May issue of The Micro User you ask if any reader could help P. Wright from St Neots in Cambridge. He needed information on a Sound Expansion Board for the Electron.

Project Expansion from Fareham in Hants produced one which was advertised by Slogger in December 1987 in Electron User. It was continually advertised until July 1988.

I know this because I have every copy of Electron User from August 1985 to its regrettable demise in July 1990. The company does not exist in Fareham any more but I have some recollection of the people who developed the board joining Slogger. Despite a long search I have been unable to confirm this. I hope that this will be of use though.

As you will have gathered I was the proud owner of an Electron until

Despite so-called industry standards it's unusual for peripherals and computers to work together first time. This can cause a lot of heartache if you've just spent several hundred pound and things go wrong.

Always try to see any peripheral working with a computer that's the same as yours.

October 1989 which I upgraded to a Master 128. The Electron is still in service with one of my grandchildren.

Since obtaining the Master it has been upgraded by adding a 3.5in disc drive to the original 5.25in drive and until recently I have been delighted to find that the 3.5in disc version of games and utilities for the Compact all worked without any problems. That is until I obtained a special offer twin pack of Barbarian and Barbarian II in 3.5in Compact disc format.

Barbarian loads OK but does not seem to run properly in Combat to Death with two players, but runs a never-ending game, clocking up scores of over 999,999 then starting at 000000 again. The joystick option doesn't work either.

Barbarian II loads to the option screen but on selecting an option it starts loading for about two sectors, prints four characters on the screen and stops loading.

I returned it to the shop and it was exchanged, but the replacement behaves in the same way. Have you any idea why Compact software should not run on a Master. Is any fix available like the Acorn Convert of which I have version 10 and 03? - J. Darlington, Locksheath, Hants.

 Thanks for the information regarding the Electron sound system. As to the problem of Compact software not working on a Master this can be due to two reasons. First of all the joystick on the Compact was in fact a digital model that in effect connected to the user port whereas on the Master it was an analogue joystick connected to an A/D converter.

The system software made the ADVAL command work the same on both machines but most games talk directly to the hardware for the speed and hence the incompatibility. This also applies to certain functions like screen memory, operating system calls and timers. If everything is done through Acorn approved calls there should be no problems but these are just too slow for most games

Video ULA chip

I HAVE a BBC Model B that has recently failed. When I switch on it usually responds as normal and then puts rubbish all over the screen apparently random characters in various colours, some of them flashing.

It doesn't respond to the keyboard, the Caps Lock and Shift Lock lights may be lit and the symptoms are not cleared with Break or Control+Break. Sometimes at power-on the cassette motor light comes on and I can hear the relay clicking.

The machine is an Issue 3 with Basic 1, OS 1.2 and Acorn 0.9 DFS. If I can repair it fairly cheaply I would like to but would prefer to save serious money for the A3000 which I also own. - Anthony Hilton, Leeds.

 What's most likely gone is the Video ULA chip which is easily replaceable and you can get them from Watford Electronics for £14 excluding VAT.

VGA monitoring

I WOULD like to use my Compaq VGA Monitor (Model 420) with my Archimedes A300. Is this possible?

I wondered whether changing the plug and re-configuring the desktop would do the trick. However, on my first - and only - attempt it did not work. Have you any ideas? - J.F. Riby, Ebberston, Yorkshire.

 The problem with using a VGA monitor is that it requires a separate line sync and frame sync signal, whereas the A300 produces a single mixed

Therefore, what you need is a sync separator of the sort described in my Body Building article of May 1990. However, VGA monitors do not work at the standard line frequency so you would be limited to a few multi-sync modes on

the A300 like Modes 25 to 28. This should be no problem for most Risc OS compliant desktop software but most games and specialist software has a habit of changing to modes like Mode 15. Normal monitors and multi-sync models can cope but not VGAs.

O FAR we've seen how you can use DTP to create documents to your own design. Fine, but if it went only as far as that it would be pointless because no one else would ever see the fruits of your labours.

In this final part of the series we look at printing and duplication - the former for one good copy of the image on paper, and the latter for multiple copies of that.

There are two main sorts of printer you can use for output. The first is the band printer, typified by dot matrix and inkjet/bubblejets. Their advantages are that they are reliable, relatively inexpensive to buy and run, and can give quite good quality results. Inkjets and bubblejets are becoming increasingly popular as alternatives to lasers.

Band printers do, however, have disadvantages. They can be very slow and may give streaky results because each page is printed as a series of individual bands - hence the name.

A new dot matrix ribbon gives its best for only a

Always discuss your needs and intentions and what you should be providing - with your chosen printing firm, because as a rule they prefer to give advice beforehand rather than have conafterwards.

short time, after which the printing starts to go grey. The 9-pin dot matrix models are cheaper than the 24-pin but correspondingly are much slower.

It isn't all that expensive to buy new ribbons, but if you do a lot of printing you can reink them several times before the cloth wears out

- The Micro User is running a special offer on a ribbon refresher spray.

Inkjet printers don't have ribbons so the quality stays very good until the ink is finished and they are much quieter than the dot matrix ones.

The other type is the page printer. This outputs whole pages at one time straight from computer

Finishing the iob

memory and the only examples are laser printers.

The Archimedes LaserDirect was the first machine to provide a higher resolution than normal - 600 dpi rather than 300 dpi - at a price within the reach of normal individuals - around the £1,000 mark.

The advantage of the Archimedes and the so-called direct drive printers is that with the fast ARM processor and 2Mb or 4Mb of memory the micro can run ahead of the printer, store several pages in memory and then return control to you while the printer finishes off. Lasers, however, are fairly expensive to run as well as being much dearer to buy.

The different outputs from these printer types are shown in Figure I, with an enlargement of a sample letter printed with each. Samples of an area of tint are also shown, demonstrating the different apparent densities of the same grey shade from different

Printer drivers

Just connecting your Archimedes to a printer isn't enough - you need to tell the micro what sort of printer it is.

This, basically, is what a driver does. There are various general or specialised drivers which correspond to the different types and makes of printer

The four standard drivers supplied by Acom are PrinterDM, PrinterIx, PrinterLJ and PrinterPS. The first three are for the band-printer types of dot matrix, Integrex inkjet and Hewlett-Packard LaserJet.

The fourth is a PostScript driver and converts the document to a form that can be understood by any

printer - including very high-quality professional ones - that use the page description language called PostScript.

The most important thing about a printer driver is, of course, to make sure that it is set up correctly. For the sake of simplicity we'll look at the Acorn dot matrix options, though the principles hold good for other types.

Loading the PrinterDM application - the current version of all Acorn drivers is 2, available as an upgrade from your dealer - installs the printer icon on the icon bar. If you click Select on the icon you call up a dialogue box and from here you can change the options that relate to different dot matrix printers.

You may also be able to alter the resolution of printing by clicking on the Printer type writable icon - some types have more than one entry, allowing you to choose low resolution for draft output.

This is much faster and saves ribbon wear, though not paper and means that you can switch to high resolution for the final high-quality printout.

You can find out more about the printer options by reading the Help file in the application's directory, reached by holding down Shift while doubleclicking on the application's file icon.

Clicking Menu on the driver's icon bar icon calls up the main menu, with options for choosing the major class of printer - Parallel, Serial, Econet, NFS or File. There's also another for you to define up to four preset page sizes which you can then save so they load up every time with the driver.

Once you've set up the printer driver you can choose Quit from the main menu. This has three effects:

The icon disappears from the icon bar

Figure I: Outputs from various printer types, shown enlarged - dot matrix (60 and 180 d.p.i.), inkjet (150 and 300 d.p.i.) and laser (300 and 600 d.p.i.)

The most important thing about a printer driver is, of course, to make sure that it is set up correctly

 The memory used by the driver application is released and can be reused

 The driver module will still print out quite contentedly but the settings will be fixed until you reload the application.

Camera copy

Camera copy is simply a flashy name for the image that will be used for duplication. Mostly it will be on paper, though photographic paper is used in professional work.

If you're making the camera copy yourself take some care in preparing it to get the best image, because even the finest photographic equipment can't reproduce well a poor-quality original.

The first thing is to match the paper to your printer, even by trial and error. Dot-matrix printers need a slightly absorbent surface to avoid smudging, whereas inkjets give the best results with slightly shiny paper, although you may need to be careful to avoid smearing while the ink is still wet.

Laser printers work well with most photocopier papers and the advantages of special laser printer paper are debatable.

Whatever your printer, maximise the contrast by using as white a paper as possible - the thin fanfold variety for draft dot matrix work is not good enough. Giving your dot matrix a spring clean, and using a fresh ribbon will help too.

To improve the quality of your document beyond your printer's normal capabilities, print at a larger

size than the finished document needs to be and ask the person doing the duplicating to reduce it in proportion.

For instance, if you are preparing an A5 page - 148mm by 210mm - you can print it at 141 per cent size on A4 paper -210mm by 297mm - ready for reduction to 71 per cent during duplication.

What the reduction does is to increase the effective resolution of the image - but watch out for tint areas because the dots might cause problems during reduction.

Impression and Ovation

have scale controls for use in printing, so you can choose to output your document larger than the actual size - you don't have to prepare it at an enlarged size unless you use Acorn DTP.

I make no mention of colour printers and with good reason. Printing and duplicating in full colour can be done from an Archimedes, but it can be a costly route to take.

Printing to file

Waiting for a dot matrix or inkjet printer to finish can be boring because most drivers tie up your micro while they are working.

If you have to prepare several documents, each with one or more identical pages, you can output the common parts to disc. All you need is plenty of

disc space, and preferably a hard drive.

We saw earlier that File is a class of printer. If you enter a valid filename - such as ADFS::0.\$.mydoc or :5.Poster.printout - into the writable icon reached via the File option, anything you print will be sent to that file as a graphic image with a filetype that corresponds to the printer type selected by the driver.

All you then have to do to print the file is change the class back to match your printer and drag the file icon to the icon on the icon bar.

Why bother with this? There are two reasons: Printing to disc is faster than to a band-type, and outputting from a file can be done in the background so you can still use your micro while it does

The technique leads conveniently into the subject of PostScript. Unfortunately there isn't space here to deal with its benefits, and a short description of how to prepare a PostScript document would mislead you into thinking it was always straightforward - it isn't.

It's almost the only feasible way of accessing the world of professional-quality reproduction from DTP on the Archimedes, and it's beset with traps for the

Duplication methods

There are duplication methods to suit all pockets and quantities. The simplest and the cheapest for small quantities is photocopying, which is usually charged at a flat rate per copy. The quality is good enough for very many uses and it's quick enough to

tracing paper overlay on each page describing the colours to be used.

The camera copy for spot colour should always be printed in black and each separation must have alignment mark - registration marks - to define the correct positioning of the colours.

Give due regard to the finished look of your document. For instance, the paper you choose is at least as important a design decision as any of the other work you did during the DTP phase.

Glossy paper is dearer but gives a cleaner, more precise finish with an air of quality. Paper colour and thickness play their part too - they are both defined by the sort of document you are producing.

Finishing

Finishing is everything that happens to your document after duplication. Depending on the document type it may be nothing at all, or it may take many steps. The main processes are folding, binding and

Folding can produce anything from a folded leaflet to a multi-page book, depending on how many pages have been put on to each sheet of paper during duplication. The folding is done by machines, so it's quick and accurate.

The various types of binding that can be used to make brochures, booklets and books are shown in Figure II.

Stapling is secure and durable, but side stabbed documents need a large margin allowance at the bound edge. Perfect binding, where the page edges are glued together, lasts a lot better now than it

used to.

Sewn binding, where sheets are folded several times and stitched together, is at the top of the range and costs proportionately more.

A nice cover for a brochure or a book is a good idea if you want to sell it. Use a thin card all card is known as board in the trade - and use contrast between the ink or inks and the board colour to attract attention. You can have the outside of the cover varnished or even plastic coated - laminated - for extra protection.

Some other sorts of binding can be done at home, such as the ring binding often used for software manuals. Or you may need special equipment, for instance the wire or plastic comb binding also used in manuals. Basically, the binding type is defined by the use to which the publication will be

Many offset litho processes use a paper sheet that is just larger than the final size so that the edges, which may get dirty and a bit rough, can be trimmed off to give a neat finish. Trimming is essential for separating the pages in a book after folding and binding but for a flat sheet such as a poster you can probably get away without it.

This lightning tour of printing, duplicating and finishing rounds up this series on DTP. It's really only the beginning of the story, as the rest is up to you and your creative talent. Now get publishing!

Figure II: Some different sorts of binding - stapled at the side or side stabbed, stapled through the fold or saddle stitched and perfect bound

be done on the spot. In most High Street print shops this is the only option available.

For larger quantities and higher quality you need to turn to a real printing firm who will use a photographic process to prepare offset litho printing plates that carry the ink to the paper.

This is a much more flexible and potentially more expensive procedure, though for large quantities more than 100 or so - it tends to work out cheaper than photocopying. However, it does take longer because of the extra steps involved.

With offset litho printing you aren't restricted to black ink as one or more coloured inks can be used. If you want areas of different colour on a page - known as spot colour - you can have it.

Just remember that for each different colour ink the firm will need a separate piece of camera copy - collectively these are called separations - or a

adfs::Winnie.\$.!Boot * adfs::Winnie.!Scrap.!boot adfs::Winnie.!System.!boot Run Run Desktop -file system:!startup

The basic system !Boot file

Organising your hard disc

Personalise your Clem Vogler and Steve Turnbull explore auto-booting from your hard disc

AVE you bought a hard disc recently? Did the machine you bought have one as standard? Or perhaps you're thinking about getting one?

Apart from giving you room to breathe a hard disc has the added advantage that you can run your favourite software from switch on but how's it done?

For the moment we'll just examine auto-booting with Risc OS 2 because Risc OS 3 has some convenient added features that complicate things enormously.

The first step is to create a !boot file for your machine. You do this from !Edit. Double-click it and then click Menu on the iconbar icon. From there move to the Create option and slide to the arrow. In the sub-menu that appears is a Command option, click this one.

A normal edit window appears but it will save as a Command file instead of a text file. Click on your hard drive icon and save the Command file currently empty - with the name !Boot in the directory window that's appeared.

The directory window should also contain your !System directory, the !Fonts directory and a !Scrap directory - if you don't have this one you'll find it on this month's subscription

Although the exact way you organise your hard disc is a matter of taste you may find the following directories

useful:

 Applicatns. This should contain programs like !Paint, !Draw, !Edit and any other complete document editor such as Impression, Ovation, Poster, Illusionist and so on. Any applications that can create and edit documents should be

• Library. This is a special directory which the Filer searches if it's asked to run a program but isn't given the complete path name. Some

Placelt can be very helpful

programs will put routines into the library so that they are easily accessi-

 PDrivers. It's handy to keep all your printer drivers together.

• Utilities. This should contain all the programs that perform a particular operation on a file. For example programs that convert from one graphics format to another, provide desktop facilities like backdrops, calculators, file compressors and so on. If you have a lot of utilities they can be subdivided into sections like DeskUtils, GrafUtils and so on.

You can then have other directories containing data and documents relating to your personal needs, perhaps one for correspondence, another for financial matters and so on.

Within the first !boot file you need to initialise the !Scrap and !System directories. All you have to do is click in the Edit window for !Boot then drag both !Scrap and !System and drop

them into the Edit window while holding down Shift.

What happens is that the full path and file name of the directories appear in the window. Now add:

.!boot

to each of the lines. When the commands in this file are obeyed these two lines force the !Boot files of !Scrap and !System to be executed and the directories are initialised.

At the bottom of the file add the

Desktop -file System:!Startup

and make sure there is at least one Return after the line. This command starts up the Desktop and forces another file of commands to be exe-

This file is going to be called !StartUp and located inside the

System directory. To get at the inside of the !System directory double-click its icon while holding down the Shift key. This will open up to reveal !Boot, !Help and !Run files as well as !Sprites and a Modules directory.

Click on the Edit icon on the iconbar to create a new text file and immediately save it into the !System directory with the name !StartUp. The purpose of this file is to initialise various utilities and applications and perhaps run some of them.

When you double-click a sprite file and the Filer hasn't yet seen !Paint all that happens is that the first sprite of the file is drawn on the screen. This is not very useful and it's just as annoying to have to remember to open your applications directory before double-clicking the file.

In the case of non-Acorn applications the problem is even worse because documents for programs like Easiwriter and Ovation will appear blank as the filetype icons haven't been loaded into the sprite pool.

To fix this problem drag the icons of all the applications you want to initialise into the edit window for !StartUp, holding down Shift so that the complete path name is put into the file.

All those programs you actually want to load and run leave as they are – the !Alarm application might be one of these – but if you just want to initialise them add:

.!boot

to the end. So, for example, to arrange your system to run !Paint when a sprite file is double-clicked, simply drag the !Paint icon into the edit window for !StartUp and add .!boot to the end of it.

It's a good idea to initialise your !Fonts directory and you can specify a library too with the LIB command – just drag the directory that's to be the

put the !StartUp file

Where to

library into the window.

Two common PD utilities that people like to have are !Menon and !Placelt. The former allows you to put the names of applications and directories on to a menu for easy selection. You can also have sub-menus for grouping common items.

The advantage of !PlaceIt is that you can have the icons of applications and directories on screen all the time, ready for you to double-click. Using the !StartUp file you can automatically load and run either or both of these – or another one if you have your own preference.

Using !PlaceIt also reduces the number of programs you have to put in the !StartUp file because it automatically runs the !boot file and loads the sprites for any application that's sitting on the Desktop.

Once your !StartUp file has everything in it you need, make sure you save it.

So far so good, but if you press

Control+Break it still won't autoboot, there are some configuration items that must be altered.

First up is the default filing system. If you have an ADFS hard disc then that's no problem but if you have an IDEFS or SCSIFS issue this command after pressing F12:

Configure FileSystem IDEFS

or

Configure FileSystem SCSIFS

Then you need to set up which is the default drive. This will normally be drive 4 although not necessarily – especially if you have a SCSI system with lots of hard discs. Anyway the command is:

Configure Drive 4

The next step is to force the booting to take place with:

Configure Boot

This tells the default filing system to look for a file called !boot on its default drive and then do something with it. That something can be LOADed, RUN, EXECuted or ignored – in this case we could either run or execute. To ensure we set the boot option on the correct drive enter these commands at the star prompt:

ADFS Drive 4 OPT 4 3

Change the first command to whatever filing system your hard disc is on and the second to the correct drive number. Now pressing Control+Break

– ensuring you've saved any edit files

– should result in your system autobooting.

 What we have presented here is not the only approach but it's one that works. When you get the feel of it you'll be able to modify it to suit yourself.

Risc OS 3

As mentioned the new operating system has some clever features to make creating system !boot files even easier. Specifically you can save the current Desktop configuration using the Desktop boot option from the menu on the iconbar Acorn symbol. It also automatically sets the autoboot options.

Every program currently running is then given the opportunity to add information to the desktop file. What is saved depends on the application itself. For example the Filer records all the windows currently open and where they are on screen. If this file is then executed the applications will be run, perhaps loading files as well, windows will be opened where they were and so on.

The main problem with this system is that too much information is recorded and it's worthwhile loading the file into !Edit and going through it deleting unnecessary sections.

Despite the cleverness of this built-in system we've found that the method described in this article for Risc OS 2 actually works very successfully with Risc OS 3 as well, but the extra commands allow the machine to be organised even better.

The typical Risc OS 3 desktop file

On the run

REATING applications for the 32-bit Risc OS machines isn't the easiest thing in the world but Acorn didn't make it any easier by spreading the information through the four volumes of the Programmer's Reference Manual.

This time we're looking at start-up programs. Inside an application directory are a number of standard files: !Boot, !Run, !RunImage and !Sprites.

Last month we saw how to build the !Sprites file to display an interesting icon and how you can create a simple !boot file with just the IconSprites command.

The !boot file is usually an Obeytype file executed when a directory window is first opened and the operating system sees the application for the first time.

This is why opening up directory window can take a very long time the Filer is looking at each application directory in turn and checking to see whether it has a !boot file.

If there isn't one the Filer automatically issues the:

IconSprites <Obey\$Dir>.!Sprites

which may result in an error message if that file doesn't exist either.

If the !boot file is there the Filer runs it. So it doesn't have to be an Obey file - it could be Basic, a utility or anything that can be run. However the convention is for an Obey file because it allows other commands to be executed easily.

What's it for?

The idea of the !boot file is to add information about the application to the operating system. This could be as little as which sprite to use for the icon - the !Sprites file - or could include data about file types related to the application, what to do when certain file types are double-clicked or dragged to a printer driver.

!Boot and !Run files are intimately linked with the concept of the system variable which allows information about applications to be held in a common area and accessed by a

For example when an Obey-type file is run, the Obey module sets up a system variable called Obey\$Dir. This contains the complete filing system path name of the Obey file currently being carried out. You can check to see the current contents of Obey\$Dir by pressing F12 and typing:

Show ObeySDir

The filing system path that appears is the location on disc of the last obey

🗖 🖾 adfs::Piglet.\$.MicroUser.Test 🚡 0 adfs::Piglet.\$.MicroUser.Test.!AppName ! App Hame !Sprites22 !Sprites23 !Boot !Sprites 🗅 🖾 adfs::Piglet.\$.MicroUser.Test.!AppName.!Boot AppName !Boot IconSprites (Obey\$Dir).!Sprites Set AppName\$Dir (Obey\$Dir)

The basic !boot file

Steve Turnbull reveals more about the essentials of creating your own applications

file the Obey module executed. By entering:

*cat <obey\$dir>

you can list the directory containing the last Obey file executed. To see all the system variables try typing Show.

!Boot files use Obey\$Dir to create their own system variable which enough: If you use them it doesn't matter where your program is - on floppy, hard disc, CD-Rom or whatever. And it won't matter what directory the user puts your application in. The system variable you create -AppName\$Dir - will have the right path name so your program will know where it is.

If you don't use system variables

Dealing with file types

makes a permanent record of where the application program is located on disc. The command needed looks like

Set AppNameSDir <ObeySDir>

You should always use this command as one of the first two in your !boot file, the other being:

IconSprites <Obey\$Dir>.!Sprites

The importance of using system variables cannot be emphasised your name will be mud and users trying desperately to move your program where they want it - rather than where you force it to be - will curse you violently when it doesn't work.

There are other system variables that you might need for more complex programs that have documents with specific file types. These variables control the translation from document type number to document type name and what happens when the document is run, loaded or an attempt is made to print it.

In general they look like this:

Accessing !boot from !run can make life easier

Set File\$Type_XXX MyFile Set Alias\$@RunType_XXX Run <AppName\$Dir> %*0 Set Alias\$@LoadType_XXX Run <AppName\$Dir> %*0 Set Alias\$@PrintType_XXX Type_XXX Run <AppName\$Dir> %*0 -print

The first sets up the text name of a specific filetype, the XXX should be replaced by a hexadecimal number. For example, FFF is a text file, FFE a command (Exec) file, FFD is data, FFC a utility, FFB for Basic, FFA is an absolute address code file and so on.

You can invent a file type by issuing the appropriate command from the star prompt. Press F12 and enter:

Set File\$Type_123 TestType

Now you can create a test file and change its type with the command:

> Create Fred 1000 SetType Fred TestType

There's no icon for this file type so the Filer window will display a white box with a black border for this file.

The next two Alias commands cause the operating system to replace simple run and load commands with slightly more complex versions. So the two commands:

Run Fred Load Fred will both get converted to:

> Run <AppName\$Dir> Fred Run <AppName\$Dir> Fred

so the application that Fred belongs to is run and that program can then look to see if it is supposed to load any particular file.

In this case it is, file Fred. This is why double-clicking on a draw file loads up !Draw and then !Draw itself loads up the file that was doubleclicked in the first place.

The final Alias command is used by the printer drivers. You can often print files by dragging them from the Filer window on to the printer driver

Text files are usually printed automatically because they are quite simple but draw files, for example, cannot be printed directly, !Draw itself needs to be run.

So the printer driver issues a command:

Run <draw\$dir> -print Fred

!Draw is run then looks at the rest of the command line and discovers it has to print a file called Fred, so it loads Fred and prints it. Some applications might automatically quit after printing the file.

Getting back to the !Boot file for your application you can see now that if there is a particular file type your application can load you should set up system variables for the file type, loading, running and perhaps printing as well.

But you should never replace actions for existing file types. For example let's say your application rotates sprite files through a variety of angles. You could replace the normal Load and Run Alias commands so that they run your application instead of !Paint - but don't.

You should only replace the Alias commands if your application actually performs all the functions of the application you're taking over from.

If your application can do all the editing functions that !Paint can do you can replace the Load and Run Alias commands, but if it can't, don't do it.

Instead you have to program it to recognise when the file is dragged on to the application's iconbar icon or into one of its windows.

Essentially that's all !Boot files are for - they just set up the system variables that allow your program to be run when files belonging to it are run, double-clicked or dragged to the printer driver.

If you don't do any of these things there's no need to bother with a !Boot file. But if you have one it will also need the IconSprites command.

Now let's take a quick look at !Run files and how they relate to !Boot files. When an application icon is doubleclicked or a run command is issued for it, it's the !Run file that is executed. A couple of special circumstances need to be taken into account:

 The first is if the application is run without the !boot file being run at an earlier time. This means that any system variables won't have been set up and the icons won't

have been loaded into the common sprite pool.

 The second is where you've copied the application from one place to another - perhaps from floppy to hard disc. The !Boot file will have been run from the source position so all the system variables will relate to the original version of the application. But perhaps you want to run from the copy.

The solution is the same for both cases: All the information in the !Boot has to be executed again from the !Run file. The usual way of doing this is to copy all the text from !Boot into !Run, but this just adds work especially if you change the !Boot file.

It's much better to make the first thing in the !Run file a command to execute !Boot - Obey files can be nested without causing problems. So all you do is put in this command:

Run <Obey\$Dir>.!boot

This instructs the Obey module to carry out all the commands in the !Boot file in the same directory as !Run - which is exactly what we want. Now all the system variables will changed to refer to the version of the application that has been doubleclicked or run.

 In the next part of this series we'll take a closer look at !Run files and using the WimpSlot command.

Steve Bruntlett takes you through a more unusual application

HE focus of this article is map design and production. General techniques and working procedures are used in this kind of work which may have application in other areas of computer-based graphic design.

There are many uses for maps, including party invitations, treasure hunts, walks, rides, homework, worksheets, posters and designs.

It's not always possible to find up-to-date maps which include new roads, shopping centres and estates. A photocopy with old bits blanked out and new bits drawn in is a standard way to produce a map and, while it may not take as long to draw as a computer-based one, it can quickly look tatty.

computer-based one, it can quickly look tatty.

Another type of map that can be easily produced is the kind suggesting a shert five mile walk for Sunday afternoon often found in local papers. It is usually too small to read and falls apart if it starts to drizzle. You could put together a series of walks as simple maps with a few key symbols, stopping points and written instruction.

The most interesting development of this kind of working map is the number of illustrations to be found in Tourist Information Offices.

What to leave in?

If you can produce a smallish map, try centring it on an A4 page and produce a series of illustrations for the map using either your own DrawPlus drawings, scanned drawings or photographs.

One of the main problems when drawing maps is deciding what to include and what to leave out. Omitting detail can make maps easier to read as well as emphasising important information.

When I was producing my map I wasn't concerned with showing every street name or bend, rather the location in relation to well known roads, features and buildings in the area.

Working from a paper and pencil drawing, for a Pizza Party map I first concentrated on the main road in relation to the village. Starting to work on screen straight away may be tempting but it's a good idea to try and simplify the information on paper first.

The alternative is to scan the relevant section of

Start off with the road outlines

a map of the area, load that into DrawPlus on Layer 1 and then work over the top of that on Layer 2 turning off the scanned map to monitor progress.

As all but one of the roads were single lines it wasn't too much of a problem to draw them and line them up. It's still a good idea to use a Grid Screen setting of a centimetre with a Lock setting of 10 and only turn off the Snap to lock grid option for fine adjustment.

The main road was drawn with a double line for emphasis. You must decide whether all roads will be the same thickness or whether there may be one or two variations.

Drawing a double line might seem straightforward but how can you make sure the lines are parallel, and what happens if there are two such roads meeting at a crossroads or junction?

You might be able to draw the roads parallel but you can't just drop one on top of the other, as there has to be space at the junction of the crossroads.

This needs four separate sections which is reasonably easy to draw vertically and horizontally but what about at 30 degrees? Try it and see what I mean.

The most obvious way to produce a crossroads is to draw it at right angles, rotate it and move it into position. This seems reasonable but you don't know if it will be the right size or proportion especially if you're working within a fixed size outline border.

By grouping the elements of the crossroads, rotating the drawing by 30 degrees and drawing an outline box round it, you should see what the problems are in making sure the road ele-

ments reach the edge of the map outline accurately while still parallel to each other.

Now ungroup the crossroads and you'll soon realise that you can't scale the components to reach the edges without distortion. Use the Edit options instead.

Select a section and press F5 to enter Edit mode. Press Adjust and you'll see the control points in blue. Now drag these to the edge, but how do you know if the altered lines are still parallel?

One solution is to draw your crossroads on Layer 1, save the drawing, create Layer 2 using the Layers option under the Misc menu and load a copy back on to your drawing at the bottom left hand corner for reasonable alignment. Select Layer 1 and turn the first crossroads to red – your drawing on Layer 2 should still be black.

Move the copy over the original so that they are perfectly registered. Now turn off the Sel radio button for the drawing on Layer 1 so it can't be changed but leave the Vis radio button switched on so you can still see it.

Fine tuning the roads

Once the red map on Layer 1 and the current black map on Layer 2 are registered you'll only be able to see the black map. However, if you start editing the map on Layer 2 by moving the line control points you'll soon see the red lines underneath but because that layer isn't selected you won't be able to alter them by mistake.

Move the control points to the edge of the outline box making sure they still cover the underlying red lines and you'll be able to achieve near perfect results.

You may need to do some fine tuning with the Snap to lock grid option reduced or turned off but the underlying map will always give you the basis for accurate parallel-lines no matter how far you extend them. This is OK for simple construction but

Roundabouts can be very complex and need to use the layers menu

The map became central to the invitation

With an underlying structure it's a matter of tracing round the edges

a more flexible approach is needed for complex outline shapes.

One of the best ways to produce accurate roads is to use a single thick line in a different colour and use that as an underlay for the detailed drawing. This is much more suitable for curved roads and especially useful for complicated map structures such as multi-exit roundabouts.

Trying to draw a roundabout or any other similarly complex shape without an underlying structure is extremely difficult, if not impossible. With an underlying structure it's a matter of tracing round the edges.

Using a grey line of 40pt thickness I constructed a drawing of a basic roundabout with a few exits on Laver 1. This is best grouped into a single object. Layer 1 can be deselected but kept visible and Layer 2 created.

Draw thin black lines round the edges of the road structure but don't bother about curves at this stage. Set the Snap to lock grid setting to 40 for manoeuvrability.

The Edit option will let you move the control points into position, change the straight lines to curves where necessary and move the yellow edit points to produce the curve. Try and keep the edit points equidistant from the control points and the same distance from the grey road edge to produce the smoothest curves.

Once the outline of the road drawing is complete the components can be grouped and thickened to make them visually stronger. The bird's-eye view of the map can be changed to a perspective view by squashing or skewing the drawing.

Roads drawn by outline

The more complex map drawn for the party was constructed in a similar way with a grey underlying structure drawn first on Layer 1. The outlines of the road were drawn on to Layer 2, moved into position, changed to curves where necessary and edited to fit the road structure.

Once the drawing is complete there should be little difference between the edge of the underlying road structure and its outline. You may have to use small gridlock settings and work at a larger scale to achieve total accuracy but if all else fails thicken the outline to hide any

I'd be inclined to group all the outlines and lock them in place so that when you start overlaying text and other drawings you don't interfere with the outline map - the Lock option is near the bottom of the Select menu.

The other alternative is to put the text on a newly created Layer 3 and switch off Sel on Layers 1 and 2 but keep them visi-

The map outline needs text to show roads and other identifiable features. This can be typed into DrawPlus in a sans serif typeface such as Homerton or Swiss for clarity with fancy fonts for headings. This will often need to be rotated so you'll have to use the Change

Change text to graphics objects before rotation

Editing the road can be tricky

to path option from the Special menu. Use the rotate option or the rotate ear on the text object and position it along, or at the side of, the road. You'll probably have to scale it down to fit. Use the Scale option to reduce it by a fixed amount instead of the adjust ear or you might distort it, unless of course that's the effect you want.

I decided to make the map more special by adding a title round the edge using FontFX from DataStore. Simply select a typeface that looks suitable, type in the required text, set the line thicknesses, colours and fill of the text and select the display options.

The resulting drawing was loaded into the map,

moved into position, reduced to fit round the edge and grouped with the map to form a single graphics object. This makes manipulation easier when adding text to the invitation and for balancing the text and graphic elements for a better visual effect.

The text was added line by line and selected in a group for automatic centring using the Align option from the Arrange menu. Spacing text vertically in equal amounts can be made easier by selecting all the text to see the gaps between the lines and then adjusting each line to make them equal.

An easier alternative is to use Edit for blocks of text which centres and spaces text exactly as specified. The same technique can be used to align blocks of graphics and text.

To produce two A5 invitations, drawings or maps on an A4 printout, reduce them by 66 per cent and put them side by side on a landscape A4 page.

It's easier to change the paper orientation to landscape than to rotate the drawings through 90 degrees which won't be possible unless absolutely all your text has been converted to graphics. Normal text can't be rotated - or at least not in DrawPlus.

I hope you'll experiment with map design for your own purposes. If you don't find the prospect exciting or at least useful I hope you'll find some of the techniques covered in this article useful in their application to other areas of computer-based graphic design.

 Next month, in the last of the series, we move from maps to architecture.

Archi IDE Hard Cards

Watford's NEW low cost, high performance revolutionary IDE Hard Cards for the A300 and A400 series Archimedes are unbelievably easy to install - you simply slot one into any vacant podule backplane slot in the rear of your computer. These stunningly engineered, light weight but fast, 2.5" miniature hard drives are mounted onto the professionally designed cards, and are supplied with the fully Acorn-conformant IDE Filing System ready installed and ready to run. A novel feature of the hard cards is that they can be easily removed and transported to another Archimedes, for example to make a hard disc backup, or to transfer saved files from work to home etc. Security of files on the hard disc is ensured by our unique security password lock, which allows files to be read only, but not overwritten or deleted ideal for use in school applications where the integrity of your master software needs to be

retained.

- Spare 42Mb Disc

2399 £535 £55

Hi-Speed, Low Cost Archi Hard Disc Drive

Watford's advanced interface allows IDE drives to work on any Archimedes machine, speeds in excess of SCSI devices can be obtained at a fraction of the cost of a SCSI drive.

Up to four drives are supported by the IDE filling system IDEFS, up to two drives can be attached to each expansion card, up to four cards can be installed in a machine. An optional 20Mb or 40Mb hard disc can be supplied on the podule expansion card itself, with its fast transfer rate and power saving modes the drive is ideal for storing commonly used software such as the !Fonts application.

A powerful security feature has been provided with the two unique commands *IDELock and *IDEUnlock, ideal for educational establishments where hacking or tempering may be prevalent that may lead to loss of data. Once locked, the configuration can not be changed until a secret password is used. The IIDEForm Write Protect option is particularly useful in conjunction with *IDELock as it will prevent any unauthorised deletion of data.

By an innovative use of on-board memory, the card will remember its configuration, even if moved to another slot or even a different machine, this also includes the unique security features.

Hardware

- Single width EuroCard
- Supports proposed ANSI ATA (IDE) specification
- · Fast 16 bit MEMC interface interrupt driven to support background disc operations
- 5 Mbytes per second peak transfer rate
- Built in Non Volatile RAM to hold configuration
- LED activity indicator
- 37 way D type socket for external drives
- Optional on-card 20Mb or 40Mb hard disc
- . Up to two drives (master and slave) per card
- · Multiple cards per machine (up to four)

- Conforms fully to the Acorn IDE Specification
- All software supplied in ROM
- Filing system 'IDEFS'
- Desktop filer with drive ready detection and disc name under icon
- · !IDEForm, WIMP based configuration and formatting software
- Drives can be individually write protected
- Up to four drives over multiple cards
- Power saving standby modes supported with configurable timeout
- Drives can be used without translation in native mode for minimum overhead
- !IDEFSDisk, creates PC emulator hard discs

A3000 I/O Card (User, Analogue & IIC)

This NEW versatile I/O Card from Watford, fits inside the A3000 and includes an Analog to Digital Converter, a User Port, and an InterIC (IIC) connector.

The card allows many of the peripherals developed for the BBC to be used with the Archimedes A3000. The ADC and User Port have the same pin out and connectors as the BBC computers.

Extensive RISC OS software is supplied to provide BBC OSBYTE calls for support of the ADC and User Ports, including the BASIC keyword ADVAL. The software provides extended RISC OS support for separate interrupts from both the ADC and User Ports, permitting easy interrupt driven operation.

The card is provided with all the software in ROM and is utomatically loaded when the machine is turned on.

Peripherals connected to the ports can obtain up to 500mA of power at +5V. A fuse is fitted to the card to protect the A3000 from damage arising from accidental short circuit of the power output.

The card is provided with an extensive manual explaining installation, all software commands, connector pin outs, hardware addresses and example programs.

An 8 bit User Port with a standard 20 way IDC connector, compatible with the User Port on the BBC computers and the Archimedes I/O Podule.

A 10 bit Analog to Digital Converter with a standard 15 way D type connector, compatible with the ADC on the BBC range of computers and the Archimedes I/O podule.

I/O podule.
An InterIC (IIC) Port with a 5 pin DIN socket to connect the A3000 to external IIC devices. £42

More Archimedes Products See Pages 3, 5, 6, 8, 10, 13

256 Grey-Scale Scanner

Watford proudly introduces its new innovative 256 grey-level hand scanner for the Archimedes range of micro computers. It offers up to 256 grey levels at a maximum of 400 dpi, and comes complete with the most advanced and sophisticated 256 grey scale scanner software currently available for the

Designed by our own R & D team, it offers the best overall scanning solution for incorporating pre-drawn logos, artwork, photographs and sketches into desktop publishing documents and other graphics programs, including !Paint etc.

The scanner has been openly welcomed by the computer press.

"The image quality which this little beauty can produce is quite stunning" - Archimedes World -July 1992.

"Other Arch image grabbers have been irritating or just plain useless'

"Loads of well written, easy-to-follow and in-depth help, all glued together in a very handsomely designed manual." - Computer Shopper - July

The major features of the package are: Multiple copies of the image in memory at once, allows multiple consecutive operations without having to save the original image to disk. Instant redraw of all 4 image buffers. No recalculations needed unlike other packages that use on the fly screen-dithering.

High advanced dithering and image size reduction available via industry standard ChangeFSI package for maximum image quality. An invaluable aid to reduce the size of the image whilst maintaining image quality.

A unique LED indicator on the scanner shows you when the scanner is being moved at close to the maximum scanning speed, not just when it is too late and a scan line has been missed by moving the scanner too fast.

Fully adjustable scale and size of image preview when scanning. Image preview window can even be behind other windows and preview is shown in realtime with maximum number of grey-scales available. Support for Serial Port Graphics Enhancer. Allows up to 256 simultaneous grey scales on screen at

True brightness, contrast and gamma correction. All can be specified by a value to exactly match monitor/printer. No guessing with shapes of curves. RISC OS 3 features include rotation and shearing. Scans normally are scanned at a slant rather than being rotated, shearing enables the scan to be corrected better than rotation.

Scanner scans at an amazing 3ms per line. A post card at 400 dpi takes only 7.3 seconds to scan, creating over 3Mb of data.

Selectable 256 grey-scale, 256 grey-scale half width, 16 grey-scale and monochrome scanning modes. Half width mode enables longer 256 greyscale scans to be achieved.

Fast RISC OS printing with multiple options. Save image in AIM, TIFF or RISC OS Sprite format. Advanced in-built image processing options. Convolution digital filtering fully implemented with over 100 filters covering edge detection, image enhancement and image smoothing.

Single width, high quality podule using surface mount technology.

Just compare the competition on our price and above features. There can only be one choice.

ARM 3 Turbo Card Mkll

Simply The Best

Here it is at last - the all new Mark 2 version of Watford's highly acclaimed ARM 3 processor board for the Archimedes and now also the A3000 series computers. Using the latest surface mount technology on a high quality four layer circuit board we have reduced the overall size to a mere 53mm x 45mm, and the cost to only £169. Mk II upgrade will increase the speed of your micro by a factor of 3 to 6.

Any competent A300 or A400/1 series micro owner can fit the upgrade himself, as we provide full fitting instructions and a special ARM chip extraction tool. However for A3000 micros and those not wishing to perform the upgrade themselves, we will collect, upgrade and return your micro by courier service, at an additional cost of £18.

(A300 and old A440 series owners please note you will need to upgrade to MEMC1A for ARM3 to work.)

RRP £249

Offer Price £169

Acorn have satisfactorily evaluated Watford's ARM 3 upgrade and the A3000 upgrades are fitted by Acorn approved surface mount technology centre, therefore its fitment will not invalidate Acorn's warranty on the micro.

Concept Keyboards

Standard A3 Keyboard with BBC Software Standard A4 Keyboard with BBC Software Archi A3 Keyboard £138 £109 Archi A4 Keyboard €110

Archi Mouse Port Splitter

Our handy little splitter unit eliminates the risk of damaging your micro due to constant plugging and unplugging of the mouse by allowing you to connect both, a joystick and a mouse simultaneously to your Archimedes.

Archimedes to BBC Serial Link Mk 2

Using this simple data link, it is possible to solve all your BBC to Archimedes data transfer problems. The kit is supplied with a disk, and the necessary cable to connect the two computers. New RISC OS Version also available (please specify)

Archi Real-Time Digitiser

Now supplied with NEW RISC OS Version

Software Watfords' Archimedes Video Digitiser is the most sophisticated digitiser ever designed for a micro, It provides a fast and flexible means of capturing images from a video camera or recorder for display and manipulation on the Archimedes range of Micros. Off-air televison signals may also be digitised via a video recorder or TV tuner. Please write for further details.

Price £119

A Set of Colour Filters for colour image grabbing £16 using a video camera

Archi Graphic Tablet

The Archi Graphic Tablet offers performance and accuracy comparable to other tablets priced at well over £400, and has the useful addition of a liftable over £400, and has the useful addition of a littable cover, which can hold tracing material or menu templates securely. The package is supplied complete with sophisticated Archi software. (Now, fully LinCAD compatible. Recommended by Linear Graphic for use in Education).

(FREE this month, PC Mouse Drivers & Art package)

Special Price £199

(Price includes Tablet, Leads, Software & Puck) Stylus Optional Extra £20

Archi Graphic Tablet Junior. Working area 9" x 6". Price includes Stylus

Disc Plonker Rack

When using ones micro, there is a tendency to have more than one Disc on the desk. This exposes them to the hazards of fingerprints, scratches, dust, coffee and

an untidy desk. Why not protect your valuable data from all these hazards with the help of our extremely handy and low cost DISC PLONKER RACK. Holds up to eight 5.25" discs.

Protection at Only: £2

Special Bulk Offer Discs

(Supplied packed in Anti-Static Lockable Storage Units) (Lifetime warranty on Discs)

Aries AlphaScan Monitor

Pound for Pound, the AlphaScan VGA Multiscan monitor provides the maximum performance and greatest flexIbility of any 14" colour monitor for the Archimedes micro.

Its multiscan circuitry provides automatic adjustment for frequencies between 30 and 60KHz horizontal, and 50 and 90Hz vertical. Its 0.28mm dot pitch high resolution tube provides super sharp text graphics, while a high speed (70/72Hz) refresh rate provides a flicker-free display easing the eye strain. The Multivideo VIDC Adaptor supplied (free) with the monitor allows high resolution operation in all screen modes.

Professional Printer Stand

The professional printer stand takes hardly more space than your printer. Due to the positioning of the paper feed and re-fold compartments ie. one above the other, the desk space required for your printer functions is

effectively halved. Its ergonomic design ensures smooth paper flow and automatic refolding.

- Power by two AAA size batteries (not included)
- Automatic Standby Mode after 5 seconds inactive
- Auto Power Shut-Down after 20 seconds inactive

Price £49

BEEB VIDEO DIGITISER

"Test Bureau Approved for Use in Education"

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro. This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket. The software supplied includes a sophisticated, fast screen dump routine.

Images produced can be compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem. The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

£99

(BBC B+ and Master compatible, except Master with Econet)

(Price includes) Digitiser Unit, Software in ROM & a Comprehensive Manual)

Beeb Hand Scanner

Hand-held Scanner for the BBC Micro

Watford Beeb HandScan is a compact unit which will allow photographs, diagrams, or any other documents to be digitised quickly and easily, to then be used in a desk top publishing package, art program, or even in your own Basic programs!

The HandScan plugs directly into the 1MHz bus on the BBC while a comprehensive set of utilities provided by the sophisticated ROM firmware. The scanner has a resolution of either 100 DPI or 200 DPI when accuracy is essential. Pictures as wide as 4" may be scanned in mode 0 and various types of dithering may be selected to simulate the grey levels of a scanned picture.

All necessary software has been included in the firmware to allow the scanner to read images directly into our Wapping Editor with little more than the click of the mouse. The digitised picture may then be incorporated into your magazine, newsletter, report or any other document.

Beeb HandScan & Firmware

Winner of the BBC Acorn User 1990 Award for the Best DTP/Word Processor

The Wapping Editor

The Wapping Editor from Watford Electronics represents a breakthrough in Desktop Publishing for the Beeb. The package includes a 64K ROM containing ALL the software needed to get into print fast; a very sophisticated graphics module, professional quality typesetting software, a word processor, a comprehensive font editor for designing your own typefaces, and a variety of printer dumps. This mouse-driven system is designed for the BBC B, the B+ and Master computers and will take full advantage of any Sideways and Shadow RAM that may be fitted. It will run under DFS, ADFS and Network filing systems and requires as a minimum just a single 40 track drive.

Included with the system is a utility disc containing several high quality fonts, various utilities and a ROM image of a Support ROM. A comprehensive 100 page manual completes the package. The Support ROM contains routines to allow an area to be rotated to any angle or distorted to any four-sided shape. Also included are facilities to draw ellipses at any angle and sectors, segments and arcs (in Master or BBC B with Acorn GXR). Another of the features of the Support ROM is a 'Turbo DFS' which gives DFS access times comparable with those of ADFS.

Page Layout Section

The Wapping Editor may be used to create pages of any size from an A6 to a full A3 page. If none of the eight default page types suit your purpose, the stand-alone page creation program may be used to create pages to your own requirements. By using proportionally spaced fonts and genuine microspacing it is possible to print over 150 characters across an A4 page. A unique feature of the Wapping Editor is the 'A5 x 2' page size allowing two A5 pages to be printed side by side onto a single A4 sheet.

The graphics module incorporates the facilities like: pencil, brush, airbrush, polygon, circle, eclipse, fill, cut & paste, etc.

Text may be typeset, either justified or unjustified, in any font anywhere on the page. Simply select which font and text document you wish to use, and pull out a rectangle on the page where you want the text to be – it's as simple as that! Multiple columns may be printed just as easily and a special 'expand' feature may be used to expand the microspacing so that the document exactly fits the space defined.

Word-Processor

The integral word processor is the ideal tool for producing your text documents, although text can of course be read in from any of the other popular word processors such as View, Wordwise etc.

The Font Editor

The font editor module will allow you to design your own typefaces or to modify the ones provided on the utility disc. This sophisticated editor has numerous functions designed to take the tedium and frustration out of producing good looking, well balanced fonts. Each character may be individully proportionally spaced and characters of any size up to 16 x 16 pixels may be defined.

Pictures may also be 'grabbed' from a video source by using the Watford BEEB Video Digitiser.

Wapping Editor Software Pack £59
Wapping Editor plus Mouse £79

(Wapping Editor only works with Master Compact if a Mertec Expansion box is fitted)

Wapping Art Disc

Over 250K of clip art to cut and paste into your Wapping Editor pages. Pictures include maps, transport, people, media, sport, games etc. Two 'ratio' screens for use with hi-res and rotated A5 pages to ensure images are not distorted when printed out.

Music writing symbols in the form of pattern and brush for quick production of manuscripts are included together with staves.

There are two prepared hi-res pages layed out for printing labels, both single and double width. Ready made label designs are included but these can be easily replaced with your own designs.

A Mode 0 screen dump routine is also included. To pack such a large amount of data onto the discs the screens have been compressed and routines to compress and expand Mode 0 screens are included on both discs. Using the packing routine you can archive large numbers of screens onto a single disc.

£15

Wapping Font Disc 1

Sixteen additional fonts, including smaller version of Oberon and Daisy and two new sizes of the standard font for the Wapping editor.

Also included are three Mode 0 screens containing giant 'headline' fonts to cut and paste to create extra smooth headlines.

Supplied complete with instructions.

£12

Wapping Font Disc 2

This new addition to our Wapping range of DTP software provides you with additional 23 fonts for the Wapping Editor DTP pack. (80 track discs only). £13

Archi A4 Scanner

This most advanced Archi A4 image scanner is supplied complete with ROM based podule software. Features provided include facilities for zooming in on an image and inverting the image in X and Y directions, saving and printing of the sprite created. Interactive help is supplied using the !HELP application on the Acorn applications discs. The 216mm scanning width can cope with both deckton scanning of single sheets protegraphs.

desktop scanning width can cope with both desktop scanning of single sheets, photographs, diagrams, etc., with its fast ten page automatic document feeder, but it can also detach from the feeder to become a convenient hand-held full page scanner for larger documents or pictures.

Scanned image control can be freely adjusted in increments of 10 dots per inch from 100 up to 400 dpi resolution with 64 levels of grey scaling. A built in shading controller and manual brightness control achieve optimum image clarity.

Unlike some scanners, which use a red light source, the Watford scanner uses a yellow/green source which vastly improves the light/dark contrast, thus eliminating the effect where any red-based colours are faded down to white and so do not show up in the scanned image.

All these features and facilities combine to make the Archi Page Scanner the fast and convenient way in which to add that extra impact, interest and clarity to documents, reports, instruction sheets, manuals, news letters, etc., from your Archimedes DTP package.

New Low Prices:

 Archi A4 Scanner
 £269

 Sheet Feeder for above
 £75

 Scanner + Sheet Feeder
 £359

Archi Mk II Hand Scanner

Watford Electronics is now able to offer a complete hand held scanning package, possibly the most essential addition to any desk top publishing system, for only £119. The package includes the most comprehensive utility software available for the Archimedes, a high quality hand held scanner, and all necessary documentation to get you going straight away.

SCANNER

The scanner is capable of scanning up to an amazing 400 dots per inch (DPI)! The scanning area is 4" wide, and the height is only limited by the maximum amount of memory available. The dot resolution may be switched to 100, 200, 300 or the maximum 400 dpi. One of four operating modes may be selected offering either pure monochrome scanning, or one of three grey level modes. The grey level modes use different size dither patterns to represent up to 16 shades of grey. There is also a dial to allow the "brightness" to be adjusted over a wide range, in order to optimise the quality for any specific image. The scanner interface is a standard, single width, expansion card (podule) which plugs into the Archimedes' backplane. The socket on the rear panel connects the scanner by 1.8 metres of cable

SCANNER SOFTWARE

Full use is made of the windowing and the multitasking facilities of RiscOS. The software is supplied in a 64Kbyte ROM located on the interface board. The scanner appears as a small icon on the desktop icon bar, and the software is retrieved from the ROM simply by clicking on that icon. As you scan a page, the image appears in the scanning window on the screen, scrolling up in real time. The other facilities included in the software are.

Cropping and scaling to any size including stretching and squashing in X and Y direction separately.

Colour tinting X and Y flip.

Edge detection which turns solid objects into

Selective directional copying which allows features (i.e. lines or text) to be made thicker or thinner.

Scanned images may be saved as sprite files or transferred directly into other RiscOS applications (DTP, Draw, Paint) simply by dragging the sprite file into the application's window. Sprites may also be generated using anti-aliasing. This greatly improves picture quality and is particularly effective when scanning material with a range of grey tones, such as photographs. Images can be printed on any printer that is supported by a RiscOS printer driver, with optional settings for portrait or landscape modes, image scale and positioning. Images are printed using the full resolution of the printer and are not limited to the screen resolution.

On-screen help is provided via the RiscOS interactive help facility. Calls are also provided in the ROM for users wishing to write their own software, incorporating the use of the scanner.

AHS-4 Archi 300/400 Version AHS-3 Archi A3000 Version £119 £129

Sideways ROM **ZIF Socket System**

Allows you to change your ROMs quickly and efficiently, without having to open the lid. The ZIF socket is located into the ROM Cartridge's position. It is very simple to install. No soldering required. Also included in the price is a plastic see through storage case with antistatic lining, which allows you to store 12 ROMs.

ROM Cartridges for the BBC Master

Will accepts the larger Piggy Back ROMs like Interword, Quest, etc.

Twin £8; Quad £13

Solderless Sideways ROM Socket Board

- · Increases your BBC Micro's ROM capacity from
- · No soldering required.
- Socket 14 takes two 6264 RAM chips.
- · Read protect to make RAM "Vanish") allows recovery from ROM crashes.
- Battery backup option for RAM chips.
- · Supplied ready to fit with comprehensive instructions.

Price: Only £35 Battery Backup fitted £39 Battery Backup only £3

16K Sideways RAM £8

 Sideways RAM Utilities Disc for Solderless ROM Board. Includes the options to load and save ROM Images and the facility to use Sideways RAM as Printer Buffer. Only: £8

32K Shadow RAM/Printer **Buffer Card Expansion Board**

A MUST FOR WORD PROCESSING

Simply plug the ribbon cable plug into the 6502 socket and gain a massive 32K of extra RAM.

- "VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28K bytes free - 5 times as much as normal.
- In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24k of text in memory. This product is recommended as an ideal complement by Computer Concepts.
- . Use the full 32k or the bottom 12K of the expansion RAM as a printer Buffer. (P.S. Only 12K printer buffer can be used with Wordwise & WW+, due to the way they are written).
- · Unique facility to turn ROMs off and on again.

Only £54

(Price includes a comprehensive manual and the ROM)

ARIES B-32 Shadow RAM Card £55

Commander Joystick

Watford Electronics' new Commander Joystick for the BBC B and Master 128K has a unique dual mode of operation giving selective free floating or self centring fully variable control in both X and Y axis directions. Commander is particularly good for flight simulation and drawing programs.

Features:

- Direct connection to BBC Analogue input port no interface needed.
- Fully compatible with all BBC Joystick controlled games programmes.
- Switchable springs allow selection of floating or centring operation.
- Trim adjusters for both X and Y axes for fine centre adjustment.
- Convenient stick mounted fire button with additional base buttons.

Price: £15

ROM/RAM Card

- · NO SOLDERING required to fit the board.
- Fully buffered for peace of mind.
 Compatible with BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8.
- Up to 8 banks of sideways RAM (dynamic)
- Option for 16k of battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM.
- Separate RAM write register (&FF30 to &FF3F).
- Automatic write to currently selected RAM socket for convenience.
- FREE utilities disc packed with software.
- Large printer buffer.
- UNIQUE fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
- ROM to RAM load and save facilities

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD &7F for ROMSPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster.

ICL7673PA

Acorn Speech Synthesizer package complete, for the **BBC B Microcomputer** Special Offer £14

User Port Splitter Unit

Gone are the days when you had to plug and unplug devices from the User Port. This extremely useful little device allows two units to be connected to the User Port simultaneously, and select between them simply by toggling a switch. This device is particularly useful for those people using Quest Mouse and the Watford Video Digitiser or any similar combination

Excellent Value at £22

Whether you want to type in your latest program or the draft of a new trilogy, Watford's manuscript holders are superb for holding your paper at the ideal height and angle to allow you to read and type in ease and comfort.

Available in 2 full A4 versions, desk resting and shelf clamping. Paper is held firmly by means of a plastic retaining ruler and a clip grip.

Desk. Top £8 Angle poise £12

Copy holders as above but with a NEW battery operated, remote controlled cursor/ruler. (By hand or foot pedal.) (Batteries 2 x AA not

included.) Desk Top £15 Angle poise £20

£3.00

TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs!

The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast.

- ERASER EB Standard version erases up to 16 chips. £34
- ERASER GT Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. £36
- · Spare UV tubes.

ROM Extraction Tool

This extremely useful tool allows you trouble free chip insertion and removal from your computer by distributing the removal force over the whole 92 body of any 24 or 28 pin chip.

Metal Chip Extractor

Servisol Foam Cleaner

This king size multipurpose foam cleaner spray is ideal for cleaning Keyboard, Monitor, Disc Drive & Computer furniture surfaces.

ACORN to PC

Stop the Confusion!

Do you have to use both Acorn computers and PC's? Would you like to use your Archimedes or A3000 in PC-emulation mode but are unsure of the new commands?

Although Acorn machines (such as the BBC B, the Master, the Archimedes) are mainly used in education, most commercial computers use other operating systems, particularly MS-DOS. As a result school computer users are at a disadvantage when moving into 'business' computing. PCs and other commercial computers use MS-DOS as the operating system, so commands for formatting, copying, backing up, printing and the modem are not the same. Even file names are written differently! And did you know that there is one Acorn command which, if used in MS-DOS, wipes everything in the current directory?

'ACORN TO PC' enables you to change over painlessly. It shows clearly and quicly how, why and where the two systems (Acorn and MS-DOS) differ. As with a foreign language dictionary, you can use the book to transfer either way – from Acorn to MS-DOS, or from MS-DOS to Acorn.

Price: £9.95 (No VAT)

The Complete BBC Computer User Handbook

If you own a BBC B, B+, Electron, Master 128 or Master Compact, or Archimedes, then this is the book for you. It shows how to get the best from your machine, and how to make it work for you.

Only: £9.95 (No VAT)

Beeb PC (BASIC)

Designed for program authors to convert BBC programs to run on IBM PCs. Price: £38

Beeb DOS 3.0

(Now reads Archimedes Discs)

Beeb DOS is a collection of utilities which run on the PCs and enable it to read and write information on BBC Discs.

Price: £39

The Complete Mouse User Guide to BBC Micro

This manual has been written to reveal the secrets of the mouse. It explains all the principles required by the hardware and associated software, and also example listings for inclusion into custom programs. The manual first details the basic principles of the mouse and a simple program which uses these principles. This information should be adequate for most applications. However, it is possible to improve the performance of the mouse by expanding on the principles already used in the software. This is again fully explained and an example program given.

understanding of the mouse from this manual. For those not interested in exactly how the mouse functions, complete example programs are also included.

Price £5.95 (No VAT)
Example programs on Disc £4.95

The Epson RX/FX Printer Commands Revealed Handbook

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out? Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX-KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English, how to use and make the most of your KP810, PW1080A or any other Epson FX80 compatible printers like Panasonic KX-P1080/1, etc., with the BBC Micro, both from Basic and Wordwise.

£4.95 (No VAT)

BEEBUG Magazine

the only magazine still devoted soley to the BBC Micro and the Master 128

Celebrates the start of its 11th year of publication

BEEBUG was the first magazine ever published to cater for BBC enthusiasts, and is still going strong after 10 successful years.

BEEBUG offers a wealth of information: from articles on how to write Basic programs to ready-to-use utilities and complete stand-alone applications. BEEBUG also offers frequent 'fun' programs and entertaining games.

If you want to find out more, write to us for a FREE BEEBUG magazine or phone on 0727 40303. Please quote M8 to receive your free magazine.

the author of Drawplus

ECTOF

the RISC OS drawing package

Vector's wealth of features includes

- Highly-compressed saving using a Drawfile-specific technique
- Printing of large documents over several sheets
- Saving of all lines of text as a single text file
- Modularisation of documents into 32 separate layers
- Easy drawing of lines, curves, arcs, ellipses, rectangles and polygons
- Continuation of existing paths
- A facility to define line patterns
- Scaling and rotation of objects about their corners, centres, or any point on the document
- A 256 colour selection box
- An additional unique palette for each document
- Locking of objects for safety
- Undeleting of deleted objects
- Comprehensive facilities for scaling, rotating, skewing, aligning and spacing out of objects
- A choice of rulers and grids
- Auto scrolling of windows
- Compressed Libraries for storing Draw objects and sprites
- Precise ordering of objects (not just Front and Back commands)

Special facilities include

- Path merging, splitting and reversing
- Interpolation between objects
- Replication objects can be repeated as many times as required without consuming memory - ideal for repeating patterns
- Radiation any path can be radiated around a choice of centres when combined with path merging, amazing results are possible
- Masking any object can be filled with any other object

Extra RISC OS 3 functions:

- Automatic kerning
- Text and sprite rotation
- Conversion of text to path objects
- Dithering to show colours which are not available in the current palette

FREE DEMO DISC

Why not check it out yourself? Send us a blank disc and ask for a demo copy of Vector (complete apart from the save and print facilities).

E all know that power corrupts and that absolute power corrupts absolutely, well the Magnetic Scrolls adventure Corruption is a pretty powerful adventure.

It's also quite difficult and I have had a fair number of cries for assistance from readers.

I am not going to give a moveby-move solution exactly, but rather indicate what actions need to be performed at certain stages in the adventure.

Apart from using my own grey cells, I have consulted solutions sent in by two readers, Matthew Jacques and to a lesser extent J. Terry who completed the game but failed to get the villains arrested. This cost him 25 points.

The game scenario is as follows: You are offered a partnership in the City firm of Rogers and Rogers (your name is Derek Rogers) as a result of a clever deal you did with the company Scott Electronics.

You are, in fact, the fall-guy who is to be framed, and your task in the adventure is to gather the evi-

dence that will clear your name and allow the baddies to get the justice they deserve. The important thing to realise is

The important thing to realise is that a number of significant and time-critical events are taking place. Indeed, anyone playing Corruption without the kind of help offered here will have to take several bites at the cherry: It would be a sheer fluke for anyone to get the correct sequence first time.

You start at 9am having just

arrived in your new office and you have to be pretty sharp here if you are to get the full flavour of things. Don't forget, you'll have to make your own map – I'm not performing that chore for you.

You need to be outside the dealing room in time to give David a message from them at 9.06 am and it will pay you to listen at Hughes' door once David has gone inside.

You also need to grab a ledger and a share certificate from the fil-

ing cabinet in your office as these are important evidence.

are important evidence.

Next you need to go back to Margaret's office, because you heard earlier that David was expecting her to have a cheque ready for him a little later that morning.

She puts the cheque into an envelope at 9.15 am – and again, this is important evidence. You should grab it immediately, and you will be considered a helpful messenger-boy by Margaret.

At some point you should have checked your inventory to find that, in your jacket pocket, you have a set of car keys and a credit card.

My advice is to put them in your briefcase as soon as you can find a convenient moment since, at one crucial point in the game I suddenly remembered that my jacket was now missing and, moreover was irretrievable.

That sort of discovery does the old blood pressure a lot of good. Moral? Make regular saves throughout the game. More next time.

Putrid Power Ploys

ERE's the final part of Barbara Gibb's meticulous solution to Castle Blackstar, a most entertaining and well thought-out tape-based adventure for the BBC Micro.

On leaving the Temple, go south, north, southwest and then three times west, before going north and down to the tunnel entrance, where you should light the lamp. Now go down once more to the narrow tunnel with a trapdoor and a message.

Read the message, close the door, go up twice and extinguish the lamp before moving south, east twice, south, west and down to the well bottom.

It's time to refill your lamp again ready for the final push. Light it and go north four times, southeast, east, northwest, down, northwest and then northeast to the cell block.

Now go east to the duel room

Flying high?

and then up to the *dual* room, down twice, north twice and west twice to the warm room.

From here go down to the windy pit which — as Barbara Gibb remarks — would have blown out your lamp if you had not closed the trapdoor in the narrow tunnel. What's more, the lamp would then refuse to relight (owing to the draught) thus preventing any further progress.

This sort of thing is usually the sign that you are approaching the climax of an adventure, as is the case here. Two moves north and one down will take you to the Orb room. As you take the Orb, you will hear noises which are the sound of certain escape routes from the cas-

tle being cut off. Rotten, isn't it?

West, east, west and up are the moves which will return you to the warm room: From here, go east three times, northwest and twice north to the Throne room.

Take the dynamite, push the throne and you will be able to go down to a secret passage. Move west to the dead end and light the dynamite there. This will reveal a hole in the wall – so go down, east, southeast, up, southeast then south and north to reach the M doorway.

Return to the cove by going north four times, southwest, south, west, north, northwest, four times south and finally northwest to the boat. From here, go east to the narrow tunnel and open the door. Barbara confesses she doesn't know why, but it adds an extra point to your score which should read 236 at this stage. My guess is that it's for returning the breeze to the windy pit.

Move west again to the cove and bail out the boat so that you can sail it, then go south twice, southeast, bail again and continue south, east twice and down to the rocky bay.

From here you must go west, northwest, down, northwest again, then northeast and enter.

Next travel north, east twice, southeast, west, southeast, east, north, northwest then north and read the note. Now enter, take the

ERE'S a little bit more from Andrew Cawte on the ArcElite Missions he's dealt with so far. He discovered Mission 3 while still in Santaari Galaxy on attaining Competent status.

Having casually wiped out a luckless pirate (Rantan Pino) more or less by mistake, Andrew was informed that Pino's son Zurin was out for blood.

Zurin flies a brown Cobra MkIII which has a cloaking device of sorts he doesn't actually show up on your scanner - and a Missile AutoLock system.

Having zonked Zurin, Andrew returned to the Space Station and found he'd been awarded a Missile

Elite update

AutoLock all of his own.

Andrew doesn't seem to have figured out the primary purpose of the AutoLock system, though. Veterans will recall having locked a missile on to an enemy and then having to hold the launch while some hairy laser combat takes place.

Hands up all those who have then blasted the missile target by mistake? The AutoLock mobile cross-hairs help prevent that.

The fourth mission sent Andrew chasing round known space on an errand of mercy for GalMed. They are

clearly as hard up (or mean) as GalFam and he was distinctly peeved at the measly monies offered as a reward. My son, virtue is a reward in itself - wear your halo with pride and continue to trade cannily.

Andrew was puzzled by Space Beacons, and wondered what they are for. The answer is simple: They are there for fun, to practice flying through - if they are in the right configuration - but NOT for scooping up or shooting at.

Finally Andrew has a couple of hints and a query: If you call up the data on Riedquat (Santaari Galaxy) you'll probably smile.

If you load ArcElite then click Menu over its icon on the icon bar and move the pointer to Info and wait a couple of minutes you'll discover the copyright line becomes a scrolling message - and yours truly gets a mention, too.

His query has to do with a ninth Galaxy: There's a name for it, but no galaxy in his version and he wonders why. ArcElite had to be totally faithful to the original - and the original had only eight galaxies.

Christian Weber owns an Electron version of Elite and it looks very much

as though he has missile-blasted something that was totally invisible to his scanners: Could it be that the dear old Elk has C and D facilities?

Richard Seymour is an Elite addict, and - when he wrote - was Deadly. He wonders if he has the C and D ship on his (BBC B) version: The answer is Probably.

He also has a query about a friend's Amstrad version. No, Richard, your friend isn't lying: The solution to that mission is to refuel at the sun before docking at the Space Station. It takes loadsa kills to become Elite and (on the BBC version) I am Elite 10 times over: I'm working on things so far as ArcElite is concerned.

Moans and Mumbles

I've had a couple of comments from an old hand at adventuring, Richard Forster. First was a moan: He reckoned that I was too explicit in the help I offered in my review of Wonderland.

Admittedly, Richard hadn't bought the game then - I hope he has now but those of you who are familiar with that adventure will know that I gave fairly specific help for about the first five per cent of it, and that's all.

Richard also asked if mathematical puzzles of the kind presented by my predecessor Alice could be included in the column.

The simple answer is: No. I'm no mathematician, rather a philosopher-cumhistorian. I did set what I thought was an easy puzzle once, had no takers, and one reader reckoned it was for Ph.Ds only. Ah well, you win some and you lose some.

broomstick and leave once more. described as over the cottage and The lamp is no longer needed, so two moves up will put you in reach you might as well drop it here. of the stars, so use the input Touch Do you remember that vision There will now be a dark passage in front of you: Enter the

some mapping tech-

learn

beginners

niques.

you received in the temple when you prayed? You have to take the Orb up to the goddess - and to do that you must learn the secrets of broomstick riding. Personally, I prefer my pram after reading about Terry Pratchett's character Granny Weatherwax.

If you examine the plaque on the broomstick you'll find it reads as

Wraith GXL 2000 bat power, Automatic regulating broom. Attempt device activation code and reverse back again. General Magic

This message hides the password - actually a well-known one in magic circles - and so, provided you have dropped everything except the orb and the broomstick, saying Abracadabra will get you airborne. Your location will now be

machine room, go north and examine the door. You should now recognise the message here, so say the right word and the door will slide open enabling you to enter. Hand over the orb and you'll get an encouraging few words from her ladyship and a score of 250 points. Thanks Barbara. Next time, I'm going to devote some

THE REOCEP ISER

Hybrid Music 5000 (BBC Only)

The Music 5000 is a powerful stereo digital synthesiser which allows you to take a piece of music all the way from a sheet score. or an idea, or even one of the supplied examples through entry, arrangement, replay and mixing to give a finished performance complete with realistic instruments and studio effects.

The system is capable of a vast range of high quality instrumental; percussion and effect sounds, including natural-sounding synthesiser-types as well as the abstract up to-eight at a time. You can choose a predefined sound from the library, a variation or a completely new sound created from hundreds of alternative waveforms, envelopes and modulations.

The software is based on the AMPLE music language which is powerful, versatile and easy to use. It has built-in computer music notation as an alternative to standard staff notation as well as supporting a music keyboard, sound expander and Midi. The Music 5000 will turn your BBC Micro into a computerised music production studio. The manual is written for the beginner to

computer music and the Tutorial section takes you through each of the processes set by set entering, editing, arranging, mixing, performing, selecting, modifying and £55.00 designing the musical instruments that you use.

Special Offer Price: £55.00 (normally £149.00)

Rhapsody II (Archimedes Only)

A score writing program which has been designed to allow you to create and edit your own musical scores. You can enter your music by hand one note at a time, drag the notes on to the stave or you can even use a Midi instrument to capture music in real or step

If you have a Midi instrument attached to your Archimedes you can

play a part and then transcribe it on to a stave. This can be repeated and each part entered via the Midi keyboard and transcibed on to the appropriate stave. And of course you can play your score back through the Midi Keyboard.

The package features automatic beaming, up to 24 staves, changes of tempo and volume, ties, triplets, user defined trills and so on. When your masterpiece is complete you could print the whole score or individual parts in the usual way.

Archimedes Game Maker's Manual

Now you can find out how to use your Archimedes and Basic 5 to build high quality games whether for education or for recreation. Ideal for the experienced or novice Basic programmer, Terry Blunt takes you through the seven major aspects to writing a successful and professional product: Planning a game; Critical games

stages; Graphics and animation; Arcade games; Role playing games; Strategy games; Professional tips and tricks. You can see the principles laid out in fully tested listings. This book is sure to become an essential reference written in an informative and easy to read style.

Vidi Archimedes

Capture and display colour images in under 5 seconds from a still source with Vidi-Archimedes from ROMBO. Compatible with both Archimedes and BBC A3000, the only additional requirement you will need is your video source.

Special offer price.

Count! Five fun games to challenge all ages - and all abilities

Shopping ... keeping track of your accounts ... applying for jobs... you need to know that your arithmetic won't let your

Amid all the alarm about falling literacy standards, a new cry is heard from the business community - our children can't count!

Now, with Count! you can use your Acorn Computer to teach basic counting and arithmetic skills in a fun and easy to understand manner. Following the success of

Spell! - this latest package follows the same style and creates a collection of programs to help you and your family.

You can decide which functions you are going to include as well as two different degrees of difficulty.

No complicated manual or techniques are needed. You just load the program and progress at your own pace or dare to take on the computer in a high-speed challenge.

Count! can deal with any ability level. The graphics are specifically designed to appeal to young children without distracting them from the vital aim of the programs - to improve their arithmetic.

Count! includes five different games, each making use of the full range of arithmetic functions addition, subtraction, division, multiplication as well as £ and decimal calculations.

- In a Flash: Calculate the sum as it appears on screen, then type in the correct answer. A progress chart will let you see
- Rocket: Hangman with numbers. Guess the calculations or use your knowledge and logic to launch the rocket or see it end up as a pile of scrap.
- Lunar Buggy: Improve the speed of your mental arithmetic by solving the poser before the buggy dives off
- All Mixed Up: You are presented with sums that do not make sense. But by juggling the numbers you can get the right answer.
- Conveyer Belt: As you progress more and more calculations appear on screen. Not only do you have to solve the questions, but also remember the answers. It's a challenge which at its highest level will test even the best.

... for the Archimedes/Master Compact/Electron (3.5in disc) or BBC B/B+/Master (5.25in 40t or 80t disc)

Take a step into the world of professional publishing with

This is an easy-to-use and flexible page design system for producing high-quality printouts through your Epson compatible printer. It comes with four of its own fonts to get you started plus a Font Designer to keep you going.

- Independent control of bold, italic, 'thin' and underline characteristics of the system font
- Proportional spacing of both external and
- Stretching and compressing of any area
- Pixel editing via zoom facility

Europress Publications' DTP

5.25in DFS 40/80 track disc (only) £14.95

Due to the complexity of the program the fill routines will not function correctly with the B+, Master or Compact – all other features are compatible

Font Style

Fontstyle is a versatile system for creating professional looking printouts. It comes with two ready-made fonts and a designer so you can create your own.

Plus you can now get a set of four discs containing an extra 64 fonts! The mouse's take

Fontstyle is so easy to use. You just type in your text using your favourite word processor - enter the easy-to-remember formatting codes and save it. Then just load in the FontStyle program and you'll have superb results within minutes.

ne of FontStyle's features

- Professional-looking results from 9 pin pri
- Simple to use

10 ON ERROR GOTO 110

PC problems

I RECENTLY upgraded my old PC emulator for the new version. When loading a game called Pirates - an adventure written for the IBM PC - I get the error message: Booting from non-Dos Disk use Ctrl+Alt+Del to reboot.

I did this about five times but with no joy. The game worked excellently with the old emulator. Do I need a new MSdos or DRdos disc or is there something completely wrong with the emulator? - Simon Winnard, Swinton, Manchester.

Our PC Today colleagues have run into this situation with genuine PCs so it's not the emulator. Basically the game won't work with the later version of MSdos or DRdos that you're using, so just boot up with the earlier version when you want to play.

Happy archiving

I SAW your review of Archivist in the May issue of The Micro User and decided to give you a long-term user's view. I am a satisfied user of Archivist - which is now available in an improved form as version 2.30i.

The new version offers improvements in feel, ease of use and performance as well as routines which take advantage of the extra power of Risc OS 3.

At its modest price of £25 it cannot be beaten for its excellent performance. Card formats are easy to design using the separate module and these can be entered and manip-

File recovery from recursive directory

Micro

and

lem that I have come across once or

To retrieve files from the recursive directory structure, here's a short program in Basic which searched for the files and copies them out the of the mess of directories they are in. It then deletes the unwanted directory tree and returns the disc to its original state.

To use this program, run it and then enter first the name of the program directory, then the pathname leading to its top level - omit the name of the directory itself. The program will then recover the files.

ulated in all the expected ways. Unusually individual cards may be printed using Risc OS drivers and

Data may also be exported as CSV files, plain text or as drawfiles for inclusion in DTP. Oregan also supply a public domain importer to convert files from other data handling packages.

outline fonts.

You reviewer commented that the search facilities though powerful are unfriendly. This has been much improved in the latest version which

20 REM Recurse 30 REM By Richard Holland (13) 40 REM Recovers files lost in recursive directories 50 INPUT"Please enter the directory 60 INPUT"Please enter where it first appears : "b\$ 70 OSCLI"DIR "+b\$ 80 REPEAT 90 OSCLI"DIR "+a\$ 100 UNTIL ERR=67798 110 IF ERR<>67798 END 120 *UP 1 130 c\$=LEFT\$(A\$,2)+"2" 140 OSCLI"COPY "+a\$+" "+b\$="."+c\$+" 150 OSCLI "DIR "+b\$ 160 OSCLI "DIR "+a\$+" "CFR"V" 170 OSCLI "DIR "+b\$ 180 OSCLI"RENAME "+c\$+" "+a\$ 190 PRINT"Finished.

I hope this program helps out anybody stuck with this problem. -Richard Holland, Overton, Hants.

includes an easy search option which is very simple to use.

You simply type in the data to be searched for on a blank copy of the current card's format and press Return. This suffices for most pur-

The admittedly complex full search facility is retained as it allows powerful macro and selective multi-field searches to be carried out once the format is learnt.

Details are particularly easy to enter by clicking and pointing at field names on an existing card or at functions and operators on the complex search window.

Alternatively, the search expression used by the computer in an easy search is automatically entered.

I would underline that Archivist in its latest version is a first class product providing a powerful but lowcost database particularly suitable for home or educational use.

In addition, Oregan's support for such a modestly priced product is second to none. Comments from existing users have led to the recent improvements and registered users have been sent the latest upgrade free of charge. - Andy McMullon, Scampton, Lincoln.

Electron pals

I HAVE been reading The Micro User for over three years and I used to read Electron User in which I had a letter published about a pen pal.

I was really pleased when, in the same issue, there was a letter from Oliver Debus in West Germany. My mum wrote to Oliver and we wrote to each other. He sent me his new address when he moved - but I have lost it.

I have moved too and I would like to get back in touch with Oliver. My new address is 40 Dursley Road, Cam, Dursley, Gloucestershire GL11

I'd also like some advice about programming in assembly language and machine code so I can program my own games with real graphics. I have already written a Cashbook and Cash

Rom and Ram troubles on an Archimedes 410

I HAVE found Mike Goldberg's Rom and Ram column very useful in helping me to get to know my Archimedes 410, although as a totally computer illiterate grandmother I was somewhat abashed to learn that this feature is meant for younger readers.

Up until now I have been doing fine. However, in the February issue I struggled to get the images to move in a controlled fashion around the screen.

Eventually, by putting colons at the ends of lines 80, 160 and 170 I succeeded in doing so. But if I am too enthusiastic about pressing the various keys it deteriorates into endless lines across the screen.

My computer refuses to shows the slightest interest in MAR2 from the March issue though. With all these new concepts to understand I am unable to move in any direction. What does line 70 PRINT" mean?

And line 80 just disappears when listed so what is the point of leaving it blank? And the biggest puzzle of all - why so big a gap between Line 80 and

MAR6 at least elicits the response Unknown or

missing variable at line 70 but once more I cannot think of anything sensible to do about it.

In fact, I am beginning to feel even more stupid than Rom. I really must say I salute your younger

Please can you help me? I don't seem to have anyone around here I can ask and I am most reluctant to give up on what is becoming the most fascinating activity in my whole life. - Mrs. M. T. Webb, Durbanville, South Africa.

 Unfortunately Rom and Ram have been directed at the 8-bit BBC Micro from the March issue which is one reason why the programs have not worked correctly.

The programs will work on the 6502 emulator. However not all the problems you describe are caused by using a 32-bit machine.

The blank lines are there purely as separators and in the original programs each has a space on the line, we should have replaced the spaces with colons ourselves - sorry about that.

The line number gap is to allow the programmer, Mike, to add lines without running into the DATA statements.

Using an apostrophe in a PRINT statement forces a new line to be printed on screen. Using five creates five new lines then the end of the PRINT itself forces a sixth.

The error message about variables can have one of two sources, either the line mentioned is wrong or the place where a variable is first mentioned is wrong. Take the following example:

> 10 number = 1 20 PRINT number

This will generate the error message about a variable being unknown at line 20.

However, it's fairly easy to see that line 10 has been mis-typed. I hope this helps - please don't give up, we'll ask Mike, Rom and Ram, the cat and the ducks to do some more Arc-oriented programs for publication in a future issue.

register programs among others. Paul Matthews, Dursley, Gloucs.

• If you're following Rom & Ram that will give you a few hints about methods but for actual machine code programming you would be best going into a large bookshop that has technical books and seeing what they have on the BBC Micro and the 6502 chip.

Although the Electron and BBC Micro don't have a big commercial market any more they are very good computers for learning to program and can give you an excellent grounding on which to build your future expertise.

Daisy chained?

MY daughter was given a BBC B issue 7 for Christmas and I have just received a Ricoh RP1500Q daisy wheel printer.

Could you tell me if the two machines are compatible, and if so how I connect them? I am not very computer-oriented so please make any answer as simple and straightforward as possible.

Are there any companies producing public domain software for the BBC? - F. Worner, Ferndale, Mid-Glamorgan.

Yes the printer will work with the micro, but there are some points to be aware of: You'll need a connecting lead, the Ricoh will probably need a serial one. This plugs into the back of the micro into the serial socket.

The difficulty with serial connections is that the data can be transferred in a number of different formats and speeds, and both machines have to be in agreement otherwise nothing happens or you get garbage. You may need the help of technically-experienced dealer or friend with this part.

You won't be able to print graphics but the text will be very crisp. This is the major advantage of daisywheels, but the major disadvantage is that they are extremely noisy as each letter is slammed on to the paper by a

Probably the best software to use

is Inter-Word from Computer Concepts, because it stores the necessary configuration to drive the printer so you don't need to keep resetting the software before you start.

Teri Paul's PD pages outline some of the programs available in both the Archimedes and BBC PD world. She also features a list of the libraries who supply PD software.

BBC Lemmings?

IS THERE a version of Lemmings or Oh no! More Lemmings for the BBC Micro? I'm always looking forward to Friday because I go to my friend Toby who has an Amiga and got it with Lemmings and has bought Oh no! More Lemmings. I have a BBC Micro with a 5.25in disc drive. — William Whitaker, Stockport, Cheshire.

 Lemmings and its sequel are only available for the Archimedes from Krisalis. There's a chance that a BBC software house might write an 8-bit version but don't hold your breath.

Typing in vain?

I AM using a recently-purchased A3000. Using the Basic available on F12, I have keyed in the code for Arena 6502 from your January issue. However, it will not run and stops at line 60 on listing II (line 60 PHA) with the message No such mnemonic.

I have also tried running the program under the 6502 Host without success. Using the 6502 Host I am unable to key in all the lines. For example, line 50 in Listing II — line 50 [OPTL. No square brackets appear on my screen when I press the appropriate key.

Am I doing something wrong, or trying the impossible? Or is the answer to subscribe and get the free listings discs? – A. Taylor, Wadhurst, East Sussex.

 Of course we think subscribing is your best approach, on the other hand you can learn a lot from typing in programs – although not so much from such tightly programmed machine code as in Arena 6502.

Arena 6502 won't work on the Arc in native mode but works fine on the 6502 emulator. On an ARM3 machine it runs very fast and smoothly and with the latest version of the emulator you even get the sound effects.

The square brackets appear as arrows but the program will work.

512k is too small

I BOUGHT an Acorn 80186 co-processor known as the 512 board for my BBC B+. The board only has 512k and while GemDesktop and GemPaint load perfectly, when I load GemWrite I run into problems.

I cannot use GemWrite unless I expand the board to 1Mb. Why do companies sell a product that doesn't work with standard software? – Christopher Game, Colchester, Essex.

• When the 80186 board was first produced 512k was considered sufficient for most purposes. Graphic environments were a thing of the future and it is a fact of life that most won't work within 512k.

I am sorry to be so negative, but your alternatives are really to upgrade your board or your computer if you want to run this type of software. Essential Software are the people to talk to and they're at P. O. Box 5, Groby, Leicester LE6 0ZB.

Missing brackets

MANY readers will be familiar with the excellent Complete BBC Computer User's Handbook by Dr John Lockley and Douglas Tate and published by Watford Electronics. Among many interesting ideas is the formula called Zeller's Congruence on page 183 for working out the day of the week given the date.

Unfortunately, some brackets were omitted and the formula should read:

(INT(2.66*M-0.2) + D + Y +INT(Y/4) + INT(C/4) - 2*C) MOD 7

where:

D= day of the month M= month of the year

Y= year of the century

C= century number

The line of Basic (above) will give the day of the week for any date from 1753 onwards. – Jon Millington, Bristol.

ALL programs printed in this magazine are exact reproductions of listings taken from running programs which have been thoroughly tested.

However, on the rare occasions when mistakes occur, corrections are published as a matter of urgency.

Should you encounter error messages when you type in the program, they will almost certainly be the result of your own typing mistakes.

Unfortunately we cannot answer personal programming queries concerning mistakes. Of course letters about suggested errors will be investigated without delay, but any replies found necessary will only appear in these pages.

Memory upgrades

£1499

A5000 Acom's new machine with RISC OS 3, multisync monitor, ARM3, and 40Mb drive. An extra 2Mb of RAM (4Mb total) is included free.

A5000 Learning Curve - £1531. (£1798.92 inc. VAT)

A5000 RAM £85

Upgrades your 2Mb A5000 to 4Mb. High quality 4layer board as recommended by Acorn. Fitting does not involve any soldering. Extra 2Mb (4Mb total) £85. N.B. This upgrade is currently supplied free of charge with both of the A5000 systems above (ie standard version and the Learning Curve).

RAM

A3000 - Only 8 RAM chips - low power consumption

- User fittable - no soldering required

- Available as a "bare board" (ie sockets, but no RAM)

- Gold-plated connectors ensure long term reliability -4Mb-£130.00 2Mb-£50 Bare board - £25.50

A310 RAM

8-chip design ensures low power consumption. Compatible with ARM3 upgrades, backplanes, hard discs etc. Larger OS ROM option. Four-layer circuitry reduces electrical noise for trouble-free operation. The 2Mb board may be upgraded to 4Mb

4Mb - £163 2Mb - £99

In addition to a two year warranty, all the upgrades described here are covered by our no-quibble 14-day money-back guarantee. Your statutory rights are not affected.

SCANNING ISBELIEVING

The ScanLight range of scanners has become the most popular for the Archimedes. We now introduce a new updated version of ScanLight 256, a true 256 greyscale hand held scanner, along with new scanner software and a new low price.

The ScanLight, version 2 software, now offers;

- · Instant image rotation by any angle
- Support for the new RISC OS 3 true 256 grey-level sprite format
- Only one copy of the image in memory at once
- . On the fly screen-dithering for maximum quality
- A selection of sampling sizes from 2x2 to 8x8
- Image enhancement facilities such as sharpening, edge detect etc.
- Simple brightness and contrast controls
- · Spline curve control over grey-map for additional control

The scanner itself now offers a maximum resolution of 400 dpi true 256 grey-levels at full 105mm width. In addition there is support for monochrome, 16 grey-level and 256 grey-level scanning at 100, 200, 300 and 400 dpi. The ScanLight software offers several unique facilities that make it the leader in its field - e.g. the ability to provide all picture processing and enhancement functions with only the one original copy of the image in memory - vital since scanned pictures require a great deal of memory.

The perfect way to capture high quality pictures for inclusion in DTP or practically any other RISC OS application.

ScanLight 256, scanner, interface board and software-£199.00+VAT (£233.92 inc.)

Suitable for all Archimedes models and Operating System versions.

An internal A3000 version is available for the same price. Please specify when ordering.

Summer Olympiad

Capture the thrill and competitive spirit in five challenging events: Hurdles, Fencing, Skeet Shooting, Triple Jump and High Diving. The best ever Olympic simulation by Tynesoff. For one to four players

Tactic

The widely praised and extremely addictive Archimedes strategy game from Eterna is now available for the first time for the BBC Micro/ Master. One or two player option. Master enhanced version.

By popular demand, a classic, fast and furious space 'shoot-em-up'. Destroy the waves of attacking aliens in the allotted time, before bombs, inviso-flight, triple fire, etc.

Master Break

Snooker -style trivia quiz game for 1-4 players. Over 1500 questions on Science & Nature, Sport, Pop Music, Geography, etc. All the fun of a trivia quiz and snooker match rolled into one enthralling game.

This superb new 4-game compilation is only available on disc for BBC Micro (B, B+) and Master computers. Master Compact 31/2" disc ... £19.95 (inc VAT) BBC Micro/Master 51/4" disc ... £14.95 (inc VAT)
