Two typos occurred on p. 1013 of our paper, where we report non-genetic trend for wheat and barley. The correct figures are given in Tables 4 and 5. With the corrected slope values for non-genetic trend, the passage in question reads (all slopes rounded to two decimal places): “If we assume that intensity 2 captures trends free of age effects ($\delta_2 = 0$), then it may be concluded for winter wheat that most of the trend is due to genetic causes ($\hat{\beta} = 0.53 \text{ dt ha}^{-1} \text{ year}^{-1}$), amounting to about three times the contribution of non-genetic causes ($\hat{\gamma} = 0.16 \text{ dt ha}^{-1} \text{ year}^{-1}$) (Table 4). The situation is similar in spring barley ($\hat{\beta} = 0.39 \text{ dt ha}^{-1} \text{ year}^{-1}$, $\hat{\gamma} = 0.09 \text{ dt ha}^{-1} \text{ year}^{-1}$) (Table 5). All conclusions of the paper remain unaltered.
