An Iterative Process to Calculate the SCF Open Shell Orbitals

Renato Colle, Raffaele Montagnani, Pierluigi Riani and Oriano Salvetti

In the expression of the $\mathscr{F}_d$ operator (page 254, third line from the bottom), the multiplication by the occupation number has been omitted. Therefore this formula must be read:

$$\mathscr{F}_d = 2\left(h + \sum_{j=1}^{m} (2\mathscr{J}_j - \mathscr{K}_j) + \mathscr{J}_a + \mathscr{J}_b \pm \tfrac{1}{2}(\mathscr{K}_a + \mathscr{K}_b)\right).$$
