

### THIRD ANNUAL NATAS MEETING

The third annual meeting of the North American Thermal Analysis Society (NATAS) was held in Waco, Texas, U. S. A., on February 7-8, 1972. The technical papers presented were as follows:

B. Wunderlich, Melting point variations in linear high polymers (Plenary Lecture) . . . . .	175
F. Paulik and J. Paulik, Kinetic studies of thermal decomposition reactions under quasi-isothermal and quasi-isobaric conditions by means of the derivatograph . . . . .	189
H. S. Yanai, W. J. Freund, and O. L. Carter, Determination of the deflection temperature under load, VICAT softening temperature, and Clash-Berg $T_f$ of plastics by a new method . . . . .	199
R. W. Farmer, Thermogravimetry of thermally stable aromatic and heterocyclic polymers . . . . .	203
R. W. Farmer, Phenolic resin char-formation during hyperthermal ablation .	223
A. D. Kirshenbaum and A. J. Beardell, Thermal analysis of the reaction of molybdenum trioxide with various metals . . . . .	239
C. B. Concilio and B. J. Jahnke, The characterization by differential thermal analysis of organic polyelectrolytes and flocculating agents . . . . .	249
G. Krapf, J. L. Lutz, L. M. Melnick, and W. R. Bandi, The DTA-EGA study of the chemical isolation of $\text{Fe}_3\text{C}$ , amorphous carbon, and graphite from steel and cast iron . . . . .	257
R. G. Ferrillo and A. Wilson, Differential scanning calorimetry of hazardous materials: 4-nitro- <i>m</i> -cresol and <i>p</i> -nitrophenol . . . . .	273
P. K. Gallagher and D. W. Johnson, Jr., Kinetics of the formation of $\text{BaSnO}_3$ from barium carbonate and tin(IV) oxide or oxalate precursors . . . . .	283
E. L. Simmons and W. W. Wendlandt, Deaquaion kinetics at the boiling point of water: $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}$ and $\text{BaBr}_2 \cdot 2\text{H}_2\text{O}$ . . . . .	291
T. P. Herbell, Thermogravimetry system designed for use in dispersion strengthening studies . . . . .	295
C. S. Gorzynski, Jr., M. McCarty, and J. N. Maycock, Application of thermal analysis methods to the study of unstable and metastable materials . . . . .	309
<i>Thermochim. Acta</i> , 4 (1972)	171

R. L. Bohon and W. T. Conway, DTA studies on the glycerol-water system . . . . .	321
V. S. Ramachandran, Elucidation of the role of chemical admixtures in hydrating cements by DTA technique . . . . .	343
R. W. Mar, High-temperature thermal analysis of high boron alloys using automatic optical pyrometry . . . . .	367
F. Noel, Thermal analysis of lubricating oils . . . . .	377
D. L. Jernigan and J. L. McAtee, Jr., The study of carbon-coated grids at elevated temperatures by electron microscopy . . . . .	393
R. T. Marano, J. L. McAtee, Jr., K. P. Wittstruck, and A. A. Marano, Differential thermal analysis of kidney and bladder stones . . . . .	405
M. I. Knudson, Jr. and J. L. McAtee, Jr., A study of thermal decomposition of tris(ethylenediamine)cobalt(III) chloride: dilution effects . . . . .	411
R. T. Marano and J. L. McAtee, Jr., Differential thermal analysis of ammonium tetrafluoroborate and hexamminonickel- and tetramminozinc-tetrafluoroborate . . . . .	421
G. W. Miller and R. V. Fitzsimmons, Thermal analyses of polymers. XI. Correlation among several modes of thermal analysis for the transitional behavior of block copolymers . . . . .	425

The following papers were also presented but were not submitted for publication in this issue.

- R. K. Ware (Owens-Illinois, Inc., Toledo, Ohio), Prediction of crystallization temperatures of crystallizable glasses.
- G. W. Miller, T. L. Maurer (Owens-Illinois, Inc., Toledo, Ohio), and J. F. Johnson (Materials Science Institute, University of Connecticut, Storrs, Connecticut), Thermal analysis of polymers. XII. A survey of the development and application of thermal depolarization analysis.
- E. L. Charsley, J. P. Redfern (Stanton Redcroft Ltd., London S. W. 1), and M. L. Aspinal (A. E. I. Scientific Apparatus Ltd., Manchester, England), Simultaneous DTA-mass spectrometry.
- Everett K. Gibson (NASA, Manned Space Center, Houston, Texas), Thermal analysis-evolved gas analysis studies of geochemical samples via interfaced thermoanalyzer mass spectrometer computer system.
- E. M. Bollin (Eastman Kodak Company, Rochester, New York), A modified thermal head for pan type sample containers.

- E. M. Barrall, II, Mary Ann Flandera, and A. J. Logan (IBM Research Laboratory, San Jose, California), A thermodynamic study of the cross-linking of methyl silicone rubber.
- W. T. Humphries, D. Miller, and R. H. Wildnauer (Skin Biology Research, Johnson and Johnson, New Brunswick, New Jersey), Thermal analysis of natural and chemically modified human hair.
- G. Shelhamer and U. V. Rao (Matthey Bishop, Inc., Malvern, Pennsylvania), A simple and rapid method for testing the efficiency of supported catalysts using DTA.
- C. W. Bale, F. Ajersch, and J. M. Toquri (Department of Metallurgy and Materials Science, University of Toronto, Toronto, Canada), A chemical control technique to determine the thermochemical properties of liquid metal-non-metal systems.
