THE BEST OF
AMIGA

BootMan

Not all programs are created equal. Some programs insist on having all your memory, and others hate having other programs running in the background (such as disk caches, mouse utilities). And then there are those days when you want a full blown startup with all your assigns pre-made, disk caches, mouse utilities and everything. Now you don't have to rewrite your startup-sequence every time. This program allows you create separate startup-sequences for different scenarios. Then, whenever you boot your computer up, you can pick whichever startup-sequence you need (the bare bones for that memory-hog game program, and a full-blown startup for those regular sessions.) You can even password protect your startup altogether!
ON DISK: A Different Way To Start

CompressDisk

Data compression is not a new thing in the Amiga scene: there are many commercial and public domain utilities that give all Amiga users the ability to save disk space. Many are hard to use and require complex CLI commands to get files compressed and uncompressed. Now there is an easy solution to increase your disk capacity. This program will create a partition on your harddisk. Whatever file you copy to that partition becomes instantly compressed. Those files take up less room, and when you copy them out, they become decompressed. Easy. The files you don't want compressed, you don't copy to that partition!
ON DISK: Easy Disk Compression

CrazyClock

CrazyClock is... eh... Yes it is! For all of those who already known Mr. Rubick's cube. This program is inspired by Mr. Rubick's clock (almost unknown) which is a much easier alternative for everyone who couldn't solve the cube through intuition. This time you only have to move the 9 clocks on both sides to twelve. Therefore you can rotate one of the four clocks in each corner by clicking on them. To decide whether they rotate forwards or backwards the clocks are divided into halves. Click on the left to turn left and vice versa.
ON DISK: Rubick's Clock

THE COMMODORE SHAREHOLDER SURVIVAL KIT

For anyone who has invested time, money or loyalties into this Company, the CSM presents to you...THE COMMODORE SHAREHOLDER SURVIVAL KIT. As the name of this package implies, these materials can protect your stake in Commodore-- no matter what form that investment takes: stock, know-how, equipment, etc. We ask that you act based on this material and keep the faith no matter how things may appear on the surface. Your actions may very well determine our success as the CSM and the long-term success of this worthwhile company.
ON DISK: The Future

DTree v1.00 -- Directory Tree Displayer

You've got all those directories, subdirectories, and sub-subdirectories. But trying to remember what is in each directory, and where what is, or was is a whole 'nother story. Now with DTree, you can print out, display or look at your entire disk structure at a glance. This Amiga version can also display in ANSI color to show you a color coded picture of your harddisks or floppies.
ON DISK: Easy Harddisk/Floppy Viewing

AMIGAFIGLET

Now you can display any text message like the above. Figlet will take your text message and convert it into a blown up text version. This is perfect for including in letters, text files, EMail, messages and anywhere else you want to display text files. There are lots of fonts and styles to choose from.
ON DISK: A New Way To Display Text

AGMSFixText

No matter where you get it from, it always seems that you get a text file that is formatted for some other computer. Whether you are bringing your file from an IBM, MAC or even telecommunicated, sometimes there are extra bits, or the carriage return/line feeds are screwed up. Well, this is the one intelligent program you will need. It figures out what's wrong with your text files, and fixes them.
ON DISK: Program To Doctor Your Text Files

ARoach

Just when you think you've killed them all, there they are again. We're not talking about bugs, or viruses. We are talking about those disgusting roaches. All of a sudden, there they are. They scurry across your screen looking for places to hide. Then they hide under your windows. If you move or close a window, they take off again looking for a place to hide. If you use squish mode, you can use your mouse pointer to kill those pesky critters. But watch out, when you squish them they leave an icky mess on your screen. Don't worry, one click of your mouse, and your screen is clean.

BackUP

If you own a harddrive, you may know how much time it saves you. It provides you with convenience and speed. But imaging how much time would be lost, and how inconvenient it would be if it crashed! Now you can guard against that with a fast, high compression harddrive backup program. Even if you currently have a backup program, compare this one with the one you use. This program is not only fast, but it uses the latest in compression technology. For safety's sake... try it out! This program also features a custom Intuition interface, multi-floppy drive support, high-density drive support, incremental/full backups, on-the-fly compression, optional verify, two types of backup logs and a restorable configuration.
ON DISK: Something To Help You Sleep At Nights.

CarCosts

Just what does it cost to own your car. The IRS wants to know. If you use your car for any part business, you can actually deduct that percentage of all your costs. That means new tires, that new muffler, brake work, gas and everything involved in your car's costs. This program can help you figure all that out. And even if it isn't going to benefit you tax wise, at least you can know what your costs are so you can plan and budget the future.
ON DISK: Exactly How Much Your Car Costs You

Complete FileName!

CFN takes a lot of typing off your hands. When you are working in the Shell or CLI and have to type long file- or directorynames. It's enough to type the first few characters of the name and to press the TAB key. CFN completes the filename immediately, but just as long as there is just one possibility. Let's have a look at an example: Say, you have a directory with the following files: contents.doc, MegaProgrammiximo.readme and MegaProgrammiximo.c on your disk drive. Then say you want to type out the file Megaprogrammiximo.readme without all the typing. So just type: TYPE M [TAB KEY] and your Amiga will display: TYPE MEGAPROGRAMMIXIMO. (it won't finish the filename because there are two similar file names). So then all you have to do is finish the name with .DOC and you are done. And you saved all that typing. And if you have a directory full of lots of filenames, then this program will really make the difference.
ON DISK: A Lifesaver For Your Fingers

FileMaster

This is an Incredible File Utility from Finland. Probably the Best File manipulation program ever made. You can double click on Any file and it will detect if its an IFF picture, MOD file, Soundfile, or Text.. and then execute it accordingly. It multitasks, works under 1.3 and 2.0 with no problems, and unpacks any PP files or even LHArced files, with included LH and PP libraries. Also, click the Right mouse button on the option gadgets for another row of extra features. Try it and see for yourself.
ON DISK: FileControl

MagicMenus

Now you can have MagicMenus on your Amiga. Tired of having to reach up and get the menu you want? Tired of moving the mouse a little-bit too far and having the menu or submenu disappear? MagicMenu is a powerful replacement for the old Amiga menus. Magic Menu includes the following features: All Intuition menus are replaced by Magic Menu. Therefore, all programs using standard menus will appear in the new outfit. Magic Menu supports Pull-Down-Menus as well as Pop-Up-Menus. Menus are either displayed using the Standard Look, or the modern AmigaOS 2.0 style 3D-Look Menus may be controlled exclusively using the keyboard, there's no need to grab the mouse anymore. There are three different types of menus: Standard, Press Once and Select. Magic Menu can be configured in different ways, you may for example define handling and appearance of Pull-Down and Pop-Up menus separately. Magic Menu remembers every menu's last selected item, displaying Pop-Up menus the next time at a position allowing quick selection of the same or neighboring items. if a menu is selected while the currently active screen is not visible, the screen is popped to the front for the menu display. After selecting an item, it is returned to the back. if there is no input in a configurable time (moving the mouse, keypress) the menu selection is canceled, avoiding the machine to be blocked too long. And there are lots of other features, too numerous to list here.
ON DISK: A Whole New World Of Menuing

MiserPrint For HP Compatible Printers

MiserPrint is a print utility that puts up to 8 normal pages of text on one sheet of paper. You are able to save paper and time. MiserPrint uses the small built-in fonts (Courier and Letter Gothic) of the HP-Deskjet printers.
ON DISK: A Life Saver For Trees

PrintWindow

This program allows you to print to any preferences printer the active window at the stroke of a key. This program is particularly useful if you only want to print the window you are working on.
ON DISK: Easy, Efficient Printing

SMG Info

If you have ever tried to contact Commodore lately... you probably know that it's next to impossible. And with Commodore authorized repair service far and few between... there is an alternative. SMG can supply you with spare parts and handle repairs for you if needed. This is an information file on what services are available, and how to go about getting parts if you need them.
