# THE BEST OF AMIGA

## VirusKillers

In each issue we always include the latest virus killers and detectors. As you know, the best protection is prevention. The included utilities can help you detect and destroy that virus on one of your disks before it has a chance to infiltrate your entire disk collection. Add these utilities to your collection, or update your collection with the latest versions and keep it safe. Prevention is always the best medicine.

ON DISK: Virus Killer Programs, Source Code for Verification

## The World Database

This is an incredible program that can display the CIA database of the planet earth on your Amiga. There are several databases included. You can zoom in to specific regions or even display the data with a satellite view. The level of information included and available is incredible.

ON DISK: WDB Display Program, Satellite Display Program Regular Version, Satellite Display Program Math Coprocessor Version, Three Database Sets

## The Gallows

You've played Hangman before but have you ever played it Amiga style? This version of Hangman has a dictionary of over 3,000 highly-challenging words. Give it a try and test your command of the English language. You can also add your own words.

ON DISK: Hangman Program, Word Database

## Hoi, Let's Play (PLAYABLE DEMO)

This is a playable demo of one level of the game Hoi, Let's Play by Hollyware Entertainment. The object of the game is to help HOI find his true love by crossing the "Madlands" of his home planet. This is a demo of the second level of the game. Hoi must activate elevators and throw switches. Throwing switches can start machinery into motion that is dangerous to Hoi. So be careful, not everything is helpful.

ON DISK: Playable Demo of Hoi, Joystick Required.

## HotAnimation

In our never-ending search for the hottest Amiga animation, in this issue we have come across an animation done with a StarTrek theme. In this smooth animation you will see the Enterprise outflying three Klingon battlecruisers. This animation makes use of raytracing objects to create the animation and the ships. The animation player needed is also included on disk.

ON DISK: Animation and Animation Player Program

## HotMusic

This issue we have found a really hot soundtrack that not only has great rhythm and instrumentation

"REDSHA DONS"  
cool!

but also sound effects to enhance the instrumentation. The necessary music players are also included on disk.

ON DISK: Musical Soundtrack and Music Player Program

## POING

This arcade game is similar to BreakOut and Arkanoids but with a really interesting twist. The gameplay is with the mouse so the paddle control is excellent. Once you break through enough bricks to reach the back wall, you can break through the back wall onto another screen. There are bonus bricks with extra balls and more. There are also bonus rounds and more. A great game and a must have.

ON DISK: Poing Game Program

## Librarian

Librarian is a CanDo Deck that you use to catalogue your floppy disks. It will read automatically from the disk and put the files on the screen. Then you will be able to add comments to the files or see the comments if they are already there. You can save the catalogue and print it, to obtain statistics. There is also online help if you need it.

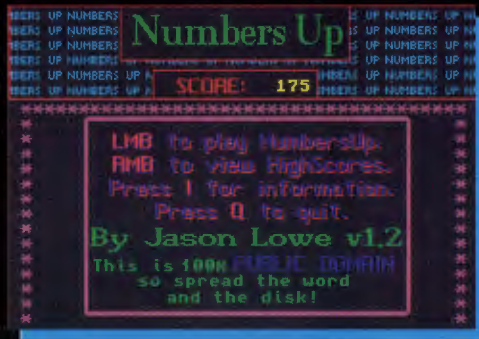

ON DISK: Librarian Program, DeckRunner Program

## CheckBook Accounting

This checkbook program is different from most programs because this one leaves you with the control. Many highly automated programs act as a black box in the sense that you enter the data, and trust the program to do the rest. But if your data has an error, it makes it hard to find the error. With this program you keep a ledger (which you can even update with your WordProcessor)! Then you use the program to perform various functions and generate information. Source code is also included.

ON DISK: Checkbook Program, Source Code

## ClockDj - The Super Clock

This is no simple Workbench clock! This is a clock-mouse-accelerator-screen blanker-window manipulator-function keys-macros with ARExx support. More specifically: Screen and Pointer blanking after a pre-defined period of inactivity. Mouse accelerator. Sun mouse. Click window to front or back or cycle through them with your mouse. The program can also allow the user to select a window and remove it from the screen while leaving the task that started it unaffected. You can also pop up a new CLI window at the bottom of the screen. You can display chip and fast memory separately. ClockDJ will also allow you re-map the keyboard, substitute a string of characters for a single key depression, or execute a command when a particular key sequence is pressed. And to top it all off, ClockDJ also is ARExx compatible as well as having a whole pile of other functions.

ON DISK: ClockDJ Program, Sample ARExx Code
