# THE BEST OF AMIGA

## LeverEdge Nag Program

Now you never have to miss that important business appointment, birthday, anniversary or any other important date. But also just as important, you can schedule and plan your time during the day. As time becomes a more and more of a rare commodity these days, it becomes harder to schedule in regular events such as eating right and exercise. LeverEdge Nag can help you with all these things. LeverEdge NAG is a program to remind you of events before you miss them. Events can be scheduled to occur once or repeat daily, weekly, monthly or yearly. You can even be alerted of the event in a number of ways from a screen flash to a message requester.

**ON DISK: LeverEdge Nag Program**

## icalc

This is probably the most complete "Do Everything" calculator utility ever created for the Amiga! Not only can it handle everything from complex trigonometric functions and complex numbers as well as all the basics. You can even set up configuration files and program in complex functions and have the use of variables. So if you are performing a set of calculations regularly (for investment, interest income, loan payments etc.) you can have icalc perform them for you with one function. Plus, there is a whole slew of functions already built into the program itself! Now you never have to be afraid of repetitive calculations again!

**ON DISK: icalc Program**

## MorphAnimation

This is an interesting concept for a morphing image animation. This animation is of a boy, whose images morphs (slowly evolves) into the image of his father. This is the same effect seen in the Terminator II movie where the terminator changes into different objects, and also in the new Michael Jackson video where one person morphs into another person and so on. The necessary display program is also included in this issue.

**ON DISK: Animation, Display Program**

## Talker

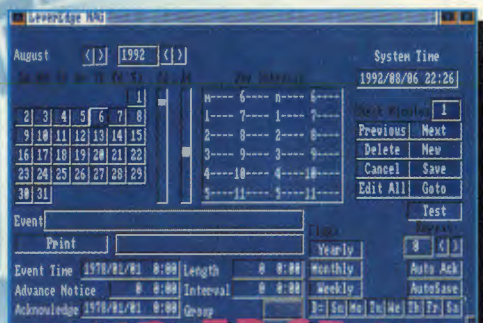

Have you ever wanted your Amiga to read to you, or give a speech? Well, this program can do just that, and with flair! You just specify the file, and this program will read it to you. And not only do you listen, but the program displays a face whose lips and eyes move and blink as it speaks your file to you. A really interesting program to examine and explore.

**ON DISK: Talker Program, Source Code**

## EuroStars

This is one of the more remarkable star field generators for the Amiga. It originated in Europe and has been cleaned up and featured here in America. Not only does it create a marvelous starfield which can be used for video backgrounds and more, but also you can specify the parameters of the star field's actions. The parameters you can change are: Movement, specifies how many world units the stars are translated each frame. Rotation, specifies a static/initial rotation angle. Spin, specifies the change in rotation for each frame. You can even change X, Y, and Z specifiers which indicate which axes the operators are to apply.

## LEVER EDGE NAG

## CROSS MAZE

## THROMULUS

## VirusKillers

In each issue we always include the latest virus killers and detectors. As you know, the best protection is prevention. The included utilities can help you detect and destroy that virus on one of your disks before it has a chance to infiltrate your entire disk collection. Add these utilities to your collection, or update your collection with the latest versions and keep it safe. Prevention is always the best medicine.

## SuperCroak Demo

This is a playable one level game of SuperCroak. If you have played Frogger then you know how this game works. The music and sound are great. Joystick Required.

**ON DISK: SuperCroak Game Demo**

## CrossMaze

If you like crossword puzzles, then you will love this game. This program creates a maze of 10, 20, or 30 words between 8 and 10 letters in length. These words are presented to you in a list along with the maze. Your goal is to put all the words in the maze so that they all fit. The words do not HAVE to be placed back in the same way that CrossMaze built the maze (there may be more than one solution).

**ON DISK: CrossMaze Game**

## Order

Order is a tile game played on a 7X7 board. Each tile can be one of 5 colors or can be blank. The purpose of the game is to arrange the tiles, in a way to achieve the maximum order. Each tile has a desire (don't we all!).

Red tiles don't like to be around other red tiles. Blue tiles like to be around exactly 1 other blue tile. Green tiles like to be around exactly 2 other green tiles. Purple, exactly 3. Yellow, exactly 4. Points are awarded for satisfying the tiles desires. There is no right way to arrange the board and the maximum score for any board is unknown. Experiment! This game is easy to learn, and hard to master.

**ON DISK: Order Game program**

## Thromulus Demo

This is a playable demo version of the game Thromulus. Thromulus is a game within your blood stream. Red cells fighting blue cells. Also in the game are other cells such as killer cells, clotting cells and switcher cells. The object is to take as many boxes away from the opponent as possible. The player with the most pieces wins! The sound effects and music are fantastic, and the game play is interesting and always develops a new strategy.

**ON DISK: Working Demo of Thromulus**

## HotMusic

This issue we located a really interesting piece of music with some incredible instrumentation, some vocal and even a slight political twist. A really hot soundtrack that not only has great rhythm and instrumentation, but also sound effects to enhance the instrumentation. The necessary music players are also included on disk.
