THE BEST OF AMIGA

AmigaIMPLODER

Ever get tight on disk space, or run out of room on your Workbench or boot disk. Now there is an answer. IMPLODER will actually crunch your programs up to 50% of their original size! And the crunched program still works as if nothing happened! Amazing you say! This incredible program was created by a team of brilliant programmers to intelligently decompress a program when you try to execute it! That means you can drastically increase your disk space and harddrive space without buying extra drives!

ON DISK: Cruncher Programs, Libraries, Source Code, Decrunchers

HomeBudget

Now you can take control over your personal finances, and create a workable budget at the same time. This well thought out program offers three separate sections: Checking Accounting, Savings Accounting & Budgeting System. You can specify as many budget categories as you like, and have them fully integrated into your Checking and Savings Accounts. You can keep track of checks, withdrawals, banking fees, cash card withdrawals, deposits, interest. In addition, HomeBudget can create reports and charts on your spending (saving) habits. Plus a whole lot more. Get and keep your finances under control with HomeBudget.

ON DISK: HomeBudget Program

KeyBang - For Kids & Frustrated Adults

What many younger children crave is feedback. And this is just what this program does. Whenever you press any key on the keyboard, the Amiga draws an image and plays digitized sounds. This may sound simple, but it is just what kids need to keep them amused, and when you are feeling a little frustrated, what you might need too. Just pound away on the keyboard... and enjoy!

ON DISK: KeyBang Program, A Ton Of Digitized Sounds

PC-Patch

PcPatch is a bunch of utilities to enable PCCopy and PCFormat from the Extras 1.2 (or Extras 1.3) PCUtil drawer to read, write and format any kind of MS-Dos style disks, including 720k/3.5" diskettes. Included is a format editor, so everyone can customize PCCopy to fit his needs. Two sample format entries have been added, AtariSS and AtariDS.

ON DISK: PC-Patch Program, Sample Formats

IFF to ANSI

Now you can dress up your startup-sequences, text files, scripts and whatever uses ascii text files to the CLI or a window. You can draw a picture with your favorite paint program, then this program will convert it to a text file that when you print out to your screen will show a rendition of the picture. You can make large titles, boxes, or whatever you like, in color, on your screen, in a text file! You can even load them into your favorite wordprocessor to do fancier title pages for reports, illustrations and more! This version of the program puts a small ad in the corner of the picture.

RAM: Clean & Sweep

Many programs use up RAM inefficiently and badly fragment your memory. And even though you may have enough RAM, sometimes it is so fragmented into pieces instead of large chunks of free RAM, programs won't be

able to use the memory anyway! These two programs will hunt through your memory and collect and clean spare memory fragments to maximize your RAM usage. A MUST HAVE PROGRAM!

ON DISK: Clean & Sweep Programs

Disk Storage Tiny

This is a tiny, but elegant program by one of the most prolific and intelligent programmers on the Amiga. It is a small program that will run from CLI or Workbench and display a list of ALL mounted devices, including harddisk partitions. You will constantly be up to date on the percentage full, the amount of free space (in Kilobytes) and total device storage space. In addition it will also keep you abreast of CHIP, FAST and total RAM available!

ON DISK: Disk Storage Tiny Program

TrainingLog - TLog

Now is the weather and time to get in shape. But to do so requires a controlled and sustained regimen of exercise. Now your Amiga can help you do just that. TLog is an intuition based program that allows you to record daily statistics and monitor your training progress. You can maintain a daily record of distance, time, heart rate, weight and temperature. Furthermore you can link a text file with the entry and keep a free form diary. Through its AREXX interface, tlog allows you to automatically get to a scheduler to post reminders of upcoming events. The AREXX commands provide the basis for generating custom reports from the tlog data base.

ON DISK: TLog Program

The SceneryChannel

In *Back To The Future II* they had the scenery channel. Well, there is no reason the Amiga can't do it now! Here is a program that generates scene after scene of beautiful fractal landscapes ranging from meadows, to mountain ranges to snowscapes and more. Plus there is music to accompany the program. Enjoy your journey.

ON DISK: Scenery Channel Program, Music

VirusKillers

In each issue we always include the latest virus killers and detectors. As you know, the best protection is prevention. The included utilities can help you detect and destroy that virus on one of your disks before it has a chance to infiltrate your entire disk collection. Add these utilities to your collection, or update your collection with the latest versions and keep it safe. Prevention is always the best medicine.

ON DISK: Virus Killer Programs, Source Code for Verification

HotMusic (SPACE QUEST II)

This issue we have found a really hot soundtrack that not only has great rhythm and instrumentation, but also sound effects to enhance the instrumentation. The necessary music players are also included on disk.

ON DISK: Musical Soundtrack and Music Player Program

KnightMare

This is a working demo of the game Knightmare by Mindscape. It is a graphic role playing adventure game similar to *Dungeon Master*, but more. There are more features and variations. The combat is fantastic, as well as use of the weaponry. This demo even offers free versions of the game if you can beat the demo. Limited offer of course.
