Z. Naturforsch. **58c**, 637–639 (2003); received May 22, 2003

Besides caffeic acid three pyrones have been isolated from aqueous bark extracts from *Acosmium panamense* and their structures were determined using spectroscopical methods. Besides the already described desmethylyangonine its O^{4'}-mono as well as the di(1–6)glucoside are found the first time.

Key words: Desmethylyangonine, Desmethylyangonine- β -D-glucoside, Desmethylyangonine- β -D-di(1–6)glucoside
