1-4. Reporting Equipment Improvement Recommendations (EIRs).

If disperser needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about your equipment. Let us know why you don't like the design. Tell us why a procedure is hard to perform. Put it on an SF 368 (Quality Deficiency Report). Mail it to us at: Commander, US Army Armament Materiel Readiness Command, ATTN: DRSAR-MAD-E, Aberdeen Proving Ground, MD 21010, We'll send you a reply.

OPERATING INSTRUCTIONS

Section I. DESCRIPTION AND USE OF OPERATOR'S CONTROL AND INDICATORS

Container (1) contains the CR agent solution, charged to a pressure of 140 psi. The nozzle (2) directs the stream of CR solution. The actuator (3) controls and release of CR agent solution through the nozzle. The actuator has two posi-

tions lock and unlock. An intact tamperproof seal (4) indicates that the actuator has not been turned to the unlock (discharge) position. The carrier (5) is not packed with the disperser.

Section II. PREVENTIVE MAINTENANCE CHECKS AND SERVICES

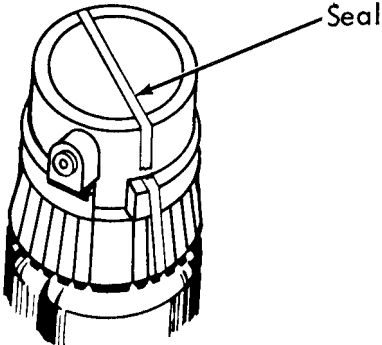

Before operation, always keep in mind the WARNINGS and CAUTIONS. Be sure to per-

form the preventive maintenance checks and services (PMCS), table 2-1.

Table 2-1. Operator/Crew Preventive Maintenance Checks and Services

NOTE: Within designated interval, these checks are to be performed in the order listed.

B - Before Operation

Item No.	Interval B	Item to be Inspected	Procedures Check for and have repaired or adjusted as necessary.	Equipment Not Ready/Available If:
1	*	Tamperproof Seal	Missing or broken seal. 	Tamperproof seal is missing or broken.
2	*	Disperser	Shake to determine if disperser contains agent.	Disperser is empty.
3	*	Carrier	Check for damaged flap(s) and snap buttons.	Flap(s) torn or missing. Buttons mashed or missing.

Section III. OPERATION UNDER USUAL CONDITIONS

WARNING

Do not rub eyes or skin if you have been contaminated. Thoroughly wash affected skin areas with soap and cold water. For eyes, flush with cold water and seek medical treatment.

To prevent unintentional discharge of CR agent do not carry unlocked disperser in carrier at any time, do not depress top of carrier while disperser is inside carrier do not exert pressure on the flap of carrier which contains the disperser. Caution should be exercised whenever entering a restricted space or conducting an action which might exert pressure on the carrier/disperser top such as buckling seat belt etc.

c. Remove the disperser from the carrier.

NOTE

If left-handed, use your thumb instead of the index finger to unlock the actuator.

2-1. Initial Checks and Services.

Perform the PMCS listed in table 2-1.

2-2. Operating Procedure.

a. Strap the carrier to your belt.

b. Grasp the carrier flap and release the snap button.

d. Grasp disperser in hand with your index finger around actuator and against the nozzle. Be sure that the thumb is around the container and not the actuator.

e. Using index finger, rotate the actuator nozzle counterclockwise. This will unlock the actuator.

NOTE

Do not operate disperser in upside-down position, because pressurized nitrogen will escape without agent discharging.

f. Partially extend your arm and hold the disperser upright with wrist stiff. Using the index finger as a sight, point nozzle toward target (facial area).

WARNING

Do not block nozzle with your fingers or thumb when discharging agent. CR agent will irritate your skin.

g. Press actuator down with index finger to discharge agent. Use short 1-second bursts or continuous stream as required.

RELEASE

h. Release index finger to stop discharge of agent.

NOTE

If left handed, use your index finger to lock the actuator.

CLOSE WITH THUMB

i. With your thumb against the nozzle, rotate the actuator clockwise until the actuator is in the locked position.

j. Place disperser in carrier and turn-in to organizational supply.

CHAPTER 3

ORGANIZATIONAL MAINTENANCE INSTRUCTIONS

Section I. REPAIR PARTS, SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT

3-1. Repair Parts.

a. Tamperproof seals. Tamperproof seals, page 3-6, are packed with the disperser. Organizational maintenance personnel have the responsibility to install seals on serviceable actuators returned by operator.

b. Carrier. Maintenance for carrier is limited to cleaning of carrier. There is no authorized repair for the carrier. It is not a part of this end

item. When required, carriers must be requisitioned separately, appendix D.

3-2. Servicing. Organizational maintenance personnel are authorized to unpack, inspect, issue, clean and repack unserviceable dispersers para 3-7.

3-3. Special Tools. No special tools are required.

3-4. Test, Measurement, and Diagnostic Equipment (TMDE). No test, measurement, and diagnostic equipment is required.

Section II. SERVICE UPON RECEIPT

3-5. Service Upon Receipt of Materiel. One hundred forty-four dispersers are packed in a wooden box. The wooden box contains 12 fiberboard cartons. Each fiberboard carton contains 12 dispersers individually sealed in plastic bags and an envelope containing 80 replacement tamperproof seals. See table 3-1.

WARNING

To prevent injury to personnel, do not expose the disperser to temperature above 130°F. (54.5°C.). The

disperser is pressurized and when exposed to excessive heat, it could explode. To prevent injury to personnel, do not destroy or puncture the disperser.

WARNING

When opening the wooden packing boxes that contain dispersers, exercise care to prevent contamination of personnel or the area, in the event any of the dispersers are leaking CR agent.

Table 3-1. SERVICE UPON RECEIPT - M36 DISPERSERS AND TAMPERPROOF SEALS

	LOCATION	ITEM	ACTION	REMARKS
1.	Wooden Box	Fiberboard cartons	Remove the 12 fiberboard cartons from wooden box.	Retain all packing materials for repack- ing of empty/unser- viceable dispersers.
2.	Fiberboard Carton	Disperser	Remove the 12 dispersers from fiberboard carton. Do not remove the dispersers from their plastic bags for inspection. The dispersers are removed from the bags just prior to initial issue. Visually inspect each disperser for dents, for the actuator in locked position. Make sure the tamperproof seal is attached and not broken/torn.	
3.	Fiberboard Carton	Seals	Remove envelope containing 80 replacement tamperproof seals from fiberboard carton and store for future use.	

3-6. Inspecting and Checking Equipment.

a. Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on DD Form 6, Packaging Improvement Report.

b. Check the equipment against the packing slip to see if the shipment is complete. Report all discrepancies in accordance with the instructions of TM 38-750.

Section III. PREVENTIVE MAINTENANCE CHECKS AND SERVICES

Before issuing the disperser to the operator, perform PMCS as outlined in table 3-2.

APPENDIX E

MAINTENANCE ALLOCATION CHART

Section I. INTRODUCTION**E-1. General.**

a. This appendix provides a general explanation of all maintenance and repair functions authorized at various maintenance categories.

b. The Maintenance Allocation Chart (MAC) in Section II designates overall responsibility for the performance of maintenance functions on the identified end item or component. The implementation of the maintenance functions upon the end item or component will be consistent with the assigned maintenance functions.

c. Section III contains supplemental instructions and explanatory notes for a particular maintenance function.

E-2. Maintenance Functions.

a. Inspect. To determine the serviceability of an item by comparing those characteristics with established standards through examination.

b. Service. Operations required periodically to keep an item in proper operating condition, i.e., to unpack, to clean, and to repack.

c. Repair. The application of maintenance services or other maintenance actions to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in a part, subassembly, module (component or assembly), end item, or system.

3. Explanation of Columns in the MAC, Section II.

a. Column 1, Group Number. Column 1 lists functional group code numbers, the purpose of which is to identify components, assemblies, sub-assemblies, modules with the next higher assembly, and end items.

b. Column 2, End Item/Component. Column 2 contains the names of end item, components, assemblies, subassemblies, and modules for which maintenance is authorized.

c. Column 3, Maintenance Function. Column 3 lists the functions to be performed on the item listed in Column 2.

d. Column 4, Maintenance Category. Column 4 specifies, by the listing of a work time figure in the appropriate subcolumn(s), the category of maintenance authorized to perform the function listed in Column 3. This figure represents the active time required to perform that maintenance function at the indicated category of maintenance. If the number or complexity of the tasks within the listed maintenance function vary at different maintenance categories, appropriate work time figures will be shown for each category. The work time figure represents the average time required to restore an item (assembly, subassembly, component, module, end item, or system) to a serviceable condition under typical field operating conditions. This time includes preparation time, troubleshooting time, and quality assurance/quality control time in addition to the time required to perform the specific tasks identified for the maintenance functions authorized in the maintenance allocation chart. The symbol designations for the various maintenance categories are as follows:

C..... Operator or crew.
O..... Organizational maintenance.

e. Column 5, Tools and Equipment. Column 5 specifies, by code, those common tool sets (not individual tools) and special tools; TMDE, and support equipment required to perform the designated function.

f. Column 6, Remarks. This column shall, when applicable, contain a letter code, in alphabetic order, which shall be keyed to the remarks contained in Section III.

E-4. Explanation of Columns in Remarks, Section III.

a. Column 1, Reference Code. The code recorded in column 6, Section II.

b. Column 2, Remarks. This column lists information pertinent to the maintenance function being performed as indicated in the MAC, Section II.
