Command Data Model and Dictionary

**Information
Systems
Modernization
Program**

Foreword

The U.S. Army Corps of Engineers has developed a product that will help manage information in such a way that it can be shared throughout the organization. The Corps recognizes the importance of information as a growing resource. The use of technology to collect, store, and disseminate information is increasing. Thus, the importance of managing information is paramount.

Historically, there have been many systems in place for logically organizing and controlling information and data. For instance, libraries use systems to catalog and track books, periodicals, videos, and other information. As a result of our Command resolve to treat data as a corporate resource in the same manner that we do our personnel, materiel, etc., the Corps has developed a system to store and locate data using computer technology and manual systems. This system is the Corps of Engineers Data Encyclopedia developed by HQUSACE CEIM-PD.

At the center of the Encyclopedia is the Command Data Dictionary (CDD). The Command Data Dictionary is a special kind of database which acts as a repository of information about data we use to manage our programs and projects.

ROBERT L. HERNDON
Colonel, Corps of Engineers
Chief of Staff

Chapter 1

Introduction

1-1. Purpose

This pamphlet provides to users the structure of the Corps' shared data and their definitions. Included herein are the business rules expressed in the data relationships and the dictionary of data elements. The graphic depiction of the entities, data elements, and their relationships is the Command Data Model (CDM). See Appendix A for a description of the CDM. The Command Data Dictionary (CDD) in Appendix B contains the definitions of the data entities and data elements. This model forms the basic framework for all business systems development that envisions sharing of data. The goal of this pamphlet is to facilitate functional user involvement in Information System development and to ensure maximum consistency and shareability of data by providing:

- a. The means by which functional users identify data currently managed within the Corps.
- b. The means to assure common definitions of data collected and reported throughout the Corps.
- c. The mechanism to document the Data Architecture Control Committee's (DACC) consensus of the Corps' data and definitions.

1-2. Applicability

This pamphlet is applicable to all HQUSACE/OCE elements, Major Subordinate Commands (MSC), Districts, Laboratories, and Field Operating Activities (FOA).

1-3. References

- a. AR 25-1.
- b. AR 25-9.

1-4. Objectives

The objectives of the Command Data Model and Dictionary are:

- a. Facilitate user involvement in information system requirements and development.
- b. Document the business rules and relationships that govern the Corps' data.
- c. Facilitate communications among users by establishing common data structures and definitions.
- d. Provide a basis to solicit MSC participation in the Corps' data administration (new proposals, changes, refinements, etc.).
- e. Publish a record of decisions by the functional representatives of the Data Architecture Control Committee.
- f. Control data redundancies.
- g. Encourage adherence to data policies.

EP 25-1-6

11 Feb 91

h. Provide a structured approach to the development of databases and applications.

1-5. Scope

a. This Command Data Model is based on the recently developed "baseline" concepts for accounting and work management. It will eventually represent all that we know about the Corps' shared data requirements.

b. The Command Data Model was originally created in March 1989, by the integration of the three baseline Prototype Development Concept (PDC) data models: Work Breakdown Structure, Work Item Resource Structure, and Accounting Structure. It was augmented by data from the Design PDCs and by reverse engineering the Automated Management and Progress Reporting System (AMPRS) and Project and Resource Information System for Management (PRISM) databases.

c. At this stage it includes data about project management and some about other

functions closely related to project management. The early accounting baseline structure will be updated by the Accounting PDC. Team when validated.

d. The key concept of the Command Data Model is that our business is related to managing work, whether it be a large multiyear project or a smaller task. Our objective is to get the work done on time and within budget. So naturally, the data model is driven by the entities: WORK-ITEM FUNDING ACCOUNT, RESOURCE ESTIMATE, COST-ACCOUNT, and MILESTONE. This version also includes those data elements that the AMPRS and PRISM functional users felt represented the current AMPRS and PRISM databases.

1-6. Corrections, Inquiries and Improvements

Questions concerning any inconsistencies, inquiries, and recommendations for improvements regarding this pamphlet should be sent to HQUSACE, CEIM-PD, Washington, D.C. 20314-1000.

Chapter 2

General Concepts

2-1. General

These concepts define and describe the components which constitute the Command Data Model (CDM) environment. A basic, Corps-wide understanding of these concepts is necessary to ensure consistency when referring to the Command Data Model and Dictionary. The importance of a common structure and definition of data cannot be overemphasized. The Corps must share its data, must communicate its data, and must understand its data.

2-2. Information and Data

The Corps defines information as a representation of facts, concepts, and assumptions that are derived from data for use in performing the various Corps' missions. Data is defined as meaningful facts about persons, places, things, concepts, events, and activities in a defined format and structure from which information may be derived. Data is considered a Command resource that is shared among many users as appropriate. Data is manipulated and processed to create information from which business decisions can be made. Identifying the role that the data plays in determining the Corps' business rules is an essential part of identifying reliable data.

2-3. Data Objects

Data objects are entities, data elements, relationships, and data models and their

characteristics when structured, combined, and analyzed, provide an understanding of the business process.

2-4. Entities

a. Entities are the persons, places, things, concepts events, or activities about which we want to collect data. The data object, entity, is a logical place to store the characteristics of the real world objects. Analysts show the relationships between entities and the rules affecting their relationship graphically. The entities and their relationships are the building blocks used to depict, or model, the data needed to support a business process.

b. The USACE has categorized data into areas or classes of information. See Appendix C "USACE Data Classes," for an explanation and a listing of USACE Data Classes.

2-5. Data Elements

a. Data elements are uniquely defined and identifiable characteristics of the person, place, or thing defined by an entity. When values are given to these data elements, the values represent facts about specific instances of an entity important to the business. Data elements are the smallest unit of meaningful data.

b. The definition of a data element includes a description of the characteristic that it represents, such as CONTRACT-START-DATE, the date that the contractor may begin work under a specific contract. The definition also includes the Domain which is the set of values that a data element may assume, usually defined by the data element's length and

EP 25-1-6

11 Feb 91

format, or by a specific list of values. (Refer to Appendix D for lists of Common and Standard Domains.)

c. To provide continuity from current (legacy) data systems to the Command Data Model (CDM), it is helpful to see the correlation between the Legacy System Data Elements and the Command Data Elements. This is further discussed in Appendix E, "Legacy System to CDM Correlation."

2-6. Naming Conventions

When dealing with data objects (e.g., entities and data elements), it is important to understand and agree on the object's name and definition. As a system is developed, the structure and definition of all data should be stored in the Data Encyclopedia or Dictionary. The Data Encyclopedia is a valuable tool for organizing, tracking, and controlling the vast amounts of data used by the Corps. In order to effectively use this tool, naming conventions have been established that help users to quickly locate data objects and identify duplicate data objects. The Corps of Engineers "Data Element Defining and Naming Conventions" appear in Appendix F of this document.

2-7. USACE Data Encyclopedia

a. The USACE Data Encyclopedia addresses the Corps' needs by providing users with an information sharing tool, a repository of metadata (information about data), and an automated cross reference resource tool (for cross referencing activity and data models) used in the information resource methodology adopted by the Corps.

(1) The methodology for Information Systems development includes:

- (a) Requirements Analysis Planning
- (b) Conceptual Design
- (c) Iterative Application Development

(2) Throughout the process of this methodology, the data administrative functions will occur as follows:

(a) In concert with the modeling of the business, the information needed by the various business activities is defined. This information includes the Inputs, Controls, Outputs, and Mechanisms (ICOMs) used by the business people in their activities.

(b) Entities are identified which will contain the fundamental data elements represented in the inputs, controls, outputs and mechanisms as well as other data that needs to be kept; then an Entity-Relationship (E-R) Data Model is developed.

(c) The entities are defined.

(d) The entities key data elements are determined and the relationships among entities reviewed.

(e) The non-key data elements that describe the entity are identified.

(f) All data elements are defined.

b. The Data Encyclopedia will facilitate each stage of this process. It will: Improve

system documentation; provide accurate, timely metadata during system development; provide extensive cross references of corporate data; help coordinate the documentation needs of all users; and assist in enforcing standards.

c. The inquiries and listings available from the Data Encyclopedia will enable management and users to spot redundant data. Redundant data are likely to cause inconsistencies in the information derived from it. The same piece of data may have different formats or many versions, resulting in inconsistent, or even inaccurate business decisions.

d. The benefits provided by the USACE Data Encyclopedia during system development include: The minimization of data redundancy; ease in developing and maintaining current documentation (therefore, minimizing change impact); and extensive cross references and multiple views of existing Corps data sources.

2-8. IDEF Modeling Technique

The U.S. Air Force's Integrated Computer Aided Manufacturing (ICAM) invented a technique required on many of its projects which evolved into the Integrated Computer Aided Manufacturing Definition, ICAM Definition (IDEF) Modeling Technique. The IDEF Modeling Techniques have been adopted by the Corps of Engineers to be used during system development. The Corps uses the IDEF Modeling Techniques in the development of activity and data models which graphically and descriptively depict the Corps' business processes. The IDEF Modeling Techniques provide: An effective

means for displaying the current (AS-IS) and the planned (TO-BE) environments; a means to accomplish interaction and consensus between user groups as part of system development; consistency, which facilitates data integration and sharing; and the use of documentation and audit trails during system conceptual design.

2-9. Command Data Dictionary CDD

a. The Command Data Dictionary is a printed glossary of data terms. Its information can also be retrieved online from the Encyclopedia system. If Webster's dictionary is essential to clear communication in the English language, then data structures and definitions in the Encyclopedia are essential to clear communication within systems design, development, and use.

b. The Data Encyclopedia provides a mechanism to define and use information about data. It is a central repository of this information about data called metadata. Consistent with the increase in the efficiency of methods used to collect, compute, and disseminate mission data is the need to understand the characteristics and relationships of the data itself. The Encyclopedia provides the technology to record, analyze, and share this. The data dictionary is a report of the metadata about the Corps' data. The Corps' CDM and CDD are based on the IDEA Modeling Techniques.

2-10. Command Data Model (CDM)

a. The Command Data Model is a graphical representation of the structure of the USACE corporate data. It contains the

EP 25-1-6

11 Feb 91

entities, relationships, and data elements of the Corps' data. Like the Command Data Dictionary, it is a representation of the metadata that describes the important shared data of the Corps. This metadata is stored in the Encyclopedia. For the CDM, it is a graphical representation. It serves as a communication tool between functional and technical users.

b. Because it is graphical, it best shows the structure and, of course, the complexity of the totality of the Corps' data that has been defined as of a particular point in time. But, because it is graphical, the full definitions cannot be shown on it without destroying its structural message. Thus, the Command Data Dictionary report or the many Encyclopedia search and retrieval functions are used to present this detail.

c. The Command Data Model and Command Data Dictionary (CDM/CDD) are the base from which shared information will evolve in the Corps. The model flow (in Figure 2-10) shows how the CDM/CDD serves to:

- (1) Provide a starter model for a new project.
- (2) Integrate project final data models after they have been validated and have passed the In-Process Reviews (IPRs) and alpha tests.
- (3) Interface legacy systems to the CDM.
- (4) Provide a physical database design from a conceptual project final model.

NOTE: Sequencing numbers denote normal development cycle.

2-11. Extracting a Data Model View

a. The Encyclopedia has the capability to extract a subset from a model. This feature is invoked by first creating a Data Model Header for the new model, then following the instructions for extracting a data model which is accessed under the Encyclopedia menu of "Other Data Model Functions."

b. The new data model is populated by selecting the relationships that are going into it which indirectly selects the entities of choice. If the entities selected are "Registered" or "Approved," they can be only borrowed or shared because they represent Corps-wide entities, approved and controlled by the DACC. A new project can create "Candidate" entities and relationships. Relationships can be deleted only if they do not affect the key structure of the CDM.

2-12. Fundamental and Derived Data

Fundamental data is the lowest level, basic piece of information or fact. The data model and dictionary deal with basic or fundamental data. Derived data is information prepared by algorithms, conditional extractions, or formulas, such as "the sum of costs from 7/89 thru 10/89" or "inflation adjusted project estimate." The latter is derived using the data elements PROJECT-ESTIMATE and INFLATION-RATE.

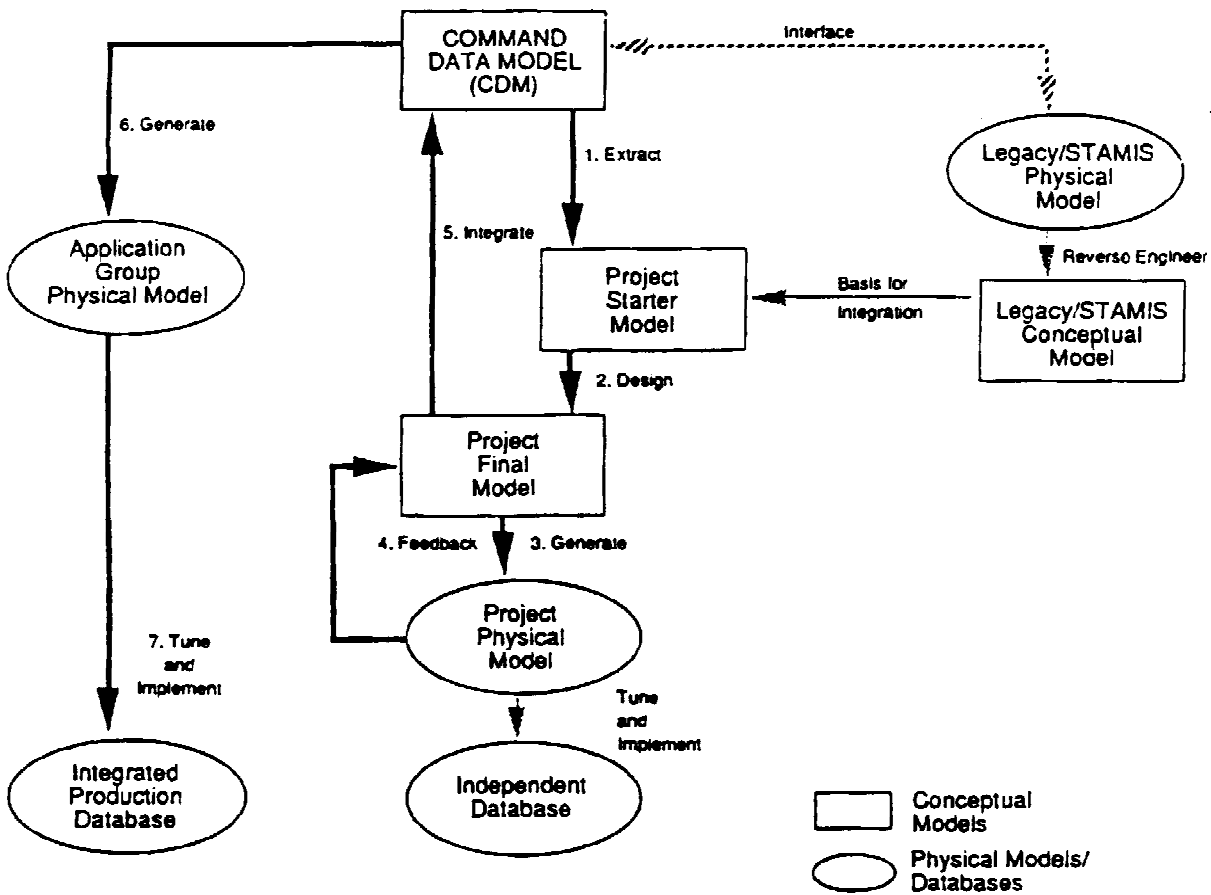

Figure 2-1: USACE Encyclopedia Data Administration & Database Administration Models, Operations, and Interfaces

2-13. Conceptual Data Models vs Physical Data Models

a. The Conceptual Data Model (or Command Data Model in the Corps) is the normalized basic structure of the business rules, entities, and data elements that describe the things the Corps needs to operate. A conceptual model deals with the fundamentals, following specific rules for accuracy and communication. The conceptual data model is

a neutral view of the data. For example, an "inflation adjusted cost estimate" has the same meaning whether it is seen from an accounting viewpoint, a project manager's viewpoint, or the viewpoint of virtually any function within the Corps.

b. When a subset of the CDM (Command Data Model) is formed into a specific database to support one or more applications, there may be adaptations made for

EP 25-1-6

11 Feb 91

performance or security reasons. The result is called an physical model. The physical model may contain derived values, may combine or split entities into records that suit the performance requirements better, or may even repeat data elements in different records.

c. The following CDD and CDM relate to physical models in that:

(1) They provide the conceptual metadata which includes the fundamental data and definitions, the building blocks, of the physical model.

(2) Many (or most) entities will become a table in the physical model without change.

(3) The fields of the physical model usually correspond to data elements in the conceptual model although sometimes there may be derived fields in the physical model that combine multiple conceptual data elements algorithmically (such as: summation, ratio, or complex formula).

(4) The domain attributes specified in the dictionary are recommended for use in physical models throughout the Corps and provide the rules for input editing.

2-14. How are the CDM and the CDD Used in Routine MSC Work?

a. The IDEF Modeling Techniques and the continuing evolution of the Command Data Model and the Command Data Dictionary will assist the MSCs in these ways:

(1) Help the field Information Management (IM) staffs develop better systems.

(2) Help information users throughout the Corps to better understand the data with which they are dealing.

(3) Facilitate data sharing and the interchange of data.

(4) Identify and promote the use of a common set of data structures that represent the way the Corps does business.

(5) Standardize data definitions and domains, including data type, size, and standard lists of values where appropriate (such as, organization code, project status code, etc.)

b. In the pursuit of happiness and better Information Systems throughout the field, you will find it useful to:

(1) Familiarize yourself with the overall structure of the CDM. Use it as a roadmap of the CDD.

(2) If you are beginning a new application development, see if you can extract a starter data model from the CDM in order to first make your job easier, and second, tie in to the structures that other Corps IM projects are using.

(3) Browse through the CDM and CDD to see if there are entities or data elements that have already been defined that you can use in your systems development.

(4) Check any system or database that you must interface with to see if any of the data that you will be sharing is already defined in the CDM/CDD. If not, contact Data Administration because you have just discovered data that needs to be shared. That data needs to be incorporated into the CDM/CDD so the two known users and any more that come along can be assured of consistency.

(5) If the CDM/CDD structures or definitions don't work for you, let Data Administration know. The evolution and quality of the CDM/CDD can only occur if you make it happen.

c. Later, after the next development phase of the Encyclopedia, we will include suggestions for the inclusion of current and legacy systems into the Encyclopedia.

Chapter 3

USACE Data Administration Procedures and Change Control

3-1. General

a. The activities involved in managing the Command Data Model (CDM) and thereby the Command Data Dictionary (CDD) are depicted in the following activity diagrams:

(1) The Context Diagram in Figure 3-1 (activity AO) represents the overall activity of managing Data Administration for the U.S. Army Corps of Engineers (USACE).

(2) Figure 3-2 is the decomposition or graphical representation of the AO subactivities performed to accomplish managing the USACE Data Administration activity.

(3) Figure 3-3, Activity Descriptions, lists the activity number, name, and description of activities displayed on the AO Decomposition Diagram.

(4) Figure 3-4, ICOM Descriptions, defines the Inputs, Controls, Outputs, and Mechanisms involved on the AO Decomposition Diagram.

b. There are three sources of change to the Command Data Model: Project Requirements discovered by an Information System Development Project, requests from users, and data administration technical requirements arising as the HQ Data Administration works to integrate all the field proposals. The first two are shown as inputs

on the left side of the activity model while the third is internal to activity A3.

c. A development project, shown as activity A1 creates new entities and data elements as it proceeds, or it may wait until the end and submit a Project Final Model. Throughout the design process, the team will check the Encyclopedia to see if the CDM or some other project's data model has already discovered and defined the data they require. If so, they can arrange to share it.

d. The responsible data proponents participate in the reviews of development projects in activity A1 and fulfill their responsibilities of managing the definition of the data in their assigned data classes.

e. The proposed changes that are not already addressed are forwarded to HQ Data Administration (activity A3) for QA and integration with the CDM and other proposed changes.

f. Any user of data may submit a request for change or addition to the appropriate data proponent who will revise and approve it (activity A2) and pass it on to the HQ Data Administration for integration. If the proponent rejects a user request, the user can "appeal" to the HQ DA directly.

g. In activity A3, the HQ Data Administrator accepts Project Final Models or the changes that have been approved by the proponents and checks them for standard adherence, quality definitions, appropriate entity placement of data elements, and nonredundancy. If they pass these QA checks, then they

EP 25-1-6

11 Feb 91

are sent to the Data Architecture Control Committee (DACC). The Command DBA will negotiate any conflicting proposals as much as possible to reach a suitable compromise. Any unsolved issues are forwarded to the DACC for resolution.

h. The DACC is made up of data proponents who have active modernization projects in process. Since changes that are genuine improvements and pass all the QA checks may still have impact on existing users, the DACC

must evaluate the benefits versus the impact of these changes (activity A4). The DACC is the user's checkpoint.

i. When the DACC approves a set of changes or a new CDM, the Command Data Administrator makes the updates in the Encyclopedia and a new CDM is available online (activity A5). Periodically, an updated EP 25-1-6 is released that summarizes major milestones in the evolution of the CDM/CDD.

Figure 3-1: Manage Data Administration for the U.S. Army Corps of Engineers (USACE)

Context Diagram

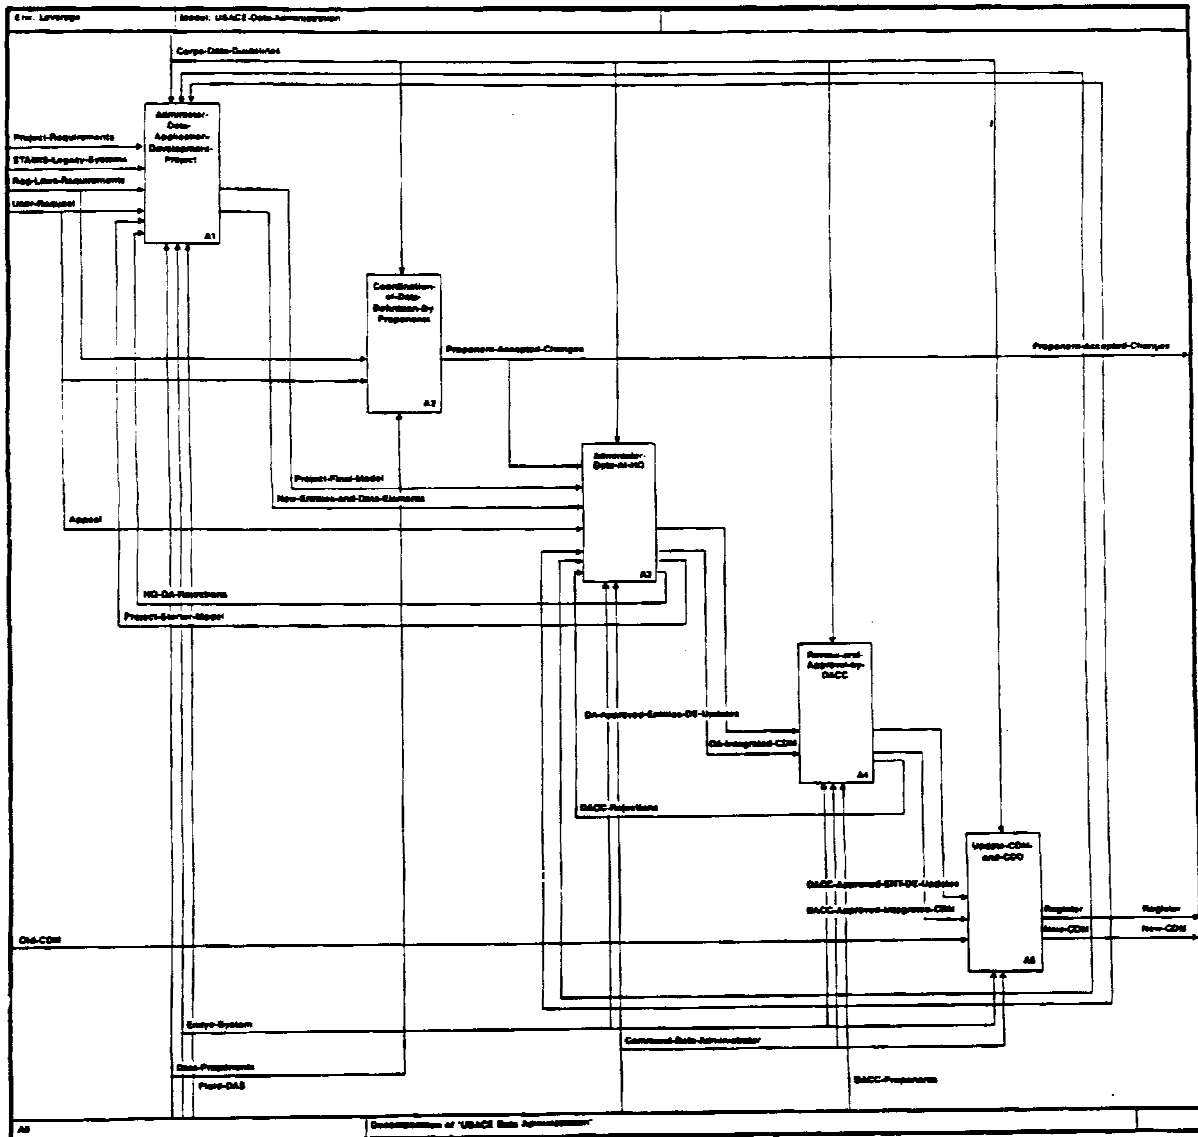

Figure 3-2: Manage Data Administration for the
 U. S. Army Corps of Engineers (USACE)

Decomposition Diagram

ID	ACTIVITY NAME	DESCRIPTION
A1	Administer-Data-at-Application-Development-Project	The administration of data at the MSC (Division, District, or other) or HQ directorate as part of an Information System Project. The range of activities goes from requesting change of a data element definition to developing a full scale Project Final Model.
A2	Coordination-of-Data-Definition-by-Proponents	The proponents who are responsible for their business areas coordinate changes to the CDM or CDD that are requested, implied, or demanded
A3	Administer-Data-at-HQ	<p>The administration and integration of Corps' data definitions, structure, and usage. This will include review of proposed new data entities and data elements, mediating different view-points, registering the data entities and data elements, integrating new models, as well as administering the change procedures, and chairing the Data Architecture Control Committee (DACC).</p> <p>Project Starter Data Models may also be generated for new IS projects.</p>
A4	Review-and-Approval-by-DACC	The DACC Proponents review proposed new entities, data elements, and models, as well as changes to the Command Data Model and the Command Data Dictionary.
A5	Update-CDM-and-CDD	The actual encyclopedia metadata defining the CDM and the CDD are updated, and appropriate diagrams and reports are published.

Figure 3-3: Activity Descriptions

ICOM NAME	DESCRIPTION
Appeal	An Appeal may be generated by a user or IM person when the proponent of an entity or business area rejects his proposed change. This usually occurs across business areas. The appeal goes to the Corps Data Administrator who will consider it and process it through the full DACC, if appropriate.
CORPS-Data-Guidelines	The regulations and guidelines issued by USACE HQ to implement the Corps' data management policy.
Command-Data-Administrator	The headquarters office responsible for recommending Data Administration policies, preparing guidelines, and providing support to the MSCs in their staffing and operation of the Data Administration function. This Command DA is also responsible for the management of the Corps' Data Encyclopedia, providing starter models to IM projects, registering entities and data elements within the Corps', acquiring Army approval where required, maintaining the Command Data Model and Dictionary, as well as integrating new MSC models into the CDM.
DA-Approved-Entities-DE-Updates	Updates to Data Entities and Data Elements that have been reviewed by the HQ Data Administrator and approved. They must yet be reviewed and approved by the DACC before they are officially incorporated into the CDM.

Figure 3-4: ICOM Descriptions

ICOM NAME	DESCRIPTION
DA-Integrated-CDM	A CDM that integrates some new entities, data elements, or Project Final Models with the current version of the CDM. It is not yet the new version of the CDM until the DACC reviews and approves it.
DACC-Approved-Ent-DE-Updates	Updates to the current entities and data elements of the CDM that have been approved by the DACC for inclusion in the next update.
DACC-Approved-Integrated-CDM	An integrated CDM including changes and new Project Final Models that has been reviewed and approved by the DACC.
DACC-Proponents	Those data proponents who serve as voting members of the DACC for the resolution of definition issues and who review and approve CDM updates.
DACC-Rejections	These are proposed model entity or data element changes whose impact is considered untenable at the present time.
Data-Proponents	Functional users who are designated by their directorates or MSCs as the individual (or office) responsible for the definition of data that is assigned to that office for caretaking.

Figure 3-4: ICOM Descriptions (cont'd)

ICOM NAME	DESCRIPTION
Encyclopedia-System	The software, supporting hardware, and network that provide a repository for the metadata about the Corps' data. The Encyclopedia System includes PC Modeler, the Host Encyclopedia modules, and the Leverage model analysis package. There is a central repository in an SQL relational database accessed through a nationwide network.
Field-DAs	Data Administrators at the Divisions, Districts, or HQ Directorates who support users and IM staff in the definition and sharing of data. They are particularly involved in new application development and upgrading of legacy systems.
HQ-DA-Rejections	These are proposed model entity or data element changes that do not pass quality assurance checks.
New-CDM	The newest , now the current, version of the CDM which has been updated with the DACC approved changes or new model integrations.
New-Entities-and-Data-Elements	Updated Entities and Data Elements (or their metadata) that have been added to the CDM/CDD following approval by the DACC.
Old-CDM	The current, or previously current version, of the CDM that will be changed or expanded.

Figure 3-4: ICOM Descriptions (cont'd)

ICOM NAME	DESCRIPTION
Project-Final-Model	An IDEF, fully attributed, data model which represents the final result of the conceptual design phase of a project
Project-Requirements	The requirements of the users, or requirements inherent in the business process, for data to be stored and possibly shared.
Project-Starter-Model	A selected subset of the Command Data Model extracted to provide an application development project with a nucleus of registered and defined data entities and data elements. The purpose is to facilitate data sharing and to assure consistency of data structure and definition.
Proponent-Accepted-Changes	Proposed changes to entities, data elements, and relationships that have been reviewed by proponents and are being forwarded to the Command Data Administrator for a quality assurance check and final approval by the DACC.
Proponent-Rejection	A requested change to the CDM or CDD that a data proponent has rejected as not consistent with the intent and meaning of the data for which he is the shepherd.
Reg-Laws-Ext-Agency-Requirements	Requirements from new or revised laws, regulations, or external agency requirements.

Figure 3.4: ICOM Descriptions (cont'd)

EP 25-1-6
11 Feb 91

ICOM NAME	DESCRIPTION
Registered-Entities-Data-Elements	Entities and data elements that have been quality checked by the Command Data Administrator and whose status has then been raised to Registered.
STAMIS-and-Legacy- Systems-Requirements	Requirements imposed on the data entities, data elements, or structure imposed by STAMIS or legacy systems.
User-Request	Requests from users for additions or changes to the CDM or CDD.

Figure 3-4: ICOM Descriptions (cont' d)

Chapter 4

Accessing the Corps Central

Data Encyclopedia

4-1. To Access the Encyclopedia:

Use Vistacom and the CEIM-PD provided Script (see the Encyclopedia Users Manual or the Data Administration/Data Encyclopedia course Participants Guide for detailed instructions in using the script).

a. Enter RUNE to execute the Run Encyclopedia batch file on the PC. It will prompt you for host identifiers and passwords. After successful connection to the host, it will prompt you for your Encyclopedia identifier and password. Figure 4-1,

Encyclopedia Network Configuration, depicts the remote work station connected to the central computer where the Host Encyclopedia operates.

b. Following the security checks, the main menu of the Encyclopedia system will be displayed. At this time you can use any of the maintenance or search and retrieval functions of the Encyclopedia.

c. Most of the functions display results on the screen in a mini-report format. Some generate reports into files in your VMS directory. The screens that you use to initiate these longer reports have options you can specify which will cause the Encyclopedia system to download the report file to the ENCVCOM directory on your PC, where you can peruse it or print it.

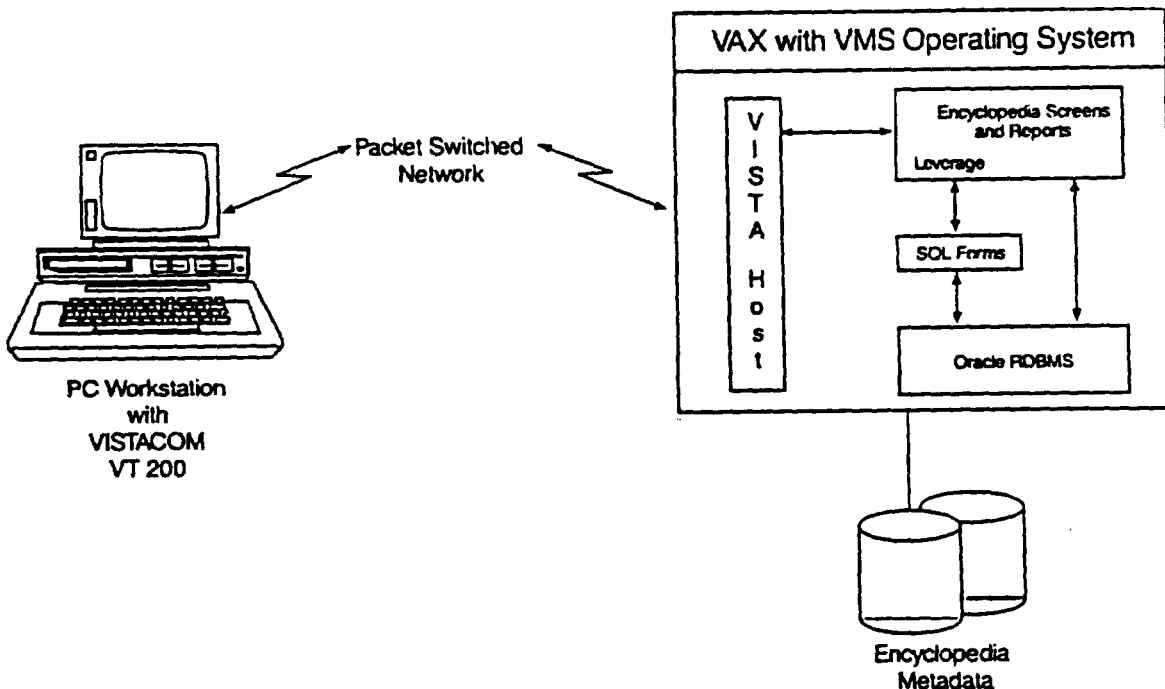

Figure 4-1: Encyclopedia Network Configuration

Appendix A

Command Data Model (CDM)

1. General

a. The following is the U.S. Army Corps of Engineers' latest version of the Command Data Model (CDM). This CDM represents the current state of a model that numerous individuals both in and out of the Corps have worked on exhaustively for many months. It is designed to represent a Command-wide view of much of the data that the Corps will use across organizational boundaries, and is an extremely important component in the Information System Modernization Program (ISMP).

b. This paper attempts to familiarize recipients of the CDM with some of the principles behind it. These principles include a brief discussion of the Origins and background of the CDM, the overall goals of the ISMP program, the benefits of data modeling, the constructs of an IDEF data model how to validate the business rules represented in a data model, and some suggestions on incorporating this CDM in local application development efforts.

2. Origins and Background of the CDM

The overall goal of the ISMP program is to view data as a shareable asset and to store data in a timely and accurate manner for use by all who have a legitimate need. The attached CDM represents a Corps-wide view of many of those data. Scores of individuals have contributed to its current state in the past several months and even years, and the

information represented should be reviewed and validated for correctness, and assumed to be fairly stable at this point. Suggestions or alterations to this model, however, are encouraged and should be directed to the Information Management Directorate of the Corps of Engineers in Washington, D.C.

3. Goals of the ISMP Program and Benefits of Data Modeling

a. Any organization has a set of internal rules by which it operates. For example, an organization might have the internal rule that when a customer submits a request to do work, that request is detailed on a Customer Request form that has a thirteen digit number. This number is used to help track that order. The Corps of Engineers has such business rules, and these are laid forth in the CDM. In this manner, an organization can develop clear, meaningful relationships between data.

b. Meaningful business rules ensure a wealth of information available to managers at all levels to pose and answer "What If?" questions. It also means data is captured and stored once and only once to facilitate timely and accurate information throughout the organization. Data that is not needed is not captured; data that is needed is captured singularly. With this base of common ground, applications can be developed and used Corps-wide, and can easily and efficiently dovetail with other applications developed similarly. These are all fundamental goals of the ISMP program.

EP 25-1-6

11 Feb 91

4. The Constructs of an IDEF Data Model

a. The Corps of Engineers ISMP program has adopted the IDEF Methodology as its standard. IDEF, which stands for Integrated Computer-Aided Manufacturing **DEFinition**, is designed so that functional experts (the end-users of a system) can develop the data model to support their business area. The attached data model was developed by Corps functional experts.

b. To effectively understand the attached model, it is, of course, necessary to understand the symbols used to represent the data of a business. The following diagram (Figure A-1) is an example of a simple DEE data model:

Figure A-1: Simple IDEF Data Model

c. In the above data model, the boxes represent "entities." An entity is a set of real-world objects with common characteristics about which data is kept. The two entities shown in the model are CUSTOMER and WORK-REQUEST.

d. Between the two entities is a line with a dot at one end, representing a "relationship." In this manner, two entities can be related to

each other and a business rule is developed. The dot at the end of the line represents the "cardinality" of the relationship. In this case, the cardinality is zero, one, or many. The statement derived from this example data model will show the role that the cardinality plays in helping to formulate the business rule. That business rule is:

"Every CUSTOMER submits zero, one, or many WORK-REQUESTS."

The business rule can also be read in reverse in this manner:

"Every WORK-REQUEST must be submitted by one and only one CUSTOMER."

e. Given the relationship, the cardinality, and the resultant business rule, the entity CUSTOMER is said to be a "parent" of WORK-REQUEST, and WORK-REQUEST, in turn, is a "child" of CUSTOMER.

f. The example data model represents the simplest and first form of a data model. It is called an Entity-Relationship (E/R) data model because it depicts only entities and their relationships to each other. The following example (Figure A-2) is needed to illustrate a more detailed data model called a Key-Based (K/B) data model:

Figure A-2: Key-Based (K/B) Data Model

g. The model above shows several different types of "data elements." Data elements are common characteristics of an entity. In the example above, the entity CUSTOMER has a common characteristic (data element) called CUSTOMER-NAME.

h. It also has a CUSTOMER-ADDRESS data element, but there's a difference in these two data elements. Note that there is a line through the entity box, with CUSTOMER-NAME appearing above that line and CUSTOMER-ADDRESS appearing below. Because of its position relative to the line, CUSTOMER-NAME represents the "key" of CUSTOMER. The "key" of an entity is said to be the minimum data element(s) needed to uniquely identify one instance of an entity from another. The name of the CUSTOMER identifies one instance from another and is, therefore, a "key data element."

i. CUSTOMER-ADDRESS is a non-key data element and is shown below the line. That is, it is not needed to help uniquely identify one CUSTOMER from another, but it is a needed common characteristic of a customer.

j. The key to WORK-REQUEST is both CUSTOMER-NAME and WORK-REQUEST-DATE. In order to uniquely identify one WORK-REQUEST from another, the model indicates that both data elements need to be part of the primary key.

k. But, again, there is a difference between these two data elements. CUSTOMER-NAME is said to be a "foreign key" of WORK-REQUEST. It has "migrated" from the parent entity, CUSTOMER, to the child entity. The fact that it is a foreign key is denoted with an "(FK)" after the name of the data element. Conversely, WORK-REQUEST-DATE is said to be "native" to WORK-REQUEST.

5. Validating a Data Model

a. A data model should be read by functional and technical components of an organization to validate the contents therein. The functional reviewers of a model bring to the analysis their day-to-day expertise in the area from the viewpoint of a regular user of the data involved. The technical reviewer, who is experienced with the details of the storage, manipulation, and management of the information involved, brings to the analysis specific expertise in the area of systems design and computer applications.

b. To validate a data model, ask questions that seek to either contradict or reinforce the diagram. For example, using (Figure A-2) above, ask if a single WORK-REQUEST can be submitted by more than one CUSTOMER. If so, then the model depicted is unable to incorporate this business rule, and is therefore incorrect, or at least

EP 25-1-6

11 Feb 91

inadequate. Another example might be, can a single CUSTOMER submit more than one WORK-REQUEST in a single day? If this is a valid possibility, then the keys used to uniquely identify WORK-REQUEST are inadequate, and an alternative key should be considered.

c. In this manner, the attached CDM can be checked for validity and completeness throughout the Corps.

6. Incorporating the ISMP Philosophy into Local Application Development

In addition to validating the contents of the attached CDM, Major Subordinate Commands (MS C) should incorporate the philosophy of the ISMP program when seeking to develop local applications. This can be achieved through the following means:

a. Use the IDEF methodology to develop applications.

b. Use the entities already defined in the CDM wherever possible so applications from diverse areas can interface and/or be integrated at a later date.

c. Use the definitions of entities and data elements from the CDM, or propose refinements.

d. Use the Data Element naming conventions:
[ENTITY NAME] [CLASS MODIFIERS]
[CLASS WORD] for new names.

e. Use the attached materials to aid in constructing Corps-wide business rules to support the business.

f. Part of the CDM is standardization of the domains for certain data elements, usually "identifiers" such as ORGANIZATION-ID. These domains specify a list of acceptable values. Design systems around these standard domains and incorporate edit checks into data entry of these data elements.

g. Develop relational databases and use a relational database management system (RDBMS) and its application development tools for Information System development

h. Follow the guidelines set forth in the latest release of the *Application Development Project Leaders' Reference Manual*.

7. Command Data Model Graph

There are multiple plotted pages (24" x 36' of graph drawing) which contain the complete Command Data Model. They can be assembled into a single large drawing showing all entities and data elements as shown in the sketch below. The Command Data Model graph is located at the back of this EP.

A1	B1	C1	...
A2	B2	C2	...
...

NOTE: 1) The Command Data Dictionary and the Command Data Model Graph may have some minor differences due to different times of reproduction. 2) The associative entity between EMPLOYEE and WORK--ITEM, and the associative entity between ORGANIZATION and WORK-ITEM, were both omitted, 3) The keys for the WORK-ITEM-AGREEMENT, RESOURCE-ESTIMATE, GENERAL-LEDGER-CORRELATION-TABLE, and FUNDING-REGISTER are not complete. 4) The plan is to include them in the next up-date.

EP 25-1-6
11 Feb 91

APPENDIX A

COMMAND DATA MODEL GRAPH

The attached Command Data Model includes the following graphs:

A1	B1	C1
A2	B2	C2

Appendix B

Command Data Dictionary

1. Dictionary Layout:

ENTITY	:		
PROJECT	:		
SHORT NAME	:		PROPONENT :
STATUS	:	STATUS DATE:	REVISION DATE :
		<entity definition>	
*** <data element name>			
		<data element definition>	
SHORT NAME	:	PROPONENT:	TYPE:
FIELD LENGTH	:	DECIMAL LENGTH:	FORMAT:

2. Field Definitions:

ENTITY

ENTITY

The name of an entity.

PROJECT:

The project proposing the specified entity. The initial load will reflect the same project for each entity, that is, "Command Data Model (CDM)."

SHORT NAME:

The recommended database name for the entity or data element when it is mapped directly to a physical table or a physical field. Standards on these names are evolving, so treat these as tentative in this issue.

PROPONENT:

The Corps of Engineers organization that is responsible for the definition of the entity and/or data element. The same proponent is often designated for both the entity and native data elements.

STATUS:

The level of approval that the entity has received (candidate, registered, approved).

STATUS DATE:

The date when the status, or level of approval, was granted to this entity.

EP 25-1-6

11 Feb 91

REVISION DATE:

The most recent date when any of the metadata about this entity was changed. If blank, the metadata was not changed since originally entered.

<entity definition>:

The definition of the entity.

***<data element name>

The name of the data element. (Refer to Appendix C of this document, "Data Element Refining and Naming Convention," for detailed information.)

Most data elements shown on the page(s) with a particular entity will be native, or originate from that entity, and have that entity's name repeated as the first part of the data element's name. Foreign data elements are those data elements which have migrated to that entity from the entity where they originated and do not have that entity as the first part of their data element's name. (The entity appearing in the first part of their name is the entity from which they have migrated.)

<data element definition>:

The definition of the data element.

TYPE:

There are two fields printed. The upper one indicates whether the data element is part of the primary key of the entity. Possible values are: KEY or NON-KEY.

The lower one indicates how this data element migrated to this entity. Possible values: NATIVE or FOREIGN.

FIELD LENGTH:

The maximum field LENGTH for a value of this data element. Possible values are: any numerical value or VAR for variable LENGTH text.

DECIMAL LENGTH:

The number of decimal positions in a numeric field (may be blank).

FORMAT:

The format of a value for this data element. Possible values are: NUM (numeric), CHAR (character), and DATE.

DOMAIN NAME.

The name of the domain which defines the acceptable values for a data element. FIELD LENGTH, DECIMAL LENGTH, and FORMAT are attributes of the domain. If the domain is also constrained by a list of values, the list is in the Domain Reference List at the back of the Dictionary Report in this appendix. Common and Standard Domains are discussed in Appendix D.

3. Role Names:

In some cases, the data element name will be preceded by a role name in the format

<Data element name>.

The role name is important in the CDM where a particular data element migrates into an

entity more than once. Each such occurrence of the data element is there for a purpose or has a role. An example is when there are two relationships between EMPLOYEE and VEHICLE as shown below. One employee has the role "RESPONSIBLE" and another has the role "MAINTENANCE" regarding the vehicle (Figure B-1).

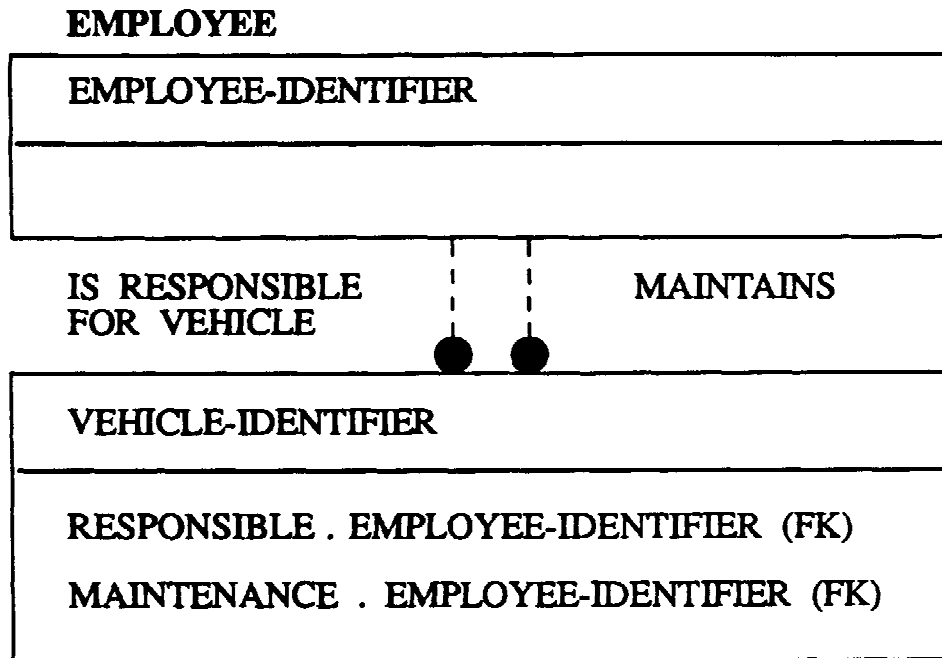

Figure B-1: Role Name

ENTITY : ADDRESSEE
PROJECT : CDM
SHORT NAME : ADDRESSEE PROPONENT : DACC/CERE
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

A person or organization with whom the Corps of Engineers wishes to maintain address and telephone information, e.g., customer, contractor, etc.

*** ADDRESSEE-IDENTIFIER

A computer generated code which uniquely identifies an ADDRESSEE.

SHORT NAME: PROPONENT: TYPE: KEY
DOMAIN NAME: ADDRESSEE-IDENTIFIER NATIVE

*** ADDRESSEE-CITY-NAME

The CITY, town, or Post Office contained in the address of an ADDRESSEE.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 30 FORMAT: CHAR NATIVE
DOMAIN NAME: ADDRESSEE-CITY-NAME

*** ADDRESSEE-COUNTRY-CODE

The code of a foreign country for the ADDRESSEE.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 2 TYPE: LIST FORMAT: CHAR NATIVE
DOMAIN NAME: COUNTRY-CODE

*** ADDRESSEE-COUNTY-NAME

The name of the county. The name may also denote parishes, burroughs, or judicial divisions.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 30 FORMAT: CHAR NATIVE
DOMAIN NAME: COUNTY-NAME

*** ADDRESSEE-EXTENSION-NUMBER

A code assigned to the ADDRESSEE's WORK-PHONE-NUMBER.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 4 FORMAT: CHAR NATIVE
DOMAIN NAME: ADDRESSEE-EXTENSION-NUMBER

*** ADDRESSEE-FACSIMILE-NUMBER

The telephone number for sending FACSIMILES to the ADDRESSEE.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 20 FORMAT: CHAR NATIVE
DOMAIN NAME: TELECOM-ID

ENTITY : AGREEMENT
PROJECT : CDM
SHORT NAME : AGREEMENT
STATUS : REGISTERED
PROPOSER : DACC/CEPR
STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

A legal or formal understanding between the Corps of Engineers and one or more parties that delineates obligations, commitments and deliverables.

*** AGREEMENT-IDENTIFIER

A unique identifier for an AGREEMENT, e.g., a CONTRACT or a local cooperation AGREEMENT. Because the AGREEMENT-IDENTIFIER must be unique within the Corps, it must be generated internally (as opposed to using a vendor's agreement-identifier). The CONTRACT identifier is formatted as follows:
AAAAAA-BB-C-DDDD
where
AAAAAA is either
DACCxx for Civil Works, with xx = MSC#, or
DACAXx for Military Programs, with xx = MSC#, or
IMPRST for Imprst contracts.
BB is the last two digits of the fiscal year of the contract award.
C is the contract type, either
C = Contract, or
D = Indefinite delivery type contract, or
E = Facilities contract, or
G = Blanket ordering agreement, or
H = Agreements including basic agreements, or
L = Lease agreement.
DDDD is a sequential counter within MSC, reset each fiscal year.

A code which indicates a GFP/GFE clause as being changed, added to, or deleted from the CONTRACT by a specific modification.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
DOMAIN NAME: MOD-GFP-GFE-ACTION-CODE		NATIVE

*** AGREEMENT-MODIFICATION-GOVERNMENT-FURNISHED-EQUIPMENT-AMOUNT

Modification amount, increase or decrease, for government furnished equipment.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** AGREEMENT-MODIFICATION-LIQUIDATION-DAMAGE-TEXT

Text defining the damages to be assessed against the contractor for failure to complete work as required. Example: \$80.00 per day.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: VAR	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: LONG-TEXT		

*** AGREEMENT-MODIFICATION-MANAGEMENT-RESERVE-AMOUNT

Modification amount, increase or decrease, for management reserve.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT

*** AGREEMENT-MODIFICATION-NEGOTIATED-MODIFICATION-NUMBER

The modification number that relates a non-negotiated modification to a negotiated modification. Specifically, an unpriced change order to the bilateral mod or directed change that finalized the unpriced change order.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 10	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-10		

*** AGREEMENT-MODIFICATION-NEGOTIATION-TYPE

An indicator designating negotiation status of the modification.
Values: 1=Negotiated, 2=Non-Negotiated

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: MOD-NEG-INDICATOR		

*** AGREEMENT-MODIFICATION-SERIAL-NUMBER

A number assigned by the design agent or construction agent to uniquely identify each design or construction modification or CME activity.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 10	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-10		

*** AGREEMENT-MODIFICATION-SIGNATURE-DATE

The day, month and year the contracting officer signed the modification.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** AGREEMENT-MODIFICATION-SUPPLEMENTAL-AGREEMENT-TYPE

An indicator designating a modification as a supplemental AGREEMENT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: MOD-SUPPLEMENTAL-AGREEMENT-IND		

*** AGREEMENT-MODIFICATION-SUPPORT-CONTRACT-AMOUNT

Modification amount, increase or decrease, for support CONTRACT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT

DATA ADMINISTRATION DICTIONARY REPORT

ENTITY : CHANGE-REQUEST
PROJECT : CDM
SHORT NAME : CHANGE-REQUEST PROPONENT : DACC/CEPR
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

A request to make a change to a WORK-ITEM and/or an AGREEMENT.

*** CHANGE-REQUEST-NUMBER

A unique number generated by the system identifying a specific CHANGE-REQUEST. (Could be for a current working estimate.)

SHORT NAME: PROPONENT: TYPE: KEY
FIELD LENGTH: 10 FORMAT: CHAR NATIVE
DOMAIN NAME: CHARACTER-10

*** AGREEMENT-MODIFICATION-NUMBER

The complete modification number. Usually, a locally assigned string of 6 characters starting with a "P". Not used for delivery orders.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 10 FORMAT: CHAR FOREIGN
DOMAIN NAME: CHARACTER-10

*** CHANGED-AGREEMENT-IDENTIFIER.AGREEMENT-IDENTIFIER

A unique identifier for an AGREEMENT, e.g., a CONTRACT or a local cooperation AGREEMENT. Because the AGREEMENT-IDENTIFIER must be unique within the Corps, it must be generated internally (as opposed to using a vendor's agreement-identifier). The CONTRACT identifier is formatted as follows:

AAAAAA-BB-C-DDDD

where

AAAAAA is either

DACCxx for Civil Works, with xx = MSC#, or

DACAx for Military Programs, with xx = NSC#, or

IMPRST for Imprst contracts.

BB is the last two digits of the fiscal year of the contract award.

C is the contract type, either

C = Contract, or

D = Indefinite delivery type contract, or

E = Facilities contract, or

G = Blanket ordering agreement, or

H = Agreements including basic agreements, or

L = Lease agreement.

DDDD is a sequential counter within MSC, reset each fiscal year.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 13 FORMAT: CHAR FOREIGN
DOMAIN NAME: AGREEMENT-IDENTIFIER

*** CHANGED-AGREEMENT-IDENTIFIER.AGREEMENT-TYPE

The Agreement-Type indicates the category of the AGREEMENT, e.g., a CONTRACT or a LOCAL-COOPERATION-AGREEMENT.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 39 FORMAT: CHAR FOREIGN
DOMAIN NAME: CHARACTER-39

ENTITY : CHART-OF-ACCOUNT
PROJECT : CDM
SHORT NAME : CHART-OF-ACCOUNT PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 17-SEP-90

A classification of WORK-ITEMs for reporting and financial purposes. The breakdown is by feature, subfeature, subfeature element, and special indicator. Reference EC 1110-2-538.

*** CHART-OF-ACCOUNT-IDENTIFIER

A unique identification for a CHART-OF-ACCOUNT. For example, can be a feature or subfeature.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 6	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHART-OF-ACCOUNT		

*** PARENT-CHART-OF-ACCOUNT.CHART-OF-ACCOUNT-IDENTIFIER

A unique identification for a CHART-OF-ACCOUNT. For example, can be a feature or subfeature.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 6	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHART-OF-ACCOUNT		

*** CHART-OF-ACCOUNT-NAME

The name for a specific CHART-OF-ACCOUNT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 40	FORMAT: CHAR	NATIVE
DOMAIN NAME: NAME-ID-40		

*** CHART-OF-ACCOUNT-OVERHEAD-HIRED-LABOR-PERCENT

The overhead rate average percent for hired labor for the CHART-OF-ACCOUNT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 5 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: PERCENT		

*** CHART-OF-ACCOUNT-OVERHEAD-OTHER-PERCENT

The overhead rate average percentage, other than hired labor, for the CHART-OF-ACCOUNT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 5 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: PERCENT

ENTITY : CLAIM
PROJECT : CDM
SHORT NAME : CLAIM PROPONENT : DACC/CERE
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

A written request for compensation in the form of an equitable adjustment by or against the Government.

*** CLAIM-NUMBER

A unique alpha-numeric number assigned by office of counsel to identify a CLAIM upon a determination by organization Federal Government to recommend non-merit to the contracting officer Redefined due to the fact that only accelerated claims are assigned a claim number when the claim is submitted.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-10		

*** CLAIM-CONTRACT.AGREEMENT-IDENTIFIER

A unique identifier for an AGREEMENT, e.g., a CONTRACT or a local cooperation AGREEMENT. Because the AGREEMENT-IDENTIFIER must be unique within the Corps, it must be generated internally (as opposed to using a vendor's agreement-identifier). The CONTRACT identifier is formatted as follows:
AAAAAA-BB-C-DDDD
where
AAAAAA is either
DACCxx for Civil Works, with xx = MSC#, or
DACAXx for Military Programs, with xx = MSC#, or
IMPRST for Imprst contracts.
BB is the last two digits of the fiscal year of the contract award.
C is the contract type, either
C = Contract, or
D = Indefinite delivery type contract, or
E = Facilities contract, or
G = Blanket ordering agreement, or
H = Agreements including basic agreements, or
L = Lease agreement.
DDDD is a sequential counter within MSC, reset each fiscal year.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 13	FORMAT: CHAR	FOREIGN
DOMAIN NAME: AGREEMENT-IDENTIFIER		

*** CLAIM-CONTRACT.AGREEMENT-TYPE

The Agreement-Type indicates the category of the AGREEMENT, e.g., a CONTRACT or a LOCAL-COOPERATION-AGREEMENT.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 39	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-39

DATA ADMINISTRATION DICTIONARY REPORT

ENTITY : EMPLOYEE
PROJECT : CDM
SHORT NAME : EMPLOYEE PROPONENT : CEPE
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-OCT-89

A person employed by the Corps of Engineers for wages or salary and assigned to an organizational element.

*** EMPLOYEE-IDENTIFIER

This is a unique number identifying a specific government employee

SHORT NAME:	PROPONENT:	TYPE: KEY
FIELD LENGTH: 11	FORMAT: CHAR	NATIVE
DOMAIN NAME: EMPLOYEE-IDENTIFIER		

*** ORGANIZATION-CODE

A unique code which identifies an organization within the Corps of Engineers. Breakdown of the code is as follows:

CHAR #
Division 1
District 2
Dir/Division 3
Branch 4.5
Section 6.7

The first two characters are the MSC (Major Subordinate Command) code, formerly known as the EROC (Engineering Reporting Organization Code).

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 7	TYPE: LIST FORMAT: CHAR	FOREIGN
DOMAIN NAME: ORGANIZATION-CODE		

*** EMPLOYEE-FIRST-NAME

This reflects the first name of a specific government employee.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

*** EMPLOYEE-LAST-NAME

This reflects the last name of a specific government employee

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 30	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-30		

*** EMPLOYEE-MIDDLE-NAME

This reflects the middle name of a specific government employee

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

01/09/91
15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** EMPLOYEE-ONTIME-IDENTIFIER

Ontime identifier for the employee. Used for routing electronic mail to and from an individual.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 15	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: ONTIME-IDENTIFIER		

*** EMPLOYEE-PHONE-NUMBER

This reflects the area code and phone number assigned to a specific government employee

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: TELECOM-ID		

*** EMPLOYEE-RANK

The rank of the EMPLOYEE, where applicable. For example: military rank or Mister, or Ms.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 5	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: EMPLOYEE-RANK		

*** EMPLOYEE-TITLE-NAME

This identifies the official title of a specific EMPLOYEE.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 30	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-30

ENTITY : EQUIPMENT
PROJECT : CDM
SHORT NAME : EQUIPMENT PROPONENT : CELD
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-OCT-89

Expendable or non-expendable, capital and personal property which is expensed or depreciated in accomplishing the Corps' mission. Equipment is typically movable. Equipment is a type of RESOURCE and more data about it can be found in its generalization, RESOURCE.

*** RESOURCE-CODE

A code which identifies a RESOURCE used to accomplish the Corps mission. The code may identify a standard RESOURCE type of any component in a breakdown thereof, e.g., manner.

SHORT NAME:	PROponent:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: RESOURCE-CODE		

*** EQUIPMENT-SERIAL-NUMBER

The unique serial number which distinguishes a certain piece of equipment.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

01/09/91

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

ENTITY : FISCAL-STATION
PROJECT : CDM
SHORT NAME : FISCAL-STATION PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

A table which lists fiscal station numbers with their corresponding names.

*** FISCAL-STATION-NUMBER

The number of the fiscal station.

SHORT NAME:	PROPOONENT:	TYPE: KEY
DOMAIN NAME:		NATIVE

*** FISCAL-STATION-NAME

The name of the fiscal station.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 30	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-30

DATA ADMINISTRATION DICTIONARY REPORT

ENTITY : FORCES-CONFIGURATION
PROJECT : CDM
SHORT NAME : FORCES-CONFIGURATION PROPONENT : CECW
STATUS : CANDIDATE STATUS DATE : 01-MAY-90 REVISION DATE : 08-JAN-91

Configuration of resources estimated to perform the Corps' mission for the year. It is a higher level management estimate than the sum of the individual work-item estimates, containing higher level adjustments.

*** ORGANIZATION-CODE

A unique code which identifies an organization within the Corps of Engineers. Breakdown of the code is as follows:

CHAR #
Division 1
District 2
Dir/Division 3
Branch 4.5
Section 6.7

The first two characters are the MSC (Major Subordinate Command) code, formerly known as the EROC (Engineering Reporting Organization Code).

SHORT NAME: PROPONENT: TYPE: KEY
FIELD LENGTH: 7 TYPE: LIST FORMAT: CHAR FOREIGN
DOMAIN NAME: ORGANIZATION-CODE

*** FORCES-CONFIGURATION-FUNCTION-CODE

Functional breakdown of FORCE-CONFIGURATION, e.g. for power or navigation.

SHORT NAME: PROPONENT: TYPE: KEY
DOMAIN NAME: NATIVE

*** FORCES-CONFIGURATION-YEAR

Year for which this configuration of forces estimate is in effect.

SHORT NAME: PROPONENT: TYPE: KEY
FIELD LENGTH: 4 FORMAT: NUM NATIVE
DOMAIN NAME: YEAR

*** APPROPRIATION-BASIC-SYMBOL-CODE

The basic symbol as defined by regulation which uniquely identifies an APPROPRIATION. It is the last four digits of the APPROPRIATION.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 4 FORMAT: CHAR FOREIGN
DOMAIN NAME: APPROPRIATION-BASIC-SYMBOL-CODE

01/09/91
15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** APPROPRIATION-LIMITATION-CODE

The code which breaks down an APPROPRIATION for specific purposes.
It is a suffix to the basic symbol.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 5	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-LIMITATION-CODE		

*** CIVIL-CATEGORY-CODE.COMMAND-WORK-CLASSIFICATION-CODE

A code used to identify a COMMAND-WORK-CLASSIFICATION. For example, may be a code for the type of construction, or for a program package, or for Corps S and A only, or for uniform (or non-uniform) rates, or a special category code

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 10	TYPE: LIST FORMAT: CHAR	FOREIGN
DOMAIN NAME: COMMAND-CLASSIFICATION-CODE		

*** CIVIL-CLASS-CODE.COMMAND-WORK-CLASSIFICATION-CODE

A code used to identify a COMMAND-WORK-CLASSIFICATION. For example, may be a code for the type of construction, or for a program package, or for Corps S and A only, or for uniform (or non-uniform) rates, or a special category code

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 10	TYPE: LIST FORMAT: CHAR	FOREIGN
DOMAIN NAME: COMMAND-CLASSIFICATION-CODE		

*** CIVIL-SUBCLASS-CODE.COMMAND-WORK-CLASSIFICATION-CODE

A code used to identify a COMMAND-WORK-CLASSIFICATION. For example, may be a code for the type of construction, or for a program package, or for Corps S and A only, or for uniform (or non-uniform) rates, or a special category code

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 10	TYPE: LIST FORMAT: CHAR	FOREIGN
DOMAIN NAME: COMMAND-CLASSIFICATION-CODE		

*** FORCES-CONFIGURATION-BUDGET-AMOUNT

The budget or appropriation amount.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
DOMAIN NAME:		NATIVE

*** FORCES-CONFIGURATION-CARRY-IN-AMOUNT

The amount of unexpected carry-in.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
DOMAIN NAME:		NATIVE

ENTITY : FUND
PROJECT : CDM
SHORT NAME : FUND
STATUS : REGISTERED
PROPOSER : CERM
STATUS DATE : 01-MAY-90 REVISION DATE : 17-SEP-90

A table of the codes which specify the FUND as either direct, automatic reimbursable, funded reimbursable, contributed or direct fund citation.

*** FUND-CODE

A code which designates funds as direct, automatic reimbursable, funded reimbursable, direct fund citation or contributed.

SHORT NAME:	PROPOSER:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: FUND-CODE		

*** FUND-NAME

The name of the applicable FUND which identifies funds as direct, automatic reimbursable, funded reimbursable, direct fund citation or contributed.

SHORT NAME:	PROPOSER:	TYPE: NON-KEY
FIELD LENGTH: 39	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-39

ENTITY : FUNDING-ACCOUNT
PROJECT : CDM
SHORT NAME : FUNDING-ACCOUNT PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-OCT-89

The citation used to identify and track official funding data for a specific work-item within the corporate information management system.

*** FUNDING-ACCT-RESOURCE-PLAN.RESOURCE-PLAN-NUMBER

A unique number which identifies a specific RESOURCE-PLAN

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** FUNDING-ACCT-RESOURCE-PLAN.WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 6	FORMAT: CHAR	FOREIGN
DOMAIN NAME: WORK-ITEM-CODE		

*** FUNDING-REGISTER-CONTROL-NUMBER

The sequential number assigned to uniquely identify an accounting classification listed on a funding authorization

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** FUNDING-ACCOUNT-AMOUNT

The total amount of funds accepted for a funding-account work-item.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** FUNDING-ACCOUNT-BALANCE-AMOUNT

The funding account amount which has not been used and is available for commitment or obligation.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** FUNDING-ACCOUNT-DESIGNATED-RETIREMENT-DATE

The date all financial records related to a FUNDING-ACCOUNT are designated to be retired if different from the automatic retirement date as specified by an activity's database administrator.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

01/09/91
15:10:32

USACE ENCYCLOPEDIA

*** FUNDING-ACCOUNT-FEDERAL-UNDELIVERED-ORDERS-AMOUNT

Amount of federal undelivered orders.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** FUNDING-ACCOUNT-FEDERAL-UNOBLIGATED-CARRY-OVER-AMOUNT

Amount of federal unobligated funds to carry over into the next fiscal year.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** FUNDING-ACCOUNT-FISCAL-COMPLETE-CODE

The code which indicates when a funding-account is fiscally complete. This will be determined after the funding-account work-item is physically complete and when all obligations have been liquidated and no outstanding open documents exist on the database for a funding-account.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
DOMAIN NAME:		NATIVE

*** FUNDING-ACCOUNT-FISCAL-COMPLETE-DATE

The date a FUNDING-ACCOUNT is validated as being fiscally complete.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** FUNDING-ACCOUNT-LAST-UPDATE-DATE

The date that the FUNDING-ACCOUNT was last updated

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** FUNDING-ACCOUNT-NONFEDERAL-UNDELIVERED-ORDERS-AMOUNT

Amount of nonfederal undelivered orders.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT

ENTITY : FUNDING-AUTHORITY
PROJECT : CDM
SHORT NAME : FUNDING-AUTHORITY PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

The authority received on a funding authorization which authorizes the accepting activity to obligate the listed appropriation for a specified amount within a specified time period in the performance of work.

*** FUNDING-AUTH-FUND-TYPE-CODE.FUND-CODE

A code which designates funds as direct, automatic reimbursable, funded reimbursable, direct fund citation or contributed.

SHORT NAME:	PROponent:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	FOREIGN
DOMAIN NAME: FUND-CODE		

*** FUNDING-AUTHORIZATION-RECORD-AMENDMENT-ORDER-NUMBER

The sequential number assigned to track changes to a funding authorization by the issuing activity.

SHORT NAME:	PROponent:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** FUNDING-AUTHORIZATION-RECORD-ORDER-NUMBER

The identifying number assigned to a funding authorization by the issuing activity.

SHORT NAME:	PROponent:	TYPE: KEY
FIELD LENGTH: 20	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-20		

*** FUNDING-AUTHORITY-FUND-CODE

This element mimics the foreign key element FUNDING-AUTH-FUND-TYPE-CODE.FUND-CODE for the purpose of creating a generalization group with this element as the discriminator. Since the Encyclopedia does not at present allow foreign elements to act as discriminators, this workaround is necessary to complete the CEFMS model.

ENTITY : FUNDING-AUTHORIZATION-RECORD
PROJECT : COM
SHORT NAME : FUNDING-AUTHORIZATION-RECORD PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

The record which contains the general information related to each funding authorization. Funding authorizations are the source documents which substantiate the receipt of funding authority and program at a field operating activity.

*** FUNDING-AUTHORIZATION-RECORD-ORDER-NUMBER

The identifying number assigned to a funding authorization by the issuing activity.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

*** FAR-APPROPRIATION.APPROPRIATION-BASIC-SYMBOL-CODE

The basic symbol as defined by regulation which uniquely identifies an APPROPRIATION. It is the last four digits of the APPROPRIATION.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 4	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-BASIC-SYMBOL-CODE		

*** FAR-APPROPRIATION.APPROPRIATION-FINANCIAL-DATA-FISCAL-YEAR

The fiscal year a specific APPROPRIATION was appropriated and/or is available for obligation.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 4	FORMAT: NUM	FOREIGN
DOMAIN NAME: YEAR		

*** FAR-APPROPRIATION.APPROPRIATION-LIMITATION-CODE

PROJECT : CDM
SHORT NAME : GENERAL-LEDGER-CORRELATION-TAB PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-OCT-89

A record which specifies the General Ledger accounts to be updated based upon transaction type and appropriation.

*** ACCOUNTING-PHASE-CODE

A code used to identify a particular phase in the Government accounting process, e.g., commitment, obligation.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 3	FORMAT: CHAR	FOREIGN
DOMAIN NAME: ACCOUNTING-PHASE-CODE		

*** GENERAL-LEDGER-ACCOUNT-NUMBER

The number assigned to identify a standard Army general ledger account

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** GLCT-APPROP-STATUS-CODE.APPROPRIATION-STATUS-CODE

A code used to designate the status of an APPROPRIATION as either unexpired, expired or merged and its pending disposition at fiscal year end.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-STATUS-CODE		

*** GLCT-APPROP-TYPE-CODE.APPROPRIATION-CLASSIFICATION-TYPE

A code which specifies whether an APPROPRIATION is civil, military or revolving fund.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-TYPE		

*** GLCT-FUND-TYPE-CODE.FUND-CODE

A code which designates funds as direct, automatic reimbursable, funded reimbursable, direct fund citation or contributed.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	FOREIGN
DOMAIN NAME: FUND-CODE

ENTITY : GENERAL-LEDGER-SUMMARY
PROJECT : CDM
SHORT NAME : GENERAL-LEDGER-SUMMARY PROPONENT : CERM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-OCT-89

Records which contain balances by appropriation for the General Ledger accounts.

*** GENERAL-LEDGER-ACCOUNT-NUMBER

The number assigned to identify a standard Army general ledger account

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** GLS.APPROPRIATION-BASIC-SYMBOL-CODE

The basic symbol as defined by regulation which uniquely identifies an APPROPRIATION. It is the last four digits of the APPROPRIATION.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 4	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-BASIC-SYMBOL-CODE		

*** GLS.APPROPRIATION-FINANCIAL-DATA-FISCAL-YEAR

The fiscal year a specific APPROPRIATION was appropriated and/or is available for obligation.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 4	FORMAT: NUM	FOREIGN
DOMAIN NAME: YEAR		

*** GLS.APPROPRIATION-LIMITATION-CODE

The code which breaks down an APPROPRIATION for specific purposes. It is a suffix to the basic symbol.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 5	FORMAT: CHAR	FOREIGN
DOMAIN NAME: APPROPRIATION-LIMITATION-CODE		

*** GLS.DEPARTMENT-CODE

The code which indicates the DEPARTMENT or agency responsible for administering an APPROPRIATION.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 2	FORMAT: CHAR	FOREIGN
DOMAIN NAME: DEPARTMENT-CODE		

*** GENERAL-LEDGER-SUMMARY-CUMULATIVE-AMOUNT

The amount accumulated from inception for each general ledger summary account

PROJECT : CDM
SHORT NAME : INTER-OFFICE-AGREEMENT PROPONENT : CERM
STATUS : REG/MARKED-INAC STATUS DATE : 02-NOV-90 REVISION DATE : 02-NOV-90

An agreement between at least one Corps of Engineers office and at least one non-Corps office. It is a type of agreement and more data can be found in the generalization entity, AGREEMENT.

*** AGREEMENT-IDENTIFIER

A unique identifier for an AGREEMENT, e.g., a CONTRACT or a local cooperation AGREEMENT. Because the AGREEMENT-IDENTIFIER must be unique within the Corps, it must be generated internally (as opposed to using a vendor's agreement-identifier).

The CONTRACT identifier is formatted as follows:

AAAAAA-BB-C-DDDD

where

AAAAAA is either

DACCxx for Civil Works, with xx = MSC#, or

DACAXx for Military Programs, with xx = MSC#, or

IMPRST for Imprst contracts.

BB is the last two digits of the fiscal year of the contract award.

C is the contract type, either

C = Contract, or

D = Indefinite delivery type contract, or

E = Facilities contract, or

G = Blanket ordering agreement, or

H = Agreements including basic agreements, or

L = Lease agreement.

DDDD is a sequential counter within MSC, reset each fiscal year.

ENTITY : RESOURCE
PROJECT : CDM
SHORT NAME : RESOURCE PROPONENT : DACC/CECW/CEMP
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

The material, manpower, services, real property, bulk or equipment to perform the Corps' mission.

*** RESOURCE-CODE

A code which identifies a RESOURCE used to accomplish the Corps mission. The code may identify a standard RESOURCE type of any component in a breakdown thereof, e.g., manner.

SHORT NAME: PROPONENT: TYPE: KEY
FIELD LENGTH: 10 FORMAT: CHAR NATIVE
DOMAIN NAME: RESOURCE-CODE

*** PARENT-RESOURCE-CODE.RESOURCE-CODE

A code which identifies a RESOURCE used to accomplish the Corps mission. The code may identify a standard RESOURCE type of any component in a breakdown thereof, e.g., manner.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 10 FORMAT: CHAR FOREIGN
DOMAIN NAME: RESOURCE-CODE

*** RESOURCE-DESCRIPTION

A detailed description of the RESOURCE.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 120 TYPE: TEXT FORMAT: CHAR NATIVE
DOMAIN NAME: MEDIUM-TEXT

*** RESOURCE-NAME

The name which identifies or describes a resource

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 39 FORMAT: CHAR NATIVE
DOMAIN NAME: CHARACTER-39

*** RESOURCE-SHORT-NAME

Short name for the RESOURCE.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 20 FORMAT: CHAR NATIVE
DOMAIN NAME: CHARACTER-20

*** RESOURCE-TYPE

A unique code used to determine whether a resource is one of the five standard resource types or an aggregate of all resources (bulk

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 5 FORMAT: CHAR NATIVE
DOMAIN NAME: RESOURCE-TYPE

ENTITY : RESOURCE-ESTIMATE
PROJECT : CDM
SHORT NAME : RESOURCE-ESTIMATE PROPONENT : CECM/CEMP
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

The estimated amount of a resource which is required for the carrying out of a work-item.

*** RESOURCE-ESTIMATE-CONTROL-NUMBER

A sequential control number used to identify a RESOURCE-ESTIMATE.

SHORT NAME: PROPONENT: TYPE: KEY
FIELD LENGTH: 10 FORMAT: CHAR NATIVE
DOMAIN NAME: CHARACTER-10

*** CHANGE-REQUEST-NUMBER

A unique number generated by the system identifying a specific CHANGE-REQUEST. (Could be for a current working estimate.)

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 10 FORMAT: CHAR FOREIGN
DOMAIN NAME: CHARACTER-10

*** ESTIMATED-RESOURCE-CODE.RESOURCE-CODE

A code which identifies a RESOURCE used to accomplish the Corps mission. The code may identify a standard RESOURCE type of any component in a breakdown thereof, e.g., manner.

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 10 FORMAT: CHAR FOREIGN
DOMAIN NAME: RESOURCE-CODE

*** ESTIMATING-ORG-CODE.ORGANIZATION-CODE

A unique code which identifies an organization within the Corps of Engineers. Breakdown of the code is as follows:

- CHAR #
- Division 1
- District 2
- Dir/Division 3
- Branch 4.5
- Section 6.7

The first two characters are the MSC (Major Subordinate Command) code, formerly known as the EROC (Engineering Reporting Organization Code).

SHORT NAME: PROPONENT: TYPE: NON-KEY
FIELD LENGTH: 7 TYPE: LIST FORMAT: CHAR FOREIGN
DOMAIN NAME: ORGANIZATION-CODE

*** INFLATION-INDEX-ECONOMIC-INDICATOR

Inflationary trend/forecast indication, normally presented on a regional basis.

SHORT NAME: PROPONENT: TYPE: NON-KEY
DOMAIN NAME: FOREIGN

*** INFLATION-INDEX-FISCAL-YEAR

Fiscal year for which the INFLATION-FACTOR applies. Note that last fiscal year inflation rate is used in the calculations for the out years (beyond the last FY).

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FOREIGN

DOMAIN NAME: FISCAL-YEAR

*** METHOD-OF-ACCOMPLISHMENT-CODE

A code which indicates whether work will be performed, for example via inhouse, by CONTRACT, or by reimbursable order. The manner by which the work is accomplished.

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FIELD LENGTH: 3 TYPE: LIST FORMAT: CHAR FOREIGN

DOMAIN NAME: METHOD-OF-ACCOMPLISHMENT-CODE

*** RESOURCE-MOA.METHOD-OF-ACCOMPLISHMENT-CODE

A code which indicates whether work will be performed, for example via inhouse, by CONTRACT, or by reimbursable order. The manner by which the work is accomplished.

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FIELD LENGTH: 3 TYPE: LIST FORMAT: CHAR FOREIGN

DOMAIN NAME: METHOD-OF-ACCOMPLISHMENT-CODE

*** RESOURCE-PLAN-NUMBER

A unique number which identifies a specific RESOURCE-PLAN

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FIELD LENGTH: 10 FORMAT: CHAR FOREIGN

DOMAIN NAME: CHARACTER-10

*** WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FIELD LENGTH: 6 FORMAT: CHAR FOREIGN

DOMAIN NAME: WORK-ITEM-CODE

*** RESOURCE-ESTIMATE-AMOUNT

The estimated amount for a resource for carrying out a work-item.

SHORT NAME: PROPONENT: TYPE: NON-KEY
 FIELD LENGTH: 14 DECIMAL LENGTH: 2 FORMAT: NUM NATIVE

DOMAIN NAME: AMOUNT

01/09/91
15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** RESOURCE-ESTIMATE-APPROVAL-DATE

The date (day, month and year) that the RESOURCE-ESTIMATE was approved.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** RESOURCE-ESTIMATE-BUDGET-LINE-SYMBOL-CODE

Budget line item status symbolism, designating the "budget phase" of a budget line item over a period of time.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: BUDGET-LINE-SYMBOL-CODE		

*** RESOURCE-ESTIMATE-COMPONENT-TYPE

A further breakdown of the resource amount. Can indicate, e.g., that it is for a "capability amount", or, it is for a "decrement amount".

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: RESOURCE-ESTIMATE-COMPONENT-TYPE		

*** RESOURCE-ESTIMATE-CONTINGENCY-AMOUNT

The contingency amount that is available for use. Please see ER 5-2-1.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** RESOURCE-ESTIMATE-END-DATE

The estimate end date (day, month, and year) for the use of the RESOURCE that is the basis for the RESOURCE-ESTIMATE.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** RESOURCE-ESTIMATE-FUNCTION-IDENTIFIER

Primary functional work area to which the RESOURCE will be applied.

SHORT NAME:	PROponent:	TYPE: NON-KEY
DOMAIN NAME: FUNCTION-IDENTIFIER		NATIVE

01/09/91
15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** RESOURCE-ESTIMATE-METHODOLOGY-CODE

Indicates the method used to arrive at the resource estimate. For example, may indicate that a particular automated tool was used to compute the estimate.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 15	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: RESOURCE-ESTIMATE-METHODOLOGY-CODE		

*** RESOURCE-ESTIMATE-OBLIGATION-EXPENDITURE-TYPE

Indicates whether this estimate is for an obligation or an expenditure.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: OBLIGATION-EXPENDITURE-TYPE		

*** RESOURCE-ESTIMATE-QUANTITY

The quantity in the RESOURCE-ESTIMATE expressed in a specific unit of measure. Examples may be acres, buildings, gallons, each, boxes, barrels, and so on.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 10 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: COUNT		

*** RESOURCE-ESTIMATE-START-DATE

The estimated start day (day, month and year) for the use of the RESOURCE that is the basis for the RESOURCE-ESTIMATE.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** RESOURCE-ESTIMATE-STATUS-CODE

A code which describes the status of a RESOURCE-ESTIMATE. For example, it may be a detailed breakdown of labor and material costs or it may be a very preliminary estimate.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
DOMAIN NAME:		

*** RESOURCE-ESTIMATE-TEXT

Text describing or explaining a RESOURCE-ESTIMATE.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: VAR	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: LONG-TEXT		

01/09/91
15:10:32

*** RESOURCE-ESTIMATE-UNIT-OF-MEASURE-IDENTIFIER

The units by which this RESOURCE is scheduled or consumed
(e.g. hours, tons, etc.).

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	FORMAT: CHAR	NATIVE
DOMAIN NAME: UNIT-OF-MEASURE-CODE		

*** RESOURCE-ESTIMATE-UPDATE-DATE

The date (day, month and year) that the RESOURCE-ESTIMATE was
last updated.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** RESOURCE-ESTIMATE-UPDATE-IDENTIFIER

The identifier of the person or ORGANIZATION who last updated the
RESOURCE-ESTIMATE.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE

ENTITY : WORK-ITEM
PROJECT : CDM
SHORT NAME : WORK-ITEM PROPONENT : CECW-LM
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 13-NOV-90

A separate or uniquely identifiable effort for which it is necessary to collect data for management purposes. A WORK-ITEM has a definable output which contributes to the Corps' mission. A WORK-ITEM may be a single task or an associated collection of tasks. WORK-ITEM's may be Projects, Sub-Projects, or other lower level tasks, e.g., separable elements, line items.

*** WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: KEY
FIELD LENGTH: 6	FORMAT: CHAR	NATIVE
DOMAIN NAME: WORK-ITEM-CODE		

*** AUTHORITY-IDENTIFIER

A unique identifier for the authority.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-20		

*** PARENT-WI-CODE.WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 6	FORMAT: CHAR	FOREIGN
DOMAIN NAME: WORK-ITEM-CODE		

*** WORK-ITEM-ASSIGNED-DATE

The date (day, month, and year) a WORK-ITEM is assigned to a responsible organization for accomplishment.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-ASSIGNED-NUMBER

The number assigned to a WORK-ITEM (not the unique WORK-ITEM code). Can be an internally assigned sequence number that would be unique within a PROJECT or SUBPROJECT.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 10	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-10

*** WORK-ITEM-ESTIMATED-DURATION

The estimated duration required to accomplish a WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 4	FORMAT: NUM	NATIVE
DOMAIN NAME: DAYS-DURATION		

*** WORK-ITEM-EXECUTION-AWARD-DATE

The date on which the total project (including all sub-projects) is considered as executed in accordance with OSD guidance. Refers to WORK-ITEM-EXECUTION-CODE.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-EXECUTION-CODE

The code associated with WORK-ITEM-EXECUTION-AWARD-DATE. Execution in terms of under construction, awarded only, etc.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: EXECUTION-CODE		

*** WORK-ITEM-EXECUTION-STATUS-CODE

The status of execution in any one fiscal year, such as carryover projects from previous years, authorized only, not apportioned, etc.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: EXECUTION-STATUS-CODE		

*** WORK-ITEM-FISCAL-YEAR

Used to produce a budget report for a particular fiscal year, at a particular WORK-ITEM version number.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 4	FORMAT: NUM	NATIVE
DOMAIN NAME: YEAR		

*** WORK-ITEM-FULL-NAME

The complete, unabbreviated name of the WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 120	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: MEDIUM-TEXT		

*** WORK-ITEM-FUNCTION-CODE

Primary function which the WORK-ITEM serves.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
		NATIVE
DOMAIN NAME:

15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** WORK-ITEM-GOVERNMENT-ESTIMATE-AMOUNT

An estimate, by government estimators and regulations, of fair and reasonable cost for a WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 14 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: AMOUNT		

*** WORK-ITEM-INDIRECT-OVERHEAD-CODE

Indicates if the system is to automatically generate overheads and indirects from stored data or not.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: INDIRECT-OVERHEAD-INDICATOR		

*** WORK-ITEM-INFLATION-START-FISCAL-YEAR

Year inflation factor was first applied to the PROJECT.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 4	FORMAT: NUM	NATIVE
DOMAIN NAME: YEAR		

*** WORK-ITEM-LAST-UPDATE-DATE

The last date that the WORK-ITEM was updated in the system.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-LAST-UPDATE-IDENTIFIER

Identifier of the last ORGANIZATION (or person) to update the WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

*** WORK-ITEM-LAST-UPDATE-TIME

The time of the last update that the WORK-ITEM was updated in the system.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 12	FORMAT: CHAR	NATIVE
DOMAIN NAME: LOCAL-TIME		

*** WORK-ITEM-LOCAL-PRIORITY-CODE

The local priority of the WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 3	FORMAT: NUM	NATIVE
DOMAIN NAME: PRIORITY-CODE

15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** WORK-ITEM-MISSION-CODE

A code used to indicate whether the project is to serve a new mission, a current mission, or to replace and modernize an existing facility in accordance with the following definitions:

1 = New and expanded missions: construction projects in direct support of new or expanded missions that are scheduled to be activated at an installation during the budget or subsequent years. Includes projects required in direct support of equipment changes, generated by the transfer of activities and/or personnel because of base closures.

2 = Current missions: in direct support of missions already in place on an installation within the current year.

3 = Replacement and modernization: projects to replace a deteriorated, obsolete or inadequate facility by one of the same facility class with or without increase in floor area or capacity and/or upgrading of the facility to meet current criteria. It also includes alteration and conversion projects.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: LIST FORMAT: NUM	NATIVE
DOMAIN NAME: WORK-ITEM-MISSION-CODE		

*** WORK-ITEM-MISSION-ORGANIZATION-TYPE

Indicates whether the WORK-ITEM serves a mission-oriented purpose, or whether it serves an organizational purpose.

SHORT NAME:	PROponent:	TYPE: NON-KEY
DOMAIN NAME:		NATIVE

*** WORK-ITEM-NAME

The name assigned to a work item

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 59	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-59		

*** WORK-ITEM-NONFEDERAL-ESTIMATE-PERCENT

An estimate of non-federal percentage of funds for the WORK-ITEM over its life cycle.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 5 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: PERCENT		

*** WORK-ITEM-OUT-YR-INFLATION-CODE

Indicates whether out-years have an inflation factor applied.

SHORT NAME:	PROponent:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: OUT-YEAR-INFLATION-INDICATOR

15:10:32

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

*** WORK-ITEM-PHASE-CODE

The phase that the WORK-ITEM is part of. For example, the phase may be planning (feasibility), design, construction, or multiple phases

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: WORK-ITEM-PHASE-CODE		

*** WORK-ITEM-PREVIOUS-AUTHORIZATION-CODE

Code used to track projects which have been previously authorized, but for which there has not yet been an appropriation. (This element requires more precise definition.)

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	FORMAT: CHAR	NATIVE
DOMAIN NAME: WI-PREVIOUS-AUTHORIZATION-CODE		

*** WORK-ITEM-PRIMARY-DELAY-CODE

Code applicable to record the current, principal cause of a slippage to scheduled progress. This field will also be used to reflect current or potential problem areas, even though scheduled progress is currently being maintained.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: WORK-ITEM-DELAY-CODE		

*** WORK-ITEM-PUBLIC-LAW-CODE

THE PUBLIC LAW CODE ASSOCIATED WITH THE PROJECT

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
		NATIVE
DOMAIN NAME:		

*** WORK-ITEM-QUANTITY

The number of units in the WORK-ITEM, for example the number of barracks.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 10 DECIMAL LENGTH: 2	FORMAT: NUM	NATIVE
DOMAIN NAME: COUNT		

*** WORK-ITEM-RECEIVED-DATE

The date (day, month, and year) the work item is received by the organization.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

01/09/91
15:10:32

USACE ENCYCLOPEDIA

*** WORK-ITEM-SECONDARY-DELAY-CODE

Code used to record a second, significant delay when there is more than one delaying factor with current or potential impact on scheduled progress.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: WORK-ITEM-DELAY-CODE		

*** WORK-ITEM-SEPARABLE-ELEMENT-CODE

Indicates that the WORK-ITEM is an incrementally funded unit or work.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: YES-NO		

*** WORK-ITEM-SHORT-NAME

Short name for the WORK-ITEM. Short titles in AR415-28, AFM300-4, PB-2A should be used to the extent possible.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

*** WORK-ITEM-SOURCE-DATE

Definition to be added

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-SOURCE-NAME

The name of the organization or person requesting the performance of a work item

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 20	FORMAT: CHAR	NATIVE
DOMAIN NAME: CHARACTER-20		

*** WORK-ITEM-STATUS-CODE

A code used to indicate if a WORK-ITEM has been accepted, rejected, active, or deferred.

SHORT NAME:	PROPOONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	TYPE: LIST FORMAT: CHAR	NATIVE
DOMAIN NAME: WI-STATUS-CODE		

USACE ENCYCLOPEDIA
DATA ADMINISTRATION DICTIONARY REPORT

01/09/91
15:10:32

*** WORK-ITEM-STATUS-DATE

The date (day, month and year) that the WORK-ITEM status code was last updated.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-TYPE

A code which indicates whether a work item is a project, sub-project or task

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: WORK-ITEM-TYPE		

*** WORK-ITEM-UNIT-OF-MEASURE-IDENTIFIER

The units by which the WORK-ITEM-QUANTITY is measured.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 2	FORMAT: CHAR	NATIVE
DOMAIN NAME: UNIT-OF-MEASURE-CODE		

*** WORK-ITEM-VERSION-AUTOMATIC-UPDATE-CODE

Flag to denote if funding levels should be automatically updated when the approved version number is modified.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	TYPE: TEXT FORMAT: CHAR	NATIVE
DOMAIN NAME: YES-NO		

*** WORK-ITEM-VERSION-NUMBER

The number of the level of the WORK-ITEM. A zero level indicator is an approved level. Each level designates a different "copy" of the WORK-ITEM date; for example, for "what if" analysis.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 1	FORMAT: CHAR	NATIVE
DOMAIN NAME: VERSION-NUMBER		

*** WORK-ITEM-WORK-DAYS-CODE

Indicates the units of time, e.g., 5, 6, or 7 day work week, and the work days per week.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 7	FORMAT: CHAR	NATIVE
DOMAIN NAME: TIME-UNIT

PROJECT : CDH
SHORT NAME : WORK-ITEM-INQUIRY-COMMENTARY PROPONENT : CEPA
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 25-SEP-90

A cross reference relating a WORK-ITEM to an INQUIRY-COMMENTARY.

*** INQUIRY-COMMENTARY-NUMBER

This is a unique number identifying a specific INQUIRY-COMMENTARY from an external source received by the Corps.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 10	FORMAT: CHAR	FOREIGN
DOMAIN NAME: CHARACTER-10		

*** WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME:	PROPOONENT:	TYPE: KEY
FIELD LENGTH: 6	FORMAT: CHAR	FOREIGN
DOMAIN NAME: WORK-ITEM-CODE

ENTITY : WORK-ITEM-MILESTONE
PROJECT : CDM
SHORT NAME : WORK-ITEM-MILESTONE PROPONENT : CECW/CEMP
STATUS : REGISTERED STATUS DATE : 01-MAY-90 REVISION DATE : 30-MAR-90

Major events that occur for a work item.

*** MILESTONE-CODE

A unique code identifying a MILESTONE event.

SHORT NAME:	PROPONENT:	TYPE: KEY
FIELD LENGTH: 8	FORMAT: NUM	FOREIGN
DOMAIN NAME: MILESTONE-CODE		

*** MILESTONE-STANDARD-LOCAL-TYPE

Indicates whether the MILESTONE is one from a corps standard set of MILESTONES, or whether the MILESTONE was created for local use.

SHORT NAME:	PROPONENT:	TYPE: KEY
FIELD LENGTH: 1	FORMAT: CHAR	FOREIGN
DOMAIN NAME: STANDARD-LOCAL-TYPE		

*** WORK-ITEM-CODE

A code that uniquely identifies a specific WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: KEY
FIELD LENGTH: 6	FORMAT: CHAR	FOREIGN
DOMAIN NAME: WORK-ITEM-CODE		

*** WORK-ITEM-MILESTONE-ACTUAL-DATE

The date (day, month and year) that a WORK-ITEM-MILESTONE is actually accomplished.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-MILESTONE-CREATION-DATE

The date (day, month, and year) that the MILESTONE event is first entered into the system for this WORK-ITEM.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE		

*** WORK-ITEM-MILESTONE-ORIGINAL-DATE

The date (day, month and year) originally scheduled for the accomplishment of a MILESTONE. It is the first (original) approved date for the MILESTONE.

SHORT NAME:	PROPONENT:	TYPE: NON-KEY
FIELD LENGTH: 9	FORMAT: DATE	NATIVE
DOMAIN NAME: CALENDAR-DATE

Appendix C

USACE Data Classes

1. General

The Data Classes represent a high level categorization of all the Corps' data into areas or classes of information. The purpose of such categorization is to define the overall data architecture of the Corps and its major Divisions and Directorates, and correlate them with a similar data architecture prepared at the Army level. Each of these high level data classes is a collection of the entities describing the real people, places, things, or events that the Corps maintains in its data models. A data model is more detailed than a data architecture and provides the specifics for building actual databases.

2. Policy

This data class includes all policies, regulations, and laws promulgated by the Executive Department, other Governmental agencies, Congress, office of the Secretary of Defense (OSD), and DA (Department of the Army) that impact OCE (Office of the Chief of Engineers).

3. Strategy, Goals, Objectives

This data class is a record of the documented purpose, goals, objectives priorities, and action plans for obtaining USACE objectives as approved by the Chief of Engineers.

4. Command Performance Analysis

This data class is a record of all those data associated with analyzing the performance of those programs and activities selected for specific Commands, USACE.

5. Audits and Reviews

This data class is the collection of audits and reviews of USACE activities. It includes data collected, reports, and status of follow-on activities to connect audit and review findings.

6. Inspections

This data class is the set of records of inspections conducted by USACE, higher authorities, or other agencies.

7. Efficiency Improvements

This data class is a record of all data and cross references to efficiency improvement activities managed or conducted by USACE.

8. Organization

This data class is a record of the missions, organizations, structure and functions for the Corps Worldwide operation.

9. Stationing Analysis

This data class contains the general items of data from external sources necessary for determination of facilities requirements. It consists of standards, priorities, and the specifics concerning where, what, how much and for what purpose facilities must be provided. It will be used in conjunction with

EP 25-1-6

11 Feb 91

data on existing facilities to evaluate, predict, and develop stationing proposals and the resulting facilities requirements.

10. Army Facilities Budget

This data class is the compilation of financial and other data to form programs and budgets for Army facilities. It consists of standards, priorities, guidance, and the specifics regarding resources to support facilities, real estate, construction, and operation/maintenance throughout the Army.

11. Civil Works Budget

This data class is the composite of financial and other data for the budgeting of Civil Works activities, including feasibility studies, design, construction, operations and maintenance, and research. The data class consists of priorities, guidance, budget documents and other information related to establishing program requirements for Civil Works, except manpower.

12. Command Operating Budget

This data class is the composite of financial and other data assembled to form the basis for managing the O&M Army (OMA) and Other Procurement Army (OPA) appropriations which support US ACE. It consists of standards, priorities, guidance, and specifics regarding funding to support USACE command operations.

13. Military RDT&E Budget

This data class is the composite of financial and other data for the development of the Military Research Development Test and Evaluation (RDT&E) program and budget. It consists of priorities and resources necessary to develop and implement the program.

14. R&D Project Status

This data class consists of data derived from special and routine reports that describe the status of research effort

15. Personnel Sustainment

This data class is comprised of information about personnel sustainment data to include reclassification of branch transfer, incentives, performance evaluation, counseling, reenlistment, competitive voluntary indefinite, RA integration, promotion, professional development, employee/management relations, labor relations, suggestion program, incentive awards, and union membership.

16. Agreements

This data class establishes a relationship that involves US ACE as a principal participant.

17. Environmental

This data class consists of the environmental protection and enhancement studies.

18. Civil Works Planning Studies

This data class consists of information and analysis of planning activities involving land, facilities, water, and natural resources at Civil Works projects.

19. Civil Works Operations

This data class consists of visitation, traffic, utilization, and condition data for the operation and maintenance Civil Works projects.

20. Vendor

This data class is that information relating to industries, professional, and technical organizations capable of providing equipment, materials, or services to USACE.

21. Technical Engineering

This data class is that information which establishes engineering and construction criteria, standards, and techniques, which are to be used by various Corps elements in carrying out their mission.

22. Studies

Special completed or ongoing reports not related to planning studies, environmental data, and efficiency improvements.

23. Design Project

This data class consists of data pertaining to the description and status of Military and Civil Works design projects.

24. Construction Project

This data class includes data pertaining to the civil and military construction activities of USACE.

25. Real Property Utilization

This data class consists of the records associated with the use of real property (land, buildings, and interests therein) of the Army. It includes space management, use of property by others, encroachment management, and management of excess property.

26. Property Management

This data class consists of the standards and records associated with the identification of real property including land, buildings, or interests therein. Included are all records which describe ownership, size or amount, type or other description categorizing the Army's interest including Civil Works.

27. Real Estate Acquisition

This data class consists of standards and records associated with the preparation, review, and use of appraisals for the purpose of real estate acquisition.

28. Army Operations and Maintenance

This data class consists of standards, and records associated with operating and maintaining facilities (including Army housing) throughout the Army. It excludes real property inventory, descriptions, and utilization.

EP 25-1-6

11 Feb 91

29. Regulatory

This data class includes information about permit applications under the Corps regulatory programs.

30. Emergency Operations Plan

This data class consists of the standards and records associated with preparedness, response, recovery, and mitigation responsibilities resulting from natural and technological hazards, civil disturbances, and natural resource shortages.

31. Emergency Operations Status

This data class consists of information related to the status of ongoing emergency events.

32. Mobilization Plans

This data class consists of the standards and records associated with the development of mobilization plans and the identification of requirements in response to national security threats.

33. Mobilization Status

This data class consists of information related to the status of ongoing exercises.

34. Manpower Requirements

This data class is a record of all manpower specific data concerning requirements and standards.

35. Funding

This data class includes information related to the reporting summarization and recording of all funds received by the Corps of Engineers from any source.

36. Mission Training

This data class includes data necessary to develop and manage organizational training which supports USACE mission requirements.

37. Personnel Accessions

This data class is comprised of information about personnel, both military and civilian, accessed in the Corps of Engineers.

38. Personnel Strength

This data class is comprised of personnel strength information, both military and civilian, within the Corps of Engineers.

39. Employment Opportunity (EEO)

This data class is a set of records related to planning, developing, and monitoring the Command EEO program.

40. Legal

This data class consists of the standards and records associated with advice, assistance, recommendation, and determinations on legal matters. Included are interpretation of statutes and judicial opinions; preparation, analysis, or interpretation of legislation; and representation in litigation.

41. Security

This data class is a set of records related to the administration and oversight of the security programs.

42. Contract/Purchase Order

This data class consists of a set of records describing the contract purchase order data for procuring services, equipment, supplies, etc.

43. Safety

This data class is that information relating to maintaining safe working conditions within the Corps working areas and on the project site during construction and operation for the purpose of preventing death, injury, and property damage. These data include those factors necessary to assure conformance with applicable laws, directives, and regulations.

44. Public Information

This data class consists of that information used and disseminated by USACE to project a position image to employees, the public, the media, and other government activities.

45. Administrative Information

This data class is meta-information, or information about where specific information can be found.

46. Customer

This data class contains data pertaining to those for whom the Corps does work.

47. Interest Element

This data class includes potential, current, or former individuals or organizations (not a customer, vendor or part of USACE) having an interest in USACE activities.

48. Internal Regulations, Publications, Other

This data class includes policies, regulations, or publications established by the Corps of Engineers.

49. Materiel Requirements

This data class pertains to requirements definition for materiel within the USACE.

50. Materiel Authorizations

This data class pertains to materiel authorizations within the USACE.

51. Hydrologic

This data class includes information pertaining to the occurrence, circulation, distribution, and properties of the earth and earth's atmosphere.

52. Climatic

This data class pertains to the historic, current, composite, or generally prevailing weather conditions of a region.

53. Authorizing Documents

This data class pertains to the documents delegating authority to make decisions and/or take action to accomplish a task or project.

54. PRIP Budget

This data class relates to the specially monitored and controlled program called Plant Replacement and Improvement Program (PRIP). It includes formulation, changes thereto, and submission of the "budget" for the plant and equipment requirements of USACE.

55. Law Enforcement

This data class consists of a set of records related to the administration and oversight of the Corps Law Enforcement program.

56. Information Systems Plan

This data class contains all information pertaining to the Corps' Information Management Plan, progress, and any changes thereto. It also includes information describing status, architecture, and system/applications.

57. Civil Works Maintenance

This data class contains information on the ongoing scheduled and backlog of maintenance and repair of Civil Works Projects.

58. Paperwork Management

This data class consists of all information on paperwork management and reduction activities.

59. Investigations

This data class is a set of records of investigations of allegations/complaints of suspected wrongful activities of individual(s) or organization(s) within the Corps of Engineers.

60. Disbursements

This data class pertains to information about payments for obligations incurred as a result of orders placed, contracts awarded, services rendered personnel entitlement made by the Army.

61. Travel

This data class is a set of records and procedures that provide management an oversight of travel regulations, both CONUS and OC-ONUS.

62. Federal Engineering Budget

This data class consists of agency resource (dollars) and program data (estimated program requirements) collected during the period that agreements are being negotiated. It does not include agreement data (agreements data class) or program data for programs in the execution stage. Federal Engineer Execution data is contained in the civil works or military budget data classes.

63. Family Housing Utilization

This data class consists of a set of records used by HQUSACE and the Assistant Chief of Engineers in coordinating and executing the Army Family Housing Program.

64. Waterborne Commerce Statistics

This data class consists of data related to the origin and destination of all commerce passing through the waterways of the U.S., including inland and coastal waterways. Only destination data is collected for foreign commerce arriving at U.S. ports. Also data included is port facilities data with descriptive physical data about U.S. ports such as number of docks, berthing facilities, channel depths, availability of power, land transportation facilities, etc.

65. Real Estate Disposal

This data class is comprised of standards and records associated with the disposal of real estate.

66. Manpower Authorizations

This data class is a record of all manpower authorizations specific data.

67. Accounting

This data class pertains to the recording, summarization, and reporting of all transactions related to the operations of USACE/OCE.

68. Materiel Maintenance

Maintain equipment, repair parts, and supplies in a serviceable condition through preventive

maintenance, repair, and rebuild, using organic, direct support, general support, depot, and contract means.

69. Materiel Acquisition

This data class pertains to records and transactions associated with the acquisition of materiel within the USACE.

70. Materiel Inventory

This data class pertains to the inventory records associated with materiel within the USACE.

71. Materiel Distribution

This data class pertains to records and transactions associated with the distribution of materiel within the USACE.

72. Materiel Disposition

This data class pertains to the disposition of materiel within the USACE.

73. Program/Budget Execution

This data class consists of information about tracking the obligation and expenditures against the resources allocated.

74. Personnel Transitions

This data class is comprised of personnel, both military and civilian, transition information, through voluntary and involuntary means, from the USACE.

EP 25-1-6

11 Feb 91

75. Planning and Programing

This data class is comprised of projected allocations of resources covering a five (5) year period, coincident with the Department of the Army's Program Objective Memorandum (POM).

Appendix D

Common and Standard Domain

General

1. A domain is the set of values that a data element may have. Domains are defined by the attributes of the data element (length, format, decimal location), by a range of values, or by a list of acceptable values, where applicable.

2. The domain attributes and standard value lists contained in the Command Data Dictionary have been negotiated with proponents and users. These are the standards for all future relational databases and others which, if followed, will facilitate sharing and interchange of data between systems.

3. COMMON DOMAINS support data elements that have common attributes and common values. The set of values that define a COMMON DOMAIN is not a limited list like the domain of STATE-CODE, but their domains, or set of values, are utilized by many conceptual data elements. Those domains with a limited set of values like STATE-CODE are designated STANDARD DOMAINS.

a. An example of a common domain is CALENDAR-DATE which has the attributes (length is 9, format is DATE, DD-MMM-YY). There are a number of conceptual data elements that utilize this common data domain:

- AGREEMENT-CHANGE-REQUEST-AUTHORIZED-DATE
- AGREEMENT-CHANGE-REQUEST-CANCELLATION-DATE
- AUTHORITY-EFFECTIVE-DATE
- MILESTONE-ORIGINAL-DATE
- MILESTONE-ACTUAL-DATE.

b. Another example is the common domain PERCENT which has the attributes (length is 5, format is NUMBER, decimal location is 2). Conceptual data elements utilizing this common domain are:

- INFLATION-RATE-PERCENT
- ORGANIZATION-RESOURCE-TECHNICAL-INDIRECT-OTHER-PERCENT

VALUE(S):	DESCRIPTION:
COE	Construction Engineer
DEE	Design Engineer
IPM	Individual Project Manager
TPM	Team Project Manager

DOMAIN: WORK-ITEM-DELAY-CODE

VALUE(S):	DESCRIPTION:
AO	Construction authorization not received from user (second character is zero)
AI	Construction authorization not received from HQUSACE
A2	Error in bids or protest regarding bids
A3	Bids rejected, readvertising required
A4	Bid opening delayed pending issuance of amendment or other administrative reasons
A5	Advertisement or award deferred by higher authority (includes using service)
A6	Advertising authorization not received
A8	Awaiting execution of Local COOP agreement
A9	Local COOP agency failed to provide disposal area or other items required by the Local sponsor
AD	Item canceled or deleted
C1	Right of entry for construction not obtained
C2	Land acquisition not completed
C3	Delay in construction contractor mobilization for work
C4	Contractor financial deficiency
C5	Contractor inefficiency
C6	Collection of defective work by construction contractor
C8	Unforeseen natural conditions - inclement weather
C9	Unforeseen natural conditions - subsurface conditions

Figure D-2: Standard Domains (cont'd)

EP 25-1-6

11 Feb 91

CA	Unforeseen natural conditions - catastrophe or other cause not covered by C8 or C9
CB	Seasonal nature of work
CC	Delayed by other construction contractor on same site
CD	Contract terminated for default
CE	Delay in delivery of construction contractor furnished materials or equipment
CF	Deferred by contractor for work on other line items in the same contract
CG	Correction of design deficiency pending
CH	Correction of deficiencies or final tests prior to transfer
CJ	Labor difficulties - strikes, disputes, violations, etc.
CK	Insufficient labor available within the area
CL	Change pending
CM	Temporary suspension of work for convenience of government
CN	Delayed for security reasons
CP	Delay in delivery of government furnished materials or equipment
CO	Contract terminated for convenience of government
DO	No current problems (all phases) (second character is a zero)
D1	Insufficient funds
D2	Awaiting issuance of directive to proceed or continue with design
D3	Sitting not determined
D4	Right of entry for preliminary survey not obtained
D5	Scope not defined
D6	Criteria not received from using service
D7	Criteria not received from HQUSACE
D8	Awaiting approval of design
D9	AE behind schedule
DA	DE design canceled or deferred
DB	Redesign required
DC	Design canceled or deferred
FI	Contractor claim submitted - contracting officer's decision pending

Figure D-2: Standard Domains (cont'd)

F2	Contractor claim pending - CEBCA
F3	Contractor claim pending - ASBCA
F4	Contractor claim or government suit pending - Federal Court
F5	Financial closeout pending A-E damages resolution
F6	Using service changes after transfer
F7	Pending action from another agency to include audit agencies and the Dpt of Labor or other agencies for Labor violations
F8	Correction of construction deficiencies discovered after transfer
F9	Additional contract awarded to correct deficiencies
FA	Final settlement with contractor not made
FB	Final government costs not established
FC	Pending completion of other item(s) in the same contract
FD	Final costs on GFE not established
FE	Price redetermination and/or renegotiation not completed
T1	Final acceptance withheld pending correction of deficiencies
T2	Processing of DD form 1354 not complete
T4	Using service refuses to accept transfer
T5	Operating manuals and/or training of operating personnel not been completed
T6	"AS BUILT" drawings not completed

Legacy System To CDM Correlation

1. To provide continuity from current (legacy) data systems to the Command Data Model (CDM), it is helpful to see the correlation between the Legacy System Data Elements and the Command Data Elements.
2. It should be noted that the phrase "data element" has two different meanings here. As used in "Command Data Element," "data element" refers to basic, primitive, or generic data in a conceptual data model and is used to "build" answers to questions as they are asked by reports, applications, or ad-hoc queries. In "Legacy Data Element," (LDE) "data element" may refer to an answer to a question, result of algorithm, or a field in a report as they appear in applications, reports and/or physical databases.
3. Because of the disparity between the nature of these two types of data elements, there is very little one-to-one mapping or direct cross-referencing between the data elements of the two sources. "Correlation" is the best way to describe the relationship between a Legacy Data Element (LDE) and a Conceptual Data Element (CDE). A CDE represents a more fundamental data value, and the LDE may represent a value that relates to the value of one or more CDEs. That relationship may depend upon certain conditions, constraints, or selection criteria. Thus, the following tables correlate each LDE by Legacy System, to a CDE, which name is composed of a Data-Entity-Name plus a Data-Element-Name.

Each "correlation" is further described by a "DERIVATION" which seeks to set forth the nature of the relationship between the LDE and the CDE. What this says is "that the value of the LDE is DERIVED from the value of the related CDE by means of the indicated manner." The possible values of DERIVATION are:

a. "STRAIGHT" denotes that the meaning of one LDE corresponds to the meaning of one CDE. For example:
PROJECT TITLE--PROJECT-NAME

b. "COMPOUND" denotes that the meaning of one LDE corresponds to the meanings of two or more CDEs linked together. For example:

EMPLOYEE NAME
--EMPLOYEE-LAST-NAME
--EMPLOYEE-FIRST-NAME
--EMPLOYEE-MIDDLE-NAME

c. "CONDITIONAL" means that the value of the LDE correlates with a particular instance of a CDE depending on certain conditions or "values" which are represented by other CDEs. For example: PROJECT-MANAGER-PHONE relates to EMPLOYEE PHONE-NUMBER, but the relationship depends also upon WORK-ITEM-ASSIGNMENT-CODE, WORK-ITEM-CODE, and EMPLOYEE-IDENTIFIER.

(1) [NOTE for items 1,2 and 3 above: Where the integrity of the value of a LDE is clearly dependent upon a set of CDE's as the Primary Keys for the value of the related CDE, these Primary Key CDE's will not be

EP 25-1-6

11 Feb 91

listed. For example: to identify a value for a particular instance of WORK-ITEM-MILESTONE/ORIGINAL-DATE, there first must be a value for WORK-ITEM/CODE, MILESTONE-TABLE/CODE and MILESTONE-TABLE/STANDARD-LOCAL-TYPE. These latter conditional CDEs are not listed.]

d. "ROLL-UP" denotes that the meaning of the LDE represents a summation (total) of several instances of one CDE as selected by a particular set of criteria. The values of the selection criteria are recorded by other related CDEs.

e. "COMPUTED" denotes that the meaning of the LDE represents a meaning that

is calculated according to a specific algorithm (which may include select criteria, conditions, roll-ups and/or formulas) or a combination of algorithms.

4. The following are two listings of correlations:

a. Sorted by Legacy System and Data Elements (LDE) showing correlate Conceptual Entities and Data Elements (CDE).

b. Sorted by conceptual entities and data elements (CDE) showing correlated legacy systems and data elements (LDE).

Appendix F

Data Element Defining And Naming Conventions

1. General

Guidelines and standards exist for the naming and defining of data elements which are to be a shared resource throughout the Corps of Engineers. These standards are consistent with AR 25-9. This section reviews those guidelines and standards, as well as provides examples of acceptable data element definitions and names.

2. Identification, Definition, and Naming of Data Elements

Once the entities associated with the business process are identified, defined, and named, their associated data elements, both key and descriptive, are identified, defined, and named as follows:

- a. Identify the entity which the data element describes. This requires a familiarity with the business process of which the data element is a part.
- b. Identify whether the data element already exists in the Corps Data Encyclopedia.
- c. If it does not exist, develop a definition.
- d. Use the definition to:
 - (1) identify a class word

(2) derive a data element name by prefixing the class word with the entity name.

(3) ask: Do the entity name and class word fully identify the data element? If not, add one or more modifiers to the class word.

e. Test the validity of the data element:

(1) Does it describe the entity?

(2) Does it have a single value for each instance of the entity?
Is the value of this data element dependent on the whole key of the entity?

(3) Is the value of this data element dependent only on the key of the entity and no other descriptive data element?

Step 1. Be familiar with the business process of which the data element is a part.

a. User proponents work in identifying and defining data elements, class words, entities, and modifiers because of their familiarity with the business process.

b. A data element describes a characteristic of an entity. These characteristics are the data which are stored in the database to describe each instance of the data entity. Therefore, identifying the entity is necessary to identify the data elements.

Step 2. Identify whether the data element exists.

a. If the entity exists in the Encyclopedia, the data element may already exist in the

EP 25-1-6

11 Feb 91

Encyclopedia. If a data element exists, it must be used.

b. If the requested data element does not exist, a new data element may be created for that entity.

Step 3. If it does not exist, develop a definition.

a. A data element definition must be unique and possess one acceptable meaning throughout the Corps of Engineers, across all functional areas.

b. A data element definition defines the data element within the context of the Corps' business. Avoid definitions that fit the entire English speaking world.

c. The data element definition must be a simple, precise, clear, English statement.

d. The definition must state "what the data element is", not "how it is used."

e. Where appropriate, the definition will define "what the data element is not."

f. The definition should be constructed using full, descriptive sentences. Definitions which are grammatically correct enhance readability.

g. The definition must include the entity which the data element is describing.

h. Abbreviations and acronyms must be avoided.

i. Reference the Data Manager's User Group (DMUG) paper, "Guidelines For Data Element Definitions," available through CEIM-PD.

Step 4. Use the definition to derive a data element name.

a. A data element name is derived from the definition of the data element

b. The name must be meaningful.

c. Every data element name should consist of:

(1) The entity name of the entity being defined. The term "prime word" has been used previously and refers to the entity also. An entity name may be a word or word phrase, e.g., WORK-ITEM.

(2) A class word that identifies the use or general purpose of a data element. The class word designates the type of information being maintained about an entity, such as "amount" "name" "code," etc. A class word may actually be a word phrase, e.g., "electrical-charge." For simplicity, class word phrases will be referenced singularly as a class word.

(3) Class modifiers further define the class word and entity name in the data element name. The modifiers may be adjectives or nouns. One or more modifiers may be used to fully clarify the class word and entity name which represent the data element being defined.

ENTITY CLASS WORD CLASS
NAME + MODIFIER(S) + WORD

The entity name comes first, followed by the class word modifier(s), and finally the class word.

Step 5. Identifying a Class Word.

a. The class word used in the data definition must appear on the most current USACE Class Word List before it can be included in standard usage. Proposed additions to the Class Word List may be submitted to CEIM-PD.

b. The class word identifies the use or general purpose of a data element

c. The class word designates the type of information being maintained about an entity.

d. Test for class word: To identify a class word, the following question should be asked:

What type of information is being maintained about the entity?

For example:

CONTRACT-IDENTIFIER.

The entity being described is a CONTRACT and the word "identifier" describes the type of information being maintained about the entity CONTRACT. In this example, the class word is "identifier."

e. These are common errors made when naming data elements: The data element name does not adhere to standards because one or all of its components (entity, class word, modifiers) are invalid for the following reasons:

(1) The entity does not match the entity included in the definition.

(2) The class word does not match the class word included in the definition.

(3) Abbreviations or acronyms are used.

(4) The component is plural.

(5) The component contains special characters.

(6) Multiple entities are included in the name.

(7) Multiple class words are included in the name.

(8) The modifier is not necessary.

(9) Data element name components appear in the incorrect sequence.

(10) The data element name contains variable values.

(11) It is unclear which characteristic of the entity is being described and it requires additional modifiers to eliminate ambiguity of meaning.

Examples: Using the list of entity names, class words and modifiers below; derive valid data element names from the following data element definitions as follows:

Entities (E)	Class Words (C)	Modifiers (M)
EQUIPMENT	DATE	ESTIMATED
WORK ITEM	NAME	END
EMPLOYEE	GRADE	SERIAL
DEFECTIVE PRODUCT	NUMBER	RETURNED
AUTHORIZED CONSTRUCTION PROJECT		START LAST
SALARIED EMPLOYEE		MODEL

- Definition 1: An employee possesses this grade.
 EMPLOYEE-GRADE
- Definition 2: The piece of equipment is identified by a unique model number.
 EQUIPMENT-MODEL-NUMBER
- Definition 3: A defective product was returned to its manufacturer on a specific date.
 DEFECTIVE-PRODUCT-RETURNED-DATE
- Definition 4: An authorized construction project is scheduled to start construction on this date.
 AUTHORIZED-CONSTRUCTION-PROJECTED-SCHEDULED-START-DATE
- Definition 5: This is a salaried employee's last name.
 SALARIED-EMPLOYEE-LAST-NAME
- Definition 6: The work-item is estimated to end on this date.
 WORK-ITEM-ESTIMATED-END-DATE
- Definition 7: A piece of in-house equipment is identified by its serial number.
 EQUIPMENT-SERIAL-NUMBER

Figure F-1: Data Element Defining and Naming Examples and Case Study

The following set of Class word definitions has been adjusted to conform to AR 25-9, Army Data Management Program, with additions that are particularly Corps specific.

Abbreviation - A shortened form of a written word or phrase, used in place of a whole. Mnemonics are considered abbreviations.

Acceleration - The rate of change of velocity.

Address - The place to which written communication can be sent to a person or organization.

Age - The length of time a person or thing has lived or existed.

Altitude - The vertical distance above the earth's surface or above sea level.

Amount - The monetary value arrived at by counting, aggregation, or computation.

Angle - The measurement of the space formed by two lines diverging from a common point

Area - The number of unit squares equal in measure to the surface.

Average - The arithmetic mean of a group of numeric values.

Category - A division or subset in a system of classification in which all items share the same concept or taxonomy.

Code - A group of alphabetic letters and/or numbers that represents a specific name. Acronyms are considered codes.

Comment - A note explaining, illustrating, or criticizing an action, event, person, or thing.

Coordinate - Any of set of variables used in specifying the location of a point on a line, on a surface, or in space.

Cost - The amount paid or required in payment for a purchase.

Count - To add up one by one, by units, or groups so as to get a total number of quantity.

Date - The designation of a 24-hour period, commonly expressed as a year, a month, and a day.

Date-Time-Group - A character string specifying the date and time of day.

Day - A twenty-four hour period of a month as defined by the Gregorian calendar.

Definition - A statement expressing the essential nature of something.

Denomination - The value or size of a series of values or sizes as in money.

Density - The amount of particular items of interest per unit of measure.

Depth - The linear measurement downward, backward, or inward

Figure F-2: Class Word List and Definitions

EP 25-1-6

11 Feb 91

Description - A statement or account that serves to represent the characteristics or qualities of a person, place, thing, or event.

Diffusivity - The ability to spread out, disperse, or diffuse.

Direction - The point toward which something faces or the line upon which something moves or lies, i.e., north, south, east, west.

Distance - The extent of advance away or along from a point considered -primary or original.

Duration - The time that a thing exists or lasts; refers to a count of elapsed time.

Electrical Charge - The departure from electrical neutrality at a point by the accumulation or deficit of electrical particles, i.e., more electrons than normal produces a negative charge; fewer, a positive charge.

Electrical Current - The flow or rate of flow of an electrical charge in a conductor, usually expressed in amperes.

Electrical Resistance - The property of a conductor which opposes the flow or measurement of the flow of an electrical current, resulting in the generation of heat in the conducting material, usually expressed in ohms.

Elevation - The vertical height above the Earth's surface.

Energy - The potential forces, inherent power, or capacity for vigorous action, doing work, and overcoming resistance.

Factor - Any circumstances or conditions that bring about a result.

Flow - Any circumstances or conditions that bring about a result.

Force - The energy required to put an object at rest into motion or alter the motion of a moving object.

Frequency - The number of times any occurrence or action is repeated in a given period, usually in cycles.

Grade - The classification of personnel in a government organization.

Height - The distance from the base to the top of something standing upright.

Hour - One of twenty-four intervals of elapsed time into which every day is divided.

Humidity - The amount of water vapor in the air.

Identifier - A sequence of characters that identifies an object.

Indicator - A numeric value which represents a qualitative data value.

Latitude - An object's angular distance north or south from the Equator measured through 90 degrees.

Figure F-2: Class Word List and Definitions (cont'd)

Length - The longer or longest dimension of an object orthogonal to its width.

Limit - A maximum or minimum amount or quantity.

Location - A position or site on the Earth's surface represented in a specific coordinate system.

Longitude - The arc or portion of the Equator intersected between the meridian of a given object and the prime meridian at Greenwich, England.

Mass - The physical volume or bulk of a body.

Median - The middle value in a distribution above and below which lie an equal number of values.

Minute - One of sixty intervals of elapsed time into which every hour of time is divided.

Month - One of twelve parts into which a year is divided as defined by the Gregorian calendar.

Name - A designation for an object expressed in a word or words.

Number - A character string of numeric values used to designate an object. A number in this context cannot be used for mathematical calculations.

Percent - One hundredth part of a whole.

Period - The measured or measurable time during which an action, process, or condition exists or continues (usually has a name assigned to it, and implies two points in time which usually have been scheduled but have not necessarily occurred).

Power - The intensity of strength, vigor, or force of an object.

Pressure - A measure of applied force per unit area.

Quantity - Nonmonetary numeric value arrived at by counting, aggregation, or computation.

Radioactivity - The giving off, or capability of giving off, radiant energy in the form of particles or rays., i.e., alpha, beta, and gamma rays.

Radius - The length of a line segment extending from the center of a circle or sphere to the circumference or bounding surface.

Range - The extent covered by something.

Rank - The classification of personnel in a military organization.

Rate - A measured estimate of value, worth, strength, or capacity of a thing. **Ratio** - The calculated relation in degree or number between two similar things.

Score - The mark of a point with lines or notches to keep a record or an account.

Figure F-2: Class Word List and Definitions (cont'd)

EP 25-1-6

11 Feb 91

Second - One of sixty intervals of elapsed time into which every minute of completed time is divided.

Size - Physical dimensions or magnitude of an object.

Speed - A measurement of the change in distance with respect to time.

Temperature - A measure of the degree of heat or cold.

Tension - A measure of tautness caused by pulling or stretching.

Text - An unformatted character string.

Time - A specific point in the day.

Torque - A measure of a turning or twisting force.

Total - The sum of amounts, costs, or quantities.

Type - A group or category of persons or things whose distinguishing characteristics held in common clearly set it apart from related groups or categories.

Velocity - The rate of motion.

Viscosity - The degree to which a substance resists flowing.

Volume - The amount of space occupied by a three-dimensional figure as measured in cubic units.

Weight - The force with which a body of object is attracted toward the Earth by gravitation.

Width - The measurement of an object taken at right angles to the length.

Year - The designation of a period of time consisting of approximately 365 days.

Zone - Any area or region considered as separate or distinct from others by its characteristics or geography, agriculture, time, etc.

Appendix G

Glossary Of Terms

The GLOSSARY OF TERMS will include general terms, acronyms, and abbreviations contained in the DATA MANAGEMENT: COMMAND DATA MODEL AND DICTIONARY.

AMPRS

Automated Management and Progress Reporting System

Class Word

The class word designates the type of information being maintained about an entity.

CDD

Command Data Dictionary

CDE

Command Data Element

CDM

Command Data Model

COEMIS

Corps of Engineers Management Information System

Command Data Dictionary

The Command Data Dictionary is a report generated from the Data Encyclopedia with a special kind of database which acts as a repository of information about data we use to manage programs and projects.

Command Data Model

A fully attributed conceptual data model that is the overall logical structure of the Corps of Engineers data, independent of any software or storage constraints. It may often contain data structures not yet implemented in Internal Data Models.

Conceptual Data Model

A Conceptual Data Model (the Command Data Model in the Corps) is a normalized basic structure of the business rules, entities, and data elements that describe the things the Corps needs to operate.

CONUS

Continental United States

CORPS

U.S. Army Corps of Engineers

DA

Data Administrator

DACC

Data Architecture Control Committee

Data

Data is defined as meaningful facts about persons, places, things, concepts, events, and activities in a defined format and structure from which information may be derived.

DBA

Data Base Administrator

DBMS

Data Base Management System

EP 25-1-6

11 Feb 91

Data Encyclopedia

The USACE Data Encyclopedia is an information sharing tool, a repository of metadata (information about data), and an automated tool for cross referencing activity and data models used in the information resource methodology adopted by the Corps.

Data Objects

Entities, Data Elements, Relationships, and Data Models. When data objects and their characteristics are structured, combined, and analyzed, they provide an understanding of the Business Process.

Derived Data

Derived data is information prepared by algorithms, conditional extractions, or formulas.

Domain

A Domain is the set of values that a data element may assume, usually defined by the data elements length and format, or by a specific list of values.

Common Domains support data elements that have common attributes and common values.

Standard Domains are those domains with a limited set of values like STATE-CODE.

EP

Engineer Pamphlet

FOA

Field Operating Activities of the Corps of Engineers

Fundamental Data

Fundamental data is the lowest level, basic piece of information or fact. The data model and dictionary deal with basic or fundamental data.

HQUSACE

Headquarters, U.S. Army Corps of Engineers

ICAM

Integrated Computer Aided Manufacturing

ICOM

The acronym for the roles for data or material on an activity model:

INPUT: Data or material used to produce an output of an activity.

CONTROL: Data that constrain or regulate the activity. Controls regulate the transformation of inputs into outputs.

OUTPUT: Data or materials produced by or resulting from the activity. It must include the input data in some form.

MECHANISM: Usually people, machines, or existing systems that provide energy to, or perform, the activity.

IDEF

ICAM Definition Language

IDEF Modeling Technique

The DEF Modeling Technique has been adopted by the Corps of Engineers to be used during system development. The IDEF Modeling Technique is used in the development of activity and data models which graphically and descriptively depict

the Corps' Business Processes and the data to support them.

model which reduces update anomalies and redundant data

IM

Information Management

OCE

Office of the Chief of Engineers

IMP

Information Management Plan

OCONUS

Outside Continental United States

Information

A representation of facts, concepts, and assumptions that are derived from data for use in performing the various Corps' missions.

OMA

Operations and Maintenance Army

OSD

Office of the Secretary of the Army

IPR

In-Process Review

Physical Model

A data model adapted to meet the constraints of a specific DBMS. It is usually a modification of a conceptual model, and may be tuned for performance or security purposes.

IS

Information System

POM

Program Objective Management

ISMP

Information System Modernization Plan

Project

The Project proposing the specified entity.

LDE

Legacy Data Element

Proponent

The Corps of Engineers organization that is responsible for the definition of the entity and/or data element

Legacy System

The legacy system is a previous operating system that may or may not adhere to the modeling techniques and methodology of the current ISMP program.

MSC

Major Subordinate Commands

PRIP

Plant Replacement and Improvement Program

Normalization

The process of model analysis that determines the correct packaging of Entities and Data Elements to assure a stable data

PDC

Prototype Development Concept

RDT&E

Research Development Test and Evaluation

STAMIS

Standard Army Management Information
System

Status of an Entity

The level of approval that the entity has
received: Candidate, Registered, or Approved

a. A *Candidate* entity is one proposed by a person or project and is not yet shared in other projects' models.

b. A *Registered* entity has been reviewed by the DACC as an entity that could be shared throughout all Corps data models.

c. An *Approved* entity is an entity that has been integrated into the Command Data Model, and that may currently be standard in either the Department of the Army or throughout the Department of Defense (DoD).

USACE

U.S. Army Corps of Engineers
