PREFACE

SCOPE

This manual provides a ready-reference planning guide for loads rigged for airdrop. It illustrates the rigged load and contains dimensional data, weight, and center of balance (CB) for each load. Information is also provided on aircraft, extraction parachutes and reference tables of miscellaneous information on materials used to fabricate and maintain air items and to rig airdrop equipment.

USER INFORMATION

The proponent of this publication is HQ TRADOC. You are encouraged to report any errors or omissions and to suggest ways of making this a better manual.

Army personnel, send your comments on DA Form 2028 directly to:

Director
Aerial Delivery and Field Services Department
USA Quartermaster Center and School

Chapter 1 Introduction

GENERAL

1-1. The information in this manual may be used to compute aircraft requirements and to assist the rigger and loadmaster during joint inspection of airdrop loads. The publication containing the procedure for preparing and rigging each load is indicated with the data for the load.

SPECIAL CONSIDERATIONS

1-2. The special considerations applicable to the specific loads are given in the appropriate field manual/technical order.

Chapter 2 Reference Tables

GENERAL

2-1. This chapter contains reference tables of miscellaneous information on materials used to fabricate and maintain air items and to rig airdrop equipment. If detailed information, other than that listed in these tables, is required on specific materials, the DOD Index of Specifications and Standards should be consulted.

TEXTILE TERMINOLOGY

2-2. The textile products listed in this chapter are defined as follows:

a. CORD. Cord is a fibrous, braided, cordage item of any diameter.

b. TAPE. Tape is a narrow fabric, woven or knitted, produced in widths up to and including 8 inches and in weights up to but not including 0.42 ounces per linear yard of 1-inch width.

c. THREAD. Thread is a thin, twisted, smooth strand or filament of vegetable, animal, mineral, or synthetic material, spun out to considerable length, used mainly for hand sewing and machine sewing. The use of thread is determined by a letter or numerical designation which is synonymous.

d. WEBBING. Webbing is a narrow fabric, woven or knitted, produced in widths up to and including 12 inches and in weights of 0.42 ounces or over per linear yard of 1-inch width.

Chapter 3 Rigged Load Reference Data

SECTION I- INTRODUCTION

GENERAL

3-1. This chapter contains illustrations and reference data on completely rigged airdrop platforms.

TYPE V PLATFORM LOW-VELOCITY AIRDROP

3-2. Loads rigged on type V platform for low-velocity airdrop are contained in section II.

COMBAT-EXPENDABLE PLATFORM LOW-VELOCITY AIRDROP

3-3. Loads rigged on combat-expendable platform for low-velocity airdrop are contained in section III.

MARITIME AERIAL DELIVERY SYSTEMS PLATFORM LOW-VELOCITY AIRDROP

3-4. Loads rigged on maritime aerial delivery systems platform for low-velocity airdrop are contained in section IV.

Chapter 4 Aircraft Capabilities

GENERAL

4-1. This chapter contains information on Air Force aircraft airdrop capabilities.

C-130 HERCULES

4-2. The C-130 has the capability to airdrop a maximum of 42,000 pounds using multiple airdrop platforms. The maximum weight of a single airdrop platform weight is limited to 42,000 pounds for E/H model airplanes AF 61-2358 and AF 62-1748 and up. The single maximum platform weight limit for MC-130 E/H airplanes is 35,000 pounds and 25,000 pounds for all other C-130 airplanes prior to AF 62-1784. The C-130 can airdrop loads up to 100 inches high unless otherwise certified in the specific rigging manual. The aircraft has a maximum total space available of 40 feet. The platforms will vary from 8 to 32 feet in length. For planning purposes allow a minimum of 18 inches between platforms to allow space for the Extraction Force Transfer Coupling (EFTC), three point link, and attaching the preceding extraction line. With the Extraction Parachute Jettison Device (EPJD) attached, a 30 inch space will have to be maintained for the EFTC, three point link and the EPJD with extraction line attached. The specific loading manual must be consulted when approaching maximum limits for platform space availability and weights.

C-141 STARLIFTER

4-3. The C-141 has the capability to airdrop a combined total of 70,000 pounds using multiple airdrop platforms. The aircraft has a total space available of 93 feet. The platforms will vary from 8 to 32 feet in length. For planning purposes you must allow a minimum of 18 inches between platforms to allow space for the EFTC three point link and attaching the preceding extraction line. With the EPJD attached, a 30 inch space must be maintained for the EFTC, three point link and the EPJD with extraction line attached. The maximum single platform weight is limited to 38,500 pounds unless waived for contingency by the MAJCOM (HQ). The C-130 can airdrop loads up to 100 inches high unless otherwise certified in the specific rigging manual. The maximum weight with the waiver is 42,000 pounds. The specific loading manual must be consulted when approaching maximum limits for platform space availability and weights.

C-17 GLOBEMASTER

4-4. The C-17 has the capability to airdrop a combined total of 110,000 pounds using multiple airdrop platforms. The C17 has 64 feet of space available for airdrop use. Two 32 foot platforms may be airdropped if specific guidance is followed. The platforms will vary from 8 to 32 feet in length. For planning purposes allow a minimum of 18 inches between platforms to allow space for the EFTC, three point link and attaching the preceding extraction line. With the EPJD attached, a 30 inch space must be maintained for the EFTC, three point link and the EPJD with extraction line attached. The C-17 can airdrop loads up to 118 inches high measured from the bottom of the platform. The maximum single platform weight is limited to 60,000 pounds. The specific loading manual must be consulted when approaching maximum limits for platform space availability.

C-5 GALAXY

4-5. The C-5 has the capability to airdrop a combined total of 200,000 pounds using multiple airdrop platforms. The aircraft has 121 feet of space available for airdrop use, however there are restrictions. The length of the extraction line generally restricts placement of platforms and the EFTC actuator arm must not be positioned forward of fuselage station 574 (57 inches aft of the forward ramp hinge). The platforms will vary from 8 to 32 feet in length. For planning purposes you must allow a minimum of 18 inches between platforms for the EFTC, three-point link and attaching the preceding extraction line. If the EPJD is used, a minimum of 30 inches between platforms is required. The C-17 can airdrop loads up to 105 inches high measured from the bottom of the platform. The maximum single platform weight is limited to 60,000 pounds. Consult the specific loading manual when approaching maximum limits for platform weights and space availability.
