Chapter 1

Fundamental Principles of Sling Load

INTRODUCTION

1-1. This chapter contains general information about certification for helicopter sling load and explains the role of the Military Traffic Management Command Transportation Engineering Agency (MTMCTEA) and the Department of Defense (DOD) sling load certification authority. This authority rests with the US Army Natick Soldier Center (NSC). This chapter also explains the information contained in the equipment rigging procedures and gives some general rigging instructions.

CLASSIFICATION DEFINITIONS OF SLING LOAD

1-2. All sling loads are classified under one of the following definitions:

a. CERTIFIED SLING LOADS. Certified sling loads are those items of equipment and their associated rigging procedures which have completed the evaluation and testing required by Natick Soldier Center (NSC) for sling load certification. These rigging procedures are in Chapters 2 through 14. Only certified sling loads are authorized for the Marine Corps. The US Army NSC has indicated that any single point sling load certified under a specific aircraft is also certified for any aircraft with suitable lift capability. The following restrictions apply for sling load certification to remain in effect:

(1) The load must be within the lifting capability of the desired helicopter model and not exceed the rated capacity of the sling set being used.

(2) The load shall be rigged in accordance with the certified rigging procedure. Failure to rig the load exactly as directed by the certified rigging procedure creates a unique load.

(3) The maximum tested stable airspeed (straight and level flight determined during one flight test) specified for the load in the applicability section of the rigging procedure or in appendix C of this manual is a recommendation and not a restriction, unless so stated.

(4) Changes or modifications to load characteristics (weight, model, NSN, accompanying load, structure of items etc.) creates a unique load.

(5) This certification is limited to single-point loads only.

Note: When carrying loads at weights close to the aircraft hook limitations, close coordination with the aviation unit is required.

DRAFT

CAUTION

Loads weighing less than 6,000 pounds may not fly in a stable condition and may incur jettisoning problems when flown under a CH-53E helicopter. CH-53E units may have restrictions on flying light loads. Direct coordination with CH-53E units is encouraged.

b. SUITABLE SLING LOADS. Suitable sling loads are those items of equipment and their associated rigging procedures that have not been certified but have demonstrated acceptable static lift and flight characteristics during a flight test. In most cases these loads were not pull tested in accordance with MIL-STD-913, but are known loads which have been flown without incident for years and which NSC considers to be proven safe. These rigging procedures are in Chapters 15 through 23.

c. UNIQUE SLING LOADS. Unique loads are equipment carried on a one time or low-frequency basis, such as telephone poles, artillery targets, or barrier material. The lack of sling load certification in itself does not preclude a commander from carrying a unique load. Due to the lack of rigging procedures, unique loads should be considered high risk loads. Each service is responsible for determining its policy on carrying unique loads. (USA) **The movement of unique loads should be approved by the high risk approving authority.**

d. PROHIBITED SLING LOADS. Prohibited sling loads are items of equipment that are prohibited from sling loading as determined by each service. These loads have been denied sling load certification and are a safety hazard if carried. They have either structural deficiencies or have exhibited unstable flight characteristics during flight testing. Each service will identify these loads and transmit this information by separate list. Contact your service point of contact identified in the Preface if you have any questions regarding the classification of a particular load.

CERTIFICATION OF EQUIPMENT FOR HELICOPTER SLING LOAD

a. OBJECTIVE. The objective of helicopter sling load certification is to assure the user that the equipment being transported can withstand the stresses of a sling load flight environment. Certification for sling load assures the user that the item has met minimum standards for structural integrity and that the associated rigging procedures have been developed specifically for that item.

b. RESPONSIBILITIES. Within the US Army, the MTMCTEA is responsible for transportability approval of developmental equipment. Within the DOD, NSC is the lead activity responsible for providing sling load certification and rigging procedures for military equipment. When an item is certified for sling load, it means that NSC, in cooperation with various test activities, has:

(1) Conducted an engineering analysis of the load and lifting provisions for structural adequacy during sling loading.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) Verified that the lift provisions meet the strength requirements of the applicable military standard by means of proof load testing.

(3) Developed and/or validated sling load rigging procedures through static lift testing.

(4) Evaluated flight reports and determined that the particular load meets acceptable flight characteristics with the type helicopter flown during the flight test.

(5) Issued a statement of sling load certification for the particular load, including load configuration(s), weight(s), types of helicopter(s), and maximum tested stable airspeed (straight and level flight as attained during the one flight evaluation). Certification is valid only for the conditions specified in the rigging procedures.

REQUESTS FOR SLING LOAD CERTIFICATION

1-4. Each service headquarters must designate, request, and prioritize the fielded equipment to be evaluated by NSC for sling load certification. Individual units can request sling load certification for fielded equipment through the appropriate service agency which will add the item to the prioritized list. The NSC will evaluate the equipment on a priority basis. The following agencies are responsible for their branch of service:

a. US Army - Commander, Combined Arms Support Command, ATTN: QM Combat Developments, Suite 250, 3901 A Avenue, Fort Lee, VA 23801-1809.

b. US Marine Corps - Commanding General, Marine Corps System Command (PSE) Quantico, VA 22134-5021.

c. US Navy - Naval Air Systems Command (NAVAIR).

d. US Air Force - US Air Force Systems Command.

UNIQUE ITEMS OF EQUIPMENT OR OPERATIONAL REQUIREMENTS

1-5. Helicopter sling loading of unique items, due to operational requirements, will be at the discretion of the commander. Equipment not listed in this manual should be static lifted (when possible) by a crane to determine proper rigging and stability characteristics. Personnel thoroughly familiar with sling load rigging procedures should assist in the static lift testing. Flight evaluating may be conducted after a satisfactory static rigging configuration has been determined.

Note: Low density equipment with low weight and large surface area (flat surfaces), such as shelters, empty trailers, pallet loads, boat shaped items, and empty fuel or water drums, are likely to become extremely unstable when flown during sling load operations, even at low airspeeds, and should be flown with extreme caution.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

EQUIPMENT RIGGING PROCEDURES

1-6. This section explains the information that is contained in the rigging procedures for each load. Chapters 2 through 14 contain the rigging procedures for certified single-point loads and chapters 15 through 23 contain the rigging procedures for suitable single-point loads.

a. APPLICABILITY PARAGRAPH. The applicability paragraph states whether a load is “certified” or “suitable” for sling load and the types of helicopters. The maximum tested stable airspeed is listed in appendix C. For certified loads, this airspeed is the maximum airspeed attained by the helicopter during the evaluation flight before the load became unstable or before the aircraft power requirements were exceeded. For suitable loads, the maximum recommended airspeed is based on previous experience with this helicopter/load combination. **For either certified or suitable loads, the airspeed listed is a recommendation and not a restriction, unless so stated. The aircrew should closely monitor the load during the flight, especially if the helicopter exceeds the recommended airspeed.**

b. LOAD DESCRIPTION. The load description paragraph identifies the load, model, national stock number (NSN) or other identification, and the weight of the load for certification.

(1) The actual weight of the equipment may vary somewhat from the actual rigged weight during the flight evaluation due to equipment modifications, fuel, equipment added to the load, or different models of the same item. The load weight on the equipment data plate or in the operator’s manual takes precedence over the load weight in this manual. Weigh the load if there is any doubt about its actual weight. If the load weight exceeds the weight listed in the load description paragraph, the load becomes a unique load. Contact your service point of contact if you have any questions about the load description or weight.

(2) Equipment such as cargo trailers and cargo trucks contain descriptions of the allowable additional cargo weight. Do not exceed the fully loaded weight. Some trailers become extremely unstable at low weights; therefore, a minimum weight is identified. If your trailer is below that weight, add more cargo or dummy weight as close to the center of the trailer as possible until you reach the minimum weight.

c. PREPARATION. The preparation steps are intended to reduce the possibility of damage to the equipment caused by sling leg entanglement during the hookup and lift-off operation or by wind resistance encountered during the flight. Since these preparation steps are not directive in nature, the commander assumes responsibility for any damage to the equipment caused by deviation from the preparation steps.

d. RIGGING. The rigging steps give information as to the position of the apex fitting on the load, routing orientation of the sling legs, location of the lift provisions, chain link number for each sling leg, and steps required to prevent the sling legs from becoming entangled on the load. Do not change the chain

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

link number in the rigging procedures under any circumstances as it may change sling leg loading and cause lift provision failure.

(1) The purpose of the illustration accompanying the rigging procedures is to depict what a properly rigged load looks like with the slack removed from the sling legs. The arrow identifies the direction of flight.

(2) Appendix A contains NSN component listings for slings, sling sets, cargo nets, and other miscellaneous equipment and materials.

e. **HOOKUP.** Certain sling loads, such as HMMWVs with shelters, present substantial risk of damage to the load or injury to the hookup personnel. This risk is increased during dual point hookup or night operations.

(1) To reduce the risk of damage to the load or injury to the hookup personnel an extended sling system or reach pendant as defined in FM 4-20.197 may be used.

(2) Using a reach pendant increases the distance between the load and the helicopter. Reach pendants should not be used on loads that have a tendency to spin during flight. A static discharge person is not required when using a reach pendant.

(3) If the tactical environment permits, the use of an extended sling set may reduce the risk. Polyester round slings are recommended for use as vertical pendants.

1-7. GENERAL RIGGING INSTRUCTIONS

CAUTION

Inspect lifting provisions and supporting structure for damage or degradation prior to sling loading. Do not transport loads with damaged or degraded lift provisions.

a. **PREPARING THE LOAD.** Prepare the load to be transported by following the preparation and rigging instructions for each item. Typical preparation instructions will provide information to secure loose items, remove or secure canvas covers, and remove obstructions, such as antennas. Place protective padding on windshields and other components that could be damaged by the metal parts of the sling set during hookup or release. The load should be secure enough to withstand winds in excess of 120 knots caused by the forward airspeed of the aircraft. If possible, position the load in the takeoff direction so the pilot does not have to pick the load up and then turn the aircraft into the takeoff direction.

b. **PREPARING THE EQUIPMENT.** Inspect and assemble the slings and miscellaneous equipment required to prepare and rig the load. Following the instructions in Chapter 6 of FM 4-20.197/MCRP 4-11.3E, VOL I/NWP 3-04.11/AFMAN 11-223(I), VOL I/COMDTINST M13482.2B, add or remove sling legs, chains, or apex fittings as required. Never exceed the capacity of the sling legs or apex fitting/web ring. If you have a sling set with a higher capacity than

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

the sling set prescribed, use the chain link conversion chart in Appendix B to determine the corresponding chain link for your sling set.

c. POSITIONING AND ATTACHING THE SLING SET. Position the sling set near the load. The sling legs for a typical load with four lifting points are routed as shown in Figure 1-1.

(1) Rigging a typical load with four lifting points is begun by connecting:

- (a) Sling leg 1 to the left front lifting provision.
- (b) Sling leg 2 to the right front lifting provision.
- (c) Sling leg 3 to the left rear lifting provision.
- (d) Sling leg 4 to the right rear lifting provision.

(2) If a six-leg sling set is required, the innermost sling legs, 5 and 6, are connected to the left and right middle lift provisions.

Note: Odd numbered sling legs go to the same side of the load.

(3) Following the equipment rigging procedures, loop the free end of the chain end through the lift provision and insert the specified chain link in the grabhook/grab link. Tie or tape the excess chain end to prevent the unrestrained chain from damaging the load. If necessary, wrap padding around the chain or rope assembly to prevent damage to the load or sling set. If the procedures prescribe a spreader bar, install and pad it according to the rigging instructions.

(4) Breakaway safety ties are used to temporarily restrain the sling legs to keep them from becoming entangled on the load as the helicopter lifts the load. These safety ties are made of Type I, 1/4-inch cotton webbing or duct tape.

d. VIEWING THE LOAD. Left, right, front, and rear directions are designated from the driver's perspective for vehicles and towed equipment. Howitzer gun tubes are considered the front of the load. The front or rear is identified on other items of equipment. The sling leg numbering system prevents sling legs from crossing each other and causing damage to the sling legs or causing the load to twist in flight. To improve flight stability, some loads are transported backwards. Do not confuse the front of the load as it is carried with the end designated as the front for rigging purposes. The arrow shown in the illustration identifies the direction of flight.

Chapter 2

Certified Single-Point Rigging Procedures For Wheeled Vehicles

INTRODUCTION

2-1. This chapter contains rigging procedures for single-point wheeled vehicle loads that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for wheeled vehicles are in this section. Paragraphs 2-2 through 2-39 give detailed instructions for rigging loads.

- Notes:**
1. Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.
 2. Canvas tops and doors should be removed and stowed inside the vehicle if time allows. These items may be damaged if the airspeed exceeds 100 knots.

M996/M997/M997A2 TRUCK, AMBULANCE, (HMMWV)

2-2. The M996, M997, M997A2 ambulance is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 2-1 are certified for all helicopters with suitable lift capacity by Natick Soldier Center:

Table 2-1. Truck, Ambulance, (HMMWV)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------|---------------------|-----------|-----------------------|
| Truck, Ambulance, M996, HMMWV | 7,400 | 10K | 80/30 |
| Truck, Ambulance, M997, HMMWV | 7,400 | 10K | 80/30 |
| Truck, Ambulance, M997A2, HMMWV | 10,300 | 25K | 65/24 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- OR
- (2) Sling set (25,000-pound capacity).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Spreader bar assembly (component of vehicle).

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold the mirrors forward in front of the windshield and tie together with Type III nylon cord. Tape the windshield in an X formation from corner to corner.

(b) Remove the spreader bar from under the righthand seat inside the ambulance.

(c) Secure all equipment inside the rear compartment with tape, nylon cord, and/or lashings. Close and secure the door.

(d) Secure all other equipment inside the vehicle with tape, nylon cord, and/or lashings. Close and secure the doors.

(e) Make sure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(f) Engage the vehicle parking brake. Place the transmission in neutral.

(g) Make sure that the front wheels are pointed straight ahead. Tie down the steering wheel using the securing device attached under the dashboard.

(h) Secure the Red Cross insignia covers in the closed position.

(i) Remove the keeper from the spreader bar and extend the bar so the holes line up. Reinstall pin and engage keeper. Use the sighting hole in the tube to assist in aligning holes for the pin. See top view insert in Figure 2-1.

(j) Position the spreader bar across the rear end of the vehicle roof. Attach the spreader bar check cables to the eyebolts located on the aft exterior sidewall of the rear compartment. See rear view insert in Figure 2-1.

(k) Install lift provisions on the outer ends of the rear bumper by removing the tie-down provisions located inboard of the bumper ends and installing them on the outer ends of the rear bumper, if necessary.

(2) **Rigging.** Rig the load according to the steps in Figure 2-1.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on the roof of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 2-1. M996/M997/M997A2 Ambulance (HMMWV)

DRAFT

| Armament Carrier, HMMWV, M1025A2, Line of Sight Anti-Tank (LOSAT), Resupply Vehicle with Reloader Crane | 8,240 | 10K | 40/3 |

Notes: 1. Recommended airspeed for CH-53E when using the 15,000-pound multileg sling set is 80 knots. Recommended airspeed for the CH-53E when using the 40,000-pound capacity sling set is 95 knots.

2. For vehicle weights up to 7,300 pounds, the recommended maximum airspeed for the UH-60 is 100 knots. For loads weighing above 7,300 pounds the recommended maximum airspeed is 70 knots. Coordinate closely with the aviation unit as to the vehicle weight including all gear carried on the vehicle.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity or 25,000-pound capacity).
- OR
- (2) Multileg sling set (15,000-pound capacity or 40,000-pound capacity).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Tape the windshield in an X

DRAFT

| Integrated System Control (ISYSCON), Support Carrier/Radio, Truck, 1 1/4-ton, Heavy HMMWV, M1097. | 10,300 | 25K | 60/10 |

WARNING

This cargo vehicle (M1037 modified, 9,400-lb GVW) should not be confused with the shelter carrier (M1037, 8,600-lb GVW). The M1037 modified has improved lift provisions which allows it to be lifted at higher gross vehicle weights.

Notes: 1. Recommended airspeed for CH-53E when using the 15,000 pound multileg sling set is 100 knots. Recommended airspeed for the CH-53E when using the 40,000-pound capacity sling set is 105 knots.

2. For vehicle weights up to 7,300 pounds, the recommended maximum airspeed for the UH-60 is 100 knots. For loads weighing above 7,300 pounds the recommended maximum airspeed is 70 knots. Coordinate closely with the aviation unit as to the vehicle weight including all gear carried on the vehicle.

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity or 25,000-pound capacity for the UH-60 and CH-47).

OR

(2) Multileg sling set (15,000-pound or capacity or 40,000-pound capacity for the CH-53E only).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. If installed, remove canvas covering over the bed of the truck. Remove the doors. Tape the windshield in an X formation from corner to corner. If time permits, fold canvas top and tie to windshield for added protection.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove antennas and stow inside vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(2) Rigging. Rig the load according to the steps in Figure 2-3.

(3) Hookup. The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M1037/M1042/M1097/M1097A1/M1097A2/M1113 SHELTER CARRIER (HMMWV) WITHOUT SHELTER

2-5. The M1037, M1042, M1097, M1097A1, M1097A2, M1113 shelter carriers without shelter are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 2-4 are certified for all helicopters with suitable lift capacity by Natick Soldier Center:

Table 2-4. M1037/M1042/M1097/M1097A1/M1097A2/M1113 Shelter Carrier without Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------|---------------------|------------|-----------------------|
| Shelter Carriers, M1037/M1042 | 5,220 | 15K 10K | 60/3 |
| Shelter Carriers, M1097/M1097A1 | 10,000 | 10K | 60/3 |
| Shelter Carrier, M1097A2 | 10,300 | 25K | 50/3 |
| Shelter Carrier, M1113 (Empty) | 6,400 | 25K | 40/10 |

b. MATERIALS. The following materials are required to rig this load:

(1) Multileg sling set (15,000-pound capacity or 40,000-pound capacity for CH-53 only).

OR

(2) Sling set (10,000-pound capacity or 25,000-pound capacity for CH-60 and CH-47).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Felt sheet, cattle hair, Type VI, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Tape the windshield in an X formation from corner to corner.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(c) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and place the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel using the securing device attached under the dashboard.

(f) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) **Rigging.** Rig the load according to the steps in Figure 2-4.

(3) **Hookup.** The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 2-4. M1037/M1042/M1097/M1097A1/M1097A2/M1113 Shelter Carriers (HMMWV) Without Shelter

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting in the bed of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-4 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure excess chain with tape or Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the lift provision located on the left end of the bumper from inboard to outboard. Place the correct link from Table 2-4 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure excess chain with tape or Type III nylon cord.</p> |
| <p>4. Wrap rear chains with padding where they contact the shelter carrier.</p> |
| <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglemen</p> |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).
- (3) Coupling link, part number 5779125, from a 10,000-pound sling set (4 each).
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (8) Padding, cellulose.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Connect one additional chain length to each chain of the sling set with the coupling link.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Tape the windshield in an X formation from corner to corner.

(c) Secure the shelter to the truck using wire rope or tie-down assemblies. Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure the door.

(d) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(e) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(f) Engage the vehicle parking brake and put the transmission in neutral.

(g) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(h) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) Rigging. Rig the load according to the steps in Figure 2-5.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-5 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-5 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Raise the apex fitting above the shelter carrier keeping the slings to the side of the shelter.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-5. M1037/1042 Shelter Carrier with S-250/S-250E Shelter

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity or 25,000-pound capacity).
- OR
- (2) Multileg sling set (15,000-pound capacity for the CH-53E only).
 - (a) Additional chain lengths from the sling set being used (4 each).
 - (b) Additional coupling links from the sling set being used (4 each).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (7) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 to 25 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Connect one additional chain length to each chain of the sling set with the coupling link.

(b) Fold mirrors forward in front of the windshield and tie together with Type III nylon cord. Tape the windshield in an X formation from corner to corner.

(c) Secure the shelter to the truck using wire rope or tie-down assemblies. Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure the door.

(d) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(e) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(f) Engage the vehicle parking brake and put the transmission in neutral.

(g) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(h) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(i) When using the multileg sling set, attach an additional chain length to the end of the chain on each sling leg with the coupling link.

(2) Rigging. Rig the load according to the steps in Figure 2-6.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-6 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-6 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Raise the apex fitting above the shelter carrier keeping the slings to the side of the shelter.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

M1037 SHELTER CARRIER (HEAVY HMMWV) WITH DOWNSIZED DIRECT SUPPORT SECTION (DDSS) SHELTER

2-8. The M1037 Shelter Carrier (Heavy HMMWV) With Downsized Direct Support Section (DDSS) Shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-7 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-7. Downsized Direct Support Section Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Downsized Direct Support Section (DDSS) | 8,030 | 10K | 70/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).
- (3) Coupling link, part number 5779125, from a 10,000-pound sling set (4 each).
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (8) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Connect one additional chain length to each chain of the sling set with the coupling link.
 - (b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Secure the shelter to the truck using wire rope or tie-down assemblies.

(d) Remove the ladder from the rear of the shelter. Secure the ladder inside the shelter. Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

(e) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(f) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(g) Engage the vehicle parking brake and put the transmission in neutral.

(h) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(i) Tape the windshield in an X formation from corner to corner.

(j) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) Rigging. Rig the load according to the steps in Figure 2-7.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-7 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-7 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Raise the apex fitting above the shelter carrier keeping the slings to the side of the shelter.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-7. Downsized Direct Support Section Mounted on the M1037

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

M1037 SHELTER CARRIER (HMMWV) WITH S-318 SHELTER

2-9. The M1037 Shelter Carrier with S-318 shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-8 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-8. S-318 Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------|---------------------|-----------|-----------------------|
| S-318 Shelter Mounted on M1037 | 7,440 | 10K | 80/30 |

b. MATERIALS. The following materials are required to rig this load.

- (1) Sling set (10,000-pound capacity).
- (2) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).
- (3) Coupling link, part number 5779125, from a 10,000-pound sling set (4 each).
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (8) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Connect one additional chain length to each chain of the sling set with the coupling link.
 - (b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.
 - (c) Secure the shelter to the truck using wire rope or tie-down assemblies.

| Tactical Remote Sensor System (TRSS) Sensor Mobile Monitoring System (SMMS) | 7,685 | 10K | 40/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 5779125, from a 10,000-pound sling set (4 each).

OR

(2) Multileg sling set (15,000-pound capacity for the CH-53E only).

(a) Additional chain lengths from the sling set being used (8 each).

(b) Additional coupling links from the sling set being used (8 each).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

(7) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-, 25,000- or 40,000-pound capacity sling set with coupling links. Connect two additional chain lengths to each chain on the 15,000-pound multileg sling set chain with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

(d) Secure environmental control unit cover with duct tape.

(e) Disconnect the power cord from the rear panel and secure it to the rear platform with Type III nylon cord. Lower the power panel door and secure the door.

(f) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(g) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(h) Engage the vehicle parking brake and put the transmission in neutral.

(i) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(j) Tape the windshield in an X formation from corner to corner.

(k) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(l) Remove the upper antenna mounting bracket if installed.

(2) Rigging. Rig the load according to the steps in Figure 2-9.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-9 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-9 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Raise the apex fitting above the shelter carrier keeping the slings to the side of the shelter.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-9. LMS Shelter Mounted on M1097/M1097A2

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

DRAFT

M1097A2 SHELTER CARRIER (HMMWV) WITH LIGHTWEIGHT MULTIPURPOSE SHELTER (LMS) USING SHELTER LIFT RINGS AS SLING GUIDES

2-11. The M1097A2 shelter carrier with lightweight multipurpose shelter using the shelter lift rings as sling guides is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-10 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-10. Lightweight Multipurpose Shelter Using Shelter Lift Rings as Sling Guides

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Analysis Control Team-Enclave, AN-TYQ-103 | 10,300 | 25K | 40/5 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity).

(a) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 664241, from a 25,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 25,000-pound capacity sling set with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(e) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(f) Engage the vehicle parking brake and put the transmission in neutral.

(g) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(h) Tape the windshield in an X formation from corner to corner.

(i) Tie the shelters rear lift rings together with Type III nylon cord on top of the shelter. The rings should be positioned so they point towards the front of the vehicle.

(j) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) **Rigging.** Rig the load according to the steps in Figure 2-10.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-10 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the right sling leg chain through the right rear shelter lift ring to the right rear lift provision located on the outer end of the rear bumper. Continue routing the chain back through the right rear shelter lift ring and back to the grab hook. Place the correct link from Table 2-10 in the grab hook. Repeat the procedure using the left sling leg chain, left rear shelter lift ring, and the left lift provision located on the end of the bumper.
4. Raise the apex fitting above the shelter carrier keeping the slings to the side of the shelter and removing all slack from the chains. Tie the rear chains to the rear shelter lift rings with Type III nylon cord.
5. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-10. LMS Shelter Mounted on M1097A2 Using Shelter Lift Rings as Sling Guides

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

DRAFT

M1037/M1042 SHELTER CARRIER (HMMWV) WITH LIGHTWEIGHT MULTIPURPOSE SHELTER (LMS)

2-12. The M1037/M1042 shelter carrier with lightweight multipurpose shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-11 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-11. Lightweight Multipurpose Shelter on M1037/M1042

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| High Frequency Communications Central, AN/TSC-120 | 8,365 | 15K | 50/5 |

b. MATERIALS. The following materials are required to rig this load.

- (1) Multileg sling set (15,000-pound capacity for the CH-53E only).
 - (a) Additional chain lengths from the sling set being used (8 each).
 - (b) Additional coupling links from the sling set being used (8 each).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (6) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-, 25,000-or 40,000-pound capacity sling set with coupling links. Connect two additional chain lengths to each chain on the 15,000-pound multileg sling set chain with coupling links.
 - (b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.
 - (c) Secure the shelter to the truck using wire rope or tie-down assemblies.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

(e) Secure environmental control unit cover with duct tape.

(f) Disconnect the power cord from the rear panel and secure it to the rear platform with Type III nylon cord. Lower the power panel door and secure the door.

(g) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(h) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(i) Engage the vehicle parking brake and put the transmission in neutral.

(j) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(k) Tape the windshield in an X formation from corner to corner.

(l) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) Rigging. Rig the load according to the steps in Figure 2-9.

Notes: 1. Use the link count from Table 2-11.
2. Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

| Single Shelter Switch (SSS), AN/TTC-56 | 11,500 | 25K | 32/5 |
| Tactical Airspace Integration System (TAIS) | 11,500 | 25K | 32/5 |
| Trojan Spirit Lite (V)3 Support Vehicle, AN/TSQ-226 (V)3 | 11,500 | 25K | 35/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity).

(a) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 664241, from a 25,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 25,000-pound capacity sling set with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

(d) Secure environmental control unit cover with duct tape.

(e) Disconnect the power cord from the rear panel and secure it to the rear platform with Type III nylon cord. Lower the power panel door and secure the door.

(f) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(g) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(h) Engage the vehicle parking brake and put the transmission in neutral.

(i) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(j) Tape the windshield in an X formation from corner to corner.

(k) Install the lift provisions on the outer ends of the rear bumper.

(l) Remove the upper antenna mounting bracket if installed.

(2) Rigging. Rig the load according to the steps in Figure 2-11.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

RIGGING STEPS

1. Position the apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-12 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure all excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left end of the rear bumper. Place the correct link from Table 2-12 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure all excess chain with Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.

Figure 2-11. LMS Shelter Mounted on M1097A2 Using Shelter Lift Rings as Sling Guides

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

M1097/M1113 SHELTER CARRIER (HMMWV) WITH GITCHNER MODEL 1497A SHELTER

2-14. The M1097/M1113 shelter carrier with Gitchner model 1497A shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-13 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-13. M1097/M1113 with Gitchner Model 1497A Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Joint Tactical Information Distribution System (JTIDS), AN/TYQ-JTIDS Shelter on M1097 HMMWV | 10,000 | 10K | 30/3 |
| AN/TSM-210 Electronic Shop on Enhanced Capacity Vehicle, M1113 HMMWV | 10,360 | 25K | 22/46 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound capacity sling set (4 each).

OR

(2) Sling set (25,000-pound capacity).

(a) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 664241, from a 25,000-pound capacity sling set (4 each).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

(7) Padding, cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000- or 25,000-pound capacity sling set with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Secure all equipment inside the shelter with tape, nylon cord, or lashings. Close and secure all shelter doors and vents with tape or Type III nylon cord.

(d) Secure the environmental control unit cover with duct tape.

(e) Disconnect the power cord from the rear panel and secure it to the rear platform with Type III nylon cord. Lower the power panel door and secure it.

(f) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(g) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(h) Engage the vehicle parking brake and put the transmission in neutral.

(i) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(j) Tape the windshield in an X formation from corner to corner.

(k) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) Rigging. Rig the load according to the steps in Figure 2-12.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-13 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-13 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-12. M1097/M1113 with Gitchner Model 1497A Shelter

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

M1097A2 SHELTER CARRIER (HMMWV) WITH SPECIAL OPERATIONS MEDIA SYSTEM (SOMS-B) IN S-788 SHELTER

2-15. The M1097A2 shelter carrier with SOMS-B in S-788 shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-14 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-14. M1097A2 Shelter Carrier with SOMS-B in S-788 Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------|---------------------|-----------|-----------------------|
| Special Operations Media System | 9,080 | 10K | 40/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

(6) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-pound capacity sling set with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Secure all equipment inside the shelter with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Disconnect the power cord from the rear panel and secure it to the rear platform with Type III nylon cord. Lower the power panel door and secure the door.

(e) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(f) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(g) Engage the vehicle parking brake and put the transmission in neutral.

(h) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(i) Tape the windshield in an X formation from corner to corner.

(j) Install the lift provisions on the outer ends of the rear bumper.

(k) Remove the upper antenna bracket if installed.

(2) Rigging. Rig the load according to the steps in Figure 2-13.

Notes: 1. Ensure the chains on sling leg 1 are routed between the shelter and the 30 meter mast.
2. Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position the apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-14 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure all excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left end of the rear bumper. Place the correct link from Table 2-14 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure all excess chain with tape or Type III nylon cord.
4. Wrap the rear slings with padding where they contact the shelter sides.
5. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.

Figure 2-13. M1097A2 Shelter Carrier with SOMS-B in S-788 Shelter

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

TACTICAL DATA NETWORK (TDN) GATEWAY ON M1097A1 HMMWV

2-16. The Tactical Data Network Gateway on M1097A1 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-15 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-15. Tactical Data Network Gateway on M1097A1 HMMWV

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Tactical Data Network (TDN) Gateway on M1097A1 HMMWV | 9,580 | 15K | 30/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Multileg sling set (15,000-pound capacity).

(a) Additional chain lengths, part number 3408-4, from a 15,000-pound capacity sling set (8 each).

(b) Coupling link, part number 31611, from a 15,000-pound capacity sling set (8 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold the mirrors inward for added protection and tie together with Type III nylon cord.

(b) Secure all equipment inside the unit with tape, Type III nylon cord or tiedown straps. Secure all vents, doors and latches with tape or Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle cab with tape, Type III nylon cord, or tiedown straps. Secure the doors shut, if installed.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard or Type III nylon cord.

(g) Extend the sling leg chains by connecting two additional chain length to each chain on the 15,000-pound capacity sling set with coupling links.

(h) Tape the windshield in an X formation from corner to corner.

(2) Rigging. Rig the load according to the steps in Figure 2-14.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on the roof of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M1037/M1097 SHELTER CARRIER (HMMWV) WITH G15840 SMOKE GENERATOR SET, M157/M157A1E1

2-17. The M1037/M1097 shelter carrier (HMMWV) with G15840 smoke generator set, M157/M157A1E1 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-16 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-16. M1037/M1097 Shelter Carrier (HMMWV) With G15840 Smoke Generator Set, M157/M157A1E1

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Smoke Generator Set, M157 on M1037 | 7,400 | 10K | 80/30 |
| Smoke Generator Set, M157 on M1097 | 8,025 | 10K | 80/30 |
| Smoke Generator Set, M157A1E1 on M1097 | 8,035 | 10K | 80/30 |

b. MATERIALS. The following materials are required to rig this load.

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

RIGGING STEPS

1. Position apex fitting on top of the roof of the HMMWV. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-16 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-16 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Wrap the rear slings with padding where they contact the vehicles sides.
5. Raise the apex fitting above the vehicle keeping the slings to the side of the vehicle.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-15. M157/M157A1E1 Smoke Generator Set Mounted on the M1037/M1097

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

DRAFT

M1113 (HMMWV) WITH M56 SMOKE GENERATING SYSTEM

2-18. The M1113 (HMMWV) with M56 smoke generating system is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-17 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-17. M1113 With M56 Smoke Generating System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|--|
| M1113 (HMMWV) With M56 Smoke Generating System with Graphite in Tank | 9,400 | 10K | 50/3 |
| M1113 (HMMWV) With M56 Smoke Generating System without Graphite in Tank | 9,400 | 10K | 50-Front 3-Right Rear 14-Left Rear |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

(6) Spreader bar assembly (component of the M996/M997 HMMWV Ambulance).

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove and secure the doors in the cab of the vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Ensure the turbine fuel and both fog oil tanks are not over 3/4 full.

(g) Set the three-way valve to the OFF position.

(h) Ensure the IR hopper latches are securely closed and the auxiliary hoses are attached to the mounting bracket at the forward end of the in-board fog oil tank.

(i) Secure all latches and doors with tape or Type III nylon cord.

(j) Extend the spreader bar until the holes line up. Install the pin and engage the keeper.

(k) Position the spreader bar across the rear of the vehicle between the rear slings.

~~(2) Rigging. Rig the load according to the steps in Figure 2-16.~~

CAUTION

TOTAL WEIGHT OF LOAD IS RESTRICTED TO 9,400 POUNDS DUE TO THE STRUCTURAL STRENGTH OF THE SPREADER BAR.

(3) **Hookup.** The hookup team stands on the IR hopper loading platform on the left side of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the IR hopper or on the forward end of the fog oil tanks. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-17 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or Type III nylon cord.
3. Place the nylon rope of sling legs 3 and 4 in the guides on the ends of the spreader bar. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-17 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Pad the sling legs in the area where they make contact with the structure.
5. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-16. M1113 (HMMWV) With M56 Smoke Generating System

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

DRAFT

M1097 (HMMWV) WITH FIBERGLASS CARGO BED COVER (CBC)

2-19. The M1097 (HMMWV) with fiberglass cargo bed cover is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-18 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-18. M1097 (HMMWV) With Fiberglass Cargo Bed Cover

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|------------|-----------------------|
| Cargo Bed Cover, HMMWV, Type I, Camouflage, NSN: 5411-01-647-3246 | 10,000 | 10K 15K | 50/3 62/2 |
| Cargo Bed Cover, HMMWV, Type I, Sand, NSN: 5411-01-479-1928 | 10,000 | 10K 15K | 50/3 62/2 |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).

OR

(2) Multileg sling set (15,000-pound capacity for the CH-53E only).

(a) Additional chain lengths from the sling set being used (8 each).

(b) Additional coupling links from the sling set being used (8 each).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-pound capacity sling set with coupling links. Connect two additional chain lengths to each chain on the 15,000-pound multi-leg sling set chain with coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Secure the cargo bed cover to the truck using wire rope or tie-down assemblies.

(d) Secure all equipment inside the cargo bed cover with tape, nylon cord, or lashings; close and secure shelter vents and door with nylon cord or tape.

(e) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors shut if installed.

(f) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(g) Engage the vehicle parking brake and put the transmission in neutral.

(h) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(i) Tape the windshield in an X formation from corner to corner.

(j) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) Rigging. Rig the load according to the steps in Figure 2-17.

(3) Hookup. The hookup team stands on top of the cargo bed cover. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the cargo bed cover. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-18 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-18 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Wrap the rear slings with padding where they contact the cover sides.
5. Raise the apex fitting above the CBC keeping the slings to the side of the CBC.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-17. M1097 With Fiberglass Cargo Bed Cover

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

DRAFT

M1097 (HMMWV) WITH CONTACT MAINTENANCE TRUCK, HEAVY (CMTH)

2-20. The M1097 with contact maintenance truck, heavy is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-19 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-19. M1097 With Contact Maintenance Truck, Heavy

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------------|---------------------|-----------|-----------------------|
| CMTH, Aviation Section (AS) | 9,400 | 10K | 80/30 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

(6) Spreader bar assembly (component of the M996/M997 HMMWV Ambulance).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain using the coupling links.

(b) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(c) Ensure the shelter is properly attached to the truck.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Secure all equipment inside the shelter with tape, nylon cord, or lashings. Close and secure all doors.

(e) Secure the environmental control unit cover with duct tape.

(f) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Secure the doors in the shelter or in the cab of the vehicle.

(g) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(h) Engage the vehicle parking brake and put the transmission in neutral.

(i) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(j) Tape the windshield in an X formation from corner to corner.

(k) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) **Rigging.** Rig the load according to the steps in Figure 2-18.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-19 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Position the spreader bar assembly 12 to 18 inches forward of the rear of the shelter. Route the rear sling legs through guides on the end of the spreader bar and install the pins and keepers.
4. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-19 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
5. Secure the spreader bar retainer cable to the sling leg chain.
6. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-18. M1097 With Contact Maintenance Truck, Heavy

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

M1097A1 (HMMWV) WITH REMOTE LANDING SITE TOWER (RLST)

2-21. The M1097A1 with remote landing site tower is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-20 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-20. M1097A1 With Remote Landing Site Tower

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M1097A1 (HMMWV) With Remote Landing Site Tower (RLST) | 8,460 | 15K | 60/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (15,000-pound capacity).

(a) Chain length, part number 34080-4, from 15,000-pound capacity sling sets (8 each).

(b) Coupling link, part number 31611, from 15,000-pound capacity sling sets (8 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove and secure the doors in the cab of the vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(g) Configure the RLST in the TRANSPORT mode in accordance with the operator's manual.

(h) Ensure the RLST is properly secured to the vehicle. Secure all equipment inside the RLST with the hold-down straps, tape, or Type III nylon cord.

(i) Secure the RLST cover with the straps provided. Secure the loose ends with tape.

(j) Tape the windshield in an X formation from corner to corner.

(k) Extend the sling leg chains by connecting two additional chain lengths to each chain with coupling links.

(2) Rigging. Rig the load according to the steps in Figure 2-19.

(3) Hookup. The hookup team stands on the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

PROPHET AN/MLQ-40 (V) ON M1097 HMMWV

2-22. The Prophet AN/MLQ-40 (V) on M1097 is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-21 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-21. Prophet AN/MLQ-40 (V) on M1097

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------|---------------------|-----------|-----------------------|
| Prophet AN/MLQ-40 (V) 1 | 10,000 | 10K | 55/10 |
| Prophet AN/MLQ-40 (V) 3 | 10,000 | 10K | 55/10 |
| Prophet Control Vehicle | 10,000 | 10K | 55/10 |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward inward and tie together with Type III nylon cord.

(b) Ensure the Prophet cargo bed cover is secured to the truck. Secure all equipment and cargo inside the unit with tape, nylon cord, or lashings. Close and secure the door.

(c) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Roll up all the windows and secure the doors closed (if installed).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(7) Spreader bar assembly (component of the M996/M997 HMMWV Ambulance).

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove the cab doors.

(b) Ensure the antenna support structure is secured to the truck. Secure all loose equipment within the antenna support structure with Type III nylon cord, tape, or lashings.

(c) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(g) Tape the windshield in an X formation from corner to corner.

(h) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(2) **Rigging.** Rig the load according to the steps in Figure 2-22.

(3) **Hookup.** The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

An aircrew member must monitor the spreader bar at all times. If there is any evidence of the spreader bar bending the load should be set down at the nearest suitable landing area.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M1097 (HMMWV) WITH HIGH MOBILITY DIGITAL GROUP MULTIPLEXER (DGM), AUXILIARY EQUIPMENT TRANSPORTATION CONTAINER (AETC) IN 2 AND 3 MAST CONFIGURATIONS

2-25. The M1097 with high mobility digital group multiplexer (DGM), auxiliary equipment transportation container (AETC) in 2 and 3 mast configurations is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-24 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-24. M1097 with High Mobility Digital Group Multiplexer (DGM), Auxiliary Equipment Transportation Container (AETC) in 2 and 3 Mast Configurations

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------|---------------------|-----------|-----------------------|
| 2 Mast AETC Configuration | 8,500 | 10K | 55/3 |
| 3 Mast AETC Configuration | 9,500 | 10K | 55/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).
- (3) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove the cab doors.
 - (b) Remove, fold, stow, and secure the canvas cover for the AETC using Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Ensure the AETC is secured to the truck with wire rope or tie-down assemblies. Secure all equipment and cargo inside the AETC with tape, Type III nylon cord, and lashings.

(d) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(e) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(f) Engage the vehicle parking brake and put the transmission in neutral.

(g) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(h) Tape the windshield in an X formation from corner to corner.

(i) Install the lift provisions on the outer ends of the rear bumper by removing the tiedown provisions located inboard of the bumper end and installing them on the outer ends of the rear bumper.

(j) Connect one additional chain length to each chain of the sling set with the coupling link.

(2) Rigging. Rig the load according to the steps in Figure 2-23.

(3) Hookup. The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-24 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-24 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Pad the slings where they contact the frame. Secure excess chain with tape or Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 2-23. M1097 with 2 or 3 Mast AETC Configuration

CAUTION

Do not use the lift shackles located near the center of the rear bumper for sling load lift provisions.

M1097A2 (HMMWV) WITH SECURE MOBILE ANTI-JAM TACTICAL TERMINAL (SMART-T) PALLET

2-26. The M1097A2 with secure mobile anti-jam tactical terminal (SMART-T) pallet is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-25 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-25. M1097A2 with Secure Mobile Anti-Jam Tactical Terminal Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M1097A2 (HMMWV) With Secure Mobile Anti-Jam Tactical Terminal (SMART-T) Pallet | 8,540 | 10K | 30/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove and secure the doors in the cab of the vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Secure all loose equipment on the SMART-T with tape or Type

AIR TRAFFIC NAVIGATION, INTEGRATION, AND CONTROL SYSTEM (ATNAVICS) RADAR SENSOR PALLET ON M1113 HMMWV

2-27. The Air Traffic Navigation, Integration, and Control System (ATNAVICS) radar sensor pallet on M1113 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-26 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-26. Air Traffic Navigation, Integration, and Control System radar sensor pallet on M1113

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M1113 HMMWV with ATNAVICS Radar Sensor Pallet | 11,500 | 25K | 30/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity).

(a) Additional chain lengths, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 664241, from a 25,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Strap, cargo, tiedown, CGI-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Fold the mirrors inward for added protection and tie together with Type III nylon cord. Remove the doors and secure the doors on the load with Type III nylon cord.

(b) Secure all equipment inside the unit with tape, Type III nylon cord or tiedown straps. Secure all vents, doors and latches with tape or Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle cab with tape, Type III nylon cord, or tiedown straps.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard or Type III nylon cord.

(g) Extend the sling leg chains by connecting one additional chain length to each chain on the 25,000-pound capacity sling set with coupling links.

(h) Install the sling leg guides on the rear corners of the radar sensor pallet as required in TM 11-584-381-23, chapter 2.

(2) Rigging. Rig the load according to the steps in Figure 2-25.

(3) Hookup. The hookup team stands on the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

TROJAN SPIRIT LITE (V)2, CENTRAL COMMUNICATIONS AN/TSQ-226 (V)2 ON M1113 HMMWV

2-28. The Trojan Spirit Lite (V)2, central communications AN/TSQ-226 (V)2 on M1113 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-27 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-27. Trojan Spirit Lite (V)2, Central Communications AN/TSQ-226 (V)2 on M1113

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Trojan Spirit Lite (V)2, Central Communications AN/TSQ-226 (V)2 on M1113 HMMWV | 11,500 | 25K | 35/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity).

(a) Additional chain lengths, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 664241, from a 25,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold the mirrors inward for added protection and tie together with Type III nylon cord.

(b) Secure all equipment inside on the pallet with tape, Type III nylon cord or tiedown straps. Secure all vents, doors and latches with tape or Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle cab with tape, Type III nylon cord, or tiedown straps. Secure the doors shut, if installed.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard or type III nylon cord.

(g) Extend the sling leg chains by connecting one additional chain length to each chain on the 25,000-pound capacity sling set with coupling links.

(h) Tape the windshield in an X formation from corner to corner.

(i) Secure the rear lift provision in the up position with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 2-26.

(3) Hookup. The hookup team stands on top of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the truck. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-27 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the outer ends of the rear bumper. Place the correct link from Table 2-27 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Ensure sling leg 4 is routed between the handholds on the right side of the system. Remove the slack from sling leg 4 and secure the sling leg to the front handhold with Type I, 1/4-inch cotton webbing. Secure excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.

AN/MRC-142B RADIO TERMINAL SET WITH 30M MAST ON M998 HMMWV

2-29. The AN/MRC-142B radio terminal set with 30m mast on M998 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-28 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-28. AN/MRC-142B Radio Terminal Set with 30m Mast on M998

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| AN/MRC-142B Radio Terminal Set w/ 30 Meter Mast on M998 | 7,500 | 15K | 50/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold the mirrors inward for added protection and tie together with Type III nylon cord.

(b) Remove the canvas cover and doors. Secure the canvas and doors inside the vehicle with tape, Type III nylon cord, or tiedown straps.

(c) Secure all equipment and cargo inside the vehicle cab with tape, Type III nylon cord, or tiedown straps.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard or type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(g) Stow and secure the Shore Mounted Accessory Kit (SMAK) antenna mast. Install the mast cover and secure with tape.

(h) Rotate the antenna array dishes 180 degrees from the normal stowage position; so the curved sides are facing out.

(i) Ensure the offset adapters are stowed and secured.

(j) Ensure the left and right SMAK antenna arrays are secured in the normal stowage position.

(k) Secure the power amplifier case in the normal stowage location over right rear wheel well.

(l) Secure the cables on the spools on the left rear wheel well.

(m) Secure the universal power supply in normal stowage location between the front seats.

(n) Stow and secure radio equipment.

(o) Secure the rear roof bow in the rear most position to the SMAK antenna mast with Type III nylon cord.

(p) Tape the windshield in an X formation from corner to corner.

(2) Rigging. Rig the load according to the steps in Figure 2-27.

(3) Hookup. The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M998 (HMMWV) WITH TWO MRC-127 STACKS

2-30. The M998 with two MRC-127 stacks is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-29 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-29. M998 with Two MRC-127 Stacks

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| M998 with Two MRC-127 Stacks | 8,010 | 10K | 80/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. If installed, remove canvas covering over the bed of the truck. Remove the doors. Tape the windshield in an X formation from corner to corner. If time permits, fold canvas top and tie to windshield for added protection.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove antennas and stow inside vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 2-28.

(3) **Hookup.** The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M998/M1038 (HMMWV) WITH LIGHTWEIGHT TACTICAL FIRE CONTROL SYSTEMS (LTACFIRE)/TACTICAL TERMINAL CONTROL SYSTEM (TTCS)

2-31. The M998/M1038 with Lightweight Tactical Fire Control Systems (LTACFIRE)/Tactical Terminal Control System (TTCS) is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-30 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-30. M998/M1038 with LTACFIRE or TTCS

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| LTACFIRE, Single Station | 5,927 | 10K | 80/45 |
| LTACFIRE, Dual Station | 6,215 | 10K | 80/45 |
| AN/TSQ-198 TTCS | 6,015 | 10K | 80/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove the canvas cab top and the doors. Fold the canvas top and stow securely inside the driver's compartment sandwiched between the doors.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Tape the windshield in an X formation from corner to corner.

(2) **Rigging.** Rig the load according to the steps in Figure 2-29.

(3) **Hookup.** The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting in the bed of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood. Place the correct link from Table 2-30 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the eyelet opening in the upper left corner of the tailgate. Loop the chain end through the left lift provision on the bumper and thread back through the eyelet opening in the tailgate. Place the correct link from Table 2-30 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.</p> |

M1097A2 (HMMWV) SOFT TOP TRUCK WITH ADVANCED FIELD ARTILLERY TACTICAL DATA SYSTEMS (AFATADS)

2-32. The M1097A2 soft top truck with Advanced Field Artillery Tactical Data Systems is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-31 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-31. M1097A2 Soft Top Truck with Advanced Field Artillery Tactical Data Systems

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| System 2: CHS-2 AN/GYG-3(V)1, with SINCGARS AN/VRC-90, AN/VRC-92, and EPLRS installed in the bed. AN/VRC-92 installed in cab. | 8,103 | 10K | 50/3 |
| System 3: CHS-2 AN/GYG-3(V)3, with SINCGARS AN/VRC-90, AN/VRC-92, and EPLRS installed in the bed. AN/VRC-92 installed in cab. | 8,366 | 10K | 50/3 |
| System 4: 2 each AN/GYK-37(V)2, with SINCGARS AN/VRC-89, AN/VRC-92, and EPLRS | 7,790 | 10K | 50/3 |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Coupling link, part number 577-0415, from a 10,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Padding, cellulose.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove and secure the doors in the cab of the vehicle.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Extend the sling leg chains by connecting one additional chain length to each chain using the coupling links.

(2) **Rigging.** Rig the load according to the steps in Figure 2-30.

(3) **Hookup.** The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position the apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 2-31 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-31 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

M1097A2 (HMMWV) WITH ADVANCED FIELD ARTILLERY TACTICAL DATA SYSTEM (AFATDS) FULL SIZE SOFT TOP INSTALLATION KIT (STIK)

2-33. The M1097A2 with Advanced Field Artillery Tactical Data System Full Size Soft Top Installation Kit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-32 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-32. M1097A2 with Advanced Field Artillery Tactical Data System Full Size Soft Top Installation Kit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| System 2: CHS-2 AN/GYG-3(V)1, with SINCGARS AN/VRC-90, AN/VRC-92, and EPLRS installed in the bed. AN/VRC-92 installed in cab. | 8,103 | 10K | 50/3 |
| System 3: CHS-2 AN/GYG-3(V)3, with SINCGARS AN/VRC-90, AN/VRC-92, and EPLRS installed in the bed. AN/VRC-92 installed in cab. | 8,366 | 10K | 50/3 |
| System 4: 2 each AN/GYK-37(V)2, with SINCGARS AN/VRC-89, AN/VRC-92, and EPLRS | 7,790 | 10K | 50/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, NSN 4010-01-231-3388, from a 10,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Strap, cargo, tiedown, CGU-1/B (2 each).

(6) Sling guides (included as part of the HMMWV STIK) (2 each).

c. PERSONNEL. Two persons can prepare and rig the M1097A2 HMMWV in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) Preparation. Prepare the load using the following steps:

(a) Fold mirrors inward and tie together with Type III nylon cord. Remove the doors and secure to the seats with Type III nylon cord.

(b) Secure all equipment and cargo inside the truck and trailer with tiedown straps, tape, or Type III nylon cord.

(c) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(f) Connect one additional chain length to each chain on each sling set with a coupling link.

(g) Ensure the STIK sling guides are properly installed.

(2) Rigging. Rig the load according to the steps in Figure 2-31.

(3) Hookup. The hookup team stands on top of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M1037 (HMMWV) WITH AN/TPQ-36 FIREFINDER GENERATOR PALLET

2-34. The M1037 with AN/TPQ-36 Firefinder Generator pallet is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-33 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-33. M1037 with AN/TPQ-36 Firefinder Generator

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| AN/TPQ-36 Firefinder Generator Pallet | 7,700 | 10K | 50/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove the cab doors.

(b) Ensure the generator is secured to the truck. Secure all lids, doors, and vents on the generator with tape or nylon Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

(f) Ensure the front wheels are pointed straight ahead. Tie down

DRAFT

M1037 (HMMWV) WITH COMPRESSED AIR-FOAM SYSTEM, MOBILE (CAFSM)

2-37. The M1037 with Compressed Air-Foam System, Mobile is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-36 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-36. M1037 with Compressed Air-Foam System, Mobile

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------------|---------------------|-----------|-----------------------|
| Compressed Air Foam System, Mobile | 6,400 (empty) | 15K | 40/3 |

Note: The water tank in the CAFSM **MUST BE EMPTY** for sling loading.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove the canvas cab top and the doors. Secure to the seats with Type III nylon cord.

(b) Ensure the CAFSM is secured to the truck. Secure all lids, doors, and vents on the CAFSM with tape or Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

DRAFT

INTERIM FAST ATTACK VEHICLE (IFAV) TRUCK, LONG WHEEL BASE

2-38. The Interim Fast Attack Vehicle (IFAV) truck, long wheel base is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-37 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-37. Interim Fast Attack Vehicle Truck, Long Wheel Base

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Interim Fast Attack Vehicle Truck, Long Wheel Base | 5,720 | 15K | 3/15 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Padding, cellulose.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(6) Strap, cargo, tiedown (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord. Remove all canvas covers.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or tiedown straps.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel using Type III nylon cord.

(f) Tape the windshield in an X formation from corner to corner.

(2) **Rigging.** Rig the load according to the steps in Figure 2-36.

(3) **Hookup.** The hookup teams stand in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the web ring on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

JOHN DEERE M-GATOR (MODEL #VGM6X01001)

2-39. The John Deere M-Gator (Model #VGM6X01001) is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 2-38 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-38. John Deere M-Gator (Model #VGM6X01001)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| John Deere M-Gator, Empty, (Model # VGM6X01001) | 1,400 | 10K | 3/30 |
| John Deere M-Gator, with load, (Model # VGM6X01001) | 2,450 | 10K | 3/40 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the gas cap, tailgate, fire extinguisher, and all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(b) Place tape on all the lights.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard or type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 2-37.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) **Hookup.** The hookup team stands on the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Route the chain end of sling leg 1 through the litter carrier and over the brush bar to the left front lift provision. Loop the chain through the lift provision and follow the chain routing back to the grab link. Place the correct link from Table 2-38 in the grab hook. Repeat with sling leg 2 through the right front lift provision.</p> |
| <p>3. Slide the black circular hole covers, located in the vehicle bed, to the side. Route the chain end of sling leg 3 through the left exposed hole and the left rear lift provision. Place the correct link from Table 2-38 in the grab hook. Repeat with sling leg 4 through the right exposed hole and right rear lift provision.</p> |
| <p>4. Secure all excess chain with Type III nylon cord.</p> |
| <p>5. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.</p> |

Figure 2-37. John Deere M-Gator (Model #VGM6X01001) (Continued)

TWO JOHN DEERE M-GATORS, MODEL #VGM6X01001, SIDE BY SIDE (SHOTGUN METHOD)

2-40. The TWO John Deere M-Gators, Model #VGM6X01001, side by side (shotgun method) are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-39 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-39. TWO John Deere M-Gators, Model #VGM6X01001, Side by Side (Shotgun Method)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-------------------------|
| John Deere M-Gator, Empty, (Model # VGM6X01001) | 1,450 | 10K | Listed in Rigging Steps |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity (2 each)).

(2) Additional apex fitting from a 10,000-pound capacity sling set (NSN: 4030-01-027-2902).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Strap, tiedown, cargo, CGU-1/B (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Position the vehicles as close together as possible. Ensure the vehicles are facing in the same direction and the wheels of the M-Gators are lined up.

(b) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings.

(c) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(d) Engage the vehicle parking brake and put the transmission in neutral.

(e) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel using the securing device under the dash or Type III nylon cord.

(f) Tape all lights and gauges.

(g) Reposition the blackout lights and the infrared LED lights so they do not interfere with the routing of the sling legs.

(h) Open the black sling guide covers in the bed of both vehicles.

(2) Rigging. Rig the load according to the steps in Figure 2-38.

(3) Hookup. The hookup team stands in the bed of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

Figure 2-38. Two John Deere M-Gators (Model #VGM6X01001), Side by Side (Shotgun Method)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position sling set 1 on top of the right vehicle with the bolt parallel to the length of the vehicle. Route sling legs 1 and 2 to the front of the vehicle and sling legs 3 and 4 to the rear. Sling legs 1 and 4 must be on the outside.
2. Route the chain end of sling leg 1 through the 4th opening in the front litter carrier, over the brush guard to the outside front lift provision. Loop the chain end through the outside front lift provision and back to the grabhook along the same path. Place link 3 in the grabhook.
3. Route the chain end of sling leg 2 through the 6th opening in the front litter carrier, over the brush guard to the inside front lift provision. Loop the chain end through the inside front lift provision and back to the grabhook along the same path. Place link 20 in the grabhook.
4. Route the chain end of sling leg 4 through the outside sling guide to the outside rear lift provision. Loop the chain end through the outside rear lift provision and back to the grabhook along the same path. Place link 30 in the grabhook.
5. Route the chain end of sling leg 3 through the inside sling guide to the inside rear lift provision. Loop the chain end through the inside rear lift provision and back to the grabhook along the same path. Place link 45 in the grabhook.
6. Position sling set 2 on top of the left vehicle with the bolt parallel to the length of the vehicle. Route sling legs 1 and 2 to the front of the vehicle and sling legs 3 and 4 to the rear. Sling legs 1 and 4 must be on the outside.
7. Route the chain end of sling leg 1 through the 4th opening in the front litter carrier, over the brush guard to the outside front lift provision. Loop the chain end through the outside front lift provision and back to the grabhook along the same path. Place link 3 in the grabhook.
8. Route the chain end of sling leg 2 through the 6th opening in the front litter carrier, over the brush guard to the inside front lift provision. Loop the chain end through the inside front lift provision and back to the grabhook along the same path. Place link 20 in the grabhook.
9. Route the chain end of sling leg 4 through the outside sling guide to the outside rear lift provision. Loop the chain end through the outside rear lift provision and back to the grabhook along the same path. Place link 30 in the grabhook.
10. Route the chain end of sling leg 3 through the inside sling guide to the inside rear lift provision. Loop the chain end through the inside rear lift provision and back to the grabhook along the same path. Place link 45 in the grabhook.
11. Route the additional apex fitting through apex fittings 1 and 2.
12. Secure all excess chain with tape or Type III nylon cord.

(Continued)**

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

13. Cluster and tie or tape (breakaway technique) the sling legs in each sling set on top of the vehicle to prevent entanglement during hookup and lift-off.
14. Route a CGU-1/B cargo tiedown strap through the trailer hitch of both vehicles and connect the hooks together. Tighten the straps and secure the excess strap.
15. Route a CGU-1/B cargo tiedown strap through the inside front bar of the brush guard on both vehicles and connect the hooks together. Tighten the straps and secure the excess strap.

Figure 2-38. Two John Deere M-Gators (Model #VGM6X01001), Side by Side (Shotgun Method) (Continued)

LIGHT ARMORED VEHICLE (LAV) (USMC)

2-41. The Light Armored Vehicle is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 2-40 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 2-40. Light Armored Vehicle

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------------------|---------------------|-----------|-----------------------|
| Command and Control, TAMCN E0946 | 27,060 | 40K | 3/20 |
| 25-MM, TAMCN E0947 | 28,200 | 40K | 25/3 |
| Logistics, TAMCN E0948 | 28,200 | 40K | 3/10 |
| Mortar, TAMCN E0949 | 27,400 | 40K | 25/3 |
| Recovery Unit, TAMCN E0950 | 28,400 | 40K | 3/10 |
| Tow Anti-Tank, TAMCN E0942 | 27,650 | 40K | 10/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure all loose items inside the LAV.

(b) Remove all antennae.

(c) Ensure the parking brake is set.

(d) Pad and tape all vision blocks, mirrors, and lights.

(e) Secure all hatches and panels.

(f) Ensure the boom is pinned down and tape the hydraulic cables.
(Recovery Unit)

(2) Rigging. Rig the load according to the steps in Figure 2-39.

(3) Hookup. The hookup team stands on top of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 2-40 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the lift provision located on the left end of the rear bumper from inboard to outboard. Place the correct link from Table 2-40 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the LAV to prevent entanglement during hookup and lift-off.

Chapter 3

Certified Single-Point Rigging Procedures For Trailers

INTRODUCTION

3-1. This chapter contains rigging procedures for single-point trailer loads that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for trailer loads are in this section. Paragraphs 3-2 through 3-34 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

M416 1/4-TON TRAILER

3-2. The M416 1/4-ton trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 3-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-1. M416 1/4-Ton Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------|---------------------|-----------|-----------------------|
| M416 1/4-Ton Trailer | 1,080 | 10K | 3/3 |

WARNING

The M416 1/4-ton trailer must have a gross weight of 800 pounds or more. Add additional weight or cargo to any trailer which weighs less than 800 pounds.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Tie down, CGU-1B or dacron lashing and load binder.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Lower and lock the trailer support leg in the down position.

(b) Tape or tie the light cable firmly to the top of the drawbar.

(c) Load and lash the cargo in the bed of the trailer.

(d) Ensure the parking brake is set.

(2) **Rigging.** Rig the load according to the steps in Figure 3-1.

(3) **Hookup.** The hookup team stands in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 3-1. M416 1/4-Ton Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting in the trailer bed. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 3-1 in the grab hook. Repeat with sling leg 2 through the lunette.</p> |
| <p>3. Route the chain end of sling leg 3 around the left rear spring shackle mounting bracket. Place the correct link from Table 3-1 in the grab hook. Repeat with sling leg 4 around the right rear spring shackle mounting bracket.</p> |
| <p>4. Tie (breakaway technique) the chains of legs 3 and 4 to the next-to-last tarpaulin hold-down hook on each side.</p> |
| <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.</p> |

Figure 3-1. M416 1/4-Ton Trailer (Continued)

M101A2/A3 3/4-TON TRAILER

3-3. The M101A2/A3 3/4-ton trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 3-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-2. M101A2/A3 3/4-Ton Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M101A2 with Accompanying Load | 3,000 | 10K | 3/40 |
| Command Version 1 Trailer | 1,958 | 10K | 3/40 |
| Command Version 2 Trailer | 1,981 | 10K | 3/40 |
| Len Cable Trailer | 2,796 | 10K | 3/40 |
| NC Support Trailer | 2,643 | 10K | 3/40 |
| Maintenance Trailer #2 | 1,430 | 10K | 3/40 |
| Battalion Spares Trailer #1 | 1,594 | 10K | 3/40 |
| Battalion Spares Trailer #2 | 2,206 | 10K | 3/40 |
| Marine Expeditionary Force Intelligence Analysis System M101A3 Trailer | 3,000 | 10K | 15/3 |
| Technical Control and Analysis Center Production Improvement Program M101A3 Trailer | 3,000 | 10K | 15/3 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

WARNINGS

1. The M101A2/A3 3/4-ton trailer must have a gross weight of 1,575 pounds or more. Add additional weight or cargo to any trailer which weighs less than 1,575 pounds. Place the weight near the center of the trailer.
2. Maximum weight during sling load operations for any variant of the M101A2/A3 3/4-ton trailer is 3,000 pounds.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie down, CGU-1B or dacron lashing and load binder.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fasten the tailgate in the open position with the chains on each side hooked through the keeper.

(b) Remove the front rack and place it in the bed of the trailer. Place the accompanying load on top of the front rack. Secure the accompanying load to the trailer using tie-down straps. Route the straps diagonally across the load from the tailgate hinge to the front lifting shackles.

(c) Tape or tie the light cable firmly to the top of the drawbar.

(d) Ensure the tongue wheel is in the down and locked position and the parking brake is set.

(2) **Rigging.** Rig the load according to the steps in Figure 3-2.

(3) **Hookup.** The hookup team stands in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting in the trailer bed. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Route the rear chains through the opening between the tailgate and the trailer bed. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer. Place the correct link from Table 3-2 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 3-2 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Tape or tie (breakaway technique) the chains of legs 3 and 4 to the side racks to keep the chains from binding between the tailgate and trailer bed.
5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

Figure 3-2. M101A2/A3 3/4-Ton Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M1048/M1073 TRAILER

3-4. The M1048/M1073 trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 3-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-3. M1048/M1073 Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------|---------------------|-----------|-----------------------|
| M1048 Trailer | 5,880 | 10K | 44/6 |
| M1073 Trailer | 6,260 | 15K | 58/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
OR
- (2) Multileg sling set (15,000-pound capacity).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose chains, hoses, and cables to the trailer drawbar with Type III nylon cord.

(b) Secure any lids, caps, or loose items with tape or Type III nylon cord.

(c) Tape or tie the light cable firmly to the top of the drawbar.

(d) Place the leveling jacks in the down position. Ensure the base of the leveling jacks are not extended. Stow the jack handles and secure with Type III nylon cord. The trailer should lean downward at the lunette end.

(e) Ensure the parking brake is set.

(2) **Rigging.** Rig the load according to the steps in Figure 3-3.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting in the trailer bed. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the trailer. Place the correct link from Table 3-3 in the grab hook. Repeat with sling leg 2 through the right front lift provision.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 3-3 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off. Secure excess chain with tape or Type III nylon cord.

M1048 TRAILER WITH TRACKED SUSPENSION SYSTEM

3-5. The M1048 trailer with tracked suspension system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 3-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-4. M1048 Trailer with Tracked Suspension System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------|---------------------|-----------|-----------------------|
| M1048 Trailer (TSS) | 7,880 | 10K | 26/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose chains, hoses, and cables to the trailer drawbar with Type III nylon cord.

(b) Secure any lids, caps, or loose items with tape or Type III nylon cord.

(c) Tape or tie the light cable firmly to the top of the drawbar.

(d) Place the front leveling jacks in the down position. Ensure the base of the leveling jacks are not extended. Stow the jack handles and secure with Type III nylon cord. Secure the rear leveling jacks in the up position. The trailer should lean downward at the lunette end.

(e) Ensure the parking brake is set.

(2) **Rigging.** Rig the load according to the steps in Figure 3-4.

(3) **Hookup.** The hookup team stands in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The

M149A2 WATER TRAILER (USMC)

3-6. The M149A2 water trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 3-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-5. M149A2 Water Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M149A2 Water Trailer Modified with Clevis Type Lift Provisions | 6,100 | 15K | 3/11 |

Notes: 1. This load is only certified for sling loading at its full weight of 6,100 pounds.

2. The rigging procedures for the M149 Water Trailer (US Army) are located in chapter 16.

b. MATERIALS. The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose chains, hoses, and cables to the trailer drawbar with tape or Type III nylon cord.

(b) Ensure the tongue wheel is locked in the down position.

(c) Close the tank lid and secure.

(d) Ensure that one trailer brake is set.

(2) **Rigging.** Rig the load according to the steps in Figure 3-5.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands on the trailer fenders or the front of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the water tank. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the trailer. Place the correct link from Table 3-5 in the grab hook. Repeat with sling leg 2 through the right front lift provision.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 3-5 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Pad the rear slings where they contact the water tank. Secure excess chain with Type III nylon cord.
4. Position the two rear slings around the side of the tank so that the sling legs cradle the tank.
5. Cluster and tie (breakaway technique) all sling legs together on top of the tank to prevent entanglement during hookup and lift-off.

Figure 3-5. M149A2 Water Trailer

DRAFT

M989 HEAVY-EXPANDED MOBILITY AMMUNITION TRAILER (HEMAT)

3-7. The M989 Heavy-Expanded Mobility ammunition trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-6 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-6. M989 HEMAT

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------|---------------------|-----------|-----------------------|
| M989 HEMAT (Empty) | 7,640 | 10K | 40/4 |

Note: This load is only certified for sling loading at its empty weight.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down CGU-1/B (4 each).

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) At each corner of the trailer, slide the lifting provisions out until they are completely extended. Do not lift the trailer unless the provisions are fully extended and secured in position.

(b) Remove the side and end panels. Place two panels side by side on the trailer so that the panel ends are approximately 10 inches from the front of the trailer. Make sure the panels are positioned lengthwise on the trailer. Place the remaining panels on top of the respective panels on the trailer.

(c) Secure the panels on the trailer with the tie-down straps. Attach the hook end of one tie-down strap to a tie-down ring on the trailer bed beside the panels approximately 1 foot from the end of the panels. Connect and tighten the ratchet end to a tie-down ring on the other side of the panels. Secure loose end of strap. Repeat with a second tie-down strap at the other end of the panels.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) To secure the panels lengthwise, route the hook end of one tie-down strap around the vertical metal stiffeners on the top panel of the stack of panels on the left side of the trailer. Attach the hook end to a tie-down ring on the front end of the trailer bed. Connect and tighten the ratchet end to a tie-down ring on the other end of the stack of panels. Secure loose end of strap. Repeat with a second tie-down strap on the other stack of panels.

(e) Tape or tie the intervehicular cable, hoses, and safety chains firmly to the top of the drawbar with tape or Type III nylon cord.

(f) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 3-6.

(3) **Hookup.** The hookup team stands on the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 3-6. M989 HEMAT (Continued)

M989A1 HEAVY-EXPANDED MOBILITY AMMUNITION TRAILER (HEMAT II)

3-8. The M989A1 Heavy-Expanded Mobility ammunition trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-7 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-7. M989A1 HEMAT II

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------|---------------------|-----------|-----------------------|
| M989A1 HEMAT II | 10,650 | 25K | 15/3 |

CAUTION

The following rigging procedures are for the M989A1 HEMAT II only. Do not use these procedures when rigging the M989 HEMAT.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Tie-down CGU-1/B (8 each).

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Inspect the lift provisions at the four upper corners of the cargo bed.

(b) Raise the trailer tongue and secure it in the up position with a CGU-1/B.

(c) Secure the brake hose, safety hose, intervehicular cables, and safety chains to the trailer and tongue with tape or Type III nylon cord.

(d) Engage the steering lockout pin.

(e) Secure the side panels to the cargo deck with CGU-1/Bs.

(2) **Rigging.** Rig the load according to the steps in Figure 3-7.

(3) **Hookup.** The hookup team stands on the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

Brief the aircrew to relax sling leg tension and hover to the side of the load when releasing the apex fitting to prevent damage to the panels on top of the trailer.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

MK14, TRAILER, CONTAINER HAULER

3-9. The Mk14 container hauler trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-8 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-8. Mk14 Container Hauler Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------|---------------------|-----------|-----------------------|
| Mk14 Container Hauler Trailer | 16,000 | 40K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Disengage the Mk14 from the Mk48 prime mover according to the operator's manual.

(b) Secure all hoses with tape or nylon cord.

(c) Tape all lights, reflectors, and glass fixtures.

(d) Remove the safety retainer pins from the lifting eyelets located under the doors in the bed of the trailer. Unscrew the lifting eyelets from their stored position and reinsert the lifting eyelets so that the eyelet portion is accessible from the bed of the trailer through the access doors. Screw the lifting eyelets all the way in and back out one full turn. Reinsert the safety retainer pins to prevent the lifting eyelets from backing out in flight.

(e) Make sure all tool compartment doors are secured shut.

(2) **Rigging.** Rig the load according to the steps in Figure 3-8.

DRAFT

MK15, TRAILER, WRECKER/RECOVERY

3-10. The Mk15 wrecker/recovery trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-9 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-9. Mk15 Wrecker/Recovery Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------|---------------------|-----------|-----------------------|
| Mk15 Wrecker/Recovery Trailer | 26,000 | 40K | 3/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B, as required.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Disengage the Mk15 from the Mk48 prime mover according to the operator's manual.

(b) Remove the A-frame from the rear of the trailer.

(c) Secure all hoses with tape or nylon cord.

(d) Tape all lights, reflectors, and glass fixtures.

(e) Remove the safety retainer pins from the lifting eyelets located under the doors in the bed of the trailer. Unscrew the lifting eyelets from their stored position and reinsert the lifting eyelets so that the eyelet portion is accessible from the bed of the trailer through the access doors. Screw the lifting eyelets all the way in and back out one full turn. Reinsert the safety retainer pins to prevent the lifting eyelets from backing out in flight.

(f) Make sure all tool compartment doors are secured shut.

MK16, TRAILER, FIFTH-WHEEL ADAPTER

3-11. The Mk16 fifth-wheel adapter trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-10 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-10. Mk16 Fifth-Wheel Adapter Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------|---------------------|-----------|-----------------------|
| Mk16 Fift-Wheel Adapter Trailer | 16,000 | 40K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Disengage the Mk16 from the Mk48 prime mover according to the operator's manual.

(b) Secure all hoses with tape or nylon cord.

(c) Tape all lights, reflectors, and glass fixtures.

(d) Make sure all tool compartment doors are secured shut.

(2) **Rigging.** Rig the load according to the steps in Figure 3-10.

(3) **Hookup.** The hookup team stands on top of the fifth-wheel adapter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

MK17, TRAILER, DROP-SIDE CARGO

3-12. The Mk17 drop-side cargo trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-11 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-11. Mk17 Drop-Side Cargo Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| Mk17 Drop-Side Cargo Trailer | 23,000 | 40K | 3/13 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Disengage the Mk17 from the Mk48 prime mover according to the operator's manual.

(b) Secure all hoses with tape or nylon cord.

(c) Tape all lights, reflectors, and glass fixtures.

(d) Remove the safety retainer pins from the lifting eyelets located under the doors in the bed of the trailer. Unscrew the lifting eyelets from their stored position and reinsert the lifting eyelets so that the eyelet portion is accessible from the bed of the trailer through the access doors. Screw the lifting eyelets all the way in and back out one full turn. Reinsert the safety retainer pins to prevent the lifting eyelets from backing out in flight.

(e) Make sure all tool compartment doors are secured shut.

(2) **Rigging.** Rig the load according to the steps in Figure 3-11.

M116A2 TRAILER WITH ANTENNA GROUPS, AS-3954/TRC (2 EACH) (USMC)

3-13. The M116A2 trailer with antenna groups, AS-3954/TRC (2 each) is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-12 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-12. M116A2 Trailer with Antenna Groups, AS-3954/TRC (2 each)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M116A2 Trailer with Antenna Groups, AS-3954/TRC (2 each) | 3,230 | 15K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose items inside the trailer with tape or Type III nylon cord.

(b) Secure all covers in their proper place. Do not remove the tarps. The tarps protect the antennae.

(c) Secure all chains, hoses, and cables with Type III nylon cord.

(d) Engage both trailer parking brakes and ensure the front support leg is down.

(2) **Rigging.** Rig the load according to the steps in Figure 3-12.

(3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicop-

DRAFT

M116A2 TRAILER WITH AN/TPQ-36 FIREFINDER ANTENNA TRANSCEIVER GROUP (ATG)

3-14. The M116A2 trailer with AN/TPQ-36 Firefinder antenna transceiver group is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-13 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-13. M116A2 Trailer with AN/TPQ-36 Firefinder Antenna Transceiver Group

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M116A2 Trailer with AN/TPQ-36 Firefinder Antenna Transceiver Group | 3,320 | 10K | 3/25 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).
- (3) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.
- (8) Padding, Cellulose.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Connect one additional chain length to each chain of the sling set with the coupling link.
 - (b) Engage the trailer parking brake.
 - (c) Secure the doors closed with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Place the radar set in the travel mode and secure the antenna cover to the antenna with tape.

(2) **Rigging.** Rig the load according to the steps in Figure 3-13.

(3) **Hookup.** The hookup team stands on top of the ATG trailer frame. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the ATG and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Notes: 1. Do not stand on the radar panel during hookup.

2. Due to limited clearance between the helicopter and the top of the ATG, the hookup team may want to use an extended sling system on this load and hook this load from the ground or the bed of a truck. Polyester round slings are recommended for use as vertical pendants. The extended sling legs may not be ideal for flying this load "nap of the earth" in a tactical environment.

3. Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Note: When releasing the apex fitting after setting the load down, the helicopter pilot should hover to the side to prevent damaging the radar panel.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the trailer (but not on top of the radar panel). Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 under the trailer A-frame just aft of the lunette and through the keeper from left to right on the left side of the drawbar. Place the correct link from Table 3-13 in the grab hook. Repeat with sling leg 2 on the right side of the drawbar.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer. Place the correct link from Table 3-13 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure the excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

M116A2 TRAILER WITH M894 18,000-BTU AIR CONDITIONER AND MEP-003A GENERATOR

3-15. The M116A2 Trailer with M894 18,000-BTU air conditioner and MEP-003A generator is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-14 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-14. M116A2 Trailer with M894 18,000-BTU Air Conditioner and MEP-003A Generator

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M116A2 Trailer with M894 18,000-BTU Air Conditioner and MEP-003A Generator | 2,620 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Secure all lids, doors, and caps with tape or Type III nylon cord.
 - (b) Secure all chains, hoses, and cables with Type III nylon cord.
 - (c) Engage both trailer parking brakes and ensure the front support leg is down.
- (2) **Rigging.** Rig the load according to the steps in Figure 3-14.
- (3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is as-

M116A2 TRAILER, SINGLE CHANNEL OBJECTIVE TACTICAL TERMINAL (SCOTT)

3-16. The M116A2 trailer, single channel objective tactical terminal is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-15 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-15. M116A2 Trailer, Single Channel Objective Tactical Terminal

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M116A2 Trailer, Single Channel Objective Tactical Terminal | 2,830 | 10K | 18/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down, cargo, CGU-1/B.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Secure all cargo in the bed of the trailer with tie-down straps.
 - (b) Remove and secure nylon tarps to upper trailer structure with tape or Type III nylon cord.
 - (c) Secure all chains, hoses, and cables to the drawbar with Type III nylon cord.
 - (d) Engage both hand brakes.
- (2) **Rigging.** Rig the load according to the steps in Figure 3-15.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

CAUTION

Brief the pilots to hover to the side of the trailer prior to jettisoning the apex fitting during landing operations.

(3) **Hookup.** The hookup team stands on the trailer chassis. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 3-15. M116A2 Trailer, Single Channel Objective Tactical Terminal

DRAFT

RIGGING STEPS

Note: This trailer will fly with the front end (trailer lunette) aft.

1. Position apex fitting on top of the trailer . Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Route sling leg 1 through the trailer canopy structure to the side of the trailer and through the front left sling guide on the horizontal reflector support tube. Repeat with sling leg 2 and the right front sling guide provision.
3. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer. Place the correct link from Table 3-15 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure the excess chain with Type III nylon cord.
4. Route sling leg 3 through the trailer canopy structure to the side of the trailer and through the rear left sling guide on the horizontal reflector support tube. Repeat with sling leg 4 and the right rear sling guide provision.
5. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer. Place the correct link from Table 3-15 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
6. Pad the chain and/or trailer support where there is chain contact.
7. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.

Figure 3-15. M116A2 Trailer, Single Channel Objective Tactical Terminal (Continued)

M116A3 TRAILER WITH OE334 ANTENNA COUPLER GROUP

3-17. The M116A3 trailer with OE334 antenna coupler group is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-16 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-16. M116A3 Trailer with OE334 Antenna Coupler Group

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M116A3 Trailer with OE334 Antenna Coupler Group | 3,280 | 15K | 3/15 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Lower and lock the rear landing leg in place.
- (b) Lower the front jack on the lunette as close to the ground as possible.
- (c) Secure the light cable to the top of the drawbar with Type III nylon cord.
- (d) Engage both parking brakes.

(2) Rigging. Rig the load according to the steps in Figure 3-16.

(3) Hookup. The hookup team stands next to the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the trailer . Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Pass the chain end of sling leg 1 through the right inner cable reel assembly at the front of the trailer. Loop the chain end of sling leg 1 through the left front multipurpose provision located on the front of the trailer. Place the correct link from Table 3-16 in the grab hook. Repeat with sling leg 2 through the right multipurpose provision.
3. Route the chain end of sling leg 3 through the left rear multipurpose provision located on the rear of the trailer. Place the correct link from Table 3-16 in the grab hook. Repeat with sling leg 4 through the right rear multipurpose provision. Secure the excess chain with Type III nylon cord.
4. Pad the front chains where the chains contact the generator and reels.
5. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

M105A3 TRAILER

3-18. The M105A3 trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-17 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-17. M105A3 Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------|---------------------|-----------|-----------------------|
| M105A3 Trailer (Empty) | 2,600 | 10K | 3/40 |
| M105A3 Trailer (Loaded) | 5,580 | 10K | 3/40 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Raise the trailer's jack stand so the pintle is on the ground.
- (b) Engage the hand brakes.
- (c) Tape or tie the light cable, safety chains, and brake hose to the top of the drawbar.

(2) **Rigging.** Rig the load according to the steps in Figure 3-17.

(3) **Hookup.** The hookup team stands on the trailer bed. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting beside the trailer. Route outer sling legs 1 and 2 to the front of the trailer (tailgate end) and inner sling legs 3 and 4 to the rear (lunette end). Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision of the trailer. Place the correct link from Table 3-17 in the grab hook. Repeat with sling leg 2 through the right front lift provision.
3. Route the chain end of sling leg 3 through the left rear lift provision (lunette end). Place the correct link from Table 3-17 in the grab hook. Repeat with sling leg 4 through the right rear lift provision (lunette end). Secure excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

HIGH MOBILITY TRAILERS (HMT), M1101/M1102

3-19. The M1101/M1102 high mobility trailers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-18 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-18. M1101/M1102 High Mobility Trailers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| High Mobility Trailer (Light), M1101 | 3,400 | 10K | 20/3 |
| High Mobility Trailer (Light), M1102 | 4,200 | 10K | 20/3 |
| Tactical Messaging System (TMS) Cargo Carrier, M1102 | 4,200 | 10K | 20/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down, cargo, CGU-1/B or suitable tie-down lashings.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove the two rear stabilizer legs from their storage location on the front of the trailer. Place the lower support section in the fully retracted position. Install the stabilizer legs on the rear of the trailer.

(b) Install the front jack and lower the lunette as close to the ground as possible.

(c) Remove the canvas cover and racks from the trailer. Place these items in the bed of the trailer. Place the accompanying load on top of the canvas cover and secure with the tie-down lashings.

(d) Secure the light cable to the top of the drawbar with Type III

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

nylon cord.

(e) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 3-18.

(3) **Hookup.** The hookup team stands on the drawbar or in the bed of the trailer (if possible). The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

The hookup team should dismount the trailer towards the lunette to keep the trailer from tipping towards the rear.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 3-18. M1101/M1102 High Mobility Trailers

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

Note: This trailer will fly with the front end (trailer lunette) aft.

1. Position apex fitting on top of the trailer . Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer. Place the correct link from Table 3-18 in the grab hook. Repeat with sling leg 2 through the right side front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer. Place the correct link from Table 3-18 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Pad the chain at and below where the chain contacts the trailer walls.
5. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.

Figure 3-18. M1101/M1102 High Mobility Trailers (Continued)

HMT TRAILER WITH SENTINEL AN/MPQ-64 ANTENNA TRANSMITTER GROUP (ATG)

3-20. The HMT trailer with Sentinel AN/MPQ-64 antenna transmitter group is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-19 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-19. HMT Trailer With Sentinel AN/MPQ-64 Antenna Transmitter Group

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Sentinel AN/MPQ-64 Antenna Transmitter Group | 3,900 | 10K | 3/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Plywood, 3/4-inch x 48-inches x 72-inches.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(6) Reach pendant, 11K or 25K.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Partially retract all landing legs. Secure in position and tie with Type III nylon cord.

(b) Engage the hand brakes.

(c) Tape or tie the light cable and brake hose to the top of the drawbar.

(d) Secure all loose equipment, lids, and caps with tape or Type III nylon cord.

(e) Cut pieces of plywood to cover the antenna boxes on top of the ATG. Drill holes in the plywood where necessary to secure the plywood with Type III nylon cord. Ensure the plywood is adequately secured.

(f) Pad the slings where they make contact with the load.

(2) Rigging. Rig the load according to the steps in Figure 3-19.

(3) Hookup. The hookup team stands on the wheel well of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

Advise the air crew to hover to the side of the load before releasing the apex to prevent damaging the load.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Attach a reach pendant to the apex fitting. Position the reach pendant and apex fitting on top of the ATG. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer. Place the correct link from Table 3-19 in the grab hook. Repeat with sling leg 2 through the right front lift provision.
3. Cluster and tie (breakaway technique) sling legs 1 and 2 together at 3-foot intervals to prevent entanglement during hookup and lift-off.
4. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 3-19 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure excess chain with Type III nylon cord.
5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

HMT TRAILER WITH REMOTE LANDING SITE TOWER (RLST)

3-21. The HMT Trailer with remote landing site tower is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-20 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-20. HMT Trailer With Remote Landing Site Tower

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| HMT Trailer With Remote Landing Site Tower | 3,600 | 15K | 3/15 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (15,000-pound capacity).

(a) Chain length, part number 34080-4, from 15,000-pound capacity sling sets (8 each).

(b) Coupling link, part number 31611, from 15,000-pound capacity sling sets (8 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Engage the hand brakes.

(b) Secure loose fittings, wires, and cables with Type III nylon cord. Tape the trailer lights and the cable on the spool.

(c) Retract the jack wheel to the lowest position. Position the rear stabilizers in the highest position.

(d) Place the cover over the aft rack and secure the loose ends of the straps with tape.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Extend the sling leg chains by connecting two additional chain lengths to each chain using the coupling links.

(2) **Rigging.** Rig the load according to the steps in Figure 3-20.

(3) **Hookup.** The hookup team stands beside the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

Ensure the sling legs do not snag on the antenna or the pole at the corner of the trailer.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| RIGGING STEPS |
|--|
| <p>1. Position the web ring beside the trailer. Route outer sling legs 1 and 2 to the aft of the trailer and inner sling legs 3 and 4 to the front (lunette end). Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision of the trailer. Place the correct link from Table 3-20 in the grab hook. Repeat with sling leg 2 through the right front lift provision.</p> |
| <p>3. Route the chain end of sling leg 3 through the left rear lift provision (lunette end). Place the correct link from Table 3-20 in the grab hook. Repeat with sling leg 4 through the right rear lift provision (lunette end). Secure excess chain with Type III nylon cord.</p> |
| <p>4. Pad the sling legs or chains where they make contact with the load.</p> |
| <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.</p> |

Figure 3-20. HMT Trailer With Remote Landing Site Tower (Continued)

HMT TRAILER WITH LINE OF SIGHT ANTI-TANK (LOSAT) RESUPPLY TRAILER

3-22. The LOSAT resupply trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-21 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-21. LOSAT Resupply Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Line of Sight Anti-Tank Resupply Trailer with 8 Missiles and 4 Crew Doors from the LOSAT Vehicle | 4,230 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down, cargo, CGU-1B or suitable tie-down lashings.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (5) Tie-down, cargo, CGU-1B or suitable tie-down lashings.
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding
- (7) Webbing, tubular nylon, 1/2-inch.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Engage the hand brakes.
- (b) Secure safety chains and brake hoses to the top of the draw-bar with Type III nylon cord.
- (c) Secure all equipment with Type III nylon cord.
- (d) Place the four crew doors on the sides of the trailer and secure with CGU-1B tie-down straps and 1/2-inch tubular nylon webbing.

(2) Rigging. Rig the load according to the steps in Figure 3-21.

(3) Hookup. The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the trailer . Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer. Place the correct link from Table 3-21 in the grab hook. Repeat with sling leg 2 through the right side front lift provision.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer. Place the correct link from Table 3-21 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Pad the chain where the chain contacts the doors and missiles.
5. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.

Figure 3-21. LOSAT Resupply Trailer

DRAFT

MKT-90/MKT-95/MKT-99 FIELD KITCHEN TRAILER

3-23. The MKT-90/MKT-95/MKT-99 field kitchen trailers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-22 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-22. MKT-90/MKT-95/MKT-99 Field Kitchen Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------|---------------------|-----------|-----------------------|
| MKT-90 | 5,730 | 10K | 3/11 |
| MKT-95 | 6,731 | 10K | 3/11 |
| MKT-99 | 6,731 | 10K | 3/11 |

Note: Only MKT-90 versions equipped with internal spreader bars (PIP No. 1-85-08-2802) may be sling loaded. The data plate next to the item data plate must contain an etched helicopter.

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0615, from a 10,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-pound capacity sling set with coupling links.

(b) Secure all items in their proper storage location before closing the unit.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Configure the MKT for ground transportation according to the operator's instructions.

(d) Retract and stow all landing legs. Secure each landing leg with Type III nylon cord.

(e) Lower the lunette as far as possible by adjusting the landing wheel hand screw. Do not retract the landing wheel.

(f) Secure all chains, hoses, and cables with Type III nylon cord to the trailer drawbar.

(g) Engage both trailer parking brakes and ensure the front support leg is down.

(h) Secure loose canvas with tape.

(2) Rigging. Rig the load according to the steps in Figure 3-22.

(3) Hookup. The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

CAUTION

While on the roof of the trailer, stay in front of the trailer axle. Moving behind the axle may cause the trailer to tip rearwards, causing possible injury to personnel and damage to the load.

1. Position the apex fitting on the roof of the trailer. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located in the trailer frame. Place the correct link from Table 3-22 in the grab hook. Repeat with sling leg 2 through the right front lift provision. The lift provisions are in the form of cutouts in the frame.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer frame. Place the correct link from Table 3-22 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Secure all excess chain with tape or Type III nylon cord.
5. Pad each sling where it contacts the edge of the roof. Secure the padding with tape or Type III nylon cord.
6. Cluster and tie or tape (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.

HYDRAULIC SYSTEM TEST AND REPAIR UNIT (HSTRU)

3-24. The hydraulic system test and repair unit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-23 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-23. Hydraulic System Test and Repair Unit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| Hydraulic System Test and Repair Unit | 2,878 | 10K | 16/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Safety tie the covers in the down position with Type III nylon cord.

(b) Secure all chains, hoses, and cables with Type III nylon cord to the trailer drawbar.

(c) Engage both trailer parking brakes and ensure the front support leg is down.

(2) Rigging. Rig the load according to the steps in Figure 3-23.

(3) Hookup. The hookup team stands on top of the HSTRU. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the trailer roof. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the HSTRU roof. Place the correct link from Table 3-23 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the HSTRU roof. Place the correct link from Table 3-23 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.

DESERT OPERATION TRAILER (DOT) WITH DESERT OPERATION MOTORCYCLE (DOM)

3-25. The desert operation trailer with desert operation motorcycle is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-24 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-24. Desert Operation Trailer with Desert Operation Motorcycle

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Desert Operation Trailer with Desert Operation Motorcycle | 3,300 | 10K | 20/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, cargo, CGU-1/B (4 each).
- (7) Canvas to cover the motorcycle.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Secure the motorcycle to the trailer using standard mounting methods or using at least four (4) CGU-1/B tie-down straps.
 - (b) Secure the tailgate in the up position.
 - (c) Secure all chains and hoses with tape or Type III nylon cord.
 - (d) Engage the parking brake and place the front support leg in the down position.
 - (d) Safety the spare tire with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Pad the motorcycle handlebars and luggage rack with felt padding.

(f) Cover the motorcycle with canvas and secure the canvas with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 3-24.

(3) **Hookup.** The hookup team stands on the trailer fender or in the trailer bed. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M332 AMMUNITION TRAILER, 1 1/2-TON

3-26. The M332, 1 1/2-ton ammunition trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-25 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-25. M332, 1 1/2-Ton Ammunition Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------------|---------------------|-----------|-----------------------|
| M332 Ammunition Trailer, 1 1/2-Ton | 5,780 | 10K | 10/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose items, lids, and caps with tape or Type III nylon cord.

(b) Engage the hand brakes.

(c) Tape or tie the light cable, safety chains, and brake hose to the top of the drawbar.

(d) Place the telescoping leg in the down position.

(2) **Rigging.** Rig the load according to the steps in Figure 3-25.

(3) **Hookup.** The hookup team stands on the trailer bed. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

AS-4492/TSC, LIGHTWEIGHT, HIGH GAIN, X-BAND ANTENNA (LHGXA) TRAILER

3-27. The AS-4492/TSC, lightweight, high gain, X-band antenna trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-26 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-26. AS-4492/TSC, Lightweight, High Gain, X-band Antenna Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| AS-4492/TSC, Lightweight, High Gain, X-band Antenna Trailer | 3,820 | 10K | 60/10 |

WARNING

DO NOT SLING LOAD THE LHGXA IN THE DUAL POINT CONFIGURATION AS STRUCTURAL DAMAGE MAY OCCUR TO THE LOAD.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Additional apex fitting (10,000-pound capacity).
- (3) Polyester round sling, green, 17-foot (4,200-pound capacity) used as a vertical pendant.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Prepare the LHGXA for sling loading in accordance with the operator's manual.

(b) Install the shackles and lift cables in accordance with the operator's manual.

(c) Tape or tie the light cable to the top of the drawbar.

(d) Fully retract the rear trailer jacks. Lower the tongue jack to the position nearest the ground.

(e) Engage the parking brake.

(2) Rigging. Rig the load according to the steps in Figure 3-26.

(3) Hookup. The hookup team stands beside the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

Note: This load is flown with the lunette facing aft at an approximate 12 degree angle.

1. Position the apex fitting beside the trailer. Route outer sling legs 1 and 2 to the front (lunette end) of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 3-26 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 3-26 in the grab hook. Repeat with sling leg 4 through the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Pad each chain with felt padding. Secure the padding with tape.
5. Install a 17-foot polyester round sling on the bolt end of the apex fitting on the sling set. Tape the eye of the sling to prevent the apex fitting from rotating through the eye.
6. Place the free end of the 17-foot polyester round sling on the bell portion of the additional apex fitting. Tape the eye of the sling to prevent the apex fitting from rotating through the eye.
7. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

M1112 400-GALLON WATER TRAILER

3-28. The M1112 400-gallon water trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-27 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-27. M1112 400-Gallon Water Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| M1112 400 Gallon Water Trailer, Empty | 3,860 | 10K | 3/3 |

CAUTION

This load is certified only when empty. Do not lift the trailer loaded.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose chains, hoses, and cables to the trailer drawbar with tape or Type III nylon cord.

(b) Ensure the tongue wheel is in the down and locked position.

(c) Close and secure the tank lid.

(d) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 3-27.

(3) **Hookup.** The hookup team stands on the trailer fenders or the

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

front of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 3-27. M1112 400 Gallon Water Trailer

DRAFT

M1082 LIGHT MEDIUM TACTICAL VEHICLE (LMTV) AND M1095 MEDIUM TACTICAL VEHICLE (MTV) TRAILERS

3-29. The M1082 light medium tactical vehicle and M1095 medium tactical vehicle trailers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 3-28 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-28. M1082 Light Medium Tactical Vehicle and M1095 Medium Tactical Vehicle Trailers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------|---------------------|-----------|-----------------------|
| M1082 LMTV Trailer | 11,510 | 25K | 10/3 |
| M1095 MTVTrailer | 15,780 | 25K | 10/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the trailer's jack stand in the down position so the trailer sets level.

(b) Secure all loose chains, hoses, and cables to the trailer drawbar with tape or Type III nylon cord.

(c) Engage the parking brake.

(d) Extend the lift provision bars to the widest position and lock into place with the locking pins. Secure the locking pins in place with tape.

Note: Ensure the lift eyes on the lift provision bars are perpendicular to the ground.

(e) Remove the side and end panels and stow in the storage boxes

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

under the bed of the trailer. Secure the storage latches with tape.

(2) Rigging. Rig the load according to the steps in Figure 3-27.

(3) Hookup. The hookup teams stand in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

SMALL PORTABLE EXPEDITIONARY AEROMEDICAL RAPID RESPONSE (SPEARR) TRAILER

3-30. The small portable expeditionary aeromedical rapid response trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-29 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-29. Small Portable Expeditionary Aeromedical Rapid Response Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-------------------------|
| Small Portable Expeditionary Aeromedical Rapid Response Trailer | 6,100 | 10K | Listed in Rigging Steps |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the trailer's jack stand in the down position so the lunette is near the ground.

(b) Secure all loose chains, hoses, and cables to the trailer drawbar with tape or Type III nylon cord.

(c) Secure all lids, doors, and caps with tape or Type III nylon cord.

(d) Ensure the stabilizer legs are retracted and stowed.

(e) Release the curb side lift provisions from the stowage straps. Secure the stowage straps to the trailer with tape.

(2) **Rigging.** Rig the load according to the steps in Figure 3-29.

(3) **Hookup.** The hookup teams stand on the roof of the trailer. The

DRAFT

MINIMUM OPERATING STRIP LIGHTING SYSTEM (MOSLS)

3-31. The minimum operating strip lighting system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 3-30 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-30. Minimum Operating Strip Lighting System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Minimum Operating Strip Lighting System with Spreader Bars | 3,350 | 15K | 10/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Padding, cellulose.

(6) Spreader bar, HMMWV (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the trailer's jack stand in the down position so the lunette is near the ground.

(b) Secure all loose chains, hoses, and cables to the trailer drawbar with tape or Type III nylon cord.

(c) Secure all lids, doors, and caps with tape or Type III nylon cord.

(d) Ensure the stabilizer legs are retracted and stowed.

(e) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 3-30.

(3) **Hookup.** The hookup teams stand on the roof of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting on the cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Note: This load is flown with the rear of the trailer facing forward.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the vertical left front lift provision located on the left front corner of the trailer (lunette end). Place the correct link from Table 3-30 in the grab hook. Repeat with sling leg 2 through the vertical right front lift provision.
3. Loop the chain end of sling leg 3 through the vertical left rear lift provision located on the left rear corner of the trailer. Place the correct link from Table 3-30 in the grab hook. Repeat with sling leg 4 through the vertical right rear lift provision.
4. Secure all excess chain with Type III nylon cord.
5. Extend the sling set above the trailer. Position the spreader bar between the front slings 6-inches above the trailer roof. Secure the spreader bar to the slings with Type III nylon cord and tape. Repeat the procedure with the second spreader bar and the rear slings.
6. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.

ASSAULT COMMAND POST WITH HIGH MOBILITY WHEEL SET

3-32. The assault command post with high mobility wheel set is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-31 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-31. Assault Command Post with High Mobility Wheel Set

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Assault Command Post, Housed in Expandable Light Airmobile Shelter with High Speed Mobile Wheel Set | 13,240 | 25K | ECU is Front 3/3 |
| Upgraded, Assault Command Post, Housed in Expandable Light Airmobile Shelter with High Speed Mobile Wheel Set | 14,600 | 25K | ECU is Front 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure manufacturer approved tiedown assemblies (2 each) are in place between the shelter and each wheel set.

(b) Remove all antennas and secure inside the shelter.

(c) Secure all lids, doors, and caps with tape or Type III nylon cord.

(d) Secure all loose equipment inside the shelter with tape, lashings, or Type III nylon cord.

(e) Secure the tow bar in the up position.

(2) **Rigging.** Rig the load according to the steps in Figure 3-31.

(3) **Hookup.** The hookup team stands on the roof of the shelter. The static wand person discharges the static electricity with the static wand. The

DRAFT

TRAILER SUPPORT SYSTEM WITH EXPEDITIONARY SHELTER

3-33. The trailer support system with expeditionary shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 3-32 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 3-32. Trailer Support System with Expeditionary Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Trailer Support System (TSS 2000655) on Crash-Out-Package System (COPS) Trailer with Base-X Expeditionary Shelter | 4,320 | 10K | 20/5 |

Caution

The fuel tank must have the modified cap to prevent fuel from leaking through the fuel cap vent. If the cap is not modified the tank must be drained.

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, NSN 4010-01-231-3388, from a 10,000-pound sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Spreader bar assembly (component of M996/M997 HMMWV ambulance)(NSN 4910-01-313-8839)(2 each).

(6) Strap, cargo tiedown, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000-pound capacity sling set with coupling links.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (b) Engage both trailer parking brakes.
- (c) Secure all chains, hoses, and cables with Type III nylon cord to the trailer drawbar.
- (d) Secure tents and all loose equipment with CGU-1/B cargo tiedown straps.
- (e) Close and secure all doors, latches, and caps with tape or Type III nylon cord.
- (f) Secure or remove and stow the intake duct cover.
- (g) Fully retract the stabilizer legs.
- (h) Lower the front jack so the lunette is close to the ground.

(2) **Rigging.** Rig the load according to the steps in Figure 3-32.

(3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Lower and fully retract the trailer's rear landing legs. Secure the stowage straps with tape or Type III nylon cord.

(b) Ensure the rear lift provisions are positioned above the rear trailer landing legs.

(c) Lower the front jack so the lunette is close to the ground and secure with Type III nylon cord.

(d) Close and secure all doors, latches, and caps with tape or Type III nylon cord.

(e) Secure the beam support segments to the rails with Type III nylon cord.

(f) Secure the shuttle in the stowed position.

(g) Engage both trailer parking brakes.

(h) Secure all chains, hoses, and cables with Type III nylon cord to the trailer drawbar.

(2) Rigging. Rig the load according to the steps in Figure 3-33.

(3) Hookup. The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load. Ensure the sling legs are routed between the launcher rails.
2. Loop the chain end of sling leg 1 through the left front lift provision located in the trailer frame. Place the correct link from Table 3-33 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer frame. Place the correct link from Table 3-33 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Place the nylon rope of sling legs 1 and 3 in the guides on the end of spreader bar 1 and install the spreader bar guide retainer pins and keepers. Lay the spreader bar on left top of the load. Repeat with sling legs 2 and 4 with spreader bar 2 on the right side of the load.
5. Raise the chain portion of each leg until the chain is tight and secure each chain to the launch rail with Type I 1/4-inch cotton webbing.
6. Cluster and tie (breakaway technique) all sling legs together on top of the launcher rails to prevent entanglement during hookup and lift-off.

Chapter 4

Certified Single-Point Rigging Procedures For Trailers With Mounted Generators

INTRODUCTION

4-1. This chapter contains rigging procedures for single-point trailer loads with mounted generators that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for trailer loads with mounted generators are in this section. Paragraphs 4-2 through 4-10 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

M353 TRAILER CHASIS WITH MOUNTED GENERATORS

4-2. The M353 trailer chassis with mounted generators is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 4-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 4-1. M353 Trailer Chassis with Mounted Generators

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------|---------------------|-----------|-----------------------|
| M353 Trailer Chassis | 2,720 | 10K | 20/3 |
| MEP-005A | 6,220 | 10K | 20/3 |
| MEP-006A | 7,720 | 10K | 20/3 |
| MEP-0114A | 6,220 | 10K | 20/3 |
| MEP-0115A | 6,320 | 10K | 20/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) Engage both hand brakes.
- (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (c) Secure all lids, doors, and caps with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 4-1.

(3) **Hookup.** The hookup team stands on top of the generator. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 4-1. M353 Trailer Chassis with Mounted Generators

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer frame. Place the correct link from Table 4-1 in the grab hook. Repeat with sling leg 2 through the right side, front lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer frame. Place the correct link from Table 4-1 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.</p> |

Figure 4-1. M353 Trailer Chasis with Mounted Generators (Continued)

M200A1 TRAILER-MOUNTED POWER UNITS, GENERATORS, AND POWER PLANTS

4-3. The M200A1 Trailer-Mounted Power Units, Generators, and Power Plants are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 4-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 4-2. M200A1 Trailer-Mounted Power Units, Generators, and Power Plants

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Generator set, 15 kW, 6113 | 5,119 | 10K | 3/23 |
| Generator set, 30 kW, CE301ACWK1 | 5,625 | 10K | 3/28 |
| Generator set, 45 kW, 52300 | 6,885 | 10K | 3/30 |
| Generator set, 60 kW, MEP-006A | 7,347 | 10K | 3/33 |
| AN/MJQ-12A, Unit A, 60 kW, 50/60 Hz Power Unit with MEP 006A, 60 kW, 50/60 Hz, generator set with switch box | 8,060 | 10K | 10/3 |
| AN/MJQ-12A, Unit B, 60 kW, 50/60 Hz Power Unit with MEP 806A, 60 kW, 50/60 Hz, generator set (no switch box) | 7,980 | 10K | 10/3 |
| AN/MJQ-39, Unit A, 15 kW, 400 Hz Power Unit with MEP 814A, 15 kW, 400 Hz, generator set with switch box | 5,255 | 10K | 3/3 |
| AN/MJQ-39, Unit B, 15 kW, 400 Hz Power Unit with MEP 814A, 15 kW, 400 Hz, generator set (no switch box) | 5,255 | 10K | 3/3 |

DRAFT

| PU-805, 60 kW, 50/60 Hz Power Unit with MEP 806A, 60 kW, 50/60 Hz, generator set | 7,120 | 10K | 3/3 |
| PU-806, 60 kW, 400 Hz Power Unit with MEP 816A, 60 kW, 400 Hz, generator set | 7,215 | 10K | 3/3 |
| PU-794/G Regency Net Power Unit | 6,600 | 10K | 3/18 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Lower the lunette as far as possible.
- (b) Engage both hand brakes.
- (c) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (d) Secure all lids, doors, and caps with tape or type III nylon cord.
- (e) Secure the fire extinguisher (if installed) with Type III nylon cord.
- (f) Secure the landing legs in the up position with the safety pins. Secure the safety pins with tape.
- (g) Place additional cargo as close to the center of the trailer as possible. The cargo must not contact the sling legs during lift-off or flight.

Note: The load must not weigh more than the maximum allowable weight during sling load operations.

(2) Rigging. Rig the load according to the steps in Figure 4-2.

(3) Hookup. The hookup team stands on top of the generator. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front of the trailer frame. Place the correct link from Table 4-2 in the grab hook. Repeat with sling leg 2 through the right side, front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer frame. Place the correct link from Table 4-2 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the roof to prevent entanglement during hookup and lift-off.

Figure 4-2. M200A1 Trailer-Mounted Power Units, Generators, and Power Plants

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M103A3 TRAILER-MOUNTED POWER UNITS, GENERATORS, AND POWER PLANTS

4-4. The M103A3 trailer-mounted power units, generators, and power plants are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 4-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 4-3. M103A3 Trailer-Mounted Power Units, Generators, and Power Plants

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|-----------|-----------------------|
| AN/MJQ-16 Power Unit, 5 kW, 60 Hz | 5,100 | 10K | 5/10 |
| AN/MJQ-18 Power Unit, 10 kW, 60Hz | 5,765 | 10K | 5/10 |
| AN/MJQ-25 Power Unit, 10 kW, 400 Hz | 5,750 | 10K | 5/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove the canvas top and bows. Secure the top and bows on the generator trailer or coordinate the transportation for the canvas top and bows.

(b) Ensure the fuel tank is less than 3/4 full.

(c) Engage both hand brakes.

(d) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Secure all lids, doors, and caps with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 4-3.

(3) **Hookup.** The hookup person stands on top of the generator. The static wand person stands on the wheel well. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M103A3/A4 TRAILER-MOUNTED POWER UNITS, GENERATORS, AND POWER PLANTS

4-5. The M103A3/A4 trailer-mounted power units, generators, and power plants are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 4-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 4-4. M103A3/A4 Trailer-Mounted Power Units, Generators, and Power Plants

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/MJQ-37 Power Unit with Two (2) MEP-803A, 10kW, 60 Hz, Generator Sets | 4,735 | 10K | 15/3 |
| AN/MJQ-38 Power Unit with Two (2) MEP-813A, 10kW, 400 Hz, Generator Sets | 4,735 | 10K | 15/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Engage both hand brakes.
- (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (c) Secure all lids, doors, and caps with tape or type III nylon cord.
- (d) Ensure the rear lift provisions, located on the rear of the trailer frame, are free to rotate. Secure the pins with tape.
- (e) Place additional cargo as close to the center of the trailer as possible. The cargo must not contact the sling legs during lift-off or flight.

(2) Rigging. Rig the load according to the steps in Figure 4-4.

(3) Hookup. The hookup person stands on top of the generator. The static wand person stands on the wheel well. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

RIGGING STEPS

1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left side of the trailer A-frame. Place the correct link from Table 4-4 in the grab hook. Repeat with sling leg 2 through the right side, front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer frame. Place the correct link from Table 4-4 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Secure the rear lift provisions in the up position to the generator tiedown provisions with Type III nylon cord.
5. Raise the apex fitting above the generators and route the rear slings to the side of the rear generator.
6. Pad the slings in the areas where they contact the generators.
7. Cluster and tie (breakaway technique) the front sling legs together to prevent entanglement during hookup and lift-off. Repeat the procedure for the rear sling legs.

| AN/MJQ-33 Power Unit with Acoustic Suppression Kit, 3 kW | 2,858 | 10K | 7/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (a) Engage both hand brakes.
- (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (c) Secure all lids, doors, and caps with tape or Type III nylon cord.
- (d) Remove the tarp and bows from the trailer and secure in appropriate place on trailer. Secure the tarp and bows with tiedown straps (if required).

(2) **Rigging.** Rig the load according to the steps in Figure 4-5.

(3) **Hookup.** The hookup person stands on top of the generator. The static wand person stands on the wheel well. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| PU-798 10 kW, 60Hz Power Unit with MEP-803A, 10 kW, 60 Hz, Generator Set | 2,860 | 10K | 3/3 |
| PU-799 10 kW, 400 Hz Power Unit with MEP-813A, 10 kW, 400 Hz, Generator Set | 3,160 | 10K | 3/3 |
| PU-801 15 kW, 50/60Hz Power Unit with MEP-804A, 15 kW, 50/60 Hz, Generator Set | 3,160 | 10K | 15/3 |
| AN/MJQ-33 Tactical Quiet Generator (TQG) | 2,100 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Engage both hand brakes.
- (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (c) Secure all lids, doors, and caps with tape or Type III nylon cord.
- (d) Place additional cargo as close to the center of the trailer as possible. Secure the cargo with CGU-1/B tiedown straps. The cargo must not contact the sling legs during lift-off or flight.

(2) **Rigging.** Rig the load according to the steps in Figure 4-6.

(3) **Hookup.** The hookup person stands on top of the generator. The static wand person stands on the wheel well. The static wand person discharges the static electricity with the static wand. The hookup person places the apex

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

CAUTION

DO NOT ADD CARGO TO THE PU-801 GENERATOR SET.

1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front side of the trailer bed. Place the correct link from Table 4-6 in the grab hook. Repeat with sling leg 2 through the right side, front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer bed. Place the correct link from Table 4-6 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Secure the lift provisions in the up position to the generator tiedown provisions with 1/4-inch cotton webbing.
5. Raise the apex fitting above the generators and route the rear slings to the side of the rear generator. Pad the slings in the areas where they contact the tool boxes or the generators.
6. Cluster and tie (breakaway technique) the front sling legs together to prevent entanglement during hookup and lift-off. Repeat the procedure for the rear sling legs.

Figure 4-6. M116A3 Trailer-Mounted Power Units, Generators, and Power Plants

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

HIGH MOBILITY TRAILER (HMT) WITH AN/MJQ-35A POWER PLANT

4-8. The high mobility trailer with AN/MJQ-35A power plant is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 4-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 4-7. High Mobility Trailer with AN/MJQ-35A Power Plant

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|-----------|-----------------------|
| AN/TMQ-35A, 5 kW, 60 Hz Power Plant | 3,540 | 10K | 20/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Engage the parking brake.
 - (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
 - (c) Secure all lids, doors, and caps with tape or type III nylon cord.
 - (d) Place additional cargo on the trailer bed and secure the cargo with CGU-1/B tiedown straps.
 - (e) Install the rear stabilizer legs with the lower support section fully retracted.
 - (f) Lower the front jack so the lunette is close to the ground.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 4-7.

(3) **Hookup.** The hookup team stands on the drawbar or the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer on the lunette end of the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 4-7. High Mobility Trailer with AN/MJQ-35A Power Plant

HIGH MOBILITY TRAILER (HMT) WITH TACTICAL QUIET GENERATOR POWER UNITS

4-9. The high mobility trailer with tactical quiet generator power units is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 4-8 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 4-8. High Mobility Trailer with Tactical Quiet Generator Power Units

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| PU-797A 5 kW, 60 Hz, Power Unit with 802A Generator Set | 2,657 | 10K | 3/15 |
| PU-798A 10 kW, 60 Hz, Power Unit with 803A Generator Set | 2,880 | 10K | 3/15 |
| PU-799A 10 kW, 400 Hz, Power Unit with 813A Generator Set | 2,910 | 10K | 3/15 |
| PU-801 15 kW, 60Hz Power Unit with MEP-804A Generator Set | 3,800 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, CGU/1B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Engage the parking brake.
 - (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
 - (c) Secure all lids, doors, and caps with tape or Type III nylon cord.
 - (d) Place additional cargo on the trailer bed and secure the cargo with CGU-1/B tiedown straps.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Install the rear stabilizer legs with the lower support section fully retracted.

(f) Lower the front jack so the lunette is close to the ground.

(g) Secure the four lift rings on the trailer in the up position to a convenient point on the load with 1/4-inch cotton webbing.

(2) **Rigging.** Rig the load according to the steps in Figure 4-8.

CAUTION

THE ROUTING OF THE SLING LEGS IS REVERSED FROM THE STANDARD ROUTING FOUND IN THIS MANUAL. SLING LEGS 1 AND 2 ARE ROUTED TO THE REAR OF THE TRAILER TO INCREASE THE CLEARANCE BETWEEN THE SLING LEGS AND THE GENERATOR.

(3) **Hookup.** The hookup team stands on the drawbar or the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer on the lunette end of the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the rear of the trailer and inner sling legs 3 and 4 to the front (lunette end). Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left rear lift provision located on the left rear side of the trailer bed. Place the correct link from Table 4-8 in the grab hook. Repeat with sling leg 2 through the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the left front lift provision located on the front of the trailer bed. Place the correct link from Table 4-8 in the grab hook. Repeat with sling leg 4 through the right front lift provision.</p> |
| <p>4. Pad the slings in the areas where they contact the tool boxes or the generators.</p> |
| <p>5. Cluster and tie (breakaway technique) the sling legs together on top of the generator to prevent entanglement during hookup and lift-off.</p> |

Figure 4-8. High Mobility Trailer with Tactical Quiet Generator Power Units (Continued)

HIGH MOBILITY TRAILER (HMT) WITH GENERATOR FOR JOINT SURVEILLANCE TARGET ATTACK RADAR (JSTAR) SYSTEM

4-10. The high mobility trailer with generator for joint surveillance target attack radar system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 4-9 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 4-9. High Mobility Trailer with Generator for Joint Surveillance Target Attack Radar System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Mission Trailer, without Transit Cases | 3.960 | 10K | 10/3 |
| Support Trailer, without Transit Cases | 3.878 | 10K | 10/3 |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(2) Chain length, part number 38850-00053-10, from a 10,000-pound capacity sling set (4 each).

(3) Coupling link, part number 577-0415, from a 10,000-pound capacity sling set (4 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Engage the parking brake.
- (b) Secure safety chains and brake hoses to the top of the drawbar with Type III nylon cord.
- (c) Secure all lids, doors, and caps with tape or Type III nylon cord.
- (d) Remove transit cases which will interfere with the sling legs and store them in the shelter.
- (e) Install the rear stabilizer legs with the lower support section fully retracted.
- (f) Remove the lunette jack and secure in the trailer bed.
- (g) Secure the four lift rings on the trailer in the up position to a convenient point on the load with 1/4-inch cotton webbing.
- (h) Connect one additional chain length to each chain of the sling set with the coupling link.

(2) Rigging. Rig the load according to the steps in Figure 4-9.

(3) Hookup. The hookup team stands in the bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the trailer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the trailer (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front side of the trailer bed. Place the correct link from Table 4-9 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the trailer bed. Place the correct link from Table 4-9 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Pad the slings/chains in the areas where they contact the generators.
5. Cluster and tie (breakaway technique) the sling legs together on top of the generator to prevent entanglement during hookup and lift-off.

Chapter 5

Certified Single-Point Rigging Procedures For Truck And Towed Combinations

INTRODUCTION

5-1. This chapter contains rigging procedures for single-point truck and towed combinations that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for trailer loads with mounted generators are in this section. Paragraphs 5-2 and 5-3 give detailed instructions for rigging loads.

M973/M973E1/M1065/M1066 SMALL UNIT SUPPORT VEHICLE (SUSV)

5-2. The M973/M973E1/M1065/M1066 small unit support vehicle is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 5-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 5-1. M973/M973E1/M1065/M1066 Small Unit Support Vehicle

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---|-----------|-------------------------|
| M973, Cargo, Tracked | Front-6,380 Rear-6,600 Total-12,980 | 25K | Listed in Rigging Steps |
| M973E1, Cargo, Tracked | Front-6,380 Rear-6,600 Total-12,980 | 25K | Listed in Rigging Steps |
| M1065, Command Post, Tracked | Front-6,380 Rear-6,600 Total-12,980 | 25K | Listed in Rigging Steps |
| M1066,Ambulance, Tracked | Front-6,380 Rear-6,600 Total-12,980 | 25K | Listed in Rigging Steps |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity) (2 sets).

(2) Additional chain length, part number 38850-00053-102, from 25,000-pound capacity sling sets (8 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Additional coupling links, part number 664241, from 25,000-pound capacity sling sets (8 each).

(4) Aerial delivery slings, Type XXVI nylon, 4 loop, 20 foot length (2 each) (Used to form 40 foot vertical pendant) (For CH-47 use only).

(5) Apex fitting (25,000-pound capacity) (2 each) (For CH-47 use only).

(6) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(7) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(8) Tie-down strap, CGU/1B (as required).

(9) Cord, nylon, Type III, 550-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all internal cargo and loose items with Type III nylon cord or tie-down straps.

(b) Lock the articulated steering unit with the steering cylinder locks.

(c) Secure all doors, windows, and roof hatches in the closed position.

(d) Tape all lights and glass fixtures including the windshield.

(e) Fold side mirrors inboard and tie or tape as required.

(f) Tape windshield wipers to windshield.

(g) Secure all hoses and cables located between the two cars with tape or nylon cord to avoid entanglement with sling legs.

(h) Screw the lifting eyes in as far as possible while ensuring that they are pointing towards the middle of each car. Tie diagonally opposing rings of each car together (for example, the front right ring to the left rear ring) with Type III nylon cord.

(i) Place the mud flaps in the up position and tape them in place.

(j) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 5-1.

(3) **Hookup.** The helicopter lands near the vehicle. The hookup team crawls under the helicopter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 5-1. Small Unit Support Vehicle

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Assemble the two sling sets as shown in the insert on page 5-3. Note the sling numbering sequences.
2. Route outer sling legs 1 and 2 to the front of the front provisions of the front car. Route inner sling legs 3 and 4 under the roof rack and to the rear provisions of the rear car. Sling legs 1 and 3 must be on the left side of the load.
3. Route sling legs 5 and 6 to the rear provisions of the front car. Route sling legs 7 and 8 to the front provisions of the rear car. Sling legs 5 and 7 must be on the left side of the load.
4. Loop the chain end of sling leg 1 through the left front lift provision of the front car. Add an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **40** in the grab hook. Repeat with sling leg 2 through the right front lift provision of the front car. Secure the excess chain with Type III nylon cord.
5. Route the chain end of sling leg 5 through the left rear lift provision of the front car. Add an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **67** in the grab hook. Repeat with sling leg 6 through the right rear lift provision of the front car. Secure the excess chain with Type III nylon cord.
6. Route the chain end of sling leg 7 through the left front lift provision of the rear car. Add an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **67** in the grab hook. Repeat with sling leg 8 through the right front lift provision of the rear car. Secure the excess chain with Type III nylon cord.
7. Route the chain end of sling leg 3 through the left rear lift provision of the rear car. Add an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **40** in the grab hook. Repeat with sling leg 4 through the right rear lift provision of the rear car. Ensure sling legs 3 and 4 are routed under the roof rack. Secure the excess chain with Type III nylon cord.
8. Cluster and tie (breakaway technique) the sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.
9. When using a CH-47 helicopter, assemble a 40-foot vertical pendant using two 20-foot aerial delivery slings and two 25,000-pound capacity apex fittings. Attach the end of the 40-foot vertical pendant to the top apex fitting of the sling set by removing the bolt from the apex fitting. Insert the looped end of the vertical pendant into the apex fitting and replace the bolt.

Figure 5-1. Small Unit Support Vehicle (Continued)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M1067 FLATBED SMALL UNIT SUPPORT VEHICLE (SUSV)

5-3. The M1067 flatbed small unit support vehicle is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 5-2 is certified for the **CH-47 HELICOPTER ONLY** with suitable lift capacity by the US Army Natick Soldier Center:

Table 5-2. M1067 Flatbed Small Unit Support Vehicle

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---|-----------|-------------------------|
| M1067 Flatbed, Tracked | Front-6,600 Rear-7,150 Total-12,980 | 25K | Listed in Rigging Steps |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity) (2 sets).
- (2) Additional chain length, part number 38850-00053-102, from 25,000-pound capacity sling sets (12 each).
- (3) Additional coupling links, part number 664241, from 25,000-pound capacity sling sets (12 each).
- (4) Aerial delivery slings, Type XXVI nylon, 4 loop, 20 foot length (2 each) (Used to form 40 foot vertical pendant) (For CH-47 use only).
- (5) Apex fitting (25,000-pound capacity) (2 each) (For CH-47 use only).
- (6) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (7) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (8) Tie-down strap, CGU/1B (as required).
- (9) Cord, nylon, Type III, 550-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all internal cargo and loose items with Type III nylon cord or tie-down straps.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Lock the articulated steering unit with the steering cylinder locks.

(c) Secure all doors, windows, and roof hatches in the closed position.

(d) Tape all lights and glass fixtures including the windshield.

(e) Fold side mirrors inboard and tie or tape as required.

(f) Tape windshield wipers to windshield.

(g) Secure all hoses and cables located between the two cars with tape or nylon cord to avoid entanglement with sling legs.

(h) Screw the lifting eyes in as far as possible while ensuring that they are pointing towards the middle of each car. Tie diagonally opposing rings of each car together (for example, the front right ring to the left rear ring) with Type III nylon cord.

(i) Place the mud flaps in the up position and tape them in place.

(j) Cargo in the rear car must be loaded so that it will not make contact with the sling legs and that it is not higher than the sides of the rear car.

(2) Rigging. Rig the load according to the steps in Figure 5-2.

(3) Hookup. The helicopter lands near the vehicle. The hookup team crawls under the helicopter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 5-2. Flatbed Small Unit Support Vehicle

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Assemble the two sling sets as shown on page 5-7. Note the sling numbering sequences.
2. Route outer sling legs 1 and 2 to the front of the front provisions of the front car. Route inner sling legs 3 and 4 to the rear provisions of the rear car. Sling legs 1 and 3 must be on the left side of the load.
3. Route sling legs 5 and 6 to the rear provisions of the front car. Route sling legs 7 and 8 to the front provisions of the rear car. Sling legs 5 and 7 must be on the left side of the load.
4. Loop the chain end of sling leg 1 through the left front lift provision of the front car. Attach an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **40** in the grab hook. Repeat with sling leg 2 through the right front lift provision of the front car. Secure the excess chain with Type III nylon cord.
5. Route the chain end of sling leg 5 through the left rear lift provision of the front car. Attach an additional chain length using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chain. Place link **67** in the grab hook. Repeat with sling leg 6 through the right rear lift provision of the front car. Secure the excess chain with Type III nylon cord.
6. Route the chain end of sling leg 7 through the left front lift provision of the rear car. Attach two additional chain lengths using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chains. Place link **67** in the grab hook. Repeat with sling leg 8 through the right front lift provision of the rear car. Secure the excess chain with Type III nylon cord.
7. Route the chain end of sling leg 3 through the left rear lift provision of the rear car. Attach two additional chain lengths using the coupling links. The chain must be looped through the lifting provision prior to attaching the additional chains. Place link **40** in the grab hook. Repeat with sling leg 4 through the right rear lift provision of the rear car.
8. Cluster and tie or tape (breakaway technique) the sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.
9. Secure legs 7 and 8 to the outside supports of the spare fuel can racks using 1/4-inch cotton webbing to prevent damage to the racks during lift-off.
10. Assemble a 40-foot vertical pendant using two 20-foot aerial delivery slings and two 25,000-pound capacity apex fittings. Attach the end of the 40-foot vertical pendant to the top apex fitting of the sling set by removing the bolt from the apex fitting, inserting the looped end of the vertical pendant into the apex fitting and replacing the bolt.

Figure 5-2. Flatbed Small Unit Support Vehicle (Continued)

DRAFT

Chapter 6

Certified Single-Point Rigging Procedures For Howitzers And Weapons Systems

INTRODUCTION

6-1. This chapter contains rigging procedures for howitzers and weapons systems that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for howitzers and weapons systems are in this section. Paragraphs 6-2 through 6-16 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

M101A1 105-MM HOWITZER, WITH OR WITHOUT A-22 CARGO BAGS

6-2. The M101A1 105-MM howitzer, with or without A-22 cargo bags is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-1. M101A1 105-MM Howitzer, with or without A-22 Cargo Bags

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|--------------------------|--------------------------------|
| M101A1 Howitzer | 4,980 | 10K 15K 25K 40K | 30/30 33/3 12/12 22/3 |
| M101A1 Howitzer with one A-22 Cargo Bag | 7,180 | 10K 15K 25K 40K | 30/30 33/3 12/12 22/3 |
| M101A1 Howitzer with two A-22 Cargo Bags | 9,380 | 10K 15K 25K 40K | 30/30 33/3 12/12 22/3 |
| M101A1 Howitzer with three A-22 Cargo Bags | 11,580 | 10K 15K 25K 40K | 30/30 33/3 12/12 22/3 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000 or 25,000-pound capacity) (USA).
- (2) Sling set (15,000 or 40,000-pound capacity) (USMC).
- (3) Sling leg assembly (2,500-pound capacity) from a 10,000-pound sling set, one per A-22 container.
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (8) Tie-down strap, CGU/1B (as required).
- (9) Bag, Cargo, A-22, as required.
- (10) Apex fitting (10,000-pound capacity), one per A-22 container.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Close and lock the breech.
 - (b) Close and secure the trails. Rotate the lunette to the down position. Secure the trail closing lock handle with Type III nylon cord or tape.
 - (c) Remove and secure the muzzle, breech, and tube covers.
 - (d) Pad or remove all sight mounts.
 - (e) Place the gun section equipment chest and other equipment on the trails and secure it with tie-down straps.
 - (f) Engage one hand brake.
 - (g) Pad the gun tube above the cradle and around the forward edge of the recoil damper assembly. Secure the padding with tape or 1/4-inch cotton webbing.
 - (h) Pad the left and right trails aft of the traveling lock shaft area. Secure the padding with tape or 1/4-inch cotton webbing.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 6-1.

(3) **Hookup.** The hookup team stands on top of the trails or alongside the howitzer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-1. M101A1 105-MM Howitzer, with or without A-22 Cargo Bags

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the breech. Route outer sling legs 1 and 2 to the trails. Route inner sling legs 3 and 4 to the muzzle. Sling legs 1 and 3 must be on the left side of the load.
2. Wrap the chain end of sling leg 1 around the padded area of the left trail. When using the 10,000 or 25,000-pound capacity sling set, make two complete wraps around the left trail. Place the correct link from Table 6-1 in the grab hook. Repeat with sling leg 2 on the right trail. Secure the excess chain with Type III nylon cord.
3. Position the grab hook sling leg 3 on the left side of the gun tube padded area. Wrap the chain end of sling leg 3 one complete turn around the gun tube padded area. Place the correct link from Table 6-1 in the grab hook. Repeat with sling leg 4 with the grab hook on the opposite side of the gun tube. Ensure the chains completely encircle and not just cradle the gun tube.
4. Cluster and tie (breakaway technique) the sling legs together on top of the howitzer to prevent entanglement during hookup and lift-off.
5. Attach the accompanying A-22 (s) by placing an additional apex fitting around the inner chains of sling legs 1 and 2, so the fitting is between the trails. Route the chain end of the additional sling leg through the clevis on the A-22 cargo bag and insert link 3 in the grab hook. Place the other end of the sling leg in the additional apex fitting between the trails. Repeat this procedure for each A-22 cargo bag being lifted.

Figure 6-1. M101A1 105-MM Howitzer, with or without A-22 Cargo Bags (Continued)

M102 105-MM HOWITZER

6-3. The M102 105-MM howitzer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-2. M102 105-MM Howitzer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------|---------------------|-----------|-----------------------|
| M102 Howitzer | 3,330 | 10K | 55/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU/1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the muzzle and sight covers on the howitzer and secure them with Type III nylon cord.

(b) Place the section equipment chest on the end of the trails and secure it with tie-down straps.

(2) **Rigging.** Rig the load according to the steps in Figure 6-2.

(3) **Hookup.** The hookup team stands on top of the trails next to the breech. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-2. M102 105-MM Howitzer

DRAFT

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the breech. Route outer sling legs 1 and 2 to the trails. Route inner sling legs 3 and 4 to the muzzle. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Remove the pin from the lift provision on the left trail. Center the chain end of sling leg 1 in the lift provision. Reinstall the pin in the lift provision. Place the correct link from Table 6-2 in the grab hook. Repeat with sling leg 2 on the right trail. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Remove the pin from the lift provision on the gun tube. Center the chain end of sling legs 3 and 4 in the lift provision. Reinstall the pin in the lift provision. Place the correct link from Table 6-2 in the grab hook. Secure the excess chain with Type III nylon cord.</p> |
| <p>Note: This item may be rigged with only three legs by eliminating one of the sling legs to the gun tube.</p> |
| <p>4. Cluster and tie (breakaway technique) the sling legs together on top of the howitzer to prevent entanglement during hookup and lift-off.</p> |

Figure 6-2. M102 105-MM Howitzer (Continued)

M102 105-MM HOWITZER WITH ONE A-22 CARGO BAG

6-4. The M102 105-MM howitzer with one A-22 cargo bag is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 6-3 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-3. M102 105-MM Howitzer with One A-22 Cargo Bag

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| M102 Howitzer with One A-22 Cargo Bag | 5,660 | 10K | 105/3 |

Note: More than one A-22 may be used with these rigging procedures as long as the total weight of the A-22s does not exceed 2,500 pounds.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Assembly, tie-down (10,000-pound capacity).

(6) Clevis, large

(7) Bag, Cargo, A-22.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the muzzle and sight covers on the howitzer and secure them with Type III nylon cord.

(b) Place the section equipment chest on the end of the trails and secure it with tie-down straps.

(c) Place a large clevis assembly on the ground between the howitzer trails.

(2) **Rigging.** Rig the load according to the steps in Figure 6-3.

(3) **Hookup.** The hookup team stands on top of the trails next to the breech. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Remove one sling leg from the sling set. This sling leg will be used to lift the A-22 cargo bag.
2. Position the apex fitting on top of the breech. Route outer sling legs 1 and 2 to the trails. Route inner sling leg 3 to the muzzle.
3. Remove the pin from the lift provision on the left trail. Center the chain end of sling leg 1 in the lift provision. Reinstall the pin in the lift provision. Place the correct link from Table 6-3 in the grab hook. Repeat with sling leg 2 on the right trail. Secure the excess chain with Type III nylon cord.
4. Remove the pin from the lift provision on the gun tube. Center the chain end of sling leg 3 in the lift provision. Reinstall the pin in the lift provision. Place the correct link from Table 6-3 in the grab hook. Secure the excess chain with Type III nylon cord.
5. Cluster and tie or tape (breakaway technique) the sling legs together on top of the howitzer to prevent entanglement during hookup and lift-off.
6. Attach the large clevis around the inner chains of sling legs 1 and 2, so the clevis is between the trails. Route the chain end of the additional sling leg through the clevis on the A-22 cargo bag and insert link 3 in the grab hook. Route the sling leg under the trail and place eye of the sling leg on the bolt of the large clevis between the trails.

Figure 6-3. M102 105-MM Howitzer with One A-22 Cargo Bag (Continued)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M102 105-MM HOWITZER WITH TWO OR THREE A-22 CARGO BAGS

6-5. The M102 105-MM howitzer with two or three A-22 cargo bags is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-4. M102 105-MM Howitzer with Two or Three A-22 Cargo Bags

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M102 Howitzer with Two A-22 Cargo Bags | 7,560 | 25K | 83/3 |
| M102 Howitzer with Three A-22 Cargo Bags | 9,760 | 25K | 83/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Sling leg assembly (2,500-pound capacity) from a 10,000-pound capacity sling set. One for each A-22 cargo bag.
- (3) Bag, Cargo, A-22, as required.
- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Tie-down strap, cargo, CGU-1/B, as required.
- (7) Clevis, large.
- (8) Clevis, medium (2 each).
- (9) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (10) Fitting, apex (10,000-pound capacity).

c. PERSONNEL. Two persons can prepare and rig this load in 60 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the muzzle and sight covers on the howitzer and secure them with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Place the section equipment chest on the end of the trails and secure it with tie-down straps.

(c) Place a large clevis assembly on the ground between the howitzer trails.

(d) Remove the left trail lift provision pin and place a medium clevis assembly, bell portion down, in the provision. Reinstall the lift provision pin. Repeat the procedures for the lift provision on the right trail.

(2) **Rigging.** Rig the load according to the steps in Figure 6-4.

(3) **Hookup.** The hookup team stands on top of the trails next to the breech. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-4. M102 105-MM Howitzer with Two or Three A-22 Cargo Bags

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the breech. Route outer sling legs 1 and 2 to the trails. Route inner sling leg 3 to the howitzer tube, and sling leg 4 to the area between the trails.</p> |
| <p>2. Route sling leg 1 through the medium clevis installed on the left trail and through the large clevis on the ground. Place the correct link from Table 6-4 in the grab hook. Repeat with sling leg 2 on the right trail. Secure the excess chain with Type III nylon cord</p> |
| <p>3. Remove the pin from the lift provision on the gun tube. Center the chain end of sling leg 3 in the lift provision. Reinstall the pin in the lift provision. Place the correct link from Table 6-4 in the grab hook. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Route the chain end of sling leg 4 through the large clevis on the ground and insert link 56 in the grab hook.</p> |
| <p>5. Cluster and tie (breakaway technique) the sling legs together on top of the howitzer to prevent entanglement during hookup and lift-off.</p> |
| <p>6. Route the chain end of the additional sling legs through the clevis on the A-22 cargo bags, one sling leg for each A-22 cargo bag, and insert link 3 in the grab hook. Route the sling legs under the trail and place the eye of the sling legs on an apex fitting. Attach the apex fitting to the large clevis between the trails.</p> |

Figure 6-4. M102 105-MM Howitzer with Two or Three A-22 Cargo Bags (Continued)

TWO M102 105-MM HOWITZERS

6-6. The two M102 105-MM howitzers are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center :

Table 6-5. Two M102 105-MM Howitzers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Center/Rear |
|--------------------|---------------------|-----------|------------------------------|
| Two M102 Howitzers | 6,660 | 10K | 60/20/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity) with one additional sling leg .
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Tie-down strap, cargo, CGU-1/B.

(6) Pad, energy dissipating, honeycomb, 30- x 36-inch. (A wooden block or four sheets of felt may be substituted for the honeycomb.)

(7) Felt sheet, 24- x 60-inch (2 each) or equivalent padding.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position two howitzers side by side with the wheels approximately 18 inches apart and the barrels facing the same direction.

(b) Place honeycomb padding between the inside wheels of the howitzers. Slide the howitzers together and securely lash the wheels together with the tie-down straps.

(c) Wrap one sheet of felt around each inboard trail. Secure the felt with tape or Type III nylon cord. Ensure the lift provisions are accessible.

(d) Place the muzzle and sight covers on the howitzer and secure them with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 6-5.

(3) **Hookup.** The hookup team stands on top of the padding wrapped around the inside trails. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Add the additional sling leg to the sling set. The outer sling legs are numbers 1 and 2, the inner sling legs are numbers 3 and 4, and the center sling leg is number 5.
2. Position the apex fitting on top of the inner wheels at the center of the load. Route outer sling legs 1 and 2 to the barrels. Route inner sling legs 3 and 4 to the outside trails, and center sling leg 5 to the inside trails of both howitzers. Sling legs 1 and 3 must be connected to the left howitzer.
3. Route the chain end of sling leg 1 through the lift provision on the barrel of the left howitzer. Place the correct link from Table 6-5 in the grab hook. Repeat with sling leg 2 on the right howitzer. Secure the excess chain with Type III nylon cord.
4. Route the chain end of sling leg 3 through the lift provision on the outside trail of the left howitzer. Place the correct link from Table 6-5 in the grab hook. Repeat with sling leg 4 on the right howitzer. Secure the excess chain with Type III nylon cord.
5. Route the chain end of sling leg 5 through the lift provisions on the inside trails of both howitzers. Place the correct link from Table 6-5 in the grab hook. Secure the excess chain with Type III nylon cord.
6. Cluster and tie (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.

Figure 6-5. Two M102 105-MM Howitzers

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

TWO M102 105-MM HOWITZERS WITH ONE, TWO, OR THREE A-22 CARGO BAGS

6-7. The two M102 105-MM howitzers with one, two, or three A-22 cargo bags are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-6 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-6. Two M102 105-MM Howitzers with One, Two, or Three A-22 Cargo Bags

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Center/Rear |
|--|---------------------|-----------|------------------------------|
| Two M102 Howitzers with One A-22 Cargo Bag | 8,860 | 10K | 60/20/3 |
| Two M102 Howitzers with Two A-22 Cargo Bags | 11,060 | 25K | 48/16/3 |
| Two M102 Howitzers with Three A-22 Cargo Bag | 13,260 | 25K | 48/16/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000 or 25,000-pound capacity) with additional sling leg(s) (as required).

(2) Bag, Cargo, A-22, as required.

(3) Apex fitting (10,000 or 25,000-pound capacity) (as required) (1 each).

(4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(5) Cord, nylon, Type III, 550-pound breaking strength.

(6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(7) Tie-down strap, cargo, CGU-1/B.

(8) Pad, energy dissipating, honeycomb, 30- x 36-inch. (A wooden block or four sheets of felt may be substituted for the honeycomb.)

(9) Felt sheet, 24- x 60-inch (2 each) or equivalent padding.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes. Add 15 minutes for each A-22 cargo bag.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position two howitzers side by side with the wheels approximately 18 inches apart and the barrels facing the same direction.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Place honeycomb padding between the inside wheels of the howitzers. Slide the howitzers together and securely lash the wheels together with the tie-down straps.

(c) Wrap one sheet of felt around each inboard trail. Secure the felt with tape or Type III nylon cord. Ensure the lift provisions are accessible.

(d) Place the muzzle and sight covers on the howitzer and secure them with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 6-6.

(3) **Hookup.** The hookup team stands on top of the padding wrapped around the inside trails. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-6. Two M102 105-MM Howitzers with One, Two, or Three A-22 Cargo Bags

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Add the additional sling leg to the sling set. The outer sling legs are numbers 1 and 2, the inner sling legs are numbers 3 and 4, and the center sling leg is number 5.
2. Position the apex fitting on top of the inner wheels at the center of the load. Route outer sling legs 1 and 2 to the barrels. Route inner sling legs 3 and 4 to the outside trails, and center sling leg 5 to the inside trails of both howitzers. Sling legs 1 and 3 must be connected to the left howitzer.
3. Route the chain end of sling leg 1 through the lift provision on the barrel of the left howitzer. Place the correct link from Table 6-6 in the grab hook. Repeat with sling leg 2 on the right howitzer. Secure the excess chain with Type III nylon cord.
4. Route the chain end of sling leg 3 through the lift provision on the outside trail of the left howitzer. Place the correct link from Table 6-6 in the grab hook. Repeat with sling leg 4 on the right howitzer. Secure the excess chain with Type III nylon cord.
5. Route the chain end of sling leg 5 through the lift provisions on the inside trails of both howitzers. Place the correct link from Table 6-6 in the grab hook. Secure the excess chain with Type III nylon cord.
6. Cluster and tie (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.
7. Wrap the chain end of the sling leg(s) around both inboard trails over the felt sheets and insert link 60 in the grab hook. Secure the excess chain with Type III nylon cord.
8. Route the other end of the sling leg(s) under the outside trail of the howitzers and attach the additional apex fitting. Place the medium clevis of the A-22s on the bolt of the apex fitting.

Figure 6-6. Two M102 105-MM Howitzers with One, Two, or Three A-22 Cargo Bags (Continued)

M119/M119A2 105-MM HOWITZER, FOLDED/TOWED POSITION

6-8. The M119/M119A2 105-MM howitzer, folded/towed position are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-7. M119/M119A2 105-MM Howitzer, Folded/Towed Position

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M119/M119A2 Howitzer | 4,400 | 10K | 50/10 |
| M119/M119A2 Howitzer with Accompanying Load | 7,400 | 25K | 40/10 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity) (when moving the howitzer without accompanying load).
- (2) Sling set (25,000-pound capacity) (when moving the howitzer with an accompanying load).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Sling set chain safety clamp.
- (7) Webbing, nylon, tubular, 1/2-inch (as required).
- (8) Line, multiloop, Type XXVI, 4-loop, 3-foot.
- (9) Clevis, suspension, medium (2 each).
- (10) Bag, cargo A-22 or net, cargo (5,000- or 10,000-pound capacity).
- (11) Apex fitting (10,000- or 25,000-pound capacity) (1 each).

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Place the howitzer in the folded/towed position. Ensure the wheel knock-off hub is horizontal. Engage the right wheel parking brake (wheel with the knock-off hub).
- (b) Secure the sight cover to the dial sight with tape or Type III nylon cord.
- (c) Secure the firing platform, hand spike, and jack to the trail assembly with Type III nylon cord.
- (d) Ensure the lunette is in the extended position. Install the towing eye stop (C-clamp) on the lunette and secure in place with its retaining pins, when applicable.
- (e) The sling set chain safety clamp is an additional authorized item. Refer to TM 9-1015-252-10 for NSN and installation information.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(f) When the detachable field spade is attached, ensure the two locking pins are installed and locked. Route and tie a length of Type III nylon cord through the key ring of the cable and around the end of the locking pin.

(2) **Rigging.** Rig the load according to the steps in Figure 6-7.

Note: When an accompanying load requires a sling leg, you may remove and use one of the inner sling legs from the sling set, leaving one sling leg attached to the lunette of the howitzer.

(3) **Hookup.** The hookup team stands beside the howitzer on the trails. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-7. M119/M119A2 105-MM Howitzer, Folded/Towed Position

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

WARNING

When moving the howitzer with an accompanying load, the 25,000-pound capacity sling set must be used.

Accompanying loads must not exceed the weight limits of the cargo net, cargo bag, sling leg, or exceed the lift capability of the helicopter.

1. Position the apex fitting on the barrel over the firing platform. Route outer sling legs 1 and 2 to the wheel hubs. Route inner sling legs 3 and 4 to the lunette. Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 around the left wheel hub. Place the link from Table 6-7 in the grab hook. Pull the chain taut and ensure the chain is centered on the hub. Install the sling set chain safety clamp on the two chain links closest to the top of the wheel hub. If using the 25,000-pound capacity sling set, tie the two chain links together with 1/2-inch tubular nylon webbing. Repeat with sling leg 2 on the right wheel hub. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling legs 3 and 4 through the lunette. Place the correct link from Table 6-7 in the grab hook.
4. Cluster and tie or tape (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.
5. Attach the accompanying load by routing the 3-foot, 4-loop, Type XXVI multiloop line through the eye of the sling leg attached to an A-22 or the apex fitting of a cargo net. Place a medium suspension clevis through the loop on each end of the multiloop line and attach to the provisions located under the howitzer carriage and inboard of the wheels.

Figure 6-7. M119/M119A2 105-MM Howitzer, Folded/Towed Position (Continued)

M119 105-MM HOWITZER, FORWARD/FIRING POSITION

6-9. The M119/M119A2 105-MM howitzer, forward/firing position are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-8 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-8. M119/M119A2 105-MM Howitzer, Forward/Firing Position

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-------------------------|
| M119/M119A2 Howitzer | 4,400 | 10K | Listed in Rigging Steps |
| M119/M119A2 Howitzer with Accompanying Load | 7,400 | 25K | Listed in Rigging Steps |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity) (when moving the howitzer without accompanying load).

(2) Sling set (25,000-pound capacity) (when moving the howitzer with an accompanying load).

(3) Reach pendant (11,000 or 25,000-pound capacity).

(4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(5) Cord, nylon, Type III, 550-pound breaking strength.

(6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(7) Sling set chain safety clamp.

(8) Webbing, nylon, tubular, 1/2-inch (as required).

(9) Line, multiloop, Type XXVI, 4-loop, 3-foot (for accompanying load).

(10) Clevis, suspension, medium (2 each) (for accompanying load).

(11) Bag, cargo A-22 or net, cargo (5,000- or 10,000-pound capacity).

(12) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (1 each) (for accompanying load).

(13) Coupling link, part number 664241, from a 25,000-pound capacity sling set (1 each) (for accompanying load).

(14) Strap, cargo, tiedown, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the howitzer in the forward/firing position.

If the firing platform is to be carried in the down position, follow these steps:

1 Mark the wheel hubs at the center of gravity (CG) with tape. The CG is located 6 inches behind (towards the lunette) the center of the hub.

2 Mark the center of the firing platform with tape. Roll the howitzer onto the firing platform aligning the tape strips. The wheel knock-off hub must be horizontal. Engage both parking brakes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

3 Connect the firing platform to the weapon and add an additional CGU-1/B tiedown strap.

(b) When the firing platform is carried on top of the trails ensure the wheel knock-off hub is horizontal. Engage the right wheel parking brakes.

(c) Secure the sight cover to the dial sight with tape or Type III nylon cord.

(d) Secure the firing platform (if carried), hand spike, and jack to the trail assembly with Type III nylon cord.

(e) Ensure the lunette is in the extended position. Install the towing eye stop (C-clamp) on the lunette and secure in place with its retaining pins, when applicable.

(f) The sling set chain safety clamp is an additional authorized item. Refer to TM 9-1015-252-10 for NSN and installation information.

(g) When the detachable field spade is attached to the permanent spades, ensure the two locking pins are installed and locked. Route and tie a length of Type III nylon cord through the key ring of the cable and around the end of the locking pin.

(h) When moving the howitzer without an accompanying load, extend the chain on sling leg 3 by removing the chain length and coupling link from sling leg 4 and attaching them to the end of the chain on sling leg 3.

(i) When moving the howitzer with an accompanying load and using sling leg 4 on the accompanying load, extend the chain on sling leg 3 by adding an additional length of chain with a coupling link from a 25,000-pound capacity sling set.

(2) Rigging. Rig the load according to the steps in Figure 6-8.

Note: When an accompanying load requires a sling leg, you may remove and use one of the inner sling legs from the sling set, leaving one sling leg attached to the lunette of the howitzer.

(3) Hookup. The hookup team stands beside the howitzer on the trails. The static wand person discharges the static electricity with the static wand. The hookup person places the top loop of the reach pendant onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

WARNING

When moving the howitzer with an accompanying load, the 25,000-pound capacity sling set must be used.

Accompanying loads must not exceed the weight limits of the cargo net, cargo bag, sling leg, or exceed the lift capability of the helicopter.

1. Attach a reach pendant on the sling set apex fitting.
2. Position the apex fitting and the reach pendant on the breech assembly. Route outer sling legs 1 and 2 to the wheel hubs. Route inner sling leg 3 to the lunette.
3. Route the chain end of sling leg 1 around the left wheel hub. Place link **55** (when using the 10,000-pound capacity sling set) or link **45** (when using the 25,000-pound capacity sling set) in the grab hook. Pull the chain taut and ensure the chain is centered on the hub. Install the sling set chain safety clamp on the two chain links closest to the top of the wheel hub. If the sling set chain safety clamp is unavailable or if the 25,000-pound capacity sling set is being used, tie the two chain links together with 1/2-inch tubular nylon webbing. Repeat with sling leg 2 on the right wheel hub. Place link **50** (when using the 10,000-pound capacity sling set) or link **40** (when using the 25,000-pound capacity sling set) in the grabhook. Secure the excess chain with Type III nylon cord.

Figure 6-8. M119/M119A2 105-MM Howitzer, Forward/Firing Position (Continued)

M119, 105-MM HOWITZER, FORWARD/FIRING POSITION, PLATFORM DOWN, WITH ADDITIONAL BOXES OF AMMUNITION

6-10. The M119/M119A2 105-MM howitzer, forward/firing position, platform down, with additional boxes of ammunition are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-9 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-9. M119/M119A2 105-MM Howitzer, Forward/Firing Position, Platform Down, with Additional Boxes of Ammunition

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-------------------------|
| M119/M119A2 Howitzer with Two Boxes of Ammunition on Firing Platform | 4,850 | 10K | Listed in rigging steps |
| M119/M119A2 Howitzer with Two Boxes of Ammunition on Firing Platform and Ammunition in A/22 or Cargo Net | 7,500 | 25K | Listed in rigging steps |

WARNING

The ammunition boxes must be securely lashed to the firing platform.

When using the A/22 cargo bag for an accompanying load do not exceed 2,200 pounds.

When using the cargo net for an accompanying load do not exceed 2,650 pounds.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity) (when moving the howitzer without A/22 or cargo net).

OR

(2) Sling set (25,000-pound capacity) (when moving the howitzer with an A/22 or cargo net).

(3) Reach pendant (11,000 or 25,000-pound capacity).

(4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(5) Cord, nylon, Type III, 550-pound breaking strength.

(6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(7) Sling set chain safety clamp is an authorized item. Refer to TM 9-1015-252-10 for NSN and installation information. Also authorized is the Suncor Stainless 316 precision cast, heavy duty Jaw and Swivel device, Item # S0156-HD008 (for use with 10K and 25K sling sets) or a safety clamp (Picatinny Arsenal Part # 12591189; Cage Code 19200) designed for the 25K sling set .

(8) Line, multiloop, Type XXVI, 4-loop, 3-foot (for accompanying load).

(9) Clevis, suspension, medium (2 each) (for A/22 or cargo net).

(10) Bag, cargo A/22 or net, cargo (5,000- or 10,000-pound capacity).

(11) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (1 each) (for A/22 or cargo net).

(12) Coupling link, part number 664241, from a 25,000-pound capacity sling set (1 each)(for A/22 or cargo net).

(13) Strap, cargo, tiedown, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the howitzer in the forward/firing position.

If the firing platform is to be carried in the down position, follow these steps:

1 Mark the wheel hubs with tape at the center of gravity (CG). The CG is located 6 inches behind (towards the lunette) the center of the hub.

2 Mark the center of the firing platform along the length (lunette to muzzle) and width (side to side) with strips of tape. Ensure the hand

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

holes (used to secure the ammunition boxes) are equally spaced on either side of the long axis of the gun.

3 Roll the howitzer onto the firing platform. Align the CG masking tape with the side to side tape strips. The wheel knock-off hub must be horizontal. Engage both parking brakes.

4 Connect the firing platform to the weapon. Tie the ammunition boxes together with Type III nylon cord. Secure the two ammunition boxes (if carried) by routing a CGU-1/B tiedown strap through the platform hand holes and the carrying handles of each box. Pad the CGU-1/B where it rubs on the boxes and platform.

5 Pad and tape the trailing edge of the platform when carrying an accompanying load in an A/22 cargo bag or a cargo net.

(b) Secure the sight cover to the dial sight with tape or Type III nylon cord.

(c) Secure the firing platform (if carried), hand spike, and jack to the trail assembly with Type III nylon cord.

(d) When the detachable field spade is attached to the permanent spades, ensure the two locking pins are installed and locked. Route and tie a length of Type III nylon cord through the key ring of the cable and around the end of the locking pin.

(e) When moving the howitzer without an A/22 cargo bag or a cargo net load, extend the chain on sling leg 3 by removing the chain length and coupling link from sling leg 4 and attaching them to the end of the chain on sling leg 3.

(f) When moving the howitzer with an accompanying load and using sling leg 4 on the accompanying load, extend the chain on sling leg 3 by adding an additional length of chain with a coupling link from a 25,000-pound capacity sling set.

(2) Rigging. Rig the load according to the steps in Figure 6-9.

Note: When an accompanying load requires a sling leg, you may remove and use one of the inner sling legs from the sling set, leaving one sling leg attached to the lunette of the howitzer.

(3) Hookup. The hookup team stands on the howitzer or on the trails. The static wand person discharges the static electricity with the static wand. The hookup person places the top loop of the reach pendant onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

WARNING

When moving the howitzer with an accompanying load, the 25,000-pound capacity sling set must be used.

Accompanying loads must not exceed the weight limits of the cargo net, cargo bag, sling leg, or exceed the lift capability of the helicopter.

1. Attach a reach pendant on the sling set apex fitting.
2. Position the apex fitting and the reach pendant on the breech assembly. Route outer sling legs 1 and 2 to the wheel hubs. Route inner sling leg 3 to the lunette.
3. Route the chain end of sling leg 1 around the left wheel hub (looking at the howitzer from the lunette). Place link **50** (when using the 10,000-pound capacity sling set) or link **40** (when using the 25,000-pound capacity sling set) in the grab hook. Pull the chain taut and ensure the chain is centered on the hub. Install the sling set chain safety clamp on the two chain links closest to the top of the wheel hub. If the sling set chain safety clamp is unavailable, tie the two chain links together with 1/2-inch tubular nylon webbing. Repeat with sling leg 2 on the right (knock-off) wheel hub. Place link **55** (when using the 10,000-pound capacity sling set) or link **45** (when using the 25,000-pound capacity sling set) in the grabhook. Secure the excess chain with Type III nylon cord.
4. Route the chain end of the extended sling leg 3 through the lunette. Place link **35** (when using the 10,000-pound capacity sling set) or link **28** (when using the 25,000-pound capacity sling set) in the grab hook. Secure the excess chain with Type III nylon cord.

Figure 6-9. M119/M119A2 105-MM Howitzer, Forward/Firing Position, Platform Down, with Additional Boxes of Ammunition (Continued)

M114A2 155-MM HOWITZER, TOWED

6-11. The M114A2 155-MM howitzer, towed is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-10 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-10. M114A2 155-MM Howitzer, Towed

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------|---------------------|-----------|-----------------------|
| M114A2 Howitzer | 12,700 | 40K | 50/10 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (40,000-pound capacity) with two additional 8-foot chain lengths and coupling links.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

(6) Tie-down strap, cargo, CGU-1/B (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Stow all howitzer equipment, including sights, in the proper place, except the spade key. Stow the spade key in the section chest. Secure all equipment with tape or Type III nylon cord.

(b) Position the section chest on the rear of the trails.

(c) Secure the section chest to the trails by routing the tie-down strap through the handles of the chest and both trail lifting handles.

(d) Secure the spades to the brackets with Type III nylon cord. Secure all hoses and cables to the sides of the trails with tape or Type III nylon cord.

(e) Engage one parking brake.

(f) Pad the barrel forward of the recoil mechanism. Ensure all sight mounts are removed or padded. Ensure the gun jack pin is locked in place.

(g) Remove or secure all gun covers.

(2) Rigging. Rig the load according to the steps in Figure 6-10.

(3) Hookup. The hookup team stands on the wheels or on the firing platform. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on the breech assembly. Route outer sling legs 1 and 2 to the barrel. Route inner sling legs 3 and 4 to the trail. Sling legs 1 and 3 must be on the left side of the load. Attach the additional chain lengths to sling legs 3 and 4 using the coupling links.
2. Position the grab link of sling leg 1 on the left side of the gun tube padded area. Route the chain end under the tube and back up to the grab link. Place the correct link from Table 6-10 in the grab hook. Repeat with sling leg 2 with the grab link on the right side of the gun tube. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 down through the spade key bracket on the outboard side of the left trail, under the trail, and up the inboard side of the trail. Place the correct link from Table 6-10 in the grab hook. Repeat with sling leg 4 on the right trail.
4. Cluster and tie (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.

Figure 6-10. M114A2 155-MM Howitzer, Towed

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M198 155-MM HOWITZER, TOWED/STOWED

6-12. The M198 155-MM howitzer, towed/stowed is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-11 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-11. M198 155-MM Howitzer, Towed/Stowed

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------------------|---------------------|-----------|-----------------------|
| M198 Howitzer in Towed Position | 15,740 | 25K | 50/3 |
| M198 Howitzer in Stowed Position | 15,740 | 25K | 70/3 |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity) with two additional 8-foot chain lengths and coupling links.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

(6) Tie-down strap, cargo, CGU-1/B (2 each).

(7) Clevis assembly, suspension, large, one per lift provision.

(8) Reach pendant (25,000-pound capacity) required for sling loading in the towed position.

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the spades to the trails with the tie-down straps.

(b) Secure all hoses and cables to the outboard side of the right trail with tape or Type III nylon cord.

(c) Pad the sight mounts and secure the padding with tape or Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Attach a large clevis assembly to the trail lift provisions located forward of the stowed firing baseplate.

(e) Ensure the top carriage locking pin is in place and is secured with a locking safety clip for the towed position.

CAUTION:

Do not attempt to lift the howitzer if the top carriage lock pin will not drop into place or if the locking safetyclip is missing. Either of these conditions could result in the top carriage rotating in flight.

(f) Position the barrel and install the travel lock; secure with the pins for the towed position.

(g) Attach a large clevis assembly to the lift provision on each side of the carriage for the towed position.

(h) Attach a large clevis assembly to the two lift provisions located at the upper end of the equilibrator for the towed position.

(2) Rigging. Rig the load according to the steps in Figure 6-11.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on the carriage.

Note: The helicopter must approach the howitzer over the trails.

The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| RIGGING STEPS (STOWED POSITION) |
|---|
| <p>1. Position the apex fitting on top of the barrel centered on the load. Route outer sling legs 1 and 2 to the trails. Route inner sling legs 3 and 4 to the breech end. Sling legs 1 and 3 must be on the left side of the load. Attach the additional chain lengths to sling legs 1 and 2 using the coupling links.</p> |
| <p>2. Route the chain end of sling leg 1 through the clevis on the left trail. Place the correct link from Table 6-10 in the grab hook. Repeat with sling leg 2 and the right trail.</p> |
| <p>3. Route the chain end of sling leg 3 through the clevis on the left side of the equilibrators above the breech. Place the correct link from Table 6-10 in the grab hook. Repeat with sling leg 4 on the right side. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.</p> |

Figure 6-11. M198 155-MM Howitzer, Towed/Stowed (Continued)

TWO M101A1 155-MM HOWITZERS

6-13. The two M101A1 155-MM howitzers are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-12 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-12. Two M101A1 155-MM Howitzers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------|---------------------|-----------|-------------------------|
| Two M101A1 Howitzers | 9,960 | 40K | Listed in Rigging Steps |

b. **MATERIALS.** The following materials are required to rig this load:

(1) Sling set (40,000-pound capacity) with two additional chain lengths and coupling links for the sling set being used.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

(6) Tie-down strap, cargo, CGU-1/B (as required).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(7) Pad, energy-dissipating, 24- x 24-inch (2 each) or 4-x 4- x 24-inch lumber (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

Note: The howitzer with the gun tube facing in the direction of flight is designated as howitzer 1.

(a) Position the howitzers side by side with the gun tubes facing in opposite directions. Howitzer 1 is on the left side facing forward and howitzer 2 is on the right side facing aft.

(b) Ensure the trails are secured. Rotate the lunette to the down position. Secure the trail closing lock handles with Type III nylon cord or tape.

(c) Place honeycomb between the right wheel of howitzer 1 and the right trail of howitzer 2. Route two CGU-1/B cargo tie-down straps through the top of the wheel rim, out the bottom of the rim, and around the honeycomb and trail of howitzer 2. Repeat with the right wheel of howitzer 2 and the right trail of howitzer 1.

(d) Ratchet the howitzers together as securely as possible. Add more straps as required. A minimum of two straps per wheel is required.

(e) Close and lock the breech of each gun. Secure or remove the muzzle, breech, and tube covers. Remove or pad the sight mounts.

(f) Place the gun section equipment chest on the trails and secure it with CGU-1/B tie-down straps.

(g) Pad the gun tubes above the cradles and around the forward edge of the recoil damper assemblies. Secure the padding with tape or Type III nylon cord.

(h) Pad the gun trails on both howitzers aft of the traveling lock shaft area.

(i) Set the hand brakes.

(2) Rigging. Rig the load according to the steps in Figure 6-12.

(3) Hookup. The hookup team stands alongside the howitzer or on top of the trails. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful

DRAFT

M167 20-MM AA GUN (VULCAN) WITH OR WITHOUT ONE A-22 CARGO BAG

6-14. The M167 20-MM AA gun with or without one A-22 cargo bag is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-13 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-13. M167 20-MM AA Gun with or without one A-22 Cargo Bag

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|-----------|-----------------------|
| M167 Vulcan | 3,260 | 10K | 33/3 |
| M167 Vulcan with One A-22 Cargo Bag | 5,460 | 10K | 33/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Sling leg assembly from a 10,000-pound capacity sling set (if required).
- (3) Bag, cargo, aerial delivery, A-22 (1 each) (if required).
- (4) Fitting, apex (10,000-pound capacity) (1 each) (if required).
- (5) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (6) Cord, nylon, Type III, 550-pound breaking strength.
- (7) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (8) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Pad the horizontal brace aft of the generator. Secure the padding with tape or Type III nylon cord.
 - (b) Point the radar antenna assembly directly upward.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Place the cover on the gun and secure it with Type III nylon cord.

(d) Secure all loose equipment with tape or Type III nylon cord.

(e) Engage one parking brake. Install lifting clevises on the tongue on trails.

(f) Extend and secure the rear trails in the down position.

(2) **Rigging.** Rig the load according to the steps in Figure 6-13.

(3) **Hookup.** The hookup team stands alongside the gun or on the trailer frame on the same side as the radar dish. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-13. M167 20-MM AA Gun (Vulcan) with or without one A-22 Cargo Bag

DRAFT

RIGGING STEPS

CAUTION

Advise the aircraft commander to release the sling set apex fitting on the side of the gun away from the radar antenna to prevent damage.

1. Position the apex fitting on top of the gun. Route outer sling legs 1 and 2 to the rear extended trails. Route inner sling legs 3 and 4 to the tongue end. Sling legs 1 and 3 must be on the left side of the load. Sling legs 1 and 2 are on the rear of the load.
2. Route the chain end of sling leg 1 through the lift provision on the left trail. Place the correct link from Table 6-12 in the grab hook. Repeat with sling leg 2 and the right trail.
3. Route the chain end of sling leg 3 through the lift provision on top of the left side of the tongue. Place the correct link from Table 6-12 in the grab hook. Repeat with sling leg 4 on the tongue right side lift provision. Secure the excess chain with Type III nylon cord.
4. Cluster and tie or tape (breakaway technique) the sling legs together on top of the howitzers to prevent entanglement during hookup and lift-off.
5. Place the separate apex fitting on the additional apex fitting. Place the apex fitting around the padded area on the horizontal strut. (The apex fitting pin must face up.)
6. Route the sling leg under the tongue to the accompanying load. Route the chain end of the sling leg through the medium clevis on the A-22 or the cargo net apex fitting and insert link 3 in the grab hook.

Figure 6-13. M167 20-MM AA Gun with or without one A-22 Cargo Bag (Continued)

BMS-120 BATTALION MORTAR SYSTEM

6-15. The BMS-120 battalion mortar system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 6-14 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-14. BMS-120 Battalion Mortar System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| BMS120, Carriage Mounted | 764 | 10K | 3/67 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, cargo, CGU-1B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure all loose equipment, chains and wires with tape or Type III nylon cord.

(b) Secure the mortar to the carriage by routing the tie-down strap across the mortar base plate and around the axle. Route one end of the strap through the base plate left handle, around the axle, and back through the base plate handle. Continue the strap across the base plate, through the base plate right handle, around the axle, back through the base plate handle, and attach the end of the tie-down strap to the ratchet. Pad the tie-down strap where it makes contact with the sharp edges of the base plate.

(2) Rigging. Rig the load according to the steps in Figure 6-14.

(3) Hookup. The hookup team stands alongside the carriage. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the carriage. Route outer sling legs 1 and 2 to the anchor points behind the base plate supports. Route inner sling legs 3 and 4 to the lunette. Sling legs 1 and 3 must be on the left side of the load. Sling legs 1 and 2 are on the rear of the load.

2. Route the chain end of sling leg 1 around the horizontal pipe on the left side of the carriage between the vertical pipe and the base plate. Place the correct link from Table 6-14 in the grab hook. Repeat with sling leg 2 and the right side of the carriage. Secure the excess chain with Type III nylon cord.

3. Route the chain end of sling leg 3 through the lunette. Place the correct link from Table 6-14 in the grab hook. Repeat with sling leg 4 on the lunette.

4. Cluster and tie (breakaway technique) the grab hooks from sling legs 1 and 2 together on top of the bipod assembly and sling legs 3 and 4 together on top of the lunette to prevent entanglement during hookup and lift-off.

Note: Failure to use the proper breakaway technique in taping or tying the sling legs could result in damage to the load.

Figure 6-14. BMS-120 Battalion Mortar System

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M777/M777A1, 155-MM, LIGHTWEIGHT HOWITZER

6-16. The M777/M777A1, 155-mm, lightweight howitzer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 6-15 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 6-15. M777/M777A1, 155-mm, Lightweight Howitzer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------------|---------------------|-----------|-----------------------|
| M777, 155-mm, Lightweight Howitzer | 9,300 | 15K | 80/3 |
| M777A1, 155-mm, Lightweight Howitzer | 9,800 | 15K | 80/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (15,000-pound capacity) with one additional web ring.

(a) Chain length, part number 34080-4, from a 15,000-pound capacity sling set (4 each).

(b) Coupling link, part number 31611, from a 15,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure the stabilizers are in the firing position.

(b) The spades may be in the up (stowed position) or down (firing position).

(c) Secure the air hoses and electrical cable to the supporting structure with Type III nylon cord.

(d) Stow and secure all equipment with tape or Type III nylon cord.

(e) Ensure the barrel is in the firing position.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(f) Extend the sling leg chains by connecting one additional chain length to each chain on a 15,000-pound capacity sling set with coupling links.

(2) **Rigging.** Rig the load according to the steps in Figure 6-15.

(3) **Hookup.** The hookup team stands on top of the gun carriage. The static wand person discharges the static electricity with the static wand. The hookup person places the web ring onto the cargo hook. The hookup team then carefully dismounts the howitzer and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Note: The helicopter must approach the howitzer over the spades.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 6-15. M777/M777A1, 155-mm, Lightweight Howitzer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the web ring on top of the forward end of the breech. Route outer sling legs 1 and 2 to the front of the howitzer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left side of the barrel. Place the correct link from Table 6-14 in the grab hook. Repeat with sling leg 2 through the right front lift provision. Secure all excess chain with tape or Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left side of the supporting frame near the left spade. Place the correct link from Table 6-14 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.

Chapter 7

Certified Single-Point Rigging Procedures For Guided Missile Systems

INTRODUCTION

7-1. This chapter contains rigging procedures for guided missile systems that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for guided missile systems are in this section. Paragraphs 7-2 through 7-8 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

CONTINUOUS WAVE ACQUISITION RADAR (CWAR)

7-2. The continuous wave acquisition radar is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items, components of the HAWK missile system, in Table 7-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-1. Continuous Wave Acquisition Radar

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------|---------------------|-----------|-----------------------|
| CWAR, Phase II, on M514 Trailer | 4,898 | 25K | 3/14 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Prepare the CWAR for general travel according to the operator's manual. Secure the shipping cover over the radar.

(b) Extend the rear leveling jack so the CWAR is level.

(c) Secure all doors and vents with tape or Type III nylon cord.

(d) Secure all safety chains and hoses to the trailer frame with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 7-1.

(3) **Hookup.** This load does not use a ground crew to connect the load to the aircraft cargo hook. As the helicopter hovers over the load, the flight engineer hooks the apex fitting with the helicopter cargo loading pole, lifts the apex fitting up, and places it on the aircraft cargo hook. The ground crew stands by the trailer and checks to make sure the sling legs do not become entangled as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 7-1. Continuous Wave Acquisition Radar

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the radar antenna. Route outer sling legs 1 and 2 to the front of the trailer (lunette end). Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Route the chain end of sling leg 1 down through the opening between the left front leveling jack bracket and the trailer A-frame, under the short cross members, and back up through the opening between the leveling jack bracket and the front of the trailer chassis. Place the correct link from Table 7-1 in the grab hook. Repeat with sling leg 2 on the right side of the trailer A-frame.</p> |
| <p>3. Route the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the trailer chassis outboard of the support rod. Place the correct link from Table 7-1 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Pull the front sling legs up and tape or tie (breakaway technique) the chains together at the top of the leveling jack bracket. Tie (breakaway technique) the front sling leg grab hooks to the back of the front compartment so the chains do not become entangled during hookup and lift-off.</p> |
| <p>5. Pull the aft sling legs up and tie (breakaway technique) the grab hooks to the base of the antenna support so the chains do not become entangled in the rear support leg.</p> |
| <p>6. Position the apex fitting so that it sits vertically on top of the radar antenna. Tape in place (breakaway technique) so the helicopter aircrew can pick it up using the helicopter cargo loading pole.</p> |

Figure 7-1. Continuous Wave Acquisition Radar (Continued)

M192E1/M192-1 ZERO LENGTH LAUNCHER

7-3. The M192E1/M192-1 zero length launcher is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items, components of the HAWK missile system, in Table 7-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-2. M192E1/M192-1 Zero Length Launcher

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M192E1 Guided Missile Launcher, Zero Length | 4,482 | 25K | 53/53 |
| M192-1 Guided Missile Launcher, Zero Length | 4,500 | 15K | 47/50 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000 or 15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Webbing, nylon, tubular, 1/2-inch (20-foot length).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Prepare the launcher for general travel according to the operator's manual.

(b) Secure all doors and vents with tape or Type III nylon cord.

(c) Secure all safety chains and hoses to the trailer frame with tape or Type III nylon cord.

(d) Load the launcher section control box inside the helicopter.

(e) Engage the brakes.

(2) **Rigging.** Rig the load according to the steps in Figure 7-2.

(3) **Hookup.** The hookup team stands on the launcher on each side of the pedestal. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Note: Due to the relatively small clearance between the top of the load and the helicopter during hookup, it may be desirable for the helicopter flight engineer to make the hookup using the cargo loading pole (shepherd's hook). Place the apex fitting on top of the center launch boom, with the pin facing up. Ground crew must stand by to ensure the sling legs do not become entangled on the load.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the launch stand pedestal. Route outer sling legs 1 and 2 to the front of the launcher (lunette end). Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.

2. Route the chain end of sling leg 1 through the left front lifting provision located aft of the leveling cylinder outboard end. Place the correct link from Table 7-2 in the grab hook. Repeat with sling leg 2 on the right front lift provision. Ensure the chain is routed from the inside of the lifting provision to the outside so the hook on the grab hook faces outboard when you insert the chain in the grab hook. Secure the excess chain with Type III nylon cord.

3. Route one end of the tubular nylon through the potted eye of sling leg 1. Route the same end of the tubular nylon through the potted eye of sling leg 2. Position the potted eyes of the two sling legs 39 inches apart so the sling legs cannot contact the two outer launch booms or the center boom. Using the remainder of the tubular nylon, repeat the procedure until there are at least 5 lengths of nylon (2 1/2 wraps) between the potted eyes of the two sling legs. Tie the ends of the tubular nylon together with a square knot and an overhand knot in each running end.

Note: Do not route the tubular nylon between the chains or grab hooks. Failure to attach the tubular nylon between the sling leg potted eyes may result in damage to the missile launch booms or failure of the load.

Figure 7-2. M192E1/M192-1 Zero Length Launcher

DRAFT

| RIGGING STEPS |
|--|
| <p>4. Route the chain end of sling leg 3 through the left rear lift provision located above the taillight. Place the correct link from Table 7-2 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>5. Pull the sling legs up and tape or tie (breakaway technique) the grab hooks to the boom supports. Cluster and tape or tie (breakaway technique) all sling legs together above the center launch boom to prevent entanglement during hookup and lift-off.</p> |

Figure 7-2. M192E1/M192-1 Zero Length Launcher (Continued)

M501E3 LOADER-TRANSPORTER, GUIDED MISSILE

7-4. The M501E3 guided missile loader-transporter is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items, components of the HAWK missile system, in Table 7-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-3. M501E3 Guided Missile Loader-Transporter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M501E3 Loader-Transporter, Guided Missile | 5,650 | 25K | 3/13 |
| M501E3 Loader-Transporter, Guided Missile | 5,300 | 15K | 8/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000 or 15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) With the loader-transporter engine **ON**, raise the super structure about 3 feet using the **EXTENSION** lever. Using the **ROLL/ELEVATION, AZIMUTH, and EXTENSION** levers, position the super structure in

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

the **OPERATIONAL READY** position. Shut the engine down and place the transmission in neutral.

(b) Secure the super structure arms in the operational position by engaging the lock pins. **THE SUPER STRUCTURE CANNOT BE ALLOWED TO MOVE.**

(c) Secure all safety chains and hoses to the adjacent structure with tape or Type III nylon cord.

(d) Secure all doors and vents with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 7-3

(3) **Hookup.** The hookup team stands on the loader-transporter on each side of the center of the vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 7-3. M501E3 Guided Missile Loader-Transporter

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the loader arm at the center of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle (driver's compartment). Ensure the sling legs are routed inboard of the outer two upper hoisting beams and outboard of the two lower super structure arms.</p> |
| <p>2. Route inner sling legs 3 and 4 to the rear of the load (engine compartment). Ensure the sling legs are routed inboard of the outer two upper hoisting beams. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>3. Route the chain end of sling leg 1 through the left front lift provision clevis located inboard of the left front wheel. Place the correct link from Table 7-3 in the grab hook. Repeat with sling leg 2 on the right front lift provision clevis.</p> |
| <p>4. Route the chain end of sling leg 3 through the left rear lift provision clevis inboard of the left rear fender. Place the correct link from Table 7-3 in the grab hook. Repeat with sling leg 4 on the right rear lift provision clevis. Secure the excess chain with Type III nylon cord.</p> |
| <p>5. Pull the sling legs up and tie (breakaway technique) the grab hooks to the hoisting beams. Cluster and tape or tie (breakaway technique) all sling legs together above the hoisting beams to prevent entanglement during hookup and lift-off.</p> |

M1E2 LOADING AND STORAGE MISSILE PALLET

7-5. The M1E2 loading and storage missile pallet is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items, components of the HAWK missile system, in Table 7-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-4. M1E2 Loading and Storage Missile Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M1E2 Loading and Storage Missile Pallet | 4,670 | 15K | 3/35 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Prepare the missile pallet for general travel in accordance with the operator's manual.

(b) Ensure the 3 1/4-ton shackles initially provided with the M390C trailer chassis have been replaced by the 6 3/4-ton shackles (NSN 4030-00-278-0699). Ensure the shackles are properly pinned.

(c) Secure all cables, safety chains, and hoses to the adjacent structure with tape or Type III nylon cord.

(d) Engage the parking brake.

(e) Adjust the forward and aft leveling jacks so the pads are located just above ground level.

(2) Rigging. Rig the load according to the steps in Figure 7-4

(3) Hookup. The hookup team stands on the missile pallet. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the missile storage racks. Route outer sling legs 1 and 2 to the rear of the missile pallet and inner sling legs 3 and 4 to the front of the missile pallet (lunette end).
2. Route the chain end of sling leg 1 through the left rear lift provision located on the corner of the trailer above the taillight. Route the chain from the inside to the outside of the lift provision. Place the correct link from Table 7-4 in the grab hook. Repeat with sling leg 2 on the right rear lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the opening aft of the lunette and of the landing wheel on the left side of the tongue. Place the correct link from Table 7-4 in the grab hook. Repeat with sling leg 4 on the side of the tongue.
4. Cluster and tie (breakaway technique) the sling legs together on top of the missile storage racks to prevent entanglement during hookup and lift-off.

PEDESTAL-MOUNTED STINGER (AVENGER)

7-6. The pedestal-mounted stinger (Avenger) is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 7-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-5. Pedestal-Mounted Stinger

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Stinger, Pedestal-Mounted on M998 (Avenger) | 8,513 | 10K | 50/5 |
| Stinger, Pedestal-Mounted on M1097 (Avenger) | 9,087 | 10K | 50/5 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Fold the mirrors in front of the windshield and tie together with Type III nylon cord.

(b) Ensure the Avenger fire unit is secured to the truck. Secure all equipment inside the fire unit with tape, tie-downs, or nylon cord; close and secure the door.

(c) Disconnect the standard vehicle mounted launcher connectors from the missile pods and secure them to the fire unit with tape or nylon cord.

(d) Secure all equipment inside the vehicle with tape, nylon cord, or tie-downs. Close and secure the doors (if installed).

(e) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank, oil filter, and battery caps for proper installation.

(f) Place the transmission in neutral and set the parking brake.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(g) Ensure the front wheels are pointed straight ahead. Secure the steering wheel using the securing device attached under the dashboard.

(2) **Rigging.** Rig the load according to the steps in Figure 7-5.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) **Hookup.** The hookup team stands on top of the fire unit. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision located on the rear bumper. Place the correct link from Table 7-5 in the grab hook. Place the sling leg in the sling guide on top of the fire unit. Repeat with sling leg 4 on the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) the sling legs together on top of the fire unit to prevent entanglement during hookup and lift-off.</p> |

Figure 7-5. Pedestal-Mounted Stinger (Continued)

PEDESTAL-MOUNTED STINGER ON M1097/M1097A1/M1097A2 HMMWV (AVENGER) WITH ECU/PPU AND AN ALUMINUM AIRLIFT BUMPER WITH OR WITHOUT BUSTLE BOX STOWED ON THE ROOF

7-7. The pedestal-mounted stinger on M1097/M1097A1/M1097A2 HMMWV with ECU/PPU and an aluminum airlift bumper with or without bustle box stowed on the roof is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 7-6 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-6. Pedestal-Mounted Stinger on M1097/M1097A1/M1097A2 HMMWV with ECU/PPU and an Aluminum Airlift Bumper with or without Bustle Box Stowed on the Roof

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|----------------------------|-------------------|-----------------------|
| Stinger, Pedestal-Mounted, with ECU/PPU on M1097 HMMWV | 9,800 | 10K 15K | 45/3 30/3 |
| Stinger, Pedestal-Mounted, with ECU/PPU on M1097A1 HMMWV | 9,800 | 10K 15K | 45/3 30/3 |
| Stinger, Pedestal-Mounted, with ECU/PPU on M1097A2 HMMWV | 10,000 10,300 10,300 | 10K 15K 25K | 45/3 30/3 35/3 |

CAUTION

These sling load rigging procedures are for Avengers that have the Aluminum Airlift Bumpers ONLY. Lift provisions on Steel Airlift Bumpers do not allow for adequate sling clearance.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Chain length, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0415, from a 10,000-pound sling set (4 each).

OR

(2) Sling set (25,000-pound capacity).

(a) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

(b) Coupling link, part number 577-0615, from a 25,000-pound sling set (4 each).

(3) Multileg sling set (15,000-pound capacity).

(a) Chain length, part number 34080-4 from a 15,000-pound capacity sling set (8 each).

(b) Coupling link, part number 31611, from a 15,000-pound sling set (8 each).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(4) Cord, nylon, Type III, 550-pound breaking strength.

(5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(6) Strap, cargo, tiedown, CGU-1/B (2 each, or more as required to secure cargo).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold the mirrors inward and tie together with Type III nylon cord.

(b) Ensure the Avenger fire unit is secured to the truck. Secure all equipment inside the fire unit with tape, tiedown straps, or Type III nylon cord; close and secure the door.

(c) Disconnect the standard vehicle mounted launcher connectors from the missile pods and secure them to the fire unit with tape or Type III nylon

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

cord.

(d) Secure all equipment inside the vehicle with tape, Type III nylon cord, or tiedown straps. Roll up the windows. Close and secure the doors (if installed).

(e) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank, oil filter, and battery caps for proper installation.

(f) Place the transmission in neutral and set the parking brake.

(g) Ensure the front wheels are pointed straight ahead. Secure the steering wheel using the securing device attached under the dashboard or Type III nylon cord.

(h) Secure the bustle box to the box rack on the roof of the vehicle CGU-1/B tiedown straps (if needed).

(i) Tape the zippers on the missile pod covers (if applicable).

(j) Extend the sling leg chains by connecting one additional chain length to each chain on a 10,000- or 25,000-pound capacity sling set with coupling links and two chain lengths to each chain on a 15,000-pound capacity sling set with coupling links.

(2) **Rigging.** Rig the load according to the steps in Figure 7-6.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) **Hookup.** The hookup team stands on top of the fire unit. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the helicopter but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M1097 (HMMWV) WITH ENHANCED FIBER OPTIC GUIDED MISSILE (EFOGM) LAUNCHER

7-8. The M1097 with enhanced fiber optic guided missile launcher is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 7-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 7-7. M1097 With Enhanced Fiber Optic Guided Missile Launcher

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Enhanced Fiber Optic Guided Missile (EFOGM) Launcher with Six Missiles | 9,100 | 10K | 55/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold mirrors forward in front of the windshield for added protection and tie together with Type III nylon cord.

(b) Ensure the launcher is properly attached to the truck. Secure all wiring and loose equipment with hold-down straps, tape, or Type III nylon cord.

(c) Secure all equipment and cargo inside the vehicle with tape, nylon cord, or lashings. Remove and secure the doors in the cab of the vehicle.

(d) Ensure the fuel tank is not over 3/4 full. Inspect fuel tank cap, oil filler cap, and battery caps for proper installation.

(e) Engage the vehicle parking brake and put the transmission in neutral.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(f) Ensure the front wheels are pointed straight ahead. Tie down the steering wheel, using the securing device attached under the dashboard.

(g) Tape the windshield in an X formation from corner to corner. Tape all mirrors, lights and gauges.

(h) Remove the third missile from each side counting inwards from the outside edges.

(2) **Rigging.** Rig the load according to the steps in Figure 7-7.

(3) **Hookup.** The hookup team stands on EFOGM vehicle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then carefully dismounts the vehicle and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 7-7. M1097 With Enhanced Fiber Optic Guided Missile Launcher

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision that protrudes through the hood from inboard to outboard. Place the correct link from Table 7-7 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the sling guide located on the aft end of the launcher frame. Loop the chain end through the left lift provision on the bumper and thread back through the sling guide. Place the correct link from Table 7-7 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. See insert above.
4. Pad the chains where they contact the sling guides and the missile sides.
5. Cluster and tie (breakaway technique) all sling legs together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 7-7. M1097 With Enhanced Fiber Optic Guided Missile Launcher (Continued)

DRAFT

Chapter 8

Certified Single-Point Rigging Procedures For Engineer Equipment

INTRODUCTION

8-1. This chapter contains rigging procedures for engineer equipment that has been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for engineer equipment are in this section. Paragraphs 8-2 through 8-42 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

T-3 TRACTOR, CRAWLER

8-2. The T-3 tractor crawler is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-1. T-3 Tractor, Crawler

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Tractor, Full-Tracked, JD550 with Roll Over Protection System (ROPS), Towing Winch and Hydraulic Angle Blade | 16,662 | 25K | 10/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure the operator's seat cushion to the seat frame with tape or Type III nylon cord.

(b) Remove both canopy lights, wrap in padding, and store in the toolbox.

(c) Secure all loose covers and panels with tape.

(d) Place the transmission in neutral and start the engine. Raise the blade 12 inches above the ground and align the blade at a 90 degree angle to the tractor. Turn the engine off and tape the ignition key in place.

(2) Rigging. Rig the load according to the steps in Figure 8-1.

(3) Hookup. The hookup team stands on the engine cowl in front of the ROPS. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-1. T-3 Tractor, Crawler

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the ROPS. Route outer sling legs 1 and 2 to the front of the load. Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.</p> <p>2. Route the chain end of sling leg 1 through the left front lift provision located just aft of the front of the left track. Place the correct link from Table 8-1 in the grab hook. Repeat with sling leg 2 and the right front lift provision located on the right track. Secure the excess chain with Type III nylon cord.</p> <p>3. Route the chain end of sling leg 3 through the left rear lift provision located forward of the left track rear wheel. Place the correct link from Table 8-1 in the grab hook. Repeat with sling leg 4 on the right rear lift provision located on the right track.</p> <p>4. Cluster and tie (breakaway technique) the sling legs together on top of the crew compartment to prevent entanglement during hookup and lift-off.</p> |

Figure 8-1. T-3 Tractor, Crawler (Continued)

D5B TRACTOR, DOZER

8-3. The D5B tractor, dozer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-2. D5B Tractor, Dozer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| D5B Tractor, Dozer, Type II, Power Section without ROPS | 18,915 | 25K | 47/8 |
| D5B Tractor, Dozer, Type II, Track Section | 13,735 | 25K | 21/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity) (2 each).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can sectionalize the dozer in 2 1/2 hours and two persons can prepare and rig this load in 10 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Sectionalize the dozer in accordance with the operator's manual. Do not remove the winch or the winch pump.

(b) Remove the exhaust stack and secure it on top of the winch with Type III nylon cord.

(c) Remove the pre-air cleaner and secure it on the seat with Type III nylon cord.

(d) Secure the operator's seat cushion to the seat frame with Type III nylon cord.

(e) Tape all lights and gauges.

(f) Place the transmission in neutral and secure the safety lock lever with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 8-2.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) Hookup. The hookup team stands on top of the power or track section. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-2. D5B Tractor, Dozer, Track Section

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the section. Route outer sling legs 1 and 2 to the front of the load (blade end). Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 8-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 8-2 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Cluster and tie (breakaway technique) the sling legs together on top of the section to prevent entanglement during hookup and lift-off.

Figure 8-2. D5B Tractor, Dozer, Track Section (Continued)

RIGGING STEPS

1. Position the apex fitting on top of the section. Route outer sling legs 1 and 2 to the front of the load (radiator end). Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 through the left front lift provision located by the left headlight. Place the correct link from Table 8-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision located beside the fuel tank. Place the correct link from Table 8-2 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Cluster and tie (breakaway technique) the sling legs together on top of the section to prevent entanglement during hookup and lift-off.

Figure 8-2. D5B Tractor, Dozer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

MC1150E FULL TRACKED TRACTOR

8-4. The MC1150E full tracked tractor is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-3 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-3. MC1150E Full Tracked Tractor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| MC1150E Full Tracked Tractor | 24,062 | 40K | 5/35 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Chain, 8-foot length from 40,000-pound capacity sling set with coupling links (2 each).
- (7) Tie-down chain assembly (10,000-pound capacity), MB-1.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Elevate the blade 2 feet off the ground. Using the tie-down chains, secure the blade in the UP position.
 - (b) Twist the lights on the cab inward. Tape the lights, glass fixtures, and exhaust pipe opening.
 - (c) Ensure all caps, lids, and doors are securely fastened.
 - (d) Place the transmission in neutral and engage the hand brake.
- (2) **Rigging.** Rig the load according to the steps in Figure 8-3.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands on top of the engine deck or cab. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-3. MC1150E Full Tracked Tractor

DRAFT

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the cab. Route outer sling legs 1 and 2 to the front of the load. Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Route the chain end of sling leg 1 through the left front lift provision located on the left front corner of the engine deck. Place the correct link from Table 8-3 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the left rear lift provision located near the base of the cab. Using the coupling link add the additional chain length to the sling leg chain. Place the correct link from Table 8-3 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.</p> |
| <p>Note: Add the additional chain length after the sling leg chain is routed through the lift provision. The link coupling does not fit through the lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) the sling legs together on top of the crew compartment to prevent entanglement during hookup and lift-off.</p> |

Figure 8-3. MC1150E Full Tracked Tractor (Continued)

JD450G TYPE III FULL-TRACKED TRACTOR DOZER

8-5. The JD450G type III full tracked tractor dozer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-4. JD450G Type III Full-Track Tractor Dozer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Tractor (Dozer), Full-Track, Type III, JD450G | 18,400 | 25K | 3/10 |
| Tractor (Dozer), Full-Track, Type III, JD450G, without ROPS | 17,700 | 25K | 3/10 |
| Tractor (Dozer), Full-Track, Type III, JD450G, without ROPS and Winch | 16,160 | 25K | 3/10 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity).

(a) Chain length, part number 38850-00053-102, from a 25,000-pound capacity sling set (4 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Coupling link, part number 664241, from a 25,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Heavy padding (1/4 section of a steel-belted tire or a length of fire hose or equivalent) (2 each).

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Connect one additional chain length to each chain on each sling set with a coupling link.

(b) Prepare the tractor for mission needs using the operator's manual. Special tools may be required to remove the ROPS or winch.

(c) Secure all loose equipment with tape or Type III nylon cord.

(d) Place the transmission in neutral and set the parking brake.

(e) Tape the front sling guides on the ROPS. Tape all lights and gauges.

(f) Ensure the fuel tank is not over 3/4 full. Ensure the fuel tank cap is in the vent position. Inspect the oil filter cap and battery caps for proper installation.

(2) **Rigging.** Rig the load according to the steps in Figure 8-4.

(3) **Hookup.** The hookup team stands on top of the dozer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

CAUTION

This load has a tendency to rotate in flight. Do not allow the load to rotate more than two complete turns. If the load cannot be stabilized, it should be landed.

RIGGING STEPS

Note: Padding for the rear chains cannot be added until the chains have been routed through the sling guides and attached to the grabhooks.

1. Position the apex fitting on top of the ROPS. Route outer sling legs 1 and 2 to the front of the load. Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 8-4 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Route the chain end of sling leg 3 through the left front sling guide on the ROPS, down through the left rear lift provision, and back through the same sling guide. Place the correct link from Table 8-4 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with tape or Type III nylon cord.
4. Heavily pad the sling legs where they make contact with the tracks.
5. Cluster and tie or tape (breakaway technique) the sling legs together on top of the ROPS to prevent entanglement during hookup and lift-off.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

CASE MODEL 580 WHEELED INDUSTRIAL TRACTOR

8-6. The Case model 580 wheeled industrial tractor is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-5. Case Model 580 Wheeled Industrial Tractor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| Tractor, Case, Model 850 | 10,500 | 15K | 30/54 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Chain, 6-foot length from 15,000-pound capacity sling set with coupling links (2 each).
- (7) Tie-down strap, cargo, CGU-1B (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Elevate the front bucket halfway and tilt the bucket toward the rear.
 - (b) Position the rear backhoe arm with the backhoe in the up position and secure with the tie-down straps to prevent the backhoe arm from swinging freely. Route the straps from each stabilizer to the backhoe arm.
 - (c) Ensure all caps, lids, and doors are securely fastened.
 - (d) Tape all lights, glass fixtures, and the exhaust cap closed.
 - (e) Place the transmission in neutral and engage the hand brake.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 8-5.

(3) **Hookup.** The hookup team stands on top of the engine deck or ROPS. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

SMALL EMPLACEMENT EXCAVATOR (SEE)

8-7. The small emplacement excavator is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-6 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-6. Small Emplacement Excavator

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------------|---------------------|-----------|-------------------------|
| Small Emplacement Excavator | 16,240 | 25K | Listed in Rigging Steps |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Elevate the bucket halfway and tilt the bucket toward the rear. Ensure the front end loader assembly travel locks, located at the ends of both front end loader boom cylinders, are properly pinned in place.

(b) Secure the steering wheel, doors, and all loose equipment with tape or Type III nylon cord.

(c) Tape all lights, glass fixtures, and the exhaust cap closed.

(d) Fold the side mirrors inboard and tie or tape as required. Tape the windshield wipers to the windshield. Secure the engine compartment hood with Type III nylon cord.

(e) Place the transmission in neutral and engage the hand brake.

(f) Tie or tape the hydraulic lines and hoses in close proximity to the forward lift provisions to prevent possible entanglement during hookup.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 8-6.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) **Hookup.** The hookup team stands on top of the falling objects protection systems (FOPS). The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

HIGH MOBILITY MATERIEL HANDLER (HMMH)

8-8. The high mobility materiel handler is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 8-7 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-7. High Mobility Materiel Handler

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------|---------------------|-----------|-----------------------|
| High Mobility Materiel Handler | 15,650 | 25K | 3/56 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Two persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure all travel locks are properly pinned in place.

(b) Secure the steering wheel, doors, and all loose equipment with tape or Type III nylon cord.

(c) Tape all lights, glass fixtures, and the exhaust cap closed.

(d) Fold the side mirrors inboard and tie or tape as required. Tape the windshield wipers to the windshield. Secure the engine compartment hood with Type III nylon cord.

(e) Place the transmission in neutral and engage the hand brake.

(f) Tie or tape the hydraulic lines and hoses in close proximity to the forward lift provisions to prevent possible entanglement during hookup.

(2) **Rigging.** Rig the load according to the steps in Figure 8-7.

Note: Hookup of this load presents substantial risk of damage to the load or injury to the hookup personnel. Use of a reach pendant is recommended for this load.

(3) **Hookup.** The hookup team stands on top of the falling objects protection systems (FOPS). The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the FOPS. Route outer sling legs 1 and 2 to the front of the load. Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 through the left front lift provision located near the front bumper outboard of the forklift frame. Place the correct link from Table 8-7 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Route the chain end of sling leg 3 through the left rear lift provision located on the frame inboard of the rear wheel. Place the correct link from Table 8-7 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with Type III nylon cord.
4. Place felt padding around all the chains. Secure the padding with tape or Type III nylon cord.
5. Cluster and tie (breakaway technique) the sling legs together on top of the FOPS to prevent entanglement during hookup and lift-off.

DITCHING MACHINE

8-9. The ditching machine is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-8 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-8. Ditching Machine

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------|---------------------|-----------|-----------------------|
| Ditching Machine | 3,340 | 15K | 3/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Raise the blade on the front of the vehicle and the digging chain on the rear of the vehicle.

(b) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank cap, oil filter cap, and the battery caps for proper installation.

(c) Place the transmission in neutral and engage the parking brake.

(d) Ensure the front wheels are pointed straight ahead and tie the steering wheel in place with Type III nylon cord.

(e) Secure the hood latches with type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 8-8.

(3) **Hookup.** The hookup team stands on the hood of the vehicle. The static wand person discharges the static electricity with the static wand. The

DRAFT

950BS SCOOP LOADER

8-10. The 950BS scoop loader is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-9 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-9. 950BS Scoop Loader

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| 950BS Scoop Loader, Type II, Work Section | 15,830 | 25K | 10/5 |
| 950BS Scoop Loader, Type II, Power Section | 16,110 | 25K | 10/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Chain, 8-foot length from a 25,000-pound capacity sling set with coupling links.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (7) Tie-down assembly, 15-foot dacron (2 each).
- (8) Tie-down assembly, chain, MB-1 (2 each).
- (9) Plastic bags (4 each).

c. PERSONNEL. Four persons can sectionalize the scoop loader in 2 1/2 hours. Two persons can prepare and rig this load in 20 minutes per section.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Sectionalize the loader according to the instructions provided in the operator's manual.
 - (b) Secure the bucket lift arm assembly to the work section housing with two MB-1 chain tie-down assemblies. Pass a chain around the left side of the bucket control group arm crosstube through the lift point on the housing, and secure the running ends with an MB-1 tensioning device. Repeat this proce-

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

ture on the right side of the crosstube.

CAUTION

Chains must be tight to prevent sagging of the hydraulic system during flight.

(c) Cover all hitch pins and pivot holes with plastic and tape to prevent contamination by dust and dirt.

(d) Secure tool basket lid, located in the bucket, with nylon cord. Tape all lights.

(e) Secure all hoses and cables located on front of the power section, with nylon cord to prevent damage.

(f) Secure the floating axle in level position with two 15-foot tie-down assemblies. On the left side, pass the running end of a 15-foot tie-down strap down through the tie-down provision aft of the axle, under the axle, and up through the tie-down provision forward of the axle. Secure the running ends of the strap using a D-ring and load binder on top of the axle. Repeat this procedure on the right side. Fold and secure excess webbing and load binder with cotton webbing or tape.

(g) Install the low-velocity airdrop suspension provisions on the left and right sides of the operator's platform. (These provisions are used as forward lift points for sling loading.) Torque mounting bolts to 640 + 80 foot-pounds.

(h) Remove exhaust stack and stow on the component tray, mounted in the work section bucket. Cover opening of exhaust stack with tape.

(i) Remove the pre-air cleaner and pad with cellulose padding and stow in the stowage compartment located behind the operator's seat. Cover opening of pre-air cleaner with tape.

(j) Fold the back of the operator seat down and secure in place with nylon cord. Secure the seat belt over the seat back.

(k) Tape all lights and instruments.

(l) Secure all doors and covers with tape or nylon cord.

(m) Place controls in neutral and release brakes.

(2) **Rigging.** Rig the load according to the steps in Figure 8-9.

(3) **Hookup.** The hookup team stands on the wheels or fender of the work section and on the operator's platform of the power section. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team

DRAFT

quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-9. 950BS Scoop Loader (Work Section)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS (POWER SECTION)

1. Lay out a 25,000-pound sling set and connect the additional 8-foot chain sections to sling legs 3 and 4 using the proper coupling links.
2. Position apex fitting on the engine hood. Route outer sling legs 1 and 2 to the front of the load (operator's seat) and inner sling legs 3 and 4 to the rear of the load (bumper end). Sling legs 1 and 3 should be on the left side of the load.
3. Loop the chain end of sling leg 1 through the left front lift provision located to the left of the operator's seat above the fuel tank. Place the correct link from Table 8-9 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
4. Loop the chain end of sling leg 3 through the left rear lift provision located on the forward edge of the battery box aft of the left wheel. Place the correct link from Table 8-9 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with Type III nylon cord.

WARNING

Do not attach sling legs 3 and 4 to frame lifting provisions located on the frame. Slings attached to these provisions may cause loss of the load in flight.

5. Pull sling legs up on top of the engine hood and secure together with cotton webbing. Cluster and tie or tape (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

130GS GRADER

8-11. The 130GS grader is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-10 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-10. 130GS Grader

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| 130GS Grader Front Section with Scarifier and ROPS, Low-Velocity Airdrop Suspension Provisions Removed | 16,120 | 25K | 3/77 |
| 130GS Grader Rear Section | 14,270 | 25K | 46/56 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down, cargo, CGU-1B (2 each).
- (7) Plastic bags (4 each).
- (8) Posts, wooden, 4- x 4- x 48-inch (2 each).

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes after the ROPS and LVAD suspension provisions are removed and the grader is sectionalized.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a) Sectionalize the loader according to the instructions provided in the operator's manual.
- (b) Remove ROPS and LVAD suspension provisions mounted on the front bolster.
- (c) Ensure the fuel tank is not over 3/4 full.
- (d) Use a tie-down assembly to secure each side of the front axle to

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

front tie-down points on the front end.

(e) Loosen front headlight bar, rotate forward 180 degrees, and retighten. Pad lights with padding and tape.

(f) Tape work lights on forward edge of operator's platform.

(g) Secure steering wheel to horizontal control bar with nylon cord on both sides. Secure seat with nylon cord.

(h) Cover all pivot points in the articulated hitch group with plastic bags or a suitable substitute and tape securely to prevent fouling by sand and dirt.

(i) Remove throttle handle and secure in toolbox.

(j) Pad instrument panel with cellulose padding and tape.

(k) Remove air cleaner and exhaust stack and secure to top rail with nylon cord.

(l) Tie 4- x 4- x 48-inch posts to inside rear guardrail on the rear section with nylon cord.

(m) Pad and tape rear working light and taillights.

(n) Secure doors with one loop of nylon cord horizontally around the body of the unit.

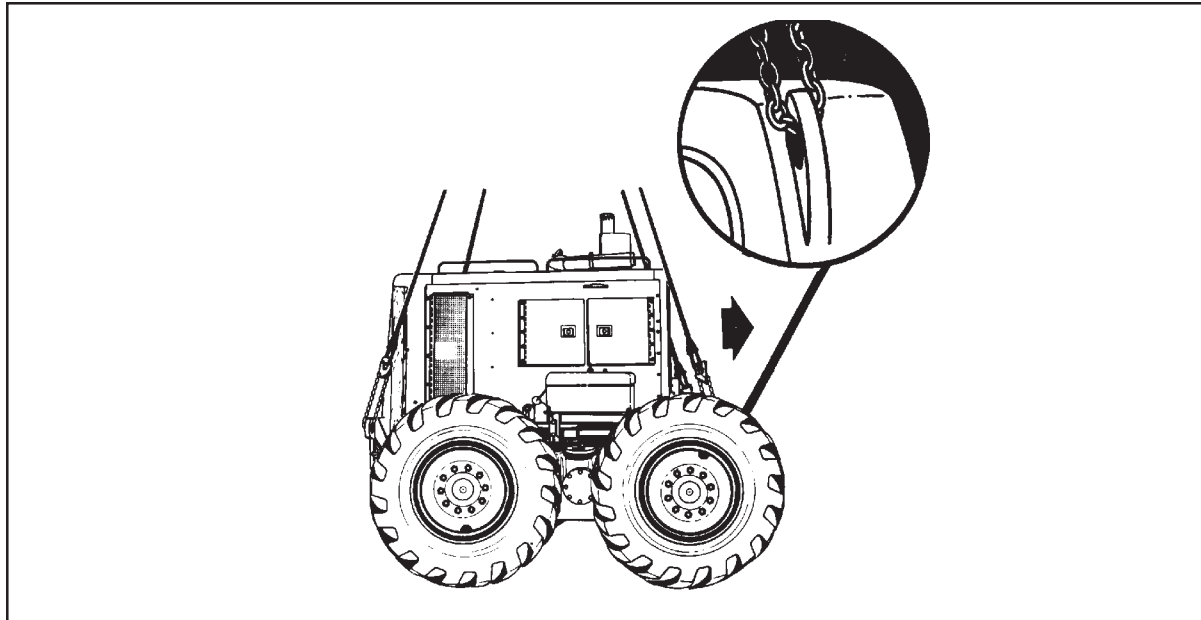

(2) Rigging. Rig the load according to the steps in Figure 8-10.

(3) Hookup. The hookup team stands on top of each section. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS REAR (SECTION)

1. Position the apex fitting on top of the engine compartment. Route outer sling legs 1 and 2 to the front (forward wheel) end and inner sling legs 3 and 4 to the rear (radiator) end of the rear section. Sling legs 1 and 3 should be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located inboard of the left front wheel. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located aft of the left rear wheel. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off. Ensure the sling legs are located outside of the 4- x 4- x 48-inch posts.

Figure 8-10. 130GS Grader (Rear Section)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS (FRONT SECTION)

1. Position apex fitting on top of the front section. Route outer sling legs 1 and 2 to the front (wheel end) of the section and inner sling legs 3 and 4 to the rear end. Sling legs 1 and 3 should be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision by the left wheel. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision above the blade. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure excess chain with tape or nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 8-10. 130GS Grader (Front Section)

613BS ELEVATING SCRAPER

8-12. The 613BS elevating scraper is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 8-11 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-11. 613BS Elevating Scraper

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-------------------------|
| 613BS Elevating Scraper Work Section | 16,330 | 25K | 3/40 |
| 613BS Elevating Scraper Power Section | 16,860 | 25K | Listed in Rigging Steps |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Plastic bags (4 each).
- (7) Plywood, 3/4- x 8- x 46-inch (2 each).

c. PERSONNEL. Four persons can sectionalize the scraper in 1 hour. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Sectionalize the scaper according to the instructions provided in the operator's manual.

(b) Secure the operator's seat with Type III nylon cord.

(c) Secure all covers and doors with tape or Type III nylon cord.

(d) Secure auxiliary fuel tank in place with Type III nylon cord.

(e) Stow elevator motor hoses and hanger arms on elevator flights in the bowl, and secure with nylon cord.

(f) Secure hydraulic cylinders up in a stowed position with doubled nylon cord.

(g) Secure loose hoses and cables with Type III nylon cord.

(h) Fold and secure the steps located on outside of the bowl.

(i) Tape all lights.

(j) Cover all hitch pins and pin holes with plastic and tape to prevent contamination by dirt and dust.

(k) Secure toolbox lid closed with nylon cord.

(l) Ensure that steering wheels are aligned.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(m) Install front bumper lift provision. Ensure that pin safety clip is installed. If clip is missing, secure the pin in place with nylon cord.

(n) Fabricate a hood protection from two pieces of 3/4- x 8- x 46-inch plywood. Nail plywood together forming an L-shaped protector. Drill two 1/2-inch holes in each corner for restraint. Plywood will protect the top edge of the radiator grill where it meets the hood.

(o) Place felt padding over the headlights and tape in place.

(p) Position the plywood protector on the hood and secure in place at four corners with nylon cord.

CAUTION

Plywood hood protector is essential to prevent hood damage by sling leg chains.

(2) **Rigging.** Rig the load according to the steps in Figure 8-11.

(3) **Hookup.** The hookup team stands on top of each section. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS (WORK SECTION)

1. Place apex fitting on top of rockguard and route outer sling legs 1 and 2 to forward end of load and inner sling legs 3 and 4 to aft (bumper) end. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the bowl. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 2 on the right front lift provision on the right front corner.
3. Pull both sling legs aft and secure (breakaway technique) to elevator and rockguard with cotton webbing or tape.
4. Loop the chain end of sling leg 3 through the left rear lift fitting located on the aft deck above the left wheel. Place the correct link from Table 8-10 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure excess chain with tape or nylon cord.
5. Pull both sling legs forward and secure (breakaway technique) to rockguard with tape or cotton webbing.
6. Cluster and tie or tape (breakaway technique) all sling legs together on top of the rockguard to prevent entanglement during hookup and lift-off.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

(6) Plastic bags (4 each).

(7) Plywood, 3/4- x 8- x 46-inch (2 each).

c. PERSONNEL. Four persons can sectionalize the distributor in 1 hour. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Sectionalize the distributor according to the instructions provided in the operator's manual.

(b) Secure the operator's seat with Type III nylon cord.

(c) Secure all covers and doors with tape or Type III nylon cord.

(d) Secure auxiliary fuel tank in place with Type III nylon cord.

(e) Secure the distribution control panel and cable in place on top of the tank with nylon cord.

(f) Ensure that the tank manhole cover is closed and secured.

(g) Close and secure the toolbox and hose stowage compartment covers with nylon cord.

(h) Secure the hose nozzle and reel with nylon cord.

(i) Tape all lights.

(j) Cover hitch pins and pin holes with plastic and tape to prevent contamination by dust and dirt.

(k) Ensure the steering wheels are aligned.

(l) Install front bumper lift provision. Ensure that pin safety clip is installed. If clip is missing, secure the pin in place with nylon cord.

(m) Fabricate a hood protection from two pieces of 3/4- x 8- x 46-inch plywood. Nail plywood together forming an L-shaped protector. Drill two 1/2-inch holes in each corner for restraint. Plywood will protect the top edge of the radiator grill where it meets the hood.

(n) Place felt padding over the headlights and tape in place.

(o) Position the plywood protector on the hood and secure in place at four corners with nylon cord.

RIGGING STEPS (WORK SECTION) (Continued)

3. Pass chain end of sling leg 3 through the aft left lift provision located on the aft deck by the left wheel. Place the correct link from Table 8-12 in the grab hook. Repeat this procedure for sling leg 4 on the lift provision by the right wheel. Secure excess chain with tape or nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the tank to prevent entanglement during hookup and lift-off.

Figure 8-12. 613WDS Water Distributor (Work Section) (Continued)

RIGGING STEPS (POWER SECTION)

1. Position apex fitting on top of the engine hood. Route outer sling legs 1 and 2 to the center of the power section by the main wheels. Route inner sling leg 3 forward to the front bumper and the other inner sling leg 4 to the arm assembly frame.
2. Loop the chain end of sling leg 1 through the left center lift provision to the left of the operator's seat and insert link 40 in the grab hook. Repeat with sling leg 2 on the right center lift provision.
3. Loop the chain end of sling leg 3 through the front bumper lift provision located in the center of the bumper and insert link 3 in the grab hook. Pull the sling leg up over the hood protector and tape or tie (breakaway technique) the sling leg to the ROPS mount.
4. Loop the chain end of sling leg 4 through the lift provision located on the center top of the draft arm assembly frame and insert link 24 in grab hook. Tape or tie (breakaway technique) the sling leg to the top of the draft arm. Secure excess chain with tape or nylon cord.
5. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 8-12. 613WDS Water Distributor (Power Section)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

ROLLER, TOWED, VIBRATING

8-14. The towed vibrating roller is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-13 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-13. Roller, Towed, Vibrating

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| Roller, Towed, Vibrating | 4,830 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Lift the tongue and position the support leg in its stowed or travel position and secure it with Type III nylon cord.

(b) Ensure the battery box cover, fuel cap, hoses, and all loose items are secured. Tape or tie any loose items as required.

(2) **Rigging.** Rig the load according to the steps in Figure 8-13.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Figure 8-13. Roller, Towed, Vibrating

TOWED ROLLERS

8-15. The towed rollers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-14 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Table 8-14. Towed Rollers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------|---------------------|-----------|-----------------------|
| Roller, Towed, RO3402 | 4,600 | 10K | 3/30 |
| Roller, Hercules, PT-11 | 3,520 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the drain plugs with tape.
- (b) Raise and secure the tongue with tie-down straps.

(2) **Rigging.** Rig the load according to the steps in Figure 8-14.

(3) **Hookup.** The hookup team stands on top of the roller. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Note: Brief the aircrew to hover to one side of the load and relax the sling tension before releasing the apex fitting to prevent damaging the load.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the roller. Route outer sling legs 1 and 2 to the front of the roller (lunette end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the roller. Place the correct link from Table 8-14 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the roller. Place the correct link from Table 8-14 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie breakaway technique) all sling legs together on top of the roller to prevent entanglement during hookup and lift-off.

Figure 8-14. Towed Rollers

VIBRATING ROLLER, CATERPILLAR, RO-33

8-16. The RO-33 Caterpillar vibrating roller is rigged for single-point sling load using the following procedures:

- a. **APPLICABILITY.** The following item in Table 8-15 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-15. Vibrating Roller, Caterpillar, RO-33

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------------|---------------------|-----------|-----------------------|
| Vibrating Roller, Caterpillar, RO-33 | 16,425 | 25K | 30/3 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Lumber, 2-inch x 4-inch (as required).
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Place the transmission in neutral and set the parking brake.
- (b) Ensure the fuel tank is not over 3/4 full. Ensure the fuel tank cap is in the vent position. Inspect the oil filter cap and battery caps for proper installation.
- (c) Secure the seat cushion to the frame with tape or Type III nylon cord.
- (d) Remove and secure the exhaust stack.
- (e) Tape all lights and gauges. Secure all loose covers and panels with tape or Type III nylon cord.
- (f) Tie down the steering wheel with Type III nylon cord.
- (g) Place the wooden block in the pivot point at the center of the roller to prevent the two halves from flexing during flight.

(2) **Rigging.** Rig the load according to the steps in Figure 8-15.

(3) **Hookup.** The hookup team stands on top of the roller. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting near the roller. Route outer sling legs 1 and 2 to the front of the load (roller end). Route inner sling legs 3 and 4 to the rear of the load (engine end). Sling legs 1 and 3 must be on the left side of the load.
2. Route the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 8-15 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with tape or Type III nylon cord.
3. Route the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 8-15 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Pad the sling legs/chains in the area where they make contact with the vehicle.
5. Cluster and tie (breakaway technique) the sling legs together on top of the roller to prevent entanglement during hookup and lift-off.

MK155 LAUNCHER, MINE CLEARING

8-17. The Mk155 mine clearing launcher is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-16 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-16. Mk155 Launcher, Mine Clearing

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------|---------------------|-----------|-----------------------|
| Mk155 Launcher, Mine Clearing | 860 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure the launch rail is in the collapsed or storage mode and not in its vertical position.

(b) Ensure the storage box lid is closed and secured with Type III nylon cord or tape.

(2) **Rigging.** Rig the load according to the steps in Figure 8-16.

(3) **Hookup.** The hookup team stands alongside the launcher. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the launch rail. Route outer sling legs 1 and 2 to the front of the load . Route inner sling legs 3 and 4 to the rear of the load. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift ring located behind the left rear corner of the storage box. Place the correct link from Table 8-16 in the grab hook. Repeat with sling leg 2 and the right front lift ring on the other side of the storage box.
3. Loop the chain end of sling leg 3 through the left rear lift ring. Place the correct link from Table 8-16 in the grab hook. Repeat with sling leg 4 and the right rear lift ring.
4. Cluster and tie (breakaway technique) the sling legs together on top of the launch rail to prevent entanglement during hookup and lift-off.

Figure 8-16. Mk155 Launcher, Mine Clearing

M68A2 LINE CHARGE, DEMOLITION WITH OR WITHOUT MK22 ROCKET MOTOR

8-18. The M68A2 line charge, demolition with or without Mk22 rocket motor is rigged for single-point sling load using the following procedures:

- a. **APPLICABILITY.** The following items in Table 8-17 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Table 8-17. M68A2 Line Charge, Demolition with or without Mk22 Rocket Motor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M68A2 Line Charge, Demolition Inert | 2,486 | 10K | 3/3 |
| M68A2 Line Charge, Demolition with Mk22 Rocket Motor | 2,672 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure the end of the load opposite the electrical connectors and fuse storage area is designated as the front of the load.

(b) Ensure the storage box lid is closed and secured with Type III nylon cord or tape.

(c) Ensure the rocket motor box is secured with metal strapping.

(d) Center the rocket motor box on top of the line charge container.

(e) Connect two CGU-1/B tie-down straps together to form one long strap. Route the strap around the line charge and rocket motor box lengthwise. Tighten the strap securely.

(f) Route two CGU-1/B tie-down straps across the rocket motor box and underneath the line charge container. Position the strap at each end of the containers approximately equal distance from the center. Tighten the strap securely. Secure the excess tie-down strap with tape or Type III nylon cord.

Note: When rigging the line charge without the rocket motor omit steps d (1) (c) through (f).

(2) **Rigging.** Rig the load according to the steps in Figure 8-17.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands alongside the line charge. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

MK155 LAUNCHER WITH OR WITHOUT M68A2 DEMOLITION LINE CHARGE AND MK22 ROCKET MOTOR ON M353 TRAILER

8-19. The Mk155 launcher with or without M68A2 demolition line charge and Mk22 rocket motor on M353 trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-18 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-18. Mk155 Launcher with or without M68A2 Demolition Line Charge and Mk22 Rocket Motor on M353 Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Mk155 Launcher | 3,700 | 10K | 3/3 |
| Mk155 Launcher with M68A2, Demolition Charge and Mk22 Rocket Motor | 6,312 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure the launcher is securely attached to the trailer chassis. Ensure the launch rail is in the collapsed or storage mode and not in its vertical position.

(b) Ensure the storage box lid is closed and secured with Type III nylon cord or tape (if installed).

(c) Tie off hoses and safety chains and secure any loose items with nylon cord or tape.

(d) Set the parking brake.

LRT-110, 7 1/2-TON CRANE

8-21. The LRT-110, 7 1/2-ton crane is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 8-20 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-20. LRT-110, 7 1/2-Ton Crane

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| LRT-110, 7 1/2-Ton Crane | 24,230 | 25K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).
- (6) Webbing, tubular, nylon, 1/2-inch.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold side mirrors in toward cab and tie or tape, as necessary. Tape or secure windshield wipers to windshield.

(b) Ensure the wheels are pointing straight ahead. Secure the steering wheel with nylon cord or tape.

(c) Secure doors, tool box covers, and all loose equipment with nylon cord or tape. Secure hook-block assembly to the end of the boom mast with CGU-1/B cargo tie-down or equivalent.

(d) Secure boom light power cable with nylon cord or tape.

(e) Insert wooden cable wedges at the drum to prevent the cable from unspooling if the cable becomes slack. Secure wedges with 1/2-inch tubular nylon.

(f) Set the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 8-20.

(3) **Hookup.** The hookup team stands beside the left and right side of the boom base. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

LRT-110, 7 1/2-TON CRANE BOOM

8-22. The LRT-110, 7 1/2-ton crane boom is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-21 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-21. LRT-110, 7 1/2-Ton Crane Boom

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| LRT-110 7 1/2-Ton Crane Boom | 8,600 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).
- (6) Webbing, tubular, nylon, 1/2-inch.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Sectionalize the crane according to instructions in the operator's manual.
 - (b) Secure hook-block assembly to the end of the boom mast with CGU-1/B cargo tie-down or equivalent.
 - (c) Secure boom light power cable with nylon cord or tape.
 - (d) Insert wooden cable wedges at the drum to prevent the cable from unspooling if the cable becomes slack. Secure wedges with 1/2-inch tubular nylon.
 - (e) Secure the boom hydraulic hoses with tape or nylon cord. Make sure the hoses are clear of the boom base.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 8-21.

(3) **Hookup.** The hookup team stands beside the boom. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

LRT-110, 7 1/2-TON CRANE POWER UNIT

8-23. The LRT-110, 7 1/2-ton crane power unit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-22 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-22. LRT-110, 7 1/2-Ton Crane Power Unit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|-----------|-----------------------|
| LRT-110, 7 1/2-Ton Crane Power Unit | 15,600 | 25K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).
- (6) Webbing, tubular, nylon, 1/2-inch.
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Sectionalize the crane according to instructions in the operator's manual.

(b) Fold side mirrors in toward cab and tie or tape, as necessary. Tape or secure windshield wipers to windshield.

(c) Ensure the wheels are pointing straight ahead. Secure the steering wheel with nylon cord or tape. Engage the parking brake.

(d) Secure doors, tool box covers, and all loose equipment with nylon cord or tape.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 8-22.

(3) **Hookup.** The hookup team stands beside the left and right side of the boom base. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

TRUCK, FORKLIFT, MC-4000

8-24. The truck, forklift, MC-4000 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-23 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-23. Truck, Forklift, MC-4000

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Truck, Forklift, Rough Terrain, MC-4000, TAMCN B2565 | 8,600 | 15K | 4/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Insert the articulating lock pin to keep the front and rear sections from twisting while in flight.

(b) Secure the seat cushion and steering wheel with Type III nylon cord. Engage the hand brake and place the transmission in neutral.

(c) Ensure the fuel tank is less than 3/4 full.

(d) Raise the fork tines 1 foot above the ground.

(2) Rigging. Rig the load according to the steps in Figure 8-23.

(3) Hookup. The hookup team stands on top of the engine deck. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting/web ring on top of the engine hood or ROPS. Route outer sling legs 1 and 2 to the front of the forklift and inner sling legs 3 and 4 to the rear of the engine area. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision (not the tie-down provision) that is located directly above the forward axle housing between the left front tire and the hydraulic cylinder. Place the correct link from Table 8-23 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 8-23 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Pull the front sling legs up and tape or tie (breakaway technique) the grab links to the front side of the upper light brackets to ensure the sling legs do not become entangled.
5. Pull the aft sling legs together on top of the engine compartment and tie (breakaway technique) the two grab links together.
6. Cluster and tie (breakaway technique) all sling legs together on top of the forklift to prevent entanglement during hookup and lift-off.

TRUCK, FORKLIFT, RT4000

8-25. The truck, forklift, RT4000 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-24 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-24. Truck, Forklift, RT4000

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Truck, Forklift, Rough Terrain, RT4000, TAMCN B2566 | 10,860 | 15K | 3/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, CGU-1B (4 each).

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the seat cushion and steering wheel with Type III nylon cord. Engage the hand brake and place the transmission in neutral.

(b) Ensure the fuel tank is less than 3/4 full.

(c) Raise the fork tines 1 foot above the ground. Lift the fork ends upward and secure to the lift cylinder frame using the CGU-1B straps.

(d) Tape the end of the exhaust pipe.

(2) **Rigging.** Rig the load according to the steps in Figure 8-24.

(3) **Hookup.** The hookup team stands on top of the falling objects protection system (FOPS). The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When

MHE-270/MHE-271 TRUCK, FORKLIFT, RT4000

8-26. The MHE-270/MHE-271 truck, forklift, RT4000 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-25 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-25. MHE-270/MHE-271 Truck, Forklift, RT4000

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| MHE-270 without Cab, NSN: 3930-01-330-8907 | 11,700 | 25K | 40/3 |
| MHE-270 with Cab, NSN: 3930-01-330-8967 | 11,920 | 25K | 40/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Tilt the mast back as far as it will go.
 - (b) Ensure the fuel tank is less than 3/4 full.
 - (c) Tilt the tow bar up as far as it will go. Ensure both pins which hold the tow bar in an upright position are disengaged. The tow bar must be free to rotate.
 - (d) Place the transmission in neutral and straighten the front wheels.
 - (e) Engage the parking brake.
 - (f) Secure the doors, chains, fire extinguisher, and all loose equipment with tape or Type III nylon cord.
 - (g) Tape all lights, windows and glass fixtures.

DRAFT

c. **PERSONNEL.** Two persons can prepare and rig each load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the forks so they are sitting on the travel blocks and are tilted all the way aft.

(b) Ensure the fuel tank is less than 3/4 full. Place the transmission in neutral and engage the parking brake.

(c) Route two CGU-1/B cargo tie-down straps around the rear access doors.

(d) Route two CGU-1/B cargo tie-down straps around the engine access doors.

(e) Secure the tool box lid with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 8-26.

(3) **Hookup.** The hookup team stands on top of the engine deck. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

EXTENDABLE BOOM FORKLIFT (EBFL)

8-28. The extendable boom forklift is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-27 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-27. Extendable Boom Forklift

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| Extendable Boom Forklift | 25,640 | 40K | 3/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a)** Secure the forks against the carriage using the CGU-1/Bs.
- (b)** Raise the carriage 10 inches off the ground, retract and raise the boom.
- (c)** Set the parking brake.
- (d)** Place the gear selector lever in neutral.
- (e)** Tape the exhaust pipe end.

(2) Rigging. Rig the load according to the steps in Figure 8-27.

(3) Hookup. The hookup team stands on the falling objects protection system (FOPS). The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a)** Secure the forks against the carriage using the CGU-1/Bs.
- (b)** Set the parking brake.
- (c)** Place the gear selector lever in neutral.
- (d)** Tape the exhaust pipe end.
- (e)** Lower the boom and tilt the forks all the way back.
- (f)** Secure all latches on the windows with tape or Type III nylon cord.
- (g)** Tape the windshield wipers to the windshield.
- (h)** Tape all lights and mirrors.
- (i)** Secure all equipment in the cab with tape or Type III nylon cord.
- (j)** Ensure the wheels are pointed straight ahead and secure the steering wheel with Type III nylon cord.
- (k)** Secure the engine cover with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 8-28.

(3) Hookup. The hookup team stands on the side of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

LIGHT ROUGH TERRAIN FORKLIFT (LRTF)

8-30. The light rough terrain forklift is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-29 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-29. Light Rough Terrain Forklift

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|---------------------------------|
| Light Rough Terrain Forklift | 13,700 | 15K | 25/3 Cab side 30/3 Boom Side |

b. MATERIALS. The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tiedown strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig each load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Slide and secure the forks together in the middle of the carriage using CGU-1/Bs.

(b) Set the parking brake.

(c) Place the gear selector lever in neutral.

(d) Tape the exhaust pipe end.

(e) Secure all latches on the windows with tape or Type III nylon cord.

(f) Tape the windshield wipers to the windshield.

(g) Tape all lights and mirrors.

DRAFT

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the vehicle. Route outer sling legs 1 and 2 to the front of the EBFL and inner sling legs 3 and 4 to the rear of the EBFL. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 8-29 in the grab hook. Repeat with sling leg 2 and the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 29 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.</p> |

Figure 8-29. Light Rough Terrain Forklift (Continued)

WELDING SHOP ON M200A1 TRAILER

8-31. The welding shop on M200A1 trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-30 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-30. Welding Shop on M200A1 Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------|---------------------|-----------|-----------------------|
| Welding Shop on M200A1 Trailer | 7,220 | 10K | 3/17 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Webbing, nylon, tubular, 1/2-inch.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all compressed gas cylinders to trailer with nylon cord. Ensure all the caps are properly installed.

(b) Secure the safety chains to tow bar of trailer with tape or Type III nylon cord.

(c) Secure rear outriggers in position by routing 1/2-inch tubular nylon over rear deck and under engine housing and tie on outriggers below step plate.

(d) Secure engine doors and control panel cover by routing nylon cord around entire engine and tying cord.

(e) The front leg must be in full down position.

(2) **Rigging.** Rig the load according to the steps in Figure 8-30.

(3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-30. Welding Shop on M200A1 Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of welding shop. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear of the trailer. Sling legs 1 and 3 should be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the trailer. Place the correct link from Table 8-30 in the grab hook. Repeat with sling leg 2 on the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 8-30 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure excess chain with tape or nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.</p> |

Figure 8-30. Welding Shop on M200A1 Trailer (Continued)

250 CFM AIR COMPRESSOR

8-32. The 250 CFM air compressor is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-31 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-31. 250 CFM Air Compressor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---------------------|-----------|-----------------------|
| 250 CFM Air Compressor | 7,425 | 10K | 3/15 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Engage parking brake. Secure light cables with tape or nylon cord. Tie off hoses on reels to prevent unrolling. Close and latch all doors and lids.

(b) Ensure fuel cap is secure. Pad front corners of shelter along bolt lines with felt and tape.

(c) Tape or tie the lift provisions in the UP position to prevent fouling.

(2) **Rigging.** Rig the load according to the steps in Figure 8-31.

(3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-31. 250 CFM Air Compressor

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Carefully place apex fitting on top of the compressor. Route outer sling legs 1 and 2 to the front of the trailer and the inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end from sling leg 1 through the left front lift provision on the tongue of the trailer. Place the correct link from Table 8-31 in the grab hook. Repeat this procedure for sling leg 2 on the right side of the tongue.</p> |
| <p>3. Loop the chain end from sling leg 3 through the left rear lift provision. Place the correct link from Table 8-31 in the grab hook. Repeat this procedure for sling leg 4. Tie (breakaway technique) the sling legs to prevent fouling the hose reels. Secure excess chain with tape or nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.</p> |

Figure 8-31. 250 CFM Air Compressor (Continued)

PNEUMATIC TOOL AND COMPRESSOR OUTFIT / HYDRAULIC PIONEER TOOL OUTFIT (PTO) ON M353 TRAILER

8-33. The pneumatic tool and compressor outfit / hydraulic pioneer tool outfit on M353 trailer are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-32 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-32. Tool Outfits on M353 Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Pneumatic Pool and Compressor, TAMCN B0395 | 8,040 | 10K | 3/18 |
| Hydraulic Pioneer Tool Outfit | 6,740 | 10K | 3/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig each load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a)** Engage both hand brakes.
- (b)** Ensure fuel cap is secure. Secure all loose gear and doors.
- (c)** Secure the light cable to the drawbar with Type III nylon cord or tape.
- (d)** Tape all lights, reflectors, and glass fixtures.
- (e)** Secure the two small wheels.

(2) Rigging. Rig the load according to the steps in Figure 8-32.

(3) Hookup. The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-32. Tool Outfits on M353 Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the compressor. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the lifting eye located at the left front corner of the trailer. Place the correct link from Table 8-32 in the grab hook. Repeat with sling leg 2 and the lifting eye located at the right front corner of the trailer.</p> |
| <p>3. Loop the chain end of sling leg 3 through the lifting eye at the left rear corner of the trailer. Place the correct link from Table 8-32 in the grab hook. Repeat with sling leg 4 and the lifting eye at the right rear corner of the trailer.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the air compressor to prevent entanglement during hookup and lift-off. Ensure the rear sling legs are tied so they do not become entangled under the hose reels.</p> |

Figure 8-32. Tool Outfits on M353 Trailer (Continued)

FUEL DISPENSING SYSTEM, TACTICAL AIRFIELD (TAFDS)

8-34. The tactical airfield fuel dispensing system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 8-33 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-33. Fuel Dispensing System, Tactical Airfield

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Fuel Dispensing System, Tactical Airfield | 3,500 | 15K | 5/5 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig each load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the battery cover, inlet plugs, and outlet plugs with tape or Type III nylon cord.
- (b) Tape the engine intake and exhaust openings.
- (c) Secure the canvas cover on the pump with Type III nylon cord.
- (d) Engage one hand brake.

(2) **Rigging.** Rig the load according to the steps in Figure 8-33.

(3) **Hookup.** The hookup team stands on the pump tires. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-33. Fuel Dispensing System, Tactical Airfield

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the pump. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the trailer. Place the correct link from Table 8-33 in the grab hook. Repeat with sling leg 2 and the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the trailer. Place the correct link from Table 8-33 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the pump to prevent entanglement during hookup and lift-off.</p> |

Figure 8-33. Fuel Dispensing System, Tactical Airfield (Continued)

BOAT, BRIDGE ERECTION

8-35. The bridge erection boat is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-34 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-34. Boat, Bridge Erection

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------|---------------------|-----------|-----------------------|
| Boat, Bridge Erection | 6,000 | 15K | 4/4 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (a) Remove and secure the canvas cover in the stern of the boat.
- (b) Remove or secure all loose items of equipment.
- (c) Attach the front section to the rear section of the boat.
- (d) Tape all lights, gages, compass, and glass items.
- (e) Ensure the shipping cradles are removed from both boat sections.

(2) **Rigging.** Rig the load according to the steps in Figure 8-34.

(3) **Hookup.** The hookup team stands on top of the boat. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-34. Boat, Bridge Erection

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the center of the boat. Route outer sling legs 1 and 2 to the stern section and inner sling legs 3 and 4 to the bow section. Make sure chains for sling legs 3 and 4 are forward (toward the bow) of the horizontal arms on the rear towing bitt. Sling legs 1 and 3 must be on the same side of the load.</p> <p>2. Loop the chain end of sling leg 1 through the left rear lifting U-bolt located on the left side of the stern section. Place the correct link from Table 8-34 in the grab hook. Repeat with sling leg 2 and the right rear lifting U-bolt.</p> <p>3. Wrap the chain end of sling leg 3 two times around the vertical post of the rear towing bitt. Wrap the chain end of sling leg 4 two times in the opposite direction around the vertical post of the rear towing bitt. Place the correct link from Table 8-34 in the grab hook. Ensure the chains are below the horizontal arm of the towing bitt.</p> <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the boat to prevent entanglement during hookup and lift-off.</p> |

Figure 8-34. Boat, Bridge Erection (Continued)

BRIDGE, MEDIUM GIRDER, DRY GAP (MGB)

8-36. The bridge, medium girder, dry is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-35 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-35. Bridge, Medium Girder, Dry

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Medium Girder Bridge, Ramp Section, Palletized TAMCN BO152 | 6,500 | 15K | 10/5 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig each load in 20 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) The larger ends of the bridge sections are at the front of the load.

(b) Ensure all sections of the bridge are properly secured to the pallet using the cargo tie-down straps. Route two straps from the pallet forward end to the aft end. Route the remaining straps from one side of the pallet, over the ramp sections, and to the other side of the pallet. Tighten all tie-down straps.

(2) **Rigging.** Rig the load according to the steps in Figure 8-35.

(3) **Hookup.** The hookup team stands on top of the bridge ramp sections. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-35. Medium Girder Bridge

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| 1. Position apex fitting on top of the ramp sections. Route outer sling legs 1 and 2 to the front of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load. |
| 2. Loop the chain end of sling leg 1 through the pallet left front lift provision. Place the correct link from Table 8-35 in the grab hook. Repeat with sling leg 2 and the pallet right front lift provision. Secure excess chain with nylon cord. |
| 3. Loop the chain end of sling leg 3 through the pallet left rear lift provision. Place the correct link from Table 8-35 in the grab hook. Repeat with sling leg 4 and the pallet right rear lift provision. |
| 4. Cluster and tie (breakaway technique) all sling legs together on top of the bridge ramp sections to prevent entanglement during hookup and lift-off. |

Figure 8-35. Medium Girder Bridge (Continued)

RIBBON BRIDGE, RAMP BAY

8-37. The ribbon bridge, ramp bay is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-36 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-36. Ribbon Bridge, Ramp Bay

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------------------|---------------------|-----------|-----------------------|
| Ribbon Bridge, Ramp Bay | 11,560 | 25K | 3/60 |
| Improved Ribbon Bridge, Ramp Bay | 13,270 | 25K | 3/60 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig each load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) The shorter end of the bay section is the front of the load.
- (b) Ensure all the bay latches are securely fastened.

(2) **Rigging.** Rig the load according to the steps in Figure 8-36.

(3) **Hookup.** The hookup team stands on top of the ramp bays. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-36. Ribbon Bridge, Ramp Bay

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the ramp bay. Route outer sling legs 1 and 2 to the front of the bay and inner sling legs 3 and 4 to the rear of the bay. Sling legs 1 and 3 must be on the left side of the load.</p> <p>2. Loop the chain end of sling leg 1 through the left front lift provision (a pin located between two plates on the top edge of the bay). Place the correct link from Table 8-36 in the grab hook. Repeat with sling leg 2 and the right front lift provision.</p> <p>3. Loop the chain end of sling leg 3 through the left rear lift provision (a pin located between two plates on the top left edge of the bay). Place the correct link from Table 8-36 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> <p>4. Pull the chain of each sling leg up tightly, tape or tie with nylon cord just above the lift provisions to prevent the chain from falling down between the plates.</p> <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the bay to prevent entanglement during hookup and lift-off.</p> |

Figure 8-36. Ribbon Bridge, Ramp Bay (Continued)

RIBBON BRIDGE INTERIOR BAY

8-38. The ribbon bridge, interior bay is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 8-37 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-37. Ribbon Bridge, Interior Bay

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------------|---------------------|-----------|-----------------------|
| Ribbon Bridge, Interior Bay | 11,800 | 25K | 3/15 |
| Improved Ribbon Bridge, Interior Bay | 13,860 | 25K | 3/15 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. **PERSONNEL.** Two persons can prepare and rig each load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) The end with the roadway lock is the front of the load.

(b) Ensure all the bay latches are securely fastened.

(2) **Rigging.** Rig the load according to the steps in Figure 8-37.

(3) **Hookup.** The hookup team stands on top of the interior bays. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-37. Ribbon Bridge, Interior Bay

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting on top of the interior bay. Route outer sling legs 1 and 2 to the front of the bay and inner sling legs 3 and 4 to the rear of the bay. The front of the bay is the end with the roadway lock. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision (a pin between two plates on the top left edge of the bay). Place the correct link from Table 8-37 in the grab hook. Repeat with sling leg 2 and the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision (a pin located between two plates on the top left edge of the bay). Place the correct link from Table 8-37 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or nylon cord.</p> |
| <p>4. Pull the chain of each sling leg up tightly, tape or tie with nylon cord just above the lift provisions to prevent the chain from falling down between the plates.</p> |
| <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the bay to prevent entanglement during hookup and lift-off.</p> |

Figure 8-37. Ribbon Bridge, Interior Bay

WATER PURIFICATION UNIT-REVERSE OSMOSIS (ROWPU)

8-39. The water purification unit-reverse osmosis is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 8-38 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-38. Water Purification Unit-Reverse Osmosis

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| MC257 Water Purification Unit-Reverse Osmosis, 600 Gallons per Hour , Skid Mounted, TAMCN B2064 | 7,400 | 15K | 5/5 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig each load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) The water pump end is the front of the load.

(b) Secure all containers, boxes, and other equipment with tape or Type III nylon cord.

(c) Tape all glass fixtures.

(2) Rigging. Rig the load according to the steps in Figure 8-38.

(3) Hookup. The hookup team stands on top of the unit. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-38. Water Purification Unit-Reverse Osmosis

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of the ROWPU unit. Route outer sling legs 1 and 2 to the front of the unit and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift ring on the top of the unit. Place the correct link from Table 8-38 in the grab hook. Repeat with sling leg 2 and the right front lift ring.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift ring. Place the correct link from Table 8-38 in the grab hook. Repeat with sling leg 4 and the right rear lift ring.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.</p> |

Figure 8-38. Water Purification Unit-Reverse Osmosis (Continued)

MS114 WFD CONCRETE MIXER

8-40. The MS114 WFD concrete mixer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 8-39 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-39. MS114 WFD Concrete Mixer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|-----------|-----------------------|
| MS114 WFD Concrete Mixer | 4,223 | 15K | 50/30 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. **PERSONNEL.** Two persons can prepare and rig each load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure all hoses, cables, or chains with tape or nylon cord.
- (b) Secure the towbar in the raised/locked position.
- (c) Raise the scoop to the up position and secure the scoop elevating wheel with the tie-down strap.
- (d) Since the mixer does not have a hand brake, loop a tie-down strap through a wheel rim and secure it to the frame to keep the wheel from turning.

(2) **Rigging.** Rig the load according to the steps in Figure 8-39.

(3) **Hookup.** The hookup team stands on top of the mixer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-39. MS114 WFD Concrete Mixer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the mixer. Route outer sling legs 1 and 2 to the front of the mixer (towbar end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front U-bolt lift provision located on the left top side of the mixer. Place the correct link from Table 8-39 in the grab hook. Route the chain from the inboard side of the provision to the outboard side. Repeat with sling leg 2 and the right front lift provision. Secure excess chain with tape or nylon cord.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear U-bolt lift provision located on the left top side of the mixer. Place the correct link from Table 8-39 in the grab hook. Route the chain from the inboard side of the provision to the outboard side. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with tape or nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the mixer to prevent entanglement during hookup and lift-off.</p> |

Figure 8-39. MS114WFD Concrete Mixer (Continued)

COUNTERMINE MINI-FLAIL

8-41. The countermine mini-flail is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 8-40 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-40. Countermine Mini-Flail

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---------------------|-----------|-----------------------|
| Countermine Mini-Flail | 2,420 | 10K | 35/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

- (a)** Tape the flail headspring mechanism to the lift/tie crossmember.
- (b)** Ensure the engine compartment door securing pin is present and safety the pin with tape.
- (c)** Secure loose cables, safety cables, and safety chains with tape or Type III nylon cord.
- (d)** Engage the brakes.

(2) Rigging. Rig the load according to the steps in Figure 8-40.

(3) Hookup. The hookup team stands beside the mini-flail. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 8-40. Countermine Mini-Flail

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position the apex fitting near the mini-flail. Route outer sling legs 1 and 2 to the front of the load (engine end). Route inner sling legs 3 and 4 to the rear of the load (flail head). Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Route the chain end of sling leg 1 through the left front lift provision (engine end). Place the correct link from Table 8-40 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Route the chain end of sling leg 3 through the left rear lift provision (flail head end). Place the correct link from Table 8-40 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.</p> |
| <p>4. Pad the sling legs/chains in the area where they make contact with the vehicle.</p> |
| <p>5. Cluster and tie (breakaway technique) the sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.</p> |

Figure 8-40. Countermine Mini-Flail (Continued)

BOBCAT SKID-STEER LOADERS

8-42. The Bobcat skid-steer loaders are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 8-41 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 8-41. Bobcat Skid-Steer Loaders

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Bobcat 863 Skid-Steer Loader with Construction and Industrial Bucket | 6,870 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Construction and Industrial Bucket and Tracks | 7,720 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Pallet Forks | 7,235 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Pallet Forks and Tracks | 8,085 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with 36-inch Auger Bit | 7,690 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with 36-inch Auger Bit and Tracks | 8,540 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Dozer Blade | 7,770 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Dozer Blade and Tracks | 8,620 | 25K | 5/10 |
| Bobcat 863 Skid-Steer Loader with Angle Broom | 7,910 | 25K | 5/10 |

Table 8-41. Bobcat Skid-Steer Loaders (Continued)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Bobcat 763 Skid-Steer Loader with no Attachments | 4,840 | 10K | 3/10 |
| Bobcat 763 Skid-Steer Loader with Clamshell Bucket Attachment (NSN 3815-01-502-3528) | 5,660 | 10K | 3/10 |
| Bobcat 763 Skid-Steer Loader with Hydraulic Breaker Attachment (NSN 3820-01-502-3530) | 5,600 | 10K | 3/10 |
| Bobcat 763 Skid-Steer Loader with Auger Attachment (NSN 3830-01-502-5470) | 5,220 | 10K | 3/10 |
| Bobcat 763 Skid-Steer Loader with Pallet Lifting Fork Attachment (NSN 3940-01-502-5469) | 5,480 | 10K | 3/10 |
| Bobcat S150 Compact Skid-Steer Loader with no Attachments | 5,530 | 10K | 20/3 |
| Bobcat S150 Compact Skid-Steer Loader with Clamshell Bucket Attachment (NSN 3815-01-502-3528) | 6,410 | 10K | 25/3 |
| Bobcat S150 Compact Skid-Steer Loader with Hydraulic Breaker Attachment (NSN 3820-01-502-3530) | 6,290 | 10K | 25/3 |
| Bobcat S150 Compact Skid-Steer Loader with Auger Attachment (NSN 3830-01-502-5470) | 5,910 | 10K | 20/3 |
| Bobcat S150 Compact Skid-Steer Loader with Pallet Lifting Fork Attachment (NSN 3940-01-502-5469) | 6,170 | 10K | 20/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- OR
- (2) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tiedown strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig each load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Adjust the boom arm and attachment angles:

1. Tilt the construction and industrial bucket, pallet forks, dozer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

blade, or angle broom all the way up and lower the boom all the way down.

2. Tilt the 36-inch auger all the way up and adjust the boom height so the auger point is 8-12 inches off the ground.

(b) Secure the 36-inch auger bit and angle broom with CGU-1/B cargo tiedown straps as follows:

1. Swing the 36-inch auger bit all the way to the left and secure with a CGU-1/B cargo tiedown strap. Route the strap around the point of the bit and around the boom arm above the attachment connection. Tighten the strap (see insert Figure 8-41).

2. Route a CGU-1/B cargo tiedown strap around the left side of the angle broom and around the boom arm above the attachment connection. Repeat the above procedures on the right side. Tighten the straps.

(c) Detach any attachment hydraulic hoses and cover the ends with tape.

(d) Secure each control arm lever to the side of the roll over protection system (ROPS) with Type III nylon cord.

(e) Tie the rear lift provisions to the ROPS in the up position with Type III nylon cord.

(f) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank cap for proper installation.

(g) Tape all windows, lights and reflectors.

(h) Tape the end of the exhaust pipe.

(2) Rigging. Rig the load according to the steps in Figure 8-41.

(3) Hookup. The hookup team stands on the rear of the load directly behind the ROPS. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the ROPS. Route outer sling legs 1 and 2 to the front of the vehicle and inner sling legs 3 and 4 to the rear of the vehicle. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 8-41 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 8-41 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure excess chain with Type III nylon cord.
4. Tie the grabhooks from the rear sling legs to the side of the ROPS with Type I, 1/4-inch cotton webbing.
5. Cluster and tie (breakaway technique) all sling legs together on top of the vehicle to prevent entanglement during hookup and lift-off.

Figure 8-41. Bobcat Skid-Steer Loaders

DRAFT

Chapter 9

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR LIQUID CONTAINERS

INTRODUCTION

9-1. This chapter contains rigging procedures for single-point lift of liquid containers that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for liquid containers are in this section. Paragraphs 9-2 through 9-6 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

LIGHTWEIGHT COLLAPSIBLE FABRIC TANK

9-2. The lightweight collapsible fabric tank is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 9-1 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 9-1. Lightweight Collapsible Fabric Tank

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|--------------------------|-----------------------|
| Tank, Fabric, Lightweight Collapsible, 160 Gallon | 1,400 | 5,000-pound capacity net | 4/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Net, cargo (5,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Inspect the net in accordance with the inspection procedures in FM 4-20.197.

(b) Ensure all sharp edges on the tank are protected.

(2) **Rigging.** Rig the load according to the steps in Figure 9-1.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 9-1. Lightweight Collapsible Fabric Tank

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

ONE TO FOUR 500-GALLON FUEL DRUMS

9-3. One to four 500-gallon fuel drums are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 9-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 9-2. One to Four 500-Gallon Fuel Drums

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Drum, Fabric, Fuel, 500-Gallon (1 each) | 4,200 | 10K | 3/3 |
| Drum, Fabric, Fuel, 500-Gallon (2 each) | 8,400 | 10K | 3/3 |
| Drum, Fabric, Fuel, 500-Gallon (3 each) | 12,600 | 25K | 3/55 |
| Drum, Fabric, Fuel, 500-Gallon (4 each) | 16,800 | 25K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000 or 25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 5 to 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Align the drums side by side in a row.
- (b) Ensure the lifting clevises are serviceable.
- (c) Rotate the drum hub so a clevis is in the top position.

(2) **Rigging.** Rig the load according to the steps in Figure 9-2.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS (ONE DRUM)

1. Position apex fitting on top of the drum. Route one outer and one inner sling legs 1 and 3 to the the left side of the drum and the other two sling legs 2 and 4 to the right side.

2. Loop the chain end of sling legs 1 and 3 through the left clevis. Place the correct link from Table 9-2 in the grab hook. Repeat with sling legs 2 and 4 through the right clevis.

Note: One drum can be rigged with a two-legged sling set using sling legs 1 and 2.

3. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 9-2. One to Four 500-Gallon Fuel Drums

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS (TWO DRUMS)

1. Position apex fitting on top of the two drums. Route outer sling legs 1 and 2 to one drum and inner sling legs 3 and 4 to the other drum. Sling legs 1 and 3 should be on the same side of the two drums.
2. Loop the chain end of sling leg 1 through the left clevis. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 2 through the right clevis.
3. Loop the chain end of sling leg 3 through the left clevis of the other drum. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 4 through the right clevis.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

RIGGING STEPS (THREE DRUMS)

1. Position apex fitting on top of the center drum. Route outer sling legs 1 and 2 to the middle drum and inner sling legs 3 and 4 to an outer drum. Sling legs 1 and 3 should be on the same side of the three drums.
2. Loop the chain end of sling leg 1 through the clevis on the left hub of the middle drum, through the clevis on the left side of one of the outer drums. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 2 through the clevises on the right side of the two drums.
3. Loop the chain end of sling leg 3 through the clevis on the left hub of the outer drum not yet connected. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 4 through the right side of the drum.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 9-2. One to Four 500-Gallon Fuel Drums (Continued)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS (FOUR DRUMS)

1. Position the apex fitting on the top of the drums. Route outer sling legs 1 and 2 to two drums and inner sling legs 3 and 4 to the other two drums. Sling legs 1 and 3 should be on the same side of the load.
2. Loop the chain end of sling leg 1 through the clevis on the left hub of one drum, over and through the clevis of the second drum. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 2 through the other side of the the two drums.
3. Loop the chain end of sling leg 3 through the clevis on the left hub of one of the other drums, over and through the clevis of the second drum. Place the correct link from Table 9-2 in the grab hook. Repeat with sling leg 4 through the other side of the two drums.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 9-2. One to Four 500-Gallon Fuel Drums (Continued)

SIX 500-GALLON FUEL DRUMS, EMPTY

9-4. Six 500-gallon empty fuel drums are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 9-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

CAUTION

One to five empty drums are not a stable load and are not certified for sling loading. One to five empty fuel drums may cause damage to the aircraft and endanger the aircrew due to violent oscillations and inherent instability.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Table 9-3. Six 500-Gallon Fuel Drums, Empty

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Middle/Rear |
|--|---------------------|-----------|------------------------------|
| Drum, Fabric, Fuel, 500-Gallon, Empty (6 each) | 4,500 | 10K | 3/3/14 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity), with two additional sling leg assemblies.
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Webbing, tubular, nylon, 1/2-inch.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Align the drums side by side in a row.
- (b) Ensure the lifting clevises are serviceable and secure.
- (c) Rotate the drum hub so a clevis is in the top position.

(d) Assemble a six-leg sling set in accordance with the procedures in FM 4-20.197.

(2) **Rigging.** Rig the load according to the steps in Figure 9-3.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Route outer sling legs 1 and 2 to the forward outer drum, middle sling legs 3 and 4 to the rearward outer drum, and inner sling legs 5 and 6 to the two center drums.
 2. Loop the chain end of sling leg 1 through the left clevis on the outer drum and through the left clevis of the next inner drum. Place the correct link from Table 9-3 in the grab hook. Repeat with sling leg 2 on the right side of the two drums.
 3. Loop the chain end of sling leg 3 through the left clevis on the other outer drum and through the left clevis of the next inner drum. Place the correct link from Table 9-3 in the grab hook. Repeat with sling leg 4 on the right side of the two drums.
 4. Loop the chain end of sling leg 5 through the left clevis on the two center drums. Place the correct link from Table 9-3 in the grab hook. Repeat with sling leg 6 on the right side of the two center drums. Secure excess chain with wide tape or nylon cord.
 5. Sling legs 1, 3, and 5 should be on the left side of the load.
- Note:** At this point, you have effectively rigged three individual, 2-leg sling loads under one apex fitting. Now you must unite the three pairs of drums.
6. Loop a length of tubular nylon through the clevis assemblies on each side of the load. Tighten as securely as possible.
 7. Cluster and tie or tape (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 9-3. Six 500-Gallon Fuel Drums, Empty

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

STORAGE MODULE, FUEL/WATER, SIX COMPARTMENT CONTAINER (SIXCON), INDIVIDUAL

9-5. The storage module, fuel/water, six compartment container (SIXCON), individual is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 9-4 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 9-4. Storage Module, Fuel/Water, Six Compartment Container, Individual

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Storage Module, Fuel/Water, Six Compartment Container, Individual | 10,000 | 15K | 3/3 |

Note: This load is certified at the FULL weight only.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can prepare and rig this load in 5 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Ensure the storage tank is completely full.
- (b) Secure all hatches, hoses, valves, and loose equipment.

(2) **Rigging.** Rig the load according to the steps in Figure 9-4.

(3) **Hookup.** The hookup team stands on top of the SIXCON. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 9-4. Storage Module, Fuel/Water, Six Compartment Container, Individual

TWO STORAGE MODULES, FUEL/WATER, SIX COMPARTMENT CONTAINER (SIXCON), STACKED

9-6. Two storage modules, fuel/water, six compartment container, stacked are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 9-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Table 9-5. Two Storage Modules, Fuel/Water, Six Compartment Container, Stacked

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Two, Storage Modules, Fuel/Water, Six Compartment Container, Stacked | 20,100 | 40K | 3/3 |

Note: This load is certified at the FULL weight only.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the two SIXCONs on top of each other. Ensure the ISO vertical corner connectors are properly secured.

(b) Tape the pins in the ISO vertical corner connectors.

(c) Ensure the storage tanks are completely full.

(d) Secure all hatches, hoses, valves, and loose gear.

(2) **Rigging.** Rig the load according to the steps in Figure 9-5.

(3) **Hookup.** The hookup team stands on top of the SIXCONs. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Chapter 10

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR SHELTERS

INTRODUCTION

10-1. This chapter contains rigging procedures for single-point lift of shelters that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for shelters are in this section. Paragraphs 10-2 through 10-13 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

AN/ASM-146 OR AN/MSM-108 ELECTRONIC SHOPS

10-2. The AN/ASM-146 or AN/MSM-108 electronic shops are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 10-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-1. Lightweight Collapsible Fabric Tank

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------|---------------------|-----------|-----------------------|
| AN/ASM-146 | 3,940 | 10K | 3/3 |
| AN/MSM-108 | 3,940 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Close and secure all doors, vents, caps, and engage the brakes.

(b) Secure the tongue in the up position with the safety chains.

(2) **Rigging.** Rig the load according to the steps in Figure 10-1.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

COMMUNICATIONS OR ELECTRONIC SYSTEMS HOUSED IN S-250 SHELTERS

10-3. The communications or electronic systems housed in S-250 shelters are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 10-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-2. Communications or Electronic Systems Housed in S-250 Shelters

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/TRC-93B (V)1 or (V)2 | 3,250 | 10K | 33/3 |
| AN/TRC-93B (Reconfiguration) | 3,660 | 10K | 33/3 |
| AN/TSC-124, Single Channel Objective Tactical Terminal (SCOTT) | 2,100 | 10K | 33/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(b) Secure all loose equipment (antennas, electrical lines, hoses, etc.) with tape or Type III nylon cord.

(c) Ensure all the bolts in the environmental control unit (ECU) mounting frame are present and tight.

(d) Secure the ECU cover with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 10-2.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

COMMUNICATIONS OR ELECTRONIC SYSTEMS HOUSED IN LIGHT-WEIGHT MULTIPURPOSE SHELTER (LMS)

10-4. The communications or electronic systems housed in lightweight multipurpose shelters are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 10-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-3. Communications or Electronic Systems Housed in S-250 Shelters

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Operations Central Shelter, Firefinder AN/TPQ-36 (V)8, S-788 | 2,869 | 10K | 20/3 |
| Biological Agent, Automatic: Integrated Detection System, S-788 | 3,300 | 10K | 25/3 |
| Downsized Dirc Support Section, Standardized Integrated, Command Post Systems (SICPS) | 2,400 | 10K | 10/20 |
| Tactical Airspace Integration System (TAIS), AN/TSQ-221 | 3,965 | 10K | 10/3 |
| Meteorological Measuring System, Profiler Shelter (SICPS only) | 3,700 | 10K | 10/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Remove all antennas. Disassemble and securely stow inside the shelter.

(b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(c) Secure all loose equipment (antennas, electrical lines, hoses, etc.) with tape or Type III nylon cord.

(d) Ensure all the bolts in the environmental control unit (ECU) mounting frame are present and tight.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Secure the ECU cover with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 10-3.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DIGITAL TECH CONTROLLER (DTC) HOUSED IN A MODIFIED GITCHNER SHELTER

10-5. The digital tech controller housed in a modified Gitchner shelter is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 10-4 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-4. Digital Tech Controller Housed in a Modified Gitchner Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Digital Tech Controller Housed in a Modified Gitchner Shelter | 9,100 | 15K | Door is Front 3/30 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Inspect the inside and outside of the DTC for any sign of skin separation (delamination) from the frame structure.

WARNING

Any separation of the skin from the structural members may indicate a reduction in structural integrity and should not be flown.

(b) Remove all antennas. Disassemble and securely stow inside the shelter.

(c) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(d) Secure all loose equipment (antennas, electrical lines, hoses, etc.) inside the shelter with tape or Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Ensure all the bolts in the environmental control unit (ECU) mounting frame are present and tight.

(f) Secure the ECU cover, if installed, with tape or Type III nylon cord.

(g) Secure the lift rings in a vertical position with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 10-4.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 10-4. Digital Tech Controller Housed in a Modified Gitchner Shelter

| ARL-I and ARL-C Fly Away Kit, Type C-1 | 8,500 | 10K | ECU is the Front 3/10 |

Notes: 1. Do not allow the sling legs to become entangled with the rope lashing points located near the lift points.

2. The CH-47 is not recommended for single point sling loading of the Integrated Family of Test Equipment Shelters.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (as listed in table 10-4).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove all antennas. Disassemble and securely stow inside the shelter.

(b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(c) Secure all loose equipment (electrical lines, hoses, etc.) with tape or Type III nylon cord.

(d) Ensure all the bolts in the Environmental Control Unit's (ECU) mounting frame are present and tight.

(e) Secure the ECU cover with tape or Type III nylon cord.

(f) Secure the lift rings in the vertical position with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 10-5.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

Brief the helicopter crew to relax the sling leg tension and hover to the side of the load when releasing the apex fitting to prevent damage to the roof of the shelter.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

8- X 8- X 10-FOOT SHELTER SYSTEMS

10-7. The 8- x 8- x 10-foot shelter systems are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 10-6 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-6. 8- x 8- x 10-Foot Shelter Systems

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------------|-----------|---------------------------|
| Shelter, Electromechanical Induction (EMI), TAMCN C6110 | 7,700 | 15K | Door is the Front 5/5 |
| S-715/T, Reproduction/Distribution Facility Shelter | 4,826 | 15K | Door is the Front 3/3 |
| Electronic EMI HSOP Shelter | 4,140 | 15K | Door is the Front 3/3 |
| Shelter, Radar Set, Precision Approach, AN/TPN-22, TAMCN Q2115 | 7,200 | 15K | Door is the Front 3/3 |
| Shelter, Communications Central, AN/MSC-63A, TAMCN A0258 | 6,619 | 15K | Door is the Aft 5/5 |
| Air Radar Shelter, AN/TPS-73 | 14,500 | 40K | Door is the Front 5/8 |
| Radar Shelter, AN/TPS-63B | 7,360 | 15K | Door is the Front 3/10 |
| 10-Foot Rigid EMD Communications Shelter | 7,000 (Minimum Weight) | 15K | Door is the Front 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000 or 40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Remove all antennas. Disassemble and securely stow inside the shelter.

(b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(c) Secure all loose equipment (electrical lines, hoses, etc.) with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 10-6.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DOWNSIZE DIGITAL GROUP MULTIPLEXER (DDGM) SHELTER ASSEMBLAGES

10-8. The downsized digital group multiplexer shelter assemblages are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 10-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-7. Downsized Digital Group Multiplexer Shelter Assemblages

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------|---------------------|-----------|-----------------------|
| AN/TRC-173A | 3,500 | 10K | 3/3 |
| AN/TRC-174A | 3,425 | 10K | 3/3 |
| AN/TRC-175A | 3,350 | 10K | 3/3 |
| AN/TRC-138B | 3,525 | 10K | 3/3 |
| AN/TRC-138C | 3,430 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure all drawers and internal equipment with tape or Type III nylon cord.

(b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(c) Secure the air conditioner cover with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 10-7.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

AN/TYC-5A DATA COMMUNICATIONS TERMINAL

10-9. The AN/TYC-5A data communications terminal is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 10-8 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-8. AN/TYC-5A Data Communications Terminal

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/TYC-5A Data Communications Terminal | 7,451 | 15K | 5/5 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure all internal equipment with tape or Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.

(c) Remove the transporter dolly lift sets if attached to the shelter.

(2) **Rigging.** Rig the load according to the steps in Figure 10-8.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

HARDENED ARMY TACTICAL SHELTER (HATS)

10-11. The hardened Army tactical shelter is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 10-10 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-10. Hardened Army Tactical Shelter

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------|---------------------|-----------|-----------------------|
| Hardened Army Tactical Shelter | 8,160 | 10K | 3/30 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure all internal equipment with tape or Type III nylon cord.
- (b) Close and secure all doors, vents, and caps with tape or Type III nylon cord.
- (c) Secure the air conditioner panels with tape.

(2) **Rigging.** Rig the load according to the steps in Figure 10-10.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

CRADLE MOUNTED AN/TPQ-32A RADAR SET, COMPONENT OF THE AN/MPQ-49A FORWARD AREA ALERTING RADAR (FAAR) SYSTEM

10-12. The cradle mounted AN/TPQ-32A radar set, component of the AN/MPQ-49A forward area alerting radar system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 10-11 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-11. Cradle Mounted AN/TPQ-32A Radar Set, Component of the AN/MPQ-49A Forward Area Alerting Radar System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Cradle Mounted AN/TPQ-32A Radar Set, Component of the AN/MPQ-49A Forward Area Alerting Radar System | 7,100 | 10K | 3/20 |

Note: The AN/TPQ-32A must be removed from the truck prior to sling loading.

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Additional chain lengths with couplings (4 each).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Tie-down strap, cargo, CGU-1/B (as required).
- (7) Wrench, box end, 9/16-inch.

c. **PERSONNEL.** Two persons can prepare and rig this load in 25 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Remove the cradle from the modified M35A2 truck and remount the mast in the vertical position in accordance with TM 9-1430-588-10.

(b) Remount the antenna reflectors from over the generator assembly to the front of the cradle by removing and replacing the quick release pins.

(c) Remove the two turnbuckles located between the front (shelter

DRAFT

NATO AIR BASE SATCOM (NABS) SHELTER PALLET, AN/TSC-93B (V)2

10-13. The NATO air base satcom shelter pallet, AN/TSC-93B (V)2 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 10-12 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-12. NATO Air Base Satcom (NABS) Shelter Pallet, AN/TSC-93B (V)2

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| NATO Air Base Satcom (NABS) Shelter Pallet, AN/TSC-93B (V)2 | 5,751 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose cables and equipment on the shelter pallet with tape or Type III nylon cord.

(b) Remove the cargo cover and stow it inside the shelter.

(c) Close and secure all doors, vents, and caps with tape or Type III nylon cord. All exhaust vents must be taped.

(2) **Rigging.** Rig the load according to the steps in Figure 10-12.

(3) **Hookup.** The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

REFRIGERATOR, RIGID BOX WITHOUT REFRIGERATOR UNIT

10-14. The refrigerator, rigid box without refrigerator unit is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 10-13 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 10-13. Refrigerator, Rigid Box without Refrigerator Unit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Refrigerator, Rigid Box without Refrigerator Unit | 3,500 | 15K | 5/5 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove the refrigerator unit from inside the refrigerator box.

(b) Secure all equipment inside the box with tape or Type III nylon cord. Close and secure the door latch.

(2) Rigging. Rig the load according to the steps in Figure 10-13.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 10-13. Refrigerator, Rigid Box without Refrigerator Unit

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the web ring on top of the refrigerator box. Route outer sling legs 1 and 2 to the front of the box and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 10-13 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 10-13 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the box to prevent entanglement during hookup and lift-off.

Figure 10-13. Refrigerator, Rigid Box without Refrigerator Unit (Continued)

DRAFT

Chapter 11

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR CONTAINERS

INTRODUCTION

11-1. This chapter contains rigging procedures for single-point lift of containers that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for containers are in this section. Paragraphs 11-2 through 11-13 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

SHIPPING/STORAGE CONTAINERS

11-2. The shipping/storage containers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 11-1 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-1. Shipping/Storage Containers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| ISU-60 (Loaded) | 11,650 | 25K | 3/3 |
| ISU-90 (Loaded) | 11,900 | 25K | 3/3 |
| ISU-90 (Empty) | 1,900 | 10K | 3/3 |
| ISU-60 with Jmp Forward Arming and Refueling Point (FARP), Advanced Aviation Forward Area Refueling System (AAFARS) | 4,000 | 10K | 3/3 |
| Advanced Design Refrigerator, 300 Cubic Feet (ADR300), Produced by AAR Cadillac Manufacturing Inc. | 11,900 | 25K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000- or 25,000-pound capacity) (as required).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure all cargo inside the container.

(b) Secure all doors in the secured and locked position.

(2) Rigging. Rig the load according to the steps in Figure 11-1.

(3) Hookup. The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.</p> |

Figure 11-1. Shipping/Storage Containers (Continued)

QUADCONS

11-3. The Quadcons are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 11-2 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-2. Quadcons

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------|---------------------|------------|-----------------------|
| One (1) Quadcon, Empty | 1,764 | 10K | 3/3 |
| One (1) Quadcon, Loaded | 7,000 | 10K | 3/3 |
| Two (2) Quadcons, Empty | 3,528 | 10K | 3/3 |
| Two (2) Quadcons, Loaded | 10,000 14,000 | 10K 25K | 3/3 |

WARNING

WEIGHT IS RESTRICTED TO 7,000 POUNDS IN EACH QUADCON FOR SLING LOAD OPERATIONS. QUADCONS MUST BE CENTRALLY LOADED. ENSURE QUADCONS ARE LOADED TO SIMILAR WEIGHTS FOR MULTIPLE QUADCON CONFIGURATIONS. OFF CENTER LOADING OR OVERLOADING MAY RESULT IN ADVERSE FLIGHT CONDITIONS OR DAMAGE TO THE LOAD.

Note: Recommended airspeed will vary based on load configuration and the weight of the load inside the Quadcons.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000- or 25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Connect the Quadcons together using the manufacture's approved rigid connecting link (Part No. Sealock 1046). Lock all connecting links and wrap with tape.

(b) Secure all cargo inside the container. Close and secure all doors in the locked position.

(2) **Rigging.** Rig the load according to the steps in Figure 11-2.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on the roof of the container. Route outer sling legs 1 and 2 to the front of the container and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left front corner of the container. Place the correct link from Table 11-2 in the grab hook. Repeat with sling leg 2 through the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the container. Place the correct link from Table 11-2 in the grab hook. Repeat with sling leg 4 through the right rear lift provision.
4. Secure all excess chain with tape or Type III nylon cord.
5. Cluster and tie (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.

Figure 11-2. Quadcons

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

AUTHORIZED STOCKAGE LIST MOBILITY SYSTEMS (ASLMS)

11-4. The Authorized Stockage List Mobility Systems are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 11-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-3. Authorized Stockage List Mobility Systems

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|------------|-----------------------|
| ASLMS, Field Pack-Up (FPU), FPU-12 (12-Foot Section Only) | 20,000 | 25K 40K | 3/3 |
| ASLMS, FPU-8 (8-Foot Section Only) | 18,000 | 25K 40K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000- or 40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure all cargo inside the container.
- (b) Close and secure all doors in the locked position.

(2) **Rigging.** Rig the load according to the steps in Figure 11-3.

(3) **Hookup.** The hookup team stands on the rear of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on the roof of the container. Route outer sling legs 1 and 2 to the front of the container and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the opening in the side of the ISO fitting at the top left front corner and out through the front opening. Place the correct link from Table 11-3 in the grab hook. Repeat with sling leg 2 through the right front ISO fitting.
3. Loop the chain end of sling leg 3 through the opening in the side of the ISO fitting at the top left rear corner and out through the rear opening. Place the correct link from Table 11-3 in the grab hook. Repeat with sling leg 2 through the right rear ISO fitting.
4. Cluster and tie (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.

Figure 11-3. Authorized Stockage List Mobility Systems

DRAFT

AUTHORIZED STOCKAGE LIST MOBILITY SYSTEMS, CONNECTED

11-5. The connected Authorized Stockage List Mobility Systems are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 11-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-4. Authorized Stockage List Mobility Systems, Connected

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|------------|-----------------------|
| ASLMS, Field Pack-Up (FPU), FPU-8/12 (8 & 12-Foot Sections Connected) | 25,000 26,000 | 25K 40K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000- or 40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Connect the FPU-8 and FPU-12 together using the manufacturer's approved rigid connecting link (Tandem Horizontal Connectors, part number 12900BA-1PZ) (FPU-8-12 only).

(b) Secure all cargo inside the container.

(c) Close and secure all doors in the locked position.

(2) **Rigging.** Rig the load according to the steps in Figure 11-4.

(3) **Hookup.** The hookup team stands on the rear of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

FIELD MEDICAL OXYGEN GENERATION/DISTRIBUTION SYSTEM (FMOGDS)

11-6. The field medical oxygen generation/distribution system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 11-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-5. Field Medical Oxygen Generation/Distribution System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Oxygen Generation/Distribution Module (OGDM) | 3,405 | 10K | 3/3 |
| Cylinder Filling Module (CFM) | 2,049 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure all tools are properly stowed. Secure all loose equipment inside the container with tape or Type III nylon cord.

(b) Secure all doors and vents with tape. Secure all hoses and chains with tape or 1/4-inch cotton webbing.

(2) **Rigging.** Rig the load according to the steps in Figure 11-5.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 11-5. Field Medical Oxygen Generation/Distribution System

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

FIELD MEDICAL OXYGEN GENERATION/DISTRIBUTION SYSTEM (FMOGDS) (COMBINED)

11-7. The combined field medical oxygen generation/distribution system is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 11-6 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-6. Field Medical Oxygen Generation/Distribution System (Combined)

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Middle/Rear |
|---|---------------------|-----------|------------------------------|
| Oxygen Generation/Distribution Module and Cylinder Filling Module | 5,454 | 10K | 3/20/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity) with two additional chain legs.
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).
- (6) Lumber, 2 x 4 x 72-inch (4 each).

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure all tools are properly stored. Secure all loose equipment inside the container with tape or Type III nylon cord.

(b) Secure all doors and vents with tape. Secure all hoses and chains with tape or 1/4-inch cotton webbing.

(c) Position the units together with the "A" sides facing each other.

(d) Cut slots in four 2 x 4 x 72-inch pieces of lumber to keep the CGU-1/B tie-down straps from sliding.

(e) Place the 2 x 4 x 72-inch pieces of lumber between the OGMD and the CFM as dunnage.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) **Rigging.** Rig the load according to the steps in Figure 11-6.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 11-6. Field Medical Oxygen Generation/Distribution System (Combined)

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Configure a six leg sling set.
2. Attach two (2) 2 x 4 x 72-inch pieces of lumber to the “A” side of each unit using the CGU-1/B tie-down straps. Ensure the straps are routed horizontally around the unit and through the slots in the lumber.
3. Strap OGDGM and CFM together using the tiedown straps, two fastenings evenly spaced around the sides. Fasten the straps together as necessary to span the two pieces of equipment.
4. Position apex fitting on top of the units. Route outer sling legs 1 and 2 to the front of the OGDGM. Route inner sling legs 3 and 4 to the rear of the CFM and the middle sling legs 5 and 6 to the interface of the OGDGM and the CFM. Sling legs 1, 3, and 5 must be on the left side of the load.
5. Route the chain end of sling leg 1 through the left front lift provision located on the front of the OGDGM. Place the correct link from Table 11 -6 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
6. Route the chain end of sling leg 3 through the left rear lift provision located on the rear of the CFM. Place the correct link from Table 11 -6 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
7. Route the chain end of sling leg 5 through the left lifting provision on the interfacing “A” sides of the OGDGM and the CFM. Place the correct link from Table 11-6 in the grab hook. Repeat with sling leg 6 and the right lifting provision on the interfacing “A” sides of the OGDGM and the CFM. Secure the excess chain with Type III nylon cord.
8. Cluster and tie (breakaway technique) all sling legs together on top of the OGDGM and CFM to prevent entanglement during hookup and lift-off.

Figure 11-6. Field Medical Oxygen Generation/Distribution System (Combined) (Continued)

ARMY MISSILE SYSTEMS ENCLOSURE ASSEMBLY LAUNCH PODS (EALP), ONE CONTAINER

11-8. The Army missile systems enclosure assembly launch pods, one container is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 11-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

Table 11-7. Army Missile Systems Enclosure Assembly Launch Pods, One Container

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Multiple Launch Rocket System with Rocket Pod/Container (with Six Rockets) | 5,005 | 10K | 3/3 |
| Guided Missile Launch Assembly (GMLA) | 5,071 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the EALP for travel in accordance with standard procedures.

(2) **Rigging.** Rig the load according to the steps in Figure 11-7.

Note: The firing end is considered to be the front of the load.

(3) **Hookup.** The hookup team stands on top of the EALP. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

ARMY MISSILE SYSTEMS ENCLOSURE ASSEMBLY LAUNCH PODS (EALP), TWO CONTAINERS

11-9. The Army missile systems enclosure assembly launch pods, two containers are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 11-8 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-8. Army Missile Systems Enclosure Assembly Launch Pods, Two Containers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Multiple Launch Rocket System with Two Rocket Pods/Containers (with Six Rockets) | 10,010 | 25K | 3/3 |
| Two Enclosure Assembly Launch Pods, Guided Missile Launch Assembly | 10,142 | 250K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, cargo, CGU-1/B (as required).

c. **PERSONNEL.** Four persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Prepare the EALPs for travel in accordance with standard procedures.

(b) Stack the EALPs one on top of the other, with both EALPs facing the same direction.

CAUTION

Do not mix the MLRS and the GMLA in the same load.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(c) Lash the stack of EALPs together using the CGU-1/B tie-down straps. Two of the straps should run through both sets of lifting provisions on each end of the EALPs, to keep them aligned during flight. Evenly space the remaining two straps between the lifting provisions, running them around the EALPs. **DO NOT ROUTE THE STRAPS OVER THE ROCKET TUBES.** Pad all straps in the area where they contact the edges of the EALPs.

(2) **Rigging.** Rig the load according to the steps in Figure 11-8.

Note: The firing end is considered the front of the load.

(3) **Hookup.** The hookup team stands on top of the EALPs. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 11-8. Army Missile Systems Enclosure Assembly Launch Pods, Two Containers

M1A1 FULL-UP POWER PACK (FUPP) CONTAINER

11-10. The M1A1 full-up power pack container is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 11-9 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-9. M1A1 Full-Up Power Pack Container

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| M1A1 Full-Up Power Pack) Container with Full-Up Power Pack, (Metal or Fiberglass) | 13,620 | 25K | 3/10 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(a) Secure all equipment inside the container with tape or Type III nylon cord.

(b) Close and secure all doors and vents with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 11-9.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 11-9. M1A1 Full-Up Power Pack Container

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of the container. Route outer sling legs 1 and 2 to the front of the container (transmission end) and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 11-9 in the grab hook. Repeat with sling leg 2 on the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 11-9 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.</p> |

Figure 11-9. M1A1 Full-Up Power Pack Container (Continued)

DISTRIBUTED EXPLOSIVE TECHNOLOGY (DET) SYSTEM, ARRAY CONTAINER

11-11. The distributed explosive technology system, array container is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 11-10 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-10. Distributed Explosive Technology System, Array Container

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------------------------|-----------------------|
| Distributed Explosive Technology (DET) System, Array Container | 4,000 | Navy MK105 O Sling Assembly | N/A |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set, Navy MK105 O Sling Assembly with 91-inch or longer leg assembly.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load by taping the handles on the sides of the container.

(2) **Rigging.** Rig the load according to the steps in Figure 11-10.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DISTRIBUTED EXPLOSIVE TECHNOLOGY (DET) SYSTEM, LANDING CRAFT, AIR CUSHIONED (LCAC), LANDING INTERFACE KIT (LIK) CONTAINER, SINGLE

11-12. The distributed explosive technology system, landing craft, air cushioned, landing interface kit container, single is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 11-11 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 11-11. Distributed Explosive Technology System, Landing Craft, Air Cushioned, Landing Interface Kit Container, Single

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------------------------|-----------------------|
| Distributed Explosive Technology System, Landing Craft, Air Cushioned, Landing Interface Kit | 1,550 | Navy MK105 O Sling Assembly | N/A |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set, Navy MK105 O Sling Assembly with 91-inch or longer leg assembly.

(2) Cord, nylon, Type III, 550-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load by placing a strap over each end of the LIK container and attaching it to the platform in accordance with manufacturer's instructions.

(2) **Rigging.** Rig the load according to the steps in Figure 11-11.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set, Navy MK105 O Sling Assembly with 91-inch or longer leg assembly.

(2) Cord, nylon, Type III, 550-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place a strap over each end of the LIK container and attach it to the platform in accordance with manufacturer's instructions.

(b) Ensure the containers are secured together one on top of the other according to the manufacturer's instructions.

(c) Tie the bottom container lift provisions down to a point on the load with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 11-12.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Chapter 12

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR RADAR AND SATELLITE EQUIPMENT

INTRODUCTION

12-1. This chapter contains rigging procedures for single-point lift of radar and satellite equipment that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for containers are in this section. Paragraphs 12-2 through 12-13 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

AN/TPQ-37 ARTILLERY-LOADING RADAR SET (FIREFINDER)

12-2. The AN/TPQ-37 artillery-loading radar set is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 12-1 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-1. AN/TPQ-37 Artillery-Loading Radar Set

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| AN/TPQ-37 Artillery-Loading Radar Set | 10,800 | 25K | 68/5 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Ladder.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Antenna unit should be configured for march order. If the antenna unit is mounted on its transport trailer, it must be removed for sling loading. If the trailer is to accompany the unit, it must be rigged and moved as a separate load.

(b) Ensure the maintenance tent frame and cover are stowed and secured in their proper position.

(c) Ensure all cover panels, cabinet doors, and vents are installed and secured.

(d) Secure all loose items with Type III nylon cord.

(e) Ensure the rear door is closed and secured with the locking handle. Door rods must be secured in their clips.

(f) Ensure the antenna transport cover is secured tightly to the lacing brackets with bungee cord. If necessary, secure the antenna with additional nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 12-1.

CAUTION

Do not stand on top of the load. Use the ladder to connect the sling legs to the load.

(3) Hookup. The hookup team remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

Note: Hookup is accomplished by the flight engineer using a cargo-hook loading pole (Shepard's Hook). Ensure the helicopter crew is informed of this in advance.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Note: Advise the pilot to hover to one side before releasing the apex fitting from the cargo hook .

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Open the access holes in the antenna transport cover as necessary to reach the lifting rings.
2. Rotate the antenna tie-down bolt ratchet handles toward the center of the trailer to prevent sling interference.
3. Position apex fitting on top of the load. Route outer sling legs 1 and 2 to the front of the unit and inner sling legs 3 and 4 to the rear (door end). Sling legs 1 and 3 must be on the left side of the load.
4. Loop the chain end of sling leg 1 through the left front lift ring. Place the correct link from Table 12-1 in the grab hook. Repeat with sling leg 2 on the right front lift provision. Secure the excess chain with Type III nylon cord.
5. Loop the chain end of sling leg 3 through the left rear lift ring. Ensure the chain is routed through the slot on the top of the corner post. Place the correct link from Table 12-1 in the grab hook. Repeat with sling leg 4 on the right rear lift ring. Pad the chain legs where they contact the top of the corner post. Secure the padding with tape or Type III nylon cord.
6. Close and securely fasten the opening in the rear of the antenna transport cover.
7. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.

Figure 12-1. AN/TPQ-37 Artillery-Loading Radar Set

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

AN/TMQ-31 RADIO DIRECTION FINDER

12-3. The AN/TMQ-31 radio direction finder is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 12-2 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-2. AN/TMQ-31 Radio Direction Finder

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/TMQ-31 Radio Direction Finder, Pedestal Mounted on M103A3 Trailer | 5,010 | 10K | 3/22 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Two persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Place the radar set in the travel mode.
 - (b) Secure the air hoses, safety chains, and intervehicular cable to the tongue of the trailer with tape or Type III nylon cord.
 - (c) Engage the trailer hand brakes.
 - (d) Remove the canvas cover and secure it on top of the ladder with Type III nylon cord.
 - (e) Fold the canvas bows down and secure them to the trailer deck with Type III nylon cord.
- (2) **Rigging.** Rig the load according to the steps in Figure 12-2.
- (3) **Hookup.** The hookup team stands on the platform to the rear of

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

the radar. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Note Advise the pilot to hover to one side before releasing the apex fitting from the cargo hook .

Figure 12-2. AN/TMQ-31 Radio Direction Finder

DRAFT

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift ring located on the front left corner of the trailer. Place the correct link from Table 12-2 in the grab hook. Repeat with sling leg 2 on the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift ring located on the left rear corner of the trailer. Place the correct link from Table 12-2 in the grab hook. Repeat with sling leg 4 on the right rear lift ring. Secure the excess chain with tape or Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.</p> |

Figure 12-2. AN/TMQ-31 Radio Direction Finder (Continued)

AN/TPQ-36 FIREFINDER ANTENNA RADAR SET

12-4. The AN/TPQ-36 firefinder antenna radar set is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 12-3 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-3. AN/TPQ-36 Firefinder Antenna Radar Set

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/TPQ-36 Firefinder Antenna Radar Set on M103A1 | 4,110 | 10K | 16/11 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Multiloop line, 9-foot, Type XXVI, nylon (4 each).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Clevis assembly, medium (2 each).
- (7) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Engage the trailer hand brakes.

(b) Close and secure the doors with Type III nylon cord.

(c) Place the radar set in the travel mode.

(d) Secure the cover on the antenna.

(e) Attach a medium clevis to each rear lift points.

(2) **Rigging.** Rig the load according to the steps in Figure 12-3.

Note: The radar panels cannot support any extra weight.

(3) **Hookup.** The hookup team stands on the fenders of the unit. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Note: Advise the pilot to hover to one side before releasing the apex fitting from the cargo hook .

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Connect a 9-foot multiloop line to the left rear clevis. Place the multiloop line in the sling guide of the antenna, pull up until tight, and tape the line to the sling guide. Repeat the procedure on the right side.
2. Wrap the left side of the A-frame, aft of the lunette, with padding and secure it in place with tape. Choker-hitch a 9-foot multiloop line around the padded area. Repeat the procedure on the right side.
3. Position apex fitting on top of the trailer (not on top of the radar panel). Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
4. Loop the chain end of sling leg 1 through the multiloop line attached to the left side of the tongue. Place the correct link from Table 12-3 in the grab hook. Repeat with sling leg 2 on the right front lift provision. Secure the excess chain with tape or Type III nylon cord.
5. Loop the chain end of sling leg 3 through the multiloop line attached to the left rear lift provision. Place the correct link from Table 12-3 in the grab hook. Repeat with sling leg 4 on the right rear lift provision. Secure the excess chain with tape or Type III nylon cord.
6. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.

Figure 12-3. AN/TPQ-36 Firefinder Antenna Radar Set

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

AN/TPQ-36 FIREFINDER II

12-5. The AN/TPQ-36 firefinder II is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 12-4 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-4. AN/TPQ-36 Firefinder II

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------------------|---------------------|-----------|-----------------------|
| Firefinder II, AN/TPQ-36 Block II | 9,673 | 25K | 11/3 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (25,000-pound capacity) with four additional chain lengths and coupling links.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Tie-down straps, cargo, CGU-1/B (2 each).

(6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

(7) Spreader bar assemblies, 117 inches and 91.8 inches in length (components of the Firefinder II).

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

Note: Do not stand on the surface of the antenna array at any time.

(a) Assemble the two spreader bar assemblies by matching similar sections to form a long (117-inch) and a short (91.8-inch) spreader bar.

(b) Prepare the Firefinder II for transport in accordance with operator's manual.

(c) Secure all loose equipment on the pallet with tape or nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(d) Ensure all latches, doors, and panels are secured with tape or nylon cord.

(e) Using the two tie-down straps, secure the antenna cover to the antenna array. Route the tie-down straps from front to rear.

(f) Place the long (117-inch) spreader bar on top of the shelter roof. Position the bar (parallel with the side of the shelter) between the edge of the shelter that is adjacent to the antenna array and the radio mount on the shelter roof. Secure the spreader bar loosely in place (allow adequate slack for movement) with nylon cord to prevent the spreader bar from rolling off the shelter roof.

(g) Place the short (91.8-inch) spreader bar through the opening in the antenna array support arms directly below the antenna array as indicated in the illustration. Secure the spreader bar loosely in place with nylon cord to prevent the spreader bar from sliding out of the openings in the support arms.

(2) Rigging. Rig the load according to the steps in Figure 12-4.

(3) Hookup. The hookup team stands on top of the shelter. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Note: Brief the helicopter crew to relax sling leg tension, lower the spreader bars onto the shelter roof and antenna array support arms, and hover to the side of the load when releasing the sling set.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shelter. Route outer sling legs 1 and 2 to the front (shelter end) of the load and inner sling legs 3 and 4 to the rear (generator end). Sling legs 1 and 3 must be on the left side of the load.
2. Using the proper coupling links, add the chain extensions to each sling leg chain assembly.
3. Route the chain end of sling leg 1 through the fitting on the left end of the long spreader bar and down the side of the shelter. Insert link 10 (counting down from the grab hook coupling link) in the spreader bar end fitting. Route the chain end through the lift provision located on the left side of the pallet frame, back up to the spreader bar, and insert link 23 in the end fitting. Secure the chain in the end fitting by installing the retaining pin in the end of the spreader bar. Place the correct link from Table 12-4 in the grab hook. Repeat with sling leg 2 through the right end fitting on the spreader bar, and lift provision on the right side of the pallet frame.

Figure 12-4. AN/TPQ-36 Firefinder II

DRAFT

RIGGING STEPS (Continued)

4. Route the chain end of sling leg 3 through the fitting on the left end of the short spreader bar and down the side of the antenna array assembly. Route the chain end through the lift provision located on the left side of the pallet frame below the generator engine and back up through the spreader bar end fitting. Pull the chains tight to remove slack. Place the correct link from Table 12-4 in the grab hook. Install the retaining pin in the end of the spreader bar. Repeat with sling leg 4 through the right end fitting on the spreader bar and lift provision on the right side of the pallet frame.

Note: The chain links do not lock in the end fittings on the short spreader bar like they do on the long spreader bar.

5. Tape the two loops of the chain legs together every 1 to 2 feet. Secure all excess chain with tape or nylon cord. Place padding around the grabhooks and secure with tape or nylon cord to prevent damage caused by the grabhooks when the sling is released.

6. Pull the rear sling legs 3 and 4 tight over top of the antenna array to remove slack from the sling legs. Cluster and tie or tape (breakaway technique) the sling legs together to prevent the chains and grabhooks from fouling on the antenna array during hookup and lift-off.

7. Cluster and tie (breakaway technique) the front sling legs 1 and 2 together on top of the shelter to prevent entanglement during hookup and lift-off.

Figure 12-4. AN/TPQ-36 Firefinder II (Continued)

OE-361/G QUICK REACTION SATELLITE ANTENNA

12-6. The OE-361/G quick reaction satellite antenna is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 12-5 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-5. OE-361/G Quick Reaction Satellite Antenna

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| OE-361/G Quick Reaction Satellite Antenna(QRSA) | 4,830 | 10K | 3/30 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Four persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Install the spreader bar assembly which is stored on the load. After hooking the spreader bar assembly to the lift rings, tape the keepers securely with tape.

(b) Pad both spreader bars with felt or other cushioning material to prevent damage to the antenna panels during load release. Tape or tie the padding securely to prevent it from being dislodged during flight.

(c) Pad the uppermost stacked antenna panel with available material to prevent possible damage from the apex clevis at load release. Tape or tie the padding securely to prevent it from being dislodged during flight.

(d) Ensure the ladder, box covers, and any other loose items are properly secured. If the tie-down straps are missing or worn, replace with nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 12-5.

(3) **Hookup.** The hookup team stands on top of the load between the stacked antenna panels and either side of the center post. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

CAUTION

Brief the helicopter crew to relax sling leg tension, lower the spreader bars onto the shelter roof and antenna array support arms, and hover to the side of the load when releasing the sling set.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the load. Route outer sling legs 1 and 2 to the front (ladder end) of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left lift eye of the front spreader bar. Place the correct link from Table 12-5 in the grab hook. Repeat with sling leg 2 and the right lift eye on the front spreader bar.
3. Loop the chain end of sling leg 3 through the left lift eye of the rear spreader bar. Place the correct link from Table 12-5 in the grab hook. Repeat with sling leg 4 and the right lift eye on the rear spreader bar. Secure excess chain with tape or nylon cord.
4. Wrap felt padding or other suitable cushioning material around each grab hook assembly to protect the antenna when the sling set is released. Tape or tie the padding securely to prevent it from being dislodged during flight.
5. Cluster and tie (breakaway technique) all sling legs together on top of the antenna to prevent entanglement during hookup and lift-off.

AS-3471/TPN-22 ANTENNA PALLET (USMC)

12-7. The AS-3471/TPN-22 antenna pallet is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 12-6 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-6. AS-3471/TPN-22 Antenna Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AS-3471/TPN-22 Antenna Pallet, TAMCN Q2115 | 5,700 | 40K | 3/5 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (40,000-pound capacity) with four additional chain lengths and coupling links.

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Four persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all handles.

(b) Secure the crank handle at the base of the pallet.

(c) Add the additional chain length to each leg of the sling set using the coupling links.

(2) **Rigging.** Rig the load according to the steps in Figure 12-6.

(3) **Hookup.** The hookup team stands on the pallet. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position the apex fitting on top of the load. Route outer sling legs 1 and 2 to the front (supply box end) of the load and inner sling legs 3 and 4 to the rear (leveling disk end). Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the small space between the channel beams at the left front base of the antenna. Place the correct link from Table 12-6 in the grab hook. Repeat with sling leg 2 on the right front base of the antenna.
3. Loop the chain end of sling leg 3 through the small space between the channel beams at the left rear base of the antenna. Place the correct link from Table 12-6 in the grab hook. Repeat with sling leg 4 on the right rear base of the antenna.
4. Tie or tape (breakaway technique) all chains loosely to the straps at the bumpers to prevent the chains from moving off the protective bumpers.
5. Cluster and tie (breakaway technique) all sling legs together on top of the antenna to prevent entanglement during hookup and lift-off.

Figure 12-6. AS-3471/TPN-22 Antenna Pallet

ANTENNA PALLET TRANSIT FRAME

12-8. The antenna pallet transit frame is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 12-7 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-7. Antenna Pallet Transit Frame

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|-----------|-----------------------|
| SM-F 973604-1 used with AN/TSC-93B | 1,970 | 10K | 30/3 |
| SM-F 973604-21 used with AN/TSC-85B | 2,107 | 10K | 30/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all equipment with the eight ratchet straps supplied. Use tape or Type III nylon cord if additional security is required.

(b) Remove and stow the protective cover. Secure with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 12-7.

(3) **Hookup.** The hookup team stands on the frame. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the load. Route outer sling legs 1 and 2 to the front (opposite the antenna segments) of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the top left corner of the frame. Place the correct link from Table 12-7 in the grab hook. Repeat with sling leg 2 on the top right corner of the frame. Secure the excess chain with tape or Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 12-7 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the frame to prevent entanglement during hookup and lift-off.

DIGITAL GROUP MULTIPLEXER (DGM), DIGITAL ANTENNA MAST PROGRAM (DAMP), 2 AND 3 ANTENNA PALLET CONFIGURATIONS

12-9. The digital group multiplexer digital antenna mast program, 2 and 3 antenna pallet configurations are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 12-8 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-8. Digital Group Multiplexer, Digital Antenna Mast Program

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| DGM, DAMP Pallet, 2 Antenna Configuration | 4,300 | 10K | 3/3 |
| DGM, DAMP Pallet, 3 Antenna Configuration | 5,500 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Webbing, tubular, nylon, 1/2-inch, 1000-pound breaking strength.
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. **PERSONNEL.** Four persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the grating on the cable reels side with Type III nylon cord.

(b) Secure the cable reels with Type III nylon cord.

(c) Wrap the tie-down straps and turnbuckles with padding and secure the padding with tape. Secure them to the pallet with the rubber straps provided.

(2) **Rigging.** Rig the load according to the steps in Figure 12-8.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands on the pallet. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position the apex fitting on top of the load. Route outer sling legs 1 and 2 to the front (cable reel end) of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the top left corner of the frame. Place the correct link from Table 12-8 in the grab hook. Repeat with sling leg 2 on the top right corner of the frame.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 12-8 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the frame to prevent entanglement during hookup and lift-off.

DIGITAL GROUP MULTIPLEXER (DGM), AUXILIARY EQUIPMENT TRANSPORTATION CONTAINER (AETC), 2 AND 3 MAST CONFIGURATIONS

12-10. The digital group multiplexer, auxiliary equipment transportation container, 2 and 3 mast configurations are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 12-9 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-9. Digital Group Multiplexer, Auxillary Equipment Transportation Container

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------------|---------------------|-----------|-----------------------|
| DGM, AETC, 2 Antenna Configuration | 3,028 | 10K | 3/3 |
| DGM, AETC, 3 Antenna Configuration | 4,014 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Four persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose equipment inside the AETC with tape or Type III nylon cord.

(b) Remove and stow the AETC cover. Secure the cover with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 12-9.

(3) **Hookup.** The hookup team stands on the AETC. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team

LIGHTWEIGHT GENERATOR FRAME ASSEMBLY (AN/TSC-93B RECONFIGURATION) SATELLITE COMMUNICATIONS TERMINAL

12-11. The lightweight generator frame assembly (AN/TSC-93B reconfiguration) satellite communications terminal is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 12-10 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-10. Lightweight Generator Frame Assembly (AN/TSC-93B Reconfiguration) Satellite Communications Terminal

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| AN/TSC-93B Satellite Communications Terminal without ALTA | 3,644 | 10K | 3/3 |
| AN/TSC-93B Satellite Communications Terminal with ALTA | 3,957 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (3 each).

c. **PERSONNEL.** Four persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose equipment with CGU-1/B tie-down straps, tape, or Type III nylon cord.

(b) Remove and stow the cover. Secure the cover with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 12-10.

(3) **Hookup.** The hookup team stands on the frame corners, diagonally across from each other. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but

DRAFT

SECURE MOBILE ANTI-JAM RELIABLE TACTICAL TERMINAL (SMART-T) PALLET

12-12. The secure mobile anti-jam reliable tactical terminal pallet is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 12-11 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 12-11. Secure Mobile Anti-Jam Reliable Tactical Terminal Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Secure Mobile Anti-Jam Reliable Tactical Terminal Pallet | 2,440 | 10K | 3/30 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Four persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose equipment with tape or Type III nylon cord. Ensure the fuel cans at the end of the pallet are locked in position.

(b) Secure the antenna dish.

(2) **Rigging.** Rig the load according to the steps in Figure 12-11.

Note: The fuel can brackets are on the rear of the load.

(3) **Hookup.** The hookup team stands beside the pallet. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

| Remote Emitter Unit (REU) Threat Kit (TK) 9, (P/N 9805-8001-1) | 3,497 | 10K | 3/15 |

b. MATERIALS. The following materials are required to rig this load:

(1) Sling set (10,000-pound capacity).

(a) Additional chain lengths, part number 38850-00053-101, from a 10,000-pound capacity sling set (4 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(b) Coupling link, NSN 4010-01-231-3388, from a 10,000-pound capacity sling set (4 each).

(2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Four persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Connect one additional chain length to each chain of the sling set with the coupling link.

(b) Place the UMTE in the shipping configuration.

(c) Secure all loose equipment.

(d) Coil and secure the power cable to the platform with tiedown straps.

(e) Ensure the fuel tank is not over 3/4 full. Inspect the fuel tank cap for proper installation.

(2) **Rigging.** Rig the load according to the steps in Figure 12-12.

CAUTION

The antenna faces the rear of the load. Rigging the load in reverse could cause the load to become unstable.

(3) **Hookup.** The hookup team stands beside the pallet. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Chapter 13

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR GENERATOR SETS

INTRODUCTION

13-1. This chapter contains rigging procedures for single-point lift of generator sets that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for generator sets are in this section. Paragraphs 13-2 through 13-7 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

AVIATION GROUND POWER UNIT (AGPU)

13-2. The aviation ground power unit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 13-1 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 13-1. Aviation Ground Power Unit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------------|---------------------|-----------|-----------------------|
| Aviation Ground Power Unit | 4,190 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (4-each).
- (6) Webbing, nylon, tubular, 1/2-inch, 1000-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Stow and secure the towbar with 1/2-inch tubular nylon.

(b) Close all doors, secure handles with tape, and attach four CGU-1/B tie-down straps.

(c) Route one tie-down strap horizontally around the power unit. Position it approximately 16 inches down from the top of the power unit. Repeat using another tie-down strap positioned approximately 8 inches higher than the first tie-down strap.

(d) Route another tie-down strap through the forklift lift provisions and then vertically around the power unit. Repeat this procedure using another tie-down strap through the other lift provision.

(e) Secure all equipment inside the unit with nylon cord or tape.

(f) Secure exhaust cover closed with tape.

CAUTION

Pay careful attention to securing the exhaust cover closed to preclude possible damage during flight. If cover cannot be adequately secured, it should be removed.

(g) Ensure that fuel tank is not more than 3/4 full. Inspect fuel tank cap, oil filler caps, and battery caps to ensure they are secure.

(h) Engage the parking brake.

(2) Rigging. Rig the load according to the steps in Figure 13-1.

(3) Hookup. The hookup team stands on top of the power unit. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the unit. Route outer sling legs 1 and 2 to the front (tongue) of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 should be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift ring. Place the correct link from Table 13-1 in the grab hook. Repeat with sling leg 2 on the right front lift ring.
3. Loop the chain end of sling leg 3 through the left rear lift ring. Place the correct link from Table 13-1 in the grab hook. Repeat with sling leg 4 on the right rear lift ring.
4. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.

AVIATION DIRECT CURRENT GENERATOR SET (ADCGS)

13-3 The aviation direct current generator set is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 13-2 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 13-2. Aviation Direct Current Generator Set

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------------------|---------------------|-----------|-----------------------|
| Aviation Direct Current Generator Set | 1,100 | 10K | 3/3 |

b. Materials. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute, 30- x 36-inch (4 sheets).

c. Personnel. Two persons can prepare and rig this load in 20 minutes.

d. Procedures. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Fold and tape ground cable to the inside of the tongue frame. Roll rear cable in the rack provided. Tape hold-down latch on rear cable rack.

(b) Cover cable receptacles. Secure door latches and tape exhaust stack cover down.

(c) Route a single length of Type III nylon cord under and through the frame, over the exhaust stack cover and instrument cover, and tie to secure both covers. Tape the fuel tank gage.

(d) Set the wheel brakes in the ON position.

(2) **Rigging.** Rig the load according to the steps in Figure 13-2.

(3) **Hookup.** The hookup team stands on the side of the load. The static wand person discharges the static electricity with the static wand. The

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

SKID MOUNTED GENERATORS

13-4. The skid mounted generators are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 13-3 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 13-3. Skid Mounted Generators

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| MEP-004AAS with Acoustic Suppression Kit, 15KW | 4,031 | 10K | 3/3 |
| MEP-005AAS with Acoustic Suppression Kit, 30KW | 4,556 | 10K | 3/3 |
| MEP-103A with Acoustic Suppression Kit, 15KW | 4,230 | 10K | 3/3 |
| MEP-104A with Acoustic Suppression Kit, 30KW | 4,830 | 10K | 3/3 |
| MEP-113A with Acoustic Suppression Kit, 15KW | 4,230 | 10K | 3/3 |
| MEP-114A with Acoustic Suppression Kit, 30KW | 4,830 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute, 30- x 36-inch (4 sheets).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Remove two sling legs from the sling set.
 - (b) Secure all lids, doors, and caps with tape or Type III nylon cord.
- (2) **Rigging.** Rig the load according to the steps in Figure 13-3.
- (3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team

DRAFT

MEP112A GENERATOR PALLET

13-5. The MEP112A generator pallet is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 13-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 13-4. MEP112A Generator Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| MEP813 TQG, Generator Pallet, Sentinel Radar System | 1,600 | 10K | 7/3 |
| MEP812A Generator Pallet | 2,150 | 10K | 7/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure all chains and hoses with tape or Type III nylon cord.
- (b) Secure all lids, doors, vents, and caps with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 13-4.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

NATO AIR BASE SATCOM (NABS) POWER PALLET AN/TSC-85(V)2

13-6. The NATO air base satcom power pallet AN/TSC-85(V)2 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 13-5 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 13-5. NATO Air Base Satcom Power Pallet AN/TSC-85(V)2

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| NATO Air Base Satcom (NABS) Power Pallet AN/TSC-85(V)2 | 8,630 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all loose equipment and cables on the pallet with tape or Type III nylon cord.

(b) Close and secure all access covers, vents, and doors. All exhaust covers must be taped.

(c) Remove the cargo cover and store it on the prime mover.

(2) **Rigging.** Rig the load according to the steps in Figure 13-5.

Note: The Required Individual Equipment (RIE) case is designated as the forward end for rigging purposes.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

quickly exits the area underneath the helicopter to the designated rendezvous point.

CAUTION

Brief the pilot to relax sling tension and hover to the side of the load when releasing the apex fitting to prevent damage to the pallet.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the generators. Route outer sling legs 1 and 2 to the front of the pallet and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 should be on the left side of the load.

Note: Do not use the lift provisions on the generators.

2. Loop the chain end of sling leg 1 through the left front lift provision located on the pallet. Place the correct link from Table 13-5 in the grab hook. Repeat with sling leg 2 on the right front lift ring.

3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 13-5 in the grab hook. Repeat with sling leg 4 on the right rear lift ring.

4. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.

| MEP804A, 15KW, 50/60HZ Generator Set | 2,125 | 10K | 3/3 |
| MEP814A, 15KW, 50/60HZ Generator Set | 2,240 | 10K | 3/3 |
| MEP805A, 30KW, 50/60HZ Generator Set | 3,005 | 10K | 3/3 |
| MEP805B, 30KW, 50/60HZ Generator Set | 3,040 | 10K | 3/3 |
| MEP815A, 30KW, 400HZ Generator Set | 3,015 | 10K | 3/3 |
| MEP815B, 30KW, 400HZ Generator Set | 3,060 | 10K | 3/3 |
| MEP806A, 60KW, 50/60HZ Generator Set | 3,760 | 10K | 3/3 |
| MEP806B, 60KW, 50/60HZ Generator Set | 4,042 | 10K | 3/3 |
| MEP816A, 60KW, 400HZ Generator Set | 3,850 | 10K | 3/3 |
| MEP816B, 60KW, 400HZ Generator Set | 4,240 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) Close, lock, and secure all doors and panels with tape.
- (b) Close and secure the exhaust cover with tape.
- (c) Close vents on the fuel cap.

(2) **Rigging.** Rig the load according to the steps in Figure 13-6.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the generator. Route outer sling legs 1 and 2 to the front of the generator and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 should be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located at the front of the generator inside of the left skid. Place the correct link from Table 13-6 in the grab hook. Repeat with sling leg 2 on the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located at the rear of the generator and inside the skid. Place the correct link from Table 13-6 in the grab hook. Repeat with sling leg 4 on the right rear lift provision.
4. Secure the lift provision in the up position with tape and pad the slings where they contact the generator.
5. Cluster and tie (breakaway technique) all sling legs together on top of the unit to prevent entanglement during hookup and lift-off.

Chapter 14

CERTIFIED SINGLE-POINT RIGGING PROCEDURES FOR MISCELLANEOUS EQUIPMENT

INTRODUCTION

14-1. This chapter contains rigging procedures for single-point lift of miscellaneous equipment that have been certified for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the certified loads. The certified single-point rigging procedures for miscellaneous equipment are in this section. Paragraphs 14-2 through 14-9 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

FORWARD AREA REFUELING EQUIPMENT (FARE)

14-2. The forward area refueling equipment is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 14-1 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-1. Forward Area Refueling Equipment

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|--------------|-----------------------|
| Generator, 1.5KW, Fuel Hoses with Reels and Carrying Bags (2 each), Assembly Pump, Fire Extinguishers (3 each) | 820 | 5K Cargo Net | N/A |

b. MATERIALS. The following materials are required to rig this load:

- (1) Net, cargo (5,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (4 each).
- (6) Webbing, nylon, tubular, 1/2-inch, 1,000-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure the two fire extinguishers to the inside frame of the fuel hose reels with 1/2-inch tubular nylon webbing. Secure the two fuel hose reels together with Type III nylon cord.

(b) Spread a 5,000-pound capacity cargo net on the ground. Center the two fuel hose reels on the net. Place the pump assembly on either side of the reels. Place the 1.5KW generator, with 5-gallon gas can attached, on the opposite side of the reels. Place fuel hose carrying bags in front of the reels. Secure the two carrying bags with the remaining fire extinguisher together with nylon cord. Secure the carrying bag to the reels.

(2) Rigging. Rig the load according to the steps in Figure 14-1.

(3) Hookup. The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 14-1. Forward Area Refueling Equipment

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

FIRE EXTINGUISHER, DRY CHEMICAL

14-3. The fire extinguisher, dry chemical is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 14-2 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-2. Fire Extinguisher, Dry Chemical

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Fire Extinguisher, Dry Chemical, Self Contained, TAMCN C4765 | 3,000 | 15K | 5/5 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Tie hose reel and nozzle to the frame with Type III nylon cord.
- (b) Secure or remove all loose attachments. Tape all glass including the gages.

(2) **Rigging.** Rig the load according to the steps in Figure 14-2.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting/web ring on top of the fire extinguisher. Route outer sling legs 1 and 2 to the front of the fire extinguisher and inner sling legs 3 and 4 to the rear end (hose reel). Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located at the top corner of the frame near the pressure vessel. Place the correct link from Table 14-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located at the top corner of the frame near the hose reel. Place the correct link from Table 14-2 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the fire extinguisher to prevent entanglement during hookup and lift-off. Pay close attention to the pipes and valves.

Figure 14-2. Fire Extinguisher, Dry Chemical

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGID RAIDING CRAFT

14-4. The rigid raiding craft is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 14-3 is certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-3. Rigid Raiding Craft

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------|---------------------|-----------|-----------------------|
| Rigid Raiding Craft | 3,200 | 40K | 5/10 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (40,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Tighten all straps on the anchor, paddles, cushions, and loose equipment.

(b) Stow the boat utility bags in the console. Remove the anchor chain and line and stow in the console. Protect the battery from the chain.

(c) Secure the console hatch with tape. Secure the anchor to the deck and secure the loose end of the anchor.

(d) Secure the running lights to an inner handrail with tape or Type III nylon cord.

(e) Secure the base of the outboard motors tightly to the bar directly above with Type III nylon cord.

(f) Tape the compass glass on top of the console.

(2) **Rigging.** Rig the load according to the steps in Figure 14-3.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(3) Hookup. The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

2.75-INCH ROCKET FASTPACK PALLET

14-5. The 2.75-inch rocket fastpack pallet is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 14-4 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-4. 2.75-inch Rocket Fastpack Pallet

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| PA 150 Pallet with Twelve (12) 2.75-inch Rockets | 2,200 | 10K | 3/3 |
| PA 151 Pallet with Twelve (12) 2.75-inch Rockets | 2,000 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Close the safety latches on the lids of the rocket containers. Secure the lids with Type III nylon cord.

(b) Secure the loose ends of any cables, bands, or chains with tape or Type III nylon cord.

(c) Ensure the 1-1/4-inch steel banding around the pallet is in serviceable condition and the containers are locked together.

(d) Tape the upper corners of the pallet from the top to the second row of rockets.

(2) **Rigging.** Rig the load according to the steps in Figure 14-4.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team

DRAFT

SPECIAL DIVERS AIR SUPPORT SYSTEM (SDASS)

14-6. The special divers air support system is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 14-5 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-5. Special Divers Air Support System

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|---------------|-----------------------|
| Four SDASS Racks with Two Empty Air Cylinders each in a 2 X 2 Configuration | 1,800 | 10K Cargo Net | N/A |

b. MATERIALS. The following materials are required to rig this load:

- (1) Net, cargo (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (4 each).
- (6) Dunnage material.
- (7) Plywood 44 X 75 X 1/2-inch (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Inspect the cargo net in accordance with FM 4-20.197.
- (b) Prepare the plywood sheets and the dunnage.

(2) **Rigging.** Rig the load according to the steps in Figure 14-5.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Spread the cargo net on the ground.
2. Position the bottom two racks on the plywood sheets. Secure each rack to the plywood using CGU-1/B tie-down straps.
3. Place the remaining two racks on top of the bottom racks, fitting together the feet at each of the five junction points.
4. Insert dunnage between the two stacks of racks and secure the dunnage to the stacks with Type III nylon cord.
5. Route two CGU-1/B tie-down straps around the lower bottom racks and two CGU-1B tie-down straps around the upper racks.
6. Rig the net in accordance with FM 4-20.197.

Figure 14-5. Special Divers Air Support System

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

TWO MOBILE OVERSNOW TRANSPORT (MOST) SNOWMOBILES WITH OR WITHOUT TWO SLEDS

14-7. The two mobile oversnow transport snowmobiles with or without two sleds are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 14-6 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-6. Two Mobile Oversnow Transport Snowmobiles with or without Two Sleds

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|---------------|-----------------------|
| Polaris Indy Wide-Track Snowmobile | 638 each | 10K Cargo Net | N/A |
| Norwegian Pulk Sled, Model BN 2010C | 381 each | 10K Cargo Net | N/A |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Net, cargo (10,000-pound capacity) (2 each).
- (2) One sling leg from a sling set (10,000-pound capacity).
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (6) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (7) Pad, energy dissipating, honeycomb (2 sheets).

c. **PERSONNEL.** Eight persons can prepare and rig this load in 10 minutes. The large number of personnel is required to lift and position the MOST.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:
 - (a) Inspect the cargo net in accordance with FM 4-20.197.
 - (b) Position the two MOSTs on level ground.
 - (c) Secure the canvas cargo cover over the sled.
 - (d) Secure the fuel cap on the MOST with tape.
 - (e) Remove the snap-off wind screen from the MOST, pad it with felt, and secure it over the seat with Type III nylon cord.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(2) Rigging. Rig the load according to the steps in Figure 14-6.

(3) Hookup. The hookup team consists of four people. The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. One hookup person places the apex fitting onto the aircraft cargo hook. The other two people kneel, one on each side of the load, to ensure the net does not catch on the handle bars, tie-down points, or trailer hitch as the load is lifted. As the first net is lifted off the ground, after successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point. This will ensure the hookup team is not struck by the second cargo net as it is being lifted off the ground.

Note: Brief the pilot to hover to the side after the sleds are on the ground to lower the MOSTs to the ground. Once the MOSTs are on the ground, the pilot must hover to the side before releasing the apex fitting.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 14-6. Two Mobile Oversnow Transport Snowmobiles with or without Two Sleds

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Lay out the first 10,000-pound cargo net. Place two MOSTs side-by-side facing in opposite directions with two sheets of honeycomb between them. Close the net to the apex fitting of the cargo net. Gather the excess net above the load and tape the net together every 3 feet from the apex down (breakaway technique).</p> |
| <p>2. Lay out the second 10,000-pound cargo net next to the first one and center the two sleds on the net side-by-side facing opposite directions. Close the net to the apex fitting of the cargo net. Gather the excess net above the load and tape the net together every 3 feet from the apex down (breakaway technique).</p> |
| <p>3. Attach the chain from the 10,000-pound sling leg to the apex of the cargo net holding the sleds. Insert link 4 in the grabhook. The end of the sling leg with the apex attached is fed under the net holding the two MOSTs along the axis of the honeycomb. It is passed through the net at the center and pulled upward between the two sheets of honeycomb and attached to the apex of the net using the apex. This will allow the sleds to hang directly below the MOST.</p> |

Figure 14-6. Two Mobile Oversnow Transport Snowmobiles with or without Two Sleds (Continued)

CONTAINER ROLL-IN/OUT PLATFORM (CROP), TWO EMPTY PLATFORMS, STACKED

14-8. The container roll-in/out platform, two empty platforms, stacked are rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 14-6 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-7. Container Roll-in/out Platform, Two Empty Platforms, Stacked

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---------------------------|---------------------|-----------|-----------------------|
| Two CROPs, Empty, Stacked | 7,300 | 10K | 30/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable padding.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Ensure the load restraints are in the stowed position.

(b) Secure the A-frames in the down position.

(c) Stack the platforms with the A-frames at the same end and secure the platforms together with the straps provided with the platform (a minimum of two straps per platform are required). Ensure the straps have operational keepers on the hook ends. Secure the loose strap ends with tape or 1/4-inch cotton webbing.

(2) Rigging. Rig the load according to the steps in Figure 14-7.

(3) Hookup. The hookup team stands on the stacked platforms. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the cargo hook. The hookup team then carefully dismounts the platform and remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 14-7. Container Roll-in/out Platform, Two Empty Platforms, Stacked

DRAFT

| RIGGING STEPS |
|--|
| <p>1. Position the apex fitting on top of the stacked platforms. Route outer sling legs 1 and 2 to the front of the platform and inner sling legs 3 and 4 to the rear (A-frame end). Sling legs 1 and 3 must be on the left side of the load.</p> <p>2. Loop the chain end of sling leg 1 through the left front lift provision located on the top platform. Place the correct link from Table 14-7 in the grab hook. Repeat with sling leg 2 through the right front lift provision on the top platform.</p> <p>3. Loop the chain end of sling leg 3 through the left rear lift provision located on the top platform. Place the correct link from Table 14-7 in the grab hook. Repeat with sling leg 4 through the right rear lift provision on the top platform.</p> <p>4. Secure all excess chain with tape or Type III nylon cord.</p> <p>5. Pad each chain where it contacts sharp edges on the platform. Secure the padding with tape or Type III nylon cord.</p> <p>6. Cluster and tie (breakaway technique) all sling legs together on top of the platforms to prevent entanglement during hookup and lift-off.</p> |

Figure 14-7. Container Roll-in/out Platform, Two Empty Platforms, Stacked (Continued)

SPECIAL OPERATIONS CRAFT-RIVERINE (SOC-R) AND NAVAL SPECIAL WARFARE RIGID INFLATABLE BOAT (NSWRIB) TRAILER

14-9. The special operations craft-riverine and naval special warfare rigid inflatable boat trailer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 14-8 are certified for all helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 14-8. Special Operations Craft-Riverine and Naval Special Warfare Rigid Inflatable Boat Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Special Operations Craft-Riverine (SOC-R) Trailer | 3,716 | 15K | 5/3 |
| Naval Special Warfare Rigid Inflatable Boat (NSWRIB) Trailer | 4,300 | 15K | 5/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Multileg sling set (15,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure the utility box lid with Type III nylon cord.

(b) Lower the lunette close to the ground and secure it in place with a 5,000-pound tiedown strap and load binder.

(c) Secure safety chains, intervehicular electrical cables, and brake cables on top of the drawbar tape or Type III nylon cord.

(d) Engage the parking brake and secure it in the engaged position.

(e) Tape the rails on the trailer together to ensure the slings do not become entangled.

(f) Tape all lights.

(2) Rigging. Rig the load according to the steps in Figure 14-8.

Note: This load is flown with the lunette in front.

(3) Hookup. The hookup team stands next to the trailer. The static discharge person discharges the static electricity. The hookup person places the apex on the cargo hook. The hookup teams then carefully dismount the boat and remain close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup teams quickly exit the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 14-8. Special Operations Craft-Riverine and Naval Special Warfare Rigid Inflatable Boat Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position the apex fitting on top of the trailer.
2. Loop the chain end of sling leg 1 around the main support frame in front of the tiedown provision on the left side of the trailer . Place the correct link from Table 14-8 in the grab hook. Repeat this step with sling leg 2 on the right side of the trailer.
3. Loop the chain end of sling leg 3 around the frame and through the lift provision on the left rear of the trailer. Place the correct link from Table 14-8 in the grab hook. Repeat this step with sling leg 4 on the right side of the trailer. Secure the excess chain with tape or Type III nylon cord.
4. Raise the apex fittings above the load. Cluster and tie (breakaway technique) the sling legs in each sling set together to prevent entanglement during hookup and lift-off.

Chapter 15

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR WHEELED VEHICLES

INTRODUCTION

15-1. This chapter contains rigging procedures for single-point lift of wheeled vehicles that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for wheeled vehicles are in this section. Paragraphs 15-2 through 15-6 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

M342A2 2 1/2-TON DUMP TRUCK WITH WINCH

15-2. The M342A2 2 1/2-ton dump truck with winch is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 15-1 is suitable for all ARMY helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 15-1. M342A2 2 1/2-Ton Dump Truck with Winch

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M342A2 2 1/2-Ton Dump Truck with Winch | 15,770 | 25K | 3/30 |

WARNING
DO NOT LIFT THIS LOAD WITH THE ORIGINAL VEHICLE LIFT PROVISION

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. One person can prepare and rig this load (after modifying the bed) in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Modify the cargo bed. Secure the bed in the down position.

(b) Place the transmission in neutral and engage the hand brake.

(c) Secure the steering wheel and doors with Type III nylon cord.

(d) Tape the windshield wipers to the windshield.

(e) Secure the hood with Type III nylon cord routed from the grill through the hood latches.

(2) Rigging. Rig the load according to the steps in Figure 15-1.

(3) Hookup. The hookup team stands in the cargo bed of the truck. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

M35A1/A2 2 1/2-TON CARGO TRUCK WITH WINCH

15-3. The M35A1/A 2, 2 1/2-ton cargo truck with winch is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following items in Table 15-2 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 15-2. M35A1/A2 2 1/2-Ton Cargo Truck with Winch

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| M35A1 2 1/2-Ton Cargo Truck with Winch | 13,550 | 25K | 13/3 |
| M35A2 2 1/2-Ton Cargo Truck with Winch | 13,570 | 25K | 13/3 |

WARNING
DO NOT LIFT THIS LOAD WITH THE ORIGINAL VEHICLE LIFT PROVISION

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

(5) Padding, cellulose.

(6) Tie-down, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 25 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove the bed tarpaulin and bows and secure them in the truck bed with tie-down straps or Type III nylon cord.

(b) Remove the cab tarpaulin, lower and secure the windshield, and secure the tarpaulin over the windshield with Type III nylon cord.

(c) Secure the hood with Type III nylon cord routed from the grill through the hood latches.

(d) Ensure the fuel cap, oil filler cap, radiator cap, and battery caps are properly installed and the battery compartment door is fastened.

(e) Secure the seats and doors with Type III nylon cord.

(f) Place the transmission in neutral and engage the hand brake.

(g) Straighten the front wheels and secure the steering wheel with Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 15-2.

(3) Hookup. The hookup team stands in the cargo bed of the truck. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting in the bed of the truck near the cab. Route outer sling legs 1 and 2 to the front of the truck and inner sling legs 3 and 4 to the rear end. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left side of the front bumper. Place the correct link from Table 15-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left lifting pin on the spring shackle between the rear wheels. Place the correct link from Table 15-2 in the grab hook. Pull the grab hook up against the side of the truck and tie the chain in the chain guide bracket with 1/4-inch cotton webbing. Ensure the hook side of the grab hook faces outward. Repeat with sling leg 4 and the right rear lift provision.
4. Tie the rear grab hooks together across the bed of the truck with 1/4-inch cotton webbing.
5. Pull the front sling legs up over the hood and secure the grab hooks to the hood latch attachment with Type III nylon cord.
6. Tape sling legs 1 and 2 to the top of the steering wheel. Cluster and tie (breakaway technique) all sling legs together on top of the truck to prevent entanglement during hookup and lift-off.

CRANE, SELF-PROPELLED, FOR ARMY AIRCRAFT MAINTENANCE AND POSITIONING (SCAMP)

15-6. The crane, self-propelled, for army aircraft maintenance and positioning is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 15-5 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 15-5. Crane, Self-Propelled, for Army Aircraft Maintenance and Positioning

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Crane, Self-Propelled, for Army Aircraft Maintenance and Positioning | 14,600 | 25K | 3/40 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Attach the block and tackle to the front pintle hook (the cable must be snug).

(b) Rotate the mirrors in toward the cab and tape all the glass.

(c) Secure the engine cover, tow bar, and tow wheels in place with Type III nylon cord.

(d) Secure all loose equipment, doors, or panels with tape or Type III nylon cord.

(e) Place the transmission in neutral and engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 15-5.

(3) **Hookup.** The hookup team stands between the end of the boom and

Chapter 16

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR TRAILERS

INTRODUCTION

16-1. This chapter contains rigging procedures for single-point lift of trailers that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for trailers are in this section. Paragraphs 16-2 through 16-13 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

M105 1 1/2-TON TRAILER

16-2. The M105 1 1/2-ton trailer is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-1 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-1. M105 1 1/2-Ton Trailer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---------------------|-----------|-----------------------|
| M105 1 1/2-Ton Trailer | 5,750 | 10K | 4/30 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 25 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

- (a) Remove the top tarpaulin and bows.
- (b) Remove the front and rear racks, stow in the slots provided on each side of the trailer, and secure them in place with Type III nylon cord.
- (c) Stow the bows and tarpaulin in the trailer bed and secure them with Type III nylon cord.
- (d) Fasten the tailgate in the open position with the chains on each side hooked through the keepers.
- (e) Secure the cargo in the bed using the CGU-1/B cargo straps.
- (f) Secure the light cable to the drawbar with tape or Type III nylon cord.
- (g) Engage the parking brake.
- (h) If the trailer has modified lift provisions, remove the push pin and rotate the provisions downward.

(2) **Rigging.** Rig the load according to the steps in Figure 16-1.

(3) **Hookup.** The hookup team stands in the cargo bed of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 16-1. M105 1 1/2-Ton Trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting in the trailer bed. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear end. Route the rear chains between the tailgate and the bed. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 16-1 in the grab hook. Repeat with sling leg 2 on the lunette.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision located at the aft end of the trailer chassis frame. Place the correct link from Table 16-1 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Remove the slack from sling legs 3 and 4. Tape or tie the grab hook or sling leg to the side rack.</p> |
| <p>5. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.</p> |

Figure 16-1. M105 1 1/2-Ton Trailer (Continued)

M270A1 SEMITRAILER, WRECKER

16-3. The M270A1 semitrailer, wrecker is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 16-2 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-2. M270A1 Semitrailer, Wrecker

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Semitrailer, Lowbed, Wrecker, 12-Ton, 4 -Wheel | 17,500 | 25K | 55/3 |

WARNING
DO NOT LIFT THIS LOAD WITH THE ORIGINAL
VEHICLE LIFT PROVISION

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

M172A1 SEMITRAILER, LOWBED

16-4. The M172A1 semitrailer, lowbed is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 16-3 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-3. M172A1 Semitrailer, Lowbed

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|----------------------------|---------------------|-----------|-----------------------|
| M172A1 Semitrailer, Lowbed | 16,500 | 25K | 3/60 |

WARNING
DO NOT LIFT THIS LOAD WITH THE ORIGINAL
VEHICLE LIFT PROVISION

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** One person can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** None required.
- (2) **Rigging.** Rig the load according to the steps in Figure 16-3.

(3) **Hookup.** The hookup team stands on the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the air hoses and safety chains to the drawbar with Type III nylon cord.

(b) Ensure the spare tire is securely attached.

(c) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-4.

(3) **Hookup.** The hookup team stands on the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team

TRAILER-MOUNTED WELDING SHOP

16-6. The trailer-mounted welding shop is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-5 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-5. Trailer-Mounted Welding Shop

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| Trailer-Mounted Welding Shop | 2,960 | 10K | 10/65 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure all tie-down handles on tanks with Type III nylon cord. Secure the safety chains and intervehicular cable to the trailer tongue with tape or Type III nylon cord.

(b) Ensure all covers, doors, lids, and latches are securely fastened.

(c) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-5.

(3) **Hookup.** The hookup team stands on the platform to the rear of the trailer near the vise. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the center of the load. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear end. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the lunette of the trailer. Place the correct link from Table 16-5 in the grab hook. Repeat with sling leg 2 on the right side. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the trailer. Place the correct link from Table 16-5 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure the excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

LEB 300 WELDING MACHINE ON 2 1/2-TON TRAILER CHASSIS

16-7. The LEB 300 welding machine on 2 1/2-ton trailer chassis is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 16-6 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-6. LEB 300 Welding Machine on 2 1/2-ton Trailer Chassis

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Welding Machine, Arc, LEB 300 on 2 1/2-ton Trailer | 5,310 | 10K | 28/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Chock blocks (2 each) (addition to OVE blocks).

c. **PERSONNEL.** One person can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Place chock blocks in front and behind the wheels.
- (b) Secure the brake hoses, safety hoses, and chains to the trailer tongue with tape or Type III nylon cord.
- (c) Secure the OVE chock blocks on the trailer racks with Type III nylon cord.
- (d) Close and secure all lids, doors, and caps.

(2) **Rigging.** Rig the load according to the steps in Figure 16-6.

(3) **Hookup.** The hookup team stands on the platform to the rear of the trailer near the vise. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the heli-

TRAILER-MOUNTED COMPRESSOR, RECIPROCATING

16-8. The trailer-mounted compressor, reciprocating is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-7 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-7. Trailer-Mounted Compressor, Reciprocating

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Trailer-Mounted Compressor, Reciprocating | 900 | 10K | 10/15 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the front leg in the down position.
- (b) Secure the brake hoses, safety hoses, and chains to the trailer tongue with tape or Type III nylon cord.
- (c) Close and secure all lids, doors, and caps.
- (d) Engage parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-7.

(3) **Hookup.** The hookup team stands along side the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

TRAILER-MOUNTED AN/MTC-10

16-9. The trailer-mounted AN/MTC-10 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-8 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-8. Trailer-Mounted AN/MTC-10

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| AN/MTC-10 Telephone Control Office Group on M416 Trailer | 1,800 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Remove the tarpaulin and all external items; stow in the bed of the trailer.
- (b) Stow the accompanying load in the trailer bed and secure with Type III nylon cord.
- (c) Tape all fittings on the trailer and tongue.
- (d) Fold rear stand before hookup to helicopter.

(2) **Rigging.** Rig the load according to the steps in Figure 16-8.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear ensuring they are forward of the aft top frame. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 16-8 in the grab hook. Repeat with sling leg 2 on the right side.
3. Loop the chain end of sling leg 3 under the left rear corner of the trailer and around the left rear spring shackle. Place the correct link from Table 16-8 in the grab hook. Repeat with sling leg 4 and the right rear corner of the trailer.
4. Cluster and tie or tape (breakaway technique) all sling legs to the upper frame to prevent entanglement during hookup and lift-off.

Figure 16-8. Trailer-Mounted AN/MTC-10

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

TRAILER-MOUNTED TOOL OUTFIT

16-10. The trailer-mounted tool outfit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-9 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-9. Trailer-Mounted Tool Outfit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------------|---------------------|-----------|-----------------------|
| Trailer-Mounted Tool Outfit | 2,450 | 10K | 5/35 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the covers and doors with tape or Type III nylon cord.
- (b) Secure the intervehicular cable and safety chains to the trailer tongue with tape or Type III nylon cord.
- (c) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-9.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the tool outfit cover. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 16-9 in the grab hook. Repeat with sling leg 2 on the right side.
3. Loop the chain end of sling leg 3 under the left rear corner of the trailer and around the left rear spring shackle. Place the correct link from Table 16-9 in the grab hook. Repeat with sling leg 4 and the right rear corner of the trailer. Secure the excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the tool outfit to prevent entanglement during hookup and lift-off.

TRAILER-MOUNTED, LUBE, SERVICE UNIT

16-11. The trailer-mounted, lube, service unit is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-10 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-10. Trailer-Mounted, Lube, Service Unit

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Lube Service Unit, Engine 3A, Trailer-Mounted | 5,540 | 10K | 5/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down, cargo, CGU-1B (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Ensure the batteries and loose equipment under the cover are secure.
- (b) Secure the doors with Type III nylon cord.
- (c) Secure the box to the frame with the CGU-1/Bs.
- (d) Secure the brake hoses and safety chains to the tongue of the trailer with Type III nylon cord.
- (e) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-10.

(3) **Hookup.** The hookup team stands on top of the load. The static wand person discharges the static electricity with the static wand. The hookup person

TRAILER, BOLSTER, M796

16-12. The trailer, bolster, M796 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 16-11 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-11. Trailer, Bolster, M796

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---------------------|-----------|-----------------------|
| Trailer, Bolster, M796 | 6,340 | 10K | 100/8 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the front leg in the down position.
- (b) Secure the brake hoses and safety chains to the tongue of the trailer with Type III nylon cord.
- (c) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 16-11.

(3) **Hookup.** The hookup team stands on top of the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located aft of the left hand brake. Place the correct link from Table 16-11 in the grab hook. Repeat with sling leg 2 on the right side. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision located aft of the left wheel. Place the correct link from Table 16-11 in the grab hook. Repeat with sling leg 4 and the right rear of the trailer.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

Figure 16-11. Trailer, Bolster, M796

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

M149 SERIES WATER TRAILERS

16-13. The M149 series water trailers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 16-12 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 16-12. M149 Series Water Trailers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------|---------------------|-----------|-----------------------|
| Trailer, Water, M149 | 6,060 | 10K | 75/90 |
| Trailer, Water, M149A1 | 6,060 | 10K | 75/90 |
| Trailer, Water, M149A2 | 6,320 | 10K | 75/90 |

WARNING
THE M149, M149A1, AND M149A2 WATER TRAILERS, WITHOUT THE MODIFIED CLEVIS-TYPE LIFT PROVISIONS, ARE NOT CURRENTLY CERTIFIED FOR SLING LOADING DUE TO INADEQUATE LIFT PROVISION STRENGTH WHEN THE TRAILER IS LOADED.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the brake hoses and safety chains to the tongue of the trailer with Type III nylon cord.

(b) Place the support leg and wheel in the DOWN position.

(c) Tape the top edge of the aft end of the water tank to prevent the sling legs from chafing on the top of the tank.

(d) Engage both hand brakes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(e) Ensure the fill port is securely closed. Tape if necessary.

(2) **Rigging.** Rig the load according to the steps in Figure 16-12.

(3) **Hookup.** The hookup team stands on each wheel fender. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 16-12. M149 Series Water Trailers

DRAFT

RIGGING STEPS

1. Position apex fitting on top of the tank. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 16-12 in the grab hook. Repeat with sling leg 2 on the right side. Secure the excess chain with Type III nylon cord.
3. Using the rear lift provisions as a guide to keep the chains in place, route the chain end of sling leg 3 down between the tank and the crossmember, under the rear crossmember, and back up through the lift provision. Place the correct link from Table 16-12 in the grab hook. Repeat with sling leg 4 and the right rear of the trailer. Secure the excess chain with Type III nylon cord.
4. Cluster and tie or tape (breakaway technique) all sling legs together on top of the water tank to prevent entanglement during hookup and lift-off.

Chapter 17

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR ENGINEER EQUIPMENT

INTRODUCTION

17-1. This chapter contains rigging procedures for single-point lift of engineer equipment that is suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for engineer equipment is in this section. Paragraphs 17-2 through 17-12 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

MRS-100 WHEELED INDUSTRIAL TRACTOR

17-2. The MRS-100 wheeled industrial tractor is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 17-1 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-1. MRS-100 Wheeled Industrial Tractor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------------|---------------------|-----------|-----------------------|
| MRS-100 Wheeled Industrial Tractor | 21,100 | 25K | 53/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. One person can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Sectionalize the tractor from the scraper according to the operator's manual.

(b) Secure the hydraulic lift cylinder in the carrying bracket.

(c) Secure all caps, lids, and hatches.

(d) Place the transmission in neutral and set the hand brake.

(e) Lock the blade in the locked position.

(2) **Rigging.** Rig the load according to the steps in Figure 17-1.

(3) **Hookup.** The hookup team stands on the driver's seat. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| <p>2. Loop the chain end of sling leg 1 through the left front lift provision by the radiator. Place the correct link from Table 17-1 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision located near the left brake light. Place the correct link from Table 17-1 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the tractor to prevent entanglement during hookup and lift-off.</p> |

Figure 17-1. MRS-100 Wheeled Industrial Tractor (Continued)

M5 8-FOOT AGGREGATE SPREADER

17-3. The M5 8-foot aggregate spreader is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 17-2 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-2. M5 8-Foot Aggregate Spreader

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------|---------------------|-----------|-----------------------|
| M5 8-Foot Aggregate Spreader | 2,290 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** One person can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

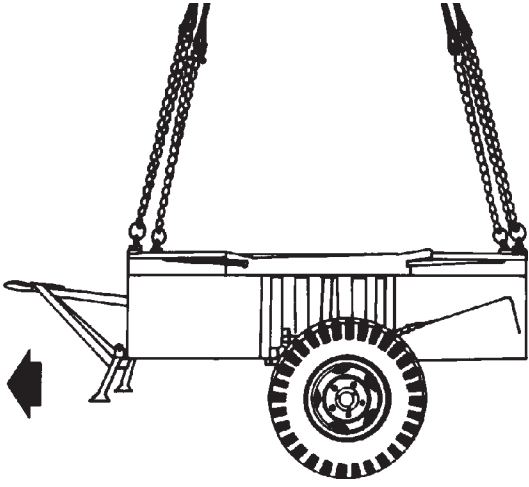

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (a) Remove the operator's platform and block off plates.
- (b) Stow and secure the platform and plates in the spreader.

(2) **Rigging.** Rig the load according to the steps in Figure 17-2.

(3) **Hookup.** The hookup team stands on top of the spreader. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the spreader. Route outer sling legs 1 and 2 to the front (tongue end) of the spreader and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lifting eye located on the front left corner of the spreader. Place the correct link from Table 17-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lifting eye located on the left rear corner of the spreader. Place the correct link from Table 17-2 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the spreader to prevent entanglement during hookup and lift-off.

Figure 17-2. M5 8-Foot Aggregate Spreader

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

ROLLER, TOWED, VIBRATING, 1-DRUM, 5-TON, VR55TM

17-4. The roller, towed, vibrating, 1-drum, 5-ton, VR55TM is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 17-3 is suitable for all ARMY helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-3. Roller, Towed, Vibrating, 1-Drum, 5-Ton, VR55TM

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Roller, Towed, Vibrating, 1-Drum, 5-Ton, VR55TM | 3,450 | 10K | 20/90 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the front and rear support legs in the DOWN position with Type III nylon cord.

(b) Secure the battery box cover and engine top cover with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 17-3.

(3) **Hookup.** The hookup team stands on top of the roller. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

ROLLER, ROAD, TOWED, WHEELED, 13-TIRE, 9-TON

17-5. The roller, road, towed, wheeled, 13-tire, 9-ton is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 17-4 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-4. Roller, Road, Towed, Wheeled, 13-Tire, 9-Ton

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Roller, Road, Towed, Wheeled, 13-Tire, 9-Ton | 3,300 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down, cargo, CGU-1/B.
- (6) Chock blocks (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Secure the drain plugs with tape.
- (b) Raise the tongue and secure it in place with the CGU-1/B cargo tie-down strap.
- (c) Place the chock blocks by each set of rollers.

(2) **Rigging.** Rig the load according to the steps in Figure 17-4.

(3) **Hookup.** The hookup team stands on top of the roller. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team

DRAFT

quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the roller. Route outer sling legs 1 and 2 to the front of the roller and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the front left corner of the roller. Place the correct link from Table 17-4 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the left rear corner of the roller. Place the correct link from Table 17-4 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the roller to prevent entanglement during hookup and lift-off.

TAR KETTLES

17-6. The tar kettles are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 17-5 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-5. Tar Kettles

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Kettle, Heating, Bitumen, 165-Gallon | 1,750 | 10K | 5/20 |
| Kettle, Bitumen, Trailer-Mounted,7ZPSAP | 1,900 | 10K | 5/20 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the trailer front support leg in the DOWN position. Secure all safety chains, cables, and hoses with tape or Type III nylon cord.

(b) Secure all loose covers with Type III nylon cord.

(c) Engage the parking brake.

(2) **Rigging.** Rig the load according to the steps in Figure 18-5.

(3) **Hookup.** The hookup team stands on the frame alongside the kettle. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the tar kettle. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lifting ring located on the front left corner of the trailer. Place the correct link from Table 17-5 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lifting ring located on the left rear corner of the trailer. Place the correct link from Table 17-5 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together on top of the trailer to prevent entanglement during hookup and lift-off.

16SM CONCRETE MIXER

17-7. The 16SM concrete mixer is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 17-6 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-6. 16SM Concrete Mixer

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Mixer, Concrete, Trailer-Mounted, 16SM | 6,040 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Chock blocks, 6- x 6- x 24-inch (4 each).
- (6) Tie-down, cargo, CGU-1/B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 20 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

- (a) Place the chock blocks to the inside of each wheel.
- (b) Secure the tongue in the raised position using the CGU-1/B cargo tie-down strap.

(c) Secure the scoop elevating wheel with the scoop in the raised position with rope or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 17-6.

(3) **Hookup.** The hookup team stands on top of the mixer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the

ROAD SWEEPER, TOWED

17-8. The road sweeper, towed is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 17-7 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-7. Road Sweeper, Towed

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Sweeper, Rotary, Towed, with 150-Gallon Water Tank Sprinkling System | 2,120 | 10K | 90/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Rotate the towing bar around and secure it in place to the top horizontal bar. Secure safety chains in place with Type III nylon cord.

(b) Rotate the brush to the last locking hole and secure it with the locking pin.

(c) Secure the hydraulic handle in the UP position with Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 18-7.

(3) **Hookup.** The hookup team stands on the frame next to the engine. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the road sweeper. Route outer sling legs 1 and 2 to the front of the engine and inner sling legs 3 and 4 to the rear axle. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lifting point. Place the correct link from Table 17-7 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 around the left rear axle near the left rear wheel. Place the correct link from Table 17-7 in the grab hook. Repeat with sling leg 4 and the right rear axle.
4. Cluster and tie (breakaway technique) all sling legs together on top of the sweeper to prevent entanglement during hookup and lift-off.

SHEEPSFOOT ROLLER, TWO-DRUM, MD-96

17-9. The sheepsfoot roller, two-drum, MD-96 is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 17-8 is suitable for all ARMY helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-8. Sheepsfoot Roller, Two-Drum, MD-96

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|------------------------------------|---------------------|-----------|-----------------------|
| Sheepsfoot Roller, Two-Drum, MD-96 | 7,500 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Chain assembly (2 each).

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Wrap a chain four or five times around the two lower tie-down points aft of the inner sections of the drums and engage hook in the chain end to prevent the two drum sections from pivoting upwards. Secure the hook with tape or Type III nylon cord so the hook will not disengage.

(b) Repeat using the other chain on the two forward lower tie-down points.

(2) **Rigging.** Rig the load according to the steps in Figure 17-8.

(3) **Hookup.** The hookup team stands beside the roller. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated

MODEL 1150 FULL TRACKED TRACTOR

17-10. The model 1150 full tracked tractor is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 17-9 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-9. Model 1150 Full Tracked Tractor

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Tractor, Full-Track, Case Model 1150 without Roll Over Protection, System | 21,930 | 25K | 3/3 |
| Tractor, Full-Track, Case Model 1150 without Blade | 18,740 | 25K | 3/23 |
| Blade | N/A | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Sling set (10,000-pound capacity) (2 legs only).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Two protective plugs for hydraulic lines, if sectionalizing the tractor.

c. PERSONNEL. One person can rig each load in 5 minutes. Two persons can remove ROPS and sectionalize the tractor and blade in 2 hours.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Sectionalize the load, if required, according to the operator's manual. Install protective caps over the hoses and install trunnion caps securely.

(b) Place the transmission in neutral.

(2) **Rigging.** Rig the load according to the steps in Figure 17-9.

(3) **Hookup.** The hookup team stands on the driver's seat or beside the

M4K 4000-POUND FORKLIFT

17-11. The M4K 4000-pound forklift is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 17-10 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-10. M4K 4000-Pound Forklift

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Forklift Rough Terrain, 4000-Pound, M4K | 9,725 | 10K | 25/3 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.
- (6) Tie-down strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Insert the locking pin or bolt and nut to prevent the front and rear ends from pivoting.

(b) Secure the steering wheel with Type III nylon cord. Engage the hand brake.

(c) Ensure the fuel tank is less than 3/4 full.

(d) Pad the forward edge of the roll over protection system (ROPS). Secure the padding with tape or Type III nylon cord.

(e) Raise the fork tines approximately 1 foot above the ground. Lift the ends of the fork tines by hand to point upward and secure the fork tines to the lift cylinder frame using the tie-down strap.

(2) **Rigging.** Rig the load according to the steps in Figure 17-10.

(3) **Hookup.** The hookup team stands on top of the engine deck. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the engine hood. Route outer sling legs 1 and 2 to the front of the forklift. Ensure the sling legs are routed behind the lower driving light box beam mounted on the front fenders. Route inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located directly above the forward axle housing between the left front tire and the hydraulic cylinder. Place the correct link from Table 17-10 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the top hole in the left rear lift provision. Place the correct link from Table 17-10 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Pull the aft sling legs together on top of the engine compartment and tie (breakaway technique) the grab hooks together.
5. Cluster and tie (breakaway technique) all sling legs together on top of the forklift to prevent entanglement during hookup and lift-off.

FLOODLIGHT SET, TRAILER-MOUNTED

17-12. The floodlight set, trailer-mounted is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 17-11 is suitable for all ARMY helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 17-11. Floodlight Set, Trailer-Mounted

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Floodlight Set, Trailer-Mounted, Model No. HLT-3KW-M.1 | 2,300 | 10K | 40/100 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap, cargo, CGU-1/B (as required).

c. **PERSONNEL.** Two persons can prepare and rig this load in 15 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Ensure the generator set is secured in place with the security bolts. Use the CGU-1/B tie-down straps if necessary.

(b) Secure the mast section and lights in place with Type III nylon cord.

(c) Secure all cables, hoses, and chains to the trailer tongue with tape or Type III nylon cord.

(d) Engage the parking brake. Raise all the leveling legs to the full up position. Secure the trailer tongue leg in the down position.

(2) **Rigging.** Rig the load according to the steps in Figure 17-11.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS

1. Position apex fitting on top of the floodlight set. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the left side of the trailer. Place the correct link from Table 17-11 in the grab hook. Repeat with sling leg 2 and the right front lift provision. Secure the excess chain with Type III nylon cord.
3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 17-11 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure the excess chain with Type III nylon cord.
4. Cluster and tie (breakaway technique) all sling legs together on top of the floodlight set to prevent entanglement during hookup and lift-off.

Chapter 18

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR LIQUID CONTAINERS

INTRODUCTION

18-1. This chapter contains rigging procedures for single-point lift of liquid containers that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for liquid containers are in this section. Paragraphs 18-2 through 18-4 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

TANK, FABRIC, COLLAPSIBLE, 10,000-GALLON

18-2. The tank, fabric, collapsible, 10,000-gallon is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 18-1 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 18-1. Tank, Fabric, Collapsible, 10,000-Gallon

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Tank, Fabric, Collapsible, 10,000-Gallon | 1,040 | 10K | 100/100 |

CAUTION

THIS LOAD MAY BECOME UNSTABLE AT AIRSPEEDS ABOVE 35 KNOTS

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. **PERSONNEL.** Two persons can prepare and rig this load in 10 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Ensure all safety latches on the cover are securely closed.

(2) **Rigging.** Rig the load according to the steps in Figure 18-1.

Note: Do not carry more than one tank at a time.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

60,000-GALLON FUEL SYSTEM SUPPLY POINT

18-3. The 60,000-gallon fuel system supply point is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 18-2 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 18-2 . 60,000-Gallon Fuel System Supply Point

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| 60,000-Gallon Fuel System Supply Point | N/A | N/A | N/A |
| Net #1 - Pump | 1,300 | 5K Net | N/A |
| Net #2 - Tanks | 6,000 | 10K Net | N/A |
| Net #3 - Hoses | 2,000 | 5K Net | N/A |
| Net #4 - Hoses | 2,200 | 5K Net | N/A |
| Net #5 - Hoses | 4,000 | 5K Net | N/A |

b. MATERIALS. The following materials are required to rig this load:

- (1) Net, cargo (5,000-pound capacity) (4 each).
- (2) Net, cargo (10,000-pound capacity).
- (3) Sling set (10,000-pound capacity) (2 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (4) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (5) Cord, nylon, Type III, 550-pound breaking strength.
- (6) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (7) Apex fitting (25,000-pound capacity).

c. PERSONNEL. Eight persons can prepare and rig this load in 60 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(2) Rigging. Rig the load according to the steps in Figure 18-2.

(a) Spread out all five nets side by side.

(b) Center the pump on net #1 (5,000-pound capacity).

(c) Center two metal containers with tanks and fittings on net #2 (10,000-pound capacity). Position the third container on top of the bottom two containers.

(d) Center both filters on net #3. Tie three fire extinguishers to each side of the filters with Type III nylon cord. Place six rolled hoses on top of the filters. Pull the net up around the load and tie the corners to the pumps.

(e) Place 15 long hoses centered on net #4 (5,000-pound capacity). Build a pyramid of 120 hoses.

(f) Secure all signs on a pallet and secure with Type III nylon cord. Center the net on net #5. Secure four fire extinguishers on a second pallet and center on the net. Pile all remaining hoses on the pallets.

(3) Hookup. The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

ONE TO SIX 250-GALLON WATER DRUMS

18-4. One to six 250-gallon water drums are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 18-3 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 18-3 . One to Six 250-Gallon Water Drums

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| One Drum, Fabric, Water, 250-Gallon | 2,210 | 10K | 3 |
| Two Drums, Fabric, Water, 250-Gallon | 4,420 | 10K | 3/3 |
| Three Drums, Fabric, Water, 250-Gallon | 6,630 | 10K | 3/20 |
| Four Drums, Fabric, Water, 250-Gallon | 8,840 | 10K | 3/3 |
| Five Drums, Fabric, Water, 250-Gallon | 11,050 | 10K | 3/3/33 |
| Six Drums, Fabric, Water, 250-Gallon | 13,260 | 10K | 3/3/22 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity) with 2 additional sling legs.
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Apex fitting (25,000-pound capacity).

c. PERSONNEL. One person can prepare and rig one drum in 5 minutes; add 5 minutes for each additional drum.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Align all drums side by side (if appropriate) and rotate the hubs of each drum so a clevis is positioned at the top.

(2) **Rigging.** Rig the load according to the steps in Figure 18-3.

Note: Route the sling legs so the odd numbered sling legs are to one side of the drum(s) and the even numbered sling legs are to the other side.

(3) **Hookup.** The hookup team stands alongside the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team

Chapter 19

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR SHELTERS

INTRODUCTION

19-1. This chapter contains rigging procedures for single-point lift of shelters that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for shelters are in this section. Paragraphs 19-2 and 19-3 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

TOOL SET, AVIATION MAINTENANCE, SE 1, AIRMOBILE

19-2. The tool set, aviation maintenance, SE 1, airmobile is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 19-1 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 19-1. Tool Set, Aviation Maintenance, SE 1, Airmobile

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|-----------|-----------------------|
| Tool Set, Aviation Maintenance, SE 1, Airmobile | 3,030 | 10K | 30/30 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Felt sheet, cattle hair, Type IV, 1/2-inch or suitable substitute.

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Secure the tongue in the UP position with Type III nylon cord. Secure the safety chains and hoses to the tongue with tape or Type III nylon cord. Secure the jack handles in position with tape or Type III nylon cord.

(b) Pad the rear axle on each side of the towing pintle and secure the padding with tape or Type III nylon cord.

(2) Rigging. Rig the load according to the steps in Figure 19-1.

(3) Hookup. The hookup team stands on top of the tool set. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of the tool set. Route outer sling legs 1 and 2 to the front (tongue end) of the tool set and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 around the left front axle just inside the suspension spring. Place the correct link from Table 19-1 in the grab hook. Repeat with sling leg 2 and the right front axle. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Loop the chain end of sling leg 3 around the padded area on the left rear axle. Place the correct link from Table 19-1 in the grab hook. Repeat with sling leg 4 and the right rear axle. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the tool set to prevent entanglement during hookup and lift-off.</p> |

Figure 19-1. Tool Set, Aviation Maintenance, SE 1, Airmobile (Continued)

SHOP, PORTABLE, AIRCRAFT MAINTENANCE (SPAM)

19-3. The shop, portable, aircraft maintenance is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 19-2 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 19-2. Shop, Portable, Aircraft Maintenance

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--------------------------------------|---------------------|-----------|-----------------------|
| Shop, Portable, Aircraft Maintenance | 5,425 | 10K | 3/3 |

b. **MATERIALS.** The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. **PERSONNEL.** Two persons can prepare and rig this load in 5 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

- (1) **Preparation.** Prepare the load using the following steps:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(a) Secure all vents and doors with tape or Type III nylon cord.

(b) Secure the fold-out safety cable with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 19-2.

(3) **Hookup.** The hookup team stands on top of the SPAM. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 19-2. Shop, Portable, Aircraft Maintenance

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the shop. Route outer sling legs 1 and 2 to the front (door end) of the tool set and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift ring. Place the correct link from Table 19-2 in the grab hook. Repeat with sling leg 2 and the right front lift ring.
3. Loop the chain end of sling leg 3 through the left rear lift ring. Place the correct link from Table 19-2 in the grab hook. Repeat with sling leg 4 and the right rear lift ring.
4. Cluster and tie (breakaway technique) all sling legs together on top of the shop to prevent entanglement during hookup and lift-off.

Chapter 20

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR CONTAINERS

INTRODUCTION

20-1. This chapter contains rigging procedures for single-point lift of containers that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for containers are in this section. Paragraphs 20-2 and 20-3 give detailed instructions for rigging loads.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

ONE CONEX CONTAINER

20-2. One CONEX container is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 20-1 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 20-1. One CONEX Container

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Box, Metal , Shipping, Conex, 270 Cubic Feet | 1,560 | 10K | 3/3 |
| Box, Metal , Shipping, Conex, 295 Cubic Feet | 2,140 | 10K | 3/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap CGU-1/B.

c. PERSONNEL. One person can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Close the doors.

(b) Secure the doors by routing CGU-1/Bs around the entire container.

(2) **Rigging.** Rig the load according to the steps in Figure 20-1.

(3) **Hookup.** The hookup team stands on top of the container. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 20-1. One CONEX Container

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the container. Route outer sling legs 1 and 2 to the front of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the left front lift provision. Place the correct link from Table 20-1 in the grab hook. Repeat with sling leg 2 and the right front lift provision.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 20-1 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together on top of the container to prevent entanglement during hookup and lift-off.</p> |

Figure 20-1. One CONEX Container (Continued)

TWO CONEX CONTAINERS

20-3. Two CONEX containers are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 20-2 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 20-2. Two CONEX Containers

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Two Boxes, Metal , Shipping, Conex, 270 Cubic Feet | 10,000 | 10K | 3/60/3 |
| Two Boxes, Metal , Shipping, Conex, 295 Cubic Feet | 10,000 | 10K | 3/60/3 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity) with two additional sling leg assemblies.
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Tie-down strap CGU-1/B.

c. PERSONNEL. Two persons can prepare and rig this load in 20 minutes.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the containers side by side with the doors facing the same direction.

(b) Close and secure the doors by routing CGU-1/Bs around the entire container.

(2) **Rigging.** Rig the load according to the steps in Figure 20-2.

(3) **Hookup.** The hookup team stands on top of the containers. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 20-2. Two CONEX Containers

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Configure a six-leg sling set by adding the two additional sling legs to the sling set.
2. Position apex fitting on top of the containers. Route outer sling legs 1 and 2 to the front (door end) of the containers, middle sling legs 3 and 4 to the rear, and inner sling legs 5 and 6 to the center of the containers. Sling legs 1, 3, and 5 must be on the left side of the load.
3. Loop the chain end of sling leg 1 through the left front lift provision of the left container. Place the correct link from Table 20-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
4. Loop the chain end of sling leg 3 through the left rear lift provision on the left container. Place the correct link from Table 20-2 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
5. Loop the chain end of sling leg 5 through the front inboard lift provision of both containers. Place the correct link from Table 20-2 in the grab hook. Repeat with sling leg 6 and the rear inboard lift provisions. Secure the excess chain with Type III nylon cord.
6. Cluster and tie (breakaway technique) all sling legs together on top of the containers to prevent entanglement during hookup and lift-off.

Figure 20-2. Two CONEX Containers (Continued)

DRAFT

Chapter 21

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR RADAR EQUIPMENT

INTRODUCTION

21-1. This chapter contains rigging procedures for single-point lift of radar equipment that is suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedure for radar equipment is in this section. Paragraph 21-2 gives detailed instructions for rigging the load.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

AN/MPQ-4A RADAR SET

21-2. One AN/MPQ-4A radar set is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 21-1 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier

Table 21-1. AN/MPQ-4A Radar Set

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Radar Set, Trailer-Mounted, AN/MPQ-4A Radar Set without 55-Gallon Drum of Fuel | 6,290 | 10K | 3/55 |
| Radar Set, Trailer-Mounted, AN/MPQ-4A Radar Set with 55-Gallon Drum of Fuel | 6,690 | 10K | 3/55 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (5) Webbing, nylon, tubular, 1/2-inch.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(6) Padding, felt, 1/2- x 24- x 60-inch (2 sheets), 1/2- x 30- x 36-inch (1 sheet).

c. **PERSONNEL.** Two persons can prepare and rig this load in 30 minutes.

d. **PROCEDURES.** The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Place the radar set in the travel mode. Secure the safety chains and the air hoses to the trailer tongue with tape or Type III nylon cord.

(b) Secure the handles of the rear outriggers and all pins with tape.

(c) Place a 24- x 48-inch sheet of felt padding over the receiver-transmission group and secure with tape.

(d) Place two sheets of felt side by side on top of the reflector, tape the centerline, and secure in place with Type III nylon cord routed from one step over the receiver-transmission group and reflector to the other step.

(e) Secure the fuel drum with 1/2-inch tubular nylon to the step.

(2) **Rigging.** Rig the load according to the steps in Figure 21-1.

(3) **Hookup.** The hookup team stands on the trailer fenders. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the reflector. Route outer sling legs 1 and 2 to the front (tongue end) of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the tongue. Place the correct link from Table 21-1 in the grab hook. Repeat with sling leg 2 and the right front lift provision. If a fuel drum is being moved, route sling legs 1 and 2 through the lunette instead of the lift provisions.
3. Loop the chain end of sling leg 3 through the left rear lift provision located aft of the receiver-transmission group. Place the correct link from Table 21-1 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Figure 21-1. AN/MPQ-4A Radar Set

DRAFT

Chapter 22

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR GENERATOR SETS

INTRODUCTION

22-1. This chapter contains rigging procedures for single-point lift of generator sets that are suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for generator sets are in this section. Paragraph 22-2 and 22-3 give detailed instructions for rigging the load.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

TRAILER-MOUNTED GENERATORS

22-2. Trailer mounted generators are rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 22-1 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 22-1. Trailer Mounted Generators

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Generator Set, 5KW, PU-620/M Mounted on M116 Trailer | 2,840 | 10K | 3/50 |
| Generator Set, 10KW, PU-619 Mounted on M105 Trailer | 3,530 | 10K | 30/30 |
| Generator Set, 10KW, PU-304 Mounted on M105 Trailer | 4,110 | 10K | 40/50 |

Note: The PU-619/M generator set mounted on the M105 trailer is not currently approved for lift with the original lift provisions.

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

c. PERSONNEL. Two persons can prepare and rig this load in 15 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) Preparation. Prepare the load using the following steps:

(a) Remove the canvas cover and secure on top of the generator with Type III nylon cord.

(b) Secure the 5-gallon gas cans with Type III nylon cord.

(c) Engage the parking brakes.

(d) Secure the safety chains, air hoses, and intervehicular cable to the tongue with tape or Type III nylon cord.

(e) Inspect the lift provisions for cracks in the welds.

(2) Rigging. Rig the load according to the steps in Figure 22-1.

(3) Hookup. The hookup team stands on the trailer. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) Derigging. Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 22-1. Trailer Mounted Generators

| RIGGING STEPS |
|--|
| <p>1. Position apex fitting on top of the trailer. Route outer sling legs 1 and 2 to the front of the load in front of bow 1 and inner sling legs 3 and 4 to the rear between bows 3 and 4. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 through the lunette. Place the correct link from Table 22-1 in the grab hook. Repeat with sling leg 2. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Loop the chain end of sling leg 3 through the left rear lift provision. Place the correct link from Table 22-1 in the grab hook. Repeat with sling leg 4 and the right rear lift provision. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.</p> |

Figure 22-1. Trailer Mounted Generators (Continued)

7.5KW GENERATOR SET

22-3. The 7.5KW generator set is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 22-2 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 22-2. Trailer Mounted Generators

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-------------------------------------|---------------------|---------------|-----------------------|
| Generator Set, Wheel Mounted 7.5 KW | 810 | 10K or 5K Net | 3/50 |

b. MATERIALS. The following materials are required to rig this load:

(1) One sling leg from a 10,000-pound capacity sling set with apex fitting.

(2) Net, cargo (5,000-pound capacity).

(3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.

(3) Cord, nylon, Type III, 550-pound breaking strength.

(4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. One person can prepare and rig this load in 5 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Tie the tow bar in the raised position with Type III nylon cord.

(b) Secure the safety chains, air hoses, and intervehicular cable to the tongue with tape or Type III nylon cord.

(2) **Rigging.** Rig the load according to the steps in Figure 22-2.

(3) **Hookup.** The hookup team stands beside the generator. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Chapter 23

SUITABLE SINGLE-POINT RIGGING PROCEDURES FOR MISCELLANEOUS EQUIPMENT

INTRODUCTION

23-1. This chapter contains rigging procedures for single-point lift of miscellaneous equipment that is suitable for sling load. Each rigging procedure is found in a paragraph that includes a description of the load, materials required for rigging, and steps to complete the procedure. An applicability paragraph is also a part of each paragraph and identifies the suitable loads. The suitable single-point rigging procedures for miscellaneous equipment is in this section. Paragraphs 23-2 through 23-5 give detailed instructions for rigging the load.

Note: Reach Pendants may be used on all single point loads. A static discharge person is not required when using a Reach Pendant.

350-GPM PUMP ASSEMBLY

23-2. The 350-GPM pump assembly is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 23-1 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 23-1. 350-GPM Pump Assembly

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|-----------------------|---------------------|-----------|-----------------------|
| 350-GPM Pump Assembly | 1,165 | 10K | 50/50 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (10,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(1) **Preparation.** Prepare the load using the following steps:

(a) Secure the engine cover and any other loose equipment with Type III nylon cord.

(b) Slide the tow bar all the way in and secure with safety pins.

(2) **Rigging.** Rig the load according to the steps in Figure 23-1.

(3) **Hookup.** The hookup team stands beside the pump. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

Figure 23-1. 350-GPM Pump Assembly

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

| RIGGING STEPS |
|---|
| <p>1. Position apex fitting on top of the pump. Route outer sling legs 1 and 2 to the front of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.</p> |
| <p>2. Loop the chain end of sling leg 1 around the left front corner of the frame and through the rings on the bottom of the frame. Place the correct link from Table 23-1 in the grab hook. Repeat with sling leg 2 and the right front corner of the frame. Secure the excess chain with Type III nylon cord.</p> |
| <p>3. Loop the chain end of sling leg 3 around the left rear corner of the frame and through the rings on the bottom of the frame. Place the correct link from Table 23-1 in the grab hook. Repeat with sling leg 4 and the right rear corner of the frame. Secure the excess chain with Type III nylon cord.</p> |
| <p>4. Pull each grab hook up and tie to the top corner of the load. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.</p> |

Figure 23-1. 350-GPM Pump Assembly (Continued)

LIGHT TACTICAL FLOATING RAFT BRIDGE

23-3. The light tactical floating raft bridge is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following items in Table 23-2 are suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 23-2. Light Tactical Floating Raft Bridge

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|---|---------------------|--------------|-----------------------|
| M796, Bolster Trailer with Eight Half-Pontoons and Cradle | 10,620 | 25K | 3/13 |
| Eight Half-Pontoons and Cradle | 6,000 | 10K | 3/3 |
| LTR Superstructure, Light Bundle | 5,250 | 10K | 3/3 |
| LTR Superstructure, Medium Bundle | 7,000 | 10K | 3/3 |
| LTR Superstructure, Heavy Bundle | 10,000 | 25K | 3/3 |
| Two Motors and Mounting Brackets | 1,290 | 5K Cargo Net | N/A |

b. MATERIALS. The following materials are required to rig this load:

(1) Bolster trailer with pontoons and cradle:

(a) Sling set (25,000-pound capacity).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (b) Tie-down assemblies (10,000-pound capacity) (6 each).
- (c) Tie-down strap, cargo, CGU-1/B (as required)
- (d) Webbing, cotton, 1/4-inch.
- (e) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (f) Cord, nylon, Type III.

(2) Pontoons and cradle:

- (a) Sling set (10,000-pound capacity).
- (b) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (c) Cord, nylon, Type III.
- (d) Webbing, cotton, 1/4-inch.

(3) LTR (light bundle).

- (a) Sling set (10,000-pound capacity).
- (b) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (c) Cord, nylon, Type III.
- (d) Webbing, cotton, 1/4-inch.
- (e) Webbing, nylon, tubular, 1/2-inch.
- (f) Panel, deck (4 each).
- (g) Panel, filler, deck (8 each).
- (h) Panel, filler, short deck (6 each).
- (i) Panel, end, ramp (2 each).
- (j) Assembly, articulating (2 each).
- (k) Curb, normal (4 each).
- (l) Curb, short (6 each).
- (m) Cable, 5/8-inch, 26-feet long (2 each).
- (n) Clamp, cable, 5/8-inch (8 each).
- (o) Turnbuckle, 5/8- x 24-inch (2 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) LTR (medium bundle).

- (a) Sling set (10,000-pound capacity).
- (b) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (c) Cord, nylon, Type III.
- (d) Webbing, cotton, 1/4-inch.
- (e) Webbing, nylon, tubular, 1/2-inch.
- (f) Panel, deck (6 each).
- (g) Panel, filler, deck (6 each).
- (h) Panel, filler, short deck (2 each).
- (i) Panel, end, ramp (4 each).
- (j) Curb, normal (6 each).
- (k) Curb, short (4 each).
- (l) Cable, 5/8-inch, 26-feet long (2 each).
- (m) Clamp, cable, 5/8-inch (8 each).
- (n) Turnbuckle, 5/8- x 24-inch (2 each).

(5) LTR (heavy bundle).

- (a) Sling set (25,000-pound capacity).
- (b) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (c) Cord, nylon, Type III.
- (d) Webbing, cotton, 1/4-inch.
- (e) Webbing, nylon, tubular, 1/2-inch.
- (f) Panel, deck (8 each).
- (g) Panel, filler, deck (16 each).
- (h) Panel, filler, short deck (12 each).
- (i) Panel, end, ramp (4 each).
- (j) Curb, normal (8 each).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- (k) Curb, short (12 each).
- (l) Cable, 5/8-inch, 40-feet long (2 each).
- (m) Clamp, cable, 5/8-inch (8 each).
- (n) Turnbuckle, 5/8- x 24-inch (2 each).
- (o) Assembly, articulating (4 each).

(6) Two motors and mounting brackets:

- (a) Net, cargo (5,000-pound capacity).
- (b) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (c) Cord, nylon, Type III.
- (d) Webbing, cotton, 1/4-inch.
- (e) Webbing, nylon, tubular, 1/2-inch.

c. PERSONNEL. Eleven persons can prepare and rig these loads in the following time:

- (1) Bolster trailer with pontoons and cradle, 30 minutes.
- (2) Pontoons and cradle, 20 minutes.
- (3) LTR (light bundle), 20 minutes.
- (4) LTR (medium bundle), 25 minutes.
- (5) LTR (heavy bundle), 30 minutes.
- (6) Two motors and mounting brackets, 10 minutes.

d. PROCEDURES. The following procedures apply to these loads:

(1) Preparation. Prepare the loads using the following steps:

(a) Bolster trailer with pontoons and cradle:

1. Secure the pontoons on the cradle and trailer according to the operator's manual.

2. Secure both sides of the cradle to the trailer with tie-downs.

3. Under the bottom pontoon and on top of the cradle, secure the cradle to the trailer by wrapping one tie-down strap around the cradle and trailer

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

frame at each side of the load in the vicinity of the rear wheels. Repeat this procedure at the forward wheels.

(b) pontoons and cradle: Secure the pontoons to the cradle according to the operator's manual.

(c) LTR superstructure (light bundle):

1. Place two timbers on the ground as shoring approximately 6 feet apart.

2. Lay both cables on the ground parallel to and on the outside of the timbers.

3. Stack the four deck panels on the timbers. Face the deckplates of the bottom and third panels down and the second and top panels up. All male ends must be in the same direction.

4. Connect the two articulating assemblies and place them on top of the stack of deck panels.

5. Place two end ramp panels, butt end to butt end, on top of the articulating assemblies.

6. Place six deck filler panels in the space between the bottom and second deck panels.

7. Place remaining two deck filler panels, six short deck filler panels, and six short curbs in the space between the third and top deck panels.

8. Place the four normal curbs in the space between the top deck panel and the articulating assemblies.

9. Close off the ends of the deck panels and articulating assemblies by lacing 1/2-inch tubular nylon webbing across the ends of the stack.

10. Bring cables up over load, route each end through the turnbuckle, secure each end with two cable clamps, and tighten turnbuckle.

CAUTION

Do not over tighten the cables as damage to the load will occur.

11. Tie the two cables together with 1/2-inch tubular nylon webbing.

(d) LTR superstructure (medium bundle):

1. Place two timbers on the ground as shoring approximately 6 feet apart.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

- 2.** Lay both cables on the ground parallel to and on the outside of the timbers.
- 3.** Stack two parallel sets of deck panels, three panels high, with male ends facing in same direction.
- 4.** Place two end ramp panels, butt end to butt end, on top of each stack of deck panels.
- 5.** Place deck filler panels between deck panels.
- 6.** Close off ends of deck panels by lacing 1/2-inch tubular nylon webbing across ends of stacks.
- 7.** Place three normal curbs on each side of load, alternating short curbs in between the normal curbs.
- 8.** Bring cables up over load, route each end through turnbuckle, secure each end with two cable clamps, and tighten turnbuckle.

CAUTION

Do not over tighten the cables as damage to the load will occur.

- 9.** Tie each short curb to the turnbuckle with nylon webbing.
- 10.** Tie the two cables together with 1/2-inch tubular nylon webbing.

(e) LTR superstructure (heavy bundle):

- 1.** Place two timbers on the ground as shoring approximately 6 feet apart.
- 2.** Lay both cables on the ground parallel to and on the outside of the timbers.
- 3.** Configure two light bundle stacks side-by-side and secure each end of the load with cables.

(2) Rigging. Rig the load according to the steps in Figure 23-2.

(3) Hookup. The hookup team stands on top of the pontoons, on top of the superstructure bundles, or alongside the cargo net, depending on the load. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

RIGGING STEPS (BOLSTER TRAILER)

1. Position apex fitting on top of the pontoons. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision mounted on the left front corner of the frame. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 2 and the right front corner of the trailer.
3. Loop the chain end of sling leg 3 through the left rear lift provision mounted on the left rear corner of the trailer. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 4 and the right rear corner of the trailer. Secure the excess chain with Type III nylon cord.
4. Pull each grab hook up and tie to one of the boat rails with 1/4-inch cotton webbing. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS (CRADLE AND PONTOONS ONLY)

1. Position apex fitting on top of the pontoons. Route outer sling legs 1 and 2 to the front of the trailer and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 through the left front lift provision located on the cross beam of the cradle. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 2 and the right front lift provision.
3. Loop the chain end of sling leg 3 through the left rear lift provision located on the cross beam of the cradle. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 4 and the right rear lift provision.
4. Pull each grab hook up and tie to one of the boat rails with 1/4-inch cotton webbing. Cluster and tie or tape (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

| <ol style="list-style-type: none">1. Position apex fitting on top of the load. Route outer sling legs 1 and 2 to the female end of the deck panels and inner sling legs 3 and 4 to the male ends. Sling legs 1 and 3 must be on the left side of the load.2. Loop the chain end of sling leg 1 through the inside hole and back out through the outside hole of the bottom deck panel. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 2 on the opposite side of the load.3. Loop the chain end of sling leg 3 through the hole at the male end of the bottom deck panel. Place the correct link from Table 23-2 in the grab hook. Repeat with sling leg 4 on the opposite side of the load.4. Remove the safety pins and place them in the boat motor box or safety tie them with Type III nylon cord.5. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off. |
| RIGGING STEPS LTR (LIGHT, MEDIUM, AND HEAVY) |
| <ol style="list-style-type: none">1. Spread the 5,000-pound capacity cargo net on the ground.2. Secure the motors, pins, paddles, and miscellaneous items in the containers. Secure the lid closed with Type III nylon cord.3. Center the containers on the cargo net.4. Place the mounting brackets on top of the containers.5. Rig and close the cargo net in accordance with FM 4-20.197. |

Figure 23-2. Light Tactical Floating Raft Bridge (Continued)

MEDIUM-SPAN BRIDGE

23-4. The medium-span bridge is rigged for single-point sling load using the following procedures:

a. **APPLICABILITY.** The following item in Table 23-3 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 23-3. Medium-Span Bridge

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Bridge Erection Set, Medium Girder Section | 13,800 | 25K | 5/5 |

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Multiloop line, Type XXVI nylon, 12-foot, 4-loop (4 each).
- (3) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (4) Cord, nylon, Type III, 550-pound breaking strength.
- (5) Webbing, cotton, 1/4-inch, 80-pound breaking strength.
- (6) Padding, felt or suitable substitute.
- (7) Clevis, large (4 each).
- (8) Tie-down strap, cargo, CGU-1/B (as required).

c. PERSONNEL. Six persons can prepare and rig this load in 30 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Prepare the load using the following steps:

(a) Position the ramp sections on top of the bridge main structure. Secure with tie-down straps.

(b) Secure the four pieces of padding on the bottom side at each corner where the nylon straps are choker-hitched.

(2) **Rigging.** Rig the load according to the steps in Figure 23-3.

(3) **Hookup.** The hookup team stands on top of the bridge center. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the bridge. Route outer sling legs 1 and 2 to the front of the load and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Choker-hitch a 12-foot, 4-loop, Type XXVI nylon sling through the opening in each corner of the bridge.
3. Insert a large clevis in the running end of each 12-foot sling. Ensure the bolt runs through the sling and the nut is tight on the bolt.
4. Loop the chain end of sling leg 1 through the large clevis on the 12-foot sling on the front left corner of the bridge. Place the correct link from Table 23-3 in the grab hook. Repeat with sling leg 2 and the right front corner of the bridge.
5. Loop the chain end of sling leg 3 through the large clevis on the 12-foot sling on the rear left corner of the bridge. Place the correct link from Table 23-3 in the grab hook. Repeat with sling leg 4 and the right rear corner of the bridge.
6. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

M4T6 BRIDGE

23-5. The M4T6 bridge is rigged for single-point sling load using the following procedures:

a. APPLICABILITY. The following item in Table 23-4 is suitable for all **ARMY** helicopters with suitable lift capacity by the US Army Natick Soldier Center:

Table 23-4. M4T6 Bridge

| Nomenclature | Max Weight (Pounds) | Sling Set | Link Count Front/Rear |
|--|---------------------|-----------|-----------------------|
| Bridge, Floating, Aluminum, Highway Type, Deck-Balk Superstructure on Pneumatic Floats, M4T6 | 9,000 | 25K | 4/4 |

b. MATERIALS. The following materials are required to rig this load:

- (1) Sling set (25,000-pound capacity).
- (2) Tape, adhesive, pressure-sensitive, 2-inch wide roll.
- (3) Cord, nylon, Type III, 550-pound breaking strength.
- (4) Webbing, cotton, 1/4-inch, 80-pound breaking strength.

c. PERSONNEL. Two persons can prepare and rig this load in 10 minutes.

d. PROCEDURES. The following procedures apply to this load:

(1) **Preparation.** Ensure all components are securely attached together.

(2) **Rigging.** Rig the load according to the steps in Figure 23-4.

(3) **Hookup.** The hookup team stands on top of the bridge. The static wand person discharges the static electricity with the static wand. The hookup person places the apex fitting onto the aircraft cargo hook. The hookup team then moves clear of the load but remains close to the load as the helicopter removes slack from the sling legs. When successful hookup is assured, the hookup team quickly exits the area underneath the helicopter to the designated rendezvous point.

(4) **Derigging.** Derigging is the reverse of the preparation and rigging procedures in steps d (1) and d (2).

DRAFT

FM 4-20.198/MCRP 4-11.3E, Vol II/NWP3-04.12/AFMAN 11-223 (I), Vol II/ COMDTINST M13482.3B

RIGGING STEPS

1. Position apex fitting on top of the center of the bridge. Route outer sling legs 1 and 2 to the forward end of the balk connecting stiffener and inner sling legs 3 and 4 to the rear. Sling legs 1 and 3 must be on the left side of the load.
2. Loop the chain end of sling leg 1 around the seventh balk connection pin from the forward end on the left balk connecting stiffener. Place the correct link from Table 23-4 in the grab hook. Repeat with sling leg 2 and the seventh connection pin from the forward end of the right balk stiffener.
3. Loop the chain end of sling leg 3 around the seventh balk connection pin from the rear end on the left balk connecting stiffener. Place the correct link from Table 23-4 in the grab hook. Repeat with sling leg 4 and the seventh connection pin from the rear end of the right balk stiffener.
4. Cluster and tie (breakaway technique) all sling legs together to prevent entanglement during hookup and lift-off.

Appendix C

Sling Load Factors

Each certified sling load under goes a flight test before it is certified. There are four limiting factors that limit the flight airspeed in the flight test. These factors are:

- (1) Aircraft Limitations
- (2) Excess Fleet Angle
- (3) Load Instability
- (4) Certification by Analogy

In the table that follows the nomenclature and weight of the item, the paragraph number of the item, the maximum tested airspeed, and the limiting factor is represented. The number in parenthesis represents the limiting factor as shown above.

Airspeed Factors

| Nomenclature | Paragraph Number | Max Weight (Pounds) | Tested Air Speed(Knots) | Limiting Factor |
|---|------------------|---------------------|--|-----------------|
| Truck, Ambulance, M996, HMMWV | 2-2 | 7,400 | UH-60 / 60 CH-47 / 110 | |
| Truck, Ambulance, M997, HMMWV | 2-2 | 7,400 | UH-60 / 80 CH-47 / 75 | |
| Truck, Ambulance, M997A2, HMMWV | 2-2 | 10,300 | CH-47 / 75 | |
