

# **NONLETHAL CAPABILITIES LOADING PLAN FOR THE UH-60 BLACK HAWK HELICOPTER**

The Nonlethal Capability Set (NLCS) is specifically designed to support Army units selected to participate in ground force operations where a nonlethal (NL) capability may be required. The components of the set are intended to enhance a unit's capability across the range of military operations. The NLCS is intended to augment, not replace, currently fielded weapon systems and munitions.

This graphic training aid (GTA) supports the training presented in the NLCS Training Support Package and will assist soldiers during loading and unloading of the Black Hawk helicopter.

The distance to the operation, the terrain, or the required reaction time may dictate troop transport by helicopter. Troops must be careful when loading and unloading with bulky equipment, such as shields, to avoid being blown off balance and injured by the rotor wash. The helicopter must be carefully guarded or removed from the area to avoid damage to the aircraft. Ideally, it can be used to support the operation after off-loading the troops. Figure 1 shows soldiers how to load themselves and their NL equipment onto a UH-60 Black Hawk helicopter.

**Headquarters, Department of the Army  
July 2001**

**DISTRIBUTION:** United States (US) Army Training Support Centers (TSCs).

**DISTRIBUTION RESTRICTION:** Approved for public release.
