DEPARTMENT OF THE ARMY TECHNICAL BULLETIN

CALIBRATION PROCEDURE FOR VIBREX BALANCE KIT MODEL B4591, CONSISTING OF VIBREX TESTER MODEL 11, BLADE TRACKER MODEL 135M-11, AND BALANCE PHAZOR MODEL 177M-6A

Headquarters, Department of the Army, Washington, DC 29 May 2008

Distribution Statement A: Approved for public release; distribution is unlimited.

REPORTING OF ERRORS AND RECOMMENDING IMPROVEMENTS

You can improve this manual. If you find any mistakes or if you know of a way to improve these procedures, please let us know. Mail your letter or DA Form 2028 (Recommended Changes to Publications and Blank Forms) directly to: Commander, U.S. Army Aviation and Missile Command, ATTN: AMSAM-MMC-MA-NP, Redstone Arsenal, AL 35898-5000. A reply will be furnished to you. You may also send in your comments electronically to our E-mail address: 2028@redstone.army.mil or by fax 256-842-6546/DSN 788-6546. For the World Wide Web use: https://amcom2028.redstone.army.mil. Instructions for sending an electronic 2028 can be found at the back of this manual.

Single interrupter logic test	13	8
Balance mode test	14	9
Final procedure	15	10

SECTION I IDENTIFICATION AND DESCRIPTION

1. Test Instrument Identification. This bulletin provides instructions for the calibration of Vibrex Balance Kit Model B4591, Consisting of Vibrex Tester Model 11, Blade Tracker, Model 135M-11, and Balance Phazor Model 177M-6A. The manufacturer's manual and TM 55-4920-402-13&P were used as the prime data sources in compiling these instructions. The equipment being calibrated will be referred to as the TI (test instrument) throughout this bulletin.

a. Model Variations. None.

b. Time and Technique. The time required for this calibration is approximately 2 hours, using the dc and low frequency technique.

2. Forms, Records, and Reports

a. Forms, records, and reports required for calibration personnel at all levels are prescribed by TB 750-25.

b. Adjustments to be reported are designated (R) at the end of the sentence in which they appear. When adjustments are in tables, the (R) follows the designated adjustment. Report only those adjustments made and designated with (R).

3. Calibration Description. TI parameters and performance specifications which pertain to this calibration are listed in table 1.

Table 1. Calibration Description			
Test instrument parameters	Performance specifications		
Calibrator Model 11 RPM	900 and 1800 rpm at 60 Hz		
Double interrupter logic	IPS equals 0.8 ±0.08 at 1800 rpm		
(Balancer model 177M-6A)	IPS equals 0.4 ± 0.04 at 900 rpm		
Single interrupter logic	0.8 IPS ±0.08 at 1800 rpm		
(Balancer model 177M-6A)	0.4 IPS \pm 0.04 at 900 rpm		
Balance mode	0.8 IPS ±0.08 at 1800 rpm		
(Strobex model 135M-11)	0.4 IPS ±0.04 at 900 rpm		

Table 1. (Calibration 1	Description
------------	---------------	-------------

SECTION II EQUIPMENT REQUIREMENTS

4. Equipment Required. Table 2 identifies the specific equipment to be used in this calibration procedure. This equipment is issued with Secondary Transfer Calibration Standards Set AN/GSM-286, AN/GSM-287 or AN/GSM-705. Alternate items may be used by the calibrating activity. The items selected must be verified to perform satisfactorily prior to use and must bear evidence of current calibration. The equipment must meet or exceed the minimum use specifications listed in table 2. The accuracies listed in table 2 provide a four-to-one ratio between the standard and TI. Where the four-to-one ratio cannot be met, the actual accuracy of the equipment selected is shown in parenthesis.

5. Accessories Required. The accessories required for this calibration are common usage items issued as indicated in 4 above, and are not listed in this calibration procedure. All peculiar accessories are supplied with the TI.

		Manufacturer and model	
Common name	Minimum use specifications	(part number)	
CALIBRATOR ¹	900 and 1800 rpm at 60 Hz	Chadwick-Helmuth, Model 11	
DC POWER SUPPLY	Output voltage: 0 to 30 V	HDL, Model LR10 (LR10)	
	Output current: 0 to 5 amps		
FREQUENCY COUNTER	Range: 10 to 40 Hz	Fluke, Model PM6681/656	
	Accuracy: ±0.25 Hz	(PM6681/656)	

1 abic 2. minimum opecifications of Equipment negation	Table 2.	Minimum	Specifications	of Equipme	ent Required
--	----------	---------	----------------	------------	--------------

¹Supplied with the Vibrex Balance Kit, Model B4591.

SECTION III CALIBRATION PROCESS FOR CALIBRATOR CHADWICK-HELMUTH, MODEL 11

6. Preliminary Instructions

a. The instructions outlined in paragraphs 6 and 7 are preparatory to the calibration process. Personnel should become familiar with the entire bulletin before beginning the calibration.

b. Items of equipment used in this procedure are referenced within the text by common name as listed in table 2.

c. Unless otherwise specified, verify the result of each test and, whenever the test requirement is not met, take corrective action before continuing with the calibration. Adjustments required to calibrate the TI are included in this procedure. Additional maintenance information is contained in the manufacturer's manual for this TI and TM 55-4920-402-13&P.

d. Unless otherwise specified, all controls and control settings refer to the TI.

7. Equipment Setup

WARNING

HIGH VOLTAGE is used or exposed during the performance of this calibration. DEATH ON CONTACT may result if personnel fail to observe safety precautions. REDUCE OUTPUTS(S) to minimum after each step within the performance check where applicable.

a. Screw magnetic pickup and two accelerometers into their respective holes on TI (fig. 1). Do not connect any cables at this point.

NOTE

Screw the magnetic pickup in until it just touches the interrupter screws. Then, back out the magnetic pickup 1/6 turn to provide clearance. Tighten jam nut on magnetic pickup.

Figure 1. Calibrator, Model 11, accelerometer and magnetic pickup installation.

- b. Connect TI power cable to dc power supply using cable supplied with TI.
- c. Set power supply ON-OFF switch to ON and adjust output for 28 volts.

d. Remove both pairs of double interrupter screws (fig. 2) on TI rotor disc, leaving only two opposite single interrupter screws.

Figure 2. Tester interrupter placement.

e. Connect frequency counter to magnetic pickup on TI using a BNC to test hook type lead.

f. Set TI CAM RATE (RPM) switch to 1800.

g. Set TI MOTOR ON switch to MOTOR ON.

8. RPM Test

a. Performance Check

(1) View rotor disc under ordinary fluorescent room lights (60 Hz) and adjust TI 1800 RPM adjust (fig.1) until outer ring appears stopped. Frequency counter will indicate 30 ± 1 Hz.

NOTE

If frequency counter does not indicate 30 ± 1 Hz, take corrective action to insure line frequency of fluorescent lighting is 60 Hz.

NOTE

To convert frequency counter indication to RPM, multiply by 60.

(2) Set TI CAM RATE (RPM) switch to 900.

(3) Adjust 900 RPM adjust (fig.1) until next ring on the rotor disc appears stopped. Frequency counter will indicate 15 ± 1 Hz.

- (4) Set TI MOTOR ON switch to down position.
- (5) Disconnect lead from magnetic pickup on TI.
- (6) Replace two opposite pairs of interrupter screws on TI rotor disc.
- b. Adjustments. No further adjustments can be made.

9. Final Procedure

NOTE

The number of TI's (Model 11) in the set may vary. After calibrating the last TI, do not disconnect the magnetic pickup and accelerometers, if proceeding to section IV of the procedure.

- a. Deenergize and disconnect all equipment.
- b. Annotate and affix DA label/form in accordance with TB 750-25.

SECTION IV

CALIBRATION PROCESS FOR BALANCE PHAZOR, MODEL 177M-6A AND BLADE TRACKER, MODEL 135M-11

10. Preliminary Instructions

a. The instructions outlined in paragraphs 10 and 11 are preparatory to the calibration process. Personnel should become familiar with the entire bulletin before beginning the calibration.

b. Unless otherwise specified, verify the result of each test and, whenever the test requirement is not met, take corrective action before continuing with the calibration. Adjustments required to calibrate the TI are included in this procedure. Additional maintenance information is contained in the manufacturer's manual for this TI.

c. Unless otherwise specified, all controls and control settings refer to the TI.

11. Equipment Setup

WARNING

HIGH VOLTAGE is used or exposed during the performance of this calibration. DEATH ON CONTACT may result if personnel fail to observe safety precautions. REDUCE OUTPUTS(S) to minimum after each step within the performance check where applicable.

NOTE

The magnetic pickup and two accelerometers supplied with TI should already be connected to the calibrator as in paragraph **7 a.** above.

a. Connect accelerometer cables supplied with TI and dress them around behind calibrator and crossed so there will be no force from cables that might pull the camfollowers away from cam. Connect the other end of accelerometer cables to accelerometer channel A and B of TI.

- b. Connect magnetic pickup cable between calibrator and magnetic pickup channel A of TI.
- c. Connect TI dc power cable to calibrator.
- d. Connect calibrator to dc power supply and adjust dc power supply output to 28V.
- e. Set TI controls as follows:
 - (1) INTERRUPTER LOGIC switch to DOUBLE.
 - (2) MAGNETIC PICKUP switch to COMMON.
 - (3) **RPM RANGE** switch to **X10**.
 - (4) **RPM TUNE** dial to **180**.
 - (5) **FUNCTION** switch to **A**.
- f. Verify that all six screws are installed in the edge of calibrator rotor disc.
- g. Set calibrator CAM RATE switch to 1800 and MOTOR ON switch to ON.

12. Double Interrupter Logic Test

a. Performance Check

(1) Press and hold TI **TEST** pushbutton.

(2) Verify that 12:00, 6:00 and 1:00 o'clock lights light (a light at 12:30 o'clock instead of 1:00 o'clock is permissible).

(3) Release **TEST** pushbutton and observe clock position of lighted light.

(4) Push and hold **VERIFY TUNE** pushbutton on TI and adjust **RPM TUNE** dial to return light to clock position observed in (3) above.

(5) Release **VERIFY TUNE** pushbutton and observe new clock position.

(6) Repeat (4) and (5) above until there is no change whether pushbutton is pushed or released. Read the clock position with **VERIFY TUNE** pushbutton released.

- (7) Verify the following indications on TI:
 - (a) **PHAZOR** indication is between 2:30 and 3:30 o'clock.
 - (b) **IPS** meter indication is between 0.72 and 0.88.
 - (c) **RPM TUNE** dial is between 176 and 184.
- (8) Set calibrator CAM RATE switch to 900.
- (9) Set TI RPM RANGE switch to X1, and RPM TUNE dial to 900.

- (10) Repeat (3) through (6) above and verify the following indications:
 - (a) **IPS** meter indication is between 0.36 and 0.44.
 - (b) **RPM TUNE** dial is between 882 and 918.
- b. Adjustments. No adjustments can be made.

13. Single Interrupter Logic Test

- a. Performance Check
 - (1) Set calibrator CAM RATE switch to 1800 and stop calibrator.
 - (2) Disconnect magnetic pickup from CHANNEL A and connect to CHANNEL B.
 - (3) Set TI controls as follows:
 - (a) INTERRUPTER LOGIC switch to SINGLE.
 - (b) **RPM RANGE** switch to **X10**.
 - (c) **FUNCTION** switch to **B**.
 - (d) **RPM TUNE** dial to **180**.
 - (e) MAGNETIC PICKUP switch to COMMON.

(4) Remove two opposite pairs of interrupter screws on calibrator leaving only two opposite single screws.

(5) Run calibrator and push and hold ${\bf TEST}$ pushbutton on the TI. Only the 12:00 o'clock light should light.

(6) Release **TEST** pushbutton and observe clock position of lighted light.

(7) Push and hold **VERIFY TUNE** pushbutton on TI and adjust **RPM TUNE** dial to return light to clock position observed in (6) above.

(8) Release VERIFY TUNE pushbutton and observe new clock position.

(9) Repeat (7) and (8) above until there is no change when **VERIFY TUNE** pushbutton is pushed or released.

- (10) Verify the following indications on TI:
 - (a) **PHAZOR** indication is between 8:30 and 9:30 o'clock.
 - (b) **IPS** meter indication is between 0.72 and 0.88.
 - (c) **RPM TUNE** dial is between 176 and 184.
- (11) Set calibrator CAM RATE switch to 900.
- (12) Set TI RPM RANGE switch to X1 and RPM TUNE dial to 900.
- (13) Repeat (7) through (9) above and verify the following indications:
 - (a) **IPS** meter indication is between 0.36 and 0.44.
 - (b) **RPM TUNE** dial is between 882 and 918.

b. Adjustments. No adjustments can be made.

14. Balance Mode Test

a. Performance Check

- (1) Set calibrator CAM RATE switch to 1800 RPM.
- (2) Set TI RPM RANGE switch to X10 and RPM TUNE dial to 180.
- (3) Set Strobex **MODE** switch to **A**.
- (4) Set calibrator MOTOR ON switch to down position.
- (5) Connect Strobex (Model 135M-11) to TI Strobex connector.

(6) Install two opposite pairs of interrupter screws on calibrator rotor disc (all six screws installed).

(7) Set calibrator MOTOR ON switch to MOTOR ON.

NOTE

Because of calibrator two-lobe cam, the accelerometer generates two signals per revolution, causing Strobex to flash twice per revolution. The following steps reference "h" in the "ch" logo located in the center position of the strobe disc.

(8) Squeeze and hold Strobex trigger. Aim Strobex at calibrator rotor strobe disc to illuminate strobe pattern. Verify that stem of **"h"** in logo appears stopped in two positions.

(9) Note clock angle of stem of "h" in logo. Press and hold balancer **VERIFY TUNE RPM** pushbutton and adjust **RPM TUNE** knob until clock angle of stem of "h" is the same as observed before **VERIFY TUNE** pushbutton was pressed.

(10) Release **VERIFY TUNE** pushbutton and observe new clock angle of stem of "h". Repeat (9) and (10) until there is no change in clock angle of stem of "h" whether **VERIFY TUNE** push-button is pressed or released.

NOTE

When balancer is tuned properly, stem of **"h"** appears stopped at approximately 1:30 and 7:30 o'clock.

- (11) Verify that TI indicates the following:
 - (a) **IPS** meter is between .72 and .88 at 1800 rpm.
 - (b) **RPM TUNE** dial is between 176 and 184.

(12) Release Strobex trigger.

(13) Set TI RPM RANGE switch to X1. Set calibrator CAM RATE (RPM) switch to 900.

(14) Adjust TI **RPM TUNE** knob for indication of **900** on **RPM TUNE** dial.

(15) Squeeze and hold Strobex trigger. Aim Strobex at calibrator rotor strobe disc to illuminate strobe pattern. Verify that stem of "**h**" in logo appears stopped in two positions.

(16) Note clock angle of stem of "h" in logo. Press and hold balancer **VERIFY TUNE** pushbutton and adjust **RPM TUNE** knob until clock angle of stem of "h" is the same as was observed before **VERIFY TUNE** pushbutton was pressed.

(17) Release verify tune pushbutton and observe new clock angle of stem of "h".

(18) Repeat (16) and (17) until there is no change in clock angle of stem of "h" whether **VERIFY TUNE** pushbutton is pressed or released.

NOTE

When balancer is properly tuned, stem of "h" appears stopped at approximately 1:30 and 7:30 o'clock.

- (19) Verify that balancer indicates the following:
 - (a) **IPS** meter is between .36 and .44 IPS.
 - (b) **RPM TUNE** dial is between 882 and 918 rpm.
- (20) Release Strobex trigger.
- **b.** Adjustments. No adjustments can be made.

15. Final Procedure

- a. Deenergize and disconnect all equipment.
- b. Annotate and affix DA label/form in accordance with TB 750-25.

By Order of the Secretary of the Army:

GEORGE W. CASEY, JR. General, United States Army Chief of Staff

Jospe E. Morins JOYCE E. MORROW Administrative Assistant to the
