SECTION I

INTRODUCTION

1. Scope.

Although this manual is numbered 24P, it includes depot maintenance items as well as the repair parts and maintenance supplies required for the performance of organizational, direct support and general support maintenance of Test Stand, Hydraulic System Components, P/N 674016.

2. General.

This Repair Parts and Special Tools List is divided into the following sections:

a. Prescribed Load Allowance (PLA)—Section II. Not applicable.

b. Repair Parts—Section III. A list of repair parts authorized for the performance of maintenance at the organizational level, in figure and item number sequence.

c. Special Tools, Test and Support Equipment—Section IV. Not applicable.

d. Repair Parts—Section V. A list of repair parts authorized for the performance of maintenance at direct support, general support and depot level.

e. Special Tools, Test and Support Equipment—Section VI. Not applicable.

f. Federal Stock Number and Reference Number Index—Section VII. A list of federal stock numbers in ascending numerical sequence followed by a list of reference numbers in ascending alphanumerical sequence, cross-referenced to the illustration figure and item number.

3. Explanation of Columns.

The following provides an explanation of columns in the tabular lists in sections III and V :

a. Source, Maintenance and Recoverability Codes (SMR).

(1) *Source code.* Indicates the selection status and source for the listed item. Source codes are:

<i>Code</i>	<i>Explanation</i>
P	Repair parts, special tools and test equipment supplied from the GSA / DSA, or Army supply systems and authorized for use at indicated maintenance categories.
P2	Repair parts, special tools and test equipment which are procured and stocked for insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.
P9	Assigned to items which are NSA design controlled : unique repair parts, special tools, test, measuring and diagnostic equipment, which are stocked and supplied by the Army COMSEC Logistic System and which are not subject to the provisions of AR 380-41.

<i>Code</i>	<i>Explanation</i>
P10	Assigned to items which are NSA design controlled: special tools, test, measuring and diagnostic equipment for COMSEC support, which are accountable under the provisions of AR 380-41, and which are stocked and supplied by the Army COMSEC Logistic System.
M	Repair parts, special tools and test equipment which are not procured or stocked, as such, in the supply system but are to be manufactured at indicated maintenance levels.
A	Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately and can be assembled to form the required assembly at indicated maintenance categories.
X	Parts and assemblies that are not procured or stocked because the failure rate is normally below that of the applicable end item of component. The failure of such part or assembly should result in retirement of the end item from the supply system.
X1	Repair parts which are not procured or stocked. The requirement for such items will be filled by the next higher assembly or component.
X2	Repair parts, special tools, and test equipment which are not stocked and have no foreseen mortality. The indicated maintenance category requiring such repair parts will attempt to obtain the parts through cannibalization of salvage. The item may be requisitioned with exception data, from the end item manager, for immediate use.
G	Major assemblies that are procured with PERMA funds for initial issue only as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above the DS and GS level or returned to depot supply level.

Note: Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded X and aircraft support items as restricted by AR 700-4

(2) *Maintenance code.* Indicates the lowest category of maintenance authorized to install the listed item. Maintenance level codes are:

<i>Code</i>	<i>Explanation</i>
O	organizational maintenance
F	Direct support maintenance
H	General support maintenance
D	Depot maintenance

(3) *Recoverability code.* Indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are nonrecoverable. Recoverability codes are:

<i>Code</i>	<i>Explanation</i>
R	Applied to repair parts, (assemblies and components) special tools and test equipment which are considered economically repairable at direct and general support maintenance levels. When the item is not longer economically repairable, it is normally disposed of at the GS level. When the item is not longer economically repairable, it is normally disposed of at the GS level. When supply considerations dictate, some of these repair parts may be listed for automatic return to supply for depot level repair as set forth in AR 710-50. When so listed, they will be replaced by supply on an exchange basis.
S	Repair parts, special tools, test equipment and assemblies which are economically repairable at DSU and GSU activities and which normally are furnished by supply on an exchange basis. When items are determined by a GSU to be uneconomically repairable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T	Higher dollar value recoverable repair parts, special tools, and test equipment which are subject to special handling and are issued on an exchange basis. Such items will be repaired or overhauled at depot maintenance activities only. No repair may be accomplished at lower levels.
U	Repair parts, special tools and test equipment specifically selected for salvage by reclamation units because of precious metal content, critical materials, high dollar value or reusable casings or castings.

b. *Federal Stock Number.* Indicates the federal stock number assigned to the item and will be used for requisitioning purposes. Items source coded A, M, X1, or X2 are not assigned a federal stock number.

c. *Description.* Indicates the federal item name and any description of the item required. The description column contains the following sub-columns.

- (1) *Reference Number and Manufacturer's Code.* Indicates a part number on other reference number for the listed item followed by the applicable five-digit federal supply code for manufacturers.
- (2) *Usable on Code.* Not applicable.

d. *Unit of Measure (U/M).* A two-character alphabetical abbreviation indicating the amount or quantity of the item upon which the allowances are based e.g., EA, FT, PR.

e. *Quantity Incorporated in Unit.* This column indicates quantities required for one assembly only, including instances when similar assemblies are broken down together. A "V" appearing in this column in lieu of a quantity indicates that a definite quantity cannot be indicated (e.g., shims, spacers) When parts are shown as attaching two or more items, the quantities of these parts are those necessary to attach only one of the items.

f. *Fifteen-Day Organizational Maintenance Allowances.*

- (1) The allowance column is divided into four subcolumns. Indicated in each subcolumn opposite the first appearance of each item is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the allowance columns. Items authorized for use as required, but not for initial stockage are identified with an asterisk (*) in the allowance column.
- (2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period for the number of equipments supported. Units and organizations authorized additional prescribed loads, will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the density column applicable to the number of items supported to obtain the total quantity of repair parts authorized.
- (3) Organizational units providing maintenance for more than 100 of these equipments, shall determine the total quantity of repair parts required by converting the equipment quantity to a decimal factor by the parts quantity authorized in the 51-100 allowance column. Example: authorized allowance for 51-100 equipments is 12; for 140 equipments multiply 12 by 1.40 or 16.80 rounded off to 17 parts required.
- (4) Subsequent changes to allowances will be limited as follows. No change in the range of items is authorized. If additional items are considered necessary, recommendations should be forwarded to the Commanding General U.S. Army Aviation Systems Command (USAAVSCOM) P.O. Box 209, St. Louis MO 63166, for exception or revision to the allowance list. Revisions to the range of items authorized will be made by USAAVSCOM based upon engineering experience, demand data or The Army Maintenance Management System (TAMMS) information.

g. *Thirty-Day DS/GS Maintenance Allowances.*

- (1) The allowance column is divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance

of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. Items authorized for use as required, but not for initial stockage are identified with an asterisk (*) in the allowance column.

- (2) The quantitative allowances for DS / GS levels of maintenance will represent initial stockage for a 30-day period for the number of equipments supported. The basis of issue for authorized special tools, test and support equipment is the number of end items of equipment supported.
- (3) Determination of the total quantity of parts required for maintenance of more than 100 of these equipments, can be accomplished by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example: authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts required.

h. One Year Allowances for 100 Equipments Contingency Planning Purposes. When applicable, this column indicates opposite the first appearance of each item the total quantity required for distribution and contingency planning purposes. The range of items indicates the total quantities of all authorized items required to provide adequate support of 100 equipments for 1 year.

i. Depot Maintenance Allowance Per 100 Equipments. This column indicates opposite the first appearance of each item, the total quantity authorized for depot maintenance of 100 equipments. Subsequent appearances of the same item will have the letters "REF" in the allowance column. Items authorized for use as required, but not for initial stockage are identified with an asterisk (*) in the allowance column.

j. Illustration. This column is divided as follows:

- (1) *Figure Number.* Indicates the figure number of the illustration in which the item is shown. Appearances of the letters "MS UP" in this column indicates maintenance supplies located in Section V.
- (2) *Item Number.* Indicates the callout number to reference the item in the illustration.

4. How to Locate Repair Parts.

a. When Federal Stock Number or Reference Number is Unknown:

- (1) *First.* Find the illustration of the assembly or subassembly to which the repair part belongs.
- (2) *Second.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.
- (3) *Third.* Using the repair parts listing find the figure and item number listed in the illustration column.

b. When Federal Stock Number or Reference Number is Known:

- (1) *First.* Using the Index of Federal Stock Numbers and Reference Numbers, find the pertinent federal stock number or reference number. This index is in ascending federal stock number sequence followed by a list of reference numbers in ascending alphanumeric sequence, cross-referenced to the illustration figure and item number.
- (2) *Second.* Using the repair parts listing, find the figure and item number listed in the illustration column referenced in the Index of Federal Stock Numbers and Reference Numbers.

5. Federal Supply Code for Manufacturers.
